AACE International CLASS 5 Cost Estimate - Class 5 estimates are generally prepared based on very limited information, and subsequently have wide accuracy ranges. Typically, engineering is 0% to 2% complete. They are typically prepared for any number of strategic business planning purposes, such as but not limited to market studies, assessment of initial viability, evaluation of alternate schemes, project screening, project location studies, evaluation of resource needs and budgeting, long-range capital planning, etc. Virtually all Class 5 estimates use stochastic estimating methods such as cost/capacity curves and factors, scale of operations factors, Lang factors, Hand factors, Chilton factors, Peters-Timmerhaus factors, Guthrie factors, and other parametric and modeling techniques. Expected accuracy ranges are from -20% to -50% on the low side and +30% to 100% on the high side, depending on the technological complexity of the project, appropriate reference information, and the inclusion of an appropriate contingency determination. Ranges could exceed those shown in unusual circumstances. As little as 1 hour or less to perhaps more than 200 hours may be spent preparing the estimate depending on the project and estimating methodology (AACE International Recommended Practices and Standards).

Anchorage Hydropower Utility

Anchorage Hydropower Utility
Organizational Overview

The Anchorage Hydropower Utility is an enterprise function of the Municipality of Anchorage (MOA).

In 2020, the MOA sold Municipal Light & Power (ML&P) and with the closing of the sale transaction to Chugach Electric Association, Inc. (CEA), the nature of the electric service provided by the MOA converted from the provision of retail electric service to a significant portion of Anchorage, through generation, transmission, and distribution facilities, to the far more limited provision of wholesale generation service through long-term contracts with two utility customers. MOA's ownership interest in the generation assets of the Eklutna Hydroelectric Project ("Eklutna Project") was not transferred to CEA and was retained by the MOA, as the Anchorage Hydropower Utility.

Anchorage Hydropower Utility is located approximately 30 miles northeast of Anchorage on the Old Glenn Highway. MOA, CEA, and Matanuska Electric Association, Inc. (MEA) share the project costs through a proportionate share of ownership. Under separate power purchase agreements (PPAs), for a term of 35 years, CEA will purchase its proportionate share (64.29%) of ML&P's share, and MEA will purchase its proportionate share (35.71%), of the Eklutna output. Through these PPAs, CEA and MEA have agreed to purchase the entire output of the MOA's Eklutna Project ownership interest.

Anchorage Hydropower
Business Plan

Mission
Provide energy that is safe and reliable to meet purchase power agreement (PPA) requirements.

Services
Anchorage Hydropower owns 53.33% of the generation assets of the Eklutna Hydroelectric Project. Anchorage Hydropower sells all its electric output to Chugach Electric Association (CEA) and Matanuska Electric Association (MEA) pursuant to PPAs. Anchorage Hydropower is currently subject to economic regulation by the Regulatory Commission of Alaska (RCA).

Business Goals
- Provide electricity to satisfy the PPAs.
- Maintain $3 million cash reserve in accordance with RCA Order U-19-020(39).
- Maintain 180 days of cash on hand to cover operating expenses.
- Maintain equity and earn net income at a level sufficient to continue to ensure the long-term financial stability of the utility.
- Operate the electrical system with optimum economic efficiency and strict adherence to environmental standards.

Strategies to Achieve Goals
- Implement industry best practices and streamline business processes to ensure the financial and operational integrity of the utility.
- Contract with an individual with knowledge of the Railbelt generation and transmission system and prudent utility practice to advise on power plant operations.
- Work collaboratively as owners of the Eklutna Hydropower Project to implement predictive maintenance program to reduce or eliminate outages and interruptions

Performance Measures to Track Progress in Achieving Goals
1. Maintain positive Net Income

About Anchorage Hydropower Utility

History
In 1929, the privately owned, Anchorage Power & Light Company (AP&L) began supplying electricity from a hydroelectric power plant on the Eklutna River, 30 miles northeast of Anchorage. In 1943, the city acquired the Eklutna plant from AP&L. In 1955, the U.S. Bureau of Reclamation completed construction of a new, larger plant on the Eklutna River. The city contracted for 16,000 kilowatts of generating capacity from that plant and "little" Eklutna was transferred to the federal government. In 1997, Municipal Light & Power (ML&P), Chugach Electric Association, Inc. (CEA), and Matanuska Electric Association, Inc. (MEA) jointly took ownership of the Eklutna Hydroelectric Plant. In 2020, through the sale of ML&P, the Municipality of Anchorage (MOA) retained its ownership interest in the generation assets of the Eklutna Hydroelectric Project (Eklutna Project). MOA, CEA, and MEA each own an undivided interest in the Eklutna Project in the following percentages: MOA, 53.33 percent; Chugach, 30 percent; and MEA, 16.67 percent.

Services
The Eklutna Project has 40 megawatts of generation capacity and produces approximately 130,000 kilowatt-hours of electricity per year.

In 2021, the project produced 142,979 megawatt hours (MWh) of clean energy. This is enough energy to power more than 24,600 residential homes for an entire year. Eklutna hydroelectric power is the lowest cost renewable energy in Southcentral Alaska.

Regulation
The utility is regulated by the Regulatory Commission of Alaska (RCA) and subject to abide by the rules and regulations in the utility's tariff, if any, or in special contracts with customers.

Under sections 13.11(a) and 16.04.B. of the Anchorage Municipal Charter, the revenue received from CEA under the power purchase agreement must be distributed in the MOA Trust Fund. The new section 26.10.068 provides that revenue received from CEA must be distributed to the MOA Trust Fund. It also provides that additional revenue may be distributed to the general government budget, subject to the requirement that the utility maintain sufficient reserves to meet anticipated capital and operating expenses and as required by the RCA.

The RCA requires that the MOA maintain a reserve fund of not less than $3,000,000 to support the MOA's share of anticipated operations. If for any reason these reserves are not met, the utility is prohibited from paying a dividend to general government and depositing CEA's payments to the trust.

Physical Plant
The 40-megawatt (MW) Eklutna Project is in Southcentral Alaska approximately 30 miles northeast of downtown Anchorage near the Native Village of Eklutna. The U.S. Bureau of Reclamation (USBR) constructed the project in 1955, which included rehabilitation of an existing dam at the outlet of Eklutna Lake.

The rehabilitated dam was damaged in the 1964 earthquake, at which point a new and taller embankment dam was constructed just downstream. The new dam is an earth and rockfill structure 815 feet long and 41 feet high with a rectangular concrete spillway that runs through the dam. Eklutna Lake, approximately 7 miles long and 1 mile wide, is located within Chugach

State Park and provides almost 90 percent of the domestic water supply for the MOA. The intake structure for the Eklutna Project is located 36 feet below the natural lake level. From there, water is diverted north into a 4.6-mile-long tunnel through Goat Mountain and then into a 1,370-foot-long penstock before reaching the powerhouse located on Old Glenn Highway. The tailrace flows under the highway and then discharges into the Knik River. The powerhouse contains two generating units.

Visit the Eklutna Hydropower website at: https://www.eklutnahydro.com/background/

Anchorage Hydropower Utility
Highlights and Future Events

The 1991 Fish and Wildlife Agreement (Agreement) gives deadlines for specific milestones in the consultation, program development, and implementation processes. These deadlines, listed below, are all relative to the date on which ownership of the project was officially transferred from the federal government to the three local utilities (October 2, 1997). This date is referred to as the Transaction.

Before the Governor issues the final Fish and Wildlife Program, the Agreement requires the owners to develop study plans, conduct the necessary studies, prepare study reports, develop a draft Fish and Wildlife Program, engage the public, and to consult with agencies and interested parties multiple times throughout the process. In order to allow adequate time to meet these requirements, the owners have initiated the consultation process early.

- 2022 – Initiate the consultation process no later than 25 years after the transaction date
- 2024 – Issuance of the Final Program by the Governor at least 3 years prior to implementation
- 2027 – Begin implementation of the Program no later than 30 years after the transaction
- 2032 – Complete implementation of the Program no later than 35 years after the transaction

The planned schedule to provide the Governor with a Proposed Fish and Wildlife Program is shown below, with updates through Fall of 2021.

2019 – During the last week of August, the owners' team conducted a site reconnaissance of the Eklutna River. The primary goal was to provide the project owners' technical and regulatory staff with the chance to review and observe site conditions and project facilities. In addition, the site reconnaissance allowed technical staff to assess the potential scope of study efforts needed to provide the Governor and his/her staff with data to establish the Fish and Wildlife Program required by the 1991 Fish and Wildlife Agreement. For more information, please reference the trip report which can be found under Final Documents at: Documents - Eklutna Hydro

2020 – In June 2020, a Technical Work Group (TWG) was established for study planning purposes. The TWG consists of technical experts and representatives from the following entities:

- Native Village of Eklutna
- Alaska Department of Fish and Game
- U.S. Fish and Wildlife Service
- National Marine Fisheries Service
- Trout Unlimited
- Alaska Pacific University
- Alaska Institute for Climate and Energy
- Hydropower Project Owners

Earlier in the year, the project owners acquired aerial imagery, spherical videography, and LiDAR of the entire Eklutna River as well as the northeastern shoreline of Eklutna Lake along the lakeside trail. The spherical videography is now available online at: https://biglook360.com/eklutna/ Segments 1-7 show the river and lake shoreline going upstream at a higher altitude, while segments 8-14 are going downstream at a lower altitude. The imagery, videography, and LiDAR will be utilized during the ongoing study planning process this year and during subsequent study implementation.

The following information can be found at the project website: https://www.eklutnahydro.com/project-schedule/

September 2020 – the project owners' technical team held several meetings with the TWG to establish a study program framework. The project owners then developed Draft Study Plans and distributed them to the TWG on October 26, 2020, for review and comment. The comment deadline was November 25, 2020. A subsequent TWG meeting was held on November 30, 2020, to review the TWG's comments on the Draft Study Plans.

March 2021 – After receiving comments from the Technical Work Group (TWG) and others on the Draft Study Plans, the project owners held multiple meetings with the TWG in November and December 2020 to discuss their comments. The project owners then revised the study plans based on all comments received and distributed the Revised Draft Study Plans to the TWG on January 18, 2021, for a second round of review and comment. Another meeting with the TWG was held on January 25, 2021, to review the major revisions to the study plans and to answer any clarifying questions from the TWG before the comment deadline on January 29, 2021. The project owners revised the study plans again to address the second round of comments from the TWG, and then distributed the Proposed Final Study Plans to the parties to the 1991 Fish and Wildlife Agreement on February 24, 2021, for review and concurrence. The project owners are currently working to obtain all necessary permits and authorizations for the planned summer field work season.

The project owners were happy to report that letters had been received from all of the parties in the 1991 agreement officially concurring with the scope of work in the Study Plans. Following the process outlined by the state agencies, the concurrence letters from the four state agencies and the Proposed Final Study Plans were then sent to the Alaska Energy Authority (AEA) as the governor's representative for review. The AEA provided no additional comments, and the Study Plans were finalized in May 2021.

June - August 2021 – Two of the primary studies being conducted in 2021 were an instream flow study and a geomorphology/sediment transport study. Both of these studies require a team to establish transects (cross sections) in the river for data collection. The project team conducted a site visit with the Technical Work Group (TWG) to establish exact transect locations. In order to collect data for both the instream flow and geomorphology/sediment transport studies, the project owners planned to use the drainage outlet gate at the base of the spillway in the dam to release specific flows into the river in the fall of 2021. However, this gate is not used on a regular basis and a large pile of rocks and debris had accumulated in front of it over the years. The project owners hired a team of divers to remove the rocks from the front of the gate so the gate could be inspected and determine if it was operational to conduct the study flows. The rock and debris removal was initiated and was scheduled to be completed in August. Upon inspection, there was some concern that the gate was not in good enough condition to conduct the flow releases in the fall 2021, so the decision was made to replace the gate in August at the same time as the remaining rock and debris are removed.

September 2021 – During the study planning process, concerns were raised that the study flow releases would result in unusually high flow conditions in the Eklutna River resulting in potentially hazardous conditions. Although there is no official public access to the Eklutna River, the river is still open for fishing, and trespassing to access the river does occur. With that in mind, the project owners have developed a Public Safety Plan in coordination with the Native Village of Eklutna, Eklutna, Inc., Chugach State Park, and the Anchorage Water and Wastewater Utility. The plan includes placing warning signs at all known access points to the Eklutna River and near the pond upstream of the dam, as well as, a formal notification of the flow release schedule to all of the project stakeholders, downstream landowners, and Native Village of Eklutna.

The study flow releases are also likely to mobilize and transport a large portion of the accumulated sediment from behind the lower dam site. Both the Alaska Department of Transportation and Public Facilities and the Alaska Railroad Corporation have expressed concern that the sediment would deposit downstream near their respective bridges and potentially cause negative impacts. The project owners reviewed all relevant available data and did not anticipate any negative impacts to downstream infrastructure. However, out of an abundance of caution, the project owners will monitor the streambed near the highway and railroad bridges daily during the study flow releases for any unanticipated sediment deposition or scour that would be cause for concern.

After replacing the drainage outlet gate at the spillway, consulting with the downstream landowners, and obtaining all of the necessary permits and authorizations, the project owners initiated the study flow releases. Drone footage of the flow releases at the dam can be viewed **here.**

- Monday, September 13 – Initiated flow releases at 150 cfs
- Friday, September 24 – Decrease flows to 75 cfs
- Wednesday, September 29 – Decrease flows to 25 cfs
- Wednesday, October 6 – Decrease flows to 0 cfs

On September 14, representatives from the Anchorage Water and Wastewater Utility and the Native Village of Eklutna joined board members and CEOs from Chugach Electric and Matanuska Electric at the Eklutna Canyon campground to observe the study flow releases and learn more about the necessary preparation and expected outcomes of this part of the study program.

October 2021 – The study flow releases ended on October 6. The project owners were happy to report that field crews successfully collected data at established transects throughout the Eklutna River during each of the study flow releases. Additional transects in the river were surveyed before and after the study flow releases to examine how sediment would move under various flows. As expected, a large portion of the accumulated sediment from behind the lower dam site was mobilized and transported downstream by the study flow releases. Time-lapse videos of the sediment wedge can be viewed **here**. However, no significant sediment deposition or scour was observed at the downstream highway or railroad bridges, and no public safety incidents were reported. The project team started analyzing the data that was collected in 2021 and drafting study reports.

The first year of field work has been completed, the project owners have initiated the study planning process for 2022. The project owners planned on continuing some of the aquatics studies that were initiated in 2021, as well as conducting new studies that will focus on other resource areas including terrestrial, recreation, and cultural resources. With that in mind, the

project owners have established three new Technical Work Groups (TWGs) for each of the new focus areas. The following entities are currently participating in one or more of the TWGs.

- Native Village of Eklutna (aquatics, terrestrial, recreation, cultural)
- Alaska Department of Fish and Game (aquatics, terrestrial, recreation)
- Alaska Department of Natural Resources – Chugach State Park (recreation)
- Alaska Department of Natural Resources – Office of History and Archaeology (cultural)
- U.S. Fish and Wildlife Service (aquatics, terrestrial, cultural)
- National Marine Fisheries Service (aquatics)
- Trout Unlimited (aquatics, recreation)
- Alaska Pacific University (aquatics, terrestrial)
- Hydropower Project Owners (aquatics, terrestrial, recreation, cultural)

November 2021 – Preliminary results from the studies in 2021 were presented to the aquatics Technical Work Group (TWG). The team continued to work on drafting year 1 study reports, which were planned to be distributed to the aquatics TWG in February, 2022, for review and comment.

Also, a proposed study program framework for year 2 was presented to all four TWGs. After receiving feedback from the TWGs regarding the studies to be conducted next year, the team immediately started drafting the year 2 study plans, which were distributed in February for review and comment. The year 2 study plans were planned to be distributed to all four TWGs as well as the parties to the 1991 agreement.

February 2022 – The draft year 1 study reports and the draft year 2 study plans were distributed to the Technical Work Groups (TWGs) and the parties to the 1991 Agreement (parties) on February 11. The TWGs and the parties had one month to review and provide comments to the project owners. Shortly after the comment deadline, the project owners scheduled a series of TWG meetings to address any substantive comments that would warrant further discussion. The project team revised as appropriate and distributed the Proposed Final Year 2 Study Plans to the parties for concurrence. The goal of the project owners was to receive concurrence from all of the parties by mid-May so that a second field season by late May could be initiated. The year 1 study reports and year 2 study plans were posted to the documents page of the project website.

March 2022 – The comment deadline for the draft year 1 study reports and year 2 study plans was March 11. A series of TWG meetings were scheduled for the week of March 21 to review the substantive comments that warranted further discussion. The draft year 2 study plans, and all of the comment letters were posted to the documents page of the project website.

April 2022 – The project team conducted a series of TWG meetings the week of March 21 to review the substantive comments on the draft year 2 study plans that warranted further discussion. This included comments on the study area, methods, and schedule for several key studies being conducted this year, including the geomorphology and sediment transport study, instream flow study, water quality study, fisheries studies, terrestrial wildlife studies, recreation study, cultural resources study, and engineering studies. The project team then developed a comprehensive comment-response table, revised the year 2 study plans, and distributed the proposed final year 2 study plans to the parties to the 1991 Agreement on April 1 for review and concurrence. The proposed final year 2 study plans, which includes the comment-response table as an appendix, will be posted to the documents page of the project website.

The project team has started to develop fish habitat and sediment transport models using the instream flow and geomorphology data that was collected last year. Part of this process includes establishing Habitat Suitability Criteria (HSC) curves for the Eklutna River. The project team distributed a draft technical memorandum with recommended HSC curves to the Aquatics TWG on February 25 for review and comment and then met with the Aquatics TWG on April 18 to discuss further. The project team is now working to finalize the HSC curves for the Eklutna River and will post the final tech memo to the documents page of the website. Modeling results will be presented to the Aquatics TWG later this year.

May 2022 – The project owners have received concurrence letters from all of the parties to the 1991 Agreement. The three state agencies (Alaska Department of Fish and Game, Alaska Department of Natural Resources, and the Alaska Department of Environmental Conservation) concurred with the proposed scope of work for all of the proposed studies. The two federal agencies concurred with the proposed scope of work for 10 of the proposed studies but have reserved their concurrence on the proposed year 2 efforts for both the instream flow study and the geomorphology and sediment transport study until modeling results are available later this year. The project team will finalize the study plans and post them to the documents page of the website along with all of the concurrence letters.

June 2022 – After obtaining all of the necessary permits, the project team initiated the second study year by conducting some early season study efforts this spring, which included:

- Collecting new LiDAR data and aerial imagery of the Eklutna River to further assess how the flow releases last year moved sediment throughout the river
- Downloading winter flow data from the stream gages in the river and winter temperature data from the thermistor strings in the lake
- Deploying both time-lapse and motion-sensitive wildlife cameras at key locations along the river to determine what species are using the study area
- Sampling for moose browse to help assess if moose numbers now are below the habitat carrying capacity
- Surveying for migratory waterfowl, shorebirds, and raptors to assess their seasonal use of wetlands and other habitat

September 2022 – During field work this week, two hand-hewn logs from the Eklutna Alex cabin were found on the lake shoreline near the Eklutna Lake Campground, nearly seven miles from where they originated at the head of the lake. Since this is a well-used area of the park known for people making campfires, there was concern that the cabin logs may be vulnerable to burning or damage. McMillen Jacobs notified the Native Village of Eklutna, Chugach State Park, and State Historic Preservation Office within 24 hours so that a plan could be developed to move/protect them. The cabin logs have since been returned to Eklutna Village. The tribe intends to preserve the remnants and perhaps feature the cabin logs in a display with interpretive information.

October 2022 - Leadership from the Native Village of Eklutna (NVE) and the owners of the Eklutna Hydroelectric Project met on October 19 to discuss continued opportunities to work together and collaborate on the efforts around the 1991 Fish & Wildlife Agreement. Led by NVE Tribal Council President and Chair Aaron Leggett, several members of the Council joined Anchorage Municipal Manager Amy Demboski, Chugach Electric CEO Arthur Miller, Matanuska Electric (MEA) CEO Tony Izzo, along with board members and staff from the organizations. The Tribal Council members recounted some of the history of the Eklutna people, the Eklutna River, and surrounding land, as well as compelling stories of individual experiences and relationships

with the area. The meeting also focused on opportunities for the stakeholders to work together on possible funding sources as the study efforts are finalized and potential fish and wildlife mitigation and enhancement projects are studied.

November 2022 – Using the data that was collected before, during, and after the study flow releases last year, the project team has developed an instream flow model and a sediment transport model for the Eklutna River. Preliminary results from both of these models, as well as some preliminary fisheries and water quality results from the lake studies, were presented to the Aquatics Technical Work Group (TWG) during a series of three meetings this fall. At each of these meetings, the project team also presented ideas for potential engineering solutions that would provide flows into the Eklutna River and fish passage into Eklutna Lake. Next steps include phase 1 of the engineering feasibility and cost assessment, which includes developing conceptual designs and high-level cost estimates. Supplemental instream flow analysis and phase 1 engineering results (conceptual designs and high-level cost estimates) will be presented to the Aquatics TWG this winter.

February 2023 – On February 13, the project team presented the preliminary 2D fish habitat modeling results to the Aquatics Technical Work Group (TWG). This supplemental analysis was conducted for specific reaches of the Eklutna River that could not be evaluated as part of the 1D fish habitat modeling effort due to hydraulic complexity, channel instability, and access issues. The full year 2 study results were distributed to the TWGs in March for review and comment, including the conceptual designs and cost estimates developed during phase 1 of the engineering feasibility and cost assessment. These results will inform the comprehensive alternatives analysis to be initiated in the spring of this year.

March 2023 – The Alaska Section of the American Water Resources Association held their annual conference in Anchorage on March 6 – 8, 2023. The Eklutna Hydroelectric Project team was invited to present at the conference. Samantha Owen, the Project Manager, presented an overview of the hydro project, the requirements of the Fish and Wildlife Agreement, and the overall study program. Kathy Dubé, the Geomorphology and Sediment Transport Study Lead, presented her study results and discussed how these results will be used to inform the development of a future Fish and Wildlife Program. The draft Year 2 study reports were distributed to the Technical Work Groups (TWGs) on March 24. During the week of March 27th, the project owners held a series of TWG meetings to provide a broad overview of the study results, answer questions, and go over the next steps. The TWGs will have one month to review and provide comments to the project owners by April 21st. The project team will then revise the reports as appropriate and distribute the Final Year 2 Study Reports and comment responses in May.

April 2023 – The alternatives analysis process has begun. The first in a series of 5 alternatives analysis meetings was held April 6th with the project owners, members of the Technical Work Groups (TWGs), and parties to the 1991 Fish and Wildlife Agreement in attendance. The alternatives analysis process was presented including the Cost Effectiveness and Incremental Cost Analysis model. Attendees were invited to submit comprehensive alternatives for analysis using a form listing the various component options. These alternatives will be discussed at upcoming alternatives analysis meetings.

May 2023 – The second alternatives analysis meeting was held May 17th. The Phase 1 engineering for the replacement dam alternative was presented, followed by a review of over 30 comprehensive alternatives submitted by the hydro project owners and several stakeholders including the Native Village of Eklutna, Alaska Department of Fish and Game, Chugach State

Park, National Marine Fisheries Service, U.S. Fish and Wildlife Service, Trout Unlimited, and The Conservation Fund. Each of the comprehensive alternatives was analyzed using a cost effectiveness model, and results were presented at the meeting. Attendees were invited to revise and resubmit their comprehensive alternatives, if desired, for further discussion at upcoming alternatives analysis meetings with an aim of narrowing down potential alternatives.

2023 - 2024 – Conduct public meetings, resolve any disagreements, and submit proposal to the Governor.

Road to completion
START
1 MARCH 2019
Initiated the required consultation process early by identifying key stakeholders and conducting initial consultation meetings.
2 Developed the project website, conducted an initial site reconnaissance, and compiled relevant existing information.
3 MARCH 2020
Distributed the Draft Initial Information Package (IIP) to stakeholders for review and comment.
4 APRIL 2020
Stakeholder meeting to answer questions and review comments on the Draft IIP.
5 Developed an information matrix to guide study planning.
6 Established the TWG, conducted preliminary field work, and kicked-off the study planning process.
7 Developed a proposed study program framework and reviewed it with the TWG.
8 OCTOBER 2020
Distributed draft study plans to TWG for review and comment.
9 NOVEMBER 2020
TWG meeting to review comments on draft study plans.
10 APRIL 2021
Finalize study plans and send to governor for review.
11 Acquire any required permits for studies and confirm field logistics.
12 Conduct first year of studies and develop draft reports.
13 Review draft study reports with the TWG, then finalize reports for first year of studies.
14 FEBRUARY 2022
Study planning for second year of studies.
15 Acquire any required permits for studies and confirm field logistics.
16 Conduct second year of studies and develop draft reports.
17 Review draft study reports with the TWG, then finalize reports for second year of studies.
18 APRIL – JULY 2023
Develop draft summary of study results and conduct alternatives analysis.
WE ARE HERE
19 JULY- OCT. 2023
Develop draft fish and wildlife program and distribute to stakeholders for review and comment.
20 JAN. 2024
Conduct public meetings.
21 JAN. – APRIL 2024
Review and consider all comments, develop a final proposed fish and wildlife program, and submit to the governor.
22 Parties to the 1991 Agreement have 60 days to submit comments and any alternative recommendations to the governor, then the project owners have 30 days to submit responses to the Governor.
23 OCTOBER 2024
Deadline for governor to issue a final fish and wildlife program.
24 OCT. 2027
Deadline to begin implementation of the final fish and wildlife program.
25 OCT. 2032
Deadline to complete implementation of the final fish and wildlife program.
PROJECT COMPLETION
Completed Tasks

Anchorage Hydropower Utility
External Impacts

A Fish & Wildlife Agreement in 1991, with the United States Fish and Wildlife Service (USFWS), the National Marine Fisheries Service (NMFS), and the State of Alaska (the State) came to an agreement that requires the owners to:

- examine, and quantify if possible, the impacts to fish and wildlife from the Eklutna Hydroelectric Project
- examine proposals for the protection, mitigation and enhancement of fish and wildlife affected by the hydroelectric development
- consider the impacts of any protection, mitigation, or enhancement (PME) measures on other environmental resources and beneficial public uses as well as available means to mitigate those impacts
- develop and propose a Fish & Wildlife Program to the Governor.

The Governor will then review the proposal and issue a final Fish & Wildlife Program giving equal consideration to:

- the purposes of efficient and economical power production
- the protection, mitigation of damage to, and enhancement of fish and wildlife
- the protection of recreation opportunities
- municipal water supplies
- the preservation of other aspects of environmental quality
- other beneficial public uses
- requirements of State law

Throughout this process, the owners are required to consult with the USFWS, the NMFS, State resource agencies including the Alaska Department of Fish & Game (ADF&G), the Alaska Department of Environmental Conservation (ADEC), the Alaska Department of Natural Resources (ADNR), and any other interested parties. The USFWS, NMFS, and the State agreed that this process obviates the need for the owners to obtain a license for the project from the Federal Energy Regulatory Commission (FERC). The Native Village of Eklutna and Anchorage Water & Wastewater Utility are also included in the process.

Anchorage Hydropower Utility
Capital Overview

Capital Project Selection Process
The Eklutna Operating Committee (EOC), of which the Municipality is a member, reviews engineering and operating reports, maintenance schedules, and other information about the condition of the generation assets of the Eklutna Power Project (the Project). The EOC develops a five-year capital plan and develops and approves a current year capital project budget based on need, available resources, and schedule.

Significant Projects
Fish & Wildlife Project – In compliance with the 1991 Fish and Wildlife Agreement between the Eklutna project owners, the Federal government, and the State of Alaska, Anchorage Hydropower is responsible to pay for 19.04% of the costs associated with developing and implementing a Fish & Wildlife Study Plan, designed to mitigate any effects of the hydroelectric activity of the Project on fish and wildlife in the area.

Impacts on Future Operating Budgets
The entity must retain equity for the payment of capital projects in the future. The Municipality is responsible for 19.04% of the Eklutna generation capital expenditures and any future Fish & Wildlife project expenditures.

Description

Fish and Wildlife costs are for the development of studies required by the agreement.

Comments

The Eklutna Operations Committee has approved projects that are required for components of generators. The Chugach Electric Association (CEA), Municipality of Anchorage (MOA), and Matanuska Electric Association (MEA) proportionately share the costs as approved in the sale agreement:
CEA - 64.29%
MOA - 19.04%
MEA - 16.67%

Subject:	Order U-24-024(3) (Anchorage Hydropower)
Date:	Tuesday, August 20, 2024 9:54:32 AM

BY ORDER OF ADMINISTRATIVE LAW JUDGE JAMES L. WALKER

Order U-24-024(3)

ORDER DENYING MOTION FOR EXPEDITED CONSIDERATION IN PART

On August 15, 2024, the Municipality of Anchorage d/b/a Anchorage Hydropower (AHP) filed a motion for expedited consideration of their pending request for acknowledgement and reinstatement of voting rights on the Eklutna Operating Committee. AHP specifically requested adoption of a procedural schedule in this docket that would result in issuance of a final order by October 2, 2024, substantially earlier than the statutory timeline under AS 42.05.175(i) of January 14, 2025. AHP stated the basis for this request in the body of its motion. AHP also requested expedited consideration of their motion for expedited consideration. AHP requested that the other parties be required to respond to the motion for expedited consideration by August 19, 2024, with reply due August 20, 2024, and a decision on the motion for expedited consideration by August 23, 2024. In the motion, AHP stated that Matanuska Electric Association, Inc. (MEA) opposed expedited consideration, Chugach Electric Association, Inc. (Chugach) had not responded to AHP's inquiry about expedited consideration, and that the Office of the Attorney General, Regulatory Affairs and Public Advocacy Section (RAPA) was not opposed to expedited consideration.

Under 3 AAC 48.091(c), a party opposing or supporting a motion has ten days to respond to that motion. This would make responses to AHP's motion for expedited consideration due Monday, August 26, 2024. Under 3 AAC 48.091(e), replies by the movant are due three business days after responses are filed. In this instance that would make any reply to responses to AHP's motion for expedited consideration due, at the latest, by Thursday, August 29, 2024. With Order U-24-024(1), as modified by Order U-24-024(2), the Commission has scheduled a prehearing conference in this matter for August 30, 2024. AHP has not requested a revision to this prehearing conference date.

Under 3 AAC 48.091(g)(3), a request for expedited consideration must be accompanied by an affidavit or other evidence showing the facts that justify expedited consideration. The Affidavit of Mark A. Corsentino, P.E., accompanying AHP's motion for expedited consideration does not address the request for expedited consideration of the motion for expedited consideration. Due to AHP's failure to provide evidence of a reason for expedited consideration of its motion for expedited consideration, I deny that portion of AHP's motion for expedited consideration.

Responses to AHP's motion for expedited consideration are due by August 26, 2024. Any reply to those responses are due within three business days of the date the response is filed. If there is a dispute on the AHP motion for expedited consideration, the parties should be prepared to present limited oral argument at the prehearing conference on August 30, 2024. Oral argument will be limited to not more than 5 minutes per party due to RAPA's need to leave the conference by 3:00 p.m.

I electronically notified the following:

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

CHUGACH ELECTRIC ASSOCIATION, INC. AND MATANUSKA ELECTRIC ASSOCIATION, INC.'S JOINT OPPOSITION TO AHP'S MOTION FOR EXPEDITED CONSIDERATION

Pursuant to 3 AAC 48.091(c), Chugach Electric Association, Inc. ("Chugach") and Matanuska Electric Association, Inc. ("MEA") jointly oppose the Municipality of Anchorage ("MOA") d/b/a Anchorage Hydropower's ("AHP's") Motion for Expedited Consideration ("AHP's Motion for Expedited Consideration") of its Request for Acknowledgement of Acquisition of Expertise Required to Participate As A Voting Member of the Eklutna Operating Committee ("AHP's Request for Acknowledgement"). As explained below, there is no need for the Commission to rush its consideration of AHP's request, and more importantly, there are significant issues related to AHP's request that the Commission should consider and resolve as part of its review of AHP's Request for Acknowledgement.

I. Many Significant Issues Posed in This Proceeding Must be Considered and Resolved

In AHP's Motion for Expedited Consideration, AHP states that there is only one, straightforward issue in this docket relating to AHP's expertise to participate on

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

the Eklutna Operating Committee ("EOC").[1] While Chugach and MEA agree that AHP's expertise is central to the Commission's consideration, they submit that there are many related issues that must also be considered. Pursuant to the Commission's Notice of Utility Request, the CEOs of Chugach and MEA have timely filed today joint comments on AHP's Request for Acknowledgement of Acquisition of Expertise Required to Participate As A Voting Member of the Eklutna Operating Committee ("Chugach and MEA's Joint Comments"). As set forth in the Chugach and MEA's Joint Comments, Chugach and MEA have concerns and maintain that there are significant questions to be addressed in this docket related to AHP's potential resumption of voting rights as an EOC member and under the 1991 Agreement[2] related to fish and wildlife protection, mitigation, and enhancement measures at the Eklutna Hydroelectric Project ("Eklutna Project"), including:

1) May AHP follow the direction of the Anchorage Assembly ("Assembly") to attempt to either un-do the significant efforts of all the Parties to the 1991 Agreement or unilaterally force a do-over of the carefully negotiated and now-complete lengthy process required under the 1991 Agreement?
2) May the Assembly exert its political and policy preferences in a manner that overrides the three utility Project Owners' considerations of prudent utility practice, applicable utility regulation, and the reliable operation of the Railbelt electric generation and transmission system?

[1] AHP's Motion for Expedited Consideration at 10.

[2] Agreement among the Municipality of Anchorage d/b/a Anchorage Municipal Light and Power, Chugach Electric Association, Inc., Matanuska Electric Association, Inc., U.S. Fish and Wildlife Service, National Marine Fisheries Services, Alaska Energy Authority, and the State of Alaska, relative to the Eklutna and Snettisham Hydroelectric Projects, dated August 7, 1991 ("1991 Agreement"), attached as Exhibit 1 to AHP's Motion for Expedited Consideration.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

3) May AHP take a position that the Project Owners cannot take any action under the 1991 Agreement or operating the project without first securing Assembly approval?

4) Is AHP's proposal for dealing with conflicts of interest adequate and is there a better approach for when AHP's representative, in his role as AHP's representative, engages with the utility he manages -- Anchorage Water and Wastewater Utility ("AWWU") -- the MOA, or the Assembly?

Please see Chugach and MEA's Joint Comments, which are incorporated herein by reference. Chugach and MEA believe that these issues require due process, review of applicable standards (statutory, regulatory and those set forth by the Commission in Order 39[3]), the development of a record (potentially following discovery), its presentation to the Commission, and potential briefing, before the Commission can render a fully considered decision. Additionally, Chugach and MEA believe that the Commission must consider how AS 42.05.641[4] applies to this situation and the questions posed in Chugach and MEA's Joint Comments. For instance, are Assembly's actions with respect to the 1991 Agreement consistent with AHP's obligations of a certificated public utility? Can the Assembly compel AHP to disregard its RCA-approved power purchase agreements (PPAs) and take actions detrimental to its power purchase customers?

---

[3] Order U-18-102(44)/U-19-020(39)/U-19-021(39), Order Accepting Stipulation in Part, Subject to Conditions; Transferring and Issuing Certificates of Public Convenience and Necessity, Subject to Conditions; Addressing Beluga River Unit Management, Gas Transfer Prices, and Third-Party Sales Gas Pricing; and Requiring Filings, dated May 28, 2020 (Order 39), at 60-67.

[4] AS 42.05.641 ("The commission's jurisdiction and authority extend to public utilities operating within a municipality, whether home rule or otherwise. In the event of a conflict between a certificate, order, decision, or regulation of the commission and a charter, permit, franchise, ordinance, rule, or regulation of such a local governmental entity, the certificate, order, decision, or regulation of the commission shall prevail.")

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

AHP has requested that the Commission issue its acknowledgement of expertise by October 2, 2024. Given that the prehearing conference has been set for August 30, 2024 to determine the necessary process, Chugach and MEA simply do not think that 33 days between those dates is sufficient. If nothing else, the numerous exhibits attached to AHP's Motion for Expedited Consideration demonstrate the complexity and intensity of the disagreements between the Assembly and the Project Owners related to the Project Owners' implementation of the 1991 Agreement. The Commission should take the time necessary to understand what it is being asked to do and what might result from its actions. As the Commission noted in Order U-18-102(52)/U-19-020(49)/U-19-021(49),[5] the Commission consideration and resolution of these matters must be accomplished in a manner consistent with the requirements of due process.

II. The EOC Will Not Make Significant Financial Decisions Implementing the Final Fish and Wildlife Program before January 2025

As a starting point, Chugach and MEA note that the factors leading to AHP's purported demonstration of expertise have existed long before its filing on July 18, 2024. As noted in its AHP's Request, Mr. Corsentino has served as the General Manager of AWWU since February 2019, the same year that the Project Owners initiated the process set forth in the 1991 Agreement.[6] Since that time, AHP assigned representatives (including Mr. Corsentino) to participate in the Eklutna Owners' collaborative process leading to the Proposed Final Fish and Wildlife Program filed

[5] Order Redesignating Commission Panel; Denying Motion to Reopen Dockets and Modify Order No. 39 Dated May 28, 2020; Denying Petition to Intervene; Denying Motion for Expedited Consideration of Petition to Intervene and Motion to Reopen Docket and Modify Order 30 Dated May 28, 2020; And Addressing Anchorage Ordinances, dated April 19, 2024.

[6] Exhibit 2 to AHP's Request for Acknowledgement, at 1.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

with the Governor in April 2024, which was expressly supported by Mayor Bronson.[7] As noted in Chugach and MEA's Joint Comments, the Eklutna Owners (including AHP's representatives) agreed unanimously on every process and substantive decision through the five year process required under the 1991 Agreement. AHP surrendered its voting rights on the EOC only one year into this process and since then, neither the MOA nor AHP sought to demonstrate sufficient expertise exists within the MOA to end the surrender of its voting rights on the EOC and under the 1991 Agreement per Commission's Order 39.[8] That view of its expertise apparently changed when the Assembly approved Mr. Corsentino's additional role as the Utility Director of AHP on July 2, 2024, but MOA's change in view of its expertise following a change in leadership does not itself create the need for an expedited approval by the Commission.

Rather, AHP argues that the Commission should set its compressed schedule because the EOC will start making significant capital outlays and decisions related to operation, maintenance, and budgeting to implement the Final Fish and Wildlife Program the day after the Governor issues that decision in October 2024 and that AHP's portion of such costs would exceed the revenues AHP receives under its long-term PPAs with Chugach and MEA. Chugach and MEA disagree with these assessments because no such financial commitments of the Project Owners will be committed in the time period between October 2024 and January 2025 – when the Commission is scheduled to issue a final order in this docket.

First, the Governor's issuance of the Final Fish and Wildlife Program starts a review period during which actions by the Parties to the 1991 Agreement may seek review of the Final Fish and Wildlife Program or the Governor's actions in United

---

[7] *See* Mayor Dave Bronson's letter "Re: Eklutna Hydroelectric Project, Proposed Final Fish and Wildlife Program", April 26, 2024, available at https://eklutnahydro.com/wp-content/uploads/2024/05/2024-04-26-Comments-on-Proposed-Final_Mayor.pdf

[8] Order 39, at 60-67.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

States District Court for the District of Alaska.[9] Chugach and MEA will not implement the Final Fish and Wildlife Program during this appeal period or the pendency of any appeals as it would be imprudent to make significant financial commitments to implement a Final Fish and Wildlife Program that may be overturned on appeal.

Second, the Assembly's AR No. 2024-218(S), As Amended (and the MOA) requests that the Governor delay in implementation of the Final Fish and Wildlife Program by two years to further explore alternatives (unknown at this time).[10] If the Governor grants this request, the Project Owners would not be able to implement the Final Fish and Wildlife Program for years. Because this request disregards the express terms of the 1991 Agreement and Order 39 and fails to recognize that implementation cannot begin until the additional alternatives process is complete, Chugach and MEA oppose such delay, but note that they will not implement the Final Fish and Wildlife Program if any delay is ordered by the Governor, or is still being sought via judicial challenge.

Third, Chugach and MEA disagree with AHP's assertions about the costs that would be committed and incurred between October 2024 and January 2025. The current 2024 budget for the Eklutna Project does not provide any capital to implement the Final Fish and Wildlife Program that the Governor approves in the next few months. The EOC (on behalf of the Project Owners) will not be able to develop a 2025 budget that implements the Final Fish and Wildlife Program until after the Governor's approval and the Project Owners have had a chance to review it and decide how to proceed under the 1991 Agreement. (To be clear, the EOC must establish a 2025 budget for standard operations of the Eklutna Project in the next few months in a

[9] Section 104(c), Alaska Power Administration Asset Sale and Termination Act, Pub. Law 104-58, 109 Stat. 559 (November 28, 1995).

[10] Exhibit 4 to AHP's Motion for Expedited Consideration, at 3-4 and 7.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100

PHONE 206.883.2500

manner consistent with the decision-making process set forth in the Surrender and Order 39, but the EOC will not develop a supplemental budget to include expenditures to implement the Final Fish and Wildlife Program at that time.) Any vote by the EOC will necessarily follow that process so it is unlikely that the EOC will be voting on the 2025 supplemental budget until early 2025 -- after such time of consideration.

To allay such concerns, however, Chugach and MEA will commit to AHP that it will not make any budget commitments, capital expenditures or significant decisions related to operation, maintenance, and budgeting to implement the Final Fish and Wildlife Program until the earlier of (i) the Commission's final order on AHP's Request for Acknowledgement in this docket; and (ii) January 15, 2025. Notwithstanding this good-faith commitment, pursuant to the Commission's direction in Order 39 and the Surrender of EOC Voting Rights, dated October 27, 2020, executed by AHP, Chugach and MEA,[11] the EOC will continue to operate, dispatch, and maintain the Eklutna Project and follow through on the process outlined under the 1991 Agreement as it has since October 2020 through unanimous decisions by Chugach and MEA on behalf of the Project Owners. Chugach and MEA will also continue to resolutely defend the Project Owners' implementation of the 1991 Agreement and the Proposed Final Fish and Wildlife Program.

III. Conclusion

The Commission should deny AHP's Motion for Expedited Consideration and proceed deliberately and thoroughly to examine AHP's Request for Acknowledgement and the issues it presents.

RESPECTFULLY SUBMITTED this 26th day of August, 2024.

Re: RCA Docket U-24-024; In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee; Initial Comments of Chugach Electric Association, Inc. and Matanuska Electric Association, Inc.

Dear Commissioners:

We are writing on behalf of Chugach Electric Association, Inc. (Chugach) and Matanuska Electric Association, Inc. (MEA), two of the three owners of the Eklutna Hydroelectric Project (Project). We are jointly submitting the following initial comments on the petition filed by the Municipality of Anchorage d/b/a Anchorage Hydropower (AHP), the third owner of the Project, regarding AHP's acquisition of expertise necessary for it to regain voting rights on the Eklutna Operating Committee (EOC) and under the 1991 Agreement.[1] AHP's petition is required by the Regulatory Commission of Alaska's Order 39 issued in August 2020[2] and the agreement set forth in the Surrender of EOC Voting Rights, dated October 27, 2020, executed by AHP, Chugach and MEA (collectively, the "Project Owners").

1. Participation In Proceeding

We will participate jointly as parties in this proceeding through our counsel at Wilson Sonsini.

2. Qualifications

At this point, we do not oppose AHP's nomination of Mr. Corsentino to become a voting member of the EOC. We will defer to the Commission's investigation of Mr. Corsentino's qualifications and whether AHP has gained sufficient expertise necessary for it to regain voting rights on the EOC pursuant to the criteria outlined in Order 39, but we reserve the right to take a position later in this proceeding.

---

[1] Agreement among the Municipality of Anchorage d/b/a Anchorage Municipal Light and Power, Chugach Electric Association, Inc., Matanuska Electric Association, Inc., U.S. Fish and Wildlife Service, National Marine Fisheries Services, Alaska Energy Authority, and the State of Alaska, relative to the Eklutna and Snettisham Hydroelectric Projects, dated August 7, 1991 (1991 Agreement).

[2] Order U-18-102(44)/U-19-020(39)/U-19-021(39), Order Accepting Stipulation in Part, Subject to Conditions; Transferring and Issuing Certificates of Public Convenience and Necessity, Subject to Conditions; Addressing Beluga River Unit Management, Gas Transfer Prices, and Third-Party Sales Gas Pricing; and Requiring Filings, dated May 28, 2020 (Order 39), at 60-67.

3. Issues to be Addressed in this Proceeding

Chugach and MEA have certain issues and concerns related to AHP's notice and request that the Commission should address them in this proceeding.

First, we are concerned that the Anchorage Assembly (Assembly) does not appear to appreciate and respect the Commission's authority, our role as public utilities, and the Eklutna Owners' faithful execution of the process required under 1991 Agreement over the past five years leading to the Proposed Final Program we submitted to the Governor on April 25, 2024 and the Governor's expected decision in October 2024. In Order 39, the Commission specifically stated that during the surrender period, [AHP][3] "shall not have any ability to delay or change the Eklutna Project decisions made by Chugach and MEA". In the Surrender, AHP agreed that decisions related to the 1991 Agreement would be made pursuant to unanimous vote of Chugach and MEA. At every step of the process leading to and including the Proposed Final Program filed on April 25, 2024, Chugach, MEA and AHP's representatives agreed unanimously on each procedural and substantive decision without the need for any votes. Yet, the Assembly has taken numerous actions attempting to influence Eklutna Project decisions with respect to the Fish and Wildlife Program required under the 1991 Agreement, including recent actions seeking to both delay and change the Proposed Final Fish and Wildlife Program. For example, the Assembly added language to the Anchorage Municipal Code stating that it is the MOA's policy to restore continuous water into the Eklutna River (Anchorage Municipal Code 26.30.025A) – a requirement not found in the 1991 Agreement. On April 24, 2024, the Assembly appealed Order 39 itself and asserted that the "RCA lacked jurisdiction to enter Order 39" and "Order 39 violates state and federal law".[4] Most recently, the Assembly passed AR No. 2024-218(S), As Amended, that calls upon the Governor to (1) modify the process outlined in the 1991 Agreement to require the Project Owners to use two years of the three year pre-implementation period to identify an alternative infrastructure and engineering solution to what is proposed in the Proposed Final Fish and Wildlife Program; and (ii) remove substantive aspects (the "limited reopeners") from the Proposed Final Fish and Wildlife Program. In support, the MOA (under new leadership) submitted a letter that called for a two-year delay to program implementation to allow for consideration of additional alternatives not included in the Proposed Final Fish and Wildlife Program.

Through such resolutions, ordinances, and legal actions, the Assembly has disregarded the RCA's requirements in Order 39 and the Surrender by encouraging the Governor to take actions that conflict with the 1991 Agreement process and unanimous decisions (by all three Project Owners) that created the Proposed Final Fish and Wildlife Program, filed with the Governor in April 2024. The Assembly does not respect the significant resources expended, the five-year study and consultation process, contractual obligations, previous municipality

[3] At the time, the Commission referred to the "post-transaction electric utility owned by the MOA as Municipal Hydro Power (MHP)", which is now referred to as Anchorage Hydropower (AHP).
[4] *Anchorage Municipal Assembly v. Regulatory Comm'n of Alaska*, Case No. 3AN-24-06001CI (Assembly's Statement of Points on Appeal, filed on April 24, 2024).

positions, and the resulting negotiated Proposed Final Fish and Wildlife Program and its reopeners (with the MOA's active involvement every step of the way). Specifically:

- AR No. 2024-218(S) requests a delay in implementation of the Final Fish and Wildlife Program by two years to further explore alternatives (unknown at this time) that disregards the express terms of the 1991 Agreement and fails to recognize that implementation cannot begin until the additional alternatives process is complete;
- AR No. 2024-218(S)'s request to eliminate the two reopeners negotiated into the Proposed Final Program directly contradicts the intentions and interests of the Parties to the 1991 Agreement (and their managements and boards) that devoted years working on the process leading to the Proposed Final Program – including fisheries experts and two federal agencies and the Alaska Department of Fish and Game who sought and helped craft the two reopeners through negotiations;
- AR No. 2024-218(S) ignores (i) the contractual commitments among the Project Owners relating to the 1991 Agreement, including an obligation to act in a manner consistent with prudent utility practice, and (ii) power delivery obligations under the power purchase agreements approved by the RCA;
- The actions requested in AR No. 2024-218(S) would increase costs, risks, and liability consequences to the member-ratepayers of Chugach and MEA;
- The positions outlined in AR No. 2024-218(S) depart from unanimous positions agreed to by Chugach and MEA per the Surrender and even positions previously taken by MOA and AHP and its representatives throughout the five-year process executing the 1991 Agreement; and
- The MOA's unilateral mandate (to restore the continuous flow of the Eklutna River and the fish populations of the Eklutna River and Eklutna Lake) seeks to supersede AHP's obligations to follow prudent utility practice and consider all public interest objectives required to be balanced with equal consideration under the 1991 Agreement.

As a result, Chugach and MEA have serious concerns that upon regaining any voting rights on the EOC and with respect to the Fish and Wildlife Program and the 1991 Agreement, AHP will seek to follow the direction of the Assembly and either negate the significant efforts of all the Parties to the 1991 Agreement or unilaterally force a do-over of the carefully negotiated and now-complete lengthy process required under the 1991 Agreement. We doubt that the Commission intended that result when creating a mechanism for AHP to regain its voting rights.

Second, in Order 39, the Commission recognized that AHP's representative must be able to exercise knowledge of prudent utility practice and the Railbelt electric generation and transmission system. AHP holds Certificate of Public Convenience and Necessity No. 780 and as such AHP is regulated by this Commission pursuant to applicable statutes and regulations. Setting aside Mr. Corsentino's knowledge and qualifications, based on its numerous actions and negative public statements with regard to our implementation of the 1991 Agreement, we have seen no indication that the Assembly appreciates and has respect for these requirements and we

expect that it will attempt to exert its political and policy preferences in a manner that seeks to override considerations of prudent utility practice, applicable utility regulation, and the reliable operation of the Railbelt electric generation and transmission system. We anticipate that AHP will take a position that the Project Owners cannot take any action without Assembly approval. The representatives on the EOC (and the Project Owners as regulated public utilities) must be able to operate the Eklutna Project and implement their contractual and regulatory obligations without regard for political pressure.

Third, the Commission should recognize the contractual bounds of what decisions will be made by the EOC and those that will be made by the three Project Owners after the MOA gets its voting rights back. As the Commission noted in Order 39, the EOC is charged with all management decisions related to the operation, maintenance, and budgeting for the Project; to the extent voting is necessary, a double majority of ownership shares consisting of at least 51% applies. Yet, the Project Owners hold ownership of the Project through their undivided interests as three tenants in common, which gives each owner equal rights to the ownership of the whole. Over the past nearly 30 years, the Project Owners have treated each other as equals in certain ownership level decisions by the CEOs and Municipal Manager. We anticipate that this needs to continue going forward and recommend that the bounds of authority and course of dealing should be acknowledged by the Commission.

Finally, we have concerns about AHP's proposed means to deal with conflicting interests between AHP and AWWU. While we have no question about Mr. Corsentino's integrity, we do not see how Mr. Corsentino can act independently in a role as AHP's representative of the EOC adversely to the interests of AWWU—the utility he has led ably since February of 2019. For instance, he will not be able to unlearn or ignore confidential information learned from one utility when making decisions for the other. It would seem more appropriate for Mr. Corsentino to recuse himself from both roles in contractual and legal matters between the AHP (and the other Eklutna Owners) and AWWU, allow Chugach and MEA to represent the interests of the Eklutna Owners, and have Mr. Schimscheimer and the rest of the AWWU team represent the interests of AWWU. This approach would be more in line with how conflicts of interlocking directors are typically dealt with among utilities and in corporate law.

Thank you for your time and consideration. We look forward to participating in this proceeding.

Sincerely,

Arthur W. Miller
Chief Executive Officer

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	))))))	U-24-024

OFFICE OF THE ATTORNEY GENERAL'S RESPONSE TO ANCHORAGE HYDROPOWER'S (AHP) MOTION FOR EXPEDITED CONSIDERATION OF ITS REQUEST FOR ACKNOWLEDGMENT

The Office of the Attorney General, Regulatory Affairs & Public Advocacy Section (RAPA) responds to AHP's motion for expedited consideration of AHP's request for acknowledgement of AHP's acquisition of expertise required to participate as a voting member of the Eklutna Operating Committee (EOC). AHP requests that the parties file written briefs responding to AHP's Request for Acknowledgement, that the Commission conduct a hearing (if needed), and the Commission issue a decision on AHP's request no later than October 2, 2024.

RAPA agrees with AHP: "The only issue in this docket is a straightforward one—whether AHP 'has shown to [the Commission's] satisfaction that [it] has acquired

Attorney General
Regulatory Affairs & Public Advocacy
1031 West Fourth Avenue, Suite 200

the expertise required to fully participate as a voting member of the EOC.'"[1] RAPA agrees that: (1) responsive briefing by the parties is appropriate and useful; (2) a hearing should be held (meaning that RAPA believes a hearing is needed); and (3) based on briefing and a hearing, the Commission could issue an order either granting or denying AHP's request by October 2, 2024.

By not opposing AHP's request for expedited consideration, that does not mean that RAPA agrees (or disagrees) at this time on the ultimate question of whether AHP has met its burden of proof necessary for the Commission to acknowledge that AHP has obtained the needed expertise. Rather, it means that briefing, a hearing, and a Commission decision by October 2 all seem appropriate for this Docket that addresses a straightforward issue.

STATE OF ALASKA

THE REGULATORY COMMISSION OF ALASKA

Before Commissioners:	Robert A. Doyle, Chairman John M. Espindola Robert M. Pickett John C. Springsteen
In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

ANCHORAGE ASSEMBLY'S PETITION TO INTERVENE

On August 26, 2024, Chugach Electric Association ("Chugach") and Matanuska Electric Association ("MEA") jointly filed two pleadings: an "Opposition to AHP's Motion for Expedited Consideration" and "Initial Comments in U-24-024" outlining their position regarding the Municipality of Anchorage's Request for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee.

Chugach and MEA's Opposition and Initial Comments attempt to place at issue the Assembly's role in determining the Municipality's policies with respect to the Eklutna Project and call into question the propriety of the Assembly's actions regarding the 1991 Fish and Wildlife Agreement. Those arguments are outside the scope of the Municipality's Petition currently before the Commission. However, if

LANDYE BENNETT BLUMSTEIN LLP
701 WEST EIGHTH AVENUE, SUITE 1100
ANCHORAGE, ALASKA 99501
TELEPHONE (907) 276-5152, FAX (907) 276-8433

the Commission takes up those outside issues, the Assembly's rights may be directly implicated. Thus, the Assembly respectfully petitions to intervene in this action pursuant to 3 AAC 48.110.

Under 3 AAC 48.110, "[a]ny person who has a statutory right to be made a party to that proceeding will be permitted to intervene," and "[a]ny person whose intervention will be conducive to the ends of justice and will not unduly delay the conduct of the proceeding will, in the commission's discretion, be permitted to intervene."[1] In ruling on a petition for intervention, the Commission considers seven factors:

> (1) the nature of the petitioner's right under statute to be made a party to the proceeding;
>
> (2) the nature and extent of the property, financial, or other interest of the petitioner;
>
> (3) the effect on petitioner's interest of the order which may be entered in the proceeding;
>
> (4) the availability of other means by which the petitioner's interest may be protected;
>
> (5) the extent to which petitioner's interest will be represented by existing parties;
>
> (6) the extent to which petitioner's participation may reasonably be expected to assist in the development of a sound record, including the

[1] 3 AAC 48.110(a).

LANDYE BENNETT BLUMSTEIN LLP
701 WEST EIGHTH AVENUE, SUITE 1100
ANCHORAGE, ALASKA 99501
TELEPHONE (907) 276-5152, FAX (907) 276-8433

issues that petitioner intends to address in the proceeding; and

(7) the extent to which participation of the petitioner will broaden the issue or delay the proceeding.[2]

Although the Assembly does not assert a statutory right to intervention (factor one), the Assembly's Petition satisfies each of factors two through six for permissive intervention.

Under the second factor, Chugach and MEA's filings, if considered by the Commission, directly implicate the Assembly's interest in exercising policymaking authority consistent with Municipal ordinances. According to Chugach and MEA's Opposition, the following "significant questions" must be addressed in this docket:

1) May AHP follow the direction of the Anchorage Assembly ("Assembly") to attempt to either un-do the significant efforts of all the Parties to the 1991Agreement or unilaterally force a do-over of the carefully negotiated and now-complete lengthy process required under the 1991 Agreement?

2) May the Assembly exert its political and policy preferences in a manner that overrides the three utility Project Owners' considerations of prudent utility practice, applicable utility regulation, and the reliable operation of the Railbelt electric generation and transmission system?

3) May AHP take a position that the Project Owners cannot take any action under the 1991 Agreement or operating the project without first securing Assembly approval?

[2] 3 AAC 48.110(b).

LANDYE BENNETT BLUMSTEIN LLP
701 WEST EIGHTH AVENUE, SUITE 1100
ANCHORAGE, ALASKA 99501
TELEPHONE (907) 276-5152, FAX (907) 276-8433

4) Is AHP's proposal for dealing with conflicts of interest adequate and is there a better approach for when AHP's representative, in his role as AHP's representative, engages with the utility he manages -- Anchorage Water and Wastewater Utility ("AWWU") -- the MOA, or the Assembly?[3]

Each of those "significant questions" explicitly references the Assembly and bears on the Assembly's substantive interests.

Accordingly, under the third factor, any order that the Commission enters that addresses those questions may directly affect the Assembly's ability to exercise its oversight and authority of AHP going forward. If the Commission forbids AHP or Mr. Corsentino from taking Assembly direction on certain matters, or mandates a resolution procedure for conflicts of interest that affects the Assembly's policymaking authority, such an order may be in direct conflict with relevant Municipal ordinances. The Assembly must be given the opportunity to express its position on such issues.

Under the fourth factor, if the Commission were to enter an order that limits Assembly authority to act, the Assembly will have no opportunity to undo such a decision or assert its own proper authority, other than by seeking judicial review of the Commission's decision.

LANDYE BENNETT BLUMSTEIN LLP
701 WEST EIGHTH AVENUE, SUITE 1100
ANCHORAGE, ALASKA 99501
TELEPHONE (907) 276-5152, FAX (907) 276-8433

[3] Chugach Electric Association, Inc. and Matanuska Electric Association, Inc.'s Joint Opposition to AHP's Motion For Expedited Consideration at 2-3.

Fifth, the existing parties will not sufficiently represent the Assembly's interests. Although the Administration and the Assembly are generally aligned on certain substantive goals, their legal interests are not identical. The Assembly is the co-equal legislative body of the Municipality. If the Commission considers the arguments raised by Chugach and MEA, the Assembly's interest in maintaining its authority to determine policy could be affected and its position may not be adequately represented by the Administration. Related to the sixth consideration, allowing the Assembly to intervene will ensure a sound record in the docket.

Seventh and finally, there is no danger that the Assembly's intervention will unnecessarily delay the proceeding or broaden the issues. The Assembly seeks limited intervention only to the extent it becomes necessary to respond to where Chugach and MEA have called into question the Assembly's authority, or where they have sought to prospectively limit such authority. The Assembly does not anticipate taking a position or submitting briefs on matters beyond that issue.

For the foregoing reasons, the Assembly has demonstrated that its intervention will be conducive to the ends of justice and will not delay the conduct of the proceeding. Accordingly, the Assembly's petition to intervene should be granted.

Subject: Docket U-24-024 (AHP) Prehearing Conference
Date: Tuesday, August 27, 2024 11:16:48 AM

Counsel,

Order U-24-024(1), as modified by Order U-24-024(2), specifies that the prehearing conference scheduled for 2:00 p.m. this Friday will be via Cisco WebEx video conferencing. Counsel for Alaska Hydropower has left me a message asking if the Commission's East Hearing Room will also be available for this conference so that any participant who wants to do so can appear in person. Mr. Thompson indicated that he believed this would better accommodate the oral argument scheduled on the motion for expedited consideration. The Commission's East Hearing Room will be available for any participant who desires to attend the prehearing conference in person. I plan on attending the conference in person myself to facilitate the proceeding. However, I want to clearly state that no party is required to participate in the August 30 prehearing conference in person.

Please place a copy of this correspondence in the formal file in this proceeding.

IN THE MATTER OF THE PETITION FILED BY THE MUNICIPALITY OF ANCHORAGE D/B/A ANCHORAGE HYDROPOWER FOR ACKNOWLEDGMENT OF ACQUISITION OF EXPERTISE REQUIRED TO PARTICIPATE AS A VOTING MEMBER OF THE EKLUTNA OPERATING COMMITTEE.	U-24-024

REGULATORY COMMISSION OF ALASKA
701 West 8th Avenue, Suite 300
Anchorage, Alaska 99501

PREHEARING CONFERENCE

Friday, August 30th, 2024

2:00 p.m.

BEFORE JAMES L. WALKER
Administrative Law Judge

APPEARANCES:

For Municipality of Anchorage d/b/a Anchorage Hydropower:
Kemppel, Huffman & Ellis
255 East Fireweed Lane
Suite 200
Anchorage, Alaska 99503
BY: Dean Thompson
Mark Corsentino of AWWU

For RAPA:
1031 West Fourth Avenue
Suite 200
Anchorage, Alaska 99501
BY: Jeff Waller

For Chugach Electric and Matanuska Electric:
Wilson Sonsini Goodrich & Rosati
701 Fifth Avenue
Suite 5100
Seattle, Washington 98104
BY: Todd Glass
Matt Clarkson
David Pease

For Municipality of Anchorage Assembly:
Landye Bennett Blumstein
701 West Eighth Avenue
Suite 1200
Anchorage, Alaska 99501
BY: Leslie Need

P-R-O-C-E-E-D-I-N-G-S

(On record - 2:00 p.m.)

ALJ WALKER: Good afternoon, it is approximately 2:00 p.m. on August 30th, 2024. This conference is being held in the Commission's East Hearing Room in Anchorage, Alaska and via Cisco Webex Video Teleconferencing.

This is the time and place set for a Prehearing Conference, Docket U-24-024, entitled In the Matter of the Petition filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee.

This Prehearing Conference was scheduled by Order No. U-24-024(1) dated July 30th, 2024, as amended by Order No. U-24-024(2) dated August 14th, 2024.

James L. Walker, Administrative Law Judge presiding. Attending in person are Commission Docket Manager, John C. Springsteen. Online, it looks like, are Commissioner Doyle and Commissioner Espindola. Is that correct?

CHAIRMAN DOYLE: That is correct.

COMMISSIONER ESPINDOLA: Yes, that is correct.

ALJ WALKER: Thank you. This Prehearing Conference is being recorded. To ensure a clear record, I encourage all participants to mute their microphone or interconnection device whenever they are not speaking. I ask the Court Reporter to

speak up whenever background noise is sufficient to interfere with her ability to obtain a clear record.

At this time, I want to take entries of appearance from the parties starting with the Municipality of Anchorage, d/b/a Anchorage Hydropower.

MR. THOMPSON: Good morning, Your Honor, Commissioners. Dean Thompson with the law firm of Kemppel Huffman & Ellis appearing on behalf of Municipal Hydropower. And with me is Mark Corsentino who is the Director of Anchorage Hydropower.

ALJ WALKER: Thank you. For the Office of the Attorney General, Regulatory Affairs and Public Advocacy Section.

MR. WALLER: Good afternoon, Jeff Waller.

ALJ WALKER: Thank you. Chugach Electric Association and Matanuska Electric Association.

MR. GLASS: Good afternoon, my name is Todd Glass, Wilson Sonsini on behalf of both Chugach Electric and Matanuska Electric jointly. With me is Stephanie McFall also with Wilson Sonsini and I believe that both Matt Clarkson as well as David Pease are either in the room or on the line.

MADAM COURT REPORTER: Could you please spell your last name?

MR. GLASS: Glass, G-l-a-s-s.

MADAM COURT REPORTER: Thank you.

ALJ WALKER: And I will confirm that Mr. Clarkson is in the room. I don’t see -- oh, Mr. Pease is back there, he’s

hiding.

Okay, under Order U-24-024(1), petitions to intervene in this docket were due by August 27th, 2024. The Municipality of Anchorage Assembly has timely filed a petition to intervene in this matter. The parties to this proceeding have until September 3rd, 2024, to file an answer to this petition. The Commission will issue its decision on this petition sometime after that. I note that I will be out of the office the week of September 3rd, and thus, there might be delay in issuance of that decision.

To ensure that the Municipality of Anchorage Assembly has an opportunity to be heard, I will allow them to participate in that part of this conference addressing scheduling issues; however, I will not be allowing them to participate in oral argument on the motion for expedited consideration as they have not filed a brief on that issue and it is not clearly related to grounds asserted in their petition to intervene.

Can I have counsel for the Municipality of Anchorage Assembly enter their appearance?

MS. NEED: Good afternoon, Leslie Need from the Landye Bennett Blumstein.

MR. MORAWSKI: Good afternoon, Jackson Morawski, also Landye Bennett Blumstein for the Assembly.

MR. ERICKSON: Andrew Erickson for the Assembly.

ALJ WALKER: Thank you. I am aware of no other petitions

to intervene that have been timely filed. Is any person present at this conference aware of any petitions? Seeing none. Is there anyone else attending this conference who wants to be recognized on the record? I'm seeing none there, okay.

The purpose of this Prehearing Conference is to establish a procedural schedule and address any other matters required to resolve this docket. I note that, in its notice and request for acknowledgment filed in this docket on July 18th, 2024, at page three, Anchorage Hydropower stated, "Order 39 required that the surrender must remain in effect until the MOA has shown to the Commission's satisfaction that MHP has acquired the expertise required to fully participate as a voting member of the EOC." And I omitted the footnotes in that quote.

This statement is an incomplete quotation of what was required by Order U-18-102(44). The complete quotation is as follows. "This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA as those agreements may be extended and cannot be lifted until such time as MHP has shown to our satisfaction that MHP has acquired the expertise required to fully participate as a voting member of the EOC."

What I do not find in either the notice and request for acknowledgment or in the motion for expedited consideration or the attachments to these filings is any evidence or discussion of why the Commission should set aside the minimum term of voting rights surrender required in Order 44.

