Hilti Kwik Bolt II Anchors in Fire-Resistive Construction

Hilti Kwik Bolt II expansion anchors are limited to non-fire-resistive construction per ICBO Evaluation Report ER-4627. These expansion anchors are frequently specified for connections in rated fire-resistive buildings. Hilti has performed testing for fire resistive construction. Hilti Kwik Bolt II expansion anchors may be considered acceptable for use in fire-resistive reinforced concrete buildings when manufacturer testing information is submitted for plan review.

Other expansion anchor brands and configurations may be considered acceptable after review of similar test data and information or updated ICBO evaluation reports.
