

MUNICIPALITY OF ANCHORAGE
WATER QUALITY IMPROVEMENTS CAPITAL PROGRAM
Department: Parks and Recreation

Department Goal:

The goal of the Parks and Recreation Department for the 1987-1992 Capital Improvement Program is to raise and protect the water quality of local streams, thereby improving those aspects of community life and neighborhood values which depend on clean and aesthetically appealing surface water, through a program of land acquisition along those streams.

Water Quality Improvements:

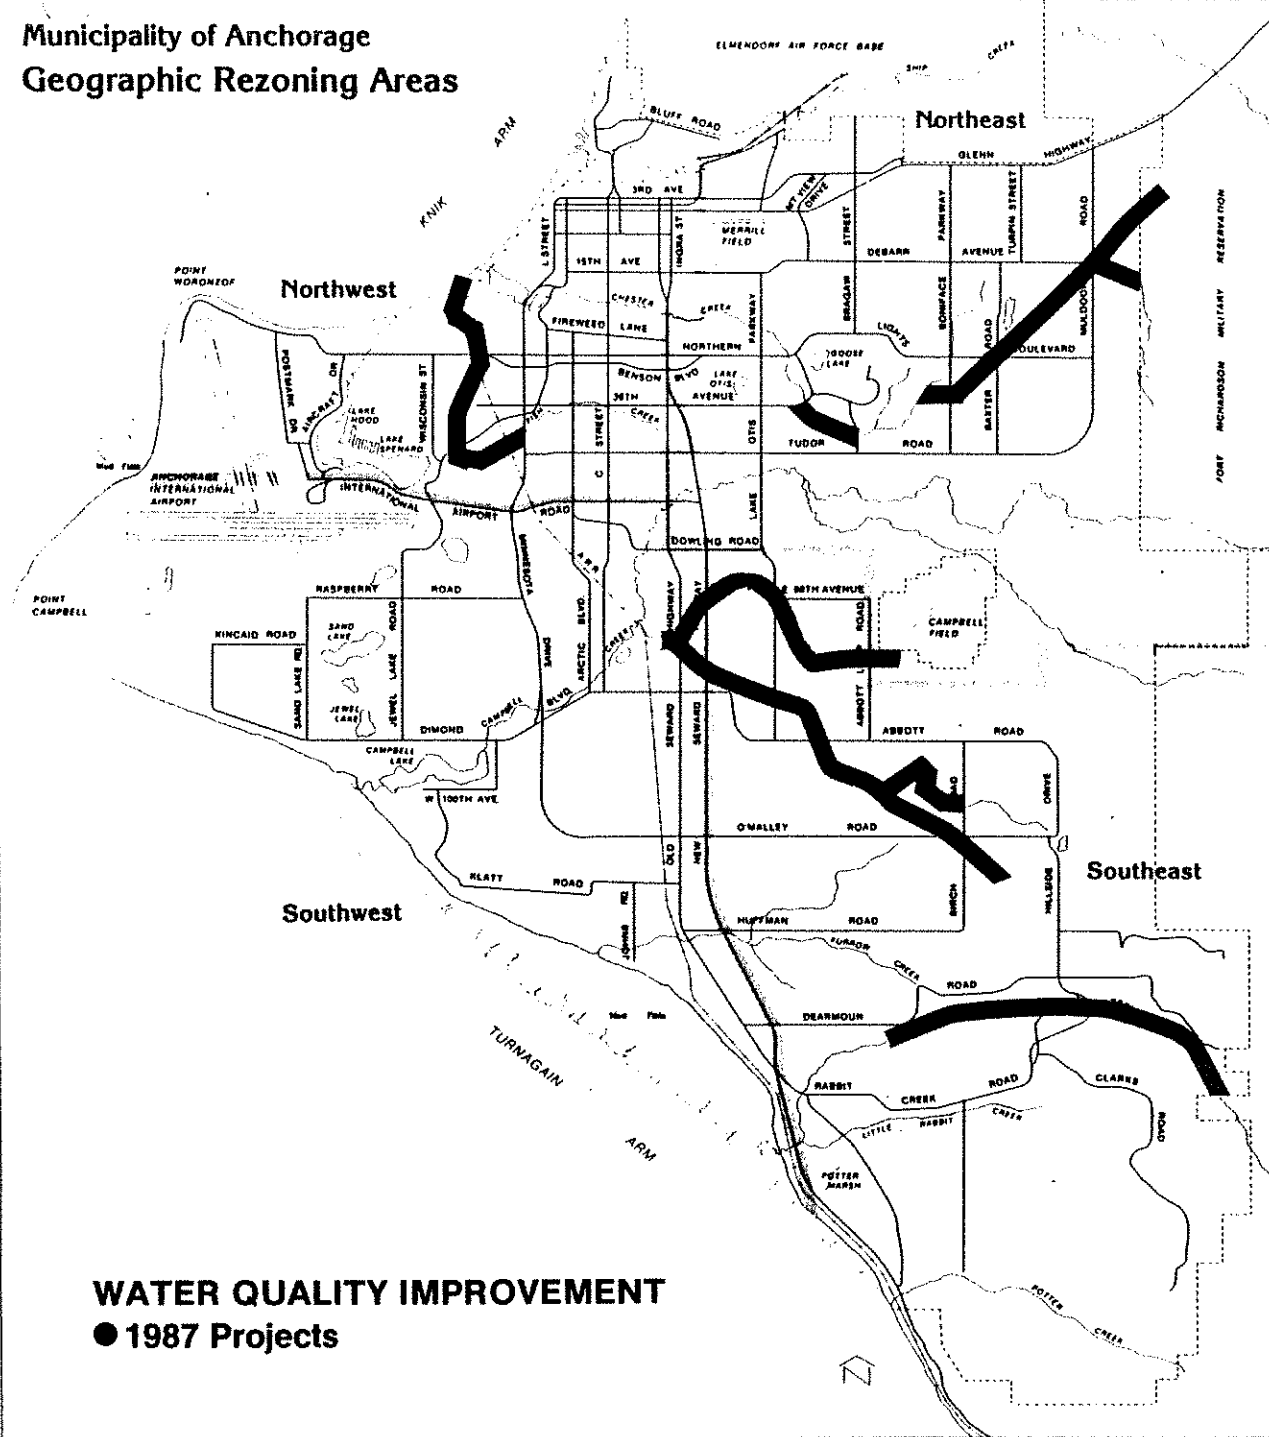

Acquire land along Rabbit, Fish, Little Campbell and Chester Creeks, as well as others as budget and community priorities direct, sufficient to protect local creeks, creek banks, and the immediate upland area along these creeks from human and domestic animal contamination and encroachment by structures and other "improvements" which would otherwise threaten the water quality.

The designated wetlands which are included in the Water Quality Improvement Program should be preserved because of their valuable habitat, proximity to existing Municipal park lands, and areas of important habitat and hydrological values. These wetlands areas should be acquired over a period of six years. The areas selected for acquisition have been chosen because of documented high resource value and have, in some cases, been tracted for acquisition through the reserve tract procedure under 21.80.135 of the Anchorage Municipal Code.