I also find nothing in Mr. Corsentino or Mr. Schimscheimer and I apologize for butchering the names, will continue to be employed by the Municipality at the time the Eklutna PPA and the MEA PPA are currently scheduled to expire. I raise this issue at this time because it appears that the Commission should be considering dismissal of the notice and request for acknowledgment as being prematurely filed and that there may -- and that may require a substantially different procedural schedule than would be required to consider the merits of Anchorage Hydropower's request.

I ask the parties to think about this issue in recommending a procedural schedule at this conference. We have a pending motion for expedited consideration by Anchorage Hydropower. In that motion, Anchorage Hydropower has proposed a procedural schedule that would result in a final decision in this docket by October 2, 2024. Under Order U-24-024(3), oral argument on the motion for expedited consideration was authorized with a limit of no more than five minutes of argument per party. Is Anchorage Hydropower prepared to present oral argument on this motion for expedited consideration?

MR. THOMPSON: Yes, Your Honor.

ALJ WALKER: And are you reserving any time for reply?

MR. THOMPSON: Yes.

ALJ WALKER: How much?

MR. THOMPSON: The five minutes, I'll reserve two minutes for reply.

ALJ WALKER: Thank you. Please proceed.

MR. THOMPSON: Okay. Very quickly, I will stand on the arguments in MHP's request for expedited consideration and particularly in the reply. The -- MHP believes that the issue is very narrow here and under Order 39, it is solely whether MHP has acquired the expertise required to fully participate as a member. And the Commission, in Order 39, clarified what are the factors in that decision and there are two. Knowledge of prudent utility practice and knowledge of the Railbelt generation and transmission system. So, that is the only question before the Commission and it is something that can be decided on the schedule that MHP has proposed.

The need for expedited consideration is that MHP has not been able to exercise its voting rights since the acquisition closed and it owns 53 percent of the project, it's liable for various cost responsibilities. It is a certificated utility. MHP needs to be able to represent its interests.

And why sooner than later? Because things are going to start happening on October 2nd, don't know exactly what's going to happen, but that is when this Fish and Wildlife final program may be issued. There may be litigation, who knows? But MHP thinks it's reasonable that it have a vote on the EOC given that it owns 53 percent of the assets.

The arguments by Chugach and MEA against expedited consideration is that they want to broaden the scope of this docket to include issues about the Assembly's authority over MHP and whether it can exert political influence on the appointed representative and all of that is beyond the scope of this. There are other forums for that to be addressed, there's an appeal going on right now.

ALJ WALKER: Thirty seconds.

MR. THOMPSON: And so, none of those negate the need for the expedited consideration and MHP believes that the schedule it has proposed is reasonable and certainly enough to settle the very narrow topic of this motion.

ALJ WALKER: Does RAPA wish to present oral argument?

MR. WALLER: Yes, Your Honor, please.

ALJ WALKER: Please proceed.

MR. WALLER: All right, so this is Jeff Waller, I will try to be brief. I'm going to let everybody know that there's going to be a slight modification of what we filed in light of recent filings, but staying with what we've originally filed, this is seen as a straightforward thing. I think of it like when you're at Disney World and there's a sign that says you must be this tall to ride the ride. Either Mr. Corsentino was that tall or he's not and so, either he has the qualifications or he doesn't.

The reason that RAPA thinks we should proceed forward in

the way we suggested, which would be briefing and a hearing, is right now, some information is missing and I'll give you a very brief example. Mr. Corsentino's resume points out that he has experience supervising a one-megawatt hydropower plant. The filing Anchorage Hydropower submitted says it's connected to MEA and to Chugach, but it's not in the exhibits, it's not in the evidence presented, not in the record.

So, we need a hearing to flesh out that record; a chance for Mr. Corsentino to explain his expertise, his knowledge, whether he understands what it means to be a prudent electric utility operator, and his experience otherwise. And that can also include, a point that Your Honor brought up, is for AHP to explain how are they going to cover that expertise for the time period the Commission set out.

So, to RAPA, this is fairly simple. Let's do some briefing, let's have a hearing and then either, as I said, Mr. Corsentino is this tall and he can ride the ride or he's not that tall and he doesn't get to ride the ride.

My other last point would be the slight modification in our presentation of our briefing. We did not consider any of these political things to be coming up to be part of the docket. If this docket does expand as Chugach/MEA have indicated and that the Assembly coming in, RAPA is a lot less certain that we can get it done in this short time. But we still believe it is the simple you're this tall or you're not.

Thank you.

ALJ WALKER: Thank you. Mr. Glass, is Matanuska Electric and Chugach Electric prepared to do oral argument?

MR. GLASS: Yes, we are.

ALJ WALKER: Please proceed.

MR. GLASS: Thank you. Thank you, Commissioners, Your Honor.

We refer the Commission to our joint petition or our joint opposition to AHP's motion for expedited consideration. In short, we see that there are significant issues that need to be examined and addressed by the Commission and there exists no need to cram all of the work that needs to be done in 33 days as requested by AHP.

The scope of the issues can be broken down into four topics. Whether AHP's recently realized expertise in the form of Mr. Corsentino meets the requirements of the Commission's Order 39. As you referred to both over time as most common utility practice and knowledge of Railbelt electric generation and transmission system.

We take no position on that at this time. We think there needs to be a processed to figure out whether he has that and we'll follow the Commission's lead on that and provide support of our understanding per the utility practices as well as the Railbelt electric system as required in that process.

We also think that we need to look deeper at the

conflicts of interest proposal that AHP has proposed. We don't think they're adequate.

Two more issue I think we need to dive into in order for the Commission to understand what happens following the return of voting rights, (indiscernible) to understand what order 39 required, and specifically, can the Municipality now force a redo or a do-over with regard to actions that were taken by -- unanimously by Chugach and MEA during the time of clearing their surrender of voting rights. We don't think that that was the intent of Order 39 and we think that it would be contrary to both ourselves as well as the other parties in the 91 agreement who have been implementing it.

We also think that we need to look at what is going to happen going forward. The Municipal Assembly has made very clear that it intends to override per utility practice and long-term PPA obligations with regard to utility practice as well as other things that would impede the ability to do operational budget and legal matters in -- specifically with regard to implementing the 91 agreement and the potential Fish and Wildlife (indiscernible).

Contrary to AHP positions, these are not hypothetical and these are not some separate questions from another docket. We really want the Commission to deal with them now because, you know, the Commission's order on 39 -- Order 39 and the explanation will determine how that --- the voting goes

forward.

Similarly, the orders -- requirements on the return of voting rights and what those duties will be, how AHP will behave on the EOC matters to how we meet our obligations.

Finally, we don't think that there's a rush because, as we stated in the joint opposition and the CEO comments, there is no rush because we won't be making large financial commitments of -- or significant financial commitments, but we do need to be able to continue operating our project in pushing the 91 agreement process forward.

ALJ WALKER: Are you done?

MR. GLASS: Yes.

ALJ WALKER: Thank you.

MR. GLASS: I'll reserve with one minute left, so there you go.

ALJ WALKER: Well, I'm not going to allow you to reserve time. You're not the proponent, so you don't get to reply.

MR. GLASS: Understood.

ALJ WALKER: Okay. Mr. Thompson, now you have two minutes reserved.

MR. THOMPSON: Thank you. Very quickly, MHP understands why Chugach and MEA and maybe others would like the issues -- these other issues regarding the Assembly and these other issues that they identified at page two and three of their response, we can understand why they would like to get some

advisory opinions on that or a declaratory ruling, but this isn't the place. I mean, the Order 39, this is as Mr. Waller said, is Mr. Corsentino tall enough and that's a very limited question, so we believe that those other issues do not justify denying the request for expedited consideration.

And I would also venture to say I doubt, if we're going to go down that road, that that will -- that there's enough time with 180 days if we're going to expand into declaratory ruling and advisory opinions. So, we need to keep this simple and focused and the other issues can and will be addressed in the proper forum.

Finally, I've avoided talking about the merits of the ultimate request. We are here solely to determine the schedule for resolving that issue and we stand by our proposed schedule, we note that Chugach and MEA, in their comments, indicated that, at this point, they don't have a substantive problem with Mr. Corsentino, but.....

ALJ WALKER: Thirty seconds.

MR. THOMPSON: .....whatever issues there are -- pardon me?

ALJ WALKER: Thirty seconds.

MR. THOMPSON: Okay. Whatever issues there are, they can be easily resolved under the schedule that we have proposed including the conflict of interest issue. If there is a conflict of interest issue, that can be addressed during that

period of time.

I would note also that whether there is a conflict of interest, it's the same conflict of interest potentially that would have existed since the beginning of Eklutna, ML&P and AWWU.

Finally, just for the record, if I understand Your Honor correctly, MHP does disagree with the interpretation of Order 39 that you indicated. We don't believe that the first -- that it indicated that we can never get our voting rights back until the expiration of the power purchase agreements, and at the appropriate time, we'll elaborate on that argument. Thank you.

ALJ WALKER: Thank you. Okay, I am authorized to announce at this time that the Commission denies Alaska Hydropower's motion for expedited consideration. This decision will be explained in a written order to follow.

With the denial of the motion for expedited consideration, we need to develop a procedural schedule for the timely resolution of this docket. In the expedited schedule proposed by AHP, there is no scheduled time for discovery. Does any party see a need for discovery in this proceeding? RAPA's indicating they want to say something.

MR. WALLER: Yeah, Jeff Waller. Your Honor, if we are not going to do expedited consideration and not have to have an open hearing where Mr. Corsentino could get on the stand and answer anybody's questions about his qualifications, then RAPA

would probably like to do some discovery. We're going to try to keep it short and then I also have a question, if this is an appropriate time, does the Commission have an idea of how much time it would like to make a decision after the last day of close -- of the hearing until the statutory deadline, because that will help us develop a schedule.

ALJ WALKER: To the best of my knowledge, the Commission has not discussed the answer to your question.

MR. WALLER: Thank you.

ALJ WALKER: So, I would presume that the standard 90 days recognizing that that might not be possible in a 180-day proceeding and so, we will consider what the parties propose. With the discovery question then, my follow-up order is do any of the parties see a need for an order governing confidential discovery in this docket?

MR. GLASS: Your Honor, if I could go back to the previous question? We too see a time -- I mean, a need and a time for discovery to be put into the schedule. Not only do we have questions that could be -- discovery could be served on the Municipality's expertise and prudent utility practice and the (indiscernible - audio over-modulating) in Order 39, but we also understand that there might be the desire from the Commission to have us provide information regarding expertise needed to operate big plant and do other things that the EOC does as we did in previous proceedings. Just a question

regarding, you know, that -- would there be that opportunity or expectation from the Commission that we would provide that in the form of prefiled testimony or otherwise.

ALJ WALKER: It is my expectation, since the Commission is required to base its final orders on evidence in record, that it would be appropriate to have testimony addressing those issues. And the reason I was asking about confidential discovery order is I see the possibility that we might be getting into some personnel history records and so, I realize there are confidentiality rules related to those things that may be applicable and that's why I'm asking.

MR. THOMPSON: Yes, and Your Honor, I don't know exactly what the other parties are going to seek in discovery, but yes, MHP would like a confidentiality order.

ALJ WALKER: Do you want to.....

MR. THOMPSON: (Indiscernible - simultaneous speech).....

ALJ WALKER: Do you want to propose one as a model or just have me pick a recent one and.....

MR. THOMPSON: What I would request is that the parties -- we can probably agree on a.....

ALJ WALKER: Discuss it?

MR. THOMPSON: .....model order and let Your Honor know.

ALJ WALKER: Okay. The other thing I see since AHP disagrees with the Commission's interpretation of Order 44, I would like to see briefing on that issue built into the

procedural schedule as well. And with that guidance, do the parties want to take a break and talk about a procedural schedule?

MR. THOMPSON: Yes.

ALJ WALKER: Okay. And.....

MR. THOMPSON: MHP would like to.

ALJ WALKER: .....are the parties willing to allow the Municipality of Anchorage Assembly's counsel to participate in that?

MR. THOMPSON: MHP is -- agrees to that.

ALJ WALKER: Mr. Glass?

MR. GLASS: We're willing to allow that today, yes.

ALJ WALKER: Okay.

MR. GLASS: Subject, of course, to what the Commission's decision is in the participation factor period next Tuesday.

ALJ WALKER: Yes, I just want to allow their participation so we don't hit any roadblocks that they are granted intervention. With that, and because of the -- Mr. Glass is connected through the conferencing, I'm going to propose that we take a -- what do you think, 15-minute break?

MR. WALLER: Twenty.

ALJ WALKER: Twenty?

MR. WALLER: Twenty.

ALJ WALKER: Twenty-minute break. We will -- we, myself and Commissioner Springsteen and Commission staff will leave

the room and the parties can talk with the system live so Mr. Glass can participate. Does that work?

MR. WALLER: Your Honor, it's Jeff Waller. One more thing. I believe we have several -- we're going to have to talk to Mr. Glass through Webex, we're going to have to call him and if we have Commission people on the Webex, then.....

ALJ WALKER: Oh, that's true and.....

MR. WALLER: .....that's a problem, so.....

ALJ WALKER: .....it's going to be difficult for people to get off.

MR. WALLER: Dean, is it something we could call him and put him on speaker phone?

MR. THOMPSON: Yes, that would be my idea and I don't know if you can keep Webex going, but just mute or.....

ALJ WALKER: Would you guys want to do your meeting in the library where you could call in privacy?

MR. WALLER: That sounds -- that's workable for me.

MR. THOMPSON: Yeah, we could do that.

ALJ WALKER: Okay. Then.....

MR. WALLER: Does that work for you, Todd?

MR. GLASS: That works fine and both David and Matt have my cell number and that would be perfectly fine.

ALJ WALKER: Okay. Then it is currently 2:28 p.m. on August 30th, 2024. We will go off record in Docket U-24-024 for approximately 20 minutes to allow the parties to confer on

a proposed procedural schedule.

MR. THOMPSON: And.....

ALJ WALKER: Off record, please.

MR. THOMPSON: Okay.

(Off record)

ALJ WALKER: Okay, it is 3:00 p.m. on August 30th, 2024, and the parties for Docket U-24-024 are back present in the hearing room. I'm not sure if Mr. Glass is back on or not. Yes, he is, okay.

So, with that, do we have a report from the parties and a procedural schedule?

MR. THOMPSON: Yes, Your Honor. I will read through these dates. Mr. Glass put together a schedule, but we've adjusted it, so I will read these off and if I misspeak, someone will jump in and correct me.

September 18th, AHP's prefiled direct testimony is due as well as AHP's brief on the Order 39 issue that Your Honor requested.

UNIDENTIFIED VOICE: (Indiscernible - microphone not on).

MR. THOMPSON: Term of surrender issue. Okay. Then September 18th, discovery opens on AHP's direct testimony. And then October -- is this October 8th or October 3rd?

MR. WALLER: October 3rd, discovery closes.

MR. THOMPSON: Yeah, October 3rd, discovery closes on AHP's direct testimony. That's the last date of propound.

Then October 8th is intervenor's prefiled testimony and intervenor's brief on the -- what did you call it? Surrender issue?

ALJ WALKER: By intervenor, are you also including RAPA?

MR. THOMPSON: Yes, intervenor and RAPA.

ALJ WALKER: Okay.

MR. THOMPSON: And it would be responsive testimony as well as their brief regarding the vote surrender issue. Discovery opens on.....

ALJ WALKER: (Indiscernible - microphone not on).

MR. THOMPSON: I'm sorry. Okay.

(Pause)

ALJ WALKER: Please proceed.

MR. THOMPSON: Okay. Also on October 8th, discovery opens on intervenor's responsive prefiled responsive testimony and that's the last date of propound as well. Or no, discovery.....

ALJ WALKER: I'm sorry?

MR. THOMPSON: .....opens on October 8th, then -- yeah. October 23rd is the last date of propound discovery on intervenor and RAPA responsive testimony.

ALJ WALKER: Okay.

MR. THOMPSON: And then October 29th is AHP's prefiled reply testimony due date as well as the due date for AHP's reply brief regarding the vote surrender issue. Then October

29th, discovery opens on AHP's reply testimony.

MR. WALLER: This is Jeff Waller. Mr. Thompson.....

MR. THOMPSON: I'm sorry, October 29th.

MR. WALLER: .....did you mean October 25th -- or excuse me, October 29th, yes.

MR. THOMPSON: October 29th.

MR. WALLER: Yeah.

MR. THOMPSON: Yeah.

MR. WALLER: Yeah, thank you.

MR. THOMPSON: Yes, thank you. And then November 8th is the last date to propound discovery on AHP's reply testimony.

ALJ WALKER: Okay.

MR. THOMPSON: November 11th, witness lists and statements of issues are due and any errata to testimony, I assume. And then November 18th, Prehearing Conference followed with a Hearing commencing on November 18th and scheduling the Hearing through November 22nd. And then the statutory timeline is January 14th, so that would give the Commission roughly, what would that be, almost two months after the Hearing ends to issue a decision.

ALJ WALKER: Okay, give me a second here, I'm calling up the calendar for November to look at those hearing dates. Okay, so 19, 20, 21.

(Pause)

ALJ WALKER: Okay, so those dates do appear to be

available on the Commission's calendar. Okay, Mr. Waller, you agree with those dates or do you want me to repeat what I have just to be sure?

MR. WALLER: No, sir. This is Jeff Waller, you don't need to repeat them. RAPA agrees with those dates. The one clarification I was going to give is, in case Your Honor notices, that there's no dispositive or discovery deadline motion deadline. We purposely excluded that from the schedule just because of the really, really short time period. People will just be adults and get their motions in appropriately on time, but trying to set a schedule that allows full briefing and time for the Commission to decide on an 180-day schedule is just not doable. But otherwise, RAPA -- well, not otherwise, RAPA does agree with this schedule, thank you.

ALJ WALKER: Thank you. Mr. Glass, you agree with the schedule that was presented?

MR. GLASS: Yes, Chugach and MEA agree to the schedule.

ALJ WALKER: And I'm not sure just who it is, is it Ms. Need? Do -- is that -- if the Municipality of Anchorage Assembly is granted intervention or granted party status, will those dates work for the Municipality of Anchorage Assembly?

MS. NEED: They will, Your Honor, thank you.

ALJ WALKER: Thank you. Oh, did the parties come up with a model for a confidential discovery order?

MR. THOMPSON: We have not, Your Honor, but I'm sure we

can do that pretty quickly and get back to you at least by Tuesday.

ALJ WALKER: By when?

MR. THOMPSON: By Tuesday, the 1st -- I mean, by next Tuesday.

ALJ WALKER: Okay.

MR. THOMPSON: I mean, Mr. Waller, I think, turned into a pumpkin five minutes ago and we just haven't had a chance to talk about it.

ALJ WALKER: Okay. I.....

MR. WALLER: This is a holiday weekend, I'm not working Monday.

ALJ WALKER: I'm just -- I'm off all next week, so it will be a little slow getting there, but discovery doesn't open for a bit, so.....

MR. THOMPSON: Yeah.

ALJ WALKER: .....it'll be out before discovery opens. Okay, one additional issue I saw raised in the Chugach/MEA joint opposition is a reference to AS 42.05.641 and I note that the Commission does not routinely follow the legislative or administrative actions of any local government entity including the Municipality of Anchorage, so if the utilities believe that the Municipality of Anchorage has taken legislative or administrative action that should be reviewed by the Commission under AS 42.05.641, I just want to give you a heads up that

it's incumbent on the utilities to timely file a complaint requesting such review because the Commission does not initiate it or at least has not.

Do the parties have anything else that need to be considered on the record of this conference?

MR. THOMPSON: Your Honor, when the procedural schedule is issued, with respect to the hearing, I guess my request is that there be some clarity about whether the hearing -- the extent to which the hearing is going to be in person or on Webex or both, and in particular, I guess I would want to make sure that witnesses are expected to appear in person unless they request otherwise. So, I guess I would just -- there have been some recent hearings where it was not clear whether attorneys were required to appear in person or even required to appear online and witnesses saying we're now going to appear virtually, so I guess some clarity on that might be helpful and maybe the parties can stipulate regarding that as well, but I just thought I would raise it.

ALJ WALKER: I would prefer to see a written stipulation just so whatever wording I put into an order is consistent with what the parties desire. You know, I.....

MR. THOMPSON: Okay.

ALJ WALKER: I -- as you may realize, I haven't done a hearing in a while and I'm not up on current practices, so your language would probably be more relevant than anything I could

craft.

MR. THOMPSON: Okay. We will see if we can do that.

ALJ WALKER: Okay. Anything else? Mr. Waller is shaking his head no.

MR. THOMPSON: Nothing else.

ALJ WALKER: Mr. Thompson is shaking his head no.

MR. THOMPSON: Nothing else for AHP.

ALJ WALKER: Mr. Glass, did you have anything further?

MR. GLASS: Nothing, thank you, Your Honor.

ALJ WALKER: And forget who it is, Ms. Need, do you have anything further?

MS. NEED: No, I could have helped you on that. No, thank you, Your Honor.

ALJ WALKER: Okay. Well, then do you have anything? Commissioner Doyle or Commissioner Espindola, do you have anything further you want to address in this record?

CHAIRMAN DOYLE: No, thank you, Judge.

COMMISSIONER ESPINDOLA: Judge Walker, I just wanted to note that November 11th is Veterans Day. I don't know if the parties were aware of that during their procedural schedule discussions, but I just wanted to flag that for situational awareness. No further comments.

ALJ WALKER: Okay. So, your filings on November 11th will not actually be received until November 12th. Thank you, Commissioner Espindola.

MR. THOMPSON: I wonder, Your Honor, should we just change the deadline for statements of issues and witness lists to November 12th?

ALJ WALKER: Okay, I can do that. It is certainly not cast in stone yet or not even in real ink. Okay, with that, I want to thank everyone very much for their participation. It is approximately 3:13 p.m. on August 30th, 2024 and this conference is adjourned. We are off record in Docket U-24-024. Thank you. And Mr. Waller, enjoy the retirement party.

(Off record)

(This Prehearing Conference was concluded at 3:13 p.m.)

TRANSCRIBER'S CERTIFICATE

I, Sonya Hewes, Transcriber with Accu-Type Depositions, do hereby certify that the foregoing pages numbers 1 through 27 are a true, accurate, and complete transcript of the Prehearing Conference held at the Regulatory Commission of Alaska, on Friday, August 30th, 2024, as transcribed by me to the best of my knowledge and ability.

RECEIVED
By the Regulatory Commission of Alaska on Aug 29, 2024

STATE OF ALASKA

THE REGULATORY COMMISSION OF ALASKA

Before Commissioners:

Robert A. Doyle, Chair
John M. Espindola
Robert M. Pickett
John C. Springsteen

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

MUNICIPALITY OF ANCHORAGE D/B/A ANCHORAGE HYDROPOWER'S REPLY TO CHUGACH ELECTRIC ASSOCIATION, INC. AND MATANUSKA ELECTRIC ASSOCIATION, INC.'S JOINT OPPOSITION TO AHP'S MOTION FOR EXPEDITED CONSIDERATION

The Municipality of Anchorage ("MOA") d/b/a Anchorage Hydropower ("AHP") hereby replies to Chugach Electric Association, Inc. ("Chugach") and Matanuska Electric Association, Inc.'s ("MEA's") joint opposition ("Opposition") to AHP's Motion for Expedited Consideration ("Motion for Expedited Consideration") of its Request for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee ("Request for Acknowledgment").

Chugach and MEA's opposition relies on an assumption that the Regulatory Commission of Alaska ("Commission") will accept Chugach and MEA's invitation to expand the scope of this docket and provide advisory opinions on issues related to the August 8, 1991, "Fish and Wildlife Agreement, Snettisham and Eklutna Projects," ("1991 Fish and Wildlife Agreement") and on issues regarding the Anchorage Assembly's authority and past or potential actions. Such

(907) 277-1604

expansion of the docket would be unnecessary and improper. Pursuant to Order U-18-102(44)/U-19-020(39)/U-19-021(39) ("Order 39"), the only issue in this docket is whether AHP "has shown to [the Commission's] satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC [Eklutna Operating Committee]."[1] This question is one that can be thoroughly and adequately addressed under AHP's proposed expedited schedule, particularly because Chugach and MEA have already opined that, as to qualifications, "[a]t this point, we do not oppose AHP's nomination of Mr. Corsentino to become a voting member of the EOC."[2]

While AHP appreciates that Chugach and MEA are willing to make a "good-faith commitment" to not make any "budget commitments, capital expenditures or significant decisions" to implement the final Fish and Wildlife Program ("Final Program") until the resolution of this docket,[3] Chugach and MEA might not be able to satisfy that commitment, e.g., if it conflicts with prudent utility management. Additionally, expedited consideration is needed for majority owner AHP to effectively participate *generally* on the EOC this fall.

I. DISCUSSION

A. Chugach and MEA fail to raise any "significant questions" that could not be addressed under AHP's proposed expedited schedule.

[1] Order No. U-18-102(44)/U-19-020(39)/U-19-021(39) (May 28, 2020) at 67.

[2] "Initial Comments of Chugach Electric Association, Inc., and Matanuska Electric Association, Inc.," dated August 26, 2024, at 1.

[3] Opposition at 7.

ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

None of the concerns or "significant questions" that Chugach and MEA assert must be addressed in this docket preclude expedited consideration.[4] Chugach and MEA argue that the "complexity and intensity of the disagreements between the Assembly and the Project Owners related to the Project Owners' implementation of the 1991 Agreement" is a reason why expedited consideration should be denied.[5] However, the Commission need not, and should not, wade into any such "complex" or "intense" disagreements that are ongoing in the 1991 Fish and Wildlife Agreement Process. Pursuant to Order 39, this docket is limited to the question of whether AHP:

> "has shown to [the Commission's] satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC."[6]

Chugach and MEA provide no adequate reason why a decision cannot be made on an expedited basis on this single, limited question. In comments, they asserted that they "do not oppose AHP's nomination of Mr. Corsentino to become a voting member of the EOC," and also recognized that the standard for this decision is the standard articulated in Order 39, stating:

> "We will defer to the Commission's investigation of Mr. Corsentino's qualifications and whether AHP has gained sufficient expertise necessary for it to regain voting rights on the EOC *pursuant to the criteria outlined in order 39*, but we reserve the right to take a position later in this proceeding" (emphasis added).[7]

They provide no reason why an examination of Mr. Corsentino's credentials by the Commission will require more time than provided by AHP's proposed schedule.

(907) 277-1604

Instead, Chugach and MEA argue expedition is not possible because more time is needed to address their concerns regarding interpretation and application of the 1991 Fish and Wildlife Agreement, as well as their questions about the Anchorage Assembly's authority and past or potential actions.[8] These are not issues relevant to the question of whether Mr. Corsentino has "knowledge of prudent utility practice and the Railbelt generation and transmission system."[9]

Further, the Commission is not a party to the 1991 Fish and Wildlife Agreement.[10] Nor is it a designated decisionmaker pursuant to the Agreement, which provides that the Governor will issue the Final Program,[11] and that any review of the Governor's action will occur in the United States District Court for the District of Alaska.[12] In fact, some of the questions raised by Chugach and MEA's Opposition relate to questions that the Governor has requested briefing on in the 1991 Fish and Wildlife proceedings.[13] While the questions and issues raised by Chugach and MEA might be important or relevant to the 1991 Fish and Wildlife process, this docket is not the appropriate forum to resolve them.

Similarly, theoretical questions about the Anchorage Assembly's authority or actions (whether past or potential) are irrelevant to the issue of whether AHP has acquired the

(907) 277-1604

expertise to participate as a voting member of the EOC. Chugach and MEA ask the Commission to answer completely speculative questions such as, "[c]an the Assembly compel AHP to disregard its RCA-approved purchase power agreements (PPAs) and take actions detrimental to its power purchase customers?"[14] Again, while these may be important or legally interesting questions, that does not mean they should be addressed in this docket. The question in this docket is straightforward, and can be addressed thoroughly within the expedited timeline proposed by AHP.

To the extent the last issue raised by Chugach and MEA addresses AHP's proposal for dealing with conflicts of interest with Anchorage Water and Wastewater ("AWWU"),[15] any questions about AHP's proposal can be thoroughly resolved on AHP's proposed expedited schedule. Government entities, and utilities, often deal with conflicts of interest. Discussions about any proposed alternative methods of addressing conflicts do not require extensive time or briefing. To the extent that Chugach and MEA may attempt to use arguments about conflicts of interest to request commission rulings on broader questions of how the municipality should conduct its internal management, or the authority of the Anchorage Assembly, these issues are again, outside of the scope of this proceeding, and should not be addressed in this docket.

B. Chugach and MEA's proposed promise to abstain from "budget commitments, capital expenditures or significant decisions"[16] about implementation of the Final Program is not binding, and also does not address the general importance of AHP having meaningful participation on the EOC.

[14] Opposition at 3.

[15] *Id.*

[16] *Id.* at 7.

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS

255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

A good faith commitment to "not make any budget commitments, capital expenditures or significant decisions related to operation, maintenance, and budgeting to implement the Final Program" until January 15, 2025, does not resolve AHP's concerns and request for expedited consideration.[17] First, despite the good faith attempt, it does not appear that Chugach and MEA can make such a commitment in a binding manner. While they note that implementation could be delayed through the Governor's final decision itself, or through litigation, it is also possible that the Governor will issue a Final Program that requires EOC decisions to be made before January 2025. In that event, prudent utility management would require those decisions despite Chugach and MEA's commitment. Second, even if Chugach and MEA were ultimately able to fulfill their promise to not make any "significant" decisions related to the Final Program before January 2025, there still will likely be at least *some* decisions about the Final Program made before then.

Third, expedited consideration is necessary to provide AHP with meaningful participation on the EOC *generally*.[18] Participation this fall will provide AHP's representative, Mr. Corsentino, the ability to become familiarized with the 2025 budget and operational issues, including general operating and capital expenditure decisions.[19] If Chugach and MEA are ultimately correct that no major decisions about the Final Program will occur in the fall of 2024,

[17] *Id.*

[18] Motion to Expedite at 3.

[19] *See, e.g.,* Affidavit of Mark A. Corsentino, P.E., August 15, 2024, (filed in support of AHP's Motion to Expedite) at ¶ 4.

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

that does not necessarily negate the value of providing AHP meaningful participation in the management of a utility that it is 53.33% owner of sooner rather than later. The sooner Mr. Corsentino begins serving as a voting member on the EOC, the more time he will have to become well-versed in operational and budgeting issues generally. If no decisions on the Final Program occur this fall, this "ramp up" period will allow Mr. Corsentino to have a solid understanding of operations and budgeting *before* decisions on implementation of the Final Program occur. This will increase efficiency of the EOC when implementation does begin.

Finally, if the Commission ultimately decided to deny AHP's Request for Acknowledgment, a decision sooner rather than later would facilitate AHP finding a replacement to participate in decision-making on the Final Program as soon as possible.

II. Conclusion

For the reasons stated above, the Commission should grant AHP's request for expedited consideration. The issue in this docket is discrete and AHP's proposed expedited schedule provides adequate time to resolve it. Expedition will provide AHP the ability to have a say in decision-making on operations, capital projects, and budgeting for the Eklutna Project, especially for decision-making to implement a Final Program.

RESPECTFULLY SUBMITTED this 29th day of August, 2024, at Anchorage, Alaska.

RE: Final Proposed Fish and Wildlife Program, Eklutna Hydro Project

Dear Parties:

On behalf of Governor Dunleavy, thank you for your recent submissions concerning the Final Proposed Fish and Wildlife Program for the Eklutna Hydro Project in accordance with the 1991 Fish and Wildlife Agreement (Agreement). The Governor is cognizant of the importance of this issue to all involved. Pursuant to his responsibilities under the Agreement – to review the final proposed program and attempt to reconcile differences – the Governor wants to obtain additional

information from the parties to the Agreement, and the Native Village of Eklutna, concerning the Owners' final proposed program and all subsequently received comments.

With the assistance of the Alaska Department of Law, I will conduct a meeting on the Governor's behalf where each of you can present your position, respond to questions about the submissions, and make arguments on various legal issues that have arisen in the submissions. Although your participation is not mandatory, your involvement will certainly assist the Governor in rendering his decision as required by the Agreement.

Accordingly, the meeting is scheduled for September 9, 2024, at 1 P.M., in the North Conference Room on the 17th floor of the Atwood Building. This meeting is not open to the public, and due to space limitations, each party will be permitted to bring two representatives, including attorneys, that may participate concerning the legal issues outlined below. Each party will be provided 15 minutes to present their position on the program and legal issues. For this purpose, the Owners' group will be allotted two 15 minute slots divided as follows: a combined 15 minutes for Chugach Electric Association, Inc. (CEA) and Matanuska Electric Association, Inc. (MEA); and 15 minutes for the Municipality of Anchorage (MOA). Additionally, the Fish and Wildlife Service, the National Marine Fisheries Service, the Alaska Energy Authority, and the Native Village of Eklutna will each be provided with 15 minutes for a presentation. Your attendance is encouraged, even if your party chooses not to provide a presentation.

To adequately prepare for the meeting, I request each of the parties, and the Native Village of Eklutna, provide a legal brief (Brief) to share your perspective on the following issues:

1. The Governor is required to give equal consideration to eight factors identified in Section 5 of the Agreement. Please identify how the proposed final program or an alternate program promoted by any other parties, or the Native Village of Eklutna, does or does not meet those eight factors.
2. Does the Agreement require complete connection between the river and the lake to support fish passage?
3. Is MOA Assembly approval required for approval of the Owners' program?
4. What effect, if any, did the MOA's lack of a vote on the Owners' program have on the process set forth in the Agreement?
5. Does the Governor have the authority under the Agreement to impose a two-year extension on the process as requested by the MOA?
6. Whether the Owners and Anchorage Water and Wastewater Utility ("AWWU") have reached a final and binding agreement concerning the use of AWWU infrastructure as outlined in the Owners' program. If a final agreement has not been reached, what effect will that have on the Owners' ability to implement the final proposed program?

The Briefs shall be limited to 25 pages per party. Similar to above, for purposes of the Briefs CEA and MEA are considered one party and should submit a joint Brief. Please submit Briefs via email to rachel.bylsma@alaska.gov, with a copy to all parties, and the Native Village of Eklutna, by close of business on September 4, 2024. Parties shall not submit responses to the submission of other parties. If a party does not plan to submit a Brief, please let me know in advance of the deadline. Your attendance and participation is encouraged, even if your party

chooses not to submit a Brief. For questions regarding the meeting please contact Gene Hickey, Senior Assistant Attorney General, at 907-465-6713 or via email at gene.hickey@alaska.gov. Please RSVP by August 29, 2024, and provide the names of your attendees to Juliana Soane at 907-269-7450 or via email at juliana.soane@alaska.gov.

The Governor appreciates the efforts of all involved and we look forward to the meeting on September 9, 2024.

Sincerely,

Rachel Bylsma
Deputy Chief of Staff

STATE OF ALASKA

BEFORE THE REGULATORY COMMISSION OF ALASKA

Before Commissioners:	Robert A. Doyle, Chairman John M. Espindola Robert M. Pickett John C. Springsteen
In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

CHUGACH ELECTRIC ASSOCIATION, INC. AND MATANUSKA ELECTRIC ASSOCIATION, INC.'S JOINT OPPOSITION TO ANCHORAGE ASSEMBLY'S PETITION TO INTERVENE

Pursuant to 3 AAC 48.091(c), Chugach Electric Association, Inc. ("Chugach") and Matanuska Electric Association, Inc. ("MEA") jointly oppose the Anchorage Assembly's ("Assembly's") Petition to Intervene, filed on August 27, 2024. As explained below, the Assembly does not meet the standard for permissive intervention under 3 AAC 48.110(b). Simply stated, the Assembly has no independent standing or legal interests to support its intervention in this docket because the Municipality of Anchorage is already a party to this proceeding – having filed the petition that gave rise to this docket – and the Assembly's interests are represented by the MOA and its counsel.

I. The MOA Is Already A Party to this Proceeding

On July 18, 2024, the Municipality of Anchorage ("MOA") d/b/a Anchorage Hydropower ("AHP") provided notice of, and requested the Commission provide acknowledgement of, AHP's purported acquisition of expertise required to participate

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

as a voting member of the Eklutna Operating Committee.[1] Specifically, the MOA provided notice that "Mark Corsentino, P.E., was unanimously approved by the Anchorage Assembly to be the Utility Director of Anchorage Hydropower on July 2, 2024. As such, Mr. Corsentino will also serve as AHP's representative on the EOC . . . ." MOA Request, at 3-4. Consequently, in response to that filing, the Commission gave public notice and opened this docket to consider AHP's request and the MOA thereby became the first named party to the docket.

By the MOA's statement in its request, therefore, this docket was initiated because the MOA administration and the Assembly exercised their powers together within the MOA governance structure to put forth Mr. Corsentino to fill this role on the EOC. This coordinated effort makes sense. Pursuant to AS 29.20.050 and Section 4.01 of the MOA Charter, "[t]he legislative power of Anchorage is vested in an assembly of 12 members." Pursuant to AS 29.20.220 and Section 5.01 of the MOA Charter, "[t]he executive and administrative power of Anchorage is vested in the mayor." The Assembly and the Mayor together govern the MOA. When the MOA makes a request of the Commission, the Commission and other interested parties expect that the MOA's position reflects all component parts of the MOA.

Accordingly, it makes no sense that the Assembly would petition to intervene in a docket before the Commission in which the MOA itself is already a recognized party. Chugach and MEA are aware of no state law that recognizes the Assembly as an independent legal entity distinct from the MOA itself. Rather, Chugach and MEA understand that the Assembly is an integral part of MOA (a unified home rule municipality that was established in 1975 under Alaska), just like the Mayor, the Administration, and the Municipal Attorney. Further, the Assembly's petition points to

[1] Notice and Request for Acknowledgement of Anchorage Hydropower's Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee,, July 18, 2024 ("MOA Request").

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

no state law that recognizes that the Assembly as independent and not part of the MOA and makes no demonstration that the Assembly is legally independent or distinct from the MOA itself.

The Assembly claims no statutory right to intervene pursuant to 3 AAC 48.110(a), so it petitions for permissive intervention according to the factors set forth in 3 AAC 48.110(a). The Assembly argues that "although the Administration and the Assembly are generally aligned on certain substantive goals, their legal interests are not identical." Assembly Petition to Intervene, at 5. The Assembly claims unique interests in policymaking, oversight, and authority of AHP that are not identical to the interests of the MOA Administration. Assembly Petition to Intervene, at 4-5. Yet, policymaking, oversight, and authority differences internal to the MOA do not create distinct legal interests recognized by state law. Again, the Assembly points to no state law or precedent that recognizes differentiated legal interests as between the Assembly and the Administration. The mere assertion of non-identical legal interests within any single municipal or corporate organization recognized as a single entity under Alaska law is not enough to give rise to independent legal standing.

Similarly, the Commission would not grant intervention to the board of directors of a corporation that is a party to a proceeding if the board asserted that its policies and oversight were at issue. While differences may arise from time to time between a corporation management and its board, such differences do not give rise to distinct legal interests meriting independent intervention before the Commission. Furthermore, the Commission should not spend its valuable time refereeing policy and oversight differences internal to corporations and their boards. The same logic applies to a municipality and its assembly.

As a result, due to a fundamental lack of interests distinct from those of the MOA, the Assembly's petition fails to satisfy factors (2) - (5) set forth in 3 AAC 48.110(b).

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

II. The Assembly's Interests Are Represented by the MOA and its Counsel

The Assembly argues that the MOA itself "will not sufficiently represent the Assembly's interests" before this Commission and it should therefore be allowed to intervene. Assembly Petition to Intervene, at 5. Chugach and MEA disagree.

First, the Commission should require that MOA to represent all of the MOA's various governmental interests, including the Assembly, the Mayor, the Administration, the Municipal Attorney, and AHP. To the extent that the Assembly wants its policies or oversight to drive AHP in a particular direction, the MOA's position in this docket should reflect the outcome of discussions between the Assembly, the Administration, and AHP related to those policies. The Commission should not be required to act as an arbiter of interbranch disputes or policies differences between the Assembly and the other municipal government interests involved. Other parties to the proceeding should not have to ascertain which of two MOA parties speaks for the MOA. That work should be done within the MOA, subject to the system of checks and balances laid out in the MOA Charter, before the MOA takes any positions in this docket.

Second, counsel for the MOA, Mr. Dean Thompson of Kemppel, Huffman and Ellis, P.C., has ably represented the MOA before this Commission for more than 20 years for Anchorage Municipal Light & Power (ML&P) and now AHP. Mr. Thompson served as lead counsel for the MOA in the proceeding related to the sale of ML&P's assets to Chugach, briefed the legal matters presented, and advised and represented the MOA in implementing the conditions set forth in the Commission's Order No. U-18-102(44)/U-19-020(39)/U-19-021(39). Indeed, Mr. Thompson drafted and filed the "Notice of ML&P's Surrender of Eklutna Operating Committee Voting Rights", filed with the Commission in that docket on October 30, 2020. Accordingly, Chugach and MEA see no reason to assume that he would not be able to represent the

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

MOA (and its component parts – AHP, the Administration, and the Assembly) and its legal interests in this proceeding.

III. Conclusion

The Commission should deny the Assembly's Petition for Intervention.

RESPECTFULLY SUBMITTED this 3rd day of September, 2024.

John M. Espindola
Robert M. Pickett
John C. Springsteen

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

MUNICIPALITY OF ANCHORAGE D/B/A ANCHORAGE HYDROPOWER'S NON-OPPOSITION TO THE ANCHORGE ASSEMBLY'S PETITION TO INTERVENE

The Municipality of Anchorage ("MOA") d/b/a Anchorage Hydropower ("AHP") hereby responds to the Anchorage Assembly's ("Assembly") August 27, 2024, Petition to Intervene ("Petition"). In its Petition, the Assembly stated:

> The Assembly seeks limited intervention only to the extent it becomes necessary to respond to where [Chugach Electric Association, Inc. ("Chugach")] and [Matanuska Electric Association ("MEA")] have called into question the Assembly's authority, or where they have sought to prospectively limit such authority. The Assembly does not anticipate taking a position or submitting briefs on matters beyond that issue.[1]

AHP does not oppose the Assembly's intervention as requested in the Petition.

As AHP argued in its August 29, 2024, reply to Chugach and MEA's opposition to AHP's motion for expedited consideration, the Assembly-related issues (the Assembly's authority or proposed advisory opinions regarding that authority), among others, are well beyond the proper

[1] Petition at 5.

Re: Eklutna Hydropower Project, 1991 Agreement Fish and Wildlife Program Brief

Dear Governor Dunleavy:

Thank you for inviting us to participate in a meeting to discuss your review of the Eklutna Hydropower Project's Fish and Wildlife Program pursuant to the 1991 Fish and Wildlife Agreement. The purpose of the meeting is to provide the signatories and the Native Village of Eklutna an opportunity to present our position on the proposed Program. Representatives from my staff will be present at the meeting to support our position and address your questions.

The meeting invitation also offered the opportunity to provide a legal brief addressing a series of questions. Our position on the proposed Fish and Wildlife program is outlined in the June 21, 2024 comment letter provided to your office and comports with the answers provided below. We look forward to the discussion on September 9.

Sincerely,

Jonathan M. Kurland

Regional Administrator

BRIEF IN RESPONSE TO QUESTIONS RAISED BY THE GOVERNOR TO CLARIFY RESPONSIBILITIES UNDER THE 1991 AGREEMENT

Under the 1991 Fish and Wildlife Agreement for the Snettisham and Eklutna Projects (1991 Agreement), the Eklutna Purchasers (Owners) are required to create a program to protect, mitigate damages to, and enhance fish and wildlife impacted by the Eklutna hydropower project (Program), in consultation with the National Marine Fisheries Service (NMFS), the U.S. Fish and Wildlife Service (USFWS), and the State of Alaska resource management agencies (1991 Agreement Preamble and Para. 4). The Owners proposed a Final Program and NMFS submitted comments on that Final Program to the Governor on June 21, 2024 (1991 Agreement Para. 5). NMFS's comments summarize our position on the Owner's proposed Final Program, based on our expertise and statutory authorities (such as those under the Magnuson-Stevens Fishery Conservation and Management Act, 16 USC 181 et seq.). Pursuant to his responsibilities under the 1991 Agreement, the Governor requested additional information from the parties and the Native Village of Eklutna, concerning the Owners' Final Program and all subsequently received comments, asking a response to six questions. NMFS's response to those questions are addressed below.

1. **The Governor is required to give equal consideration to eight factors identified in Section 5 of the Agreement. Please identify how the proposed final program or an alternate program promoted by any other parties, or the Native Village of Eklutna, does or does not meet those eight factors.**

The eight factors listed in Paragraph 5 of the 1991 Agreement are: (i) efficient and economical power production, (ii) energy conservation, (iii) protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat), (iv) protection of recreation opportunities, (v) municipal water supplies, (vi) preservation of other aspects of environmental quality, (vii) other beneficial public uses, and (viii) requirements of state law. Of these factors, the National Marine Fisheries Service (NMFS) has expertise and statutory authorities that apply to factor (iii) protection, mitigation of damage to, and enhancement of fish and wildlife. Under the 1991 Agreement, we hold an advisory role, but the Owners must give due weight to our recommendations, expertise, and authorities (1991 Agreement Paras. 4, 5).

As a party to the 1991 Agreement, we have actively participated in all stages of its implementation which encompassed the development of study plans, review of findings, and assessment of various protection and mitigation alternatives. We negotiated in good faith with the Owners, and signoratores, as well as in discussions with NVE, to develop the proposed Fish and Wildlife Program. Based on those discussions, our review of the proposed Program, and consideration of potential alternatives, it is our conclusion that the proposed Program provides a framework to initiate the protection, mitigation and enhancement of fish and wildlife resources, and will support the next iteration of a mitigation plan. The Program includes provisions supporting habitat restoration initiatives, monitoring the effectiveness of the mitigation, a

technical working group (TWG) to inform the mitigation decision making process, and provisions to address changing technology and climate conditions.

Our comments on the proposed Program considered alternatives for water flow at the dam rather than sourced from the AWWU portal. Presently, the primary source of water into the river would be discharged from the AWWU portal approximately one mile downstream of the dam. The Program includes a provision for the Owners to conduct a detailed feasibility study of a new fixed wheel gate at the existing dam (including a stability analysis and Class 3 cost estimate). If the new gate is structurally feasible and monitoring efforts during the defined 10-year period indicate that average annual inflows to the lake have increased by 20,000 acre-feet or the Monitoring and Adaptive Management Committee determines that higher channel maintenance flows are warranted to maintain spawning gravels, then the Owners will commit up to $10 million in 2024 U.S. dollars to install the new gate. We recommended one alternative in reference to the funds proposed in the Program for a fixed wheel gate. If the feasibility study indicates the dam is insufficiently stable to support a new gate structure and this action does not proceed, then one of two alternatives should be given consideration. In lieu of a new gate, we recommend further analysis for the construction of a pump station that takes water from Eklutna Lake and discharges it through, or adjacent to, the existing dam outlet gate. We reviewed the Owner's response to this alternative by NVE and understand their concerns. However, a more in depth analysis is warranted if the feasibility study for a new gate indicates an unfavorable stability result. A pump station would add functionality for controlling water levels, preventing uncontrolled spill, and managing the mitigation water budget. Alternatively, if the new gate is infeasible, the funds identified for the potential new gate should be designated for other mitigation measures related to water management for the protection, mitigation, and enhancement of fish and wildlife in the Eklutna River in coordination with the Monitoring and Adaptive Management Committee. This alternative also supports a framework for the protection, mitigation and enhancement of fish and wildlife resources, and will support the next iteration of a mitigation plan.

2. Does the Agreement require complete connection between the river and the lake to support fish passage?

The 1991 Agreement preamble states that the Agreement is "...regarding protection, mitigation of damages to, and enhancement of fish and wildlife (including related spawning grounds and habitat) affected by hydroelectric development of the Eklutna…Project." During the study plan phase, the 1991 Agreement directs the Owners to examine and develop proposals for the protection, mitigation of damages to, and enhancement of fish and wildlife affected by the hydropower development, taking into consideration impacts on electric ratepayers, municipal water utilities, recreation users and adjacent land use, and available means to mitigate any of those impacts (1991 Agreement Para. 2). The Owners then created the Final Program based on those studies and input by the Parties (as well as various other stakeholders not included in the 1991 Agreement) (1991 Agreement Paras. 4, 5). Finally, the 1991 Agreement directs the Governor to consider the eight factors listed above in making his decision on the Program (1991

Agreement Para. 5). The 1991 Agreement does not specifically mention fish passage or river connectivity to the lake.

3. **Is MOA Assembly approval required for approval of the Owners' program?**

NMFS lacks knowledge or information sufficient to answer this question.

4. **What effect, if any, did the MOA's lack of a vote on the Owners' program have on the process set forth in the Agreement?**

The process established by Anchorage Municipal Light and Power, Chugach Electric Association, and Matanuska Electric Association, owners of the Eklutna Project (collectively, the "Owners"), has been, to the best of NMFS's knowledge, consistent with the intent of the 1991 Agreement provisions and inclusive of significant stakeholders who are not parties

5. **Does the Governor have the authority under the Agreement to impose a two-year extension on the process as requested by the MOA?**

The 1991 Agreement lays out the timeline (1991 Agreement Para. 7) and allows the Governor to reconcile differences and establish the final program (1991 Agreement Para. 5). The 1991 Agreement does not speak to an extension of the process.

6. **Whether the Owners and Anchorage Water and Wastewater Utility ("AWWU") have reached a final and binding agreement concerning the use of A WWU infrastructure as outlined in the Owners' program. If a final agreement has not been reached, what effect will that have on the Owners' ability to implement the final proposed program?**

NMFS lacks knowledge or information sufficient to answer this question.

D. Question 4: The lack of MOA voting rights had no effect on the process and the Proposed Final Program. 21

E. Question 5: The 1991 Agreement does not give the Governor authority to impose a two-year delay. 22

F. Question 6: AWWU and the Project Owners have reached final agreement concerning the use of AWWU infrastructure, subject to certain conditions precedent. 24

III. CONCLUSION 25

I. INTRODUCTION

On August 15, 2024, Rachel Bylsma, Deputy Chief of Staff to Governor Mike Dunleavy, requested ("Governor's Staff Request") that the parties to the 1991 Fish and Wildlife Agreement[1] ("1991 Agreement") and the Native Village of Eklutna ("NVE") prepare and submit briefs in answer to six legal questions related to the Proposed Final Fish and Wildlife Program ("Proposed Final Program") submitted to the Governor on April 25, 2024 by Chugach Electric Association, Inc. ("Chugach") and Matanuska Electric Association, Inc. ("MEA"), and supported by the Municipality of Anchorage ("MOA") d/b/a Anchorage Hydropower ("AHP") (collectively, the "Project Owners").

The Eklutna Hydroelectric Project (the "Project") was developed by the federal government and became operational in 1955. The Project Owners purchased the Project from the federal government in 1997. In connection with that transaction, the Project Owners entered into the 1991 Agreement with two federal agencies and the State of Alaska committing to, every 35 years, study the impacts of the Project on fish and wildlife and propose – for Governor approval – a program to protect, mitigate damages to, and enhance fish and wildlife affected by the Project.

The Project Owners began the first process to implement the 1991 Agreement in 2019; over the last five years, the Project Owners have spent approximately $8 million, countless staff resources, and significant management time conducting a process of consultation with state and federal resource agencies, rigorous scientific and engineering studies, stakeholder engagement, and careful analysis of dozens of fish and wildlife protection, mitigation, and enhancement proposals. These efforts culminated in the Project Owners' release of a Draft Fish and Wildlife Program ("Draft Program") in October 2023. After subsequent public comment, meetings to reconcile differences, and negotiations with the other parties to the 1991 Agreement and NVE, the Project Owners

[1] Agreement Between the Municipality of Anchorage d/b/a Anchorage Municipal Light and Power, Chugach Electric Association, Inc., Matanuska Electric Association, Inc., U.S. Fish and Wildlife Service, National Marine Fisheries Service, Alaska Energy Authority, and the State of Alaska Relative to the Eklutna and Snettisham Hydroelectric Projects (Aug. 7, 1991) ("1991 Agreement").

modified the program to account for such comments and negotiations, while still conforming to the 1991 Agreement requirements. The Project Owners submitted the Proposed Final Program to the Governor on April 25, 2024, who must issue a Final Fish and Wildlife Program ("Final Program") by October 2024.

The Proposed Final Program meaningfully protects, mitigates damages to, and enhances fish and wildlife affected by the Project while balancing numerous public uses of the Eklutna River and Eklutna Lake, including power production and municipal water supply. The process conducted by the Project Owners followed and exceeded the 1991 Agreement's requirements and the Proposed Final Program represents the consensus of the Project Owners and multiple negotiated compromises among the 1991 Agreement parties, and is supported on balance by the state and federal agencies that are party to the 1991 Agreement, as reflected in their comment letters to the Governor on the Proposed Final Program.[2] Consequently, the Project Owners respectfully request the Governor adopt the Proposed Final Program as the Final Program without material modification.

In support of such approval, the following brief responds to each of the six questions posed in the Governor's Staff Request. Please note that the Project Owners have previously addressed the substance of the questions at across hundreds of pages of documents submitted to the Governor in connection with the Proposed Final Program. **Appendix A** provides a reference to such additional Project Owner provided information.

II. RESPONSES TO GOVERNOR'S STAFF REQUEST QUESTIONS

A. Question 1 Response: The Proposed Final Program meets and successfully balances the eight factors set forth in the 1991 Agreement; NVE's proposal does not.

The Governor's Staff Request asks how the Proposed Final Program, or an alternate program promoted by any other party to the 1991 Agreement, or NVE, meets the eight factors in Section 5 of the 1991 Agreement: (1) efficient and economical power

[2] Letter from Jonathan M. Kurland, Regional Administrator, National Marine Fisheries Service to Mike Dunleavy, Governor of Alaska (June 21, 2024), ("NMFS Comment Letter"); Letter from Sara Boario, Regional Director, U.S. Fish and Wildlife Service to Mike Dunleavy, Governor of Alaska (Jun. 24, 2024).

production; (2) energy conservation; (3) the protection, mitigation of damages to, and enhancement ("PME") of fish and wildlife (including spawning grounds and habitat); (4) the protection of recreational opportunities; (5) municipal water supplies; (6) the protection of other aspects of environmental quality; (7) other beneficial public uses; and (8) requirements of State law (the "Eight Factors").

The Proposed Final Program represents a well-balanced approach to each of the Eight Factors. This balance reflects intention. While no language in the 1991 Agreement required the Project Owners to analyze each of the Eight Factors directly when developing the Proposed Final Program, they did. Section 2 of the 1991 Agreement requires that the Project Owners fund studies to examine and quantify, if possible, the impacts to fish and wildlife from the Project, and to examine the impacts of fish and wildlife measures on electric rate payers, municipal water utilities, recreational users and adjacent land use. As a result, during the study process, the Project Owners amassed and analyzed a significant amount of scientific data and engineering information about how various fish and wildlife PME proposals would impact power production, surrounding land, recreation, and water supply.[3] Based on this data, the Project Owners crafted their Proposed Final Program with the goal of ensuring that the Governor could meet his obligations to give equal consideration to the Eight Factors.

The federal and state resource agency parties do not oppose the negotiated Proposed Final Program and consequently did advance alternative proposals to the Governor for consideration. NVE's most recent proposal[4], like its previous proposals[5], is not a balanced approach in that it focuses only on one factor (fish and wildlife impacts) and is centered on dam removal, which would be costly to power production, reliability, and rates, and risk the municipal water supply.

[5] *See* SID at §§ 4.12.1-4.12.3 (summarizes NVE alternatives).

1. Factors 1-2: Efficient and Economic Power Production and Energy Conservation

As member-owned cooperatives and public utilities regulated by the Regulatory Commission of Alaska ("RCA"), with corporate and legal obligations to provide reliable electricity to their ratepayers[6] at just and reasonable rates,[7] Chugach and MEA are legally constrained in their ability to put forth a Proposed Final Program that would put place power production or grid/service reliability at risk or significantly increase rates for member-ratepayers in pursuit of speculative or unknown resource benefits. Both natural gas supply constraints and renewable generation acquisition goals also necessitate the conservation of existing reliable and clean energy baseload resources like the Project. Considering these realities, ensuring that the Proposed Final Program appropriately considers Factors 1 and 2 of the 1991 Agreement is both essential to the 1991 Agreement and Chugach and MEA's obligations to their member-ratepayers.

The Project produces nearly 6 percent of the Project Owners' combined total generation portfolio, about 25 percent of Chugach's renewable energy, about 44 percent of MEA's renewable energy, and is also consistently the lowest-cost resource for power in the Alaska Railbelt.[8] Additionally, the Project is also critical to grid reliability and has been particularly essential in emergency situations as demonstrated in early 2024 during an extended period of cold weather in Anchorage. When ENSTAR Natural Gas Company ("ENSTAR") experienced gas deliverability problems, Chugach and MEA voluntarily maximized their usage of the Project (and other hydro resources) to maintain system reliability.[9] The Project provided 8 percent and 9 percent of their respective energy needs

[7] AS 42.05.381(a) ("[a]ll rates demanded… by a public utility… for a service furnished… shall be just and reasonable…").
[8] *See* SID at § 2.2.2.
[9] *See* Letter from Andrew Laughlin, Chief Operating Officer, Chugach Electric Association, Tony R. Zellers, Chief Operating Officer, Matanuska Electric Association, and Kolby Hickel, Deputy Municipal Manager, Municipality of Anchorage, to Assembly

to meet MEA's load and Chugach's load during the cold snap and created significant natural gas savings, decreased emissions, and allowed ENSTAR to avoid issuing a yellow alert designation for natural gas delivery to its customers, which would have included, in part, requiring MEA and Chugach to shift to available diesel generation to provide additional gas to ENSTAR, and use fuel more than twice as expensive as natural gas that would have increased bills for utility customers.[10]

Based on the study results, the Project Owners committed to establish year-round instream flows in the Eklutna River as the foundation of the fish and wildlife program.[11] All water that is released into the Eklutna River, however, is no longer available to be sent through the Project powerhouse and is lost generation of the Project's reliable, low-cost clean power that provides significant benefits to customers and region. To be clear, all lost generation as a result of a Final Program will need to be replaced with more expensive power, the costs of which will be borne by ratepayers.[12] The amount of water released and the timing also impacts the amount of lost generation and its costs; proposals that require shutdowns of the Project create exorbitant costs and would even cause MEA to violate its power capacity reserve reliability standard requirements if not replaced with costly new diesel generation. Accordingly, the Project Owners sought to minimize the cost and operational impacts of releasing instream flows, used cost effectiveness, cost-benefit, and incremental cost analyses to find the most efficient means to provide instream flows, and rejected all proposals that would have shut down the project operations for a significant portion of the year and undermined the value of the Project to capacity reserves and grid reliability.[13]

Vice Chair Zaletel and Members of the Municipal Assembly, Municipality of Anchorage at 7 (February 12, 2024) ("Owners' 2/12/24 Letter to Assembly").

[10] *Id.*

[11] *See* SID at § 4.5.

[12] *See id.* at § 4.5.4.4 (showing the replacement energy costs associated with different proposed flow regimes and fish passage proposals), § 2.2.2 (discussing value capacity).

[13] *Id.* at § 4.5.

As a result of this work, the Proposed Final Program reflects a balanced approach to the efficient and economic power production and energy conservation criteria with its annual replacement energy cost of $1.3 million per year, and limited estimated ratepayer increases of 0.53 percent for Chugach and 0.84 percent for MEA.[14] Other options analyzed by the Project Owners were unacceptable because they were technologically or operationally infeasible and replacement energy would have cost up to $4 million *annually*, resulting in ratepayer increases of 4.7 percent for Chugach and 5.8 percent for MEA.[15] The Proposed Final Program capitalizes on existing infrastructure efficiencies, conserves a reliable and clean source of affordable electricity that has proven system benefits in times of gas shortages, and keeps impacts on Railbelt energy and costs manageable, while still providing for meaningful instream flows, habitat increases, and benefits to fish and wildlife.

2. Factor 3: Fish and Wildlife Protection, Mitigation and Enhancement

The 1991 Agreement requires consideration of the protection, mitigation of damages to, and enhancement of fish and wildlife (including related spawning grounds and habitat). The benefits to fish and wildlife of the Proposed Final Program were analyzed and discussed in great length in the Proposed Final Program itself and in the hundreds of pages of supporting materials submitted to the Governor.[16] In short, the Proposed Final Program meaningfully protects, mitigates, and enhances fish and wildlife impacted by the Project: it proposes to release significant monthly instream flows of water from Eklutna Lake into Eklutna River in rates ranging from 27 cubic feet per second ("cfs") in winter months to 40 cfs in summer months,[17] along with additional periodic channel maintenance flows up to 220 cfs.[18] The Proposed Final Program

[14] *Id.* at § 4.5.4.4.

[18] *Id.* at § 2.2.

empowers a Monitoring and Adaptive Management Committee ("Committee") of agency and NVE experts[19] to evaluate and modify flow regimes within a water budget to increase fish habitat and effectiveness.[20] These releases will rewater 11 out of 12 river miles year-round, where regular flows have not existed for decades before the Project Owners bought the Project from the federal government.[21] Modeling results indicate that spawning and rearing habitat for Chinook will increase by 209 percent and 53 percent respectively, and that spawning and rearing habitat for coho will increase by 65 percent and 67 percent respectively.[22] Models of the increased flows and potential resulting salmon reveal benefits to other wildlife species such as bear and moose.[23]

The Proposed Final Program is also just the beginning of a decades long process to protect, mitigate damages to, and enhance fish and wildlife affected by the Project through adaptive management led by the Committee's fisheries experts, with significant reopeners for installation of a fixed wheel gate and fish passage – before the 1991 Agreement calls upon the Project Owners to begin the process again – based on ongoing monitoring.[24] The reopeners are the result of negotiations between the state and federal agencies and the Project Owners to address unknowns in the future after instream flows start to enhance fish and wildlife. For instance, the Project Owners and agencies recognized that water inflows into Eklutna Lake are likely to increase due to climatic effects on glaciers and negotiated an ongoing monitoring mechanism that allocates any such increase in water between the instream flow budget and hydro production.[25] Additionally, while no party knows of means to achieve successful upstream and downstream volitional fish passage within the project's operational constraints *now*, the

[25] *Id.* at § 3.3.3.

parties recognized opportunities might arise in the *future* and created a mechanism and a process through which the Committee of experts may reopen the program to take additional steps to add fish passage.[26]

3. Factor 4: Protection of Recreational Opportunities

The 1991 Agreement requires consideration of the protection of recreational opportunities. The Project Owners assessed the recreational opportunities existing near the Project and ensured that the Proposed Final Program enhances, does not adversely impact, or mitigates against any negative impacts to, such opportunities. [27]

The Project Owners identified the following recreational activities related to the Project near Eklutna Lake and Eklutna River: (i) the use of a lakeside trail and other Chugach State Park infrastructure around Eklutna Lake, (ii) potential fishing opportunities in the Eklutna River; (iii) kayaking on Eklutna Lake; (iv) camping (including in cabins) nearby to Eklutna Lake; (v) hunting nearby to Eklutna Lake and Eklutna River; and (vi) wildlife viewing.[28] Fishing is also popular at the Eklutna tailrace fishery where the water through the Project is released into the Knik River.

Implementation of the Proposed Final Program will not impact camping or kayaking, and increases in hunting opportunities, wildlife viewing, and Eklutna River fishing opportunities are expected with any return of fish and the wildlife that benefit from any increased salmon abundance.[29] Bear-human interactions may also increase as a result; the release of water one mile downstream of the dam, however, helps to mitigate against potential increased bear presence at Eklutna Lake-area campsites.[30] While no impacts are expected to the lakeside trail from the Proposed Final Program directly, high lake levels during past spill events have caused erosion along discrete segments of the

[29] *Id.*; *see also* Proposed Final Program at § 2.5.3.
[30] ALASKA DEPARTMENT OF NATURAL RESOURCES DIVISION OF PARKS AND OUTDOOR RECREATION, CHUGACH STATE PARK MANAGEMENT PLAN (2016) at 33; *see also* Comparison to Existing Conditions at 12 (Safety).

trail and the Project Owners committed $234,000 for lakeside trail repairs (to match other funds already secured) to improve recreation around the lake.[31] The Proposed Final Program also protects the existing Eklutna Tailrace fishery by (1) continuing to provide water to the fishing area and avoiding operational changes that could adversely impact fishing opportunities; and (2) monitoring any straying of fish from the Tailrace fishing to the Eklutna River and developing appropriate mitigation measures if needed.[32]

4. Factor 5: Municipal Water Supplies

The 1991 Agreement requires consideration of municipal water supplies. The Project and Anchorage's water supply have been inextricably linked as a matter of physical infrastructure, operations, contract, water rights, and authorizing law since the 1980s when AWWU connected its intake pipe to the Project's intake structure. The Project provides infrastructure necessary for AWWU to collect and deliver water to Anchorage.[33] Accordingly, before proposing using AWWU infrastructure for instream flows, the Project Owners worked closely with AWWU leadership and engineers over many months in advance of the Draft Program release, and again in advance of Proposed Final Program submission to the Governor, to develop legal terms and agreements by which AWWU would be comfortable should the Governor issue a Final Program requiring the use of AWWU infrastructure to release water into the Eklutna River.[34]

These efforts resulted first in the execution of a binding term sheet in October of 2023 ("Binding Term Sheet"), prior to the release of the Draft Program, pursuant to which AWWU and the Project Owners agreed to key terms to be included in agreements to govern the construction and use of an "Eklutna River Release Facility", along with an agreement governing the long-term sharing of Eklutna Lake water rights between the

[31] Proposed Final Program at § 2.5.1 - 2.5.2.
[32] *Id.*
[33] *See* Project Owner Responses to Comments on Proposed Final Program (Jul. 24, 2024), at 19-21 ("Owners' Comment Responses").
[34] *See* Proposed Final Program at § 2.1.1; Owners' Comment Responses at 19-21.

