Policy S.06

Horizontal T-111 Not Allowed

This policy directive is due to the documented evidence of water leakage and delamination resulting from the horizontal installation of T-111 siding.

The Building Safety Division will not authorize or approve the use of T-111 siding installed with the grooves horizontal. This applies when the siding is used as an exterior material exposed to the weather. Special cases or conditions will require the approval of the Building Official.

Ron Thompson, Building Official
