

2024 Construction Project Overview

Project Name: Anchorage Airport Runway 7L25R Lighting Duct Drainage Improvements

Project Number: CFAPT01149

Project Description: Through this project we will provide a drainage system for the lighting duct near the east end of runway 7L/25R.

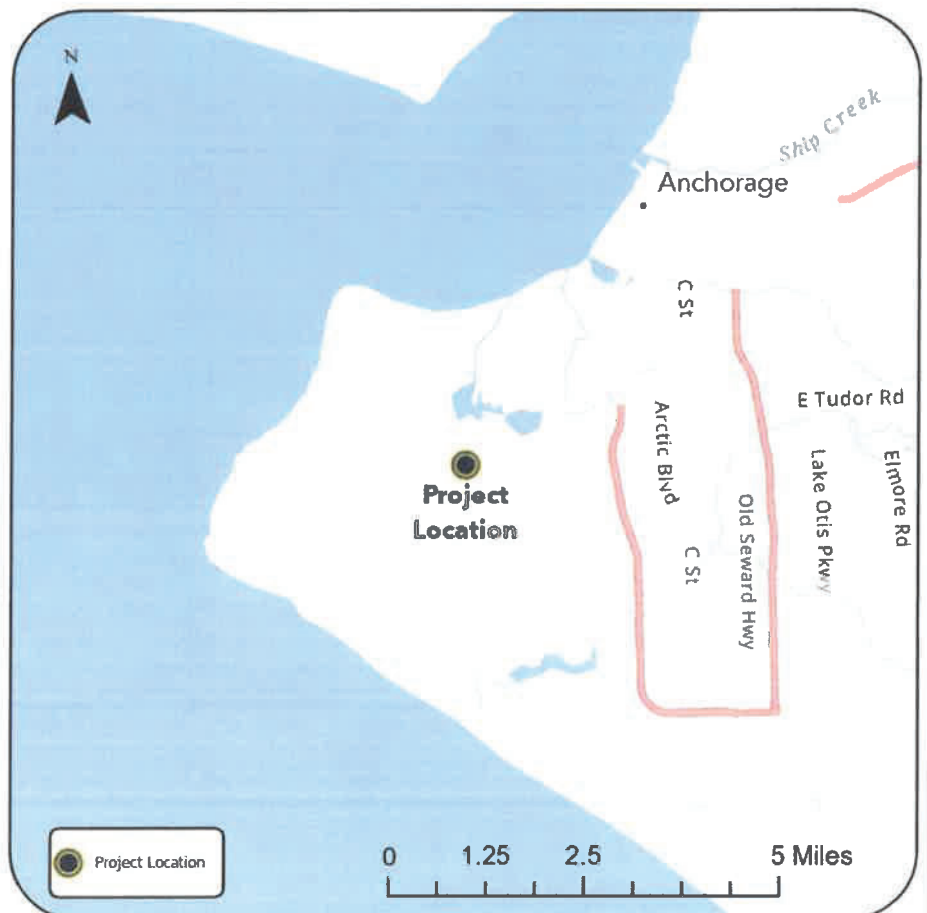

The lighting duct system that lies within the runway service area of runway 7L/25R contains all the runway and taxiway circuits' home runs that run from various areas of the field back to the airport's lighting regulator vault. The manholes of the duct system have drainage issues and are often filled with 3' to 6' of water. During the winter months this becomes ice. The circuits are frozen in ice, which causes circuit breaks in the winter, requiring emergency repairs and runway and taxiway closures.