Project Owners and AWWU.[35] As contemplated in the term sheet, AWWU and the Project Owners then negotiated three agreements to detail and govern the arrangement, which were submitted to the Governor in final agreed form (the "AWWU Final Agreements") along with the Proposed Final Program.[36]

Pursuant to the Proposed Final Program and the terms of the AWWU Final Agreements, there is no reduction in the amount of water guaranteed to be provided to AWWU for municipal water supplies.[37] The Project Owners also commit to not take any action in connection with the Fish and Wildlife Program that would compromise the Anchorage water supply and they expressly take on the liability should they do so.[38] The Project Owners will cover all costs of constructing and interconnecting new facilities for the purpose of the Final Program[39] and AWWU has design approval rights.[40] In order to accommodate instream flows and coordinated operations, the Project Owners will pay for eight new bridges over the Eklutna River for AWWU to maintain access to its infrastructure,[41] new communication systems, new flow meters, and a new isolation valve structure for safer maintenance of their facilities.[42] The AWWU Final Agreements also address and extend AWWU's interconnection rights to the Project, use of the Project Owners' water rights for Anchorage drinking water at a compensation rate capped at

[39] *See* form of Water Facilities Interconnection Agreement § 5.1.
[40] *Id.* at § 4.3.
[41] *See* form of Water Facilities Interconnection Agreement § 2.1; *see also* SID at § 2.4.
[42] *See id.* at. Exhibit A-1.

roughly half of its current costs, and replaces a 1984 agreement that expires in 2025.[43] AWWU would also gain a right to purchase the Project Owners' water infrastructure used to transport AWWU's water allocation in the event that the Project Owners cease operating the Project[44], as well as rights to priority water rights without the need for further compensation at the end of the new public water supply agreement in 2060.[45]

AWWU engineers have closely reviewed and contributed to the Proposed Final Program and current design drawings of the Eklutna River Release Facility and AWWU presented no concerns with respect to safety or feasibility to the Project Owners. AWWU has also raised no concerns to the Project Owners as to the impacts of the Proposed Final Program on municipal water supplies. Rather, AWWU has agreed to the AWWU Final Agreements and on balance, if executed, such agreements will represent a net positive benefit to AWWU and municipal water supplies as compared with the status quo.

5. Factor 6: Other Aspects of Environmental Quality

Factor 6 requires consideration of other aspects of environmental quality. As a renewable resource, the Project currently offsets approximately 72,500 metric tons of CO_2 equivalent each year and represents 25 percent and 44 percent of Chugach's and MEA's renewable electricity portfolio, respectively.[46] Because all water released through the Eklutna River Release Facility and not into the Project powerhouse will reduce the generation of carbon-free power in the Railbelt and at least in the short term, will need to be replaced with natural gas generation, the Proposed Final Program, which will cause increased carbon emissions of 6,900 metric tons of CO_2 annually[47], therefore weights negatively when considering the preservation of other aspects of environmental quality.

While this is a negative result in analyzing Factor 6, all proposals that were analyzed by the Project Owners required the release of water and reduction in Project generation, and therefore a direct associated increase in carbon emissions. Nonetheless,

[47] *See, e.g.,* Comparison to Existing Conditions at 13.

all parties and all stakeholders want to see some level of flows in the Eklutna River. This emissions result is therefore unavoidable. Given, however, that the Proposed Final Program represents a measured approach to water release that still allows for significant hydroelectric generation from the Project, the Proposed Final Program ultimately has the least negative carbon emissions impact of all alternatives proposed.

6. Factor 7: Other Beneficial Public Uses

Factor 7 requires consideration of other beneficial public uses. The Proposed Final Program relates to at least two other such beneficial uses, both positively and neutrally.

First, the Proposed Final Program creates benefits to cultural resources. NVE has informed the Project Owners on numerous occasions of the important cultural benefit of the Eklutna River as a salmon river.[48] While the Project Owners acknowledged that NVE and Eklutna, Inc. do not believe that the Proposed Final Program goes far enough,[49] nonetheless, the measures outlined in the Proposed Final Program will unequivocally provide year-round instream flows in the Eklutna River and increase salmon habitat for all four known species of salmon currently observed spawning in the Eklutna River.

Second, the Old Glenn Highway Bridge, the New Glenn Highway Bridges and the Railroad Bridge pass over the Eklutna River downstream of the Project.[50] While increases in flows certainly increase risk to downstream infrastructure, each of these bridges has a hydraulic capacity of at least 1800 cfs (or higher) and the proposed flows in the Proposed Final Program are therefore well within the hydraulic capacity of each of the existing bridges and will not impact the beneficial public use of such bridges.[51]

7. Factor 8: Requirements of State Law

The 1991 Agreement requires consideration of the requirements of State law. While multiple State laws are relevant to the Proposed Final Program, throughout the

[51] *Id.*

process leading to the Proposed Final Program, the Project Owners engaged with state officials with respect to dam safety, water rights, fish and wildlife, cultural resources, and public access for recreation; at this point, they know of no legal impediments beyond permits, approvals, and water rights amendment. Specifically, the Project Owners will seek an amendment to their current Certificate of Appropriation from the Alaska Department of Natural Resources to allow for conveyance and release of Project water for instream flows.[52] Numerous state permits[53] will also be required for the construction of the Eklutna River Release Facility and implementation of the Proposed Final Program.

The Project Owners anticipate obtaining these permits during the three-year period of 2024-2027.[54] The Project Owners anticipate that these permits and permissions will be obtainable in due course given the measured and well-supported approach of the Proposed Final Program, and assuming the Project Owners are able to obtain all necessary permits and permissions for the implementation of the Proposed Final Program, the Project Owners have identified no violations of or needed modifications in State law to implement the Proposed Final Program by the stage agencies involved.

8. NVE's Proposals Do Not Equally Consider the Eight Factors

NVE has proposed three different program alternatives since July 2023 and the Project Owners have studied, conducted engineering analyses, and responded to each.[55] Like the earlier proposals, NVE's alternative overviewed to the Governor on June 21, 2024[56] is not a balanced approach with respect the Eight Factors because it fundamentally centers on dam removal in order to promote one factor above all others (Factor 3: fish and wildlife), would be costly to power production, reliability, and utility rates, and

Zellers, COO, Matanuska Electric Association to Aaron Leggett, President, Native Village of Eklutna (April 25, 2024).
[56] NVE Comment Letter at 5-7.

would risk municipal water supplies and downstream infrastructure. It poses significant cost, engineering and feasibility challenges and risks that the Project Owners analyzed at great length in their Cost and Risk Assessment submitted to the Governor as Appendix D to the Project Owners Responses to Comments in July[57] and as Attachment F to the Supporting Information Document submitted with the Proposed Final Program.

NVE's proposed alternative contains two core components that if adopted by the Governor in a Final Program, would unreasonably harm efficient and economical power production, downstream infrastructure, recreational opportunities, other aspects of environmental quality, municipal water supplies, and in the event of an engineering failure, could also have extremely harmful impacts on fish and wildlife populations. First, NVE's proposal calls for a pump station at Eklutna Lake to pump water into the pond between a glacial berm and the Eklutna Lake dam for ultimate release into Eklutna River.[58] While the Project Owners considered variations of this approach during their analysis of alternatives, it was ultimately not selected because it depends on a powered mechanical system; if that powered mechanical system fails, the consequence could be devastating to the downstream fish populations and habitat that would depend on future flow releases.[59] Unlike the pump station, if a power outage occurs (which is likely given its remote location), then the Project Owners' Eklutna River Release Facility would continue to function by simple gravity flow from the river release valve.[60]

Second, NVE's proposal is centered on establishing complete connection between Eklutna Lake and Eklutna River by 2034 by dam removal.[61] The Project Owners have analyzed dam removal in depth[62] and have concluded that if the Project were removed and Eklutna River flows were unregulated, AWWU's pipeline infrastructure would be at significant risk and the New Glenn Highway bridges and Alaska Railroad bridge, which

[62] *See* Dam Removal Assessment.

were not built to withstand a free-flowing river, would need to be replaced.[63] Replacing the Project energy and capacity with firm renewable energy would cost more than $500 million in total known costs in 2034, and if full replacement by renewable energy is not possible, additional carbon-intense resources would need to come online.[64] It would also eliminate the Eklutna Tailrace fishery. These are very harmful results to multiple public uses that the Governor is required to give equal consideration to. The Governor adopting NVE's approach would be a clear violation of the 1991 Agreement and would require significant state agency action, including the authorizing of new bridges, new municipal water supply infrastructure, and significant new electric generation infrastructure.[65]

B. Question 2: The 1991 Agreement is silent on specific measures and does not require complete connection between the river and the lake to support fish passage.

The Governor's Staff Request asks if the 1991 Agreement requires complete connection between the Eklutna River and Eklutna Lake to support fish passage. The 1991 Agreement contains no such requirement – explicitly or implicitly. Like the Federal Energy Regulatory Commission ("FERC") hydroelectric relicensing process upon which the 1991 Agreement is modeled,[66] the 1991 Agreement sets forth a *process* for the scientific development of a plan to protect, mitigate, and enhance fish and wildlife affected by the Project. The 1991 Agreement neither requires nor prohibits specific protection, mitigation, and enhancement *measures*. Contrary to NVE's demands and the Anchorage Assembly's ("Assembly") attempts to impose new objectives,[67] neither the language of the 1991 Agreement nor the history behind it support a requirement for complete river-lake connection or fish passage.

---

[63] Owners' Comment Responses at § 4.4.
[64] *See* Owners' Comment Responses § 4.12.2.
[65] *See, e.g.,* AS 46.03.720; AS 19.05.040.
[66] *See* 18 CFR §§ 5.1 et seq.
[67] *See* Owners' Comment Responses at §§ 4.2.1 – 4.2.2; *see also* Anchorage Municipal Code 26.30.025A ("[i]t is the policy of the [MOA] and [AHP] to restore the continuous water flow of the Eklutna River and the fish populations of the River and Eklutna Lake, to the greatest extent possible, subject to all provisions of the [1991 Agreement]").

First, none of the phrases "fish passage", "river restoration", "river connection" nor any similar phrases or objectives appear in the 1991 Agreement. The 1991 Agreement requires the Project Owners to develop, fund and carry out study plans, to review and summarize findings and facilitate a comment period, to develop a draft program to protect, mitigate and enhance fish and wildlife, to attempt to resolve differences among the parties, to develop a final proposed program and to submit it to the Governor, who then is required to weigh the Eight Factors, seven of which are unrelated to fish habitat. The only content-based requirement of the program to be submitted is that it includes measures to "protect, mitigate, and enhance fish and wildlife resources."[68]

The plain language of the 1991 Agreement (including its omissions) controls. Except where Congress has explicitly adopted another standard or where doing so would "frustrate specific objectives of federal programs",[69] the interpretation of federal government contracts is generally governed by federal common law, which incorporates the "core principles" of common law in force in most states.[70] A core principle of common law regarding the interpretation of contracts is the plain-meaning rule, which requires that where contract terms are "clear and unambiguous," they must be given their "plain and ordinary meaning."[71] A contract is only ambiguous if reasonable people could find its terms "susceptible to more than one interpretation," and the fact that parties dispute the meaning of a contract does not establish that it is ambiguous.[72] The 1991 Agreement terms are clear: they include no reference to river restoration or fish passage. Given that Congress passed the Alaska Power Administration Asset Sale and Termination Act[73] ("Sale Act") in 1995 based in part on the language of the 1991

[73] Public Law 104-58 (Nov. 28, 1995).

Agreement, no reasonable argument can be made to add language into its text that isn't there.

Second, while the 1991 Agreement is not ambiguous so evidence outside of its plain meaning is not relevant, an examination of extrinsic evidence even further reveals that no party intended river restoration or fish passage to be required as part of a Proposed Final Program. The Project was built by the federal government in 1955, decades after a dam in the Eklutna River below it had eliminated historical fish runs.[74] Prior to 1991 there is no evidence that fish and wildlife was even considered in connection with the Project.[75] In 1991, in connection with the then-proposed sale of the Project from the federal government to the Project Owners and associated proposed Federal Power Act exemption of the Project, exempting it specifically from FERC licensing requirements, concerns were raised that the impacts to fish and wildlife from the Project had not been, and as a result of the exemption, would never be examined or addressed and the 1991 Agreement was the compromise reached.[76] While it was based on the FERC relicensing process, the 1991 Agreement deviates in significant ways, including by adding additional non-fish habitat related factors to what the Governor is required to balance upon reviewing a the Proposed Final Program.[77] Congress subsequently approved the sale of the Project to the Project Owners, inclusive of the FPA

[75] *Id.* at 19 ("Specific fish and wildlife measures were not contemplated in earlier divestiture summaries and reports… this was because the projects were generally viewed as not involving fish and wildlife.").

[76] *Id.*

[77] *See* 1991 Agreement at § 5; *compare* Section 4(e) the Federal Power Act: ". . . equal consideration to the purposes of energy conservation, the protection, mitigation of damage to, and enhancement of, fish and wildlife (including related spawning grounds and habitat), the protection of recreational opportunities, and the preservation of other aspects of environmental quality." *See* 16 U.S.C. § 797(e). Factors (1) efficient and economical power production, (5) municipal water supplies, (7) other beneficial public uses; and (8) requirements of State law are therefore unique to the 1991 Agreement.

exemption, via the Sale Act in 1995.[78] Given this history, there are therefore ample records available that deal with the intentions behind the 1991 Agreement, including federal agency and Congressional records.[79] None, including the Divestiture Summary Report written in 1992 by the Alaska Power Administration in support of the Project sale transaction, reference "fish passage" or "river restoration." Notably, the National Marine Fisheries Services has also specifically written that, unlike the analog in federal law, the federal government does not have the authority to prescribe fish passage pursuant to the 1991 Agreement.[80] There is therefore simply no evidence suggesting that any party, or Congress, intended the 1991 Agreement to require fish passage or river connection.

C. Question 3: Assembly Approval is not required for the Proposed Final Program.

The Governor's Staff Request asks whether Assembly approval is required for the Proposed Final Program. In short, the Assembly has no approval authority over the Fish and Wildlife Program developed by the Project Owners pursuant to the 1991 Agreement process. The Assembly's authority only applies to the MOA and AHP, but the MOA surrendered all decision-making rights over the Project management, and development and implementation of the Proposed Final Program in October 2020.

When the Project Owners purchased the Project in 1997, Chugach obtained 30 percent of undivided interests in the Project, MEA obtained 16.67 percent, and MOA, doing business as Municipal Light and Power ("ML&P), obtained 53.33 percent.[81] The Project Owners agreed to jointly manage the Project through an Eklutna Operating Committee ("EOC")[82] and did so until October 2020. In 2019, MOA sought approval

[81] *See* 1996 Eklutna Hydroelectric Project Transition Plan by and among the United State of America d/b/a Alaska Power Administration. . . MOA d/b/a ML&P, Chugach, and MEA, May 29, 1996, as extended by the Agreement for Extension by and among MOA d/b/a ML&P, Chugach and MEA ("Transition Plan") at Recitals, Exhibit E.
[82] *See id.* at Exhibit E.

from the RCA to sell ML&P's assets to Chugach, to terminate ML&P's Certificate of Public Convenience and Necessity and to eliminate staff and cease to operate as an electric utility, with one notable exception.[83] The MOA proposed to retain its ownership interests in the Project and to enter into two long-term power purchase agreements ("PPAs") with Chugach and MEA, pursuant to which MOA would sell its share of the power generated by the Project to Chugach and MEA for a period of 25 years each.[84] These PPAs include requirements that MOA operate "consistent with prudent utility practice and the rights and obligations of the parties to the [PPAs]" and "not curtail Project power deliveries except as required by law or Prudent Utility Practice."[85] For the purpose of owning MOA's share of the Project and performing under the PPAs, a Municipal Hydropower utility (now AHP) was to be maintained.[86]

The RCA, when reviewing this proposal, noted that such municipal hydropower utility would not, after the transaction, have the staff or expertise of the Railbelt electric generation system necessary to effectively participate in the EOC, writing:

> . . . we can only find that MHP is managerially and technically fit to maintain an ownership interest in the Eklutna Project subject to the condition that… ML&P surrenders its vote on the EOC… so that Chugach and MEA can jointly manage and operate the Eklutna Project, *including negotiating compliance with the Fish and Wildlife Agreement*, without MHP having a vote on operation or management decisions.[87]

Accordingly, the RCA issued Order 39 approving the transaction, but conditioning its approval of the ML&P transaction upon the MOA's surrender of its voting rights until

---

[85] *Id.* at 61-62.
[86] *Id.* at 59-60.
[87] *Id.* at 67 (emphasis added).

such time as it could demonstrate the necessary technical and managerial fitness.[88] The MOA complied, executed a binding surrender of voting rights with Chugach and MEA, and filed it on October 30, 2020.[89] After the MOA willingly surrendered its EOC decision-making authority in 2020, neither the MOA's approval, nor the Assembly's approval, is not required for decisions related to implementing the 1991 Agreement, including approval of the Proposed Final Program.

Despite the surrender and in contravention to the RCA's explicit requirement that the MOA should not have "any ability to delay or change the Eklutna Project decisions made by Chugach or MEA" during such surrender period,[90] the Assembly has taken several actions in an attempt to change, delay and undermine the Proposed Final Program, including (1) adding language to the Anchorage Municipal Code stating that it is the MOA's policy to restore continuous water into the Eklutna River;[91] and (2) passing an ordinance calling upon the Governor to modify the process outlined in the 1991 Agreement and require the Project Owners to use two years of the three-year implementation period to identify an alternative solution and to remove substantive aspects (the "limited reopeners") from the Proposed Final Program.[92] Yet, the Assembly has no authority over the decisions that Chugach and MEA make with respect to the 1991 Agreement pursuant to the RCA's Order 39. Under Alaska law, in all situations where municipal ordinances conflict with the RCA's jurisdiction and authority over public utilities operating within that municipality, RCA regulatory authority shall prevail.[93] The

---

[88] *Id.* at 67.
[89] Surrender of Eklutna Operation Committee (EOC) Voting Rights dated as of October 27, 2020, and filed with the RCA in docket number U-18-102(44) ("Surrender").
[90] Order 39 at 67 (the MOA shall not have "any ability to delay or change the Eklutna Project decisions made by the Chugach and MEA representatives on the EOC").
[91] Anchorage Municipal Code 26.30.025A.
[92] AR No. 2024-218(S), As Amended.
[93] AS 42.05.641 ("[i]n the event of a conflict between a … regulation of the commission and a … regulation of such a local governmental entity, the … regulation of the commission shall prevail.")

Assembly's actions are "substantially irreconcilable"[94] with the RCA's clear order regarding the MOA's surrender of its rights regarding implementation of the 1991 Agreement and operations of the Project. Therefore, the Assembly actions attempting to modify the Proposed Final Program are superseded by RCA plenary authority over public utilities in the State of Alaska.

Consequently, no Assembly approval of the Proposed Final Program is required. Chugach and MEA acknowledge that the MOA has requested that the RCA approve return of its AHP's voting rights.[95] Until it regains such voting rights, however, the Assembly has no approval authority over the Proposed Final Program.

D. Question 4: The lack of MOA voting rights had no effect on the process and the Proposed Final Program.

The Governor's Staff Request asks if the MOA's lack of a vote on the Proposed Final Program affected the process set forth in the 1991 Agreement. No, the lack of a MOA vote had no effect on process or the result. Even though the MOA surrendered its vote on the EOC, per the direction of Chugach and MEA's Chief Executive Officers and MOA's Municipal Manager, the three Project Owners conducted themselves as equals and made all decisions through unanimous consent. No formal vote among the Project Owners was ever taken with respect to the process, the Draft Program, or the Proposed Final Program. All three Project Owners maintained complete agreement on the Proposed Final Program process, development, and submission; and the MOA's support of the process and the Proposed Final Program is clearly reflected in Mayor Dave Bronson's letter to the Governor on April 26, 2024.[96] The subsequent election of Mayor Suzanne LaFrance – and potential associated changes in policy position – could not have impacted the process given that she took office after the Proposed Final Program was submitted.[97]

---

[94] *See* Jefferson v. State, 527 P.2d 37, 43 (Alaska 1974).
[95] This proceeding is open in RCA Docket No. U-24-024; the RCA expects to issue an order no later than the statutory deadline which is January 14, 2025.
[96] Letter from Dave Bronson, Mayor, Municipality of Anchorage to Mike Dunleavy, Governor of Alaska (Apr. 26, 2024).
[97] Letter to Governor Dunleavy from Mayor Suzanne LaFrance (July 19, 2024).

E. Question 5: The 1991 Agreement does not give the Governor authority to impose a two-year delay.

The Governor's Staff Request asks if the Governor has the authority to impose a two-year extension on the process. The 1991 Agreement grants no such authority to the Governor or any other 1991 Agreement party. The 1991 Agreement is a contract that sets forth certain scheduled requirements with dates calculated from October 2, 1997, which is the date that the Project Owners took ownership of the Project: the Project Owners were required to initiate the consultation, study and program development process by October 2, 2022, the Governor should issue a Final Program by October 2, 2024, and implementation should begin by October 2, 2027 and be complete by October 2, 2032.[98] No provisions for delay or extension exist within the 1991 Agreement.[99]

Central to this analysis is the fact that the Governor, in reviewing the Proposed Final Program, is not acting as a governmental authority providing a regulatory approval; rather, the Governor is fulfilling contractual obligations on behalf of the State of Alaska as a party to the 1991 Agreement. No federal or Alaska law empowers the Governor to exercise regulatory authority over the Project's fish and wildlife program.[100] Rather, the Governor has the authority to weigh the Eight Factors and issue a Final Program because the parties to the 1991 Agreement gave him that authority. Governor Walter Hickel signed the 1991 Agreement on behalf of the State, agreeing that the future Governor would serve this role under the 1991 Agreement.[101] Without a formal amendment to the 1991 Agreement, Governor actions to delay the issuance or implementation of a Final Program beyond October 2, 2024, and October 2, 2027, respectively, would be a breach of the State's obligations under the 1991 Agreement.

---

[98] 1991 Agreement at § 7.

[99] *Id.; see also* Closing Agreement between the United States of America, acting through the Alaska Power Administration… the MOA d/b/a ML&P, Chugach and MEA, October 2, 1997 (evidencing closing date of October 2, 1997).

[100] Compare the Governor's lack of statutory authority over the Eklutna Project with the statutory authority that FERC wields with respect to hydroelectric project licensing under Part 1 of the Federal Power Act, §§ 4-36, 16 U.S.C. §§ 797-823d (2024).

[101] *See* 1991 Agreement.

Further, given the unique history and circumstances surrounding the 1991 Agreement, there is no clear path forward to so amend the 1991 Agreement. The 1991 Agreement reflects the negotiated consensus of three utilities, two federal agencies, and the State of Alaska in agreeing to an alternative to FERC hydropower licensing requirements for two federal hydroelectric projects to be purchased (the Project and the Snettisham Hydroelectric Project).[102] The Congressional record demonstrates that such consensus and the resulting 1991 Agreement were the reason why federal agencies and Congress were comfortable with, and ultimately provided, an exemption for the Project to Part I of the Federal Power Act for the Project in Sale Act in 1995.[103]

While the 1991 Agreement is silent on extensions and excused delays, it is also silent on amendment that would allow for such extensions and delays. Had the parties intended to allow for amendment to the 1991 Agreement in the future, they could have and would have done so. Yet, all of the principals and lawyers representing the utilities, federal agencies, and the State of Alaska omitted any provision for amendment. The parties to the 1991 Agreement cannot assume today that such omission was simply an oversight, particularly because the 1991 Agreement was an essential component behind the passage of the Sale Act authorizing the sale of the Project to the Project Owners. The 1991 Agreement (without a provision for amendment) was reviewed and acknowledged and made enforceable by Congress in the Sale Act and Congress also omitted any mention of future amendments.[104] Interpretation of the 1991 Agreement must respect the due weight of Congressional review and action and there exists no basis to amend the 1991 Agreement or authority of the Governor to unilaterally delay implementation.

Because the 1991 Agreement is an agreement with federal agencies that was approved by Congress, it is a federal contract that must be analyzed in accordance with

---

[102] *Id.* at § 1.
[103] *See* Conference Committee Report ("…as a result of the [1991 Agreement], the Department of Energy, the Department of the Interior and NMFS all agree that the two hydroelectric projects warrant exemption from the Federal Energy Regulatory Commission (FERC) licensing under Part I of the Federal Power Act.")
[104] Public Law 104-58 (Nov. 28, 1995).

federal common law. Section 3(c) of the Sale Act also makes the 1991 Agreement legally enforceable and reviewable in federal court.[105] While when reviewing federal contracts, federal courts often adopt state common law principles to govern federal contract disputes, as discussed in Section II.B, but only to the point that doing so "would not frustrate specific objectives of federal programs"[106], or if incorporating state common law "would not give due regard to the federal interest in maintaining"[107] the existing terms. To allow for an amendment to delay the 1991 Agreement schedule, a federal court would need to read in a general right to amend any provision of the 1991 Agreement. This would "frustrate the specific objectives"[108] of the Sale Act, which directly references the 1991 Agreement, and would be without "due regard to the federal interest in maintaining"[109] the terms of the 1991 Agreement as they are, which informed and were relied upon by Congress in passing the Sale Act.

F. Question 6: AWWU and the Project Owners have reached final agreement concerning the use of AWWU infrastructure, subject to certain conditions precedent.

The Governor's Staff Request asks if the Project Owners and AWWU have reached a final and binding agreement concerning the use of AWWU's infrastructure as outlined in the Proposed Final Program. Yes, subject to necessary approvals, AWWU and the Project Owners must execute the AWWU Final Agreements in their current form.

In connection with the negotiations between AWWU and the Project Owners about how AWWU infrastructure could be used for the Proposed Final Program, AWWU and the Project Owners initially signed the Binding Term Sheet.[110] After this, the AWWU Final Agreements were negotiated and fully agreed to, with the exception of a

[109] West Virginia v. United States, 479 U.S. at 309.
[110] Binding Term Sheet as amended by the Amendment to Binding Term Sheet between the Project Owners and Anchorage Water & Wastewater Utility dated March 27, 2024.

handful of non-substantive or technical exhibits to be completed before execution.[111] AWWU and the Project Owners then entered into an amendment to the Binding Term Sheet, pursuant to which they agreed to execute the AWWU Final Agreements without any substantive revisions thereto, within 30 days of the following limited conditions precedent being met: (1) the Governor issuing a Final Program including the use of AWWU facilities; (2) the Assembly approving the agreements to the extent necessary for the MOA to execute and perform under them; and (3) Chugach and MEA obtaining necessary board approvals.[112] If either Governor approval or Chugach and MEA board approval fail, then the AWWU Final Agreements will not be signed and the Project Owners will have to pursue other means to implement the Final Program.

The Assembly's approval was also included as a condition precedent given that (1) AWWU is an MOA utility and (2) the Assembly expressly requires such approval.[113] The Project Owners hope that if the Governor issues a Final Program including the joint use of AWWU infrastructure, the Assembly would limit its review of the AWWU Final Agreements to their content and assess whether they are beneficial to the residents of Anchorage, rather than attempt to block the implementation of the Final Program. If the Assembly rejects the AWWU Final Agreements, however, the Project Owners will pursue other available avenues to implement the Final Program.

III. CONCLUSION

The Proposed Final Program is the result of a 5-year $8 million process of rigorous scientific study and stakeholder consultation and represents a balanced approach that allows for equal consideration of the Eight Factors and meets all requirements of the 1991 Agreement. It was developed by consensus by the Project Owners. It also meets the scheduling requirements of the 1991 Agreement, which does not authorize delay. The Governor should therefore approve the Proposed Final Program without material changes and allow the Project Owners to begin the process of implementation on schedule.

APPENDIX A

SUPPLEMENTAL MATERIALS WRITTEN BY PROJECT OWNERS

	Proposed Final Program and Supporting Information Document ("SID")	**Project Owner Responses to Comments on Proposed Final Program ("Owners' Comment Responses")**	**Other Documents**
Question 1: Eight Factor Analysis	1. Section 4.5 of the SID overviews the alternative proposals analyzed by the Project Owners. 2. Attachment B to the SID is a "Final Summary of Study Results". 3. Attachment C to the SID provides "Supporting Data for Cost Effectiveness Modeling". 4. Attachment H to the SID is a "Comparison to Existing Conditions". It overviews how the Proposed Final Program will compare to the status quo and includes information directly relevant to each of the Eight Factors. 5. Section 4.12 of the SID includes an overview and analysis of NVE's requested alternatives (as of April 25, 2024).	1. Section 4.2.1 of the Owners' Comment Responses analyzes why the Project Owners focused on all Eight Factors in developing the Proposed Final Program, rather than just Factor 3. 2. In Section 4.3 of the Owners' Comment Responses, the Project Owners respond to comments that the Proposed Final Program "jeopardizes the Anchorage drinking water system". 3. Section 4.4 of the Owners' Comment Responses overview NVE's Proposed Alternative Final Program. 4. Appendix D to the Owners' Comment Responses includes a cost and risk assessment of NVE's proposed alternative centered on a pump station and a dam removal reopener.	1. On April 25, 2024, all three Project Owners sent a letter to NVE ("4/25/24 Letter to NVE"), which includes an overview of the Project Owners' analysis of and response to NVE's proposed alternative.

	Proposed Final Program and Supporting Information Document ("SID")	Project Owner Responses to Comments on Proposed Final Program ("Owners' Comment Responses")	Other Documents
Question 2: Fish Passage Requirement		1. Section 4.2.2 of the Owners' Comment Responses includes an analysis as to why Sockeye restoration or restoring the Eklutna River is not a requirement of the 1991 Agreement and includes relevant language from the Divestiture Summary Report written a year after the 1991 Agreement describing the 1991 Agreement.	1. On April 3, 2024, the Project Owners sent a letter to Michael Curry, Board Chair and President of Eklutna, Inc. which includes a response regarding the lack of a restoration requirement in the 1991 Agreement.
Question 3: Assembly Approval	1. Each of the forms of AWWU Final Agreements (Long Term Water Transportation Agreement; Public Water Supply Agreement; Water Facilities Interconnection Agreement) attached to the SID as Attachment D. In each, the first footnote states that the MOA will not sign until signatures have been authorized by the Assembly.	1. Section 4.5.3 of the Owners' Comment Responses responds to the Assembly's AR No. 2024-218(S). 2. A copy of MOA's surrender of voting rights on the EOC is also included in Section 4.5.3 of the Owners' Comment Responses.	
Question 4: Impact of MOA Lack of Vote			1. Mayor Bronson sent a letter detailing his support of the Proposed Final Program to the Governor on April 26, 2024. 2. The Draft Program, AWWU Binding Term Sheet and amendment thereto were signed by all Project Owners, demonstrating consensus.

	Proposed Final Program and Supporting Information Document ("SID")	Project Owner Responses to Comments on Proposed Final Program ("Owners' Comment Responses")	Other Documents
Question 5: 2-Year Extension		1. Sections 4.5.1 – 4.5.2 of the Owners' Comment Responses overviews the legal problems and costs associated with a 2-year delay. 2. Appendix A to the Owners' Comment Responses is a letter that the Project Owners sent to NVE on June 30, 2020, outlining the reasons behind denying to pursue an amendment to the 1991 Agreement.	1. The 4/24/25 Letter to NVE includes an overview of why the Project Owners do not see a path to 1991 Agreement amendment.
Question 6 – AWWU Agreements	1. Section 4.6 of the SID includes an overview of the AWWU negotiation process. 2. The Binding Term Sheet and amendment to the Binding Term Sheet were linked within the SID in Section 4.6 and are here and here on the Eklutna Hydro website. 3. All forms of agreements made with AWWU are attached to the Proposed Final Program as Attachment D (see Question 3 above).	1. Appendix B to the Owners' Comment Responses is a letter that the Project Owners sent to the Assembly on February 12, 2024, which includes an overview of the AWWU negotiation process to date and responses to concerns about impacts on AWWU water supply. 2. Appendix C to the Owners' Comment Responses is a letter that Chugach's Board Chair and CEO wrote to the Anchorage Assembly on May 23, 2024, which overviews the AWWU agreement and process.	

MUNICIPALITY OF ANCHORAGE

Office of the Municipal Attorney

Telephone: 907-343-4545
Fax: 907-343-4550

Mayor Suzanne LaFrance

September 4, 2024

Rachel Bylsma
Deputy Chief of Staff
Office of the Governor
State of Alaska

Ms. Bylsma,

On behalf of the Municipality of Anchorage, including Mayor LaFrance and the Anchorage Assembly, the Municipal Attorney's Office respectfully submits the enclosed brief in response to the Governor's August 15, 2024, letter regarding the Final Proposed Fish and Wildlife Program, Eklutna Hydro Project, which requested the Municipality's perspective on six specific issues to aid the Governor's efforts to review the final program and reconcile differences between the parties.

The Municipality looks forward to presenting its position at the upcoming September 9, 2024, meeting.

Sincerely,

Eva R. Gardner, Municipal Attorney

/s/ Joseph F. Busa

Joseph F. Busa, Deputy Municipal Attorney

The Municipality of Anchorage's Brief Addressing the Governor's Questions about the Final Proposed Fish and Wildlife Program, Eklutna Hydro Project

CONCLUSION 25

INTRODUCTION AND SUMMARY

The Governor has a unique opportunity to make a decision that could lead to unprecedented public benefits and unleash innovation. He is not limited to choosing from a small menu of disappointing options. He is instead empowered to review all proposals, reconcile differences between them, and render the decision that best serves the public interest by protecting, mitigating damage to, and enhancing fish and wildlife. This gives the Governor the freedom to take the best of each proposal and craft a final program that could result in re-watering the entire Eklutna River, providing the conditions necessary for the return of sockeye salmon, increasing the available water for Anchorage, *increasing* useful power generation utilizing existing infrastructure, and providing badly needed energy storage for the Railbelt at a time of constrained energy supplies.

The Municipality respectfully requests that the Governor promote the public interest by making a modest modification, described below, to the flawed fish and wildlife program proposed by Chugach Electric Association ("CEA") and Matanuska Electric Association, Inc. ("MEA"), the Minority Owners of the Eklutna Hydroelectric Project (collectively, "Minority Owners"). The Minority Owners propose an experimental program that appears to have never been used anywhere else in the country, which would tap into municipal water infrastructure and re-water only a portion of the Eklutna River starting a full mile downstream of the dam, leaving the last mile high, dry, and fish-free.

That disappointing proposal emerged from a broken process. The Municipality—the majority owner of the Project—had no voting rights on the owners' committee during the development and submission of that proposal and thus had no formal power to ensure

that the studies and proposal accounted for and balanced *all* of the relevant public interests at stake. The result is a proposal not supported by the majority owner of the Project, the democratically elected representatives of the people directly affected by the Project (including residents, taxpayers and ratepayers), and the municipal government charged with protecting their interests. As explained further below, the Minority Owners' proposal—by requiring the disposal of the Municipality's interests in land and modification of municipal drinking water infrastructure—could be implemented only with the approval of the Anchorage Assembly. The other owners have not sought and do not have such approval. Nor did the other owners present the proposed program to the Municipality for its formal approval. They have instead imprudently asked the Governor to approve a program that, without Municipal approval, could not be implemented.

In addition to these flaws in the development and implementation of the proposed program, the program scores poorly on the merits. The Governor's job under the agreement that created this process is to protect the public interest. But the proposed program would have an *annualized* cost of $3.7 million. It would lead to a 10% *decrease* in power production. And it would fail to actually mitigate harms to the last mile of the river, the entire lake, and all upper tributaries suitable for fish spawning.

The public interest would be better served by modifying the proposed program in one important respect. The final program should devote the first two years of the required three-year pre-implementation period to reviewing proven technological alternatives, such as pumped storage hydro using existing infrastructure, that the Minority Owners have not yet considered. Pumped storage hydro is widely used in the U.S. and eligible for

federal funding. It could re-water all 12 miles of the Eklutna River, reconnect the River to the Lake, create the conditions for the return of sockeye salmon to the Lake, and provide improved fishing and recreation for all Alaskans in a crown jewel of the Chugach State Park—all while also *increasing* useful power production by providing what would essentially be an enormous battery to save variable wind-and-solar power for later usage any time of the day or year, regardless of whether the wind is blowing or the sun is shining at any given moment. The inclusion of limited "reopeners" in the Minority Owners' proposed program confirms that all three owners agree that the Governor has authority to adopt a flexible final program. The specific design need not be definitively established in the final program, but can and should allow for further innovation and development. The Municipality simply asks the Governor to provide such flexibility during the first two years of the pre-implementation period to refine the best alternative by exploring promising projects not yet adequately evaluated, including but not limited to pumped storage hydro—a project that could unleash energy abundance and economic opportunity throughout the Railbelt—and the alternative pump proposal submitted by the Native Village of Eklutna.

The Municipality—including the Mayor, the Anchorage Assembly, and the Anchorage Hydropower Utility—are united in thanking the Governor for the opportunity to submit this brief; to further advocate for the potential win-win alternatives at the upcoming meeting convened by the Governor on September 9, 2024; and to explain why the public interest would be best served by declining the Minority Owners' request that

the Governor approve their flawed proposal without any changes that would better protect the public interest.

BACKGROUND

A. The Federal Government Sold the Eklutna Hydroelectric Project to New Owners And Required Protections for Fish and Wildlife.

The federal government built a dam at the natural outflow of Eklutna Lake in 1955. The water impounded by the dam spins hydroelectric turbines that generate electricity. From 1989 to 1997, the federal government initiated and completed the process of selling this hydroelectric project to a group of three buyers: CEA, MEA, and the Municipality, then doing business as Municipal Light and Power ("ML&P").[1]

During that process, concerns arose "that without [Federal Energy Regulatory Commission ("FERC")] licensing," there would be "no opportunity" for "measures to protect, mitigate damages to, and enhance fish and wildlife (including related spawning grounds and habitat), and implement fish and wildlife measures found to be in the public interest."[2] The parties thus signed the 1991 Fish and Wildlife Agreement to create a "mechanism to develop and implement measures to protect, mitigate damages to, and enhance fish and wildlife" that would "obviate the need" for FERC review.[3]

[3] *Id.* § 1.

B. The Governor Was Charged with Protecting the Public's Interest in Enhancing Fish and Wildlife on the Eklutna River and Lake.

Under the 1991 Agreement, the project owners must submit to the Governor of the State of Alaska "a Proposed Final Fish and Wildlife Program to protect, mitigate, and enhance fish and wildlife resources."[4] The Governor "shall review the Proposed Final Fish and Wildlife Program, the comments, testimony, summary and analysis materials, and any alternative recommendations for the protection, mitigation, and enhancement of fish and wildlife resources."[5] "The Governor shall attempt to reconcile any differences between the parties, giving due weight to the recommendations, expertise, and statutory responsibilities of" the U.S. Fish and Wildlife Service, the National Marine Fisheries Service, "the state Resource Management Agencies and the Purchasers."[6]

In conducting that review, the Governor "shall give equal consideration to the purposes of efficient and economical power production, energy conservation, the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat), the protection of recreation opportunities, municipal water supplies, the preservation of other aspects of environmental quality, other beneficial public uses, and requirements of state law."[7] "Based on" the Governor's analysis, the Governor must then make a "Public Interest Determination."[8] The Governor "shall establish a final Fish and Wildlife program that adequately and equitably protects,

[4] *Id.* § 5.
[5] *Id.*
[6] *Id.*
[7] *Id.*
[8] *Id.*

mitigates damage to, and enhances fish and wildlife resources (including affected spawning grounds and habitat) affected by the Eklutna project."[9]

The 1991 Agreement thus draws on the standards by which FERC and other regional federal councils license and regulate hydroelectric projects, but puts the Governor in the position otherwise normally occupied by FERC and other regional federal councils.[10] In 1995, Congress authorized the sale of the project to the new owners, recognized the 1991 Fish and Wildlife Agreement, concluded that the Governor's public-interest review should stand in for FERC review and thus generally should displace FERC licensing requirements, and provided for judicial review.[11]

C. The Municipality of Anchorage Lost Its Vote on the Owners' Committee and the Minority Owners Submitted a Proposed Fish and Wildlife Program with Limited Benefits.

The Municipality sold its electric utility, ML&P, to CEA in 2020. CEA did not purchase all ML&P assets, however, and the Municipality, through the Anchorage Hydropower Utility, retained a 53.33% majority stake in the Eklutna Hydroelectric Project. The Municipality entered into long-term power purchase agreements with the other owners, in which CEA (but not MEA) agreed to pay a significant share of the

[10] *Compare* 16 U.S.C. §§ 797(e), 803(j) (providing for FERC's "equal consideration" of "the protection, mitigation of damage to, and enhancement of, fish and wildlife (including related spawning grounds and habitat), the protection of recreational opportunities, and the preservation of other aspects of environmental quality," as well as "the power and development purposes for which licenses are issued"); *id.* § 839b (requiring a regional federal council overseeing hydroelectric projects in the Pacific Northwest to "adequately protect, mitigate, and enhance fish and wildlife, including related spawning grounds and habitat, affected by such projects or facilities in a manner that provides equitable treatment for such fish and wildlife with the other purposes for which such system and facilities are managed and operated").

[11] Alaska Power Administration Asset Sale and Termination Act, Sec. 104(a), (c), Pub. L. 104-58, 109 Stat. 557, 558-59 (1995).

Municipality's portion of costs associated with the Eklutna Hydroelectric Project including any final fish and wildlife program. Accordingly, in addition to retaining its majority ownership of the Project, the Municipality also remains responsible for 19.04% of the capital, operation, and maintenance costs of any final fish and wildlife program.[12]

In order to retain its majority ownership interest in the project after the sale of ML&P, the Municipality was required by state regulators in 2020 to relinquish its voting rights on the project owners' committee until such time as the new Anchorage Hydropower Utility acquired necessary expertise in utility management.[13] Anchorage Hydropower, now headed by an engineer who has led the Anchorage Water and Wastewater Utility ("AWWU"), has acquired the necessary expertise and has petitioned regulators to regain its voting rights in a pending proceeding.[14] The Municipality has been without voting rights within the Eklutna Project, of which it remains the majority owner, for over four years, including during the critical phases of the development and submission of the Minority Owners' proposed fish and wildlife program.

The Minority Owners ultimately chose to propose a program that would tap into municipal water infrastructure a mile downstream of the Eklutna Dam and divert water into the lower Eklutna River using that municipal infrastructure.[15] The proposed program would not rewater the last mile of river or otherwise enhance fish or wildlife on the

[15] Proposed Final Fish and Wildlife Program 4-5.

lake.[16] The program would monitor and adjust flow below mile 11 and try to maintain the river channel to provide some new spawning and rearing habitat for Chinook, coho, pink, and chum salmon.[17] Draft ancillary agreements to the program would attempt to compensate AWWU for using its drinking water infrastructure in various ways,[18] and it would provide modest one-time payments to repair a trail near the lake and enhance some vegetation on the lower river.[19] Finally, the program would reopen for consideration of alternatives in two limited circumstances: (i) if lake inflows from melting glaciers increase due to climate change to warrant installation of a fixed wheel gate, and (ii) if a means for fish passage is found that satisfies five narrow criteria.[20]

The Governor has scheduled a meeting on September 9, 2024, to discuss the proposed project and has requested briefs addressing six questions:

1. The Governor is required to give equal consideration to eight factors identified in Section 5 of the Agreement. Please identify how the proposed final program or an alternate program promoted by any other parties, or the Native Village of Eklutna, does or does not meet those eight factors.

2. Does the Agreement require complete connection between the river and the lake to support fish passage?

3. Is MOA Assembly approval required for approval of the Owners' program?

---

[16] *Id.*
[17] *Id.* at 6-9.
[18] *Id.* at 5.
[19] *Id.* at 11, 15.
[20] *Id.* at 16-19.

4. What effect, if any, did the MOA's lack of a vote on the Owners' program have on the process set forth in the Agreement?

5. Does the Governor have the authority under the Agreement to impose a two-year extension on the process as requested by the MOA?

6. Whether the Owners and Anchorage Water and Wastewater Utility ("AWWU") have reached a final and binding agreement concerning the use of AWWU infrastructure as outlined in the Owners' program. If a final agreement has not been reached, what effect will that have on the Owners' ability to implement the final proposed program?

RESPONSES TO GOVERNOR'S QUESTIONS

The Municipality greatly appreciates this opportunity to answer the Governor's questions regarding the public interest in enhancing fish and wildlife on the Eklutna River and Eklutna Lake. The Minority Owners' disappointing proposal emerged from a broken process in which the Municipality had no formal vote and in which the Minority Owners did not seek or obtain Municipal approval of the final proposal before submitting it to the Governor. The proposal disserves the public interest because it has an annualized cost of $3.7 million each year on an experimental program that taps into municipal infrastructure, decreases power output, and leaves the last mile high and dry. Crucially, implementation of that proposal hinges on Assembly approval of the use of municipal property, but the Minority Owners have not sought or obtained such approval.

The public would be better served by devoting the first two years of the three-year pre-implementation period for consideration of proven technologies overlooked by the Minority Owners, including but not limited to pumped storage hydro using existing

infrastructure. Such alternatives could better serve the public interest by re-watering the entire river, providing the conditions necessary for the return of sockeye salmon to the full river and the lake (and its tributaries), increasing power generation, and providing badly needed energy storage for the Railbelt at a time of constrained energy supplies. The Minority Owners mistakenly overlooked the pumped storage hydropower alternative without realizing that using existing infrastructure would sharply limit costs. The Minority Owners' inclusion of limited reopeners in their proposed program confirms that they agree the Governor has authority to build flexibility for innovation into the final program. The 1991 Agreement allows reopeners at any time under Section 7. And the public interest would be best served by getting this process right from the outset.

A. (Answer to Governor's Question 1) The Proposed Program Does Not Serve the Public Interest Nearly as Well as Proven Technologies that Can and Should Be Evaluated.

The 1991 Agreement protects the public by giving "equal consideration to [i] the purposes of efficient and economical power production, [ii] energy conservation, [iii] the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat), [iv] the protection of recreation opportunities, [v] municipal water supplies, [vi] the preservation of other aspects of environmental quality, [vii] other beneficial public uses, and [viii] requirements of State law."[21]

[21] 1991 Agreement, § 5.

1. The Minority Owners' Proposal to Tap into Municipal Drinking Water Infrastructure Reduces Power Generation and Does Not Enhance Fish and Wildlife on the Upper River and the Lake.

The Minority Owners' proposal scores poorly on nearly all of the relevant factors. Rather than increase power production or conserve energy, the proposed program would have an annualized cost of $3.7 million[22] and *reduce* power production by 10%.[23]

The other side of the ledger is also in the red. The preservation, mitigation of damage to, and enhancement of fish and wildlife is the reason the 1991 Agreement exists. As explained in Part C below, reconnecting the river to the lake is a crucial component of the public's interest in this process. But the Minority Owners chose an option that fails to rewater the full Eklutna River or provide fish passage from the river to the lake, and thus fails to actually protect, mitigate harm to, or enhance fish and wildlife on those crucial segments of the affected waterways. By the same token, the proposed program fails to adequately advance recreational and other beneficial public uses such as fishing or taking in the beauty of a real mountain river with real water in it. And, as explained in more detail in Part D below, the implementation of this proposal hinges on Assembly approval that, under applicable requirements of State law, the Assembly is free to withhold.

The Municipality is not alone in concluding that a proposed program that re-waters only part of the river falls short. That view is shared by the other agencies whose

expertise the Governor "giv[es] due weight" under the 1991 Agreement.[24] The U.S. Fish and Wildlife Service criticizes the proposal for failing to achieve "full ecosystem connectivity" and "fish passage."[25] The National Marine Fisheries Service criticizes the proposal for not establishing "continuous flow of water in the full length of the Eklutna River" and "safe and effective upstream and downstream fish passage."[26] The Native Village of Eklutna has criticized the proposal as "deeply disappoint[ing]" because it "will cost ratepayers and taxpayers up to $72 million, threaten public drinking water infrastructure, and fail to meaningfully recover and maintain salmon in the Eklutna River for the benefit of our people and all Alaskans."[27] And individual public commenters similarly disfavor the draft program.[28]

2. Considering Proven Technologies in the First Two Years of the Pre-Implementation Period Would Best Serve the Public Interest.

A better program is possible. The proposed program acknowledges its own shortcomings: to offset its failure to provide for fish passage in the proposed design, it includes a reopener for an alternative program for fish passage in narrow circumstances post-implementation.[29] This recognition that fish passage is the ideal goal of any program

highlights the failings of the proposed program to set up a procedure designed to maximize the odds of achieving that goal.

The search for better alternatives should not wait or be constrained to the scope of the limited reopeners in the proposed program. As explained in more detail in Part B below, if the proposed program can be reopened under limited circumstances at some uncertain date in the future under the limited reopeners proposed by the Minority Owners, then the first two years of the three-year pre-implementation period certainly can and should be used to develop the best alternative. All parties and stakeholders should commit during that period to creatively and cooperatively evaluating and incorporating promising alternatives that would better serve the public interest and fully restore the Eklutna River and provide for fish passage into Eklutna Lake, while also improving on the current proposal's performance under other public-interest factors. If such an alternative is identified during that period, it should be proposed to the Governor and, upon the Governor's approval, should become a component of the fish and wildlife program. If no such alternative is identified, the best of bad options currently available could be implemented, subject to obtaining all required approvals and further subject to revision under Section 7 of the 1991 Agreement whenever a better option is found.

Several alternatives not yet adequately considered by the Minority Owners appear promising. A preliminary proposal for pumped storage hydro, for example, was presented to a worksession of the Anchorage Assembly on August 23, 2024, by the head of the

Anchorage Hydropower utility and received favorable discussion.[30] That proposal would use wind and solar energy, when it is abundant, to pump water from the Knik River up to Eklutna Lake through the existing hydroelectric tunnel. The stored water would act as a battery, saving the renewable energy generated on an intermittent basis and making it available for reliable dispatch through the same hydroelectric tunnel back down to the Knik River and through hydroelectric turbines when more power is required, such as in the depths of winter, at night, or when the wind is not blowing. "Existing infrastructure is in place" for the initial phase of this proposal, "keeping costs low"—unlike the Minority Owners' proposal.[31] Pumped storage hydro is a proven technology in widespread use. Though its application here would require more evaluation, it shows promise as a means of increasing the available water in Eklutna Lake for power generation and use by AWWU, restoring the entire Eklutna River, and creating a new source of abundant, reliable energy storage for the Railbelt for generations to come.

Modifying the proposed final program as the Municipality suggests would give the owners adequate time over the next two years to properly evaluate and incorporate this option or others, such as the option suggested by the Native Village of Eklutna of pumping water from Eklutna Lake to the pond next to the Eklutna Dam and modifying the dam's gate to re-water the entire river. The public interest is best served by taking every available opportunity to improve the proposed program. In the third year of the pre-implementation

[31] *Id.* at 9.

period, and starting earlier if necessary (simultaneous with the two-year reopening), the owners could obtain needed permits and conduct any other necessary preparatory work for proceeding with the proposed program if no superior alternative is identified.

B. (Q5) The Governor Has Undisputed Authority to Require that the Final Program Consider Additional Alternatives.

The Governor has the power to do what the Municipality requests. A final fish and wildlife program can use the first two years of the three-year pre-implementation period for further study or alteration of the program in the event that a better solution is found. FERC orders regarding fish and wildlife programs for other hydroelectric projects, issued under a federal statute on which the 1991 Agreement was modeled, routinely include so-called "reopener" provisions that trigger studies and adoption of additional or alternative measures even after FERC's issuance of a final license or fish and wildlife program.[32] And the 1991 Agreement itself contemplates the program can be reopened at any time. Section 7 provides that "prior to undertaking any major structural or operational modification substantially affecting water usage or fish and wildlife at the projects, the Purchasers shall follow the process called for in Sections 2 through 6 of this Agreement."[33]

Indeed, the Minority Owners' own proposed program contains two such reopeners.[34] One of those reopeners calls for "a more detailed feasibility study of the fixed wheel gate"

---

[32] *See Idaho Rivers United v. FERC*, 189 F. App'x 629, 635-36 (9th Cir. 2006) ("approv[ing] deferral of FERC's decisions on certain fishery issues pending post-licensing studies and monitoring" regarding "sturgeon mitigation"); *State of California v. Fed. Power Comm'n*, 345 F.2d 917, 924–25 (9th Cir. 1965) (a final license may "outlin[e] procedures to be followed in the interim looking to the development of a proper solution").

[33] 1991 Agreement, § 7.

[34] Proposed Final Fish and Wildlife Program 16-19.

during the first three years of the final program and provides that the fixed wheel gate solution may be implemented, if appropriate under certain conditions, ten years after the Governor's approval of the final program and up to a cost of $10 million to the parties.[35] There is no material distinction between the reopeners the Minority Owners' have already proposed, which no one disputes may legally be included in a final program, and the change the Municipality is requesting. If a final program can contain provisions requiring additional study and implementation of additional solutions favored by the Minority Owners, then the final program at issue here can do the same for promising alternatives put forward by the Municipality, the Native Village of Eklutna, or other stakeholders.

The Minority Owners have argued that the Municipality's request "fails to acknowledge" the Regulatory Commission of Alaska's order that allowed Anchorage to retain its majority ownership of the Project by surrendering its vote on the owners' committee.[36] That regulatory order is irrelevant to the Municipality's request to the Governor. Because the Municipality lost its voting rights on the owners' committee, the Municipality had no formal power to protect its own interests and the interests of the residents of Anchorage by voting as part of the that committee to "delay or change" any "Eklutna Project decisions made by the Chugach and MEA representatives" on the owners' committee.[37] But the Municipality's lack of voting rights on the committee does not change the fact that, outside of that committee, the Municipality is a party to the 1991 Agreement

[35] *Id.* at 16.
[36] Minority Owners' Responses to Comments on Proposed Final Fish and Wildlife Program 33 (July 2024).
[37] *Id.*

and, as such, fully entitled to make its case to the Governor, who, under the Agreement, reviews such comments and "attempt[s] to reconcile any differences between the parties."[38] The Minority Owners thus correctly stop short of suggesting that the state regulatory order directed at voting rights on the project owners' committee somehow also deprived the Municipality of Anchorage of a right unrelated to any voting power on the owners committee—a right that derives from a federal contract recognized by federal statute.

C. (Q2) Fully Mitigating Harms to Fish and Wildlife Means Re-Connecting the River to the Lake to Support Fish Passage.

The core purpose of the 1991 Agreement is to mitigate harm to fish and wildlife. Fully mitigating those harms means re-connecting the river to the lake to support fish passage. The focus of analysis during the first two years of the three-year implementation program should thus be on identifying alternatives that achieve that goal *and* advance the public's other interests by increasing useful power production at a reasonable cost.

Eklutna River and Eklutna Lake were once hydrologically connected from the headwaters to the mouth and supported fish passage and personal use and sport or subsistence fishing along the full length of the waterway. Hydroelectric projects including the Eklutna Hydroelectric Project severed that connection and de-watered the river for much of the year, thus destroying fish spawning and rearing habitat and denying fish passage. The core purpose of the 1991 Agreement, as explained by the Agreement itself in its very first section, is to address that problem by creating a "mechanism to develop

[38] 1991 Agreement, § 5.

and implement measures to protect, mitigate damages to, and enhance fish and wildlife (including related spawning grounds and habitat)."[39] Re-watering the river and providing for fish passage is the most obvious means of accomplishing those goals. It was also the intent of those who drafted and signed the Agreement as documented shortly after it was executed: the "loss of a sockeye salmon run" was the "specific problem" that "led to the August 7, 1991 Agreement."[40] Accordingly, for every section of riverbed that the final fish and wildlife program leaves dry, the program fails to actually protect, mitigate damage to, and enhance fish and fish spawning and rearing grounds currently affected by the Project. It also fails to deliver the benefits of marine-derived nutrients that only an anadromous fish run can provide throughout the ecosystem, including for other wildlife.

The Minority Owners have emphasized that fish passage was first disrupted in the 1920s by a private dam on the lower river before the Eklutna Hydroelectric Project was built. On that basis, they have argued that the 1991 Agreement does not provide for re-watering the full river to enable fish passage into and out of the lake.[41] That is incorrect.

The core purpose of the 1991 Agreement was to solve the problem of the salmon run that was first lost in the 1920s. State and federal agencies examined in 1992 how federal divestiture of Eklutna might be accomplished. Their report formed the basis for

---

[39] 1991 Agreement, § 1.

[40] Alaska Power Admin. & U.S. Dep't of Energy, Divestiture Summary Report 19 (April 1992), https://eklutnahydro.com/wp-content/uploads/2020/03/APA-1992-Divestiture-Summary-Report.pdf; *see* Nat'l Marine Fisheries Serv. Comments 5 ("Restoring fish passage, specifically for sockeye salmon, was a driving factor in establishing the 1991 Agreement."); Fish & Wildlife Serv. Comments 1 ("[T]he loss of a historic sockeye salmon run is what prompted the development of the 1991 Agreement.").

[41] *E.g.*, Responses to Comments on Proposed Final Fish and Wildlife Program 12, 15 (July 2024), https://eklutnahydro.com/wp-content/uploads/2024/07/2024-7-24-Owners-Responses-to-Comments-on-Proposed-Final-Program.pdf.

the federal legislation that authorized selling the Project in 1995 and gave federal recognition to the 1991 Agreement. That report explained that "[d]uring reviews of the legislative proposal, loss of a sockeye salmon run that once spawned in Eklutna Lake was identified," caused "by a small private power project constructed in the 1920s."[42] "That loss was not identified in pre-authorization studies for the Federal Eklutna Project and the Federal project does not include mitigation" of that loss.[43] "*This specific problem* and the desires of the fish and wildlife agencies to provide appropriate consideration to fish and wildlife resources over the long run led to the August 7, 1991 Agreement."[44] The Minority Owners thus cannot reasonably deny that solving the problem of the lost sockeye run was the intent of the parties in executing the 1991 Agreement.

The plain terms of the 1991 Agreement require that the lost sockeye run be addressed. The FERC procedure that the 1991 Agreement was modeled on provides for FERC review of cumulative impacts of hydroelectric projects "when added to other past … actions." *American Rivers v. FERC*, 201 F.3d 1186, 1198 n.19 (9th Cir. 1999). The 1991 Agreement requires the same equal consideration of the same factors as the FERC statute and should be interpreted to provide for the same cumulative assessment of the impacts of the Eklutna Hydroelectric Project. In any event, the lower dam is now gone and is not an obstacle to restoring fish passage today. The remaining obstacle is the Eklutna Project, as all parties recognize. Any effort to "mitigate" the effects of the Project

---

[42] Divestiture Summary Report 19.
[43] *Id.*
[44] *Id.* (emphasis added).

today must thus take the watershed as it is now and recognize that the river is currently dry because of the Eklutna Dam and fish passage is currently blocked because of the Eklutna Dam. Finally, the 1991 Agreement requires not only mitigation but "enhancement" of fish and wildlife. Enhancement plainly encompasses leaving fish and wildlife better off. The Minority Owner's attempts to unduly constrain the goals of the fish and wildlife program should be rejected as contrary to the Agreement.

The Minority Owners incorrectly assert that the Municipality's position on this issue has shifted due to "[t]he changing of municipal leadership."[45] For nearly seven years, the Municipality has consistently maintained that re-watering the river and re-establishing a hydrological connection between the river and the lake for fish passage, consistent with the other considerations under the 1991 Agreement, would best serve the public interest.[46] The Minority Owners intentionally overlooked that position and chose to propose a final program that fails to restore a hydrological connection between the river and the lake and nonetheless hinges on Assembly approval. That decision to play hard ball reflects the Minority Owners' strategic choices. It does not reflect any shift in

---

[45] Minority Owners' Responses to Comments on Proposed Final Fish and Wildlife Program 33 (July 2024)

[46] AR No. 2017-324(S), Sec. 1, (Oct. 24, 2017) (calling to "restore the hydrology and fisheries of the Eklutna River subject to all provisions of the Fish & Wildlife agreement of August 7, 1991"); AR No. 2022-262, As Amended (Sept. 27, 2022) (declaring that "the restoration of instream flow to the Eklutna River and restored fish passage to and from Eklutna Lake are the most desirable forms of mitigation for impacts caused by the Eklutna Power Project" and "commit[ting] to the restoration of the Eklutna watershed, including providing instream flow and fish passage the length of the Eklutna River and into Eklutna Lake"); AO No. 2023-131, As Amended (Dec. 19, 2023) (same); AR No. 2024-40, As Amended (Feb. 2, 2024) ("The Municipality of Anchorage does not intend to issue authorizations or provide funds or any other form of support of the Draft Fish and Wildlife Program or any alternative that doesn't restore the full length of the Eklutna River and comply with policy of the Municipality."); AMC 26.30.025A ("It is the policy of the Municipality of Anchorage and the Anchorage Hydropower utility to restore the continuous water flow of the Eklutna River and the fish populations of the River and Eklutna Lake, to the greatest extent possible, subject to all provisions of the 1991 Fish & Wildlife Agreement.").

the Municipality's clear and consistent position regarding the scope of the problem to be solved under the 1991 Agreement: the lack of a hydrological connection between the river and the lake.

There is no basis for the Minority Owners' apparent position that protecting, mitigating damage to, and enhancing fish and wildlife cannot include reconnecting the river to the lake to support fish passage. Approving the Minority Owners' proposed program, which is apparently predicated on that proposition,[47] would create litigation risk that could upend the entire program. The Municipality simply requests that the Governor, in assessing the protection, mitigation of damage to, and enhancement of fish and wildlife, recognize that re-watering the river and re-connecting it to the lake is plainly within the goals of the 1991 Agreement and that any program that accomplishes those goals is superior on that public-interest factor than any alternative that does not.

The Municipality acknowledges that the Governor must give equal consideration to several public-interest factors, not only the goal of protecting, mitigating damage to, and enhancing fish and wildlife. And "the reconciliation of power and other development needs with fish and wildlife needs in cases of conflict is ultimately left to the public interest judgment" of the Governor.[48] The Municipality respectfully requests that the Governor use his public-interest judgment to create a final program that evaluates alternatives that incorporate proven technologies that could surpass the existing proposal

---

[47] *E.g.*, Responses to Comments on Proposed Final Fish and Wildlife Program 12, 15.

[48] *State of Cal. ex rel. State Water Res. Control Bd. v. FERC*, 966 F.2d 1541, 1550 (9th Cir. 1992) (quoting 132 Cong. Rec. S. 15107 (statement of Sen. Johnston)) (addressing FERC statute comparable to 1991 Agreement).

by, among other things, restoring a hydrological connection between the river and the lake for fish passage, which was the driving intent behind the 1991 Agreement.

D. (Q3, Q4, Q6) Because the Municipality Had No Vote on the Owner's Committee, the Municipality Could Not Advance Its View of the Public Interest and Secure a Program with the Necessary Approvals.

Municipal code provides that "[i]t is the policy of the Municipality of Anchorage and the Anchorage Hydropower utility to restore the continuous water flow of the Eklutna River and the fish populations of the River and Eklutna Lake, to the greatest extent possible, subject to all provisions of the 1991 Fish & Wildlife Agreement."[49] Code further provides that "[t]he Proposed Final Fish and Wildlife Program to protect, mitigate, and enhance fish and wildlife resources in the Eklutna River shall be subject to assembly approval, prior to its submission to the Governor of Alaska."[50]

If the Municipality's representatives on the owners' committee had full voting rights commensurate with the Municipality's 53.3% ownership of the Project, the Municipality would have had the formal power to vote consistent with municipal policy to seek to re-water the entire river, increase useful power generation and storage, and otherwise advance the public interest at reasonable cost using existing infrastructure. Action on behalf of the owners of the Project generally requires a majority of the total voting interest and the support of at least two of the owners.[51] The Municipality's 53.3% ownership would have thus given the Municipality the option of functionally vetoing

---

[50] AMC 26.30.025B.2.
[51] 1996 Eklutna Transition Plan, Exhibit E, § 3.

proposed actions by the Minority Owners in appropriate circumstances. That option would have given the Minority Owners the incentive to take the Municipality's understanding of the public interest and prudent decision-making more seriously and would have helped all three owners reach consensus and avoid the necessity of the Municipality filing this opposition to the Minority Owners' disappointing final proposal.

The Municipality recognizes that the Governor's formal power to approve, disapprove, or modify the proposed plan is not curtailed by Anchorage's municipal code. But approval is merely the first step in actually implementing a fish and wildlife program. And implementation cannot occur without Assembly approval of the heart of the program: the construction of a new valve and release structure that taps into municipally owned infrastructure on municipally owned rights of way and easements.[52]

There is no final and binding agreement to permit a final fish and wildlife program to tap into municipally owned pipes on municipally owned rights of way or easements, as desired by the Minority Owners' proposal. The Municipal Manager and head of AWWU, without the approval of the Assembly, entered into a then-confidential binding term sheet with the Eklutna Hydroelectric Project, agreeing to negotiate three formal agreements that could be executed later.[53] None of the three draft agreements between the Eklutna Hydroelectric Project and AWWU related to the proposed program have been signed or executed.[54] The cover page of each draft agreement notes that it "will not be signed by

---

[53] *See* Binding Term Sheet (Oct. 27, 2023), https://eklutnahydro.com/wp-content/uploads/2024/04/AWWU-Owners-Term-Sheet-confidentiality-waived-4-25-2024.pdf

[54] *See generally* Proposed Fish and Wildlife Program, Attachment D.

the MOA until … such signatures have been authorized by the Anchorage Assembly."[55] Numerous portions of the drafts remain incomplete, and accompanying text notes that the missing information "will be populated by the Parties … prior to signing."[56]

An amendment to the binding term sheet expressly recognizes that there will be no final and binding agreement to use municipal infrastructure on municipal rights of way or easements without Assembly approval. The preamble to the agreement states that AWWU "requires certain approvals before it may enter into one or more of the Agreements."[57] The amendment extends the time for executing final agreements to provide time for "AWWU to seek and gain approvals necessary for it to enter into" the contemplated agreements.[58] And the amendment provides that the "prerequisites" to the execution of the draft agreements include "[a]pproval by the Municipality of Anchorage Assembly to the extent necessary for the Municipality of Anchorage to execute and perform under the Agreements."[59] The proposal submitted to the Governor similarly recognizes that "Project Owners will enter into long-term agreements with AWWU following, and subject to, all necessary approvals," and "[i]f such approvals are delayed or are not able to be obtained," the heart of the program will not be able to be implemented and the parties will proceed only with the modest handful of "other" mitigation efforts "outlined" in the proposal.[60]

[58] *Id.* § 1.

[59] *Id.* § 5.b.

[60] Proposed Fish and Wildlife Program 5.

