Landfill Update  
1.18.24*

# THANKSGIVING FIRE 2020

# CELL 9 SEEP

# CELL 9 SEEP

## 8.17.23 OBSERVED LIQUID COMING FROM CELL 9

- *Called Alaska Department of Environmental Conservation*
- *Mobilized tanker trucks*
- *Sampling began for soils and liquid*
- *Main purpose was to determine the cause and fix the issue.*
- *Determined the seep was not an immediate threat to the public*
- *Sampling confirmed it was leachate*
- *Downstream test wells not indicating infiltration*

# CAUSE OF THE FIRE

High likelihood, based on fire investigations, that the fire on Thanksgiving Day 2020 was caused by a large lithium battery that was located near a tire pile.

The seep is in the same vicinity as the fire.

# NEW SWS DISPOSAL POLICY:

The Anchorage Regional Landfill shall not accept lithium-ion batteries of any size. They must be disposed of at the Household Hazardous Waste location at the Anchorage Regional Landfill or Central Transfer Station

Aaron Loeb  
CEO

# LITHIUM BATTERY FIRE

# AIR QUALITY

# MATERIAL RECOVERY FACILITY (MRF)

Mission: Divert as much as possible to lengthen the life of the landfill and increase environmental stewardship while realizing efficiencies for MOA

# SWS ORGANICS PROGRAM

# Organics Transfer Station

- SWS Refuse Collection trucks to drop at the MRF
- Can divert other organic loads across the street
- Commercial organics to dispose saving them time and money
- Residential disposal of plastics
- Potential for wood lot operations

Thank you
