

FIRE

ANCHORAGE FIRE DEPARTMENT

Department Goal

The goal of the Fire Department for the 2007-2012 Capital Improvement Budget/Program is to provide effective and efficient emergency operations, fire suppression and emergency medical services (EMS) capability through the purchase of new and replacement fire apparatus, Mobile Intensive Care ambulances, related fire and medical equipment and vehicles, and construction of fire stations and other support facilities.

Fire

The 2007-2012 CIP provides for the scheduled replacement of aged fire apparatus/equipment to sustain emergency fire operations in the Anchorage Fire Service Area, Chugiak Fire Service Area, and the Girdwood Fire Service Area.

Emergency Medical Services

The 2007-2012 CIP provides for both the scheduled replacement of medic ambulance units and associated medical equipment, and expansion of the current ambulance fleet to maintain the current level Emergency Medical Services (EMS) services provided on an Areawide basis.

Facilities

Fire station renovation and upgrades are budgeted in the Fire Department CIB/CIP. Smaller fire facility projects are budgeted by the Maintenance & Operations department (Chapter 9) and include such items as major building systems upgrade projects.

ANCHORAGE FIRE DEPARTMENT

Apparatus Definitions

Pumper/Engine -- Normally referred to as a "Triple Combination Pumper"; this apparatus has a water tank, a "Class A" fire pump, and hose compartment. It generally has tool compartments, etc., a minimum complement of ground ladders, and the necessary complement of tools and equipment specified by NFPA and ISO.

Tender -- An apparatus designed specifically for the transport of water.

Pumper Tanker -- The same as a Tanker except it has a "Class A" fire pump that may be used for fire extinguishment as well as water transfer.

Aerial Apparatus -- An apparatus designed to carry a prescribed complement of ground ladders and has a power-operated aerial ladder. The aerial ladder may vary from 65 feet to 210 feet in length.

Ladder Tower (Aerial) -- An apparatus designed with all of the ground ladder complements and the aerial ladder, which terminates with a work platform. The aerial ladder may vary in length from 80 to 100 feet.

Quint -- An aerial apparatus equipped with a "Class A" fire pump, a water tank, complement of ground ladders, and an aerial ladder or platform. The vehicle is capable of operating as both an aerial and a pumper, but generally not at the same time.

Mini-Pumper -- a down-sized version of a "Pumper/Engine (see previous description) designed to provide a more rapid response to primarily wildfire incidents which occur in the urban/hillside forest interface where road access may be limited and a more agile initial ground attack, fire suppression response platform is needed.

Brush Rig -- Any of a large variety of smaller apparatus equipped specifically for the purpose of combating wildland fires. The AFD generally uses an all wheel drive apparatus such as a one- to one and one-half-ton vehicle equipped with compartments and a "slide- in" water tank and pump. This exact configuration of this type of unit varies considerably dependent on the terrain of the area where it is expected to operate.

Rescue Apparatus -- special purpose emergency response apparatus equipped to perform a wide range of incident support and specialized rescue functions.

HAZMAT Apparatus --special purpose emergency response apparatus equipped to perform a wide variety of incident support and specialized rescue and fire suppression associated with the potential or known presence of hazardous materials.

Medic Unit -- Type One, Class One, factory-equipped two- or four-wheel drive modular ambulance with ambulance prep package. Modular design, emergency/patient lighting, etc.; must comply with federal requirement KKK-A-1822C.