State and local law also recognizes that Assembly approval will be required before the proposed program could be implemented. State law provides that the legislative body of a municipality is empowered to "establish a formal procedure for acquisition and disposal of land and interests in land by the municipality."[61] The Anchorage Municipal Charter and Municipal Code provide that a conveyance of an interest in land of the Municipality and improvements thereon, including rights of way of substantial value, must be approved by the Municipal Assembly via ordinance.[62] And agreements respecting water rights at issue in the drafts must also be approved by the Assembly.[63]

Successful implementation of the Minority Owners' proposed program thus hinges on Assembly approval. The Assembly has not given such approval. Indeed, it has indicated that it will not give such approval to a program that does not address the public interest in rewatering the entire river, consistent with the other public interest factors.[64]

CONCLUSION

The Municipality respectfully requests that the Governor set us on a path to a solution that works for everyone at the table by adopting the Municipality's modest request to modify the Minority Owners' proposal and use the first two years of the three-year pre-implementation period of the final program to consider prudent alternatives that have been overlooked and that may better serve the public interest.

NATIVE VILLAGE OF EKLUTNA

September 4, 2024

Submitted via Email

The Honorable Mike Dunleavy
Governor of Alaska
Office of the Governor
State of Alaska
P.O. Box 110001
Juneau, AK 99811
rachel.bylsma@alaska.gov

Dear Governor Dunleavy:

We are deeply appreciative of you taking the time to obtain additional information regarding the 1991 Agreement process and alternatives for the Eklutna River, and your acknowledgement of the importance of this issue. This process will result in a Fish and Wildlife Program ("Program") that will last 35 years – this is a generational opportunity. We aspire for this process to result in a visionary solution that meets the purpose and intent of the 1991 Agreement and provides benefits not just for our Tribe but for all Southcentral Alaska. As the late Don Young, who was largely responsible for the sale of the Eklutna Project and the 1991 Agreement, said in 2018, it is time to "see[] the timely restoration of the Eklutna River and the recovery of salmon for the benefit of the Native people of Eklutna," and that "[r]estoring healthy salmon runs in the Eklutna River will benefit a great many Alaskans…"[1]

The Eklutna River has provided cultural and nutritional benefits to Eklutna Dena'ina throughout time immemorial, especially its once abundant salmon runs. The river remains at the heart of our people and our home. Yet over the last century, hydroelectric dams have destroyed these salmon runs and degraded the watershed. We acknowledge the importance of energy production at Eklutna for the Railbelt, particularly in this moment of an acute gas shortage. We also acknowledge that Eklutna Lake has become the primary municipal drinking water supply for Anchorage. In addition, Eklutna Lake is one of the most loved outdoor recreation areas in Southcentral Alaska. In short, the Eklutna River is now an important resource for many people. Because of that, we have sought to be collaborative partners with the hydroelectric project owners, other parties to the Agreement, and the public since the very beginning of the 1991 Agreement process. We understand the need to take thoughtful and informed action at Eklutna and have worked hard to advance balanced solutions.

Overall, we are guided by our commitment to seeing adequate water returned to all 12 miles of river below Eklutna Lake and for the full reconnection of the Eklutna River to Eklutna Lake and

[1] Congressman Don Young, Letter to Matanuska Electric Association (Aug. 6, 2018).

the upper tributary streams. This is also the purpose and intent of the 1991 Agreement. The Eklutna people's health, families, and culture depend on restoring salmon to the Eklutna River. We believe there are solutions available that can meet all the various needs of Southcentral Alaska from Eklutna, including power production (at least in the short to medium term, if not indefinitely), drinking water, recreation, and a thriving fishery. Unfortunately, we do not believe the proposed final Program submitted by the Chugach Electric Association and the Matanuska Electric Association (collectively, "the utilities") achieves this outcome and thus does not meet the objective of the 1991 Agreement. Fortunately, there are numerous proposed alternatives to achieve that objective and would have much greater public support. We thank you for considering these alternatives that can set a more positive, visionary, and wise future for the Eklutna River and our people.

In response to the inquiry from your office, the Native Village of Eklutna ("NVE") will address issues 1, 2, and 5 below. These are the issues that are most relevant to our expertise. Issues 3, 4, and 6 pertain to matters better answered by the Municipality of Anchorage ("MOA") and other parties to the 1991 Agreement. We are grateful for you and your office taking the time to better understand these important issues related to the 1991 Agreement and we look forward to meeting in person on September 9.

Issue 1: "*The Governor is required to give equal consideration to eight factors identified in Section 5 of the Agreement. Please identify how the proposed final program or an alternate program promoted by any other parties, or the Native Village of Eklutna, does or does not meet those eight factors*."

The Eight Factors Must All Be Considered, But the Governor's Ultimate Responsibility Is to Protect, Mitigate, and Enhance Fish and Wildlife and Affected Habitat.

It is first important to establish the role and sequence of the eight factors in the Governor's public interest determination process to establish the final Program under the 1991 Agreement. The ultimate responsibility of the Governor in relation to the 1991 Agreement is to establish a final Program "that adequately and equitably protects, mitigates damages to, and enhances fish and wildlife resources (including affected spawning grounds and habitat) affected by the Eklutna Project…"[2] There is no requirement that the Governor's final Program "meets" or balances all eight factors equally. He only must give all factors equal consideration as he conducts his multi-step review. The Governor's final Program can favor fish and wildlife and affected habitat over other factors to ensure adequate and equitable protection, mitigation, and enhancement of those resources.

In making his decision, the 1991 Agreement requires the Governor to undertake a thorough, multi-step process of review, reconciliation, and consideration. This process includes: reviewing the proposed final Program, other alternative recommendations, summary and analysis materials, and comments and testimony from other parties and the public; attempting to "reconcile any differences between the parties"; and equally considering eight factors from efficient and economical power production and energy conservation, to municipal water supplies, to the

[2] Fish and Wildlife Agreement Snettisham and Eklutna Projects (Aug. 7, 1991); *See also* Alaska Power Administration Asset Sale and Termination, Pub. L 104-58, title I § 104(a)(2) (Nov. 28, 1995).

protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat), among other factors.

After undertaking this multi-step review process, the Governor's ultimate responsibility is to ensure the final Program adequately and equitably protects, mitigates damages to, and enhances fish and wildlife including affected spawning grounds and habitat. As such, while giving equal consideration to the eight factors identified in Section 5 of the Agreement is an important step in the Governor's decision-making process, it is not the sole consideration or final step in his process.

Moreover, there is a marked difference between equally considering the eight factors in the multi-step review process, and equitably protecting, mitigating, and enhancing fish and wildlife and affected spawning grounds and habitat in the Governor's final decision. According to the Merriam-Webster dictionary, equal means providing the same to all, whereas equity means fairness, justice, or rightness.[3] The dictionary further explains the difference between equality and equity, stating that "[t]he idea that sometimes sameness of treatment (*equality*) does not result in proportional fairness (*equity*) is one way that these words are distinguished from each other, even in similar contexts."[4] Therefore, the Agreement does not require nor envision that the Governor's final Program would necessarily equally reconcile the eight factors, just that he will equally consider each of the eight factors as a part of his decision-making process. The Agreement, rather, gives the Governor the full flexibility – and requires him – to establish a program that equitably protects, mitigates, and enhances fish and wildlife resources and affected spawning grounds and habitat. The Governor's final Program can certainly favor fish and wildlife and affected spawning grounds and habitat over the other eight factors.

Understood in the proper context, the question as to whether the proposed final Program or any alternatives "meet" the eight factors is perhaps misguided. As stated above, there is no requirement that the Governor's final Program "meets" all eight factors, and certainly not equally. He only must give them equal consideration as he conducts his multi-step review. The standard of the Governor's final decision is whether the final Program adequately and equitably protects, mitigates, and enhances fish and wildlife and affected spawning grounds and habitat. For the Governor's consideration, we will thus outline the merits of the proposed final Program and other alternatives, focusing on whether they adequately and equitably protect, mitigate, and enhance fish and wildlife and affected spawning grounds and habitat. We will also note how they may positively or negatively affect other of the eight factors such as power production and municipal water supplies.

The Proposed Final Program Does Not Meet the Objective of the 1991 Agreement

The proposed final Program submitted to the Governor by utilities fails to meet the objective of the 1991 Agreement to adequately and equitably protect, mitigate, and enhance fish and wildlife and affected spawning grounds and habitat. As discussed in more detail below, the driving force behind the 1991 Agreement was to restore and maintain sockeye salmon that depend on free passage into and out of Eklutna Lake, their preferred spawning habitat. The utilities admit that

[3] https://www.merriam-webster.com/grammar/equality-vs-equity-difference
[4] *Id.*

their proposed final Program fails to meet this primary objective and for that reason alone, it does not meet the purpose, intent, and terms of the 1991 Agreement. In addition, the proposed final Program, by tapping into and relying upon municipal water infrastructure, would threaten municipal water supplies. Due to these inadequacies and concerns, four out of five public comments rejected the utilities' proposed Program. Moreover, the utilities plan diminishes power production at the Eklutna hydroelectric project. If the Governor is going to choose an alternative that reduces power production, the Program should at least substantially benefit fish and wildlife and reconnect affected habitat, which the utilities' Program does not. Their proposal fails on all counts – there is little gained for fish and wildlife and affected spawning grounds and habitat, it threatens municipal water supplies and reduces power generation.

Specifically, the utilities' "AWWU Portal" plan leaves Eklutna Lake and its upper tributaries completely disconnected from the lower Eklutna River and maintains over a mile of dry streambed. The proposal provides no solution for the complete blockage of salmon reaching the extensive lake spawning habitat required by sockeye salmon. In addition, 15 miles of upper tributary spawning habitat above the lake that would otherwise be highly suitable to Chinook and coho salmon are left completely stranded.[5] Without a connection to Eklutna Lake and its upper tributaries, restoring those key spawning and rearing grounds and habitat is impossible. The utilities admit that "no change in sockeye rearing habitat is anticipated."[6]

Furthermore, the flows the utilities propose to release from the AWWU Portal are severely inadequate to restore and maintain fish in the Eklutna River and are lower than any flows considered by signatory parties to the Agreement during the study process.[7] The proposed final Program also proposes similarly inadequate channel maintenance high flow events in only three out of every ten years. As such, the proposed nominal flow releases from the AWWU Portal will only minimally enhance Chinook and coho salmon and their habitat in the lower Eklutna River. Alaska Department of Fish and Game, U.S. Fish and Wildlife Service, and NOAA Fisheries in their comments on the utilities' draft program agreed that the AWWU Portal combined with the minimal flow releases would not adequately provide for the recovery and maintenance of salmon populations in the Eklutna River, nor would it restore natural river processes. We do not believe any of the utilities' changes from the draft Program to the proposed final Program meaningfully alleviate the issues articulated by the state and federal fish and wildlife agencies.

Moreover, the "limited reopeners" by which the utilities propose to re-open the 1991 Agreement process to consider further infrastructure and water flow changes are speculative at best. The fish passage re-opener is fully discretionary, and the fixed wheel gate re-opener is contingent on factors beyond the utilities or the Governor's control. As such, they do not constitute actual provisions of a Fish and Wildlife Program but are merely statements of potential action for future consideration. For example, the utilities state they will not pay more than $10 million dollars to implement the fixed wheel gate, which could enable larger flows into the river, and any

[5] *See* Native Village of Eklutna, Eklutna Lake and Tributaries Salmon Habitat (2024).
[6] Draft Fish and Wildlife Program at Appendix B-4 (Oct. 2023).
[7] *See* Native Village of Eklutna Comments on the Draft Program (Dec. 4, 2023); *See also* Native Village of Eklutna Comments to the Governor on the Final Proposed Program (Jun. 21, 2024). (Both of these comment letters are attached and incorporated by reference to this letter. These letters are extensively researched, and the letters and cited references support many of the propositions in this brief).

additional funds will need to be secured from unidentified "other sources."[8] Costs will likely be far higher than $10 million when considering demolition, construction, permitting, and other costs (the AWWU Portal is estimated at a minimum of $58 million[9]). As such, the fixed wheel gate is entirely speculative. The fish passage reopener is even more problematic because in addition to the utilities confirming that they will not provide any money for a future fish passage solution, it specifically makes it more difficult to implement fish passage because of the addition of novel criteria that are nowhere to be found in the 1991 Agreement. Even if all such criteria are met, the utilities only commit to considering fish passage, not actually implementing it.

For all the reasons articulated above, the utilities' final proposed Program does not adequately and equitably protect, mitigate, and enhance fish and wildlife and affected spawning grounds and habitat, and should be rejected by the Governor.

The Alternative Proposal from the Native Village of Eklutna Satisfies the Requirements of the 1991 Agreement

NVE proposed to the Governor an alternative final Program that would return water to all 12 miles of the Eklutna River and require the project owners to reopen the 1991 Agreement no later than 10 years from the Governor's decision date (by Oct. 2, 2034) to propose a solution for fish passage into and out of Eklutna Lake.[10] This proposal improves upon the utilities' proposed final Program because it evaluates all eight factors and achieves the purpose, intent, and requirements of the 1991 Agreement by returning water into the full length of the river and requiring full connection of the Eklutna River to the lake.

NVE's proposed solution to return water to all 12 miles of the river avoids any use of or interference with the public water supply infrastructure, negating those acute concerns with the utilities' proposal. To support the resolution of differences with the utilities and consider energy production, NVE proposed to release the same amount of water as the utilities proposed in their proposed final Program through this infrastructure, therefore diminishing power production at the Eklutna hydroelectric facility to the same extent as the utilities propose. While we do not believe the flow regime in the utilities proposed final program is adequate to attract, maintain, and recover fish nor restore natural river processes, we understand the need to avoid extensive power production reductions in the short term. NVE adopted the proposed Monitoring and Adaptive Management Plan put forth by the utilities to provide a mechanism to increase flows into the river over time.

NVE's proposed infrastructure solution rewaters all 12 miles of river and begins to lay the groundwork for future reconnection between the lake and upper tributaries and lower river. NVE proposed to build a system to take water directly from the bottom of Eklutna Lake and discharge it at the glacial moraine area upstream of the dam. The water would be released downstream into the river through the existing dam outlet gate. This alternative system would provide continuous instream flow to all 12 miles of the Eklutna River below the dam, operate completely independent from any existing AWWU infrastructure, and support future fish passage by

[8] Proposed Final Fish and Wildlife Program at 17 (Apr. 2024).
[9] Proposed Final Fish and Wildlife Program, Supporting Information Document at 54, 55 (Apr. 2024).
[10] *See* Native Village of Eklutna Comments to the Governor on the Final Proposed Program (June 21, 2024).

ensuring that AWWU can maintain its full drinking water withdrawals throughout the year at any lake level.

NVE's proposal to require the project owners to reopen the 1991 Agreement process to provide a solution for fish passage within ten years from the Governor's decision date acknowledges that the current power situation in the Railbelt requires some patience in potentially significant reductions or shutdowns of Eklutna hydroelectric power. Yet we believe, based on numerous discussions with power experts, that within the next decade Eklutna hydroelectric power will be a less important component (or not critical at all) to a stable, reliable, and affordable Railbelt power supply. Therefore, we propose that fish passage be delayed no further than necessary and that the project owners should be required to provide fish passage in a timely yet reasonable timeframe as part of this 1991 Agreement process, meeting the purpose, intent, and requirements of the 1991 Agreement. NVE's preferred solution for providing fish passage is the removal of the Eklutna Lake dam, but NVE remains open to any solution that meets the resource goal of fully reconnecting the lake to the river (including pumped storage hydropower as currently being explored by MOA).

NVE considered all eight factors in proposing its alternative, from safeguarding municipal water supplies to protecting energy production, and the alternative adequately and equitably protects, mitigates, and enhances fish and wildlife and related spawning grounds and habitat. Taken together, this alternative provides water into all 12 miles of the river now and ensures full fish passage, satisfying the 1991 Agreement requirements.

The Alternative Proposal from the Municipality of Anchorage Could Satisfy the Requirements of the 1991 Agreement and Warrants Review and Consideration

MOA has also submitted an alternative proposal to the Governor that could satisfy the requirements of the 1991 Agreement and thus merits review and consideration.[11] MOA has, by law, adopted an official position on Eklutna River restoration, which is "to restore the continuous water flow of the Eklutna River and the fish populations of the River and Eklutna Lake, to the greatest extent possible."[12] Achieving the two implied objectives in MOA code – restoring continuous water to all 12 miles of river and fish passage into and out of Eklutna Lake – would satisfy the requirements of the 1991 Agreement.

MOA's alternative suggests the Governor's final Program require the project owners to return continuous water to all 12 miles of river below the dam, using two years of the three-year pre-implementation period to define a technical engineering solution to achieve that measure. We find this alternative fully within the legal boundaries of the 1991 Agreement and discuss the legality and mechanics of this alternative in more detail below. NVE supports this approach to use the pre-implementation period to identify alternatives that were not given adequate consideration by the utilities, although only returning continuous flows to all 12 miles of river without providing any measure for fish passage would not meet the requirements of the 1991 Agreement.

[11] Letter from Mayor Suzanne LaFrance to Governor Mike Dunleavy, MOA Project Owner Formal Fish and Wildlife Program Comment Letter and Alternative Proposal (Jun. 19, 2024).
[12] Anchorage Municipal Code § 26.30.025(A).

One such alternative MOA has started exploring is pumped storage hydropower, which could provide both continuous water into all 12 miles of river and full reconnection between Eklutna Lake and River. In addition, pumped storage hydropower could protect and enhance drinking water supplies and power production at Eklutna. The utilities rejected exploring pumped storage hydropower during their alternatives analysis. In addition to considering NVE's alternative proposal, we encourage the Governor to consider MOA's alternative proposal to use two years of the three-year implementation period to provide time to explore superior solutions that meet the requirements of the 1991 Agreement, including pumped storage hydropower.

Issue 2: "*Does the Agreement require complete connection between the river and the lake to support fish passage?*"

The 1991 Agreement Requires Complete Connection Between the River and Lake to Support Fish Passage

The purpose of the 1991 Agreement and the resultant Fish and Wildlife Program is to develop and implement measures to "protect, mitigate damages to, and enhance fish and wildlife (including related spawning grounds and habitat)" from the harms of the Eklutna hydroelectric project. Salmon spawning grounds and habitat harmed by the project include the lower Eklutna River below the dam, Eklutna Lake, and the upper tributaries to Eklutna Lake. Eklutna Lake provides critical spawning grounds and habitat for sockeye salmon, and the upper tributaries to Eklutna Lake contain at least 15 miles of excellent spawning grounds and habitat for Chinook and coho salmon.[13] Without fully reconnecting the river and the lake and providing fish passage for salmon and other aquatic wildlife, the harms of the Eklutna hydroelectric project on fish and wildlife and related spawning grounds and habitat cannot be adequately and equitably mitigated.

The Eklutna hydroelectric project, including Eklutna Lake dam, is currently the only cause of damage to these spawning grounds and habitat. In the 1920s, a diversion dam was built on the lower Eklutna river below the outlet to the lake where the Eklutna Lake dam, built in the 1950s, is located. The lower diversion dam originally blocked the passage of salmon from the lower Eklutna River to Eklutna Lake, and once constructed, the Eklutna Lake dam added yet another barrier to fish passage. However, the lower diversion dam was removed by Eklutna Inc. and partners with privately raised funds in 2018 to begin the process of river restoration. Therefore, the Eklutna hydroelectric project's continued diversion of all controllable flow at Eklutna Lake and the complete disconnection of the river to the lake and upper tributaries by the Eklutna Lake dam are the primary causes for ongoing degradation of fish spawning grounds and habitat in the Eklutna River system, and the project owners are the sole responsible party for mitigating such damages.

While the 1991 Agreement does not define "mitigation," mitigation is a common term in relation to harms from development to wetlands or waterways. The primary goal in considering development in wetlands or waterways is to avoid and minimize any adverse impacts, after which mitigation is the next step. The U.S. Army Corps of Engineers and the Environmental Protection Agency define mitigation to mean "restoration, establishment, enhancement, or in

[13] *See* Native Village of Eklutna, Eklutna Lake and Tributaries Salmon Habitat (2024).

certain circumstances, preservation of wetlands, streams and other aquatic resources."[14] U.S. Fish and Wildlife Service's Mitigation Policy states that mitigation is achieved through "restoration, establishment, enhancement, or preservation of resources and their values, services, or functions."[15] As you can see, in the "hierarchy" of mitigation, restoration is always the primary objective and first step after avoidance and minimization.[16] As such, the primary goal of adequately and equitably mitigating damages to fish and wildlife including affected spawning grounds and habitat and thus meeting the requirements of the 1991 Agreement is restoring the very spawning grounds and habitat most affected by the development of the Eklutna hydroelectric project. Restoration and thus reconnection is at the heart of the 1991 Agreement.

Documents surrounding the 1991 Agreement provide additional context for the Agreement's requirement to provide complete reconnection between Eklutna River and Lake. The Divestiture Summary Report for the Sale of Eklutna and Snettisham Hydroelectric Projects ("Divestiture Report"), to which the Agreement is an appendix, notes that mitigating harms to sockeye salmon and their spawning habitat was particularly important in creating the Agreement. The Divestiture Report explained that "[d]uring reviews of the legislative proposal, loss of a sockeye salmon run that once spawned in Eklutna Lake was identified… This specific problem and the desires of the fish and wildlife agencies to provide appropriate consideration to fish and wildlife resources over the long run led to the August 7, 1991 Agreement."[17] Given that the Congressional intent of the 1991 Agreement was to recover the loss of a sockeye salmon run that once spawned in Eklutna Lake, and that sockeye salmon uncontroversially prefer to spawn in lake habitats, the clear primary Congressional intent of the 1991 Agreement was to reconnect the Eklutna River to Eklutna Lake.

The Divestiture Report also notes that the Agreement's fish and wildlife measures were intended to "work at least as well as Federal regulation for the intended purpose of mitigation and enhancement of affected fish and wildlife resources," and were to be "quite similar to that under the [Federal Energy Regulatory Commission ("FERC")] licensing" process for hydroelectric projects.[18] NOAA Fisheries in their Dec. 2023 comment letter on the utilities' draft Program stated that under a similar FERC process, the agency would require fish passage as a long-term measure, ensuring that fish and wildlife protection, mitigation, and enhancement measures supported comprehensive recovery plans for Pacific salmon and Cook Inlet beluga whales.[19] NOAA Fisheries also cited numerous FERC licenses where it required minimum flows the entire reach of the river affected by project operations, stating it was a "common FERC license requirement."[20]

[19] NOAA Fisheries, Comment Letter to Samantha Owen Re: Draft Program at 5, 6 (Dec. 6, 2023).
[20] *Id.* at 2.

Throughout the current 1991 Agreement process, the utilities have significantly discounted the potential of Eklutna Lake as vital salmon habitat. The draft Program concludes that there was never a large run of sockeye to the lake, pointing to limiting factors such as the lake's turbidity, nutrient levels, and size of kokanee.[21] This current condition of the lake may be due to the lack of marine derived nutrients from salmon carcasses and harms from the current 40-60 foot zone that experiences water level fluctuations resulting from hydroelectric power water drawdowns around the lake, including such impacts as reduced aquatic vegetation. Moreover, a primary source for the Project Owner's conclusion is a 2017 study, which they misrepresent. The study concluded that its results "can[not be] construed as evidence that [salmon runs to the lake] did not [exist]."[22] The 2017 study, rather, found that, based on the lake's water volume and turnover rate, as many as 15,000 sockeye could have spawned in the lake annually, which is far from an insignificant number.[23] A co-author of the study recently stated that "[a]nyone who cites the study to argue that Eklutna Lake had no salmon or an 'insignificant' number isn't using it scientifically, they are using it politically."[24] There are myriad glacially-fed lakes in Alaska with thriving sockeye salmon runs, and Eklutna Lake would have been no exception before being dammed.

Additionally, the Agreement's protection, mitigation, and enhancement purpose is not limited to salmon but instead includes all wildlife impacted by the Project that would substantially benefit from a fully reconnected river. The Eklutna Lake dam reduces the ecological function of the tidal wetlands, lower river, lake, and upper tributaries and thus the project's impacts reduce the health of wildlife throughout the watershed. For example, the Summary of Study Results notes that "[w]aterfowl and shorebird numbers in the study area were moderate and low, respectively, during the field surveys" and that "[s]horebirds were noticeably absent during the spring surveys."[25] This may be an example of a system that is in depression from nearly a century of harms from hydroelectric dams. Moreover, salmon bring essential marine nutrients up into watersheds, and the lack of marine nutrients has likely degraded vegetation and negatively impacted many terrestrial mammals throughout the Eklutna watershed.

Regarding marine mammals, the proposed final Program fails to consider the protection, mitigation, and enhancement of Cook Inlet beluga whales, one of the nation's most critically endangered marine mammals. The best available science shows that Cook Inlet belugas could significantly benefit from increased salmon runs in the Eklutna River. Given the mouth of the Eklutna River is within designated critical habitat in upper Cook Inlet where the Cook Inlet beluga population forages during the summer and fall, the critically endangered whales should be a primary concern for the Program. The proposed final Program provides no solution for the complete blockage of salmon reaching the extensive lake spawning habitat required by sockeye salmon and miles of upper tributaries spawning habitat above the lake that is highly amenable to Chinook and coho salmon, all of which are primary forage species for Cook Inlet belugas.

[24] Email from Rick Sinnott to Dustin Lorah, NVE (Nov. 30, 2023 at 6:50PM).
[25] Draft Summary of Study Results at 47 (Oct. 2023).

Without connection to Eklutna Lake, protecting, mitigating, and enhancing those key spawning grounds and habitat is impossible. In turn, mitigation and enhancement for Cook Inlet beluga whales is likely to be minimal as well.

Reviewing the Congressional intent behind the 1991 Agreement, both in the problem it was primarily intended to solve (loss of a sockeye salmon run) and the process it was intended to be "at least as good as" (a FERC relicensing proceeding), and the biological and ecological implications of meeting the primary objective of the 1991 Agreement, it is clear that fully reconnecting the lower Eklutna River to Eklutna Lake and the upper tributaries was the primary purpose and requirement of the Agreement.

Issue 5: ***"Does the Governor have the authority under the Agreement to impose a two-year extension on the process as requested by the MOA?"***

The 1991 Agreement Process Envisions and Allows the Use of the Three-Year Pre-Implementation Period to Define and Finalize a Technical Engineering Solution to Meet the Governor's Final Program.

Our understanding of MOA's proposal to the Governor is not for the Governor to impose a two-year extension on the 1991 Agreement process. MOA proposes that the Governor's final Program require the project owners to return continuous water to all 12 miles of river below the dam. MOA simply proposes to use two years of the three-year pre-implementation period for the project owners to define the technical engineering solution to meet the Governor's final Program and use the final year to secure necessary permits and authorizations.[26]

The 1991 Agreement sets out a clear timeline for establishing the final Program and beginning and completing its implementation. NVE acknowledge this timeline must be adhered to unless all the Parties agree to modify the 1991 Agreement. These deadlines, tied to the Transaction Date of Oct. 2, 1997, are as follows:

- Oct. 2, 2024 – Governor must establish the final Program no later than this date
- Oct. 2, 2027 – Implementation of the final Program must begin no later than this date
- Oct. 2, 2032 – Implementation of the final Program must be completed no later than this date

Under the 1991 Agreement, the final Program is intended to consist of "measures" to protect, mitigate, and enhance fish and wildlife including related spawning grounds and habitat. Per the 1991 Agreement, the Governor has wide latitude to define such measures as long as they adequately and equitably meet the objective of the Agreement. As such, these measures can articulate specific technical engineering solutions that meet the Agreement's objectives, or they can articulate design requirements that the project owners would need to meet with specific technical engineering solutions. MOA has offered an alternative for the Governor to adopt that does the latter. MOA has proposed that the Governor's measure to meet the objective of the 1991

[26] Letter from Mayor Suzanne LaFrance to Governor Mike Dunleavy, Re: MOA's formal response to CEA and MEA's proposed final Program (July 19, 2024); *See also* AR No. 2024-182(S) (July 19, 2024).

Agreement should require the project owners to "identify an alternative infrastructure and engineering solution to ensure continuous water flow to all 12 miles of the Eklutna River."[27]

The 1991 Agreement clearly envisions that the Governor may establish measures such as this one by providing three years before implementation must begin for the project owners to articulate and finalize designs, complete any required environmental assessments, and secure any necessary permits and authorizations. MOA simply proposes to use two years of the three-year pre-implementation period for the project owners to define the technical engineering solution to meet the Governor's measure and use the final year to secure necessary permits and authorizations. The1991 Agreement then allows for five years for implementation to be completed. While we aspire for water to flow into the Eklutna long before it is required, in total, the 1991 Agreement provides for up to eight years from Oct. 2, 2024 for the final Program to be fully implemented (no later than Oct. 2, 2032).

The utilities' proposed final Program both proposes to use the full length of the three-year pre-implementation period to finalize the design and secure necessary permits and authorizations (the proposed final Program provides only 30% design drawings[28]) and use the full five-year implementation period before releasing any water into 11 of 12 miles of river, as the figure below shows.

Entity	Milestone	Deadline
Parties	Provide comments to the Governor	June 24, 2024
Project Owners	Provide responses to the Governor	July 24, 2024
Governor	Issues the Final Program	October 2, 2024
Project Owners	Feasibility study for the fixed wheel gate	October 2, 2027
Project Owners	Begin implementation	October 2, 2027
Project Owners	Complete implementation (establish instream flows)	October 2, 2032

Figure 1 – The implementation schedule in the utilities' proposed final Program.[29]

Therefore, the schedule MOA is proposing to the Governor is no different than what the utilities have proposed, and MOA is not proposing any extensions to the 1991 Agreement schedule. Moreover, the utilities propose to not release a drop of water into the Eklutna River before the day they are legally required to under the 1991 Agreement – October 2, 2032. MOA places no such limitation on when river flows could be re-established.

For these reasons, the view that MOA has requested the Governor to impose an extension on the 1991 Agreement process is incorrect. Rather, MOA is proposing that the Governor establish a different kind of measure than proposed by the utilities, requiring the project owners to use the existing pre-implementation period to fulfill the Governor's measure articulated in the final Program.

Subject: Eklutna Hydroelectric Project Final Fish and Wildlife Program

Dear Governor Dunleavy:

The U.S. Fish and Wildlife Service (Service) appreciates your August 15, 2024, invitation seeking input on the Eklutna Hydropower Owner's proposed Fish and Wildlife Program (Program) for the Eklutna Hydroelectric Project (Project). You have invited us to attend a meeting on September 9, 2024, with the stated purpose of providing information to assist in fulfilling your responsibilities under the Agreement – to review the proposed Program and attempt to reconcile differences – and to obtain additional information from the Parties to Agreement and the Native Village of Eklutna concerning the Owner's final proposed Program and subsequent comments.

You requested each of the parties and the Native Village of Eklutna provide a legal brief addressing specific questions to share each entities perspective. The Service's responses to the specific questions are listed in the enclosed brief. Our perspectives on the proposed Owner's Program are detailed in our comment letter, June 24, 2024, and are reflected in the attached responses. We look forward to engaging in further discussion during the upcoming meeting.

Sincerely,

Sara Boario
Regional Director

LEGAL BRIEF FOR EKLUTNA HYDROELECTRIC PROJECT

9/4/2024

Thank you for providing this opportunity to further discuss the Final Proposed Fish and Wildlife Program (Program) for the Eklutna Hydroelectric Project (Project) and the comments you have received about the Program from the parties of the 1991 Fish and Wildlife Agreement (1991 Agreement) and the Native Village of Eklutna (NVE). To assist in your preparation for the meeting, you requested each of the parties and NVE provide a legal brief to share our perspectives concerning these eight issues:

1. The Governor is required to give equal consideration to eight factors identified in Section 5 of the Agreement. Please identify how the proposed final program or an alternate program promoted by any other parties, or the Native Village of Eklutna, does or does not meet those eight factors.
2. Does the Agreement require complete connection between the river and the lake to support fish passage?
3. Is Municipality of Anchorage (MOA) Assembly approval required for approval of the Owners' program?

4. What effect, if any, did the MOA's lack of a vote on the Owners' program have on the process set forth in the Agreement?
5. Does the Governor have the authority under the Agreement to impose a two-year extension on the process as requested by the MOA?
6. Whether the Owners and Anchorage Water and Wastewater Utility ("AWWU") have reached a final and binding agreement concerning the use of AWWU infrastructure as outlined in the Owners' program. If a final agreement has not been reached, what effect will that have on the Owners' ability to implement the final proposed program?

Given our role under the 1991 Agreement and our special expertise concerning fish, wildlife, and habitat, we focus our response on issues 1 and 2, have minimal input for issue 5, and no comment for issues 3, 4, and 6. Below is our perspective on issues 1, 2, and 5.

1. The Governor is required to give equal consideration to eight factors identified in Section 5 of the Agreement. Please identify how the proposed final program or an alternate program promoted by any other parties, or the Native Village of Eklutna, does or does not meet those eight factors.

In order to ensure that Eklutna and Snettisham are best adapted for power generation and other beneficial public uses, the 1991

Agreement requires that the Governor give equal consideration to the following eight factors:

1) the purposes of efficient and economical-power production,
2) energy conservation,
3) the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat),
4) the protection of recreation opportunities,
5) municipal water supplies,
6) the preservation of other aspects of environmental quality,
7) other beneficial public uses, and
8) requirements of State law

Notably, social justice and impacts to communities such as NVE were not expressly noted in this list of factors, nor was NVE included as an official party to the 1991 Agreement. NVE should have been included as an official party, and their exclusion was a gross oversight. Throughout this process, the parties of the 1991 Agreement have recognized the profound impact that development, from gravel mining to hydropower, has had on NVE. NVE has played a key role in Project study plans and alternative development, and we support your consideration of its comments as you weigh the eight factors.

Our primary interest in this process is specific to the development and implementation of measures to protect, mitigate

damages to, and enhance (PME) fish and wildlife, and the preservation of other aspects of environmental quality. Our recommended PME measures included year-round instream flows throughout the entire river that are of sufficient magnitude to connect floodplain and off-channel habitats; channel maintenance flows of sufficient magnitude, duration, and frequency to maintain habitat; and fish passage into and out of Eklutna Lake. Our two preferred alternatives to accomplish these PME measures were to either modify the existing dam with a fish ladder while also changing hydropower operations to provide year-round connectivity from the lake to the river; or constructing a new dam with excavation deep enough to provide year-round connectivity from the lake to the river while also minimizing impacts to hydropower operations, a fish passage structure, and a fixed-wheel gate for wide-ranging channel maintenance flows. Although it is not our role to evaluate all eight factors, we understand the estimated costs associated with constructing a new dam are appreciable. Therefore, we have considered a Fish and Wildlife Program with a phased approach so short-term PME measures can begin while solutions are being developed for long-term PME measures. For federally licensed projects, major infrastructure actions can take several years to complete, and specific mitigation measures may change as new information becomes available through monitoring or studies. In a process

that intends to be as protective as the federal licensing process, we believe a phased approach is appropriate for addressing long-term mitigation goals that may appear difficult to achieve at present.

While the Program does not immediately meet Service goals of ecological connectivity – one mile of river would remain dewatered and the proposed flows are not adequate for recreating spawning and off-channel habitat below the lake in quantities comparable to what was lost – the Program, if coupled with firm Owner commitments and continuing opportunities to reconnect the river and reestablish fish passage in the long term, would be consistent with the negotiated alternative for a phased approach.

While we believe our two preferred alternatives best addressed factor 3 for fish and wildlife, we remain open to considering any engineering solution that could accomplish our recommended PME measures, and other creative solutions to improve connectivity and habitat for fish and wildlife.

2. Does the Agreement require complete connection between the river and the lake to support fish passage?

While the 1991 Agreement does not expressly mention complete connection between the river and the lake to support fish passage, it does require development of a Program to protect, mitigate, and enhance fish and wildlife resources. This broad

requirement is best interpreted as applying to all affected portions of the watershed, not just the portions of watershed addressed by the Program, i.e., those portions located a mile or more below the current dam.

The process set forth in the Agreement was also intended to be as protective as the Federal Power Act (FPA)[1,2,3] such that it would obviate the need for federal licensing processes[4]. However, there are disparities between what has occurred here and what would have occurred under a FERC licensing process. Under the FERC process, section 18 of the FPA would have provided the Service and NMFS with authority to issue fishway prescriptions. Section 10(j) of the FPA would have required license conditions

---

[1] 1992 Divestiture Summary Report, Page 20, top paragraph: "Given the nature of the projects and the river basins affected, there is good reason to believe that the proposed arrangements will work at least as well as Federal regulation for the intended purpose of mitigation and enhancement of affected fish and wildlife resources. The August 7, 1991, Agreement affords fish and wildlife interests a stronger voice in project management than would be available under continued Federal ownership."

[2] 1992 Environmental Assessment, Alaska Energy Authority, Page 10, second paragraph from the top: "The approach for fish and wildlife measures is novel. Given the nature of the projects and the river basins affected, there is good reason to believe that the proposed arrangements will work at least as well as Federal regulation for the intended purpose of mitigation and enhancement of affected fish and wildlife resources."

[3] House Report 104-187, Alaska Power Administration Sale Act, July 13, 1995: "H.R. 1122 and separate formal agreements provide for the full protection of fish and wildlife. The purchasers, the State of Alaska, the U.S. Department of Commerce, the National Marine Fisheries Service (NMFS) and the U.S. Department of the Interior have entered into a formal agreement providing for post-sale protection, mitigation and enhancement of fish and wildlife resources affected by Eklutna and Snettisham."

[4] Section 1 of the 1991 Agreement: "NMFS, USFWS and the state agree that the following mechanism to develop and implement measures to protect, mitigate damages to, and enhance fish and wildlife (including related spawning grounds and habitat) obviate the need for the Eklutna Purchasers and AEA to obtain FERC licenses."

for protection, mitigation of damages to, and enhancement of fish and wildlife resources and related habitat based on recommendations from Federal and State fish and wildlife agencies, pursuant to the Fish and Wildlife Coordination Act. Section 10(j) recommendations typically address water quantity, water quality, instream flows, ramping rates, and habitat management, and may also include recommendations for the development and improvement of fish and wildlife in the project area. Under the FPA, FERC would then have considered any rejected Section 10(j) conditions as Section 10(a) recommendations. Fish passage is an important component of protecting, mitigating, and enhancing fish habitat pursuant to the 1991 Agreement, which was developed in response to concerns over [5][obj],[obj]. Given that 1) the loss of a historical anadromous sockeye salmon run is what prompted the development of the 1991 Agreement;; 2) lakes are important habitat for sockeye salmon spawning and rearing; 3) there are no other lakes connected to the river; and 5) Eklutna Lake still supports kokanee, or land

[5] 1992 Environmental Assessment, Alaska Energy Authority, Page 9, second paragraph from the bottom: "During initial reviews of the legislative proposal, one significant problem was identified; namely, loss of a sockeye salmon run that once spawned in Eklutna Lake. The loss was caused by a small private power development constructed in 1929. This problem was not identified in pre-authorization studies for the Federal Eklutna Project, and the Federal project does not include any mitigation. This specific problem and the desires of the fish and wildlife agencies to provide appropriate consideration to fish and wildlife resources over the long run led first to recommendation that the two projects be placed under FERC jurisdiction; and subsequently to the August 7, 1991, Agreement that provides a process similar to FERC's but without a requirement for Federal regulation."

locked sockeye salmon, the Service believes the intention of the 1991 Agreement was to develop a Program that reconnects the river and lake.

The approach of using the Agreement in lieu of the federal licensing process for fish and wildlife measures is novel, and the absence of precedent or comparable examples from other projects appears to contribute to disagreement concerning PME measure requirements in the 1991 Agreement. Consideration of the analogous federal relicensing process can help clarify the intent of the Agreement. Under the federal relicensing process, PME measures and fishway prescriptions can change where (as here) downstream fish barriers are removed, or where new information becomes available to indicate additional measures are warranted[6,7,8]. Recent federal relicensing processes also demonstrate growing recognition of the importance of connectivity, and a trend toward finding creative solutions that repair impacted ecosystems. Given this process established by

[6] Klamath Hydroelectric Project (P-2082-062) – During relicensing proceedings, new fishway prescriptions and protection, mitigation, and enhancement measures were required for the new license. Ultimately, four dams were slated for removal, and the two remaining dams have fish passage facilities.
[7] Penobscot River Hydropower Projects – As dams came up for relicensing, federal and state agencies, the Penobscot Indian Nation, conservation organizations, and project owners developed a trust to both maintain hydropower and restore sea-run fisheries. As a result, the Great Works Dam (P-2312) and the Veazie Dam (P-2403) were removed, and a stream-like bypass channel was installed around the Howland Dam (P-2721).
[8] Hells Canyon Hydroelectric Project (P-1971) – The three dams of this project have been blocking fish passage since their construction in the 1950s and 1960s. This project has been operating under annual licenses as the terms and conditions are negotiated for the new long-term license to address fish passage and other concerns.

the Agreement was intended to be as protective as federal licensing, and the Project is the final obstruction to fish passage in the Eklutna Watershed, the Service believes fish passage and full watershed connectivity are important components of a long-term mitigation strategy in the Program.

5. Does the Governor have the authority under the Agreement to impose a two-year extension on the process as requested by the MOA?

The Service would not stand in the way of a two-year extension as proposed by the MOA; we would be open to considering this type of amendment. According to the Agreement, one of the Service's roles is to review the timeline set out by the Program.

A two-year extension could minimize the probability of unresolved disagreements being challenged in court and could conserve financial resources as well. Given the short period of time previously devoted to identifying potential engineering solutions, May through August 2023, some options may not have been identified, while others may not have been fully conceptualized or analyzed. A two-year extension on the timeline for the MOA and other engineers to identify long-term solutions could improve PME measures for fish and wildlife while conserving money that would otherwise be spent on a short-term

solution that leaves one mile of river dewatered and delays re-establishing connectivity.

In summary, we want to work together to implement PME measures with the long-term goal of connectivity, and for there to be as much engagement and support as possible for finding long-term solutions that reconnect the river. We also believe NVE should have a meaningful role as this process moves forward to ensure their concerns are addressed.

The Service's goal for the future of the Project is full ecosystem connectivity. Our vision is eventual return of a sockeye salmon run that is ecologically and culturally important to the people of Alaska and the Native Village of Eklutna. Our hope is that it does not take an additional 30 years to achieve. This goal is consistent with the Agreement's requirement to "protect, mitigate damages to, and enhance" fish and wildlife resources.

We encourage all stakeholders and the public to adopt a mindset of curiosity and flexibility when considering new and innovative technologies regarding future scenarios around energy use and production, facility structure, funding, administration, and fish passage into and out of Eklutna Lake. We support the NVE's full participation in the administration of all aspects of the Program moving forward (including monitoring, adaptive

management, reopeners, and alternatives analyses and negotiations).

ALASKA OFFICE OF THE GOVERNOR

1991 FISH AND WILDLIFE PROGRAM

September 9, 2024
1:00 p.m.

Taken at:
Alaska Office of the Governor
550 West 7th Avenue, Suite 1700
Anchorage, Alaska 99501

Representing Governor Dunleavy:
Rachel Bylsma, Chief of Staff
Eugene Hickey, Senior Assistant Attorney General

Representing the Alaska Energy Authority:
Curtis Thayer, Executive Director
Mark Billingsley

Representing the Municipality of Anchorage:
Joseph Busa, Deputy Municipal Attorney
Mark Corsentino, Director

Representing the National Marine Fisheries Service from the National Oceanic and Atmospheric Administration:
Sean McDermott
Alisha Falberg (telephonic)

Representing the United States Fish and Wildlife Service:
Doug Cooper
Mike Routhier

Representing Chugach Electric Association:
Andrew Laughlin, Chief Operating Officer
Samantha Owen

Representing Matanuska Electric Association:
Tony Zellers, Chief Operating Officer
Todd Glass

Representing the Native Village of Eklutna:
Aaron Leggett, President
Curtis McQueen

Also present:
Juliana Soane, Executive Assistant

PROCEEDINGS

MS. BYLSMA: Good afternoon, everyone. Thank you so much for coming this afternoon. Name is Rachel Bylsma. I'm deputy chief of staff to Governor Dunleavy.

First, I just want to take roll call if everyone's here, for the record. So if you could please respond for the transcription.

First, there's myself, Rachel Bylsma, representing Governor Dunleavy.

Gene Hickey, senior assistant attorney general, representing the State of Alaska.

MR. HICKEY: Present.

MS. BYLSMA: Representing Alaska Energy Authority, Executive Director Curtis Thayer.

MR. THAYER: Here.

MS. BYLSMA: And Mark Billingsley.

MR. BILLINGSLEY: Here.

MS. BYLSMA: Representing the Municipality of Anchorage, Deputy Municipal Attorney General Joseph Busa.

MR. BUSA: Here.

MS. BYLSMA: And Director Mark Corsentino.

MR. CORSENTINO: Here.

MS. BYLSMA: Representing the National Marine Fisheries Service from the National Oceanic and Atmospheric Administration, Sean McDermott.

MR. McDERMOTT: Here.

MS. BYLSMA: And via phone, Alisha Falberg.

MS. FALBERG: Yes. Thank you.

MS. BYLSMA: Representing the U.S. Fish and Wildlife Service, Doug Cooper.

MR. COOPER: Present.

MS. BYLSMA: And Mike Routhier. Did I say that correctly?

MR. ROUTHIER: Here. Routhier.

MS. BYLSMA: Routhier. Okay.

Representing the Chugach Electric Association, Chief Operating Officer Andrew Laughlin.

MR. LAUGHLIN: Here.

MS. BYLSMA: And Samantha Owen.

MS. OWEN: Here.

MS. BYLSMA: Representing

Matanuska Electric Association, Chief Operating Officer Tony Zellers.

MR. ZELLERS: Here.

MS. BYLSMA: And Todd Glass.

MR. GLASS: Here.

MS. BYLSMA: And representing the Native Village of Eklutna, President Aaron Leggett.

MR. LEGGETT: Here.

MS. BYLSMA: And Curtis McQueen.

MR. McQUEEN: Here.

MS. BYLSMA: Wonderful.

Also present is Sandra Mierop. Did I say that correctly? She's our court reporter to provide the transcription of the meeting.

And then also Juliana Soane, she's executive assistant in the Office of the Governor to help with any technical or administrative assistance.

I appreciate you all making the time to come this afternoon and provide some additional information for the Governor on some of the various issues and questions related to the Eklutna Hydro Project and the proposed

final Fish & Wildlife program.

As noted in the 1991 Agreement, the Governor is required to review the final proposed fish and wildlife program, the comments, the testimony, summary and analysis materials, and any alternative recommendations made for the protection, mitigation, and enhancement of fish and wildlife resources.

He's required to attempt to reconcile differences among the party and -- among the parties and give due weight to the recommendations, expertise, and statutory responsibilities of the U.S. Fish & Wildlife Service, National Marine Fisheries Service, the state resource management agencies, and the purchasers.

The Governor is required to give equal consideration to eight different elements: The purposes of efficient and economical power production, energy conservation; the protection, mitigation of damage to and enhancement of fish and wildlife resources, including the related spawning grounds and habitat; and the protection of recreational opportunities; municipal water

supplies; preservations of other aspects of environmental quality; other beneficial public uses; and the requirements of State law.

Based on this review, the Governor shall establish a final Fish and Wildlife Program that adequately and equitably protects, mitigates damages to, and enhances fish and wildlife resources affected by the Eklutna project.

The Governor is very conscious of the critical importance of this decision to all parties present, as well as the public at large.

So pursuant to the Governor's responsibilities under this agreement, this meeting was convened to try and obtain some additional information from the 1991 Agreement parties, as well as the Native Village of Eklutna. And then in an effort to be consistent with, you know, aspects of the 1991 Agreement about the public process and the comments process, we requested that the documents be submitted to all parties and the Native Village of Eklutna, and then we have a transcription of the meeting so that it can be

posted on the website, again, for all parties and for the public, upon request, per the agreement.

So, as stated in the invitation, the parties and the Native Village of Eklutna will each have 15 minutes to present their position, should you choose to. You may not have a presentation, and that's fine. But during the course of the presentation, either I or Attorney Hickey may have some questions, and we will not count time spent on questions against your 15 minutes.

We'll start with the owners, since it's their proposed program for Chugach and MEA, followed by the Municipality. Then I'll call on each of the other parties in succession and the Native Village of Eklutna to give you your turn, if you choose. And then since this is the utility's final proposed program, the project owners' final proposed program, if you would like to reserve some time at the end for rebuttal, you may do so.

Juliana is going to run our technology and advance your slides, so, if you could say "next" for her benefit, and then also

for the transcription and for the attorney on the phone so that we can help people keep track of where we are as we move along.

And if for some reason you need to step out, you can go through this door and just knock when you need to get back in, and Juliana will let you back in.

So, with all that said, why don't we get started?

So if I can turn it over then to Chugach and MEA.

MR. GLASS: Great. Thank you.

MR. HICKEY: Before we get started, do you want to reserve any time?

MR. GLASS: We'll see how we go. Hopefully we will, but you never know.

Very good. Thank, Juliana.

Hello again. Todd Glass, Wilson Sonsini energy lawyer. I've been working on hydro for 25 years.

With me today is Samantha Owen. She's a senior regulatory consultant at McMillen, and she led the process from consulting, studies, and the alternative processing, leading to the proposed final

program.

Also you have Andrew Laughlin, the COO of Chugach, and Tony Zellers, the COO of Matanuska. Their jobs are to keep the lights on and to both implement and enforce prudent utility practice at their organizations, and the Eklutna project is a critical part of that.

We're here to explain, support, defend the proposed final Fish and Wildlife Program, the owners' implementation of the program over the last five years, and whatnot. I'm going to hand it over to Sam who's going to talk through the first response, and I'll handle the balance when she's done.

MS. OWEN: Perfect. Thank you, Todd.

So, yes, I get one question; Todd gets five; that's cool.

The proposed final program we believe does meet and successfully balance all eight criteria that are found in the 1991 Agreement, and I'm just going to briefly pop through them really quick?

Again, this is all in the

briefing we provided last week, so I won't spend too, too much time.

I'm going to combine the first two, "Efficient and Economical Power Production and Energy Conservation."

So amongst all the alternatives that were evaluated, this is the one that allowed us to maintain full reservoir fluctuation. It allows us to operate the project year-round, and it had minimal need for replacement energy rate. If the water goes down the river, it can't go through the powerhouse, and all of that will require replacement of energy. So as far as these first two bullets are concerned, this is one that had the least impact on the hydro project as a whole.

The third bullet is: "Fish and Wildlife Protection, Mitigation, and Enhancement."

We firmly believe that this proposal will provide significant benefits for fish and wildlife in the watershed. It puts water in 11 out of 12 miles of the river; it should benefit all four species of salmon that

are currently spawning in that river, including Chinook, coho, pinks, and chums.

And then, based on the models that were developed and all the model runs that we executed with U.S. Fish and Wildlife and NMFS and NVE through our technical working groups, we believe it should provide 96 percent of the available spawning habitat for Chinook, and 99 percent of the available spawning habitat for coho below the AWWU portal bow, which is the point of flow releases.

The fourth bullet, protection of recreation opportunities, we've added several measures in the proposed final program that specifically speak to recreation. I'm going to hit on three major points.

One, because there's no change to reservoir fluctuations, there would be no increased or any additional kind of erosion impacts on the lakeside trail, which is one of the most popular recreational facilities out there.

Also, because the water releases are about a mile below that campground right at the lake outlet, in our conversations with

AD & R they believe that it has limited risk of introducing additional negative bear-human interactions through the campground.

And then, third, the tailrace fishery, which is actually not in the Eklutna watershed but down in the tailrace of the power project itself, is a pretty popular recreational fishery; and this proposal has the least impact on that tailrace fishery. And we actually think it probably might have no impact, but there is the potential for strain, and so we recommended that that be included in the monitoring program as a whole that is part of the monitoring impact and management approach.

As far as Municipal water supplies are concerned, as we all know, the Eklutna Lake provides 90 percent of the municipal water supply for the Municipality of Anchorage. We've coordinated with AWWU thoroughly throughout this entire process, and we think our proposal has no significant impact or threat to the municipal water supply, whether that be the infrastructure, the water availability, or the water quality. And there

are several measures that were included in the proposed final program to achieve just that.

AWWU was involved throughout the entire concept, design, and process, and has also been involved in several negotiations leading up to the submittal of the proposal to the Governor.

Then we move on to preservation of other aspects of environmental quality. We've interpreted this to be carbon offset; so because it has the minimal impact on replacement energy, it also has the minimal impact on carbon offset.

And then other beneficial public uses, we did a cultural resource study, and we've heard extensively from the tribe that water in the river and salmon returning to the Eklutna River is an important cultural resource; and since it will have, we believe, significant benefits to that natural resource, we believe it will have significant benefits to cultural resources, as well.

And then requirements of state law, we coordinated with all the state agencies throughout this process and fully intend to

achieve all permitting that might be needed in order to implement the process.

So, that said, we would like to point out that we do believe some of the other proposals put forward maybe don't balance all eight criteria as well and focus more in on that third bullet, just the "Fish and Wildlife Protection, Mitigation, and Enhancement," and hope that's taken into consideration going forward.

This also jump-starts me into my next slide.

So, recently, pumped hydro -- Mark -- was put forward to the Assembly on August 23rd, 2024; and pumped hydro was a concept that was looked at maybe four years or so ago in relation to Eklutna. This old concept which was much bigger, right, closed loop, five reservoirs, paired with new wind, almost $5 billion, was proposed by the Alaska Institute of Climate and Energy in 2020. That actually ended up in our -- the project owners' initial information package back in 2020.

AEA actually looked further into this, but my understanding is that it

ultimately was not pursued for various reasons.

Then and now, the project owners do maintain that the purpose of the 1991 Agreement is to mitigate the existing project, not build a new project that we firmly believe would need to be further regulated. So, again, kind of outside the scope of the 1991 Agreement.

But, that said, new concept put forward to the Assembly in late August, and this is a -- I would just kind of want to point out this is different than what was looked at before. This would be -- and, Mark, correct me if I get anything wrong -- an open-loop concept. It would have one reservoir, which would be Eklutna Lake itself. It would also be paired with new wind and solar. And I don't think any costs were put forward for this one.

We haven't had a lot of time to look at this, but we have had time to evaluate it at a high level and wanted to share some of our initial thoughts. And first being that -- well, one, we were a little surprised because open loop means that there would not be a closed reservoir at the bottom. We'd be

drawing water straight from the Knik River. And at that point, the tailrace is within the zone of tidal influence that, at certain points throughout the month, there would be brackish water in that area and very heavy sediment load.

So the way it's currently proposed, that would actually be the public water supply for about four months out of the year. And then that water would then be pumped up into Eklutna Lake and down into the Eklutna River. So off the head, we think it would have pretty significant impacts on the public water supply and overall ecosystem.

And then there are some other more engineering feasibility concerns that we have, and we can go to the next slide.

I'm not going to read all of that, I promise. But, the two things I wanted to point out is I think what we heard -- and I was not at the Assembly meeting, but having watched the YouTube version of it, I think one of the points that was brought forward was that there's a lot of existing infrastructure there, and therefore it will probably be very cost

effective.

We really want to highlight that, yes, there's an existing intake; yes, there's an existing tunnel; yes, there's an existing powerhouse; none of which was designed for pumped hydro. So, I mean, this would basically involve gutting the powerhouse, putting in new turbines. Turbines that are currently there are not designed for reversible flow. It's totally unknown if the penstock and the tunnel would withstand that pressure going uphill and pumping water up into the lake.

And then, third, the intake itself is definitely not designed for reversible flow.

So, yes, there's existing infrastructure; it was not designed for this purpose back in the '50s.

And then the last thing here is just based on, again, what we saw in that presentation, we just don't think there's enough storage. When you limit the -- part of the proposal is to limit the storage in the reservoir between elevation 850 and 870, and that reduces the storage capacity of the lake

by about 60 percent. So, the amount of water that we're talking about, there isn't enough storage to contain that within that elevation bracket, and you would start spilling -- per the map that we've run, pumping the water uphill over the summertime for four months, you would actually start spilling only about after a month or so. And then even the water that you do have in the lake between those two elevations, letting it go back downhill in the winter, you'd -- running at about half capacity, you'd get about a hundred days' worth of generation, or about 40-some-odd -- 47 or so gigawatt hours compared to the 169 that we currently do.

So those are our initial thoughts. We put it all down because we know you got a copy of the presentation, so if you want to have more questions about that, I'd be happy to answer them.

But I think, with that, I'm going to turn it over to Todd.

MR. GLASS: Juliana, next slide, please.

Thank you.

I'm not going to go over each of the legal points in the briefs or our responses to Questions 2 through 6. I think they're fairly laid out in the brief; references to contracts and the laws and the various facts.

What I do want to do is make a few points; five in particular.

The first one is is it's important for the Governor and Governor's legal staff to actually look at what's in the 1991 Agreement, not what people want to be in the 1991 Agreement in 2024.

There is -- unlike FERC licensing, there is not a body of State or Federal law and regulations that can add things in. You have to look at the 1991 Agreement on its face. So one-of-a-kind contracting has to be written in a straightforward manner.

The second thing is that if you do take a look at the FERC process and precedent that were in the briefing, don't fall for selective references. You have to look at the entire body of FERC licensing law.

A few of them.

The first one is sure, licensees

in the FERC process do have to look at the cumulative impact, but they don't have to address cumulative impacts. It is simply wrong to tell the Eklutna project owners that they have to correct everything back to 1929 when they only bought the project in 1997. That's just not the way it's done in FERC. It's not done anywhere.

We don't have to require every impact to be addressed, either. That's not the way things are at FERC. If that were the case, every one of the more than 2,000 FERC projects would have been pulled out through pre-licensing.

And, finally, as both NMFS, as well as National Fish and Wildlife Service, there is no Section 18 fishway mandatory condition.

So let's keep going on.

As you start to look at the Assembly approval in voting, the Assembly approval was not required, but it didn't really matter. Like, the one critique I would say of the Municipality's briefing is they had a selective history that they chose to

acknowledge.

In reality, lawyers for the Municipality have been involved every step of the way from 2017 through April of this year. Ralph Duerre and then Ben Bowman, assistant Municipal attorney showed up at every single meeting and participated in every single decision we made.

Similarly, Kolby Hickel, and also Mr. Corsentino. Kolby Hickel participated for three years; Mark Corsentino for over a year and a half.

All of the decisions were made at a unanimous basis. There were no votes taken. And the owners acted as one in producing, through the process, the official proposed final program.

The second thing worth noting here is that the Municipality didn't just lose its rights; it surrendered them voluntarily as a means to gain regulatory approval for a billion-dollar transaction, which the Municipality gave a billion dollars. They didn't lose them; they gave them up.

And we appreciate that the change

in Administration may change views on that history; but Chugach and MEA and the owners should not have to suffer them.

The fourth thing that I want to say is that the Governor's staff, especially, should recognize the RCA's authority. HP, just like Chugach and MEA and AWWU, are regulated utilities, and they have to behave like public utilities. They have to engage in prudent utility practice.

Second thing under that subpoint there is that the RCA has clear authority that to supercedes and voids Assembly actions that are seeking to override them or interfere or slow down.

The voting rights that were given up and that Assembly is appealing now just simply, you know, won't override what the RCA wants.

Which gets to the final slide, if you don't mind, which is, there was a critical oversight in the briefing in that there is an assumption by some that the lack of Assembly approval of the AWWU documents is the end of the road. That's simply not true. While it's

not something that we've been attempting to threaten the Municipality in the least with, if the Assembly were to not approve these things, we would simply go through the Doctrine of Joint Use.

Joint Use in AS 42.05.321, and whatnot, sets forth a very clear system whereas if a utility that is allowed to use another utility's property or any facilities for public convenience is the necessity, they can go to the Commission and have the Commission sort it out and set that compensation at cost.

Now, we think in the negotiations that we have with AWWU, that AWWU is far better off with its water rights and compensation levels and all of that to do it. But if the Assembly chooses not to, for whatever reason, we will simply go to the RCA and we will be able to implement the proposed final fish and wildlife program.

So, with that, I think I've got about a minute left, but I'll reserve that.

MS. BYLSMA: Right. Thank you. I do have a few questions.

MR. GLASS: Sure.

MS. BYLSMA: So, you -- and some of them, you probably sort of addressed, but just trying to expand on that a little bit.

You stated in your brief that this final proposed program was a negotiated agreement. What does that mean and how -- can you talk about that process a little bit?

MR. GLASS: Sam, you want to talk about how we attempted to reconcile differences?

MS. OWEN: Absolutely.

So we put out our draft program October 27th, 2023, and then the agencies, the parties, the State resource management agency and NVE all provided comments on that draft in late November, early December of that year.

We met with each of them individually in the month of December.

And after that, we reconvened in January, February, March and April with all of the agencies involved and talked through their recommendations, tried to work things out. Lawyers were present, closed-door sessions.

We also had separate meetings with NVE, and what is put forward in front of

you as the proposed final program is the results of those negotiations.

MR. GLASS: And the reopeners.

MS. OWEN: The reopeners, everything in the proposed final program came out of that.

I think there's a significant clause in there that Doug or Sean fought hard for, which was what I call the climate change clause where future water coming into the reservoir will be split 50/50 between hydropower and fish resources. The limited reopener for fish passage, the limited reopener for the fixed wheel gate, all of that is the product of those negotiations over that about five-month period.

MR. HICKEY: If I can follow up on that. When you say that they were part of the negotiation, to me, then, the final plan, the draft final plan that you guys produced is a result of those negotiations, meaning it's been agreed to. That's what I interpret as negotiated.

MS. OWEN: No pen was put to paper.

MR. HICKEY: No, no. I understand. I understand there's no written agreement.

MS. OWEN: Sure.

MR. HICKEY: But when you say it was negotiated, you indicated that NVE and, I believe, the Municipality of Anchorage both agreed to those components.

MS. OWEN: Well, in this instance, the Municipality of Anchorage was functioning as part of the hydro owners group. NVE was involved in these conversations, albeit separate from the agencies. And I would say -- and I hope the agencies would agree -- that those negotiations did happen in good faith over that five-month period.

MR. HICKEY: I get that. But was there agreement from NVE as an outside --

MR. GLASS: I'll clarify that from a legal standpoint. I would say that there was an agreement in principle among the parties, but not with NVE. And I think you should ask each of one of the agencies as to whether they were in the room, whether it was the equivalent of a handshake or not. But I

would not in any way overstate that. I don't think that NVE agreed. I don't think that that would be --

MR. HICKEY: Okay. That's what I want to clarify. Thanks.

MR. GLASS: To be clear, if the Municipality was involved, and the Municipality supported the agreement at that time, things changed, obviously, subsequent to that.

MR. HICKEY: Because of the change in administrations?

MR. GLASS: (Nods head.)

MR. HICKEY: Got it.

MS. BYLSMA: So, one of the parties stated in their brief that you rejected exploring the pump storage hydro during the alternatives analysis.

Was that the case? Was it rejected? And if it wasn't analyzed, why was it not analyzed?

MS. OWEN: So, alternatives analysis, we've been defining that as a very specific period in time between April and August of 2023. So, that said, pump storage hydro was brought forth, like as I said

previously, in 2020. So at the very beginning of this process, and at the time, we maintained and we continue to maintain that, you know, pump storage hydro, from our perspective, would be a brand new project that we think would be a FERC-regulated project and, therefore, outside the scope of the 1991 agreement? Right?

From our perspective, and everything that we've read, we think it's supported that the purpose of the 1991 Agreement is to mitigate the existing project, not remove it and not build another one.

So that's the reason why it was not pursued in 2020.

I don't recall -- although I would have to go back to my notes to be 100 percent sure -- anyone bringing it forward again during the alternatives analysis between April and August of 2023.

MS. BYLSMA: One of the parties also stated in their brief that you, the project owners, have a position that the protection, mitigation, and enhancement of fish and wildlife resources cannot include reconnecting the river to the lake to support

fish passage.

Do you feel like that's an accurate reflection of your position?

MS. OWEN: No.

MR. GLASS: I think we both agree on this. Within the four corners of the document, the document is silent with respect to fish passage; it's silent with regard to connection. Therefore, it could be included or not included as part of the bundle of PME measures. I don't think the 1991 Agreement says anything about that specifically.

MS. OWEN: To further expand on that, I would argue that we actually spent a lot of time and money looking at the potential for fish passage over the past several years. Right? I don't -- I would never characterize the owners as being anti fish passage.

But the agencies and NVE, they both are very set on volitional fish passage, which means the fish can swim from the river up into the lake on their own accord, going upstream. We still have a lot of feasibility concerns regarding downstream fish passage, which is getting the juveniles from the lake

back into the river with the functioning hydro project at the same time.

So, that said, if there had been identified a solution that allowed fish passage that did not have significant impacts to the hydro project, and was feasible, then I think it's something the project owners definitely would have considered.

Everything that was brought forward and that was analyzed had either required the project to be shut off for seven, eight months out of the year; required the project to be removed altogether; or was, quite frankly, cost prohibitive.

MS. BYLSMA: So that kind of leads into my follow-up question there. If there's a feasible cost-effective alternative that is identified to restore full river connectivity and allow for fish passage, is that something that you believe can be implemented under your current proposed program?

MS. OWEN: Through the fish passage reopener, yes.

MR. GLASS: That's what that is

all about. The fish passage reopener recognized that we don't know of any engineering means to achieve fish passage -- volitional fish passage upstream/downstream right now. But at some point in the future, ten years after flows are reestablished, if the committee, the management and adaptive -- management committee, identifies a means by which to do it, the owners are open to going forward as set forth in the limited reopener.

MS. BYLSMA: Are there any current alternatives that you looked at that include forward restoration that you feel you can support?

MS. OWEN: Well, I think you would have to define "forward restoration."

But if we're talking about fish passage into and out of the lake, trap-and-haul fish passage from the current proposed flow release point would achieve upstream fish passage into the lake with the current proposal.

That said, I don't believe any of the agencies or NVE were particularly fond of traffic on fish passage. It's not very

natural, right? It's exactly what it sounds like. Trap them, you put them in the truck, you drive them up to the lake.

That said, we still have yet to find a feasible solution for getting the juvenile fish back out of the lake.

MS. BYLSMA: Final question here, at least on my part, and you addressed it somewhat, I believe, in this last slide, but just to make sure that I understand.

In your brief on Page 29 -- or 25, you said that if the Anchorage Assembly fails to approve the AWWU final agreements, you will pursue other available avenues to implement the program.

When you are talking about other available avenues, what are you referring to? Is it this process to --

MR. GLASS: Yeah. We're talking about the joint use. And it's something I actually discussed with both Mr. Bowman at one point and Mr. McLaughlin, the outside attorney for AWWU at one point.

This is not something we wanted to threaten or anything like that, but per the

briefs, it has been brought up that somehow or another this is the end of the road, and it is not the end of the road.

As public utilities, as I was mentioning before, public utilities are paid for by the public, right? Public utilities. And as such, there's a longstanding doctrine in all states where one utility can use the facilities of another utility so long as it doesn't interfere or cause any damage or anything like that. Public necessity requires it; they can use those facilities. And there is a specific state process under the Alaska statutes to allow for the RCA to do that.

And there's two actual statutes. One says joint use is the policy and it should be allowed. And then there's the second very thing which is on the screen here, is that where there is a failure to agree among the two utilities on this joint use, there is a means by which to apply to the Regulatory Commission of Alaska and have the Regulatory Commission of Alaska set forth the terms by which this joint use would occur.

So, we still prefer -- I'm happy

to answer any questions. We still prefer to enter into and implement the three agreements that we have negotiated in full with AWWU to achieve this, but if that -- if that doesn't come to pass, then we'll have to go to the RCA through the joint use process.

MR. HICKEY: May I ask a follow-up on that then?

As I understand this, AWWU has already signaled its agreement to this process of what's already been proposed. It's really the new administration and the Assembly who are taking the position that that's not our position. And even if AWWU signs off, as I understand looking at the briefs, the Municipality of Anchorage still has to approve.

How is that approval interplayed between the two utilities? I mean, that's not something that the RCA may have jurisdiction over if you still require the Municipality's signing on the dotted line.

MR. GLASS: Let me break that up into a few pieces here.

First one is AWWU itself has committed to go forward with the three

agreements and to seek Assembly approval as a precondition, just like the Governor's approval is a precondition to going forward with the agreements.

To my information, I don't know whether the new administration has taken any position with regard to the agreements yet or not. They're probably better to answer that than I am.

However, AHP, or Anchorage Hydropower is a public utility regulated by the RCA. The Municipality, and I think in the brief I quoted the actual -- the superseding authority by the RCA over the Municipality. So if the Assembly votes those agreements down, we can go to the RCA to seek it. If the Municipality says no, the AHP cannot do that, same answer, we go to the RCA, the RCA orders it, and it can be dealt with. And I know of no -- we looked for it. The Regulatory Commission of Alaska has Authority over any Municipal decision, and anywhere where there is conflict between the two, the RCA wins.

MS. BYLSMA: Do you have any other questions? Okay.

Well, those are all the questions I had. So thank you, Chugach and MEA.

So next we'll have the Municipality of Anchorage.

MR. BUSA: Thank you.

Good afternoon. My name is Joseph Busa. I'm the deputy Municipal attorney for Anchorage, and I'm here on behalf of the entire Municipal Government to make three simple points.

One, the minority owners' proposal is really disappointing. At a high level -- we'll get into more detail later -- it would spend $3.7 million on an annualized basis to decrease power production at a critical time for the Railbelt while still leaving an entire mile of river dry and failing to bring the fish back to the lake.

Two, a better proposal is on the table. Pump storage hydropower can use the existing dam -- not changing the project -- the existing dam to increase power production for the whole Railbelt while also re-watering the whole river and letting the fish come back.

No. 3, the Governor has the power

to make that generational opportunity a reality. I just want to highlight, I actually don't understand my friends on the other side to have said otherwise during this morning's proceedings. I think everyone agrees, the Governor has the power to do that.

He can require a modest modification to the minority owners' proposal to use the first two years of the three-year pre-implementation period to consider this proven technology the minority owners never adequately studied as part of this broken process.

Now, I want to go over those three points in a lot more detail, but I also want to make sure I answer all of your questions. So I want to invite you to please interrupt me at any point if you have questions about anything I've said.

The first big point, the minority owners' proposal is really disappointing. It scores poorly on all the public interest factors under the 1991 Agreement. Again, that's $3.7 million at a minimum on an annualized basis to do something that's

relatively experimental. To our knowledge, no other fish and wildlife mitigation project has tapped into Municipal drinking water infrastructure in the way that is proposed here. And it does that in order to decrease power production by about 10 percent at a time when we all know the Railbelt needs as much power as it can get during this critical time.

It does nothing to help fish or wildlife on the entire last mile of the river, the entire lake, or all of the tributaries to the lake. It will keep blocking fish and continue to disappoint subsistence and sport fishermen, as well as the hunters whose prey depends on the marine and anadromous fish run to bring back.

It's an unpopular proposal. It was opposed by most public commenters. And it emerged from a broken process in which the Municipality of Anchorage, the majority owner of this project and the local government responsible for protecting the public interest, was sidelined.

That's the first point.

The second point, the Governor

doesn't need to settle for that disappointing proposal because pump storage hydro beats it on every metric. As the Governor already knows, because he's been proposing pump storage hydro since at least 2020, pump storage hydro is a simple and proven technology. When the wind is blowing and the sun is shining and we're producing more of that renewable energy than can be reliably consumed elsewhere and otherwise go to waste, you can pump that water up from the Knik tailrace impoundment to the Eklutna Lake through the existing infrastructure. All we have to do is change those turbines to make them bidirectional. Then we can store that energy for later usage.

Then when the sun isn't shining, the wind isn't blowing, or there's an energy crunch like there was last winter, you reverse the flow and you let that water come back down, as we always have, to produce reliable, low-cost, dispatchable energy.

And now the key point there is that there's now more water in the lake for everyone for all uses. It cracks that problem, and we can increase total power production,

increase the supply of water for Anchorage, and re-water the whole river so the fish come back. That's a win, win, win.

It's proven technology at work in 43 states in the United States as of 2019. There's 67 more pump storage hydro projects in the pipeline throughout the United States. Again, that's as of 2019. There's for sure more now.

This proposal keeps costs low by using existing infrastructure, including the existing dam and the existing tunnels. We need to swap out those turbines for bidirectional turbines.

By the way, those turbines get swapped out periodically anyway because of normal wear and tear. I don't think anyone thinks that replacing turbines creates a new project. I generally don't understand that argument. And it keeps the cost low.

By the way, there's billions of dollars in Federal funds that are available for projects just like this, as last week's announcements of Federal grants in sort of related areas makes clear.

It's a popular proposal. It achieved unanimous support of all elements of the Municipality of Anchorage, including the mayor, all of the Assembly members, and importantly, the Native Village of Eklutna in a historic joint resolution just last week.

Again, this is a win, win, win, for fish and for power, and for the public interest.

Finally, the Governor has the power to make this generational opportunity a reality. I think everyone at this table agrees that a final fish and wildlife mitigation plan can include flexibility to consider additional alternatives and then implement that flexibility during the existence of a final plan.

That's what a reopener is. They've proposed several that are, in our view, too narrow and kick in too late. We think that the proven technology of pump storage hydro is sufficiently promising that it makes all the sense in the world for -- just to have a modest modification to their proposed program.

Use those first two years in the

pre-implementation period to study this proven technology. Finally, like, adequately study it in this process, which really never happened, to make sure that we're maximizing the public interest here for the generations to come.

We think that the public interest on all of those factors is just too important to defer for the long run through the 200 reopeners that exist.

In closing, the minority owners' proposal is disappointing. A better proposal is on the table by making a modest modification. And the Governor has the undisputed power to do that. His job under the agreement is to reconcile the proposals and to achieve a win, win, win for increased power production and increased water for fish and wildlife.

Thank you, and I'd love to address all of your questions.

MS. BYLSMA: Sure. Thank you.

So one of them is timing. I mean, this was just brought forth in the Assembly work session on August 23rd and approved via the joint resolution with Native

Village of Eklutna on the 5th.

Why was it not raised earlier or raised more strongly earlier in the process?

MR. BUSA: So I think I've got several lines of response, and I want to make sure I get them all out.

First, I think the broken process does come into play here. As has been discussed, the Municipality didn't have its vote on the operating committee during all of the relevant time period here. And my friends on the other side say it doesn't matter, we still operate it by consensus.

I think everyone understands in their daily life that the formal rules actually have a huge impact on how the informal process plays out.

And so if you know going in that, you know, so and so, their view, won't actually matter all that much because they've got no vote, it'll give you a certain incentive not to necessarily take them all that seriously.

Secondly, even separate from the formal vote, sort of power, I think everyone should have recognized very early on that the

proposed final program here would have required Municipality buy-in for successful implementation. But I think that was sort of swept under the rug in an attempt to, you know, sort of strongarm the Municipality. I don't think that's a healthy way of running this process.

Now I hear from my friends on the other side that they think there's an Alaska statute that would let them, I suppose, bring suit against the Municipality, sort of an experimental lawsuit. I'm not sure I know of any precedent directly on point that would allow them to do that. I think there's going to be a high degree of litigation risk. Again, it's the first time I'm hearing the proposal personally. And so I apologize, I don't have, like, a fully worked through thought process.

I do know that a separate Alaska statute says that the Assembly -- that the Municipality's legislative arm -- gets to make provision for disposition of real interests in property. I'm not sure why they're so confident that a different Alaska statute obviously overrides that separate Alaska

statute. I think there could be a lot of litigation risk there. I think it could be messy and expensive and take time.

I think it's a problem that results from the broken process here. I think if we these -- if the Municipality's understanding of the public interest had been taken seriously earlier on, we could have avoided this.

But I think the Governor can avoid that problem here. Again, he can reconcile the various proposals. And it's within the Governor's power to require to take the first two years of that pre-implementation period just to study this very promising proposal.

Now, I understand my friends on the other side have a slide where they say, you know, we don't think this would pan out, technically. Well, my friend, Mr. Corsentino, the very distinguished director, new director of Anchorage Hydropower, disagrees. And I think that's worthy of study. I think that's worthy of taking, you know, that first bit of time to really work through it to maximize the

public interest.

This is a tough technology that works in so many other areas; it's not entirely clear to me why it wouldn't work here. Again, using existing infrastructure; the existing dam; the existing tunnels.

MR. HICKEY: Attorney Glass indicated that pumped hydro might require FERC approval rather than this 1991 Agreement approval. What are your thoughts on that?

MR. BUSA: I disagree. I'm not sure why they think it would require FERC approval. As I understand it, the thinking is, well, that's a different project, this doesn't count as a program under the 1991 Agreement and, therefore, it would just have to go through FERC as a matter of course.

But, I mean, I think if you look at every alternative they studied in the course of developing this proposal, you see lots of things that -- you know, you can scale it up or down. You can do more or less. And all of those options can involve constructing lots of things at different locations or not. It can be very technologically complicated or very

simple. But if they're all aiming to re-water the river and bring back the fish, I think they're clearly within the program.

Again, the proposal from a technical point of view really is to swap out those unidirectional turbines for bidirectional turbines and swap out the controls.

To be clear, those controls actually need to be swapped oat anyway pretty soon, is my understanding, from a technical point of view. So, you're really just talking about new turbines, and I didn't hear one reason from my friends on the other side as to why changing turbines would count as a new project.

Again, to my understanding, they actually swap out those turbines from time to time due to normal wear and tear. We could just buy different types of turbines that are bidirectional.

On the other side of the page -- on the other side of the ledger, I hear in their preferred proposal they would like to dig a hole, dig into municipal water infrastructure, build a new facility there, a

new location that's actually not at the dam or inside an existing location. I think that's all within the '91 Agreement.

To be clear, I just think that our proposal is obviously with the '91 Agreement if we're going to use the same, you know, pump storage house with different turbines and, like, new controls, which, by the way, have to be updated anyway.

MS. BYLSMA: So, in your brief, you acknowledge that alternative may -- a better alternative may not be found, even after two years.

Is there a reason that the approval and permitting shouldn't advance on the current schedule for the portal valve alternative so as to not lose valuable time protecting, mitigating, and enhancing fish and wildlife resources?

MR. BUSA: We don't want to lose any valuable time, but I've also not heard my friends on the other side say that all three years would be necessary for permitting, that -- their preferred project. I think that you can take a staged approach here.

It doesn't make a lot of sense just in terms of cost savings. I think you can immediately do a technical feasibility analysis of this proven technology and get to a pretty solid understanding relatively quickly within that two-year time frame of how it's going to turn out.

Once you have that information in hand, you can make a reasoned determination of how to proceed with the other permitting decisions.

MS. BYLSMA: Thank you.

What, if any, impacts does the pump storage hydro have on the Eklutna tailrace fishery?

MR. BUSA: I'm sorry, that's a question I haven't thought about until today. I think that's something that should be studied during the first two years.

Mark, what's your thought?

MR. CORSENTINO: No, I mean, that's the whole point. I mean, even the pumps storage are a concept. Rig has looked at that, but that was a concept, and there's at least a dozen variations of that that can be done. And

they would include increasing the impoundment down there to close the bar, increasing it bigger. Putting it in a different place where you can get the watering so it -- to your point, is that the tidal influence? Well, not all the time during all the years.

The whole point of this is that, yes, we want to take a little bit of time. You know, the two years is just to address all concerns and comments, if it's feasible, within, say, the first six months. On that injury side, that's pretty swift and easy. But you want to look at all alternatives. You want to collaborate. Otherwise, you're missing on the key points.

Obviously, no one liked the Governor's proposal in 2020 because it didn't go anywhere, unfortunately, because of $4.7 billion.

This proposal, there are various ways to stick. But even he acknowledged back then, the proposal is scalable, right? Start small in expense -- and by the way, with all the VRE penetration with solar wind because it's being pushed on the -- all these companies

are being pushed to do VREs. That stuff is intermittent; it's unreliable; it's not firm. This makes it firm and beneficial.

By the way, you're probably going to have to do pump storage no matter what. That's why I would take advantage in lieu of FERC process now, because you'll save another $8 million because you don't have to spend $8 million on another FERC process down the road. This is a smart move.

And to your point, yes, there are some unknowns, a whole reason to address things like the tailrace hatchery and other things need to be addressed. Have we thought through it? Yes. Is there a silver bullet solution? No. But that's the whole point of going through discussion and a conversation to look at this.

I mean, Dixon Diversion, it's a great project. How they -- what are they doing there? Increasing the capacity.

Eklutna Lake right now doesn't produce the maximum at capacity of water even today. It doesn't have enough water. It's a 40 megawatt plant.

If you pump that thing at 40 megawatts every day of the year, you get 354 gigawatt hours per year instead of 150 or so, whatever you get now. It just doesn't have enough water. You don't run that thing at 40 megawatts. You run that at 25 wattage on an average per the year. That's the whole concept of Bradley Lake, same thing, you don't run that thing at 120 gigawatts every day of the year. You run a portion of that. You're getting water and there's two you can do just then.

Stetson Creek was the same thing that at Bradley Lake -- Cooper Lake. The whole point is getting water out of there to give you better product, bring the renaissance of hydro that you need, and make it compatible with fish and wildlife. That's the whole concept here. Look, this is the smart move with VRE. You want to do this. And it actually gives the stigma where -- the nasty stigma of hydro is that it's bad for fish and wildlife. Fix that, and you will want to do that, though.

MS. BYLSMA: So your -- the pump storage concept as -- you know, as presented -- and I'll admit that it's new to me, too -- but

it requires some additional capacity brought on through solar and wind; is that correct?

MR. CORSENTINO: Or you can use existing solar. So it would be better to do new, especially if you can get it economically.

Yes, to your point, you're going to have to use power to supply power down the road. But the whole concept is right now, if you're going to have natural gas issues and natural gas cost increases, your power for thermal is going to increase those costs.

When is solar not going to become competitive? I mean, you've even got articles where it shows that, you know, the solar farm in Houston is less expensive than the thermal generation now. So if you can pump up at a lower rate than you use thermal, then you're money ahead. But you also want to drive that cost down.

You're right. If you can get inexpensive wind to solar online -- and by the way, you've got so much wind and solar out there that's not being used all the time because you've already got other units on line on the thermal side, so it's going to waste.

This actually benefits and enhances the VRE.

So, yes, you will need that, and it needs to be cost competitive. I'd agree. That's the whole concept of looking at this.

MR. BUSA: And I just want to add onto that. My understanding is that, like, additional wind and solar is coming regardless. Like, Chugach and MEA are committed to that anyway, and so this just works with that. It facilitates it so it can work as efficiently as possible and at a time of like, you know, big energy problem in the entire Railbelt.

MR. HICKEY: Is there a -- a few questions. Have you guys look at the costs associated with this type of project? No. 1.

And then No. 2, is there a reason why there should be a two-year wait on implementing the proposed draft plan because this proposal may not pan out in the end anyway, and we just lost two years of potential restoration of fish habitat.

Can the two go on the same time frame together rather than this two-year wait versus let's do everything all at one time?

MR. BUSA: Yeah, so I think -- I

just want to reiterate something that I hope I made clear in my first answer, but I guess I didn't. I apologize for that. That's on me.

We think that the permitting can happen sort of smartly on two tracks in a way that minimizes overall costs while still allowing for further study.

So, for example, the further study of technical feasibility of pump storage hydro we don't think would take, you know, two full years. We think we're going to get a pretty good sense, relatively early on in that period of how that's going to go. Moreover, I don't think the other side has said that, you know, all three years are necessary for permitting. So I think you can shift the permitting applications back a bit to allow for technical feasibility on the front end. But I think you can make a smart choice within that two-year period to go down the road on starting the job on permitting the existing proposal while still going down the road of, you know, proving out the other proposal.

You just want to be careful on how you're balancing that to minimize your

costs overall. But you'd want to start well in advance, I agree.

MR. CORSENTINO: And the cost, though, you know, we'd want to go further in depth, that's the whole point, but it's going to be part of our option as far as initial cost.

MR. HICKEY: I'm sorry, I couldn't hear what you said.

MR. CORSENTINO: The initial cost would be on part of the infrastructure costs of the option, just somewhere between $5 and 10 million. Those turbines, to replace not just themselves, are going to be in that same bandwidth, but that's going to be firmed up the nest. And then the advantage is you don't lose from power down the road. You actually maintain, if not potentially improve it down the road.

MR. HICKEY: Thank you.

MS. BYLSMA: So kind of transitioning to maybe more, not just about the specific option, but kind of just a little broader, is: Does the Municipality believe that re-watering the entire river and providing

for fish passage, is that the only means of protecting, mitigating, and enhancing the fish and wildlife habitat?

MR. BUSA: No. I mean, I think people have come forward with lots of means of mitigation. And mitigation is a spectrum. You know, I think we're trying to be reasonable here in recognizing that mitigation is a spectrum. I think the key part, though, is that, like, everyone ought to recognize that re-watering the whole river and fighting for fish passage is just obviously way better on that factor than not doing it. Right?

And so if you can do that while also improving the other public interest factors at a reasonable, prudent cost, it just makes a lot of sense to do.

I think that that's the point of the '91 Agreement, is as the Governor sort of made that kind of reconciliation decision, really tried to maximize the public benefit on all of these dimensions.

MS. BYLSMA: Is there any alternative on the table currently short of, you know, what you've proposed with your pumped

storage hydro that you feel you could support in whole or in part?

MR. BUSA: I want to highlight that the Native Village of Eklutna has also proposed -- so I want to highlight, first of all, that sort of in a historic joint resolution last week, the Native Village of Eklutna and the Anchorage Assembly unanimously all supported pursuing pump storage hydro, so I think that's why it's been the focus of our presentation here.

But I also want to be clear that the Native Village of Eklutna has also put forward a separate proposal to pump water from Eklutna Lake into the pond that's sort of right behind the dam and re-water the full river through the existing gate in that dam, and we think that deserves further study.

MS. BYLSMA: So can you talk a little bit about your perspective on the reopeners? You know, if the position is that reopeners are permitted under the 1991 Agreement and the final program, are those something that from your view need to be included in the final program? Can the parties

just get together and agree on reopening at a point of time? What's your thought process on that?

MR. BUSA: We think that under Section 7 of the agreement, that the parties, if they were to ever propose significantly altering the project, that would sort of restart an automatic reopening proceeding. Right? Because you have to go through this process of alternative studies and proposing to the Governor for the Governor to choose among them.

We think that basically just looks a lot like sort of the far too limited reopeners they've proposed, and also looks like the flexibility we have called for in the first two years of this program.

MS. BYLSMA: So, also in your brief in the Municipality, you stated the Municipal code requiring the final proposed Fish and Wildlife program was subject to Assembly approval prior to submission to the Governor.

When was this code passed? And do you believe that the Municipal code

supersedes the terms outlined in the 1991 Agreement which, according to your brief, was a Federal contract authorized by Federal statute?

MR. BUSA: I apologize. I don't recall immediately the specific date on which that requirement was approved by the Assembly. I know -- I hope I know before the submission of the final program to the Governor, I believe almost certainly that was true.

MR. HICKEY: It was certainly after the 1991 Agreement, right?

MR. BUSA: No, no, so I want to get to that because I think that's the big question, right? Like, no, we're not taking the position that any ordinance can supersede the 1991 Agreement, but obviously the Assembly is in charge of setting the public policy direction of the Municipality and, to that extent, you know, insure that the Municipality's representative on the owner's committee is sort of fighting for the public interest and to maximize all those public interest benefits; not just fish passage and then fish, but also, you know, improving power production and improving all these beneficial

uses, like fishing on the lake.

So, I think our simple point is that the Municipality has that power over the public policy of the Municipality, and I think this also ties back into the sort of broken process here where the Municipality's understanding of the public interest, a very reasonable -- to understand the public interest, again, the understanding is that any proposal that actually brings the fish back and re-waters the whole river is clearly better than any proposal that does not on that one public interest factor. And if you can also boost the other public interest factors at the same time, that's great.

So, the Municipality, by being cut off, by having lost its vote, being cut off from this process, I think that really was a disservice to how this process could have and should have played out. Again, we want to be cooperative and work cooperatively with the other owners here.

I would just highlight, though, that now that we have Mr. Corsentino as head of Anchorage Hydropower, we have sought to get our

voting rights back on the owners' committee and proceeding before the RCA, and I think, pretty remarkably, the minority owners here have strenuously objected to doing that and to doing it on an expeditious timeline.

They actually, I think, all but admit that Mr. Corsentino is more than capable of operating Anchorage Hydro prudently on that committee. But they're still making sure we don't have our vote on that owners' committee. And that's about the '91 Agreement, but it's also about so much more. We're the majority owner of that project. And there are decisions that get made all the time, and we just think that's indicative of the program process here, as well.

MS. BYLSMA: And just a follow-up question on your description of what you've described as a broken process.

So, the project owners have said that the vote was surrendered; you have said that you lost your vote. Did the Municipality feel it was a broken process when this was ordered and agreed to in 2020?

MR. BUSA: So I think when we

agreed to voluntarily surrender that vote in 2020 in order to maintain our majority ownership, I think, obviously, going forward, our hope would be that we would retain -- reclaim that vote expeditiously and then continue to work cooperatively with the other owners going forward.

Obviously, if the Municipality had gotten its vote back earlier, that would have been better for us and for everyone.

I also just have to point out, though, that we've moved expeditiously, reclaim our vote, and no one objects to Mr. Corsentino's engineering skills or says that he does not have the skills to run that utility.

But, we're still being obstructed in our attempt to get that vote back. I think that just speaks to the broken process here.

MR. HICKEY: And just following up on that line of questioning.

If the Municipality wanted to maintain a vote, they could have done that when they negotiated the loss of the vote back in 2020, couldn't they have?

MR. BUSA: I apologize. I didn't mean to cut you off.

MR. HICKEY: I just want to make sure I understand it, because it seems to me that the record is pretty clear that the Municipality willingly gave up its vote. There's no dispute about that, right?

MR. BUSA: No.

MR. HICKEY: So there was a willing agreement to eliminate the vote back in 2020. And then what we've heard today has been that, albeit it wasn't the best of all worlds, the Municipality was part of the process going from 2020 forward in discussing these different alternatives and options to come up with the final program.

And it just seems disingenuous to me to say that the process was broken when the Municipality controlled the process at that point.

MR. BUSA: I think there's two points I want to make.

First is, yes, there were lawyers from the Municipality in the room during those discussions, but I think we need to understand

that there are multiple elements of municipal government. I think it's inaccurate to say that the Municipality was on board with everything that was going on during the study period here.

I think the Anchorage Assembly has been very clear in enacting and passing ordinances as far back as 2017, making its view very clear about that, you know, re-watering the river and providing for fish passage to maximize that element with the public benefit, consistent with all the other factors, would be the goal here.

And I think that the owners' committee has not taken that view seriously during all of that time.

Now, obviously, if we had been able to regain our vote earlier, that would have been better. That's just absolutely true.

I don't think that we should sort of focus on that process point to deprive the public of the maximum public benefit we can possibly give them at this point going forward.

MR. HICKEY: Thanks.

MS. BYLSMA: Just one final

question.

Were there any portions of your recommendations that were incorporated into the final proposed program?

MR. BUSA: I'm sorry, maybe I'm misunderstanding the question, or I'm just -- possibly I just don't know the answer.

MS. BYLSMA: Yeah. From alternatives, you know, presented earlier in the process and, you know, then the alternatives were considered and, you know, the project owners have said that then there was this negotiation to incorporate different elements into it. Were any of the things that the Municipality suggested incorporated into the final proposed program?

MR. BUSA: Not that I'm aware of.

MS. BYLSMA: Okay. I don't have any other questions.

Thank you, Attorney Busa and Director Corsentino.

MR. McDERMOTT: Just a reminder, we have one person on the phone, and I'm doing a lot of texting to make sure she --

MS. BYLSMA: Hears?

MR. McDERMOTT: Yes. So just be aware of when you're speaking that she needs to hear, as well.

Thank you.

MS. BYLSMA: Yeah, thank you.

All right. Next, then, we're going to move on from the project owners.

And Fish and Wildlife Service.

MR. COOPER: Thank you.

Good afternoon. My name is Doug Cooper. For those who don't know me, I represent U.S Fish and Wildlife Service. There, I supervise our ecological services regulatory program out of our Anchorage field office. So my office has been the Fish and Wildlife Services primary technical review and subject-matter expertise on the Eklutna hydropower project.

I'm here today representing our Regional Director Sara Boario.

So Regional Director Boario, on her behalf, I thank everyone for the opportunity here today to discuss the Governor's important decision.

We recognize that there are a lot

of parties to this agreement, and we've participated in this process. Sara did ask me to convey our appreciation to the Governor for this opportunity to work together in a collaborative, solution-based process.

And I do want to open with -- in acknowledgment that the Native Village of Eklutna was not part of the 1991 Agreement. We believe they should have been a party to the agreement, and that was -- their exclusion was a gross oversight. None of the individuals in this room were part of that process.

So, just acknowledging their lack of a formal role in this process.

I think throughout the process, the parties of the agreement have recognized the profound impact that the development from gravel mining to hydropower has had on the Native Village of Eklutna, or NVE. And under the Department of Interior, Secretary of Interior Deb Haaland has made it clear that our department prioritizes and plays a central role in how the United States stewards its public lands, increases environmental protections, pursues environmental justice, and honors our

Nation-to-Nation relationship with tribes.

NVE has played an important role throughout the process in participating in the development of project study plans and developing alternatives.

We do definitely support the Governor's consideration of NVE's comments in weighing the eight factors that factor into his decision, and we do very much appreciate just the opportunity that the Governor and all parties to the agreement have made for NVE to have a voice in this process.

So our Fish and Wildlife Service agency interest in this process is specific to the development and implementation of the measures to protect, mitigate for and enhance the damage to and preservation of the other fish, wildlife, and other aspects of the environmental quality.

So we -- Fish and Wildlife Service and NVE -- have a shared vision and a mission to support the eventual return of the historical sockeye salmon run that was ecologically and culturally important to both the people of Alaska and specifically the

people of NVE.

So salmon are really a life blood of Alaska. They feed people, fuel the economy, shape cultures and the ways of life, and support productive and resilient ecosystems. We think this overall effort is an opportunity to protect, mitigate, and enhance or develop those PME measures: Protect, Mitigate, and Enhance.

The Eklutna salmon contribute to the larger shared vision of salmon conservation throughout the state of Alaska.

As we've detailed in our several comment letters regarding the Fish and Wildlife Program, we believe the intent behind the 1991 Agreement did consider ecological connectivity and fish passage. Fish passage is an important component of protecting, mitigating, and enhancing fish habitat, pursuant to the agreement which was then developed in response to the concerns that were identified over the loss of a historical sockeye salmon run.

And that was stated in the 1992 divesture summary report where it was stated that during reviews of the legislative

proposal, loss of sockeye salmon run that once spawned in the Eklutna Lake was identified. The report goes on to state that this specific problem and the desires of fish and wildlife agencies to provide appropriate consideration to fish and wildlife resources over a long run led to the August 7th, 1991, agreement.

And then, in summary, the intent of the sale -- in summarizing the intent of the sale, the report does say that, given the nature of the projects and the river basins affected, there's good reason to believe that the proposed arrangements will work at least as well as Federal regulation for the intended purpose of mitigation and enhancement of affected fish and wildlife resources.

So, as I stated, we do believe fish passage was part of the intent behind the agreement. The agreement itself does not speak to fish passage as a specific measure that needs to be obtained or achieved; however, given that the loss of historical management of sockeye salmon is what prompted the development of the agreement that lakes are an important part of sockeye salmon spawning and rearing,

that there are no other lakes connected to the river to support that spawning and rearing habitat, and that the Eklutna Lake still does support kokanee, which are landlocked sockeye salmon. The Service does believe, then, the intention of the '91 Agreement was to develop a program that connects the river and the lake.

So we're not -- the Service isn't here today to advocate for a specific alternative or a particular alternative, but we're really here just to emphasize our long-term goal and vision for all the parties here today to intentionally, creatively, and urgently pursue full connectivity in the years ahead.

We hope that we should not wait another 30 years to achieve that fish passage and take action towards that goal. And we believe this vision is consistent with the 1991 Agreement.

All that being said, we do recognize that there are infrastructure and financial limitations that present current challenges to immediately achieving that ecological connectivity and fish passage. So

the program -- the proposed program that's before the Governor today does not meet -- does not immediately meet the Service's goals of ecological connectivity. There is one mile of river remaining de-watered, and we don't believe the proposed flows will adequately fully re-create spawning an off-channel habit in quantities comparable to what was lost.

But, we do believe the program, if coupled with firm owner commitments and continuing opportunities to reconnect the river and reestablish fish passage in the long term, would be consistent with the negotiated alternative for a phased approach.

We do -- as the owners suggested, we do believe all parties did in good faith negotiate measures for inclusion in the fish passage -- or, sorry, fish and wildlife program. And we're still here prepared to work collaboratively with all parties here today so the owners, the Municipality, the Native Village of Eklutna, and other agencies to achieve these long-term goals and missions that can support each of the parties' goals and vision for the project.

So, in summary, we want to work together to implement protection, mitigation, and enhancement measures with the long-term goal of ecological connectivity, for there to be as much engagement and support as possible for finding long-term solutions to reconnect the river, and the Service's goal for the future of the project is full ecosystem connectivity.

Our vision is an eventual return of the sockeye salmon run that is ecologically and culturally important to the people of Alaska and the Native Village of Eklutna. And our hope is that it doesn't take an additional 30 years to achieve. We think this goal is consistent with the agreement's requirements to protect, mitigate damages to, and enhance fish and wildlife resources, and we hope that we can continue to work together for those long-term ecological goals.

Thanks for the opportunity to speak today.

MS. BYLSMA: Thank you. I want to go back to something you said, talking about, you know, negotiating in good faith.

MR. COOPER: Sure.

MS. BYLSMA: Were any of the alternatives or recommendations that the Fish and Wildlife Service suggested incorporated into the proposed final program? And can you talk about that a little bit?

MR. COOPER: Sure. So the -- the negotiation process had a number of steps. So we did -- the owners group did ask for all parties to submit their preferred alternatives. Those were part of the alternatives development and alternatives analysis. Through that process, we submitted alternatives that we felt would achieve those habitat creation and restoration opportunities to support salmon rearing throughout the river system. We did prefer alternatives that would water the entirety of the river, including connectivity to the dam.

Through the negotiation process, we recognized that the infrastructure and financial limitations may preclude achieving that goal in the very near term. So the final program included those limited reopeners.

We wanted some form of phased

approach and adaptive management that would allow for incorporation of additional measures over time, and we've consistently stated that that ecological connectivity that would include restoration of sockeye salmon fish passage was an important part of the long-term vision for the program, with the recognition that current limitations may preclude it in the short term.

So, we believe that the limited reopeners give us some of that flexibility. They fall short of what our goal and vision is in the near term, but we believe at least it provides that adaptive management possibility as we look into the future.

MS. BYLSMA: Any questions?

I don't think I have any other questions for you.

MR. COOPER: Great. Thank you.

MS. BYLSMA: Thank you.

Next, NOAA, for National Marine Fisheries Service.

MR. McDERMOTT: Well, thank you.

I think being this far deep into the process, I might be reiterating a few comments.

Anyway.

But thank you for providing this forum for discussion of the proposed program. We really appreciate it, and to be able to give you additional information to support the Governor's decision.

So, as provided in our brief to the Governor, we focus our response on areas relevant to our role in the 1991 Agreement process and our statutory authority.

So those comments were consistent with our comments from June 21st on the proposed plan.

So our interests are to restore habitat functions and values in the Eklutna River, and we support NVE's interest in restoring water to the full river and fish to the watershed. That includes the lake.

While the '91 Agreement does not speak to fish passage as a requirement, in review of early correspondence strongly indicate that fish process was contemplated by NMFS staff at the time.

Likewise, in consultation with NVE, we maintain an interest in reestablishing

flow to the full length of the river and returning salmon to the full range of habitat below and above the dam.

To that end, the limited reopeners provided -- or they provide an opportunity to address this interest, similar to a reservation of authority in the Federal licensing process.

So as party to the '91 Agreement, we participated in all stages of implementation, from onset of process to finalizing the draft for the Governor's review.

We contributed to the process and negotiated in good faith to develop the proposed Fish and Wildlife Program that met the -- that meets the intent of the agreement.

And based on those discussions, our review of the proposed program and consideration of potential alternatives, we view the proposed program as a framework to initiate the protection, mitigation, and enhancement of fish and wildlife resources in the Eklutna River.

The program -- excuse me.

The program will support habitat

restoration initiatives and monitor the effectiveness of the mitigation. It forms a technical work group to inform decision-making and includes provisions to address changing technology and climate conditions.

So, if implemented, the proposed actions will also provide a foundation for the next iteration of the mitigation plan.

So the program includes a provision for the owners to conduct a detailed feasibility study of a new gate of the existing dam, and this is related to the question of water at mile -- between the dam and the portal.

If the described criteria within the plan are met, then the owners will commit to a capped amount of funds to install the new gate.

In our comments from June, we recommended a modification to the program to ensure that the value of the funds are available for other mitigation actions if the feasibility study indicates the dam is insufficiently stable to support the new gate structure and this action does not proceed.

We also recommended further analysis for the construction of the pump station and the alternative to bring water from the lake past the dam.

Now I lost my place.

Anyway, so we also put that forward as an alternative to be further reviewed.

And we reviewed the owners' response to our comments and understand their position.

I'll start with that one.

So implementing mitigation measures at hydropower projects is typically a multi-year process. We have been supportive of a phased approach to implementing the mitigation plan from very early on.

There are actions that should happen as soon as reasonable, such as adding water to the river -- that wasn't my 15 minutes -- was the metric system.

MR. HICKEY: It was your government counterpart.

He just winked. He said you could use all his remaining time, as well.

MR. McDERMOTT: And that I'll do, as a good Irishman telling a story.

Oh, my gosh.

All right. So, what do we do? So, there are actions that should happen as soon as reasonable, such as adding water to the river, forming the working group, and initiating the on-the-ground restoration.

At the same time, the parties could continue evaluating bigger actions for mitigation that would otherwise take many years to achieve, well beyond the five years to implement that are contemplated in the agreement.

That's all. Thank you.

MS. BYLSMA: Thank you.

So I'll ask you a very similar question to what I asked Fish and Wildlife Service. You mentioned the negotiation and the good faith. Were there any -- you mentioned a couple of recommendations that you put forward in your final comments. And were there any other of your alternative recommendations that were incorporated into the proposed final program?

MR. McDERMOTT: So just to clarify, from the -- from our last comments or throughout the process?

From our last comments on the draft, because then the --

MR. HICKEY: No, I think you're referring to prior to the last comments, correct?

MS. BYLSMA: Yes.

MR. HICKEY: Yeah, what was -- before your comments on the final program, were there any recommendations that you made -- that NOAA made that were included within the owners' plan? Or if there were other recommendations that were not included, how did you get to that point?

MR. McDERMOTT: I think the answer is similar to Fish and Wildlife Service. We had a position for -- you know, the bigger picture, fish passage, et cetera, and so on. And there were definitely things that were not incorporated. But there were things that were very important to us that were.

The reopeners which mimic the FERC processes for reservation of authority.

And in knowing that there were limitations here that perhaps future technology would address for fish passage.

And then the second one is, we know that things are changing. Rain events, warmer temperatures, et cetera, that we wanted that addition of how to manage the -- how do we manage the water that benefits the mitigation plan? And, of course, other interests, too.

So in that respect, there were several items that we put forward that they incorporated through the negotiation that wasn't originally on the table.

Did that answer your question? I don't know.

MS. BYLSMA: Yes. Yes, it did.

Well, thank you.

Then I think next we have AEA, if you had anything that you wanted to present.

MR. THAYER: Yes, just a couple points, and that is since we -- since this started -- this process started over four years ago, AEA has been involved in it, mainly making sure that the process was followed correctly and according to the agreement. That was

something we had worked out very early on with the Governor's Office.

I do want to comment that I think everything was done in good faith and it was open. We were kept abreast. As developments occurred, we had chances to comment on the process and saw no fatal flaws in the process as it was laid out into the 1991 Agreement.

There's been a couple of references to pumped hydro. I will just make this general statement that AEA in 2019 and 2020 did look at pumped hydro. It had nothing to do with this agreement. We were looking at alternatives for hydro opportunities in Southcentral Alaska. Pumped hydro was one that we looked at with Eklutna. We also looked at pumped hydro at Bradley Lake. We also looked at expansion of Dixon. We've looked at Susitna-Watana. So, it was a package deal in the sense this was -- I just want to make sure there was not a standalone look or an opinion given on Bradley -- I mean, on Eklutna.

We looked at various -- we were looking at the FERC jurisdiction, the cost, water quality. Also looking at the

feasibility, and especially the geotechnical work. And I'll just be upfront on that, the geotechnical work hasn't been done on Eklutna as much as it's been done with Bradley. There was an existing dam, as well as Susitna-Watana.

So we were looking at it from different aspects of it, but not from this -- not looking at it from this agreement.

So with that, I think that concludes my comments, unless there's some questions.

MS. BYLSMA: I don't have any questions for AEA.

MR. HICKEY: Nothing from me.

MS. BYLSMA: All right. The Native Village of Eklutna.

MR. LEGGETT: Where to begin? Well, I mean, I think you've heard a lot about how the process has been, and I just want to comment from the Native Village of Eklutna's perspective.

We entered these negotiations in good faith. I think, time and time again, Eklutna and the Eklutna people have proven that we are willing to compromise when it comes to

the betterment of the Municipality.

For example, when Matanuska Electric was looking to build a new power plant, Eklutna was approached. Initially, we're not in the business of selling land these days. We wanted to lease that power plant to MEA. We were told that due to the funding structure, that that would be impossible, given that, so we agreed that for the betterment of everybody, we would sell that piece of land.

We've -- you know, over the decades, gravel has been pulled out of our lands. We've continued to lease to the Anchorage School district six school sites at a $10 a year rate. And I could go on and on, transmission lines, easements, you name it.

When we entered this process, we've been very clear that from the very beginning what we want is full restoration of the entire river. That has never changed. And that will never change from our perspective.

What we believed is that we could negotiate and come up with some sort of compromise that would create salmon habitat for the entire Eklutna River.

One of the comments that was brought up earlier about holding utilities responsible since 1929, I would just respond to that by saying we're not trying to hold utilities responsible back to 1929. And a clear example of that is when the Native Village of Eklutna and the community partners pulled out the old dam at no cost to the utilities. It was what, 8.5 million -- $8.5 million project that was done.

Native Village of Eklutna also feels that working collaboratively and thinking about doing it in a new way, that we can secure funding that is out there to achieve our goal of full restoration for the entire Eklutna River.

I can tell you, having been in all the meetings, even though we're not an official participant and we were reminded of that on many occasions, that we felt that this is a deeply flawed process, as it's been laid out by others in the room here today.

And at the end of the day, what we're trying to do is put another major salmon-producing stream into Upper Cook Inlet.

We believe that this is not only a benefit to our community, but specifically, this is a benefit to over 60 percent of the residents that live in Southcentral Alaska, and that having all five species of salmon is critically important.

This year, if you looked at every river in Cook Inlet, with the exception of a few that are stocked, including the Eklutna tailrace, there have been virtually no opportunities for -- King Salmon fishing was shut down for everything. Silver salmon fishing was open for a very limited time and was closed down early due to not seeing the returns.

One of the other things, I think, that is important that's been brought up is that, yes, we do want to see something happen sooner rather than later. But for 95 years, we've had an impediment on our river, and we want to see it done right and fully -- or not fully because we'll probably never get there fully, but to see a more robust enhancement and mitigation.

We think, again, also having a

thriving, healthy river through the entire corridor also creates new opportunities for development in the area: Recreational opportunities, habitat restoration, and the list goes on.

I also want to point out that in 2020 or 2019, the Alaska Federation of Natives passed -- 2020, the Alaska Federation of Natives passed a unanimous resolution supporting our effort to see full restoration of the Eklutna River.

We found this to be a deeply flawed process, and the only, I guess, silver lining that we can see coming out of this is that some of our other entities that have been involved can see it as well. Oftentimes we've been the only ones fighting these sorts of fights and have been told why something can't be done.

We still do truly believe that we can work with the utilities to find a solution that is more equitable and that balances all eight criteria set out in the 1991 Agreement.

I also want to point out that the architect of the 1991 Agreement, the late

Congressman Don Young, had several meetings with us and was in full support of seeing full restoration of the Eklutna River, and he found that it was deeply -- that it was a mistake that he made in 1991 by not making the Native Village of Eklutna a full partner in this work, and that he regretted doing that, and that he was working to support our efforts on multiple occasions --

MR. McQUEEN: Including drafting a letter.

MR. LEGGETT: -- including drafting a letter, which we have submitted on multiple occasions.

And we also have support from the former Governor of Alaska also to that effect.

Any questions?

MS. BYLSMA: Thank you.

Can you -- you mentioned that you believe that this is a flawed process. Can you expand a little bit more on that? Is that solely to the fact that Native Village of Eklutna was not a party to the original agreement, or are there other things that you're referring to?

MR. LEGGETT: No, I don't think that was -- when I was talking about a flawed process, I mean, I think in some ways -- yeah, that was an inherent flaw, but we were willing to work within that inherent flaw. We were working for really up until about a year ago, when it became clear that there was not really any serious consideration to any of the alternatives, and that the one put forth by utilities as their preferred alternative was the one that they had had in mind the entire time. And despite various working sessions and feedback and then technical reviews and all those things, that that's ultimately what was submitted.

After the first plan was submitted, there were a few tiny additions, I would say very nominal. An increase of a couple hundred thousand dollars in mitigation funding and a few small things with the reopeners, some word changes. But it wasn't anything substantial.

So we felt that our -- our voice wasn't really heard or the voices of people throughout, and as you've heard from, you know,

the voice of the Municipality, U.S. Fish and Wildlife, and so on for various reasons. Not all the same, obviously, but...

Yeah, go ahead.

MR. McQUEEN: We've been a good partner with the utilities, and I can think of going all the way back, not just the power plant, but years back when they wanted to do a separate power line that would connect the utilities to that hydro project, that needed Eklutna land. The Eklutna people have put lots of land available for the development of Anchorage, for the development of Eagle River, and lots of new clients have come on board as we developed.

And one of the things that we really wanted to be focused on was not just the '91 Agreement and electricity, but to celebrate or at least acknowledge economic impact that the Eklutna people have brought to the community through the real estate, through the land that they made, what that would continue to be. That math is out there. And that was a little bit concerning that that wasn't -- wasn't really embraced.

And so how do you take a people who, when they had no control, a lot of impact happened to them, and then when they did have control, they continued to be a great partner? Where's the value of that relationship? So that was a sensitive thing in some of the meetings at the council. I just add that.

MS. BYLSMA: Thank you.

And to follow up on what you said, President Leggett, you said there wasn't serious considerations to some of your recommendations and alternatives, but some nominal things were added in.

Can you expand on what part of your alternatives and recommendations was incorporated into the final program from your perspective?

MR. LEGGETT: It had to do with some of the reopeners and a few minor technical things. I don't have them. I'm sure they know what they were. They could tell you what they were. But they didn't -- in our mind, it didn't amount to -- to very much. It wasn't, you know -- it wasn't a fundamental shift. It was some of the dates and then some of the

timing and, like I said, a little bit of money, you know, doubling from $125,000 to a quarter million for mitigation.

I mean, I guess the other thing I just wanted to say is what we're looking for is not maintaining the status quo. We want to be a partner in the future. We want to think about, as our Municipality grows, how do we create opportunities? We see massive out-migration in our city. How can we create -- with a healthy, thriving river, how can we create developments that build new housing, new ratepayers, something you've heard quite a bit about.

And a good example of what I would call negotiating in bad faith was that in -- I believe it was June of 2023, we attended a meeting with the project owners, and one of the things they said as to why they didn't think that our preferred alternatives would work is that they had to take into consideration the increase to the ratepayers for the utilities. And that they kind of pinned it on that.

Well, three days later,

unbeknownst to us, they announce a 6 percent rate increase; and I believe there's some lawsuits involved with that, and then how that all works out.

That wasn't disclosed to us. So to me, that was just an example of not really being a good partner and negotiating in good faith.

MS. BYLSMA: To follow up on a couple of things that you stated in your brief, one of the things that you mentioned was that you believe the current alternative or the current final proposed program threatens the municipal water supply.

Can you expand a little bit upon that?

MR. LEGGETT: Well, there's concern about, yeah, the threat to the Municipal water supply. I'm not an expert specifically on how that works.

Again, we've heard all sorts of reasons why -- I mean, I guess we have the expert from AWWU. I think he can speak to what that is.

So, yeah.

I'm not a technical engineer, though.

MS. BYLSMA: Okay.

MR. CORSENTINO: Do you want me to answer? I mean, that will be tacked to your time.

MR. BUSA: Mark is here representing Anchorage Hydropower.

MS. BYLSMA: One of the other things you stated in your brief, and in your previous comments is that you think in the next ten years Eklutna Hydropower won't be as critical to the energy security profile of here in the Railbelt. Are there -- are there specific projects coming online that you're aware of that kind of support that assertion? Do we know that it's going to sufficiently replace the amount of energy that will be lost, just looking at the energy security profile of what that Eklutna hydro dam provides?

MR. LEGGETT: We're aware of a number of solar projects that are coming online. I know that there -- I was happy to serve on the mayor's transition team and was -- had the opportunity to co-chair the energy

securities position. And there's a commitment from the Municipality of Anchorage to look at putting solar onto school district buildings.

I know my regional corporation, Cook Inlet Region, Incorporated, who has Fire Island Wind, would love to double the capacity of the project there, but has been told by the utilities that that's not feasible for the reasons that have been stated about it not being a consistent source of energy. So, again, the pumped hydro, the solution -- or the proposal that we have put would be another attempt there.

I know there's been many other, you know, energy projects that have been put out. We know there's a natural gas shortage, so we know that energy -- new ways of producing energy is on the forefront of many people's minds.

You know, I've heard all sorts of -- you know, expanding the capacity out at the dump is another alternative looking at perhaps tapping into the old dump.

And -- there was another one.

You know, the -- you know, there

was ideas floated for geothermal at Chakachamna. Developing the coal over at Beluga and expanding that out. I mean, I'm not saying these are absolutes, but I know that these have been looked at. And again, I think we are trying to figure out how to create more stable energy because far too long I think we've relied on natural gas.

And I should point out, I also believe that -- this is a different conversation -- but there isn't an energy -- there isn't a natural gas shortage in Cook Inlet. There's a shortage of people and the incentives to develop it moving forward.

MS. BYLSMA: So, of some of those -- and obviously, you're not a technical expert, so, you know, that's a fair caveat. You know, some of those proposed projects you articulated, are those, to your knowledge, reliable through the winter months when that natural gas supply is of the greatest concern?

MR. LEGGETT: I believe they would be, again, if we had the pumped hydro. The battery solution would do that.

MS. BYLSMA: And then -- one

final question from me. When looking at some of the alternatives proposed in the dam removal alternative, you know, there was identified as some risks to some of the downstream infrastructure, including the existing AWWU pipeline access road, highway and railway bridges. Do you agree that there's risk to that infrastructure? And how do you see those concerns being mitigated?

MR. LEGGETT: I think there is potential risks, but I think some of that's a smokescreen. It should be pointed out that -- for example, the Alaska Railroad. The railroad was completed in 1923 and had a bridge across the full-flowing Eklutna River and did not have an impact. So I think these can all be worked through.

Again, I'm not -- with regard to the AWWU pipe, I'm less certain of that, but I think impacts downstream with the highway bridge and the railroad bridge, I think those can be worked out.

And we've had releases go downriver -- test releases done. Again, not at full levels for, you know, hot points, but it

has show that that river can take a lot more water.

And, again, it should be pointed out also that this is the Eklutna River; it's not the Eklutna Creek. We have Ship Creek here. We have the Eklutna River. And I think pre dam estimates somewhere in the neighborhood of up to 1,000 cubic feet per second. What's being proposed now would be anywhere between 60 and maybe 130, 140 cubic feet per second. So between 6 and 13 percent of what historically flowed down that river.

MS. BYLSMA: Okay. Thank you.

Do you have any other questions, Gene?

Well, thank you, President Leggett and Mr. McQueen. We really appreciate it.

MR. HICKEY: Do we have any rebuttal time?

MS. BYLSMA: I think we had about a minute or so.

MR. GLASS: I'm not going to take a minute.

We categorically reject counsel

for the Municipality's characterization that we strongarmed anybody or anything of that nature.

But, more importantly, I'd like to hand it over to the engineer that actually keeps the lights on to respond to pump storage hydro.

MR. LAUGHLIN: Yeah. Just a few comments in response to the pumped storage hydro project or the proposed project there. You know, we believe that costs would be significantly more than what is in our proposed program right now.

And just as a frame of reference, we went to look at a turbine rotor, which is a component of a turbine, last winter, it was 4 to $10 million, and a year and a half to three years of lead just to purchase a component of a turbine. We believe it's going to be significantly more to replace turbines and to put them into operation, to flange them up to the existing infrastructure to make sure the existing infrastructure operates safely and prudently and does not suffer any kind of failures.

Of course, this is a major detour

from what the existing operations does look like right now. So we would see that as appropriate licensing or something we need to really reassess there.

And I know we're only supposed to have a minute, so just to kind of draw it back to the operation of this, this pump storage hydro implies there's an excess or surplus of renewable -- renewables available to use this thing as a battery for, and that just doesn't exist right now. We have a few interval projects online. We have Fire Island, we have -- sorry, I forget the name of your solar project out there.

But there's -- this is looking at significantly more variable renewables than is available right now to harness the excess or unusable or non-dispatchable component of that and pump water uphill, going through all the efficiency losses that there are when you do this process to again have efficiency losses as you bring it back downhill to make that viable.

I think I'm within my minute.

MR. HICKEY: And thanks, again, everyone, for their thoughts and comments.

It's been really helpful, I think, from this side of the room.

We had a lot of discussion about the pump hydro technology; pros, cons.

It seems that that's an issue that the Municipality and the Native Village of Eklutna are pushing.

It seems like the utility owners have looked at it in various ways over the past several years. And we keep hearing about these alternative reopeners and whether or not they're going to be viable or not viable.

But it seems on all the reopeners, whether it's the ones that are included in the draft plan or the ones -- the reopener that Anchorage and Native Village are talking about, the pumped hydro, you have to start somewhere, right? So there's going to be a study done on something to try to get fish passage up to the lake.

Is there a consensus in the room that everybody would be in agreement on to look at pumped hydro first versus one of the other reopeners from a study perspective while still moving forward with the program as it's

currently designed?

Is there an appetite for that?

MR. GLASS: I'm just throwing this out. I think that part of the utility project owners' comfort with the reopeners and the way that they work is that we start moving through the process to start reestablishing flows in the river for 11 of the 12 miles, and that when we're doing that, we gain knowledge -- and we heard this from the agencies -- state agencies in particular. They like that process, to lead to more informed decision-making in the future.

I think that we're comfortable with that approach rather than -- than studying pump storage hydro now and doing nothing until we get there.

MR. HICKEY: Let me back up, because I want to make sure everybody understands the question.

I'm not suggesting by the question that you don't start the 11 miles of re-watering. That's not what my question assumes.

My question assumes let's start

that process of the re-watering; you're going to learn things.

Is there an appetite in the room with respect to then instead of looking at those other reopeners, the first one you review is you study pumped hydro and you go down that road first versus one of the other reopeners, whether it's the fixed wheel or anything else?

MR. GLASS: I'll let my client speak to that.

Andrew?

MR. LAUGHLIN: So, you know, we studied many different alternatives during the alternatives analysis. I would think we'd be open to looking at this in the same light, right, where we have a defined set of criteria, this is what we're looking at, this level of engineering, this level of cost analysis, and it's a pretty straightforward process we've been through many times. Even after the alternatives analysis, when they provided another proposal, we had looked at that as well. So I think something similar to that.

MR. ZELLERS: We'd be open -- I mean, part of the first process is we've got to

see if the plan can even do it. You know, you hear a lot of this, but it's a feasibility study if we could actually physically do it with the existing structure, not the turbines -- not the existing turbines. Those would have to be replaced. I mean, that's not a hard study to do. Not a long process.

MR. GLASS: With one more criteria that I wanted to mention, is under the 1984 agreement whereby AWWU interconnected with the project, we made -- the utilities made a commitment to not do anything that compromises the quality -- the water quality that has to be part of the feasibility study.

And regardless of which hat Mark is wearing in any particular point, we are contractually obliged to not do a darn thing that messes with the water. And we think that that needs to be part of the feasibility.

MR. HICKEY: Yeah, I get that. I think what we're trying to understand is it seems like everyone is in agreement in the room that fish passage to the lake is something we would all strive for. I don't hear anybody saying anything differently.

I think from the Municipality side, MEA side, what it seems like they're saying is why study these other things when we think we have a viable alternative right here that will get us to that point. And so I just want to make sure that's what you're saying.

And does that kind of option work for NVE and the Municipality to move forward on that before you move forward on the other ones?

MR. BUSA: I want to lead just a clarifying question, I guess, on the proposal. I think it's important --

MR. HICKEY: It's not a process to question.

MR. BUSA: No, I know. I know. Sorry, I didn't mean to get ahead of my skis.

I think we've proposed, using the first two years of a three-year pre-implementation period because we think it's so important to get it right right from the outset. And you had said, you know, study this before the other reopeners.

My recollection is that one of the reopeners waits until ten years after 2032, potentially. I don't want to get the details

wrong. Please tell me if I'm wrong about that.

But we just think it's really important to do it, like, now.

MR. HICKEY: Yeah, and that's -- the suggestion would be, look, start the process, start the re-watering. But the first thing we're going to look at from Day One, whatever it is, let's look at pumped hydro, and is that a viable option going forward? That's really all I'm asking.

MS. BYLSMA: Because currently on the table one of the things that you're going to study first is this fixed wheel gate with feasibility. So I think what Attorney Hickey is trying to say, is: Is it an option that would be amenable to everybody to instead study pumped hydro first?

MR. GLASS: What's the -- for everybody, what is the timing for the fixed wheel gate process?

MS. OWEN: Sure. So, the fixed wheel gate is something that NMFS and U.S. Fish and Wildlife and MEA and others really pushed for. The only reason it was not firmly committed to in this process is because there

are serious stability issues associated with cutting a -- I want to make sure I'm being very clear about this. We're proposing to cut out the middle of the dam and put in a brand new gate in the existing spillways placed. That's not a small proposal.

And so we felt that there was an additional level of engineering analysis needed before that could be fully committed to.

But given, I would say, some pretty limited criteria, as long as those criteria could be met, the dam can still be stable. And I think we even, quite frankly, got rid of the cost effective criteria; we instead just committed to a cap on a sum of money, saying if it costs more than that, then we need to find money elsewhere.

But let me be clear: The current estimate for that fixed wheel gate is 4 million. We committed up to 10 million in 2024 dollars.

For those reasons, we wanted to set aside, use that first three years before starting implementation to really looking into fixed wheel gate further.

And then, also, I know Fish & Game is not here, and I am in no way want to speak for them, but I know it was primarily coming from Fish & Game. Ten years after first water, the reason for that ten years after first water is because we're talking about a salmon run of returning to the river, over eight miles that has been, quite frankly, dry for decades. That's not going to happen tomorrow. Right?

So the ten years is two cycles of a Chinook -- two Chinook life cycles. And that's where it came from from Fish & Game. Let's see what happens after two full Chinook life cycles.

And then, we don't even know how long it will take for fish to get that high in the river anyways.

So, during that ten-year period, there will be ongoing monitoring. And if during that monitoring program it shows one of two things, or both, that higher magnitude channel maintenance flows would be beneficial -- and honestly, we will defer to the fish agencies for that. All they have to

say is it would be beneficial.

Or two, there is so much significant excess water coming in -- and we even put a number on it. It was 20,000 acre feet of water over that 10-year period, if that increases, and that's really only a slight increase over what our projections are currently showing.

Quite frankly, the owners would like that fixed wheel gate because it gives them more control over future spill events.

So, given what I would consider those limited criteria, they are committed to fixed wheel gate, up to $10 million.

But that's the rationale for those two time periods. We want more -- that three years to really look at it from an engineering perspective, and then that 10 years is two Chinook life cycles to give us more information from a biological perspective.

MR. HICKEY: Understood. I guess -- and we haven't heard from the Federal agencies, but I think we should on what their thoughts are on pumped hydro and looking at that initially rather than as time progresses.

MR. COOPER: One of my statements, as I indicated, we're not really here to advocate for any particular alternative. Our goal is the fish passage and ecological connectivity. So we would largely defer to the engineers who can speak towards the operation of those facilities.

I think in our good-faith negotiations, jointly, we've been trying to find solutions that allow their operations to continue while achieving our ecological roles.

The fixed wheel gate was important from our perspective because the current proposal, absent the fixed wheel gate, we don't believe provides adequate maintenance or flushing flows in the system. So we're not convinced that we'll fully create and restore a fish habitat for rearing and spawning as was lost. Fixed wheel gate allows for increased flows, so that was an important component, is just getting additional water in the system.

The fixed wheel gate in and of itself isn't the critical piece for us. It's getting more water into the system. So if there was an alternative method of getting that

water into the system, we'd be open to that.

I think our agency position is we're open to any alternative that meets those goals of additional water and ecological connectivity.

And I think, also consistent with the concept of identifying an alternative as quickly as possible, that's our goal is to take action as soon as we reasonably can to achieve those longer-term goals of our agency.

MR. HICKEY: Is NOAA on the same page with that?

MR. McDERMOTT: That certainly sounded good.

(Chuckles.)

MR. McDERMOTT: One second, I'm checking.

MS. BYLSMA: Did Alisha hear that?

MR. McDERMOTT: She did, yes.

I'm being advised to stick with more to why we want the gate, which is outlined by Samantha.

I do have concerns with the pump storage option, but I'm no engineer, no expert.

I just a little familiarity based on my past work. But we're not -- we're not opposed to evaluating that option.

I think the one add-on that I would say is: Does it have to be instead of evaluating the fixed wheel gate option?

MR. HICKEY: We're not suggesting that at all. My question doesn't suggest that.

MR. BUSA: That should be done in conjunction with.

MR. HICKEY: Yeah. The question was: If the owners' plan as proposed is moving forward, is there any barrier to looking at what's been proposed by NVE -- hang on, one second -- NVE and the Municipality of Anchorage of saying we think we ought to be looking at this pump storage solution immediately? Let's not wait, right? I want to make sure I'm understanding that correctly.

So does the ability to get that feasibility study done in the beginning while the program is still moving forward, does that work? Before we come back to the ownership group, I don't think we've heard from NVE or the Municipality yet.

MR. BUSA: So I think potentially, yes. I just want to learn more about what would potentially be on the table. I suppose it's sort of questions for my friends on the other side, as well.

One, I would want to know if that study that's being contemplated would then generate a proposal that then makes a decision-point for the Governor regarding the content of the Fish and Wildlife Program, or is it just sort of a study and then potentially the other side doesn't want us to have our vote and then, you know, nothing happens.

MR. HICKEY: You guys can correct me if I'm wrong, but as I understand the reopeners, if you go down the road, we follow the agreement again, and you go through steps two through six, and it eventually comes back to the Governor.

MR. BUSA: I just want to double check on that.

MR. HICKEY: I don't think anybody is in disagreement on that, are they?

MR. ZELLERS: I agree that if you come up with a new thing, you have to go back

through the process.

MR. HICKEY: Right. Okay.

Yeah, that's the way I read the agreement.

MR. ZELLERS: We don't want to go back through the process. I mean, we've already spent almost $8 million on this process and five years of my time. That's -- there's a reason why FERC licensing has now moved to about 50 years, normal, versus 30, 35 years. Which is what the agreement repeats itself, every 35 years. We don't want to repeat the process every five years. That creates a great burden on our taxpayers.

And I just want to mention, you know, we talk a lot about Anchorage here. But for Matanuska, we're also -- represent probably 75 percent of the Valley. 75 of our membership is the Valley. So I just want to add that. And the actual physical powerhouse is in the Mat-Su Valley; not Anchorage. I just need to state that, so, for our membership.

MR. HICKEY: Understood.

MR. BUSA: And the other two things, if I could just put more on the table,

I would want to know if my friends representing the utilities would agree that, you know, if the feasibility study pans out, that it would be within the scope of the 1991 Agreement.

MS. OWEN: So I think I have something I can put forward for the owners as an olive branch, of sorts.

One, we would really like to agree to a set level of engineering on what this feasibility study would entail. That's a very broad concept. Is this 5 percent engineering? Is this 15 percent engineering? There needs to be an end goal.

Two, we don't think -- if we were being consistent with how all the other alternatives were being evaluated, 5 percent engineering would be appropriate. Quite frankly, we would have looked at other alternatives that were brought forward, even after the alternatives analysis in good faith.

So if we were to do something in lines with the same level of effort that was done for other alternatives to look at this, and we would need a firm proposal that's not endless iterations of various pump storage

concepts, right, something gets put forward, we say well, that doesn't work for this reason. And then we, well, what about this. And then that doesn't work for this reason. And there's an endless number of concepts.

Speaking to Tony's proposal -- or Tony's comment here about how we've already spent a significant amount of time and money on this process and are looking for firm end dates.

And then, also, would Anchorage -- Municipality of Anchorage be willing to pay for the study, seeing as how it was brought forward literally within the last month or two of a five-year process? Is that a burden -- a financial burden that the Municipality of Anchorage would be willing to look for?

And we would also very much insist that we get a FERC determination of jurisdiction on whether or not this would be a FERC regulated process or FERC regulated project within that time frame.

That's a lot.

MR. BUSA: That is a lot.

MR. HICKEY: How about from the Native Village of Eklutna's position -- point of view?

MR. LEGGETT: I mean, there's so many variables here. I mean, we're up against it. We're showing up to a baseball field and told what the rules are. So, you know, and they keep changing. So, I don't know. I mean, I'd like to believe it. I'd like to believe that that could happen, but I'm cautiously, you know -- we'll look at it. I think that it would take --

MR. HICKEY: I'm not trying to get a binding agreement by any stretch of the imagination here, okay? That's not the purpose of the question.

The question was just put out there because there seems to be a difference of opinion on what's the proper approach to go forward, and so I was just asking with respect to we've got this late proposal in, where are you guys at, and what do you guys think about that? Because nobody has addressed it within the documents. That's the only reason for the question.

I'm not trying to broker a settlement here, guys, okay? That's not the purpose.

MR. LEGGETT: Yeah, we'd like to look at it.

MR. BUSA: If I could just note a couple things, if that'd be appropriate.

I don't think we have interest in proposing endless concepts. We really do want to work, like, in good faith, collaboratively on achieving actual consideration of a finite set of ideas.

I would think it would be important for Anchorage to be fully participating in that process. I wonder what you think about allowing Anchorage to actually have a vote when we're considering this idea going forward.

MR. GLASS: It's a complex question, just to respond to that, if you don't mind.

Is that right now, the Municipality is signed up to pay for 19 percent, or less, actually. It depends upon the value of power. But, so as much as we're

the minority owners, we're the majority cost holders of what gets determined here. So are you -- are you saying that you get your 54 percent vote and you can -- whereby the cost's on the other 81 percent holders? Is that what you're proposing?

MR. BUSA: I guess what I'm proposing is that the existing agreements that govern the project should be fully operable. We should have our vote back. Like, I think there should be agreement on that, right?

MR. GLASS: Honestly, I don't want to get into RCA's Commission --

MR. HICKEY: We're beyond our scope here, as well, right? That's not the jurisdiction --

MR. BUSA: If we're paying for the whole thing, then we're going to take lead. I mean, but I think we should agree that there's a probably better pathway that's there, a reasonable and quick and efficient for the betterment of the process.

MR. HICKEY: I don't have anything else.

MR. LEGGETT: I just want to say,

if the burden falls on the Municipality of Anchorage, the Native Village of Eklutna is fully committed to securing funding to help assist that.

MS. BYLSMA: I don't have any other questions.

So, thank you, again, everybody, for coming and for sharing your thoughts and perspectives and the discussion. I really appreciate the time and effort spent both on submitting the briefs and then taking the time to answer questions today.

Certainly, the briefs and transcript will be helpful to the Governor as he's looking to make his decision.

So, with that note, then I'm going to say we're adjourned.

(Meeting adjourned at 3:10 p.m.)

REGULATORY COMMISSION OF ALASKA

Certification of Electronic Transmission

I, Tina Osgood, a Law Office Assistant II for the Regulatory Commission of Alaska, 701 West Eighth Avenue, Suite 300, Anchorage, Alaska, hereby certify that on September 12, 2024, I transmitted by electronic mail true and accurate copies of

Order U-24-024(4)

ORDER ADOPTING PROCEDURAL SCHEDULE, DENYING PETITION TO INTERVENE, AND REDESIGNATING COMMISSION PANEL

to the persons set out on the attached email list.

DATED at Anchorage, Alaska, this 12th day of September, 2024.

tina.osgood@alaska.gov

STATE OF ALASKA

THE REGULATORY COMMISSION OF ALASKA

Before Commissioners: John M. Espindola, Chairman
Robert A. Doyle
Robert M. Pickett
John C. Springsteen

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024 ORDER NO. 4

ORDER ADOPTING PROCEDURAL SCHEDULE, DENYING PETITION TO INTERVENE, AND REDESIGNATING COMMISSION PANEL

BY THE COMMISSION:

Summary

We adopt a procedural schedule for resolution of this docket. We deny the petition to intervene filed by the Municipality of Anchorage Assembly (Assembly). The chairman redesignates the Commission Panel.

Background

The Commission opened this docket to investigate the *Notice and Request for Acknowledgment of Anchorage Hydropower's Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee* filed by the Municipality of Anchorage d/b/a Anchorage Hydropower (AHP) on July 18, 2024.[1] The

[1]Order U-24-024(1), *Order Denying Request for Decision in 30 Days; Designating Parties; Inviting Participation by the Attorney General and Intervention; Addressing Timeline for Decision; Scheduling Prehearing Conference; Designating Commission Panel; and Appointing Administrative Law Judge*, dated July 30, 2024 (Order U-24-024(1)).

Anchorage, Alaska 99501
(907) 276-6222; TTY 1-800-770-8973

Native Village of Eklutna filed comments.[2] The Office of the Attorney General, Regulatory Affairs and Public Advocacy Section (RAPA) elected to participate in this docket.[3] We designated Chugach Electric Association, Inc. (Chugach) and Matanuska Electric Association, Inc. (MEA) as parties to this docket.[4] Chugach and MEA have elected to participate jointly.[5]

AHP filed a motion for expedited consideration with a final decision in this docket by October 2, 2024.[6] RAPA agreed with AHP that a final decision in this matter could be reached by October 2, 2024.[7] Chugach and MEA jointly opposed expedited consideration, and separately filed joint comments in this docket.[8] The Municipality of Anchorage Assembly (Assembly) filed a petition to intervene in this matter on August 27, 2024.[9]

At the prehearing conference held on August 30, 2024, the administrative law judge (ALJ) announced our denial of the motion for expedited consideration filed by

(907) 276-6222; TTY 1-800-770-8973

AHP.[10] The ALJ also announced our desire for briefing on the minimum term of the Eklutna Operating Committee voting rights surrender required by Order U-18-102(44). This term is stated as follows:

> We can only find that [AHP] is managerially and technically fit to maintain an ownership interest in the Eklutna Project subject to the condition that before the effective date of either the Eklutna PPA or the MEA PPA, ML&P surrenders its vote on the EOC under the Eklutna Project agreement so that Chugach and MEA can jointly manage and operate the Eklutna Project, including negotiating compliance with the Fish and Wildlife Agreement, without [AHP] having a vote on operating or management decisions. **This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended,** and cannot be lifted until such time as [AHP] has shown to our satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC.[11]

The parties then proposed a procedural schedule to resolve this matter within the statutory timeline.

Discussion

Procedural Schedule

We have reviewed the procedural schedule proposed by the parties, and it limits the time for issuance of a final order to only 57 days after conclusion of the public hearing, a substantially shorter time than normally required. We adopt the proposed procedural schedule but caution the parties that any requests for extensions of time are unlikely to be granted without agreement of all parties to also extend the statutory timeline under AS 42.05.175(f). The adopted procedural schedule is set out in the ordering paragraphs below.

---

[10]The transcript of this conference is not yet available. An explanation of this denial will be included in a future order.

[11]Order U-18-102(44)/U-19-020(39)/U-19-021(39), *Order Accepting Stipulation in Part, Subject to Conditions; Amending, Transferring, and Issuing Certificates of Public Convenience and Necessity, Subject to Conditions; Addressing Beluga River Unit Management, Gas Transfer Prices, and Third Party Sales Gas Pricing; and Requiring Filings*, dated May 28, 2020, at 67 (emphasis added).

Regulatory Commission of Alaska

Petition to Intervene

Any person who has a statutory right to be made a party will be permitted to intervene and we have the discretionary authority to grant intervention to others.[12] In passing on a petition to intervene we will consider the following factors:

> (1) the nature of the petitioner's right under statute to be made a party to the proceeding;
>
> (2) the nature and extent of the property, financial, or other interest of the petitioner;
>
> (3) the effect on petitioner's interest of the order which may be entered in the proceeding;
>
> (4) the availability of other means by which the petitioner's interest may be protected;
>
> (5) the extent to which petitioner's interest will be represented by existing parties;
>
> (6) the extent to which petitioner's participation may reasonably be expected to assist in the development of a sound record, including the issues that petitioner intends to address in the proceeding; and
>
> (7) the extent to which participation of the petitioner will broaden the issue or delay the proceeding.[13]

The Assembly petitioned to intervene in this docket claiming that the issues raised in the Chugach and MEA opposition to the motion for expedited consideration and in the Chugach and MEA comments attempt to impose legislative limits on the Assembly.[14] The Assembly does not assert that it has a statutory right to party status in this docket.[15] RAPA and AHP both filed non-oppositions to the Assembly Petition.[16] Chugach and MEA opposed intervention by the Assembly on the ground that the Municipality of Anchorage

---

[12] 3 AAC 48.110(a).

[13] 3 AAC 48.110(b).

[14] Assembly Petition at 1-2.

[15] Assembly Petition at 3.

[16] *Office of the Attorney General's Non-opposition to Petition to Intervene*, filed September 3, 2024; *Municipality of Anchorage d/b/a Anchorage Hydropower's Non-opposition to the Anchorage Assembly's Petition to Intervene*, filed September 3, 2024.

Regulatory Commission of Alaska
701 West Eighth Avenue, Suite 300
Anchorage, Alaska 99501
(907) 276-6222; TTY 1-800-770-8973

is already represented in this docket by AHP and the Assembly has made no showing that its interests cannot be adequately represented by AHP.[17]

In addressing the extent that its interest will be represented as set out in 3 AAC 48.110(b)(5), the Assembly states:

> Fifth, the existing parties will not sufficiently represent the Assembly's interests. Although the Administration and the Assembly are generally aligned on certain substantive goals, their legal interests are not identical. The Assembly is the co-equal legislative body of the Municipality. If the Commission considers the arguments raised by Chugach and MEA, the Assembly's interest in maintaining its authority to determine policy could be affected and its position may not be adequately represented by the Administration.[18]

This assertion does not explain a material difference in the interests of the Municipality of Anchorage and the Assembly. We find no facts that the Municipality of Anchorage's varied interests in this docket, including the Assembly's interests, will not be adequately represented by AHP. Therefore, we deny the Assembly's Petition under the factor set forth in 3 AAC 48.110(b)(5).

Redesignation of Commission Panel

The chairman redesignates the Commission Panel for this docket. The chairman designates Commissioners Robert M. Pickett, John C. Springsteen and himself as the Commission Panel.[19] Commissioner Springsteen remains Commission Docket Manager.

ORDER

THE COMMISSION FURTHER ORDERS:

1. The following procedural schedule is adopted:

[17] *Chugach Electric Association, Inc. and Matanuska Electric Association, Inc.'s Joint Opposition to Anchorage Assembly's Petition to Intervene*, filed September 3, 2024.

[18] Assembly Petition at 5.

[19] Under AS 42.04.080(a) the chairman designates a Commission Panel to hear, or if a hearing is not required, to otherwise consider and decide docketed matters.

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	)))))	U-24-024

PREFILED DIRECT TESTIMONY OF MARK A. CORSENTINO, P.E.

I. INTRODUCTION

Q.1 Please state your name and title.

A.1 My name is Mark A. Corsentino, P.E., and I am the Utility Director of Anchorage Hydropower ("AHP") and the General Manager of Anchorage Water and Wastewater Utility ("AWWU"), except for matters involving both AHP and AWWU, for which Assistant General Manager David Persinger serves as Acting General Manager of AWWU and I serve only as Utility Director of Anchorage Hydropower.

Q.2 What is the purpose of your testimony?

A.2 The purpose of my testimony is to support AHP's notice and request for acknowledgement that is has acquired the expertise required to participate as a voting member of the Eklutna Operating Committee ("EOC").

Q.3 Have you testified previously before the Commission?

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

A.3 Yes. I filed prefiled direct testimony in AWWU's rate cases U-19-005/U-19-006, U-22-002/U-22-003, and U-24-005/U-24-006, and prefiled direct testimony and oral testimony in the January 11, 2022, Public Hearing on the stipulation filed in AWWU's rate case U-21-010/U-21-011. I filed prefiled direct testimony in AWWU's tariff filings in TA176-122 and TA177-126 and for AWWU's tariff revision in U-24-008. I also filed an affidavit in support of AWWU's Petition to Create a Regulatory Asset for Recovery of Costs from Earthquake Damage filed on December 23, 2019, in U-19-102/U-19-103.

Q.4 Please summarize your professional qualifications.

A.4 See my resume enclosed as **Exhibit MAC-1**.

Q.5 Please describe how your testimony is organized.

A.5 First, I will summarize AHP's notice and request for acknowledgement that it has acquired the expertise required to participate as a voting member of the EOC. Second, I will describe the purpose of the EOC and how it functions. Third, I will describe my qualifications as they pertain to the expertise needed for AHP to participate as a voting member of the EOC. Fourth, I will discuss the measures in place to address any potential conflicts of interest that may arise due to my roles as both the Utility Director of AHP and the General Manager of AWWU.

II. SUMMARY OF AHP'S NOTICE AND REQUEST FOR ACKNOWLEDGEMENT

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

Q.6 Please summarize AHP's notice and request for acknowledgement that it has acquired the expertise required to participate as a voting member of the EOC.

A.6 In Order No. U-18-102(44)/U-19-020(39)/U-19-021(39) ("Order No. 39"), the Commission approved the sale of most of the electric utility assets of the Municipality of Anchorage ("MOA") d/b/a Municipal Light & Power ("ML&P") to Chugach Electric Association, Inc. ("Chugach"). The MOA retained its ownership interest in the Eklutna Hydroelectric Project ("Eklutna Project"), from which it sells wholesale electric power to Chugach and Matanuska Electric Association, Inc. ("MEA"), pursuant to power purchase agreements approved by the Commission. The Commission issued Certificate of Public Convenience and Necessity No. 780 authorizing the MOA d/b/a AHP to provide wholesale electric public utility service on the condition that the MOA surrender its voting rights on the EOC. Order No. 39 required that the surrender remain in effect until the MOA "has shown to [the Commission's] satisfaction that MHP[1] has acquired the expertise required to fully participate as a voting member of the EOC." The Commission identified two characteristics that AHP's owner representative must have in order to lift the MOA's surrender of voting rights: knowledge of prudent utility practice and knowledge of the Railbelt generation and transmission system.[2]

On October 27, 2020, the MOA surrendered its voting rights as an EOC member, effective as of the closing date of the asset purchase agreement between ML&P and Chugach. The surrender of voting rights remains "in effect until ML&P's successor

[1] In Order No. 39, the Commission referred to the "post-transaction electric utility owned by the MOA as Municipal Hydro Power (MHP)." Order No. 39 at 4, n. 1.
[2] *Id.* at 66.

(907) 277-1604

complies with the RCA requirements pertaining to qualifications for ML&P's representation on the EOC."[3] "Until ML&P's successor complies with the qualification terms of RCA [Order No. 39], all EOC decisions will be by unanimous vote of [Chugach] and [MEA]."[4]

On July 2, 2024, I was unanimously approved by the Anchorage Assembly to be the Utility Director of AHP. As such, I will serve as AHP's owner representative on the EOC. I have the knowledge of prudent utility practice and knowledge of the Railbelt generation and transmission system required by the Commission to lift the MOA's surrender of voting rights and to fully participate on the EOC. As Utility Director of AHP, 20%of my salary is now paid by AHP.

Q.7 Are there other requirements for AHP's owner representative on the EOC?

A.7 Yes. In conjunction with Order No. 39, AHP's owner representative must make all decisions on the EOC consistent with prudent utility practice and the rights and obligations of Chugach and MEA under the Eklutna Power Purchase Agreement ("Eklutna PPA") and the MEA Power Purchase Agreement ("MEA PPA") and consistent with all other requirements of law.

III. THE EOC

Q.8 What is the EOC?

[3] Surrender of Eklutna Operating Committee (EOC) Voting Rights (Oct. 27, 2020).
[4] *Id.*

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

A.8 The EOC was created to make all management decisions regarding the operation, maintenance, and budgeting for the Eklutna Project, including the "Fish and Wildlife Agreement Snettisham and Eklutna Projects." The EOC essentially makes decisions that would be made by a wholly-owned utility by its management team. For instance, it makes the type of decisions that I make for AWWU as General Manager. Such decisions could include decisions about operations, capital investments, budgeting, and maintenance.

Q.9 Please describe the Eklutna Project.

A.9 The Eklutna Project was constructed by the federal government from 1951 to 1955 to provide wholesale electric utility service to ML&P, Chugach, and MEA. The Eklutna Project includes a tap into Eklutna Lake, a tunnel to divert the water from the tap to a powerhouse located in the Matanuska-Susitna Borough ("MSB") containing two generating units, and a trailrace that discharges into the Knik River. The Eklutna Project connects to MEA substations in Anchorage and the MSB, and to Chugach and AHP substations in Anchorage.

Q.10 Please describe the ownership structure of the Eklutna Project.

A.10 In 1995, ML&P, Chugach, and MEA entered into the Eklutna Purchase Agreement with the federal government. Ownership was transferred to ML&P, Chugach, and MEA in 1997. ML&P acquired an undivided ownership interest in the Eklutna Project capacity, energy, and assets of 53.33%. Chugach and MEA acquired undivided ownership interests in the Eklutna Project capacity, energy, and assets of 33% and 16.67% respectively.

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

Q.11 How are decisions made by the EOC?

A.11 Since ML&P surrendered its voting rights in 2020, all EOC decisions are made by unanimous vote of Chugach and MEA.[5]

Q.12 How would decisions be made if AHP's notice and request for acknowledgement that it has acquired the expertise required to participate as a voting member of the EOC is approved by the Commission?

A.12 If AHP's notice and request for acknowledgement that it has acquired the expertise required to participate as a voting member of the EOC is approved by the Commission and AHP's voting rights are restored, the decision-making process would revert to the one outlined in the Eklutna Transition Plan. Decisions will be made based upon a double majority consisting of an affirmative vote by at least two utilities whose ownership shares total at least 51% of the Eklutna Project ownership. Since ML&P has more than 50% of the ownership, it will have to approve the action with an affirmative vote from either Chugach or MEA, or both.

IV. QUALIFICATIONS

Q.13 Please summarize your knowledge of prudent utility practice.

A.13 I am a licensed engineer with approximately 20 years of utilities experience. I have been the General Manager of the AWWU since February 2019 and was the Director of

[5] *Id.*

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION

(907) 277-1604

Operations and Maintenance and a Project Management Engineer/Supervisor before that. As the General Manager, I direct and oversee two economically regulated utilities with a combined annual revenue of $139 million, annual capital budgets of $35 million, and a net book value of over one billion dollars. I oversee 280 full-time AWWU employees as well as AWWU's two water treatment plants, three wastewater treatment plants, 1,600 miles of underground pipelines, and 200 water and sewer remote facilities.

During my time at AWWU, I have gained significant experience with operation capital expenditures, leading projects such as SCADA control system upgrades, and providing project management design and construction expertise in water transmission main projects, sewer pump station projects, and wastewater treatment process improvement projects. I have overseen several utility rate cases. I am also versed in compliance with the uniform system of accounts pursuant to 3 AAC 48.277, particularly subsections (9) through (13) for electric public utilities and (14) through (17) for water utilities.

Q.14 Please summarize your knowledge of the Railbelt generation and transmission system.

A.14 As a licensed engineer with a background in electrical engineering, I understand the mechanics and theory of electricity generation and transmission. I have direct experience with hydropower generation, scheduling, maintenance, and integration with other Railbelt resources. As General Manager of AWWU, I oversee the operation and maintenance of the hydropower generation from AWWU's Eklutna Energy Station, as well as AWWU's Reservoir 3&4 Facility and 92nd Street PRV Facility. I also oversee AWWU's co-location

LAW OFFICES OF

with Chugach's Plant 2A. I am regularly involved in the construction of pump stations and other projects requiring significant power supply from the grid. This has given me a greater understanding of power systems and related issues such as power correction, phase, amplitude, and frequency of AC power.

In addition, I have experience representing AHP on the EOC in a non-voting capacity. As such, I have knowledge of Eklutna Project matters including hydropower generation, scheduling, integration with other Railbelt resources, SCADA (as managed through Chugach), and project maintenance. Further, if there is an issue in which I require assistance, I have access to additional resources through both in-house engineering expertise at the MOA and the ability to engage the expertise of MOA consultant and contractors. In particular, Mark Schimsheimer, the Engineering Director of AWWU, has been designated to provide additional technical and engineering support to AHP, at AHP's expense. Ten percent of his salary is now paid for by AHP. His resume is attached as **Exhibit MAC-2**.

Q.15 Do you believe AHP has the expertise required to fully participate as a voting member of the EOC as required by the Commission?

A.15 Yes. In Order No. 39, the Commission stated that "[u]nder the circumstances, [it] cannot unconditionally find that MHP is managerially or technically fit to maintain majority ownership of the Eklutna Project."[6] The circumstances the Commission were referring to included MHP having a seat on the EOC even though it had no employees and that MHP

[6] Order No. 39 at 67.

would be managed by the Municipal Manager. The Municipal Manager at the time was William D. Falsey, who had a Bachelor of Science degree in physics from Stanford University and a law degree from Yale Law School. Mr. Falsey had worked in legal positions before becoming the MOA's Municipal Manager but did not have any knowledge of the Railbelt generation and transmission system or prudent utility practice. ML&P had suggested that it could use consulting services for industry-specific expertise to help it make informed decisions, but it was not sure if such expertise was available. This is no longer the case. AHP is now managed by its Utility Director who has knowledge and experience with both the Railbelt generation and transmission system and prudent utility practice.

V. CONFLICTS OF INTEREST

Q.16 How has AHP addressed any potential conflicts of interest that may arise due to your roles as the Utility Director of AHP and the General Manager of AWWU?

A.16 AHP and AWWU have entered into a Memorandum of Understanding ("MOU") (**MAC-3**) that established that I will act solely as the Utility Director of AHP and will abstain from any decisions that need to be made by the General Manager of AWWU in any instance of conflicting interests between AHP and AWWU. Under the MOU, I will not take any action in my role as the General Manager of AWWU on "issues that affect the interest, operations, or obligations" of AHP. In this instances, AWWU's interests will be represented by AWWU's Assistant General Manager. All decisions I will make in my role as the AHP

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS

(907) 277-1604

representative on the EOC will be consistent with prudent utility practices and the rights and obligations of Chugach and MEA as required by the Eklutna PPA and MEA PPA.

Q.17 Is your position - General Manager of AWWU, and Utility Director of AHP - unique from a conflict perspective?

A.17 No. Historically, for ML&P and AWWU, even when a different individual represented ML&P and AWWU, these two individuals would both report to the municipal manager because both utilities are part of the municipality. Here, the municipality created an additional layer of protection to ensure prudent utility management through the MOU, one which normally would not exist in a municipality with more than one utility. Another layer of protection is the language of both the MEA and Chugach PPAs, stating that " the Municipality EOC representative shall "make all decisions on the Operating Committee consistent with Prudent Utility Practice and the rights and obligations of the Parties" under the PPAs. Chugach and MEA have procedural remedies both through the PPAs and through the Commission's authorities in the event either believes that the MOA representative is not meeting these requirements or the requirements of its certificate.

Q.18 Does this conclude your prefiled direct testimony?

A.18 Yes, thank you.

Dated this 18th day of September, 2024, at Anchorage, Alaska.

EDUCATION

Water and Wastewater Leadership Center, University of North Carolina, March 2017

Cold Regions Engineering Short Course, University of Washington, November 2005

Master of Science Civil Engineering, Marquette University, August 2002

Bachelor of Science Biomedical Engineering*, *Magna Cum Laude*, Marquette University, May 2000

*Minors in Electrical Engineering and Biology

EXPERIENCE

February 2019 –Present *General Manager of the Anchorage Water and Wastewater Utility (AWWU), Anchorage, AK*

Directs and oversees all operations of a Municipal Department with two separate State Economically Regulated Utilities with a combined annual revenue of $130M, annual capital budgets over $35M, over 280 full time employees, 8 work divisions, a net book value of over $1B with a replacement value over $10B, with over 1,600 miles of underground pipelines, 2 water treatment plants, 3 wastewater treatment plants, 200 water and sewer remote facilities, 1 MW hydropower generation across three units (Eklutna Energy Recovery Station, Reservoir 3&4 Facility, 92nd Street PRV Facility), with a Utility wide SCADA network, including 35 lift stations, 20 finished water reservoirs, 12 high production wells, dozens of booster stations and PRV facilities with 55 pressure zones, 7,500 fire hydrants, 15,000 mainline valves, and approximately 60,000 customer parcels and service lines all within a certificated service area larger than the state of Rhode Island with a population served of approximately 230,000. Oversaw several successful utility rate cases and multiple NACWA Peak Performance Awards, FEMA earthquake recovery reimbursement efforts, lean and green utility operations, COOP through the COVID pandemic. Represented the Municipality in the Anchorage Hydropower Plant Operations Committee as part of the Municipality's ownership of 40MW hydropower plant and its associated federal fish and wildlife study in lieu of FERC relicensing. Oversaw the Stormwater Utility Evaluation and Implementation Program for the Municipality.

August 201 –January 2019 *Director of Operations and Maintenance with the Anchorage Water and Wastewater Utility (AWWU), Anchorage, AK*

Lead and managed a group of ninety five employees, mostly union represented, whose mission is to operate and maintain the Utility's plant, collection and distribution facilities. As a member of the Utility Leadership Team, was integrally engaged in the execution and implementation of the Utility 2016-2021 Strategic Plan. Initiated large diameter line cleaning program and reclassified employee positions to improve retention and to be in alignment with ADEC Operator Certification program. Oversaw emergency recovery of utility assets during magnitude 7.1 earthquake and oversaw implementation of computerized maintenance management system upgrade and integration with Municipal ERP system and Utility asset management system.

August 2007–July 2016 *Project Management Engineer/Supervisor with the Anchorage Water and Wastewater Utility (AWWU), Anchorage, AK*

Managed engineering design and construction projects and supervised employees for the AWWU Engineering capital program. Communicated and coordinated with multiple stakeholders, including all divisions within the Utility, municipal departments, permitting agencies, the public and consultants. Additional duties consisted of managing Utility soil remediation projects, providing corrosion technical assistance for projects, and providing technical input to the AWWU Asset Management Plans and the AWWU DCPM and MASS re-writes. Project Management design and construction experience in water transmission main projects, large diameter sewer conveyance projects, water storage reservoir projects, sewer pump station projects, water booster stations projects, water distribution main projects, sewer collection system projects, and wastewater treatment process improvement projects (eg replacing wastewater chlorination with UV disinfection, clarifier rehab, etc.)

August 2002–August 2007 *Project Management Engineer with the Water Business Group in CH2M HILL's Anchorage, AK and Seattle, WA offices. In Anchorage since May 2005.*

Duties consisted of project management, project engineering and construction management services for water and wastewater projects throughout the Pacific Northwest including water treatment plant design and construction (Cedar Water Treatment Plant, Skagit Water Plant Expansion), wastewater plant design and construction (Centralia, Barrow), large diameter sewer conveyance (King County), water transmission main design and construction (Tacoma and Anchorage) and water transmission main impressed current design support efforts.

September 2000–July 2002 *Civil Engineer Trainee (GS-7), United States Geological Survey, Water Resources Division), Middleton, Wisconsin.*

Collected and processed water quality samples for an airport stormwater toxicity study and a cryptosporidium and urban stormwater runoff study. Processed and analyzed the collected field data. Performed maintenance and calibration of gaging stations and automatic data samplers.

July 2001-May 2002 *Graduate Research Assistant, Marquette University, Milwaukee, Wisconsin.*

Studied aerobic and anaerobic biodegradation of the suspected endocrine disrupter precursor nonylphenol ethoxylate found in aircraft deicing fluid. Operated a system of biological reactors under differing environmental conditions.

IEDC/CDFA – Development Finance, various classes

Experience

2019-present: ***Director of Engineering, Anchorage Water and Wastewater Utility (AWWU):*** Responsible for a staff of 45 and annual budgets more than $50 million. Sections of the Engineering Division includes Development Services, Project Management, and Asset Management Planning. Utility serves a metropolitan population of 300,000, processes and distributes 50 MGPD of drinking water and process 45 MGPD of wastewater. Distribution and collection systems are deep-bury for frost conditions. All assets are located in a high seismic region. Step-up General Manager as required. Significant interface with Municipal Assembly, Administration, and State and Federal elected officials. Accomplishments include:

- Division & Utility reorganization: reconfigured division to achieve cost and deliverable efficiencies (eliminated former position).
- Pioneered utility first Public-Private Partnership to develop infrastructure in support of economic development projects

2017- 2019: ***Planning and Development Services Manager*** AWWU, Anchorage, Alaska. Responsible for special assessment districts, development services, real estate management, third party project coordination, and addressing miscellaneous public and utility concerns. Position requires diplomatic abilities towards conflict resolution and negotiations with municipal departments, government officials, and the public at large.

- Water Master Plan: 50,000 customers with a peak daily demand of 40 MGD.
- Risk and Resiliency Assessment: Federal requirements stipulate Assessment be completed to AWWA J100 standards by March 2020.
- Asset Management Plan(s): facility assessments, O&M procedures, break rates, ROI

2015: ***Managing Partner***: Alaska LNG Exporters, Anchorage, Alaska. In conjunction with international business partners created a Delaware based LLC with the goal of exporting excess and stranded Cook Inlet Basin natural gas to Pacific Rim customers. Formulated business plan, confidentiality agreements, and qualified investor presentations. Currently on hold pending Natural Gas price recovery.

2010- 2017: ***Managing Partner***: SMR Developers, Anchorage, Alaska. Formed in 2010, Owner and Managing Partner of a real estate development company. Responsible for all aspects of the corporation: Investor management, financing, accounting, subcontractor management, engineering & permitting, financial and risk analysis.

2013-2015: ***Project Manager***: NANA WorleyParsons, Anchorage, Alaska. Project Manager for mining and energy related projects. Clients include Teck Alaska, Pebble Limited Partnership (PLP) and ConocoPhillips Alaska (CPAI). Specific activities include preparation of proposals, management of work share partners, client interface and overall project management activities. Project types included green-field North Slope drill sites, power grid extensions, subcontracting (EPS), water treatment facilities and LNG handling facilities

2001-2013: ***Project Development Manager***: AIDEA/AEA, Anchorage, Alaska (AIDEA is a small capital-intensive enterprise investment corporation of the State of Alaska wherein each person has wide authority and responsibilities, AEA is a similar not-for-profit energy authority)

- AIDEA: Responsible for approximately $1 Billion of projects at any given time. Duties included all development (concept through execution and closure) and operational aspects of mining, power generation, and vertical construction projects financed by AIDEA.
- AEA: Bulk fuel upgrade and replacement projects throughout rural Alaska (20 projects with a value of $50 million). Responsible for all project phases from conception through close-out including contract negotiation, award and management of Multi-Discipline Design Contracts and Construction Management contracts.
- Projects included village to village electric interties, modular power plant size and placement, utility business agreements

Specific AIDEA activities included:

- Oversee the planning and conceptual design study for an Arctic deep-water port proposed to serve both the Red Dog Mine District and the Western Arctic Coal
- Responsible for an Arctic-grade ore concentrate trans-shipment
- Manage professional technical, legal and construction (EPC, CM, DB, DBB) and asset specific operations contracts
- Reviews all specialty inspection reports such as feasibility, design, design review, value engineering
- Facility inspection to observe condition, maintenance activities, and operation procedures
- Highly familiar with applicable regulations and permitting agencies (EPA, State) regarding NEPA, Clean Air Act, EIS, NPDES
- Negotiation of contracts and litigation settlements in excess of $150 million
- Healy Clean Coal, a 50MW coal-fired power plant: management of litigation team in an unresolved $175 million dispute, plant permitting, negotiation of power sales agreement, project development agreement, coal supply contract, O&M, custodial and transmission contracts, and various agreements and contracts as required. Negotiated sale of asset.
- Negotiated Consent Decree for Title V air permit for plant.

Specific AEA activities included:

- Authored and negotiated master Business Plan requiring sustainability of a rural Alaskan village utility (power & bulk fuel) that became a funding requirement of the Denali Commission. Interfaced with Denali Commission (Federal Agency), USDA/RUS funding program, HUD funding, State and Federal regulators, and village leaders and communities throughout Alaska.

- Authored program manual for $200 million energy program, created master funding schedule. Negotiated all aspects of the program with local leaders, and funding agencies (Federal & State Grants)

1998-2001: ***Project Manager****:* Arctic Slope Consulting Inc., (full time in Barrow) Barrow, Alaska (This company was a subsidiary of ASRC, sold to NANA and is now DBA WHPacific)

- Sr. Project Manager on all Alaska Arctic North Slope village water & sewer projects (approx. $350 million). Responsible for client contact (marketing), office workload management among various project managers, financial tracking and reporting, construction administration proposals & budgeting. Reorganized office and revised & updated document control system including creation of project control tracking procedures. Part of negotiation team on multiple $50 million projects.

- Owner's Construction Representative (OCR) on Alaska Arctic North Slope water and sewer projects for Pt Hope, Nuiqsut, & Anaktuvuk Pass (combined cost approx. $150 million). Projects included construction of sewer treatment and water treatment facilities, all direct-bury collection and distribution systems, and related auxiliary construction. Responsible for pay requests, DC/VRs, change orders, site visits, inspectors, and communication between the owner & the contractor.

1998: ***Superintendent, Surveyor***: UIC Construction, Inc., Anchorage, Alaska

- Site Supervisor and General Foreman for 20-person Alaska Native crew ($4 million per season). Responsibilities included all site paperwork, time sheets, quantity tracking, and scheduling, HR issues, interface with the owner's representative.
- Survey Party Chief on NSB Village Sewer and Water Projects (Anaktuvuk Pass & Pt. Lay). Included project layout, and substantial redesign work.

1994-1998: ***Project Engineer***: Bristol Environmental Services Corporation, Anchorage, Alaska (The business unit no longer exists in the same form)

- Environmental site investigations, geophysical surveys, product recovery systems, large-scale HAZMAT cleanups.
- Experience in environmental cleanup associated with Arctic production facilities

1995 (summer): ***Project Engineer***: South Coast, Inc., Ketchikan, Alaska (This company no longer exists)

- Survey Party Chief and Construction Engineer for Bethel runway rebuild project. ($4 million). Surveyor of road realignment and utilities placement ($1.5 million).
- Survey Party Chief and Construction Supervisor of new airport runway, apron, and access roads ($5.5 million).
- Surveyor for marine ferry terminal dock ($7.75 million). Redesigned highway alignment, drainage flows and culvert placement and utility conflicts on highway and bridge reconstruction project ($4 million).
- General Foreman on Petersburg seaplane float dredging and construction project ($2.5 million).

1993-1994: ***Project Engineer***: Arctic GeoScience, Inc., Anchorage, Alaska, (This company no longer exists)

- Engineered and designed drill pad and road system to support oil exploration activities in Arctic Russia. Design issues included geotechnical analysis, thermal analysis of permafrost stability, and layout of man-camp, flare pit, tank farm, and power modals.
- Served as CONOCO's on-site representative overseeing the winter construction of the system and the placement of the drill rig and ancillary equipment units.

Public Service Activities

- Chair, South Golden View Rural Road Service Area
    - Public Official, seat won through Municipal Election, April 2008, re-elected 2010, 2013, 2016
    - Annual budget $750K of direct tax revenue, grants of up to $4.5 million

- **Candidate for Assembly:** April 2016
- **Participant**: November 2014 Governor Walker/Mallott "Transition Team Member" for Consumer Energy Issues.
- **Participant**: June 2015 "Conversations with Alaskan", Fairbanks, Alaska. Three-day event to give feedback to the Administration on current budget issues and proposed solutions.
- **Storm Water Utility Steering Committee (2017-18)**: member representing rural road service areas

MEMORANDUM OF UNDERSTANDING BETWEEN ANCHORAGE WATER AND WASTEWATER UTILITY AND ANCHORAGE HYDROPOWER UTILITY RE RESOLUTION OF CONFLICTS OF INTEREST

WHEREAS, Mark Corsentino has been appointed and confirmed as the general manager of Anchorage Water and Wastewater Utility (AWWU), but has also been appointed and confirmed as the director of Anchorage Hydropower Utility (AHU);

WHEREAS, Mark Schimscheimer is the Engineering Director of AWWU, but has also been designated to provide technical and engineering support to AHU;

WHEREAS, both AWWU and AHU utilize Eklutna Lake as part of their operations; AWWU as a source of drinking water and AHU as a hydropower production water source and storage; and

WHEREAS, AWWU currently purchases its water from the Eklutna Hydroelectric Owners ("Owners"), comprised of Chugach Electric Association, Inc., Matanuska Electric Association, Inc., and AHU;

WHEREAS, decisions regarding the management of AHU and AWWU may impact and conflict with the other utility, rendering it essential to address and resolve potential conflict issues that Mr. Corsentino and Mr. Schimscheimer may face in their performance of their duties;

WHEREAS, it is also necessary to apportion management expenses for both AWWU and AHU on a cost-causer, cost-payer basis;

NOW THEREFORE, AWWU and AHU agree as follows:

1. Mr. Corsentino and Mr. Schimscheimer shall not take any action in their roles as AWWU employees on issues that affect the interests, operations, or obligations of AHU. Specifically, in all instances of conflicting interest between AWWU and AHU:
    a. Mark Corsentino shall abstain from any decisions that need to be made by the General Manager of AWWU, and he shall instead act solely as director of AHU, with loyalty to AHU's interests.
    b. AWWU's interests shall be represented by, and the General Manager's authority delegated to, the AWWU Assistant General Manager (currently David Persinger).

c. Mr. Schimsheimer shall similarly abstain and his AWWU duties shall be delegated to another AWWU staff member. When acting on behalf of AHU, Mark Schimscheimer shall not act in his role as an employee of AWWU or represent AWWU's interests.

2. AHU may utilize Mr. Schimscheimer, at its own expense, to provide additional technical and engineering support of AHU operations.
3. AHU will have access to and right to use, at AHU's expense, contracts of the MOA to access technical and engineering expertise necessary to oversee and conduct operations.
4. To reflect this arrangement, Mr. Corsentino's and Mr. Schimscheimer's salaries shall be apportioned as follows, effective July 8, 2024:
   a. AWWU shall pay 80% of Mr. Corsentino's salary and AHU shall pay 20% of his salary; and
   b. AWWU shall pay 90% of Mr. Schimscheimer's salary and AHU shall pay 10% of his salary.

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

MUNICIPALITY OF ANCHORAGE D/B/A ANCHORAGE HYDROPOWER'S BRIEF REGARDING INTERPRETATION OF ORDER 39

The Municipality of Anchorage ("MOA"), d/b/a Anchorage Hydropower ("AHP"), submits this brief regarding interpretation of language in Order U-18-102(44)/U-19-020(39)/U-19-021(39) ("Order 39")[1] pertaining to the terms of the MOA's surrender of voting rights on the Eklutna Operating Committee ("EOC"). The EOC was formed to make all management decisions related to operation, maintenance, and budgeting for the Eklutna Hydroelectric Project ("Eklutna Project"), owned by the MOA (53.33% interest), Chugach Electric Association, Inc. ("Chugach") (30% interest), and Matanuska Electric Association ("MEA") (16.67% interest).[2]

As part of the approval of the MOA's sale of most of its electric utility assets to Chugach in dockets U-18-102/U-19-020/U-19-021 ("Acquisition dockets"), the Regulatory Commission of Alaska ("Commission") granted the MOA a new certificate of public convenience

[1] May 28, 2020.

[2] Order 39 at 61.

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

and necessity ("CPCN") to authorize the MOA's provision of wholesale public electric utility service through its part ownership of the Eklutna Project's generation facility, subject to certain conditions. One condition the Commission placed on the new CPCN for the MOA was the surrender of the MOA's voting rights on the EOC, due to the Commission's concerns that after the merger and loss of its utility employees, the MOA would no longer be "managerially and technically fit" to hold a CPCN without such surrender.[3] With the surrender, the Eklutna Project would be "jointly manage[d] and operate[d]" by Chugach and MEA, "including negotiating compliance with the Fish and Wildlife Agreement."[4] The Commission stated that the surrender "must have a term at least equal to the term of the [Eklutna Power Purchase Agreement ("Eklutna PPA") with Chugach] and the [Matanuska Electric Association Power Purchase Agreement ("MEA PPA")], as those agreements may be extended, and cannot be lifted until such time as MHP[5] has shown to [the Commission's] satisfaction that MHP has acquired the expertise required to fully participate as a voting member of the EOC."[6]

In the pre-hearing conference on August 30, 2024, Administrative Law Judge ("ALJ") Walker requested briefing from the parties on the question of whether this language in Order 39 regarding the MOA's surrender of its voting rights on the EOC mandates that a "minimum term" of the surrender, equal to the (at least 35-year) terms of the PPAs, must elapse

[3] Order 39 at 67.

[4] *Id*.

[5] In Order 39, the Commission referred to the post-transaction electric utility owned by the MOA as Municipal Hydro Power ("MHP") and not AHP.

[6] *Id.*

before the MOA is able to request acknowledgment that it has acquired the expertise required to fully participate as a voting member of the EOC.[7] It does not.

As documented in the Acquisition dockets and the MEA PPA approval docket (TA379-121), as well as in subsequent filings in this docket, the Commission, the owners of the Eklutna Project, and the Office of the Attorney General, Regulatory Affairs & Public Advocacy Section ("RAPA") all had a public, contemporaneous and continuing understanding that while Order 39 required the term of the surrender to be equal to the terms of the Eklutna and MEA PPAs, that term was subject to termination, and the surrender was subject to being "lifted" at any time after the MOA made a showing to the Commission's satisfaction that MHP had acquired the expertise required to fully participate as a voting member of the EOC. As discussed further below, to interpret the language otherwise would be contrary to the language of the PPAs, Order 39, and subsequent Commission approvals. It also would be anf unreasonable and arbitrary restriction on the MOA's ability to participate in management of its ownership hydropower asset for *decades*, despite continued MOA responsibility for costs and other liabilities.

I. PROCEDURAL HISTORY

A. In Order 39, the Commission's approval of the acquisition of MOA's electric utility assets by Chugach included conditional approvals of (1) a new CPCN for the MOA for the Eklutna Project and (2) approval of the power purchase agreements between the MOA and Chugach and the MOA and MEA.

In Order 39, the Commission approved, subject to conditions, the sale of most of the electric utility assets of the MOA, d/b/a Municipal Light and Power ("ML&P"), to Chugach (the "Transaction" or "Acquisition"). As part of that approval, the Commission accepted, in part,

[7] Order No. U-24-024(4) at 3 (September 12, 2024).

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION

(907) 277-1604

a stipulation filed by less than all of the parties of record (subject to conditions).[8] It conditionally approved the Eklutna PPA and the MEA PPA. The Commission granted, subject to conditions, regulatory approvals filed by Chugach in Docket U-19-020, and denied the application to amend CPCN No. 8 filed by Chugach and CPCN No. 121 filed by ML&P.[9] The Commission instead transferred CPCN No. 121 to Chugach, subject to closure of the transaction and other conditions.[10]

As a result of the transfer of the MOA's CPCN No. 121 to Chugach, the Commission granted a new certificate to the MOA, "[s]ubject to transaction closure and other conditions."[11] One such condition was surrender of the MOA's EOC voting rights.[12] The new certificate would "authorize[] the provision of wholesale public electric utility service through part ownership of the Eklutna Hydroelectric Project ("Eklutna Project") generation facility" to Chugach and MEA.[13] The Commission described the Eklutna Project as follows:

> "The Eklutna Project was built and operated by the federal government pursuant to the Eklutna Power Act of 1950. In 1995, Congress authorized sale of the Eklutna Project to ML&P, Chugach, and MEA under the terms of the 1989 Eklutna Purchase Agreement. Under this agreement, the three utilities received an undivided interest in all of the Eklutna Project, water rights, generation plant and the transmission assets interconnecting the Eklutna Project with ML&P, Chugach, and MEA.171 ML&P obtained a 53.33% ownership interest, Chugach obtained a 30% ownership interest, and MEA obtained a 16.67% interest in the Eklutna Project. Eklutna Project energy, capacity, and costs are to be allocated based on these ownership interests."[14]

A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

> The Eklutna Project was managed, for over 60 years, as follows:
>
> "The three utilities created the Eklutna Operating Committee (EOC) to make all management decisions related to operation, maintenance, and budgeting for the Eklutna Project. ML&P, Chugach, and MEA each have a representative on the EOC. Decisions by the EOC are made based upon a double majority consisting of affirmative votes by at least two of the three utilities whose ownership shares total at least 51% of the Eklutna Project ownership. Effectively, management of the Eklutna Project is limited to actions approved by ML&P and at least one of Chugach or MEA."[15]

In Order 39, the Commission examined whether the services to be authorized (sale by the MOA of power to Chugach and MEA pursuant to the PPAs), were "required for the convenience and necessity of the public."[16] Further, the Commission examined whether the MOA was "fit, willing, and able to provide the utility services applied for."[17]

The Commission found that MHP was financially fit "to own an interest in the Eklutna Project, subject to the condition that MHP maintain a $3,000,000 reserve fund to support the Eklutna Project capital expenditures it is obligated to make under the MEA PPA."[18] The Commission then discussed ML&P's proposal that after the acquisition, MHP would be managed by the Municipal Manager, a position that was at that time held by William D. Falsey, an attorney and the municipal manager for approximately three years at the time of Order 39's issuance.[19] It also discussed testimony from Chugach witness Dustin Highers, stating that based on his

experience as EOC chair, "that to be an owner representative on the EOC, it was essential that the representative have knowledge of prudent utility practice and the Railbelt electric generation and transmission system."[20] The Commission reviewed Mr. Falsey's resume, and determined that nothing in his resume indicated that he had knowledge of the Railbelt generation and transmission system, or prudent utility practice, which the Commission noted "is the management standard specified for the MHP EOC representative in both the Eklutna PPA and the MEA PPA."[21]

While ML&P proposed it likely would utilize consultant services to provide industry-specific expertise and staffing "to help us make informed decisions as a continuing member of the [EOC]," the Commission determined it could not "unconditionally" find that MHP was managerially or technically fit to maintain majority ownership of the Eklutna Project.[22] The Commission instead conditioned issuance of a CPCN to MHP on the MOA's surrendering its vote on the EOC, before the effective date of either the Eklutna PPA or the MEA PPA.[23] As a result of that surrender, Chugach and MEA would jointly manage and operate the Eklutna Project, including negotiating compliance with the Fish and Wildlife Agreement.[24] The Commission stated that the surrender "must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended, and cannot be lifted until such time as MHP has shown to our satisfaction that MHP has acquired the expertise required to fully participate as a voting member

of the EOC."[25] The surrender requirement was also a condition for the approval of the PPAs, as in approving the Eklutna and MEA PPA's, the Commission noted that "we can approve neither of these Eklutna Project agreements unless we can first find that MHP is fit, willing, and able to serve as an owner of the Eklutna Project. Therefore, a condition to our approval of these Eklutna Project agreements is that MHP obtain a certificate under the conditions established above."[26]

The Commission approved the Eklutna PPA in Order 39, determining it was not a wholesale power contract "subject to the requirements and protections of AS 42.05.431(b)," but required the MOA to separately file for approval of the MEA PPA because it was a wholesale power contract.[27] The Acquisition transaction closed on October 30, 2020.[28] On October 30, 2020, the MOA filed notice of its surrender of EOC voting rights with the Commission.[29] The MOA also submitted Tariff Advice Letter 379-121 on September 30, 2020, requesting approval of the MEA PPA and Amendment No. 1 to the MEA PPA. On November 20, 2020, the Commission

[29] Exhibit 2, Notice of Surrender of Voting Rights, October 30, 2020 ("Surrender").

approved the MEA PPA and Amendment No. 1 to the MEA PPA.[30] On April 9, 2021, the Commission issued CPCN No. 780 for the MOA, d/b/a AHP.[31]

B. AHP filed a request for acknowledgment of AHP's acquisition of expertise required to participate as a voting member of the EOC, and the Commission requested briefing regarding the "minimum term" of the EOC voting rights surrender.

On July 18, 2024, AHP filed a Notice and Request for Acknowledgment of Anchorage Hydropower's Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee ("Request for Acknowledgment"). The Commission opened this docket, and during the August 30, 2024, prehearing conference in this matter regarding the Request for Acknowledgment, as well as in a subsequent order, ALJ Walker referred to the language in Order 39 regarding the terms of the MOA's surrender of its vote on the Eklutna Operating Committee, emphasizing the bolded language below:

> "Under these circumstances, we cannot unconditionally find that MHP is managerially or technically fit to maintain majority ownership of the Eklutna Project. We can only find that MHP is managerially and technically fit to maintain an ownership interest in the Eklutna Project subject to the condition that before the effective date of either the Eklutna PPA or the MEA PPA, ML&P surrenders its vote on the EOC under the Eklutna Project agreements so that Chugach and MEA can jointly manage and operate the Eklutna Project, including negotiating compliance with the Fish and Wildlife Agreement, without MHP having a vote on operation or management decisions. **This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended**, and cannot be lifted until such time as MHP has shown to our satisfaction that MHP has acquired the expertise required to fully participate as a voting member of the EOC."[32]

(907) 277-1604

ALJ Walker "announced [the Commission's] desire for briefing on the minimum term of the Eklutna Operating Committee voting rights surrender required by Order U-18-102(44)."[33] In other words, ALJ Walker asked whether the language in Order 39 provided that the surrender of the MOA's voting rights could only be lifted based on a showing that (1) the MOA acquired the expertise required to participate as a EOC voting member (2) that was made *after* the "minimum term" of the surrender, a term that would be "at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended."[34] Under this understanding, the MOA would *never* have voting rights on the EOC until the terms of both PPAs had elapsed, and both contracts ended—which could be thirty years, or more, from today.

As explained below, the correct reading of the language in question is the understanding that has been held by the Commission, the Eklutna Project owners, and RAPA: that while the surrender may have a minimum term, this surrender may be lifted (and the minimum term terminated) at the time that the MOA "complies with the RCA requirements pertaining to qualifications for [MOA's] representation on the EOC."[35]

II. DISCUSSION

A. If the Commission intended in Order 39 that the MOA would never have voting rights reinstituted during the term of the PPAs, it would have explicitly disapproved the terms in the Eklutna and MEA PPAs regarding MOA representation on the EOC, as it removed other inapplicable or disapproved terms from the PPAs and other Acquisition-related agreements.

[33] Order No. U-24-024(4) at 3.

If the Commission intended to prohibit the MOA from reinstituting EOC voting rights for the duration of the PPAs, it would have explicitly disapproved the terms in both PPAs regarding MOA representation on the EOC. Instead, Order 39 itself, as well as the subsequent approval of the MEA PPA in a separate proceeding, explicitly referenced to, and ultimately approved, the terms in both the Eklutna and MEA PPAs regarding the requirements for an MOA representative on the EOC. These relevant terms are as follows (bold emphasis added):

Eklutna PPA, Section 4.2(B) (Operation of the Facility):

> "(B) **During the Term**, Seller shall, in consultation with Purchaser, select the person to serve as Seller's representative to the Operating Committee (the "Seller's Representative"). The Seller's Representative shall make all decisions on the Operating Committee consistent with Prudent Utility Practice and the rights and obligations of the Parties under this PPA. Seller's Representative shall also be Seller's representative for any consultation, study, and implementation processes required under the Fish and Wildlife Agreement relating to the Facility. The Seller's Representative shall make all decisions with respect to any processes required under the Fish and Wildlife Agreement with due regard for the rights and obligations of the Parties under this PPA.[36]"

MEA PPA Section 4.2 (Operation of the Facility):

> "(A) **During the Term** Seller shall, at its cost and expense, manage, control, operate, and maintain the MEA Portion in accordance with the Operations Agreement and in a manner consistent with Prudent Utility Practice. Without limiting the foregoing, during the Term, as between Seller and Purchaser. Seller shall be responsible for all capital costs, all operations and maintenance expenses, and all costs and expenses for environmental compliance and compliance with Applicable Laws relating to the MEA Portion.
>
> (B) **During the Term**. Seller shall, after giving Purchaser a reasonable opportunity to consult with Seller. but without in any way limiting Seller's discretion as a result of any such consultation, select the person to serve as Seller's representative to the Operating Committee (the "Seller's Representative"). The Seller's Representative shall make all decisions on the Operating Committee consistent with Prudent Utility Practice and the rights and obligations of the Parties

[36] Eklutna PPA.

> under this PPA and the rights and obligations of the parties under the Chugach Power Purchase Agreement. The Seller's Representative shall also be Seller's representative for any consultation, study. and implementation processes required under the Fish and Wildlife Agreement relating to the Facility. The Seller's Representative shall make all decisions with respect to any processes required under the Fish and Wildlife Agreement with due regard for the rights and obligations of the Parties under this PPA."[37]

In Order 39, the Commission "approv[ed] the Eklutna PPA as amended by Amendment No. 2, Amendment No. 3, and the Original Stipulation."[38] It did *not* approve Amendment 1 (stating that the Eklutna PPA was a wholesale power agreement subject to AS 42.05.431(b)).[39] Thus, Section 4.2(B) of the Eklutna PPA was approved. Similarly, in Letter Order #L2000410,[40] the Commission approved, in its entirety, the MEA PPA (with Amendment 1). Thus, Sections 4.2(A) and (B) of the MEA PPA were approved by the Commission.

If the Commission intended to prohibit a voting MOA representative on the EOC for the entire duration of both the Eklutna and MEA PPAs, the above contract terms would have been rendered superfluous and potentially misleading, and the Commission would have either explicitly disapproved these terms, or conditioned approval on the removal of those terms. Elsewhere in the Acquisition docket, the Commission clearly excluded or disapproved terms in other agreements where applicable. For instance, the Commission explicitly disapproved Amendment 1 to the Eklutna PPA (stating that the Eklutna PPA was a wholesale power agreement

[37] MEA PPA.

under AS 42.05.431(b)).[41] Similarly, the Commission approved the Payment in Lieu of Taxes Agreement ("PILT") between the MOA and Chugach, as revised, subject to explicit conditions including, "that Sections 2.02 and 2.12 are not part of the approved agreement."[42] The Commission also rejected most of the Amended and Restated BRU Fuel Agreement between the MOA and Chugach, but explicitly provided for adherence to certain provisions of the agreement, such as the valuation of natural gas for economy energy sales or natural gas sales to other parties (Section 2.05).[43] In contrast, the Commission stated that the Eklutna PPA was approved subject to "the condition that it is not a power purchase agreement under AS 42.05.431(b) and the other conditions set out in the body of this order," but did not disapprove Section 4.2 (MOA EOC representative) from the approval.[44]

Nor could it be said that the failure to disapprove these terms was merely a Commission oversight in Order 39, as the Commission explicitly discussed and cited to the Section 4.2 terms as an integral part of its decision to require the surrender of voting rights. The Commission explicitly referenced the MOA EOC Committee Member requirements in the PPAs in its discussion as a reason requiring surrender, stating that the "standard specified for the MHP EOC representative in both the Eklutna PPA and the MEA PPA" was "prudent utility practice."[45] If the Commission intended to *never* allow AHP to serve on the EOC for the duration of the PPAs,

[41] Order 39 at 74 (disapproving Amendment 1 because "we find that the Eklutna PPA is not a wholesale power agreement entitled to the protections of AS 42.05.431(b)").

there would be no reason to include the term regarding the AHP EOC voting member requirements in the finalized Eklutna and MEA PPAs, especially after such an explicit discussion of the PPA requirements for the MOA representative.

It is a principle of both contract law and statutory interpretation that contracts and statutes should not be interpreted in a manner that renders language superfluous.[46] To the extent there is any ambiguity in the language of a past Commission Order, the Commission should apply the same rules of interpretation here. Interpreting Order 39 as prohibiting reinstatement of the MOA's voting rights on the EOC for the duration of the Eklutna and MEA PPAs would render sections 4.2 of both PPAs superfluous in a manner contrary such principles of interpretation. A better reading in compliance with principles of interpretation would be that Sections 4.2 were not disapproved because it was understood that voting rights could be reinstated during the terms of the PPAs.

The general meaning of the term "lifted" as used in the legal context also affirms the understanding that the term, as used in Order 39 (the surrender "cannot be lifted until such time as MHP has shown to our satisfaction that MHP has acquired the expertise required to fully participate as a voting member of the EOC"), was intended to indicate that the otherwise

[46] *See, e.g., Titus v. Dep't of Corr.*, 496 P.3d 412, 416 (Alaska 2021) (stating "[w]e generally give effect to all of a statute's "provisions, so that no part will be inoperative or superfluous, void or insignificant"); *Maine Cmty. Health Options v. United States,* 590 U.S. 296, 314, 140 S. Ct. 1308, 1323, 206 L. Ed. 2d 764 (2020) (stating that "[t]he Court likewise hesitates to adopt an interpretation of a congressional enactment which renders superfluous another portion of that same law"); *Jarvis v. Ensminger*, 134 P.3d 353, 360 (Alaska 2006) (stating that "in reaching a reasonable interpretation of a contract, we attempt to give effect to all of its terms," and that appellant's interpretation in that matter would render a timing provision of the contract "superfluous") (internal quotations and citations omitted).

"minimum term" of the surrender could be cut short by a showing that the MOA had acquired the relevant expertise. The word "lifted" is often applied to stays or injunctions, relief which is typically contingent on an additional (usually final) determination being made by a court in a matter. Sometimes however, a stay can be "lifted" before that "minimum term" expires, on application of a party and by order of the court.[47] Similarly, here, to give effect to the term "lifted" in its typical understanding in the legal or general context, the term would mean that it would otherwise terminate or cut short the "minimum term" of the surrender, not be one of *two* requirements in order for reinstatement of voting rights to occur.

B. Filings subsequent to Order 39 in the Acquisition docket and the MEA PPA approval docket show that the consistent and public understanding of the Commission, the Eklutna Project owners, and the public has been that the minimum term of the MOA surrender could be lifted by a showing that the MOA had acquired the expertise required to participate as a voting member of the EOC.

Since Order 39 was issued, subsequent filings in the Acquisition docket and the MEA PPA approval process manifest a consistent and public understanding by the Commission and the Eklutna Project Owners that the "term" of the MOA's surrender was subject to being lifted by a showing to the Commission that the MOA had acquired the relevant expertise to participate as a voting member of the EOC again.[48]

1. The Commission explicitly questioned the MOA regarding language in the PPA about the MOA's EOC representative in Section 4.2 of the

MEA PPA decided to approve the MEA PPA in its entirety with no modifications after the MOA explained that the language in Section 4.2 could become relevant if and when the MOA voting rights were reinstated during the term of the PPA.

Pursuant to the requirements of Order 39, on September 30, 2020, the MOA, d/b/a ML&P, filed TA379-121, seeking approval of the MEA PPA (with Amendment 1).[49] The version of the MEA PPA submitted for approval included Section 4.2 (Operation of the Facility), which was ultimately approved, contained the language regarding the MOA's EOC voting representative.[50] The question of whether that language referencing the EOC conflicted with the surrender requirements of Order 39 was *explicitly* addressed through a Staff question and response during the MEA PPA approval process. On October 22, 2020, staff Engineering Analyst James Layne emailed counsel for ML&P the following query:

> "I believe there is an inconsistency between the MEA Eklutna PPA and the final order (U-18- 102(44)/U-19-020(39)/U-19-021(39)) (U-18-102(44).
>
> At page 67 of U-18-102(44) the Commission required MOA/ML&P to surrender its vote on the EOC so Chugach and MEA could manage the Eklutna Hydro project.
>
> The MEA Eklutna PPA, at page 8 of Exhibit A, Section 4.2(B) appears to allow MOA/ML&P to keep its vote on the EOC.
>
> Does MOA/ML&P believe the language between the final order and the MEA Eklutna PPA as summarized above are in conflict? Please explain your response and provide a remedy if appropriate."[51]

MOA's counsel responded:

> "The MOA/ML&P do not believe that the MEA Eklutna PPA is inconsistent Order No. U-18- 102(44)/U-19-020(39)/U-19-021(39) ("Order 39"). The part of Order 39 that you cite states:

[49] Tariff Advice Filing 379-121.

> 'We can only find that MHP is managerially and technically fit to maintain an ownership interest in the Eklutna Project subject to the condition that before the effective date of either the [Chugach] Eklutna PPA or the MEA PPA, ML&P surrenders its vote on the EOC under the Eklutna Project agreements so that Chugach and MEA can jointly manage and operate the Eklutna Project, including negotiating compliance with the Fish and Wildlife Agreement, without MHP having a vote on operation or management decisions.' Order 39 at 67.
>
> To comply with the Order, ML&P will surrender its vote on the EOC prior to the closing of the ML&P sale to Chugach, which will be before the effective date of the Chugach Eklutna PPA and of the MEA Eklutna PPA. ML&P will promptly file a notice of that surrender with the RCA.
>
> **The surrender will have a term at least equal to the term of the two PPAs, subject to termination of the surrender upon MHP showing to the RCA's satisfaction "that MHP has acquired the expertise required to fully participate as a voting member of the EOC."** Order 39 at 67. If and when MHP has a proposed EOC representative that satisfies the qualifications, MHP will file that information and request that the RCA make the necessary finding for termination of the EOC vote surrender.
>
> Like Section 4.2(B) of the Chugach Eklutna PPA, Section 4.2(B) of the MEA Eklutna PPA requires MHP, in consultation with the Purchaser, to select MHP's representative on the EOC. As a result of Order 39, MHP won't have any voting representative on the EOC **until the surrender is terminated upon a positive finding by the RCA that MHP's proposed representative is qualified. Thus, Section 4.2(B) of neither PPAs need to be amended. In addition, Section 4.2(B) should remain as written as it will be relevant if and when MHP's voting rights surrender is terminated in the future upon the necessary finding of the RCA**."[52]

This response was placed in the publicly available file on the Commission website as a supplemental tariff filing.

2. Additional filings in TA379-12 and the Acquisition docket confirmed the universal understanding that a showing of acquisition of expertise could terminate the surrender of voting rights.

[52] *Id.* (emphasis added).

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS

ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

Additional filings in the TA379-12 docket confirm the understanding articulated by counsel for ML&P—that the term of the surrender was "subject to termination" upon a showing that the MOA had acquired the relevant expertise to regain voting rights—was also held, unquestioned, by Chugach and MEA. On October 30, 2020, the MOA filed a notice of ML&P's Surrender of Eklutna Operating Committee Voting Rights simultaneously in dockets U-18-102/U-19-020/U-19-021 and in docket TA379-121 (MEA PPA approval). The notice stated that it was filed in compliance with Order 39's requirements and included a copy of the Surrender.[53] The Surrender, signed by ML&P, Chugach, and MEA, stated:

> "In accordance with the requirements of order U-18-102(44), the Municipality of Anchorage, dba Municipal Light & Power(ML&P), hereby surrenders its voting rights as an EOC member and under the Fish and Wildlife Agreement effective as of the Closing of the Asset Purchase Agreement between ML&P and Chugach Electric Association (Chugach). **This surrender of voting rights shall remain in effect until ML&P's successor complies with the RCA requirements pertaining to qualifications for ML&P's representation on the EOC.**
>
> **Until ML&P's successor complies with the qualification terms of RCA order U-18-102(44),** all EOC decisions will be by unanimous vote of Chugach and Matanuska Electric Association, Inc. (MEA). Eklutna hydro operations, dispatch and maintenance will continue to follow past practices and policies unless changes are approved through the EOC process."[54]

Like the response to staff's question, the Surrender's language makes clear that the MOA's voting rights could be restored by compliance with *one* requirement—that AHP shows to the Commission's satisfaction that it complies with the qualification requirements of Order 39. This

[53] Exhibit 2, October 27, 2020, Surrender of Eklutna Operating Committee (EOC) Voting Rights.

showing of meeting the qualification requirements would terminate and cut short any "minimum term" that otherwise applied to the surrender.

3. The Commission's approval of the MEA PPA with no modifications or discussion of the issue whether Section 4.2 should be removed shows that it also understood that the "minimum term" of the surrender was subject to being lifted if qualifications conditions were met.

The Commission's approval of the MEA PPA, with no modifications to exclude the language in Section 4.2, after the documented staff discussion with ML&P counsel and the filing of the MOA's surrender, shows that the Commission also understood that the surrender could be lifted before the expiration of the "minimum term" by a showing that the MOA had acquired the required expertise to be a voting member of the EOC. On November 20, 2020, the Commission issued Letter Order #L2000410, approving, in its entirety, the MEA PPA (with Amendment 1), with no attempt to exclude Section 4.2 or to refute the understanding articulated in the filings (including the Surrender document itself) that the "minimum term" of the surrender was subject to being "lifted" or "terminated" by a showing of meeting the expertise requirements. The filings and decision in the MEA PPA approval docket make unequivocally clear that the reinstatement of the MOA's voting member of the EOC could be lifted (before the expiration of the PPAs) if the MOA meets the Commission's requirements regarding the expertise required to fully participate as a voting member of the EOC.

It would be difficult to argue that the Commission committed an oversight by not disapproving Section 4.2 in the MEA PPA, after explicitly inquiring about the language of Section 4.2 considering Order 39, and receiving a response from ML&P, and later after reviewing the language of the Surrender document signed by all three Eklutna Project owners. It was clear and

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS

(907) 277-1604

explicit during the approval process of the MEA PPA that Section 4.2(B) properly remained in both the MEA PPA and the Eklutna PPA, because the surrender term could be terminated by a showing that AHP had acquired the expertise required to fully participate as a voting member of the EOC.

C. The Eklutna owners and the public have continued to understand that the MOA's surrender rights was subject to the MOA, d/b/a AHP, showing that it had acquired the expertise required to reinstate voting rights.

It is clear from the comments and filings in this matter that, until the pre-hearing conference of August 30, 2024, the (immediate) reinstatement upon proof of expertise was the universal, contemporaneous, continuous, and public understanding. One need look no further than the filings in this docket to see that the public understanding of the MOA, Chugach, MEA, and the RAPA has been that if the MOA could show to the Commission's satisfaction that it had acquired the necessary expertise, its surrender of EOC voting rights would be (immediately) terminated. AHP makes that understanding clear in its Request for Acknowledgment.[55] This understanding was also articulated in public Anchorage Assembly Meetings.[56] While Chugach and MEA raised several issues with AHP's Request for Acknowledgement in public comments, their comments manifest their understanding that AHP did not need to wait for the terms of the PPAs to expire in order to reinstate its voting rights.[57] RAPA's Response to AHP's Motion for Expedited

[55] Request for Acknowledgment at 2-3.

Consideration similarly manifests an understanding that "[t]he only issue in this docket is a straightforward one—whether AHP 'has shown to [the Commission's] satisfaction that [it] has acquired the expertise required to fully participate as a voting member of the EOC."[58] All of these positions were articulated in filings available to the public and through a public comment period.

D. An unbreakable minimum surrender term requirement the MOA's surrender of voting rights, which could not be lifted by later Commission approval of qualifications for participation on the EOC, would have been an unprecedented and superfluous method of addressing the Commission's substantive concerns, and an unreasonable restriction under AS 42.05.241.

If Order 39 had required the MOA to surrender voting rights on the EOC irrevocably for 35-plus years—in other words, surrender for decades the only way to have a say in the management of a utility for which it still maintains cost and other legal liability—such a decision would be (1) unnecessary to address the Commission's concerns in light of the requirement to show the Commission it had obtained the necessary expertise to reinstate voting rights and (2) an unreasonable use (and abuse) of the Commission's authority under AS 42.05.241 (conditions of certificate issuance).

The Commission's concerns articulated in Order 39 were substantive, but also discrete. The Commission was concerned that the post-transaction MOA utility would no longer have the in-house expertise required for a representative to participate as a voting member of the EOC, specifically that the proposed representative, the current municipal manager, did not have

such expertise.[59] The Commission's requirement of a minimum term was reasonable in order to let the parties know how long the surrender would last if undisturbed by further action on the part of the MOA. The Commission's placement of a condition that the MOA make a showing it has acquired the expertise in order to lift the surrender was intended to ensure that the MOA was "managerially or technically fit" when it did resume a position on the EOC. To also require the surrender to last for at *least* 35 years (the terms of the PPAs) would be arbitrary and provides no additional protection that the MOA will be "managerially and technically fit." There is no reason the MOA must wait 35 years to present a suitable EOC representative to the Commission.

Such a condition would provide the Eklutna Project owners and the public no benefit. It limits the number of voices on the EOC, reducing potentially helpful input. It arbitrarily diminishes, for an extended period, the MOA's ability to manage its own property. It would be an excessive and arbitrary application of the Commission's authority to place conditions on certificates under AS 42.05.241. Indeed, it would be an unfair surprise for the MOA to have surrendered its vote voluntarily, and chosen not to appeal Order 39, based on the contemporaneous understanding of all involved that it would be able to recover its vote once it acquired the necessary expertise, only to be informed years later that the surrender was essentially irredeemable for a generation.

[59] Order 39 at 66 (noting that "ML&P proposes that MHP will have a seat on the EOC, even though it will have no employees" and that there was nothing in the current Municipal Manager's resume indicating "that he has any knowledge of the Railbelt generation and transmission system, or prudent utility practice which is the management specific standard specified for the MHP EOC representative in both the Eklutna PPA and the MEA PPA").

The present situation exhibits why a 35-year ban on MOA EOC participation would be unnecessary and unhelpful. With a 35-year ban, although the MOA *has* acquired the relevant expertise in the form of an AHP utility director, currently Mr. Mark Corsentino, P.E., it would need to wait—for no discernable reason—for another 35-plus years to be able to obtain approval to reinstate its voting rights. Such a requirement to wait is excessive, because, as here, the AHP Director, starting with the recently appointment Mr. Corsentino, will not simply be a municipal manager tasked with attending EOC meetings, but will be a utility professional well qualified to participate in such meetings.

If, in the future, the Commission does have concerns about an AHP utility director, or who the AHP EOC representative may be, the Commission, as well as Chugach and MEA, have tools to address these concerns if and when they arise. Remedies exist within the terms of both PPAs.[60] The Commission *always* has authority under AS 42.05.261, upon "complaint or upon its own motion," to amend a certificate after notice and opportunity for hearing, where good cause exists. Any future concerns can be addressed at that time through such avenues, as such concerns would be for any other utility.

III. CONCLUSION

For the reasons explained above, any "minimum term" on the MOA's surrender is subject to the MOA's showing to the Commission that it has acquired the required expertise to participate as a voting member of the EOC.

[60] *See, e.g.*, Article 10 of the Eklutna PPA; Article 12 of MEA PPA.

1996 EKLUTNA HYDROELECTRIC PROJECT

TRANSITION PLAN

by and among

THE UNITED STATES OF AMERICA d/b/a ALASKA POWER ADMINISTRATION, a unit of the DEPARTMENT OF ENERGY; THE MUNICIPALITY OF ANCHORAGE d/b/a MUNICIPAL LIGHT & POWER; CHUGACH ELECTRIC ASSOCIATION, INC.; and MATANUSKA ELECTRIC ASSOCIATION, INC.

1996 EKLUTNA HYDROELECTRIC PROJECT

TRANSITION PLAN

by and among

THE UNITED STATES OF AMERICA d/b/a ALASKA POWER ADMINISTRATION, a unit of the DEPARTMENT OF ENERGY; THE MUNICIPALITY OF ANCHORAGE d/b/a MUNICIPAL LIGHT & POWER; CHUGACH ELECTRIC ASSOCIATION, INC.; and MATANUSKA ELECTRIC ASSOCIATION, INC.

This plan comprises:

- Transition Plan, consisting of 13 Sections contained on 10 pages;
- Exhibit A, consisting of 33 pages;
- Exhibit B, consisting of 5 pages;
- Exhibit C, consisting of 12 pages;
- Exhibit D, consisting of 25 pages;
- Exhibit E, consisting of 9 pages; and

THIS PLAN ("PLAN") dated as of May 28, 1996, is adopted by and among, namely, The United States of America d/b/a Alaska Power Administration (APA) a unit of the Department of Energy (DOE); The Municipality of Anchorage (ML&P); the Chugach Electric Association, Inc.(CEA); and the Matanuska Electric Association, Inc. (MEA). Unless specifically referred to herein, the above are hereinafter designated the "Parties."

RECITALS:

WHEREAS, by the Alaska Power Administration Asset Sale and Termination Act, APA is authorized to sell to the undersigned Utilities (hereinafter the "Eklutna Purchasers"), physical assets, property interests, and all other interests the DOE may have in the Eklutna Hydroelectric Generation Plant, tunnels, transmission lines, rights-of-way, equipment, rolling stock, and other rights in contract (hereinafter the "Eklutna Project") as set forth in the Eklutna Purchase Agreement, dated August 2, 1989, attached hereto and incorporated below by reference as

Exhibit A (hereinafter referred to as the Purchase Agreement) together with all amendments thereto; and

WHEREAS, the Eklutna Purchasers are required prior to May 28, 1996, pursuant to the Purchase Agreement to jointly develop and adopt specific transition plans setting forth the arrangements and a timetable for completing the sale and transfer; and

WHEREAS, the Eklutna Purchasers have signed a Memorandum of Understanding dated July 25, 1989, attached hereto as Exhibit B, in which they mutually declare their respective proportionate shares of the Eklutna Project's capacity, energy, and undivided interest in Eklutna assets to be 16/30 to ML&P (53.33%); 9/30 to CEA (30%); and 5/30 to MEA (16.67%), and further declare that the Eklutna Project operating costs will be borne in these same proportions; and

WHEREAS, the Eklutna Purchasers, subject to the rights of the Parties to amend the terms of the Purchase Agreement subsequent to adoption of this Plan, desire to formalize transition plans and arrangements by the terms of this Plan; and

WHEREAS, the Parties intend that this Plan shall foster an efficient, orderly, and expeditious transfer of the Eklutna Project and its operation to the Eklutna Purchasers, and further intend that the transfer be accomplished with minimum costs and minimum adverse impacts to APA employees.

NOW THEREFORE, IN CONSIDERATION of the mutual covenants set forth herein, the Parties agree as follows:

SECTION 1. PARTIES

Parties to This Plan: The Parties to this Plan are the United States of America d/b/a Alaska Power Administration (APA) a unit of the Department of Energy (DOE), and the Eklutna Purchasers: The Municipality of Anchorage d/b/a Municipal Light & Power (ML&P), purchaser of 16/30ths of the Eklutna Project (53.33%); the Chugach Electric Association, Inc. (CEA), purchaser of 9/30ths of the Eklutna Project (30%); and the Matanuska Electric Association (MEA), purchaser of 5/30ths of the Eklutna Project (16.67%). The Eklutna Purchasers shall, after the Transaction Date, own an undivided interest in the Eklutna Project assets identified in Section 4 of the Purchase Agreement that are the subject of this Plan, and will exercise the rights and bear the responsibilities of such ownership in proportion to their respective shares.

SECTION 2. TERM OF PLAN

(a) Effective Date. This Plan shall become effective upon execution by all of the Parties ("Effective Date").

(b) Expiration Date. Unless earlier terminated pursuant to other provisions of this Plan, this Plan shall expire upon completion of the tasks herein defined or as otherwise mutually agreed upon by all of the Parties.

SECTION 3. SELECTION OF A TRANSACTION DATE

The date upon which ownership of the Eklutna Project transfers to the Eklutna Purchasers is the "Transaction Date" and shall be within 30 days of the completion of all items listed in Exhibit C and section 10 of this Plan to the satisfaction of all Parties or as late as November 28, 1997, or later if mutually agreed upon.

SECTION 4. SCHEDULE FOR PAYMENTS TO THE UNITED STATES TREASURY

(a) Section 5(a) of the Purchase Agreement specifies the selling price of the Eklutna Project as the discounted present value of the remaining payment stream (as described in the 1987 repayment study) plus $1,000,000.00. The present value using the 9% discount rate will be determined by APA using the methodology of Section 5 of the Purchase Agreement and the remaining payments described in Exhibit B of Amendment No. 3 to the Purchase Agreement dated June 22, 1995. The price estimated in the Purchase Agreement assumes adjustments for a Transaction Date that is other than the beginning of a federal fiscal year. If the established Transaction Date is a date other than the start of the federal fiscal year, the selling price will be established and payments scheduled in accordance with the Purchase Agreement.

The payment to the U.S. Treasury will be fully paid within five years of the Transaction Date. The portion paid to the U.S. Treasury following the Transaction Date will carry interest of 9% per annum.

(b) The Eklutna Purchasers intend to make payments to the U.S. Treasury or deposits in an escrow account with certified funds (by check or wire transfer) on the Transaction Date. If any Eklutna Purchaser should otherwise choose to make payments within the allowable five year window, such election must be announced prior to the Transaction Date. A schedule will then be developed and any and all interest charges associated with the established schedule will be borne by the Eklutna Purchaser (or Purchasers) that so elect to make payments.

An interest bearing escrow account may be established in which the Eklutna Purchasers may deposit payment amounts. Funds will be held in this escrow account to cover completion of outstanding land, property, or other issues identified on the Transaction Date. Funds will be released to the U.S. Treasury as mutually agreed to by the Parties. Interest on funds held in this escrow account shall be credited toward the 9% per annum interest to be paid by the

Eklutna Purchasers to the U.S. Treasury on the portion paid following the Transaction Date, from the Transaction Date until the date the payments are actually made to the U.S. Treasury.

SECTION 5. ARRANGEMENTS AND TIMETABLE FOR TRANSFER OF OPERATIONS, MAINTENANCE, POWER MARKETING, AND ADMINISTRATION OF THE EKLUTNA PROJECT

EVENT	TIMETABLE
APA and the Eklutna Purchasers set mutually agreeable functional transfer date of October 1, 1996 ("Transition Date").	Complete
Eklutna Purchasers provide APA with proposed organization and staffing requirements related to employees currently at the Eklutna Project.	May 28, 1996
Eklutna Purchasers representatives meet with the Eklutna Project personnel to discuss detailed transition staffing plans.	Jun 10, 1996
Eklutna Operating Committee (EOC), as established in this Plan, begins to meet, develops coordination procedures for functional control in consultation with APA, and conduct other business.	Jun 28, 1996
Parties determine the budgetary offsets to current Eklutna Project rates and propose new power rates for the transition period.	Jul 1, 1996
APA initiates personnel actions necessary to facilitate the functional transfer to the utilities.	Aug 15, 1996
Detailed plans, agreements, and SOP's in place and executed for October 1, 1996 change in functional control.	Aug 30, 1996
Eklutna personnel transition to their respective utility employer.	Oct 1, 1996
EOC manages the operation and adjusts procedures as required in consultation with APA.	Commences Oct 1, 1996
Office space and full access to all government records for an APA real estate person and rewind contracting officer's representative will be provided by Eklutna Purchasers.	Commences Oct 1, 1996

SECTION 6. ACTIVITIES AND SCHEDULES FOR COMPLETION OF SALE

EVENT	TIMETABLE
Formal environmental, engineering, and safety inspections continue until complete.	Aug 1, 1996
Parties agree on resolution of inspection issues.	Aug 30, 1996
Generator rewind, plant modifications, and inspection corrective actions continue until completed.	As Required
Title and land conveyance issues continue until complete.	Transaction Date
Conveyance documents in final draft.	Aug 30, 1996
Transaction Date and the Eklutna Project sale executed.	Nov 28, 1997 (unless earlier agreed upon)

SECTION 7. TRANSFER OF DATA AND OTHER RECORDS TO PURCHASERS

EVENT	TIMETABLE
APA Listing of Eklutna Project data and records to be transferred which will include their current location.	May 24, 1996
Site selection by Eklutna Purchasers for data and document relocation plan.	Aug 1, 1996
Data and documents transferred to Eklutna Purchasers after the Transaction Date as mutually agreed to by Parties.	To Be Determined

SECTION 8. INSPECTION RESULTS AND REQUIRED DOE WORK PLAN

Inspection results and a required DOE work plan are attached hereto as Exhibit C. The Parties agree that this list may not be all inclusive, and other work items may be added by any Eklutna Purchaser if, in their judgment, new information warrants. The Parties will mutually agree who has the responsibility to correct the added work items and set the schedule for their completion. All formal inspection results and action plans to deal with outstanding issues shall be finalized by August 1, 1996. Description of inspection lists in this Exhibit C:

(a) Listing of engineering inspection results as known when this Plan is executed, the timetable of work to be completed by APA, and the resolution of other inspection issues.

(b) Listing of environmental and safety inspection results and the APA responses are in draft form as of the Effective Date of this Plan, and shall be included in this Exhibit C upon receipt of same.

SECTION 9. EKLUTNA ASSETS

Attached as Exhibit D are the Physical assets list of APA and asset lists of each of the utilities for those assets located on APA property. APA intends to transfer, on the Transaction Date, full title to all such assets to Eklutna Purchasers. If the Eklutna Purchasers should choose to operate and/or maintain the Eklutna Project prior to the Transaction Date, they shall be authorized to use listed APA equipment, tools, and vehicles. All assets listed by each utility as their own are not intended to be, and shall not be, transferred to the other Eklutna Purchasers, but shall remain available for the benefit of the Eklutna Project.

APA is in the process of finalizing its survey results on all rights-of-way, easements, and structures intended to be transferred. All parcels, rights-of-way, and easements shall be fully described upon completion and compiled for inclusion in the transfer documents executed on the Transaction Date. Any discrepancies shall be dealt with pursuant to Section 10 below.

SECTION 10. TITLE CONDITION TO ALL EKLUTNA ASSETS AND PLANNED REMEDIES

All personal property transferred to Eklutna Purchasers by APA shall be free and clear of any rights of third parties on the Transaction Date. Pursuant to the Purchase Agreement, APA represents to the Eklutna Purchasers that it, or its designated successor or assigns, shall provide without cost to the Eklutna Purchasers real property interests described as follows:

(a) Titles to APA fee owned property, including Reed and Palmer substations free and clear of encumbrances or conditions of title which would restrict the Eklutna Purchasers' rights to continue to operate the Eklutna Project,

including the transmission lines and facilities located within described rights-of-way, easements, or permitted areas;

(b) The generation facility free of any encumbrances, covenants, and/or restrictions which would arise from its designation as historically significant and would prevent the Eklutna Purchasers from use, maintenance, repair, remodel, modification or upgrade of the buildings or equipment of the Eklutna Project assets;

(c) Fee title to the Anchorage Substation property and other Eklutna Project land rights free and clear of claims of Cook Inlet Region Inc.;

(d) Access rights-of-way or easements allowing access for line maintenance of the transmission lines presently being used as disclosed by the 1996 survey;

(e) Easement rights to cross military reserve and fee owned properties owned or controlled by the United States Army within Ft. Richardson, Alaska on the existing transmission line right-of-way;

(f) Easements, rights-of-way, or permits as required to provide for 115 KV transmission line facilities located in the CEA double circuit portion of the transmission line as set forth in contract No. 85-80AP10022.000;

(g) Easement rights for the existing transmission lines across private property, including those areas of easements presently authorized under 44LD513 and section 17(b) of ANCSA, free and clear of claims of Eklutna Inc. or other underlying landowners and free of encroachments disclosed by the APA 1996 survey;

(h) Transfer of all other agreements and rights and obligations with parties who are not purchasers under this agreement; and

(i) Easement and access rights for the Wasilla Radio Relay facility free and clear of third party claims.

(j) Rights-of-way across property owned by the United States and managed by the Bureau of Land Management.

(k) Questions as to any limitations that there may be on the use of or interference with all natural inflows to and waters of the Eklutna Reservoir will be resolved.

In the event any of these rights can not be transferred to the Eklutna Purchasers, or must be acquired by APA to be transferred to the Eklutna Purchasers, APA and its successor or assigns warrant that they will proceed to acquire such rights through the legal acquisition process, even if such process is not completed by the Transaction Date. APA and its successor or assigns warrant that they have the staff and resources necessary to acquire the interests outlined above and will use such staff and other resources to complete the acquisition in a timely manner. Resolution of any real property issues will be identified in the transaction documents.

SECTION 11. EKLUTNA PURCHASERS MANNER OF ACTING, FUNCTIONAL RESPONSIBILITY, AND STAFFING

Attached hereto as Exhibit E is the Eklutna Purchasers' plan for delineation of responsibilities and activities to effect the transition of the currently employed APA personnel at Eklutna and Eklutna Project operations.

SECTION 12. NO THIRD-PARTY BENEFICIARIES

The provisions of this Plan shall not create any rights in favor of any person, corporation, or association not a Party to this Plan, and the obligations herein assumed are solely for the use and benefit of the Parties to this Plan and their successors and assigns.

SECTION 13. MODIFICATIONS TO THIS PLAN

The provisions of this Plan have been negotiated by the Parties and represent their best effort to follow the intent of the APA Asset Sale and Termination Act pursuant to the Purchase Agreement. Should modifications to this Plan become necessary, the Parties agree to continue their best effort to work toward changes that are mutually agreeable to the Parties, and in timely enough fashion that this agreement and any such modifications are adopted by the Parties on or before the Transaction Date.

EKLUTNA PURCHASE AGREEMENT

1. Parties to the Agreement.

The parties to this Agreement are the Alaska Power Administration (APAd), a unit of the United States Department of Energy, and the Municipality of Anchorage d/b/a Municipal Light and Power (ML&P), the Chugach Electric Association, Inc. (Chugach) and Matanuska Electric Association, Inc. (MEA) (Purchasers).

2. Purpose.

This Agreement sets out arrangements, terms and conditions for sale of the Eklutna Hydroelectric Project (Eklutna) to Purchasers, such arrangements, terms and conditions to be implemented if the United States Congress authorizes such sale.

3. Definitions. As used in this Agreement:

"ADNR" means the Alaska Department of Natural Resources.

"ANCSA" means the Alaska Native Claims Settlement Act (PL-92-203).

"APAd" means the Alaska Power Administration, a unit of the United States Department of Energy (including any successor entity).

"Chugach" means the Chugach Electric Association, Inc.

"BLM" means the United States Bureau of Land Management.

"Eklutna" means the Eklutna Hydroelectric Project authorized, constructed and operated pursuant to the Eklutna Project Act of July 31, 1950 (64 Stat. 382, as amended), including any and all property and facilities acquired or used in connection with Eklutna.

"MEA" means the Matanuska Electric Association, Inc.

"ML&P" means the Municipality of Anchorage, d\b\a Municipal Light and Power.

"Purchasers" means ML&P, Chugach, and MEA.

"Actions" means actions, inaction, and omissions.

"Transaction Date" means the date on which ownership of Eklutna is to be transferred to the Purchasers as set forth in Sections 4 and 9.

4. Assets to be Sold and Transferred.

a. The Eklutna assets to be sold and transferred consist of the power production, transmission, associated real property and all other facilities and assets provided or otherwise acquired for Eklutna under the Eklutna Project Act of July 31, 1950 (64 Stat. 382, as amended) including but not limited to:

(1) Eklutna Dam; power intake structure; power tunnel and penstock; the Eklutna powerplant containing two complete turbine-generator sets with ratings of 15,000 kilowatts, each; auxiliary electrical and mechanical systems; a tailrace and tailrace embankment; switchyard, transformers, 115 kilovolt transmission lines connecting the powerplant with Palmer and Anchorage; Anchorage, Palmer and Reed Substations; access roads; maintenance facilities and vehicles; supervisory control and communications systems; various buildings including office, warehouse, and garage; personal property, including spare parts and equipment; and any improvements, replacements and renewals of such major items;

(2) Title in acquired land at Palmer Substation, and easements or rights-of-way for Eklutna facilities on privately owned land as described in Exhibit A; and for title to lands at Anchorage Substation if the Department of Interior determines that the lands are available under law for conveyance to the Purchasers;

(3) Granted rights-of-way for existing Eklutna facilities located on BLM managed lands and military lands as described in Exhibit A;

(4) Studies, records, drawings, operating data, technical information; water rights including the reservoir rights; licenses and any other permits; accurate location maps of Eklutna facilities tied to public land surveys; acceptable land descriptions of the areas of the easements, permits and licenses showing the location of the Eklutna facilities within the described areas; other tangible rights as required for operations and maintenance of Eklutna facilities; and warranties or other intangible rights associated with the assets to be transferred and sold.

b. Granted rights-of-way for existing Eklutna facilities located on BLM managed lands including lands selected by the State of Alaska and military lands shall:

(1) Be sufficient for operation, maintenance, repairs, renewals and replacements of Eklutna facilities located on such lands, including provisions for access.

(2) Be issued consistent with existing Federal statutes, at no cost to the Purchasers, and remain effective for a period equal to the life of Eklutna as extended by any improvements, repairs, renewals or replacements; provided further that if Eklutna is further sold or transferred to private ownership, BLM may assess such reasonable and customary fees for continued use of the rights-of-way on BLM managed lands and military lands as consistent with law or regulation.

c. The life of Eklutna shall continue as long as Eklutna is capable of generating and transmitting electricity. Temporary interruptions in service or generation of power shall not constitute a termination of the life of Eklutna. Disuse of one portion of the project system shall not cause the life to Eklutna as a whole to terminate.

d. APAd shall provide satisfactory assurance that ANCSA 17(b) easement rights crossing native lands are sufficient for continued operation, maintenance, repair and replacement of Eklutna facilities by the Purchasers.

e. The above description of assets is intended to be general and not precise or all inclusive. As part of the transition activities, the parties will jointly prepare a particularized listing of the assets to be sold and transferred.

f. APAd intends that the sale and transfer of Eklutna to the Purchasers not result in additional costs to the Purchasers for licenses, permits or other rights for Eklutna, which costs would not have been incurred under continued Federal ownership of Eklutna.

g. Nothing in this Agreement shall prevent Purchasers from seeking substantial change in Eklutna. Purchasers shall be responsible for any appropriate approvals by affected government and non-governmental entities required for such substantial change.

h. On the Transaction Date, the APAd shall convey or cause to be conveyed title to all Eklutna assets to the Purchasers by bill of sale or other instrument of conveyance, provided that Purchasers pay or make arrangement for payment under Section 5 of

this Agreement, and provided further that for any assets not available for transfer at the Transaction Date, APAd shall provide:

(1) Mutually satisfactory assurance that such remaining assets will be transferred to the Purchasers subsequently and in a timely fashion, and

(2) Clear authority to the Purchasers for the beneficial use, enjoyment and occupancy of such remaining assets pending their conveyance to the Purchasers.

(3) If APAd fails to perform any of the requirements stated in paragraphs 4(h), 4(h)(1) or 4(h)(2) above, the parties agree to discuss appropriate remedies. The parties may agree to mediation, arbitration or other means to resolve issues presented by a failure of APAd to perform such requirements. Purchasers shall also have an absolute right to terminate the Agreement in the event APAd fails to perform such requirements.

i. If after the Transaction Date some event occurs which prevents APAd from transferring title and beneficial use, enjoyment and occupancy of Eklutna to the Purchasers, the parties agree to discuss and implement appropriate remedies including resolution through negotiation, arbitration or litigation, as appropriate.

5. Price and Payment Terms.

a. If the Transaction Date is October 1, 1989, the selling price shall be $10,435,000.

If the Transaction Date is October 1, 1990, the selling price shall be $9,580,000.

If the Transaction Date is October 1, 1991, the selling price shall be $8,631,000.

If the Transaction Date is other than one of the three above dates, the selling price will be calculated by APAd as the discounted present value as of the Transaction Date of all remaining principal and interest payments after the Transaction Date according to the payment schedule shown on Exhibit B of this agreement plus $1,000,000 ($1 million). Exhibit B payments for the first year will be prorated to reflect the portion of the year remaining after the Transaction Date. Subsequent Exhibit B payments will be assumed at mid-year (April).

The price determination is to be included in the transition plan required under Section 9 below.

b. The Purchasers shall pay the full selling price to the United States Treasury within five years after the Transaction Date. Any portion of the selling price paid after the Transaction Date will carry interest charges payable to the United States Treasury as discussed below. If the full price is paid by the Transaction Date, there will be no interest charges.

The purpose for allowing up to five years for the payments is to provide some flexibility to the Purchasers in arranging for payment and start up costs so as to minimize adverse impacts on Purchasers' ratepayers. The purpose of the interest charge is to assure that the United States Treasury receives the full value of the selling price. The Purchasers shall not seek Federal financing for the purchase.

c. The discount rate to be used for determination of the selling price shall be nine percent (9%).

The interest rate to be charged for payments after the Transaction Date shall be nine percent (9%).

The sales price described above is full consideration for all Eklutna assets described in Section 4 (Assets to be Sold and Transferred).

d. APAd shall not change its rate criteria for the purpose of accelerating principal payments before the Transaction Date. The Purchasers shall not delay their take of allocated power for the purpose of shifting revenues beyond the Transaction Date.

6. Responsibilities.

a. As of the Transaction Date, the Purchasers shall assume all ownership responsibilities for Eklutna and ownership responsibilities of APAd and its successors for Eklutna shall cease, except as follows:

(1) APAd shall be solely responsible for all costs to close out APAd responsibilities including but not limited to Federal employee entitlements and benefits for APAd employees.

(2) The parties recognize that there may be unfinished work as of the Transaction Date which is the responsibility of APAd to complete. Such unfinished work could include incomplete transfer of some assets to be completed by APAd under Sections 4 and 10 or specific APAd responsibilities

arising out of the joint determination of maintenance activities to be completed by APAd under Sections 9 and 10. APAd shall be solely responsible for such unfinished work.

(3) APA shall be solely responsible for any claims or other legal proceedings arising from actions or alleged actions by APAd while APAd managed or operated Eklutna or from actions or alleged actions by APAd in carrying out remaining APAd responsibilities under this agreement after the Transaction Date."

7. Operation and Maintenance Expenses, Revenues.

Operation and maintenance expenses up to the Transaction Date, including all obligations incurred by APAd which require payments after the Transaction Date shall be the responsibility of APAd. Subsequent operation and maintenance expenses shall be the responsibility of the Purchasers. APAd fund balances from Congressional appropriations as of the Transaction Date shall remain with APAd.

All revenues for power sold up to the Transaction Date will be returned to the United States Treasury. The Purchasers shall be responsible for sales of power after the Transaction Date, including the collection and disposition of revenues therefrom.

8. Non-Power Users.

a. The parties do not intend to adversely affect non-power users' rights as a result of transfer of ownership and control of Eklutna from the Federal government to the Purchasers.

As of the Transaction Date, the Purchasers shall assume all APAd responsibilities and benefits with respect to the following agreements, including amendments and supplemental agreements made or entered into prior to the Transaction Date, provided that after the effective date of this Agreement, APAd shall consult with the Purchasers prior to making additional amendments and supplemental agreements:

(1) The agreement dated February 17, 1984, between APAd and the Municipality of Anchorage concerning the Eklutna Water Project; as amended by Supplemental Agreement No. 1 dated August 24, 1988;

(2) The agreement dated November 1, 1982, between APAd and Cook Inlet Aquaculture Association concerning the Eklutna hatchery.

b. The Purchasers shall consult with BLM and ADNR to ensure effective and proper management of lands required for Eklutna.

c. Except to the extent Purchasers determine public recreational uses shall be limited by safety and operational requirements, the Purchasers will continue to make Eklutna lands and water available to the public for recreation uses.

9. Transition Plans and Activities.

a. Within six months after the Congressional authorization is obtained, the Purchasers and APAd shall adopt specific transition plans setting forth the arrangements and a timetable for completing the sale and transfer. The parties intend that the transition plans shall foster an efficient, orderly and expeditious transfer of Eklutna and its operation to the Purchasers, minimize transition costs and minimize adverse impacts on employees. The transition plans and activities shall be developed jointly by the Purchasers and APAd and, among other items, shall include:

(1) The selection of a "Transaction Date" on which ownership of Eklutna would transfer to the Purchasers;

(2) A schedule for payments to the United States Treasury including provisions for reasonable grace periods;

(3) Arrangements and timetable for the transfer of operations, maintenance, power marketing and administration of Eklutna;

(4) A definition of activities and schedules for completing the sale and the assignment of responsibilities for such activities;

(5) A continuation of the consultations and access to records and data, and arrangements and timetable for transfer of data and other records to the Purchasers;

(6) Provisions for environmental, engineering and safety inspections by the Purchasers and APAd and a joint determination by the Purchasers and APAd of specific maintenance activities, including procurement, to be completed by the APAd;

(7) If necessary, provisions for completing any asset transfer actions that may not be completed as of the Transaction Date;

(8) A particularized listing of all the Eklutna assets to be sold and transferred, including photocopies of all

rights-of-way obtained from BLM, accurate location maps of the Eklutna facilities tied to public land surveys, and suitable legal descriptions of all real property interest. The parties to this Agreement recognize that the lands work will not be completed before the date of the transition plans.

(9) A description of the condition of title to the Eklutna assets as of the date of the transition plans, identifying with particularity third party interests and rights and other matters affecting title that may materially impair the ability of the Purchasers to have the full beneficial use, enjoyment, occupancy and operation of the Eklutna assets, and a description of APAd's intended course of action prior to the Transaction Date to remove, resolve or limit such matters.

(10) Transition staffing plans as necessary to assure continuity of operations and minimizing adverse impacts on APAd employees. In this regard, the parties agree that for two years after the Transaction Date APAd Eklutna personnel have first call on post-transfer Eklutna jobs for which they are qualified subject to the labor agreements of Purchasers. The staffing plans shall also consider transferring portions or all of the operations and maintenance functions to the Purchasers in advance of the Transaction Date, if that course of action is found to be feasible and helpful in minimizing adverse impacts to employees. In a manner consistent with their personnel policies and staffing requirements, the Purchasers will assist in locating suitable employment opportunities for displaced APAd employees for a period of two years after the Transaction Date; and

(11) Other matters as may be considered necessary by the parties.

10. Interim Activities.

The parties to this Agreement recognize that, in addition to the transition plans and activities described above, a number of actions need to be taken by the parties and other entities. The asset transfer and sale involves several entities including the Federal, State and local governments and two Alaska Native corporations. The parties intend to maintain full coordination with each of those entities and ensure that legislation authorizing the sale and transfer provides appropriate authority to implement the sale and transfer. The parties shall take all actions necessary to complete the sale and transfer including, but not limited to, the following listed actions:

a. APAd shall prepare Congressional legislation needed to implement this Agreement. The legislation, among other items, shall include provisions to accomplish the following:

(1) Authorize in accordance with this Agreement the sale and transfer of Eklutna to the Purchasers.

(2) Direct and authorize other Federal agencies, including the United States Department of the Interior, to assist and cooperate in sale implementation including transfer of Eklutna assets under their jurisdiction.

(3) Authorize and direct the Secretary of Interior to issue rights-of-way to Alaska Power Administration for subsequent assignment to Purchasers at no cost to remain effective for a period equal to the life of Eklutna as extended by improvements, repairs, renewals or replacements, sufficient for operation, maintenance, repair and replacement of Eklutna facilities located on lands managed by the BLM including land selected by the State of Alaska, and military lands, including access; provided that if Eklutna is further sold or transferred to private ownership, the BLM may assess such reasonable and customary fees for continued use of the rights-of-way on BLM managed lands and military lands as consistent with current law or regulation; provided further that at no additional cost fee title to lands at Anchorage Substation shall be transferred to Purchasers if the Department of Interior determines that the lands are available under law for conveyance to the Purchasers.

(4) Authorize the State of Alaska (State) to select and direct the Secretary of Interior to convey to the State certain Eklutna lands identified in Exhibit A, including the lake bed of Eklutna Lake if not navigable under the Submerged Lands Act and approximately 853 acres of improved lands housing the powerhouse, intake structure, dam facilities, and a portion of the power tunnel under the provision of Section 6 of the Alaska Statehood Act of July 7, 1958, Public Law 85-508, and the North Anchorage Land Agreement of January 31, 1983, such conveyances to be subject to the rights-of-way being provided to Purchasers under Section 10(a)(3) above.

(5) Exempt Eklutna and the Purchasers, including but not limited to subsequent facilities modifications, from jurisdiction of the Federal Energy Regulatory Commission under the Federal Power Act (16 U.S.C. 791), unless such modifications impact Federal lands other than those presently used for Eklutna.

(6) Authorize expenditure of such sums as are necessary to prepare Eklutna assets for sale and conveyance, such preparations to provide sufficient title to ensure the beneficial use, enjoyment and occupancy to the Purchasers of the assets to be sold.

b. APAd shall, in addition to the responsibilities set forth in Section 4:

(1) Prepare all Eklutna assets including but not limited to those assets described in Section 4 (Assets to be Sold and Transferred) for conveyance to the Purchasers including all actions necessary to establish sufficient title to ensure the beneficial use, enjoyment and occupancy to the Purchasers of such assets.

(2) Apply for and obtain BLM rights-of-way necessary for operation, maintenance, repair and replacement of Eklutna facilities located on Federal lands, managed by the BLM, such rights-of-way to be subsequently transferred to the Purchasers.

(3) Provide satisfactory assurance that the Purchasers have sufficient ANCSA 17(b) easement rights for continued operation, maintenance, repair and replacement of Eklutna facilities.

(4) Continue to maintain Eklutna in accordance with prudent utility practices, and Federal, and utility industry standards.

(5) Appoint one person and an alternate to represent APAd for all activities required of APAd after the execution of this Agreement and prior to the Transaction Date.

(6) Manage and operate Eklutna in accordance with prudent utility practices, and Federal and utility industry standards in such a manner as to not diminish the capability of Eklutna to produce energy and power at historic levels.

c. Purchasers shall:

(1) Establish organizational, functional and staffing arrangements for operations, maintenance and administration of Eklutna to be in effect on or before the Transaction Date including the following:

(A) Purchasers agree with each other and the APAd that each Purchaser shall appoint one person and an

alternate to represent that Purchaser for all activities required of Purchasers after the execution of this Agreement and prior to the Transaction Date.

(B) By the Transaction Date, Purchasers shall agree in writing to have an effective organization which shall be responsible for the sale of power, operation and maintenance of Eklutna and, if necessary, Purchasers shall execute power sales agreements to purchase power from Eklutna.

(C) Purchasers shall provide in their organizational agreements that if one or more of the Purchasers are unable or unwilling to purchase its share of Eklutna, then the other Purchasers may purchase that share.

(2) Arrange for the payment of the amounts set out in Section 5 (Price and Payment Terms) to be paid to the United States Treasury.

d. The Purchasers and APAd shall conduct engineering, environmental and safety inspections at Eklutna and jointly determine a list of items or matters they consider necessary to be changed or modified prior to transfer. APAd shall make such changes and modifications prior to the Transaction Date, or provide appropriate assurances that those changes or modifications shall be made. The Purchasers and APAd shall also consensually and jointly determine the acceptability of Eklutna for transfer to the Purchasers. Failure to reach agreement on the joint determination of either the list of necessary changes or modifications or the acceptability of Eklutna for transfer shall constitute grounds for termination of the Agreement.

e. This Agreement may be terminated by Purchasers if, prior to the Transaction Date, the value of Eklutna or its capability to produce energy and power has been diminished by any cause after the execution of this Agreement. Any notice of termination shall be provided to APAd in writing.

f. The parties agree that the above-listed action in subsections (a) through (d) are crucial to the sale and transfer of Eklutna. The Purchasers may elect to terminate this Agreement if the authorizing legislation does not contain substantially the same provisions set forth in Section 10(a) or if APAd fails to complete its obligations under Sections 10(b) and 10(d). APAd may elect to terminate this Agreement if the Purchasers fail to complete their obligations under Sections 10(c) and 10(d).

11. Post-sale Operations, Maintenance and Power Marketing Arrangements.

The Purchasers shall establish appropriate organizational, staffing and administrative arrangements for Eklutna on or before the Transaction Date.

To assist in implementation of these post-sale arrangements, APAd shall make available for inspection and use by the Purchasers all Eklutna records and data and shall consult with the Purchasers on operation procedures, replacement schedules, staffing plans and training on a continuing basis starting on the effective date of this Agreement.

These provisions are intended to ensure that the Purchasers have full opportunity to become fully familiar with Eklutna and to help identify further specific actions that shall facilitate the transfer of operation of Eklutna to the Purchasers.

12. Effective Date.

This Agreement shall become effective as of the calendar date on which all parties have executed this Agreement.

13. Environmental Management.

The parties intend that the transfer of ownership be accomplished in a manner that assures continued compliance with environmental and public safety standards and laws including appropriate dam safety measures. The parties note that, under applicable Department of Energy instructions, APAd is required to prepare a management plan for Eklutna covering environmental and safety requirements.

APAd shall develop and implement such management plan prior to the date on which the transaction plans are adopted and in full consultation with the Purchasers. Failure by the Purchasers to agree to such a plan shall be grounds for termination of this Agreement by the Purchasers.

The Purchasers agree to continue the implementation of such management plan after the Transaction Date, including periodic updates of the plan as needed.

14. Term.

This Agreement shall remain in effect for such time as is necessary to complete the sale of Eklutna to the Purchasers and payments for such sale to the United States Treasury, provided that this Agreement shall terminate two years after the effective date if authorization by Congressional legislation has not been obtained within those two years, and provided further

that this Agreement shall terminate two years after the date of the Congressional authorization if transfer of Eklutna to the Purchasers has not occurred by that time. The above termination dates may be extended by mutual agreement of the parties.

The above termination provisions are intended to provide ample time to obtain Congressional authorization and complete the transaction. However, it is the intent of the parties to obtain such authorization as quickly as possible and complete the sale as quickly thereafter as is reasonably practicable.

This Agreement shall be terminated if, at any time prior to the Transaction Date, the Purchasers determine they are not able to meet the payment terms and so notify APAd in writing.

15. Dispute Resolution.

The parties shall attempt to settle any claim or controversy arising out of this Agreement in good faith. The parties may agree to submit any claim or controversy to a mutually-acceptable mediator, the cost of which shall be borne equally by APAd and Purchasers. The use of such a procedure shall not be construed to affect adversely the rights of either party under the doctrines of laches, waiver or estoppel. Nothing in this section shall prevent any party from resorting to judicial procedures. Any judicial action shall be filed in the Federal court at Anchorage, Alaska.

16. Notice.

All notices under this Agreement shall be in writing directed to the Purchasers through the General Managers of the Purchasers, and to the APAd through the Administrator of the APAd or its successor.

17. Amendment.

This Agreement may be modified only by mutual agreement in writing between the Purchasers and APAd. Any such modifications must be consistent with applicable State and Federal law.

18. Approvals.

Any final sale and transfer of Eklutna shall become effective only on the obtaining of all required regulatory and administrative approvals or on receiving satisfactory assurance that such approvals are forthcoming.

19. Assignment.

This Agreement shall inure to the benefit of, and be binding upon the respective successors and assigns of the parties to this Agreement, provided however, that neither this Agreement nor any interest therein shall be transferred or assigned by any party to any other party, except to the United States or an agency thereof, without the written consent of the others whose written consent shall not be unreasonably withheld.

However, any assignment by Purchasers must be made to a successor in interest to the Purchasers and such assignment shall provide that the power from Eklutna be used for the benefit of customers in the service area of the Purchasers. Any of the Purchasers may assign its interest to the Alaska Electric Generation & Transmission Cooperative, Inc. (AEG&T) subject to any existing agreements, including amendments, between Chugach, AEG&T and MEA.

20. Force Majeure.

Failure by either APAd or the Purchasers to perform any of the requirements of this Agreement brought about by causes beyond their control and without fault or negligence of the parties shall constitute an excusable delay. In any instance where excusable delay occurs, the time for completing the work shall be extended by negotiation of the parties.

21. Continuing Support and Assistance.

The parties agree to support and assist each other in the mutually satisfactory resolution of any unforeseen problems associated with the transfer. APAd and the Purchasers recognize that new issues involving the transfer process may arise prior to and after transfer, or that issues considered resolved may need further clarification, implementation or other resolution. APAd and the Purchasers agree that open lines of communication are desirable after the date of this Agreement and after transfer to facilitate the transfer process. To that end, APAd and the Purchasers each agree to exercise their good faith efforts in implementing the terms of this Agreement expeditiously. APAd further agrees to use its best efforts to make available an appropriate Federal entity to implement this section in the event that APAd as an identifiable Federal entity ceases to exist.

22. Relationship of Purchasers.

The covenants, obligations and liabilities of the Purchasers are intended to be several and not joint or collective, and nothing contained herein shall be construed to

create an association, joint venture, trust or partnership, or to impose a trust or partnership covenant, obligation or liability on or with regard to any of the Purchasers. Each Purchaser shall be individually responsible for its own covenants, obligations and liabilities as provided in this Agreement. No Purchaser shall, by virtue of this Agreement, be under the control of, or be deemed to control, the other Purchaser. No Purchaser shall be the agent of, or have a right or power to bind, the other Purchasers without its express written consent, except as may be expressly provided in this Agreement, or as may be otherwise provided by existing law. The provisions of this Section may be modified by the final approved agreements provided for under Section 10(c)(1).

23. Agreement for Benefit of Parties Only.

As provided in Section 8, above, the parties intend to protect fully the rights of non-power users of Eklutna land and water. The parties do not intend by this Agreement to create rights in, or to grant remedies to, any third party as a beneficiary of this Agreement, or as a beneficiary of any duty, covenant, obligation or undertaking established by, or performed pursuant to, this Agreement.

24. Miscellaneous Provisions.

a. The parties agree, upon request of the other parties, to make, execute and deliver any and all documents reasonably required to implement this Agreement.

b. Captions and headings appearing in this Agreement are included to facilitate reference to the Agreement, and they are not to be read as a part of this Agreement, nor shall they have bearing on its interpretation.

c. This Agreement may be executed simultaneously in two or more counterparts, each of which shall be deemed to be an original, but all of which together shall constitute one and the same instrument.

IN WITNESS WHEREFORE, the parties have caused this Agreement to be executed the day and year written hereafter.

DATED this 2nd day of August, 1989.

Eklutna Purchase Agreement
Exhibit A

August 2, 1989
Page 1 of 2

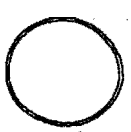
Lands, Easements and Rights-of-Way

Exhibit A consists of this narrative (pages 1 and 2 of 2) and the map prepared by BLM, signed and dated February 3, 1989.

This exhibit describes and displays present land status for the Eklutna Hydroelectric Project and describes in general terms the conveyances of land and land rights contemplated in the purchase agreement.

1. BLM - managed lands and military lands used for Eklutna Project for which BLM is to provide APAd rights-of-way sufficient for operation, maintenance, repair and replacement of Eklutna facilities, such rights-of-way to be assigned by APAd to the Purchasers.

Legend Symbols and Description.



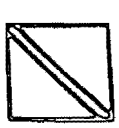
Withdrawals. Refers to approximately 863 acres of public lands withdrawn for Eklutna at the "Intake Area," "Power Tunnel," "Eklutna Powerplant" and "Anchorage Substation." The total acreage is comprised of the following land:

a. Approximately 320 acres withdrawn for the "Power Tunnel" under Public Land Order 1231 dated September 28, 1955.

b. Approximately 230 acres utilized for the "Intake Area" and approximately 60 acres for a portion of "Eklutna Powerplant" as described by ANCSA 3(c) determination AA-51183 dated July 30, 1986.

c. Approximately 243 acres utilized for "Eklutna Powerplant" as described by ANCSA 3(e) determination AA-42534 dated September 1, 1982.

d. Approximately 10 acres withdrawn for "Anchorage Substation" under Secretarial Order dated April 4, 1952.



State Land-R/W. Refers to rights-of-way across State-selected lands covering the transmission line east of "Eklutna Powerplant" to the Knik River.

Military Land-R/W. Refers to rights-of-way across military lands used for Eklutna transmission lines.

Acquired-3(e). Refers to approximately 2.5 acres of acquired land used for "Reed Substation" as described by ANCSA 3(e) determination AA-45155 dated July 30, 1985.

2. ANCSA 17(b) Easements.

Map symbol: Native Land - 17(b) Easements.

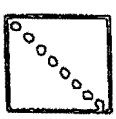
Refers to rights-of-way that are reserved for portions of the 115kV transmission line, access roads and other Eklutna facilities located on Native corporation lands, and exist as easement reservations in the ANCSA conveyances to the Native corporations pursuant to Section 17(b) of ANCSA. Those easements will not be altered by the sale of Eklutna and the Purchasers may use these easements for their intended purposes.

3. APAd Acquired Land and Easements.

Refers to land and easements acquired by the Bureau of Reclamation (predecessor of APAd) during construction of Eklutna and now controlled by APAd. APAd will assign the land and easements to the Purchasers.

Legend Symbols and Description:

Acquired. Refers to approximately 0.8 acres of land owned by APAd at Palmer Substation.



Acquired-Easements. Refers to approximately 33 easements across private lands acquired by the Bureau of Reclamation (predecessor of APAd) and now held by APAd.

4. Other Easements on Private Land.

Map [Symbol]:

Note: Other Easements on Private Lands To Be Acquired - See Exhibit A Narrative

Refers to approximately two hundred and fifty (250) parcels of private land located along the 115kV transmission line, many of which require title curative action for purposes of perfecting assignable easement rights or rights-of-way for the Purchasers. APAd shall be responsible for acquiring assignable easement rights or rights-of-way across those lands, for subsequent assignment to Purchasers.

5. Reservoir.

Eklutna Lake as designated on the map is the reservoir described in the body of the Agreement.

Eklutna Purchase Agreement
August 2, 1989

Amendment No. 1

1. Purpose.

This Amendment No. 1 reflects new information with respect to lands, extends the term of the August 2, 1989, Eklutna Purchase Agreement ("Agreement"), and states the selling price if the Transaction Date is October 1, 1992, or October 1, 1993.

2. Amendment to Section 10. Interim Activities.

Section 10a.(4) of the Agreement is amended to read as follows:

"10.a.(4) Authorize the State of Alaska (State) to select and direct the Secretary of the Interior to convey to the State certain Eklutna lands identified in Exhibit A, including approximately 853 acres of improved lands housing the powerhouse, intake structure, dam facilities, and a portion of the power tunnel under the provision of Section 6(a) of the Alaska Statehood Act of July 7, 1958, Public Law 85-508, and the North Anchorage Land Agreement of January 31, 1983, such conveyances to be subject to the rights-of-way being provided to Purchasers under Section 10(a)(3) above."

3. Amendment to Section 5. Price and Payment Terms.

Section 5 (a) of the Agreement is amended to read as follows:

"a. If the Transaction Date is October 1, 1991, the selling price shall be $8,613,000.

If the Transaction Date is October 1, 1992, the selling price shall be $9,022,000.

If the Transaction Date is October 1, 1993, the selling price shall be $9,818,000.

If the Transaction Date is other than one of the three above dates, the selling price will be calculated by APAA as the discounted present value as of the Transaction Date of all remaining principal and interest payments after the Transaction Date according to the payment schedule shown on Exhibit B of this agreement plus $1,000,000 ($1 million). Exhibit B payments for the first year will be prorated to reflect the portion of the year remaining after the Transaction Date. Subsequent Exhibit B payments will be assumed at mid-year (April).

The price determination is to be included in the transition plan required under Section 9 below."

4. Now Exhibit B.

A new Exhibit B dated June 25, 1991, reflecting the above amendment to Section 5, Price and Payment Terms, is incorporated in the Agreement in place of the original Exhibit B.

5. Extended Term.

The first paragraph of Section 14 of the Agreement is amended to read as follows:

"This Agreement shall remain in effect for such time as is necessary to complete the sale of Eklutna to the Purchasers and payments for such sale to the United States Treasury, provided that this Agreement shall terminate four years after the effective date if authorization by Congressional legislation has not been obtained within these four years, and provided further that this Agreement shall terminate two years after the date of the Congressional authorization if transfer of Eklutna to the Purchasers has not occurred by that time. The above termination dates may be extended by mutual agreement of the parties."

6. Effective Date

This Amendment No. 1 to the Agreement shall become effective as of the calendar date on which all parties have executed this Amendment.

DATED this 30th day of July, 1991.

Eklutna Purchase Agreement
August 2, 1989

Amendment No. 2

1. Purpose.

This Amendment No. 2 extends the term of the August 2, 1989, Eklutna Purchase Agreement ("Agreement"), and states the selling price if the Transaction Date is October 1, 1993, October 1, 1994, or October 1, 1995.

2. Amendment to Section 5, Price and Payment Terms.

Section 5 (a) of the Agreement is amended to read as follows:

"a. If the Transaction Date is October 1, 1993, the selling price shall be $8,810,000.

If the Transaction Date is October 1, 1994, the selling price shall be $7,733,000.

If the Transaction Date is October 1, 1995, the selling price shall be $8,117,000.

If the Transaction Date is other than one of the three above dates, the selling price will be calculated by APAd as the discounted present value as of the Transaction Date of all remaining principal and interest payments after the Transaction Date according to the payment schedule shown on Exhibit B of this agreement plus $1,000,000 ($1 million). Exhibit B payments for the first year will be prorated to reflect the portion of the year remaining after the Transaction Date. Subsequent Exhibit B payments will be assumed at mid-year (April).

The price determination is to be included in the transition plan required under Section 9 below."

3. New Exhibit B.

A new Exhibit B dated March 8, 1993, reflecting the above amendment to Section 5, Price and Payment Terms, is incorporated in the Agreement in place of the Amendment No. 1 Exhibit B.

4. Extended Term.

The first paragraph of Section 14 of the Agreement is amended to read as follows:

"This Agreement shall remain in effect for such time as is necessary to complete the sale of Eklutna to the Purchasers and payments for such sale to the United States Treasury, provided that this Agreement shall terminate six years after the effective date if authorization by Congressional legislation has not been obtained within these six years, and provided further that this Agreement shall terminate two years after the date of the Congressional authorization if transfer of Eklutna to the Purchasers has not occurred by that time. The above termination dates may be extended by mutual agreement of the parties."

5. Effective Date.

This Amendment No. 2 to the Agreement shall become effective as of the calendar date on which all parties have executed this Amendment.

Eklutna Purchase Agreement
April 21, 1995

Amendment No. 3

1. Purpose.

This Amendment No. 3 extends the term of the August 2, 1989, Eklutna Purchase Agreement ("Agreement"), and states the selling price if the Transaction Date is October 1, 1995, October 1, 1996, or October 1, 1997.

2. Amendment to Section 5. Price and Payment Terms.

Section 5 (a) of the Agreement is amended to read as follows:

"a. If the Transaction Date is October 1, 1995, the selling price shall be $8,117,000.

If the Transaction Date is October 1, 1996, the selling price shall be $7,178,000.

If the Transaction Date is October 1, 1997, the selling price shall be $5,953,000.

If the Transaction Date is other than one of the three above dates, the selling price will be calculated by APAd as the discounted present value as of the Transaction Date of all remaining principal and interest payments after the Transaction Date according to the payment schedule shown on Exhibit B of this agreement plus $1,000,000 ($1 million). Exhibit B payments for the first year will be prorated to reflect the portion of the year remaining after the Transaction Date. Subsequent Exhibit B payments will be assumed at mid-year (April).

The price determination is to be included in the transition plan required under Section 9 below."

3. New Exhibit B.

A new Exhibit B dated February 23, 1995, reflecting the above amendment to Section 5, Price and Payment Terms, is incorporated in the Agreement in place of the Amendment No. 1 Exhibit B.

4. Extended Terms.

The first paragraph of Section 14 of the Agreement is amended to read as follows:

"This Agreement shall remain in effect for such time as is necessary to complete the sale of Eklutna to the Purchasers and payments for such sale to the United States Treasury, provided that this Agreement shall terminate eight years after the effective date if authorization by Congressional legislation has not been obtained within these eight years, and provided further that this Agreement shall terminate two years after the date of the Congressional authorization if transfer of Eklutna to the Purchasers has not occurred by that time. The above termination dates may be extended by mutual agreement of the parties."

5. Effective Date.

This Amendment No. 3 to the Agreement shall become effective as of the calendar date on which all parties have executed this Amendment.

MEMORANDUM OF UNDERSTANDING

THIS MEMORANDUM OF UNDERSTANDING is made this 29th day of July, 1989, by and among MATANUSKA ELECTRIC ASSOCIATION, INC. ("MEA"), CHUGACH ELECTRIC ASSOCIATION, INC. ("Chugach"), and the MUNICIPALITY OF ANCHORAGE d/b/a ANCHORAGE MUNICIPAL LIGHT & POWER ("ML&P"). MEA, Chugach and ML&P are hereinafter collectively called the "Purchasers."

1. Recital. The Purchasers are parties to that certain Eklutna Purchase Agreement ("Purchase Agreement") dated as of March 31, 1989, with the Alaska Power Administration ("APAD") which concerns the purchase by Purchasers of certain real and personal property referred to therein as "Eklutna." It is understood that the Purchase Agreement has not yet been executed by ML&P and is therefore not yet effective. The parties expect that the Purchase Agreement will be so executed and, upon that assumption, enter into this Memorandum of Understanding.

2. Cost, Power and Firm Interests of Purchasers. It is mutually understood by the Purchasers that the allocation of output power (capacity and energy) from Eklutna (as defined in Section 3 of the Purchase Agreement) under the Purchase Agreement will continue as under the present participation in the following proportions: 16/30 to ML&P, 9/30 to Chugach and 5/30 to MEA, and that these same proportionate shares will determine the Purchasers' respective proportionate shares of their undivided interest in the Eklutna assets identified in Section 4 of the

Purchase agreement, the Purchasers' respective shares of the purchase price identified in Section 9 of the Purchase Agreement, and the Purchasers' respective shares of Eklutna's operating costs.

3. Operation of Eklutna. It is further understood and agreed that the Purchasers and their successors and assigns shall operate Eklutna in accordance with prudent electric utility practices in order to produce power in the most efficient manner possible for the maximum beneficial use of customers in the service area of the Purchasers, subject to compliance with those water usage agreements that the Purchasers have agreed to assume pursuant to Section 8 of the Purchase Agreement.

FIX ... ASSETS ___
GENERAL MGR. ___

Meeting Date:

From: Mayor Fink

Subject: Eklutna Purchase Agreement

In its AR87-41(S-1) as amended and dated March 3, 1987, the Anchorage Municipal Assembly resolved that (1) the best interest of the public may be served by federal transfer of the Eklutna Hydroelectric Facility to the Municipality or other local entities with all rights, title and interest of the United States, including reserved and acquired water rights; and (2) the administration may commence formal negotiations with the Department of Energy regarding divestiture of the project.

On May 20, 1987, the Alaska Power Association (APA) formally requested proposals from the Municipality of Anchorage, Chugach Electric Association (CEA), and the Matanuska Electric Association (MEA) for the purchase and transfer of the Eklutna Power Project. The Municipality of Anchorage d/b/a Municipal Light and Power (ML&P), CEA, and MEA (cumulatively the "Purchasers") have developed a joint proposal for purchase of the Eklutna Project. The joint proposal, presently under review by the Municipality of Anchorage, Chugach Electric Association and Matanuska Electric Association, is entitled "Eklutna Purchase Agreement" and sets out arrangements, terms, and conditions for sale of Eklutna to purchasers, such arrangements, terms, and conditions to be implemented if the United States Congress authorizes such sale. The following are essential terms of the proposed agreement:

a. The Eklutna assets to be sold and transferred generally consist of the power production, transmission, associated real property and all other facilities and assets, provided for Eklutna under the Eklutna Project Act of July 31, 1950; all rights-of-way and easements for existing Eklutna facilities located on BLM managed lands and military lands; and water rights, including the reservoir rights.

b. Within six (6) months of Congressional authorization, transition plans are to be adopted which will, among other things, identify the Transaction Date on which ownership of the Eklutna facilities will transfer to Purchasers; determine a schedule for payment of the purchase price to the United States Treasury; provide for the orderly transfer of the operations and related activities of Eklutna; provide for environmental, engineering and safety inspections by Purchasers; provide for completion of any asset transfer; develop a particularized listing of assets to be sold or transferred; and address other matters as may be considered necessary by the parties.

c. Total or combined Purchase Price to the three purchasing utilities is dependent on the timing of the Transaction Date: $10,435,000 if on October 1, 1989; $9,580,000 if on October 1, 1990; $8,631,000 if on October 1, 1991. Any other Transaction Date shall result in a selling price calculated as the discounted present value of all remaining principal and interest payments plus $1 million. The full selling price is to be paid within five (5) years after the Transaction Date using an interest rate of 9 percent. The discount rate to be used in determining the selling price is also 9 percent. ML&P's share of the purchase price is 16/30 or initially $5,565,333.33, which moneys will be committed upon the effective date of the Agreement.

d. Effective date of the Purchase Agreement is the calendar date on which all parties have executed the Agreement. The Agreement requires authorization by Congressional legislation within two years of the effective date of the Agreement, and further requires transfer of Eklutna assets within two years of Congressional legislation authorizing the transfer.

e. The covenants, obligations and liabilities of the Purchasers are intended to be several and not joint or collective. ML&P, CEA, and MEA shall each acquire an undivided interest of 16/30, 9/30 and 5/30, respectively, in the Eklutna Power Project.

f. Purchasers of Eklutna are assuming all responsibilities associated with the Agreement dated February 17, 1984 between AFA and the Municipality of Anchorage concerning the Eklutna Water Project and the Supplemental Agreement No. 1 dated August 24, 1988. AWWU's entitlement to secure a long range source of water for Anchorage with the Eklutna Water Project is thereby preserved.

g. The Purchasers are executing a memorandum of understanding concerning the possible election by the Municipality to internally reassign its interest in the Eklutna Power Project. In the event of a sale or transfer of ML&P or for other reasons the Municipality may retain its interest in the Eklutna Power Project for the benefit of the Municipality and the Eklutna Water Project.

ASSEMBLY MEMORANDUM
Eklutna Purchase Agreement
Page 3

The subject Eklutna Purchase Agreement will result in lower costs to ML&P for Eklutna power than under existing federal ownership. The Agreement ensures that ML&P will retain its current share of Eklutna output for the life of the Project. Since Eklutna is and will continue to be ML&P's lowest cost energy source, retention of ML&P's share will continue to stabilize rates.

It is recommended that the Assembly authorize the Administration to enter into an agreement for the purchase of Eklutna under the basic terms and conditions outlined above.

EXHIBIT C

Engineering inspection results listing (to date) including APA's response to the Stone & Webster report in 12 pages to ML&P dated May 13, 1996.

Environmental and safety inspection results and APA's response will not be available from Stone & Webster until after the Effective Date of this Plan. These results are incorporated into Exhibit C by reference, and will be included by mutual consent of the Parties upon receipt from Stone & Webster.

TRANSFER OF THE
EKLUTNA HYDROELECTRIC PROJECT
PALMER, ALASKA
ANCHORAGE MUNICIPAL LIGHT AND POWER

Dear Moe:

The following items are suggested for inclusion in your list of major items to be discussed among APA and the Purchasing Utilities:

- Survey of Dam and comparison with 1987 Survey
- APA's current program for routine inspections of the dam
- Rehabilitation of Power Tunnel Adit
- APA's Environmental, Health and Safety Management Plan
- Environmental Issues
- Health and Safety Issues
- Environmental Permits and Plans
- List of Physically separated sites to be included in the transfer, together with information on land and land rights
- List of vehicles and off road equipment to be transferred
- Transmission Line Survey

Stone & Webster Engineering Corporation
P.O. Box 2325, Boston, Massachusetts 02107-2325
245 Summer Street, Boston, Massachusetts 02210
Tel: 617-600-6111 Fax: 617-600-6180

A more comprehensive list of Technical and Miscellaneous Items is attached.

The list of environmental issues, prepared by Jim Rogers, and the list of Health and Safety issues, prepared by Mike Daniels, Mike Schowen and Sterling Larson will follow.

Best Regards,

Fred R. Harty, Jr.
Task Coordinator

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION
DURING THE TRANSFER INSPECTIONS FOR THE
EKLUTNA HYDROELECTRIC PROJECT

(see also the separate lists covering
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
Remote Sites		
◦ Possibilities for relocating or discontinuing the use of the Reed substation should be considered due to the security problem.		
◦ Ownership of the old Eklutna powerhouse should be established with respect to the transfer process.		
◦ At the Palmer substation, the transformer should be checked for damage because of the deformed stud.	APA has advised that MEA performed a detailed inspection (letter of February 27, 1996)	
◦ Grounds maintenance should be performed at the Repeater Station. Also, the provisions for future snow removal and vehicle access to the MEA substation should be established with respect to the Repeater Station.	APA will remove brush, weeds and logs (letter of February 27, 1996) Future maintenance to be established	
Eklutna Dam and Spillway	APA will remove logs and debris (letter of February 27, 1996)	
◦ The area upstream from the spillway is heavily encumbered with floating logs and other debris. This material should be removed.		

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION DURING THE TRANSFER INSPECTIONS FOR THE EKLUTNA HYDROELECTRIC PROJECT

(see also the separate lists covering
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
° There is an area of subsidence at the downstream edge of the dam crest, about two thirds of the way between the right abutment and the spillway structure. The subsidence is on the order of 2 ft to 3 ft over an area that is large enough to make this a grade depression. We were unable to find a solution of the condition in previous reports. A survey of this area and institution of a monitoring program is suggested.	APA will perform the survey (letter of February 27, 1996)	
° A survey program is also suggested for the road that leads from the main road to the right abutment. This survey would determine if there is a spot in the road which is lower than the crest of the dam.	APA will perform the survey (letter of February 27, 1996)	
° A survey of the various dam monitoring monuments should also be made and compared with previous measurements. Other areas of interest for a survey are described in the detailed report.	APA will perform the survey (letter of February 27, 1996)	
° Some means should be provided for removal of water which accumulates in the spillway outlet gate access gallery. There was standing water in this gallery at the time of the inspection.		

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION
DURING THE TRANSFER INSPECTIONS FOR THE
EKLUTNA HYDROELECTRIC PROJECT

(see also the separate lists covering:
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
◦ An area of standing water was noted downstream from the toe of the dam toward the outlet of the spillway channel. This condition was noted in previous reports with the comment that it was not clear whether the wet spot was related to the reservoir or originated downstream. This area should continue to be observed in future inspections, particularly when the area between the two dams is dry.		
◦ Brush and small trees were noted on the downstream embankment and abutments of the dam. This vegetation should be removed.	APA will remove vegetation (letter of February 27, 1996)	
Intake Gate Area ◦ The surface drainage should be improved around the intake gate silo.		
◦ It is suggested that this gate operating system be renovated and updated.		
◦ Cracks noted in the silo concrete at the level of the gate operating system should be monitored to determine if any changes are being experienced.		
◦ The steel items such as ladders, platforms, gate operator and gate operator supports should be cleaned and painted.		
◦ It is suggested that the provision of a permanent power supply be considered for this structure.		

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION DURING THE TRANSFER INSPECTIONS FOR THE EKLUTNA HYDROELECTRIC PROJECT

(see also the separate lists covering
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
• The access road was washed out at the time of the site visit. It is suggested that improvements be made to permit uninterruptible vehicle access on this road, which serves the intake gate silo and the Anchorage Water District diversion structure.	APA has restored the road to its original condition (letter of February 27, 1995) An upgrade has been requested for consideration by the Purchasing Utilities	
Gage House for Reservoir Water Level Monitoring • The ownership of this gage house should be verified with respect to the project transfer.		
• The identity of the floating cable, noted during the inspection, should be established and any necessary remedial action taken.	Repaired by USGS (letters of February 27, 1995 and March 13, 1995)	
Adit to the Power Tunnel • Remedial measures should be taken to restore access to the watertight bulkhead in the adit and to prevent unauthorized entry into this area.	APA will only patch the holes of the power tunnel access entrance (letter of February 27, 1995)	
Surge Tank • The area around the surge tank should be monitored for erosion of surface material. Corrective measures should be taken if necessary.		
• The inside of the surge tank should be inspected when the opportunity presents itself.		

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION
DURING THE TRANSFER INSPECTIONS FOR THE
EKLUTNA HYDROELECTRIC PROJECT

(see also the separate lists covering:
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
° The free turning operation of the wheels on the wheeled gate should be verified to be sure that they will function under load during an emergency gate closure (previous closure operations are understood to have been with no flow).		
° The gate may need painting or other maintenance.	There is no record of when the gate was last painted (letter of March 13, 1995)	
° A broken grounding strap needs to be repaired.		
° Restrictions related to operation of high bulb load should be noted.		
Intake Channel ° Obstructions caused by the process of cable welding up on the embankment roadway should be addressed.		

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION
DURING THE TRANSFER INSPECTIONS FOR THE
EKLUTNA HYDROELECTRIC PROJECT

(see also the separate lists covering
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
◦ Confirm or adjust the values of minimum tailwater level based on project datum: 20 ft elev - one unit 21 ft elev - two units (It has been reported that all project elevations following the 1964 earthquake are 2.6 ft. to 2.9 ft. lower than those shown on the drawings. If sea level forms the basis for tailwater level, the new tailwater, based on project datum, could be higher when affected by high tides)	Levels not confirmed per letter of March 13, 1996	
Powerhouse ◦ Acceptability of the sump oil separation method should be reviewed.		
◦ Redesign of the exhaust system should be considered to avoid the present situation in which the battery room exhaust is ducted through the main control panel. Also, the potential for inadvertent passage of oil room exhaust into the control room should be reviewed.	APA will replace the batteries with a different type (letter of February 27, 1996)	
◦ Rehabilitation of the butterfly valves should be considered to correct leaking which has been reported to be unfixable through normal seal adjustment.		
◦ Greaseless wicket gate bearings should be considered for installation on the turbines.		

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION
DURING THE TRANSFER INSPECTIONS FOR THE
EKLUTNA HYDROELECTRIC PROJECT

(see also the separate lists covering:
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
◦ A thin walled section of cooling water pipe, noted in the Bureau of Reclamation Inspection Report, should be replaced.	Two sections have been patched. APA will correct the last section this year (letter of February 27, 1996)	
◦ The cable trays presently have 1/4 inch asbestos fiberboard underneath the cables. Other arrangements should be established so that this asbestos material can be removed.		
◦ The immovability of the transformers on their rails should be verified to prevent damaging movement in the event of an earthquake.	APA will add restraints (letter of February 27, 1996)	
◦ Consideration should be given to more conventional distribution methods of supplying power to the Government Camp.		
EKLUTNA TO PALMER TRANSMISSION LINE ◦ On Structure 2/7, a broken bell should be replaced in the right insulator string	APA will be responding to these items during the normal maintenance program (letter of March 13, 1996)	
◦ On Structure 10/5, two broken bells in the center insulator string and one broken bell in each of the outside strings should be replaced	APA will be responding to these items during the normal maintenance program (letter of March 13, 1996)	
◦ Vibration on the center phase between structures 7/1-7/2 should be addressed	APA will be responding to these items during the normal maintenance program (letter of March 13, 1996)	

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION
DURING THE TRANSFER INSTRUCTIONS FOR THE
EKLUTNA HYDROELECTRIC PROJECT

(see also the separate lists covering:
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
• Remedial measures or changes should be considered at three areas on the line that are subject to damage, as described in the detailed report (overbuilds near between 3/7 and 3/8, old Knik River bridge, and the Matanuska River crossing between 9/3 and 10/3)	APA has no plans for any major work in this area (letter of February 27, 1996)	
• The out of plumb condition of the insulator strings should be addressed at structures 1/7, 1/8, 9/1 and 9/2	APA has no plans for any major work in this area (letter of February 27, 1996)	
• Excess brush and trees should be removed from the rights of way as described in the detailed report	APA has no plans for any major work in this area (letter of February 27, 1996)	
• Structure 10/4 should be made plumb	APA has no plans for any major work in this area (letter of February 27, 1996)	
TRANSMISSION LINE FROM EKLUTNA TO ANCHORAGE • Deterioration of the cross arm at Structure 10/3 should be addressed	APA will be responding to these items under the normal maintenance program (letter of March 13, 1996)	
• Broken bells, as described in the detailed report, should be replaced	APA will be responding to these items under the normal maintenance program (letter of March 13, 1996)	
• Excess brush and trees should be monitored for timely removal as described in the detailed report	APA will be responding to these items under the normal maintenance program (letter of March 13, 1996)	
MISCELLANEOUS • Plan and profile of each transmission line	APA will provide the original drawings. You should be aware that APA presently has a surveying contract under way to make an as-built plan of the entire transmission line.	

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION DURING THE TRANSFER NEGOTIATIONS FOR THE EKLUTNA HYDROELECTRIC PROJECT

(see also the separate lists covering:
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
• Land and Land rights data for: 1. The power plant and associated structures including the tailrace channel 2. The substations and switchyard 3. The transmission line rights-of-way and access to the rights-of-way 4. Other properties to be transferred	This will be compiled as part of transition activities (letter of March 13, 1996)	
◦ List of all outstanding contracts and commitments, including informal agreements: For example, it is understood that APA has an understanding that the Fish Hatchery may use some storage areas in the Eklutna warehouse. It is also understood that APA sometimes provides road maintenance and snow removal services in the park area. Such agreements and understandings should be listed.	This has been provided to The McCormick (and other purchasers) as part of transition activities (letter of March 13, 1996)	
◦ List of vehicles and other on road and off road equipment.	This will be compiled as part of transition activities (letter of March 13, 1996)	
◦ List of all major items of spare parts and spare equipment.	This will be compiled as part of transition activities (letter of March 13, 1996)	

TECHNICAL AND MISCELLANEOUS ITEMS NOTED FOR FURTHER CONSIDERATION
DURING THE TRANSFER NEGOTIATIONS FOR THE
EKLUTNA HYDRO-SUSITNA PROJECT

(see also the separate list covering
- Environmental Items
- Safety and Health Items)

	APA POSITION	TRANSITION TEAM RESOLUTION
• List of physically separated sites that are to be included in the transfer, such as the power plant itself, the USGS station house, the separate cabins, storage yards, transmission line and substation.	APA is collecting this and will provide this as part of the transition process (letter of March 13, 1996)	

EXHIBIT D

The Eklutna Asset List comprises:

1. **Eklutna Project Personal Property in 8 pages**
2. **Eklutna Property Inventory, Major Equipment, in 7 pages**
3. **Eklutna Project Furniture Inventory in 4 Pages**

The Eklutna Purchasers Asset Lists of Utility owned items on Eklutna Project sites:

1. **CEA Inventory Letter of May 22, 1996 in 2 pages**
2. **MEA Inventory Letter of April 1, 1996 in 2 pages**
3. **ML&P Inventory Letter of April 24, 1996 in 2 pages**

EKLUTNA PROPERTY INVENTORY

TRANSFORMER ROOM

2-EA POWER TRANSFORMERS

- Tierney Electrical Manufacturing Co.
- Enclosure Type-1
- KVA - 300
- PH=3
- H2 - 60
- Pri. Volts - 7200
- Sec. Volts - 408/277
- Ser. # 188-6 (SS Buss #2)
- Ser. # 188-5 (SS Buss #1)

2-EA STATION SERVICE DISCONNECT

- Elseco Switchgear Electric Service Engineering Co.
- DS 115 & DS 215

2-EA SINGLE-PHASE TRANSFORMER (Lightening)

- 60 cy 50 KVA
- Volts 480 to 120/240
- Class A-A
- Type DB
- Ser. # 63033 (KCD)
- Ser. # 63034 (KCC)

4-EA AIR CURRENT BREAKER

- GE
- Type AM - 13.8-250-1
- KV - 13.8
- Amps - 2000
- Interrupting KVA - 22,000
- Ser. # 376A355-25-4 (112)
- Ser. # 376A355-25-1 (212)
- Ser. # 376A355-25-5 (118)
- Ser. # 376A355-25-3 (218)

GENERATOR ROOM

2-EA SUMP PUMP MOTOR

- GE
- Model 5K324XA11A
- H.P. 7.5
- Nema Class B
- Type K
- Code G
- Frame - 324PH
- 60 cy - 3 PH
- Volts - 220/440
- FL Speed @ 60 cy - 1160
- FL Amp @ 60 cy - 21.1/10.6
- SER. # RHJ6877121 (#1)
- SER.. # SSSFJ6793973

2-EA TRANSFORMER

- GE
- Dry Type
- Indoor
- 3-phase
- 60 Hz
- Class AA
- Model # 9T26G3106
- kVA - 200
- Hv - 6900
- LV - 260
- SER. # DX

2-EA REGULATOR

- GE
- 1C-7932
- CAT - 05502X0798701
- Elem - 228B9856
- ASM - 228B9864
- Outl. - 228B9852

2-EA GENERATOR

1-EA OVERHEAD CRANE

- Ederer
- 40-ton

BATTERY ROOM

1-EA UPS

- *Best Power Systems*

1-EA EXTERNAL BYPASS SW

- *Best*
- *BYE100-MBB-1*
- *Volts - 277*
- *Cont. AMPS - 80*
- *Max Amps - 100*
- *1 Ph 60 Hz*

2-EA AIR COMP. MOTOR

- *Peerless electric Co.*
- *15 HP*
- *1450/1750 RPM*
- *40°C*
- *3 pH*
- *208-220/440 Volts*
- *50/60 cy*

CHUGACH ELECTRIC
ASSOCIATION, INC.

The following is an inventory of Chugach owned equipment at the Anchorage Substation:

- One (1) 115 kV circuit breaker, Westinghouse
  Breaker # 2409

- Four (4) 115 kV capacitor voltage transformers, Trench Electric
  Each transformer is mounted on a steel support structure
  CEA #'s: PT 125
  PT 126
  PT 127
  PT 128

- Two (2) 115 kV disconnect switches, Royal/Powerdyne
  Mounted on wood pole structure
  - Switch #'s SS201 and SS301

- Three guyed poles terminating 115 kV line from University Substation

- Three guyed poles terminating 115 kV line from Elmendorf Power Plant

- Satellite receiver system, Trimble
  Mounted on wood pole adjacent control building

The following equipment is located inside the control building:

- One (1) RTU cabinet

- One (1) dip-link cabinet

- One (1) Relay panel containing relays, switches, meters, and satellite clock receiver
  Relay panel designation: "CEA 115 kV Line to University"

- One (1) AC distribution panel and meterbase with meter
  Panel designation: Panel DH0

5601 Minnesota Drive • P.O. Box 196300 • Anchorage, Alaska 99519-6300
Phone 907-563-7494 • FAX 907-562-0027

Chugach also owns the following equipment located at the Eklutna Generation Plant:

- One (1) Harris-Westronic D-20 SCADA Remote Terminal Unit (RTU) and a slip link option mounted on the adjacent wall. This equipment is located downstairs below the control room in approximately vicinity of the State of Alaska microwave equipment.

Sincerely,

Jim K. Topalski
Manager, Land Services

Concur:

April 1, 1996

Mr. Jim Hall, Projects Manager
P.O. Box 2929
Palmer, AK 99645

Dear Jim:

The following is the result of our area inventory on March 28, 1996:

On this date Jim Hall, Matanuska Electric Association (MEA) and Michael V. Dillon, Alaska Power Administration (APA) toured the listed facilities. Ownership of various equipment at these facilities was established and mutually agreed upon. In some cases it is better to indicate by exception the equipment owned by one or the other organization.

PALMER SUBSTATION

All APA owned except:
Breaker B627 - MEA
Station Service Transformer 3237 - MEA

DOW TAP

Disconnect Switch #365 - APA
Disconnect Switch #371 - MEA

EKLUTNA POWER PLANT

All APA except:
RTU - MEA
4 ea 833 kVA Single Phase 6600-7200 Transformers- MEA
3 installed (Camp Line) - MEA
1 Spare - MEA

REED SUBSTATION

All MEA except:
High Side Dead End - APA
781 Disc SW - APA
760 GND SW - APA
115 kV Fuses - APA
Property and fence - APA

PIPPLE TAP

MEA - RTU house and all contents including the DC supply for the switch motor operators

Take Off Structure

APA - 561 Disc SW
560 GND SW
571 Disc SW
570 GND SW
Motor Operators for 561 and 571
Dead End Structures
Property and fence

BRIGGS TAP

All MEA except: 1271 Disc SW less motor operator- APA
1261 Disc SW manual Op only- APA
Property and fence - APA

CEA: Power Pot 115 kV 50 kVA

Sincerely,

Michael V. Dillon
General Foreman

cc: Nick French, APA
Tim McConnell, AML&P

ML&P Inventory of Property at Eklutna
April 24, 1996

ANCHORAGE SUBSTATION YARD:

- Two (2) pilot wire protection cabinets, Lloyd Controls
- One (1) three-phase 115 kV oil circuit breaker, type V, Allis Chalmers, Breaker #1162
- One (1)Switching structure and attached switches and insulators
- Switches
  One (1) ABS 1163
  One (1) ABS 1161
  One (1) GND Switch 1160
  One (1) By Pass Switch 1169
- Three (3) Potential transformers, three-phase, low side
- Six (6) line poles (dead end) and insulators

ANCHORAGE SUBSTATION CONTROL BUILDING:

- One (1) Center panel left side Quantum Watt Hour Meter #84878233, KVA & KVAR in-and-out
- Center panel right side ML&P:
  Three (3) Amp Meter
  Two (2) Volt Meter
  One (1) Synch Scope and Control Switches
- ML&P RTU relays for APA South line:
  Two (2) phase zone timers
  One (1) KD11 (phase-to-ground)

ANCHORAGE SUBSTATION CONTROL BUILDING (continued):

- Panel 6R: Relays for APA South line:
  Two (2) phase zone timers
  One (1) Inst. overcurrent relay
  One (1) pilot wire relay

- Panel 9R:
  Two (2) Timers
  One (1) Instantaneous fault Detection
  Three (3) Synch Check Relays
  One (1) Pilot Wire Relay
  One (1) KD 10 relay
  Two (2) Phase zone timers
  One (1) Instantaneous fault detector
  Three (3) Synch check relays

- Back Wall
  One (1) 19" Rack
  One (1) Granger Radio Equipment

- One (1) ML&P Padmounted Transformer #5217 7200V/120/240V

- One (1) ML&P Station Service Meter
  Miscellaneous Antennas on pole adjacent to control building

EKLUTNA PLANT:

- One (1) ML&P RTU

- Dunstan Controller and computer equipment for AGC/SCADA

As inventoried on April 24, 1996, by:

Timothy F. McConnell
Manager, Power Management, ML&P

Michael V. Dillon
Eklutna General Foreman, APA

EXHIBIT E

Eklutna Purchasers
Manner of Acting, Functional Responsibilities, and Staffing

EXHIBIT E

Eklutna Purchasers
Manner of Acting, Functional Responsibilities, and Staffing

PREAMBLE: The following is the general delineation of responsibilities for the Eklutna Project under ownership and operation of the Eklutna Purchasers and will provide for efficient management during normal and contingency operation. The Eklutna Purchasers expect these responsibilities will normally be carried out by the utility so assigned in this Exhibit E. Any Purchaser desiring to contract out or transfer between Eklutna Purchasers the performance of its responsibilities as designated in this Exhibit E shall first obtain approval for the change from APA and an operating committee (herein later defined as the Eklutna Operating Committee) which will be established prior to the Transition Date. The Parties intend to execute detailed transition agreements prior to the Transition Date.

(A) Manner of Acting.

(1) Transition Period. A transition period commencing on the Transition Date and concluding on the Transaction Date is anticipated to enable the Eklutna Purchasers to become familiar with the skills and work load necessary for prudent operation of the Eklutna Project. During that time, the current staff, now employed by APA, who may be offered employment by the Eklutna Purchasers and who may accept such offers will serve in the capacities described below, and the costs associated with their work on the Eklutna Project shall be paid by the Eklutna Purchasers in proportion to their respective Eklutna Project shares. Should those offered employment choose not to remain, their function(s) shall continue to be performed by the Purchasing Utility(s) responsible for those functions as that Utility

determines and with the approval of the Eklutna Operating Committee (EOC).

(2) Post Transaction Date Period. The Eklutna Purchasers agree that unless modified by the double majority voting provisions set forth in Section (A)(3) below, division of responsibilities set forth in this Exhibit E will form the basis for operations subsequent to the Transaction Date.

(3) Eklutna Operating Committee (EOC). The EOC consisting of one representative from each of CEA, MEA, and ML&P shall be formed for the management of the Eklutna Project. The EOC shall manage the Eklutna Project as authorized by APA and as agreed to by the Parties, commencing on the Transition Date. The EOC shall meet at least quarterly or more often at the request of any member with the first meeting to be held not later than June 30, 1996. The Chairman of the EOC shall be the ML&P representative until the end of the calendar year 1997. The Chairmanship thereafter shall rotate among the Eklutna Purchasers at the first meeting of each calendar year in the following order: CEA, MEA, and ML&P. Decisions of the EOC will be by double majority (a vote of two of the three Eklutna Purchasers whose shares total at least 51% of the Eklutna Project shares) unless otherwise agreed to by the Eklutna Purchasers in the Ownership and Operating Agreement to be executed by and among the Eklutna Purchasers not later than one year prior to the Transaction Date or at such time as otherwise agreed to by the Eklutna Purchasers. During the Transition Period, decisions by the EOC will be advisory in nature to APA unless specific authority is granted to the EOC by APA under mutually agreeable terms.

(4) Responsibilities of the EOC. Responsibilities of the EOC shall include:

(a) Prompt and Effective Oversight. The prompt and effective attention of the EOC shall be given to major maintenance and operating concerns or other conditions interfering with the safe and efficient operation of the Eklutna Project.

(b) The EOC shall ensure preparation of:

(i) An Eklutna Project Budget;

(ii) An Eklutna Project Status Report for distribution to each Eklutna Purchaser (and to APA prior to the Transaction Date) that will include monthly summaries, by each Eklutna Purchaser, of Eklutna Project energy, capacity, and wheeling schedules (to include losses and inadvertent power flows);

(iii) A monthly revenue report;

(iv) Reliability and scheduling occurrences causing significant power quality or scheduling deviations to the Eklutna Purchasers;

(v) Status report of EOC action items;

(vi) An annual energy allocation for each of the Eklutna Purchasers prior to each water year; and

(vii) Notification of any known limiting factors through the following quarter that would constrain any capacity or energy (including any transmission constraints).

(B) Functional Responsibilities. Duties and responsibilities may be revised and clarified under the terms of the Ownership and Operating Agreement to be executed prior to the Transaction Date or by action of the EOC. The functional responsibilities for the administration, operation, and maintenance of the Eklutna Project are as follows:

(1) Operation of the Eklutna Plant and Switchyard. MEA will operate the Eklutna Plant and Switchyard. CEA and ML&P will provide advice and assistance to MEA as requested by MEA or the EOC. The operator's duties, to the extent authorized by the Eklutna Project operating budget or as otherwise funded shall include:

(a) Providing on-site personnel as required to meet the needs of the Eklutna Project as determined by the EOC and the Eklutna Project operating budget;

(b) Bringing to the attention of the Eklutna Project Maintenance Superintendent or the EOC required Eklutna Project work essential to the safe and prudent operation of the Plant and Switchyard; and

(c) Coordinating the daily activities pursuant to these responsibilities with the ML&P Dispatch Center. The ML&P Dispatch Center shall have supervisory control over all switching functions and generator loading.

(2) Maintenance of the Eklutna Plant and Switchyard. ML&P will maintain the Plant and Switchyard. ML&P's general duties, to the extent authorized by the Eklutna Project operating budget or as otherwise funded shall include:

(a) Maintaining the Plant and Switchyard, including SCADA and communication equipment, to meet the needs of the Eklutna Purchasers as determined by the EOC and the Eklutna operating budget; and

(b) Providing a qualified and designated Eklutna Project Maintenance Superintendent who shall be responsible for:

(i) Developing a daily maintenance schedule for the Eklutna Plant in coordination with the operating utility's management, and as approved by the EOC;

(ii) Developing and implementing the preventive maintenance plans for the Eklutna Project as approved by APA and the EOC; and

(iii) Overseeing, on behalf of the EOC, all Eklutna Project maintenance in progress, with authority to suspend or modify such work as required to comply with the schedules and plans approved by APA and the EOC;

(iv) Bringing to the attention of the EOC required Eklutna Project work essential to the safe and prudent operation and maintenance of the Plant and Switchyard and performing or causing to be performed such required Eklutna Project work;

(v) Preparation of preliminary annual budget estimates for the Eklutna Project for submittal to MEA; and

(vi) Other Eklutna Project duties as assigned by ML&P pursuant to the above responsibilities, and with the concurrence of the EOC.

(3) Dispatch of the Eklutna Project. ML&P will dispatch the Eklutna Project. ML&P's general duties, to the extent authorized by the Eklutna Project operating budget or as otherwise funded shall include:

(a) Scheduling and dispatching plant capacity and energy to meet the needs of the Eklutna Purchasers in accordance with procedures established by the EOC, and under the ML&P automatic generation control (AGC) system. This will include the collection of SCADA data and other information sufficient to record all wheeling over Eklutna Project transmission lines; and

(b) Directing and controlling all switching, tagging and clearance activities for the Eklutna Project; and

(c) Honoring each Eklutna Purchaser's scheduling requests to the extent possible within the operating guidelines established by the EOC.

(4) Transmission Line and Substation Operation, Maintenance, and Repair.

(a) Facilities. As directed by the EOC and within the limitations of the Eklutna Project operating budget, CEA, ML&P, and MEA will be responsible for the operation, maintenance, and repair of the transmission segments and substations as follows:

(i) CEA—for the dual circuits on steel towers from Fossil Creek to the tap behind the Totem Theater in accordance with its May 1, 1980, agreement with APA;

(ii) ML&P—for the tap and lines from the above CEA maintained circuit to the Anchorage Substation, and the Anchorage Substation; and

(iii) MEA—for all remaining Eklutna Project transmission lines, the Palmer and Reed Substations, and the Wasilla radio relay site.

(iv) All costs for construction, operation, or maintenance of taps and facilities owned individually by ML&P, CEA, and MEA will be borne by that respective utility and not considered an Eklutna Project cost.

(b) Maintenance Activities. Transmission line and substation maintenance shall be performed in accordance with the plans approved by the EOC. As directed by the EOC and within the limitations of the Eklutna Project operating budget, the daily activities pursuant to these responsibilities shall be coordinated with the Eklutna Project Dispatcher in accordance with procedures approved by the EOC. General duties,

to the extent authorized by the Eklutna Project operating budget or as otherwise funded shall include:

(i) Maintaining Eklutna Project transmission lines and Eklutna Project substations so as to meet the needs of the Eklutna Purchasers; and

(ii) Bringing to the attention of the EOC required Eklutna Project work essential to the safe and prudent operation and maintenance of the Eklutna Project transmission lines and Eklutna Project substation equipment, and performing or causing to be performed such required Eklutna Project work to the extent existing obligations require or funds are made available for such work.

(5) Dam Maintenance and Inspections. As directed by the EOC and within the limitations of the Eklutna Project operating budget, CEA is responsible for advising the EOC on dam and waterway maintenance to include penstock, tailrace, and embankments, for ensuring required safety inspections are completed as may be prudent or required, and for bringing to the attention of the EOC such required Eklutna Project work on and along the waterways necessary to ensure safe and efficient operation of the Eklutna Project. The daily activities pursuant to these responsibilities shall be coordinated with the Eklutna Project Maintenance Superintendent and the Eklutna Project Dispatcher.

(6) Environmental Regulatory Compliance. CEA is responsible for advising the EOC on required procedures, inspections, and other actions required to ensure compliance with environmental mandates. General duties shall include periodic inspection of Eklutna Project related operations and review and coordination with APA of Eklutna Project environmental requirements.

(7) Fleet Maintenance. MEA has the responsibility for fleet maintenance, and shall take title to the titled vehicles subject to the rights of the other

Eklutna Purchasers on the Transaction Date. The daily activities pursuant to these responsibilities shall be coordinated with the Eklutna Project Maintenance Superintendent.

(8) Annual Budgeting, Billing, and Accounting. MEA will prepare the annual budget estimates; customary financial reports; billings for Eklutna Project Power, wheeling, and other benefits; other reports now being accomplished by the APA administrative staff at the Eklutna Plant; and other tasks as may be requested by the EOC. The Eklutna Project Maintenance Superintendent will provide preliminary Eklutna Project cost estimates for the annual budget to MEA to begin the annual budget process. MEA will also be responsible for billing the Eklutna Purchasers for all advanced costs and for payment of same, subject to cash management procedures established by the EOC. Each utility shall submit its requested reimbursement items to MEA for payment on a monthly basis. During the transition period, APA will calculate billing per the Power Sales Contract, and will submit a single combined monthly bill to the Eklutna Purchasers.

(9) Purchasing. Individual Eklutna Project invoices for tools, equipment, supplies, and contract services up to $2,000 may be approved by each utility pursuant to its responsibilities as described herein, but may not exceed a quarterly limit as prescribed by the EOC in its annual operating budget. All contracts or payment of invoices for more than $2,000 will normally require EOC approval, but this is not intended to constrain or delay necessary purchases to meet an emergency.

(10) Right-of-Way Authority. Right-of-way authority for third party requests will remain the responsibility of APA until such time as it is transferred to the Eklutna Purchasers.

(C) Staffing.

Beginning on the Transition Date, the Eklutna Purchasers anticipate the following APA employees shall, effective on the Transition Date, become employees of the utilities as follows.

Planned Eklutna Project Staff Assignments For The Transition Period:

Mike Dillon	Eklutna Project Maintenance Superintendent to ML&P
Amerilis Foster	Administrative Assistant to MEA
Bill Murphy	Maintenance Mechanic to MEA
Bob Plumley	Plant Mechanic to MEA
John Rivera	Plant Electrician to MEA

Terms and conditions of employment shall be developed as soon as practicable to enable a smooth transition to operation of the Eklutna Project by the Eklutna Purchasers.

EKLUTNA HYDROELECTRIC PROJECT

Agreement for Extension of

"1996 EKLUTNA HYDROELECTRIC PROJECT TRANSITION PLAN"

by and among

THE MUNICIPALITY OF ANCHORAGE d/b/a MUNICIPAL LIGHT & POWER;
CHUGACH ELECTRIC ASSOCIATION, INC.; and
MATANUSKA ELECTRIC ASSOCIATION, INC.

EKLUTNA HYDROELECTRIC PROJECT

Agreement for Extension of

"1996 EKLUTNA HYDROELECTRIC PROJECT TRANSITION PLAN"

by and among

THE MUNICIPALITY OF ANCHORAGE d/b/a MUNICIPAL LIGHT & POWER; CHUGACH ELECTRIC ASSOCIATION, INC.; and MATANUSKA ELECTRIC ASSOCIATION, INC.

The parties to this Agreement are the Eklutna Purchasers as defined in the 1996 Eklutna Hydroelectric Project Transition Plan (Transition Plan). The Eklutna Purchasers recognize that common interests exist regarding the ownership, operation, and maintenance of the Eklutna Project. The Eklutna Purchasers hereby extend the Transition Plan as modified by this Agreement.

The Eklutna Purchasers further recognize that obligations of the Eklutna Purchasers under the terms of the Alaska Power Administration Asset Sale and Termination Act, as well as obligations of the Alaska Power Administration and successor agencies, continue beyond the Transaction Date, and that the execution of this Agreement in no way relieves the Alaska Power Administration nor any Purchaser of such continuing obligations.

All capitalized terms not defined herein shall have the same meaning given them in the Transition Plan (including exhibits).

Therefore, the Parties agree to extend the Transition Plan as follows:

THIS Agreement for the Extension of the Transition Plan incorporates by reference the following documents and all of the rights, obligations, requirements, and provisions therein:

The 1996 Transition Plan, consisting of thirteen Sections contained on ten pages; incorporating therein, specifically:

Exhibit A, consisting of 33 pages;
Exhibit B, consisting of 5 pages;
Exhibit C, consisting of 12 pages;
Exhibit D, consisting of 25 pages; and,
Exhibit E, consisting of 9 pages.

THE Parties further agree to the following modifications with regard to the 1996 Transition Plan by this Agreement:

1. The Transition Plan will not expire upon completion of the tasks specified therein. However, the arrangements and timetable for transfer of operations, maintenance, and power marketing, as well as operation, maintenance, and administration of the Project will no longer require consultation with APA, nor will office space and access be provided for an APA real estate person after the Transaction Date. (Reference: Transition Plan Section 2 and Section 5)

2. The transfer of data and documents to the Eklutna Purchasers after the Transaction Date shall occur no later than January 1, 1998. (Reference: Transition Plan Section 7)

3. The effective date of this Agreement shall be the Transaction Date, but in any event no later than November 28, 1997.

4. The division of responsibilities among the Eklutna Purchasers after the Transaction Date will be as described in Exhibit E, Paragraph (A)(2).

5. The sixth sentence of Paragraph (A) (3) of Exhibit E is modified to delete reference to an "Ownership and Operating Agreement," and as so modified reads as follows: "Decisions of the EOC will be by double majority (a vote of two of the three Eklutna Purchasers whose shares total at least 51% of the Eklutna Project shares) unless otherwise agreed to by the Eklutna Purchasers."

THE parties further agree to the following in regard to the ownership, operation, and maintenance of the Eklutna Project:

1. An Eklutna Purchaser's interest in the Eklutna Project will not be modified or changed by any assignment or transfer, except upon consent of each Eklutna Purchaser. An Eklutna Purchaser's interest may be transferred or assigned among the Eklutna Purchasers in proportion to their respective Project interest or by such other allocation as to which each Eklutna Purchaser agrees. Transfer or assignment of an Eklutna Purchaser's interest to entities other than an Eklutna Purchaser will be subject to a first right of refusal by the remaining Eklutna Purchasers, with such right to be exercised within 180 days of receipt of written notification. If no remaining Eklutna Purchaser elects to acquire such interest, the transferring Eklutna Purchaser shall indemnify the remaining Eklutna Purchasers for all expenditures which would not otherwise be required, but for which the Eklutna Project becomes obligated in meeting licensing requirements and regulations which were exempted for the original Eklutna Purchasers under the Alaska Power Administration Asset Sale and Termination Act.

2. The terms and conditions of this Agreement will apply to any successor or assign of an Eklutna Purchaser, whether such succession or assignment results from security assignment, merger, acquisition, or any other disposition by the Eklutna Purchaser of its Eklutna Project share.

3. Exhibits A through D of the CONTRACT FOR ELECTRIC SERVICE TO THE CHUGACH ELECTRIC ASSOCIATION, INC.; MATANUSKA ELECTRIC ASSOCIATION, INC.; AND MUNICIPALITY OF ANCHORAGE, MUNICIPAL LIGHT & POWER, Contract No. DE-SC85-95AP10042 shall continue in effect until such time as revised or terminated by action of the EOC. Should any part of these Exhibits A through D conflict with the Transition Plan as modified by this Agreement, the Transition Plan shall prevail.

Dated at Anchorage, Alaska this 2nd day of October 1997.

Municipality of Anchorage

Larry D. Crawford
Municipal Manager

Chugach Electric Association, Inc.

Eugene N. Bjornstad

The APA hereby states its non-objection to the foregoing Agreement for Extension of "1996 EKLUTNA HYDROELECTRIC PROJECT TRANSITION PLAN"

Alaska Power Administration, a unit of the U.S. Department of Energy

Rodney L. Adelman
Administrator

RECOMMENDED:

Anchorage Municipal Light & Power

Hank Nikkels
Acting General Manager

APPROVED AS TO FORM:

MUNICIPALITY OF ANCHORAGE

Mary K. Hughes
Municipal Attorney

RECOMMENDED:

MUNICIPALITY OF ANCHORAGE

George J. Vakalis
Operations Manager

EXHIBIT A

OPERATING AGREEMENT

EXHIBIT A

OPERATING AGREEMENT

1. An operating committee consisting of one representative from each of APA, Chugach, MEA and ML&P shall be formed to decide or resolve operational matters not specified in the contract. The committee shall meet as necessary but not less than annually. The committee is not empowered to change any of the contract provisions. Committee decisions shall be by majority vote with each representative having equal weight.

2. Chugach's share of capacity and energy is 9/30, MEA's share of capacity and energy is 5/30, and ML&P's share of capacity and energy is 16/30.

3. Each Contracting Utilities shall have the right to schedule during any hour its share of the plant capacity to generate power using its own energy allocation as needed to meet its own system loads, provided its energy account is not less negative than 22500 times its share of capacity. (Example: Chugach -6750 MWh= -22500x9/30) A Contracting Utilities may utilize the capacity share of another Contracting Utilities with its own energy allocation if that other Contracting Utilities is not using the capacity and agrees to the use.

4. Spinning reserves from the plant shall be allocated to each Contracting Utilities on a pro rata basis on its share of project capacity net of any project generation scheduled by the Contracting Utilities. Any Contracting Utilities may schedule its full capacity share, if both units are then capable of operation at full output, by scheduling at least 5 MW of energy for that hour in which case both units will be operated by the dispatcher.

5. The net energy diverted by AWWU shall be deemed to have been energy delivered to and purchased by ML&P. The net energy diverted shall be calculated by subtracting the energy delivered to MEA by the Eklutna Water Treatment Plant energy recovery system from the amount of energy that could have been produced by the Eklutna Power Plant if the water delivered to the water treatment plant had instead been run through the power plant. AWWU shall either pay ML&P for the net energy diverted or replace it in kind as determined by separate agreements among APA, AWWU and ML&P.

6. At the beginning of each year, APA shall allocate all energy available for that year among the Contracting Utilities in proportion to their shares. All energy available shall be allocated unless there is a significant planned outage for that year. Whenever conditions significantly change the total energy available, APA shall allocate the change among the Contracting Utilities in proportion to their shares. For purposes of

allocating power and keeping track of energy account balances only, the year will start November 1 and end October 31.

7. APA shall maintain an energy account for each Contracting Utilities. Allocations of energy shall be credited to the accounts and energy deliveries shall be debited from the accounts at the end of each month.

8. Should a spill condition occur, APA shall calculate the amount of energy spilled and the energy accounts shall be reduced by an amount equal to the lessor of 1) the amount of energy spilled or 2) the amount in the energy accounts at the start of the spill as follows: The reduction shall be allocated among Contracting Utilities in proportion to the ratio that Contracting Utilities energy account at the start of the spill divided by the sum of all Contracting Utilities energy accounts at the start of the spill. (A negative energy account shall be treated as a zero value for the purpose of the ratio allocation. An energy account cannot become more negative as a result of the spill.) All energy generated during the period of the spill shall not be added to nor subtracted from the energy accounts. APA will take meter readings at the beginning and end of the spill period.

E X A M P L E S

	Share	Account before Spill	Share of Spill	Account after Spill
Chugach	30%	2,700	319	2,381
MEA	17%	4,500	531	3,969
ML&P	53%	18,200	2,150	16,050
Total	100%	25,400	3,000	22,400

	Share	Account before Spill	Share of Spill	Account after Spill
Chugach	30%	2,700	1,125	1,575
MEA	17%	4,500	1,875	2,625
ML&P	53%	-2,000	0	-2,000
Total	100%	5,200	3,000	2,200

	Share	Account before Spill	Share of Spill	Account after Spill
Chugach	30%	2,700	2,700	-
MEA	17%	1,500	1,500	-
ML&P	53%	500	500	-
Total	100%	4,700	4,700	-

9. Should Eklutna Lake elevation rise to the spill level, then the plant shall be run at the maximum output possible, to the extent system reliability and operating

conditions allow, until the lake elevation is reduced below the spill level. Each Contracting Utilities shall be entitled to its project share of the energy generated during this period. If a Contracting Utilities does not utilize its full project share, the remainder shall be apportioned among the other Contracting Utilities in proportion to their project shares. This extra energy shall not be subtracted from the energy account.

10. The Eklutna generator output voltages shall be controlled to maintain system voltage profiles as adopted by the operating committee but remaining within the reactive and real power limits for the units. Operation of the Eklutna generators at less than .90 power factor will be avoided unless unanimously agreed upon by the operating committee. If the production of reactive power reduces the real power output, the reduction shall be apportioned among the Contracting Utilities in proportion to that hour's generation schedule for each Contracting Utilities.

11. The energy produced and delivered to the Contracting Utilities shall be metered at the Eklutna power Plant (net outputs on the Anchorage line and Palmer line plus output on the Twin Peaks line minus any APA use outside this boundary) and the AWWU Eklutna energy recovery unit. Three percent (3%) of the net plant output shall be delivered to supply Contracting Utilities system losses and shall not be counted as energy delivered to the Contracting Utilities. The intent of the 3% is to compensate for the historical level of transmission losses incurred in transferring Eklutna power to Palmer, Eagle River and Anchorage.

12. APA shall contract with one of the Contracting Utilities to be the Eklutna Dispatcher. The Eklutna Dispatcher shall operate the power plant within that Contracting Utilities' "control area" which is defined as "a system capable of regulating its generation in order to maintain its interchange schedule with other systems and contribute its frequency bias obligation to the Interconnection". APA shall make best efforts to have the Eklutna Power Plant included in its dispatcher's automatic generation control (AGC) system. The Eklutna Dispatcher shall operate the plant in accordance with this Exhibit A and honor each Contracting Utilities' scheduling request to the extent possible within the operating guidelines prescribed by APA. At the end of each month, the Eklutna Dispatcher shall provide APA with an accounting of the energy scheduled by each Contracting Utilities.

13. APA shall provide its dispatcher with the most flexible operating guidelines possible within good engineering practices. These guidelines should at least include: minimum down time before restarting a unit; maximum number of unit starts per day; minimum unit output while operating; maximum unit output while operating; and, any unit operating ranges to be avoided.

14. "ML&P Net Delivered kWh" shall be the balance remaining after subtracting from the APA energy delivered to the purchasers; CEA, MEA, and APA quantities of energy

invoiced, as if it were taken at the Anchorage Substation. "ML&P Net Delivered kWh" is used in the wheeling calculations for ML&P and CEA in Exhibit B. (The assumption is that ML&P's energy from Eklutna is delivered to Anchorage Substation.) The preceding definition applies while ML&P is operating the Eklutna project within their control area. If the project is operated by Chugach within its control area, then "ML&P Net Delivered kWh" shall be the amount of energy scheduled to be delivered to ML&P as if it were taken at the Anchorage Substation.

15. IN WITNESS WHEREOF, the parties hereto have caused this contract to be executed the day and year first above written.

EXHIBIT B

ESTIMATE OF FIRM AND NON-FIRM ENERGY QUANTITIES AND COMPUTATIONS OF ANNUAL ENERGY AND WHEELING CHARGES

EXHIBIT B

Estimate of Firm and Non-Firm Energy ~~(APA PRS)~~

Year	Firm Energy (MWH)	Non-Firm Energy (MWH)
1994	153,000	11,000
1995	145,000	0
1996	153,000	11,000
1997	134,000	0
1998	153,000	11,000
1999	153,000	11,000
2000	153,000	11,000
2001	153,000	11,000
2002	153,000	11,000
2003	153,000	11,000
2004	153,000	11,000
2005	153,000	11,000

Computation of Annual Energy and Wheeling Payment

The total Annual Payment will be the sum of the Annual Energy Payment plus Annual Wheeling Payment. The Contracting Utilities will be billed for electric energy calculated annually each fiscal year beginning October 1, payable in twelve equal monthly payments. The amount of each annual energy installment shall be established in advance by the contracting officer in consultation with the Contracting Utilities and submitted to the Contracting Utilities in the form of Contract Exhibit B on or before October 1 of the year preceding the appropriate fiscal year.

1) Annual Energy Payment: multiply the FERC-approved rates for firm and non-firm energy times the projected energy sales shown in the APA Power Repayment Study (PRS); used to support the FERC-approved rates, except when provision in Article 16 of the contract determines the amount of energy to be billed; plus

2) Annual Wheeling Payment: Each year multiply the respective metered amounts of power and energy wheeled for each Contracting Utilities over APA transmission lines in the previous year (12 months) by the FERC-approved rate. Each Contracting Utilities will pay their respective wheeling charges for the previous year.

Wheeling Calculations:

The previous years wheeling will be calculated using the following formulas:

CEA: The energy wheeled for CEA shall be the sum of the net metered flow North on the APA North Line at ML&P Plant Two plus "ML&P Net Delivered" plus the metered flow out of the APA system into CEA University Substation (CB 2005).

EXAMPLE:		
	APA North Line net North	+2,000,000 kWh
	ML&P Net Delivered	+6,000,000 kWh
	University CB 2005 APA OUT	+1,000,000 kWh
	Total	9,000,000 kWh

MEA: The energy wheeled for MEA shall be the sum of the metered flow into the Dow and Palmer Substations minus the 115 kV Palmer Line NET quantity. The 115 kV Palmer NET quantity shall be metered flow OUT minus the metered flow IN values on the 362 meter. A negative energy value for wheeling shall be treated as zero energy flow.

EXAMPLE:		
	Dow Substation	+3,000,000 kWh
	Palmer Substation	+1,000,000 kWh
	115 kV Palmer Line NET	- 1,000,000 kWh
	Total	3,000,000 kWh

ML&P: The energy wheeled for ML&P shall be the sum of the total metered flow into the APA South Line at ML&P Plant Two (circuit breakers 115-18 and 115-19), at Anchorage Substation (ML&P CB 1162), and at CEA's University Substation (CB 2005 OUT (APA IN)) minus "ML&P Net Delivered."

EXAMPLE:		
	APA South Line Plant 2 IN	+ 23,000,000 kWh
	ML&P CB 1162 IN	+ 0 kWh
	CEA CB 2005 APA IN	+ 0 kWh
	ML&P Net Delivered	- 6,000,000 kWh
		17,000,000 kWh

NOTE: + is into APA
- is out of APA

ML&P Delivered Net will be calculated as follows:

Net Eklutna Energy Delivered shall be the sum of the net values of the Eklutna Powerplant delivery points known as the 115 kV Anchorage line (CB 462), the 115 kV Palmer line (CB 362), AWWU energy depleted, and the 12.47 kV Twin Peaks line. System losses are calculated to be 3% of the total Net Eklutna Energy Delivered. APA ENERGY DELIVERED TO THE

PURCHASERS shall equal the NET Eklutna Energy Delivered minus the 3% calculated system losses.

MEA monthly energy delivered shall be determined by a monthly scheduled amount as provided by MEA and it shall be shown as MEA DELIVERED.

CEA monthly energy delivered shall be determined by a monthly scheduled amount plus the AWWU recovery amount minus APA Use and shown as CEA DELIVERED. The scheduled delivered amount is the monthly scheduled interchange with ML&P (from Eklutna) minus MEA Delivered and the losses (both scheduled and month end true-up) supplied by the Eklutna Project.

ML&P energy delivered shall be the balance remaining after subtracting from the APA Energy Delivered to the Purchasers; CEA Delivered, MEA Delivered, and APA Use, as if it were taken at the Anchorage Substation, and shown as ML&P NET DELIVERED.

An example of the above is:

Net Eklutna Energy Delivered	+21,000,000 kWh (Metered)
3% Loss	- 630,000 kWh (21,000,000 x .03)
APA Energy Delivered to the Purchasers	+20,370,000 kWh
APA Use	- 1,000 kWh (Metered)
CEA Delivered	- 6,000,000 kWh (Scheduled)
MEA Delivered	- 2,000,000 kWh (Calculated)
ML&P Net Delivered	+12,369,000 kWh

IN WITNESS WHEREOF, the parties hereto have caused this contract to be executed the day and year first above written.

EXHIBIT C

POINTS OF DELIVERY

EXHIBIT C

Electric power and energy furnished and wheeled by APA to Chugach shall be delivered and measured at the following points:

A. At the one hundred fifteen (115) kilovolt line side span to terminal of APA CB 462 and disconnect 569 located in the Eklutna Powerplant switchyard. Power and energy will be delivered at the nominal voltage of one hundred fifteen (115) kilovolt at the point of delivery specified.

B. At the one hundred fifteen (115) kilovolt line side span to terminal of APA CB 362 and disconnect 569 located in the Eklutna Powerplant switchyard. Power and energy will be delivered at the nominal voltage of one hundred fifteen (115) kilovolt at the point of delivery specified.

C. At the one hundred fifteen (115) kilovolt slack span entering the Anchorage Substation attached to CEA circuit breaker 2400. Power and energy will be delivered at the nominal voltage of one hundred fifteen (115) kilovolt and will be measured at the one hundred fifteen (115) kilovolt at Chugach University Substation CB 2005 using CEA metering equipment.

Electric power and energy furnished and wheeled by APA to Matanuska shall be delivered and measured at the following points:

A. At the one hundred fifteen (115) kilovolt line side span to terminal of APA CB 462 and disconnect 569 located in the Eklutna Powerplant switchyard. Power and energy will be delivered at the nominal voltage of one hundred fifteen (115) kilovolt at the point of delivery specified.

B. At the one hundred fifteen (115) kilovolt line side span to terminal of APA CB 362 and disconnect 569 located in the Eklutna Powerplant switchyard. Power and energy will be delivered at the nominal voltage of one hundred fifteen (115) kilovolt at the point of delivery specified.

C. At the six thousand nine hundred (6,900) volt terminal of the MEA 6.9-12.47 KV power transformer for the 12.47 KV Twin Peaks line located at the Eklutna Powerplant. Power and energy will be delivered at the nominal voltage of six thousand nine hundred (6,900) volts and will be measured at six thousand nine hundred (6,900) volts at the point of delivery specified.

D. At the point near structure #7/6 where the MEA one hundred fifteen thousand (115) volt line taps the APA Eklutna-Palmer 115 KV line. Power and energy will be delivered at the nominal voltage of one hundred fifteen thousand (115) volts and will be measured at twelve thousand four hundred

seventy (12,470) volts at the Dow Substation low side of power transformer using MEA metering equipment.

E. At the low voltage twelve thousand four hundred seventy (12,470) volt terminal of the APA 115-12.47 KV power transformer in the Palmer Substation. Power and energy will be delivered at the nominal voltage of twelve thousand four hundred seventy (12,470) volts at the point of delivery using MEA metering equipment.

F. At the twelve thousand four hundred seventy (12,470) volt bus of the Municipality of Anchorage/Anchorage Water and Wastewater Utility's Eklutna Water Project. Power and energy will be delivered at the nominal voltage of twelve thousand four hundred seventy (12,470) volts at the point of delivery using MEA metering equipment.

Electric power and energy furnished and wheeled by APA to ML&P shall be delivered and measured at the following points:

A. At the one hundred fifteen (115) kilovolt line side span to terminal of APA CB 462 and disconnect 569 located in the Eklutna Powerplant switchyard. Power and energy will be delivered at the nominal voltage of one hundred fifteen (115) kilovolt at the point of delivery specified.

B. At the one hundred fifteen (115) kilovolt line side span to terminal of APA CB 362 and disconnect 569 located in the Eklutna Powerplant switchyard. Power and energy will be delivered at the nominal voltage of one hundred fifteen (115) kilovolt at the point of delivery specified.

C. At the one hundred fifteen thousand (115) volt bus in the Anchorage Substation attached to ML&P CB 1162 known as APA South Line. Power and energy will be delivered at the nominal voltage of one hundred fifteen thousand (115) volts and will be measured at one hundred fifteen thousand (115) volts at the point of delivery specified using ML&P metering equipment.

D. At the one hundred fifteen thousand (115) volt bus in the ML&P Plant Two Substation for CB 115-21 and 115-22 known as APA North Line. Power and energy will be delivered at the nominal voltage of one hundred fifteen thousand (115) volts and will be measured at one hundred fifteen thousand (115) volts at the point of delivery specified using ML&P metering equipment.

IN WITNESS WHEREOF, the parties hereto have caused this contract to be executed the day and year first above written.

EXHIBIT D

SCHEDULE OF RATES FOR FIRM ENERGY, NON-FIRM ENERGY, AND WHEELING

UNITED STATES
DEPARTMENT OF ENERGY
ALASKA POWER ADMINISTRATION

Eklutna Project, Alaska

SCHEDULE OF RATES FOR WHOLESALE FIRM POWER SERVICE

EFFECTIVE:

October 1, 1994 for a maximum of five years.

AVAILABLE:

In the area served by the Eklutna Project, Alaska.

CHARACTER AND CONDITIONS OF SERVICE:

Alternating current, sixty cycles, three-phase, delivered and metered at the low-voltage side of substation.

MONTHLY RATE:

Capacity charge: None.

Energy charge: All energy at 18.7 mills per kilowatthour.

MINIMUM ANNUAL CAPACITY CHARGE:

None.

BILLING DEMAND:

Not applicable.

ADJUSTMENTS:

For transformer losses: If delivery is made at the high-voltage side of the customer's substation but metered at the low-voltage side, the meter readings will be increased 2 percent to compensate for transformer losses.

For power factor: None. The customer will normally be required to maintain power factor at the point of delivery of between 90 percent lagging and 90 percent leading.

For auxiliary power service: Auxiliary power supplies may be used in conjunction with the service hereunder if the parties hereto, prior to the Contracting Utilities' utilization of any such auxiliary power supply, have entered into a written operating agreement defining the procedure by which the amount of power and energy will be determined.

UNITED STATES
DEPARTMENT OF ENERGY
ALASKA POWER ADMINISTRATION

Eklutna Project, Alaska

SCHEDULE OF RATES FOR WHOLESALE NON-FIRM POWER SERVICE

EFFECTIVE:

October 1, 1994 for a maximum of five years.

AVAILABLE:

In the area served by the Eklutna Project, Alaska.

APPLICABLE:

To firm power customers normally maintaining generating facilities or other sources of energy sufficient to supply their requirements.

CHARACTER AND CONDITIONS OF SERVICE:

Alternating current, sixty cycles, three-phase, delivered and metered at the low-voltage side of substation.

MONTHLY RATE:

Capacity charge: None.

Energy charge: All energy at 10.0 mills per kilowatthour.

MINIMUM CHARGE:

None.

BILLING DEMAND:

Not applicable.

ADJUSTMENTS:

For character and conditions of service: None.

For transformer losses: If delivery is made at the high-voltage side of the customer's substation but metered at the low-voltage side, the meter readings will be increased 2 percent to compensate for transformer losses.

UNITED STATES
DEPARTMENT OF ENERGY
ALASKA POWER ADMINISTRATION

Eklutna Project, Alaska

SCHEDULE OF RATES FOR WHOLESALE WHEELING SERVICE

EFFECTIVE:

October 1, 1994 for a maximum of five years.

AVAILABLE:

In the area served by the Eklutna Project, Alaska.

APPLICABLE:

To all non-Federal power transmitted over Eklutna Project transmission facilities for the benefit of Project customers.

CHARACTER AND CONDITIONS OF SERVICE:

Alternating current, sixty cycles, three-phase, delivered and metered at the low-voltage side of substation.

MONTHLY RATE:

Capacity charge: None.

Energy charge: All energy wheeled for others at .3 mills per kilowatthour.

MINIMUM CHARGE:

None.

BILLING DEMAND:

Not applicable.

ADJUSTMENTS:

For character and conditions of service: None.

For transformer and transmission losses: As specified in wheeling contracts.

In Order No. U-18-102(44)/U-19-020(39)/U-19-021(39) ("Order 39"), the Regulatory Commission of Alaska ("RCA") approved, subject to conditions, the sale to Chugach Electric Association, Inc. ("Chugach") of most of the electric utility assets of the Municipality of Anchorage d/b/a Municipal Light and Power ("ML&P") ("Transaction"). Order 39 also approved the MOA-Chugach Eklutna Power Purchase Agreement ("Chugach PPA"), subject to conditions, effective on the date of closing of the Transaction. In Order 39, the RCA granted to the MOA, effective upon the date of closing of the Transaction, a certificate of public convenience and necessity authorizing ownership and provision of generation electric utility service to the public for compensation from its share of Eklutna, subject to conditions, including that before the effective date of the Chugach PPA or the MOA-Matanuska Electric Association, Inc. ("MEA") Power Purchase Agreement ("MEA PPA"), the MOA has filed documentation that it has surrendered its voting rights on the Eklutna Operating Committee ("EOC").[1] In Order 39, the RCA required that the MOA's surrender of its EOC voting rights "cannot be lifted until such time as [the MOA] has shown to our satisfaction that [the MOA] has acquired the expertise required to fully participate as voting member of the EOC."[2]

Enclosed as Exhibit 1 is a Surrender of Eklutna Operating Committee Voting Rights document, signed by ML&P, Chugach, and MEA. The Surrender will remain in effect until the MOA shows to the RCA's satisfaction that the MOA has acquired the expertise required to participate as a voting member of the EOC (or upon expiration or termination of the terms of the Chugach PPA and the MEA PPA).

Exhibit 1

October 27, 2020

Surrender of Eklutna Operating Committee (EOC) Voting Rights

In accordance with the requirements of order U-18-102(44), the Municipality of Anchorage, dba Municipal Light & Power(ML&P), hereby surrenders its voting rights as an EOC member and under the Fish and Wildlife Agreement effective as of the Closing of the Asset Purchase Agreement between ML&P and Chugach Electric Association (Chugach). This surrender of voting rights shall remain in effect until ML&P's successor complies with the RCA requirements pertaining to qualifications for ML&P's representation on the EOC.

Until ML&P's successor complies with the qualification terms of RCA order U-18-102(44), all EOC decisions will be by unanimous vote of Chugach and Matanuska Electric Association, Inc. (MEA). Eklutna hydro operations, dispatch and maintenance will continue to follow past practices and policies unless changes are approved through the EOC process.

From: Layne, James O (RCA)
To: RCA Records & Filing
Subject: FW: TA379-121 Question
Date: Wednesday, October 28, 2020 10:11:21 AM

Please place this email into TA379-121 as a supplemental filing dated October 27, 2020.

This is in response to a Staff request.

Thanks.

From: Dean Thompson <ddt@khe.com>
Sent: Tuesday, October 27, 2020 4:05 PM
To: Layne, James O (RCA) <james.layne@alaska.gov>
Subject: Re: TA379-121 Question

Mr. Layne:

The MOA/ML&P do not believe that the MEA Eklutna PPA is inconsistent Order No. U-18-102(44)/U-19-020(39)/U-19-021(39) ("Order 39"). The part of Order 39 that you cite states:

"We can only find that MHP is managerially and technically fit to maintain an ownership interest in the Eklutna Project subject to the condition that before the effective date of either the [Chugach] Eklutna PPA or the MEA PPA, ML&P surrenders its vote on the EOC under the Eklutna Project agreements so that Chugach and MEA can jointly manage and operate the Eklutna Project, including negotiating compliance with the Fish and Wildlife Agreement, without MHP having a vote on operation or management decisions." Order 39 at 67.

To comply with the Order, ML&P will surrender its vote on the EOC prior to the closing of the ML&P sale to Chugach, which will be before the effective date of the Chugach Eklutna PPA and of the MEA Eklutna PPA. ML&P will promptly file a notice of that surrender with the RCA. The surrender will have a term at least equal to the term of the two PPAs, subject to termination of the surrender upon MHP showing to the RCA's satisfaction "that MHP has acquired the expertise required to fully participate as a voting member of the EOC." Order 39 at 67. If and when MHP has a proposed EOC representative that satisfies the qualifications, MHP will file that information and request that the RCA make the necessary finding for termination of the EOC vote surrender.

Like Section 4.2(B) of the Chugach Eklutna PPA, Section 4.2(B) of the MEA Eklutna PPA requires MHP, in consultation with the Purchaser, to select MHP's representative on the EOC. As a result of Order 39, MHP won't have any voting representative on the EOC until the surrender is terminated upon a positive finding by the RCA that MHP's proposed representative is qualified. Thus, Section 4.2(B) of neither PPAs need to be amended. In addition, Section 4.2(B) should remain as written as it will be relevant if and when MHP's voting rights surrender is terminated in the future upon the necessary finding of the RCA.

Please contact me if you have any questions.

Subject: TA379-121 Question

Mr. Thompson,

I have a question regarding the Eklutna Power Purchase Agreement between MOA and MEA (MEA Eklutna PPA) filed in TA379-121 as Exhibit A. MEA has filed TA525-18 seeking to add the MEA Eklutna PPA to its tariff and seeks approval of a new COPA cost element and I have asked them the same question below in TA525-18 regarding the MEA Eklutna PPA. A joint response by MEA and MOA is welcomed, or each party can file its own response.

I believe there is an inconsistency between the MEA Eklutna PPA and the final order (U-18-102(44)/U-19-020(39)/U-19-021(39)) (U-18-102(44).

At page 67 of U-18-102(44) the Commission required MOA/ML&P to surrender its vote on the EOC so Chugach and MEA could manage the Eklutna Hydro project.

The MEA Eklutna PPA, at page 8 of Exhibit A, Section 4.2(B) appears to allow MOA/ML&P to keep its vote on the EOC.

Does MOA/ML&P believe the language between the final order and the MEA Eklutna PPA as summarized above are in conflict? Please explain your response and provide a remedy if appropriate.

Please respond by Monday, October 26, 2020 by 5:00pm.

Thank you for your attention to this request and contact me with any questions.

Dear Parties,

Thank you to the Owners for your submission on April 25, 2024, of the Proposed Final Fish and Wildlife Program (Proposed Final Program) for the Eklutna Hydropower Project (Project) and to the remaining parties for their comments and participation in developing the Proposed Final Program.

As you know, through an act of Congress, the Project was sold by the federal government to Chugach Electric Association (CEA), Matanuska Electric Association (MEA), and Anchorage

Municipal Light & Power (through the Municipality of Anchorage). As part of this transaction, the 1991 Fish and Wildlife Agreement (Agreement) laid out the process for the purchasers of the Project to fund studies to examine and quantify impacts to fish and wildlife from the Project, and to develop a proposed Final Program for the protection, mitigation, and enhancement of fish and wildlife effected by the Project and for the other Parties to offer their comments.

As Governor, my duties under the Agreement are to evaluate the Proposed Final Program, attempt to reconcile differences between the Parties to the Agreement, and establish a Final Program that "adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources."

The evaluation process requires me to give "equal consideration" to eight factors to "ensure that Eklutna [is] best adapted for power generation and other beneficial public uses." The factors are: purposes of efficient and economical power production; energy conservation; the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat); the protection of recreational opportunities; municipal water supplies; the preservation of other aspects of environmental quality; other beneficial public uses; and requirements of State law.

The Final Program established today includes my evaluation of these eight criteria and my amendments to the Proposed Final Program that attempt to reconcile differences among the Parties and the Native Village of Eklutna.

The Proposed Final Program restored year-round water flows to the Eklutna River by connecting Eklutna Lake to the existing Anchorage Water and Wastewater Utility (AWWU) infrastructure; required the Purchasers to provide funding for ongoing monitoring studies, physical habitat enhancement, and lakeside trail repairs; the creation of a Monitoring and Adaptive Management Committee (Committee); and two limited reopeners of the Program for the potential construction of a Fixed Wheel Gate to replace the existing outlet and spillway and for the potential construction of fish passage into and out of Eklutna Lake.

In accordance with my responsibilities to attempt to reconcile differences, I have adopted the Proposed Final Program with the establishment of three amendments to the Proposed Final Program:

1. I added a Governor-appointed seat to the Monitoring and Adaptative Management Committee. This allows future Governors and myself to continue our responsibility under the Agreement as the work of the Committee is ongoing in the final Program.

2. I accepted the request by federal signatories, U.S. Fish and Wildlife Service, and National Marine Fisheries Service, to modify the Proposed Final Program. The Proposed Final Program allocated up to $10 million to study and potentially construct the Fixed Wheel Gate at the Eklutna Dam. If the Fixed Wheel Gate is determined to not be structurally or economically feasible, as requested by the federal parties, the remaining funds not expended of up to $10 million will be made available to the Monitoring and Adaptive

Management Committee for additional studies or measures that protect, mitigate damage to, or enhance fish and wildlife habitat.

3. I am accepting the request by the Municipality of Anchorage and Native Village of Eklutna in their joint resolution of September 5, 2024, to evaluate the Pumped Storage Hydro alternative. However, the Agreement does not provide any party the authority to unilaterally suspend or delay implementation of the Final Program and therefore the necessary work to design, permit, and construct the connection to AWWU's infrastructure and to evaluate the Fixed Wheel Gate is required to begin immediately.

The Final Fish and Wildlife Program established today under the Agreement balances the eight factors I am required to consider, and the Program is designed to be an iterative one that will be able to adapt to changing conditions and technologies well before the process is required to repeat itself.

I want to thank the Parties, the Native Village of Eklutna, and the members of the public who helped shape this Final Program with their time, resources, input, and participation over the past five years. This is not the end of the process, and I am committed to seeing this Final Program successfully enacted. I encourage everyone to join me in working together to implement this Program without delay.

Sincerely,

Mike Dunleavy
Governor

BEFORE GOVERNOR MIKE DUNLEAVY

IN THE MATTER OF THE EKLUTNA	**:**	**DECISION**
RIVER FISH & WILDLIFE PROGRAM	**:**	**October 2, 2024**

This matter comes before the Governor pursuant to the 1991 Agreement ("Agreement") among the Municipality of Anchorage ("MOA"), Chugach Electric Association, Inc. ("Chugach"), Matanuska Electric Association, Inc. ("Matanuska") (MOA, Chugach and Matanuska are collectively referred to as "Eklutna Purchasers" or "Owners"; when discussing issues where the Owners disagree, Chugach and Matanuska will be referred to as the "Operators" and MOA will be listed separately), the United States Fish & Wildlife Service ("FWS"), The National Marine Fisheries Service ("NMFS"), the Alaska Energy Authority ("AEA") and the State of Alaska ("State") concerning the protection, mitigation of damages to, and enhancement of fish and wildlife affected by the Eklutna Hydroelectric Project ("Project") near the Native Village of Eklutna ("NVE").[1] Per the Agreement the Governor is required to establish a "final Fish and Wildlife Program that adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources affected by the Project".[2]

I. PROJECT HISTORY

---

[1] The Agreement also involved the Snettisham Hydroelectric Project, but that project is not part of this decision.

[2] Agreement, Section 5 at P. 4.

The U. S. Bureau of Reclamation built the Project in the 1950s and it was rehabilitated over time. It currently consists of a dam which is an earth and rockfill structure 815 feetlong and 41 feet high with a rectangular spillway that runs through the dam.[3] The intake structure for the Project is located 36 feet below the natural Eklutna Lake level. From there, water is diverted north into a 4.6-mile-long tunnel through Goat Mountain and then into a 1,370-foot-long penstock before reaching the powerhouse located on Old Glenn Highway. The tailrace flows under the highway and then discharges into the Knik River. The powerhouse contains two generating units.[4] Eklutna Lake, approximately seven miles long and one mile wide, is located within Chugach State Park and provides almost 90 percent of the domestic water supply for the Municipality of Anchorage. As of 2018 the Project produced 177,438 megawatt hours of clean energy, enough to power more than 24,600 residential homes for an entire year.[5]

The federal government owned and operated the project until October 1997 when it sold it to the Eklutna Purchasers and is currently owned by Chugach (30%), Matanuska (16.67%) and MOA (53.33%), however, it has been operated exclusively by Chugach and Matanuska since October 30, 2020.[6] The purchase by the Eklutna Purchasers also included a requirement that the Eklutna Purchasers enter into the Agreement with NMFS,

---

3 https://eklutnahydro.com/background/.

4 Id.

5 Id.

6 MOA was required to surrender its right to operate the Project. RCA Order U-18-102(44)/U-19-020(39)/U-19-021(39). Surrender of Eklutna Operation Committee (EOC) Voting Rights dated as of October 27, 2020, and filed with the RCA in docket number U-18-102(44).

FWS, AEA, and the State (the Eklutna Purchasers, NMFS, FWS, AEA and State are collectively referred to as the "Parties[7]").

II. THE AGREEMENT

To obtain Congressional approval of the Project sale to the Eklutna Purchasers and as a substitute for federal licensing under the Federal Power Act[8] and its accompanying regulations[9], the Parties were required to enter into the Agreement to develop a fish and wildlife program that provides for the protection, mitigation of damages to, and enhancement of fish and wildlife affected by the Project.[10] The Agreement outlined a 35 year timeline to develop the fish and wildlife program. The timeline ran from the date of the sale, i.e., October 2, 1997, and initially culminates with the complete implementation of the fish and wildlife program by October 2, 2032. This process is designed to reoccur every 35 years.

A. Agreement Requirements

The Agreement set forth a comprehensive process to arrive at a final fish and wildlife plan. It required the Parties to perform the following:

---

7 For purposes of this decision, Parties will also include NVE, unless stated otherwise, even though they are not an actual party to the Agreement.

8 16 U.S. C. §791a et seq.

9 18 C.F.R. 4.1 et seq.

10 The Agreement was a substitute for the requirements of the Federal Power Act and its regulations and there are no requirements in the Agreement imposing those laws on the Parties. Rather, the Agreement specifically spells out all requirements the Parties must follow to develop a fish and wildlife program.

a. Purchasers to fund and perform studies in consultation with the other Parties and other State of Alaska agencies to "examine, and quantify, if possible, the impacts to fish and wildlife from the Project and to develop proposals for the protection, mitigation, and enhancement of fish and wildlife affected by the Project."[11]

b. Purchasers develop a draft program, the remaining Parties and other interested persons comment on the draft program, and the Purchasers reply to the comments, with all comments and the replies to be made part of the public record.[12]

c. Preparation of draft summary of the study results and a draft Fish and Wildlife Program by Purchasers.[13] Purchasers to hold public meetings and receive public comments on the program.[14]

d. Purchasers develop a Proposed Final Fish and Wildlife Program ("Proposed Final Program"), an explanation of its reasons for the final program, and provide them and all public comments to the other Parties and the Governor.[15]

---

11 Agreement, Section 2, P. 2.
12 Id. Section 3, P. 2.
13 Id. Section 4, P. 3.
14 Id. Section 5, P. 3.
15 Id. Section 5, P. 4.

e. The remaining Parties prepare written comments to the Proposed Final Program and Purchasers prepare a reply. The comments and reply are provided to the Governor.[16]

f. The Governor establishes a Final Fish and Wildlife Program.[17]

g. The Agreement requires the Owners to implement the final Program within 30 years of the transaction date and for the Governor to approve the Final Fish and Wildlife Program three years prior to commencement of the implementation of the Program.[18]

III. PROPOSED FINAL PROGRAM AND PARTIES' COMMENTS[19]

The Proposed Final Program was provided to the Parties and the Governor on April 25, 2024. The Proposed Final Program can be summarized as follows[20]:

1. Proposed Final Program

a. Construction of a new valve and release structure ("Eklutna River Release Facility") located adjacent to the existing Anchorage Water and Wastewater Utility ("AWWU") portal valve to restore year-round water

---

16 Id. Section 5, P. 4.

17 Id.

18 Id. Section 7, P. 4-5. The transaction date is October 2, 1997, which is the date of the sale of the Eklutna Project to the Owners. Program implementation must therefore begin by October 2, 2027, and the Governor's approved final Plan must be issued by October 2, 2024, i.e., three years prior to the commencement of Plan implementation.

19 AEA did not provide comments to the Final Proposed Fish and Wildlife Program. NVE did provide comments even though it was not a party to the Agreement. I will consider those comments as part of this decision.

20 The Final Proposed Fish and Wildlife Program is attached hereto as Appendix "A".

flow to the Eklutna River ("River") one mile downstream from the Eklutna Dam;[21]

1. The Eklutna River Release Facility is projected to provide year-round water flow to the River one mile below the dam at rates of 27 cubic feet per second to 40 cubic feet per second;[22]
2. The Eklutna River Release Facility is designed to increase available spawning habitat for chinook, coho, pink and chum salmon;

b. Automation of the existing outlet gate at the base of the spillway at the Eklutna Dam for remote operation;[23]

c. Development of a channel maintenance flow regime to support fish habitat over the long term;[24]

d. Construction of eight new bridges for Anchorage Water and Wastewater Utility (AWWU) at each existing ford crossing to be designed and built to withstand the projected flows;[25]

e. One-time payment of $234,000 for lakeside trail repairs;[26]

f. Monitoring and Adaptive Management Plan;[27]

---

21 Proposed Final Fish and Wildlife Program, Section 2.1.1 at P. 4-5.
22 Id. at Section 2.1.2 at P. 6-7. And
23 Id. Section 2.2.1 at P. 7.
24 Id. Section 2.2.2 at Pp. 8-10.
25 Id. Section 2.5 at P. 10.
26 Id. Section 2.4.1 at P. 11.
27 Id. Section 3.0 – 3.4 at P. 12 - 15. This plan includes the creation of a Monitoring and Adaptive Management Committee consisting of five voting members, one each from the following entities: Alaska Department of Fish and Game, Alaska Department of Natural Resources, NMFS, FWS and NVE. Id. Section 3.1 at P. 12.

g. Two limited reopeners, i.e., the study and potential construction of a fixed wheel gate to replace the existing overflow spillway and provisions to review fish passage alternatives to allow adult salmon to pass into the lake from the River and juvenile salmon to pass from the lake downstream into the River ("Limited Reopeners")[28].

2. MOA Comments

MOA raised the following issues in response to the Proposed Final Program[29]:

a. Although the prior Mayor supported the Proposed Final Program, the new Administration believed that Anchorage Assembly approval was necessary, and the prior Mayor failed to obtain it[30];

b. Requests full water restoration to the Eklutna River for the full 12 miles from the Eklutna River Dam downstream and permit fish passage to and from Eklutna Lake;

c. Removal of the limited reopeners; and

---

[28] The Fixed Wheel Gate Limited Reopener does not trigger the process terms of the 1991 Agreement; the Fish Passage Limited Reopener does not alter any other components of the Final Program. Proposed Final Program, Section 4.0, Pgs. 17, 20.

[29] Letter from Mayor Susanne LaFrance to Governor Dunleavy, July 19, 2024, and accompanying AR No. 2024-218(S).

[30] Mayor LaFrance was sworn into office on July 1, 2024. David Bronson previously served as Mayor of Anchorage from July 1, 2021 – June 30, 2024. The Proposed Final Program was drafted during and completed while Mayor Bronson served as Mayor of Anchorage. Former Mayor Bronson submitted a letter of support to the Governor's office on April 26, 2024.

d. Requested a two-year extension for the purpose of studying pumped storage hydropower as a potential alternative.

3. FWS Comments

In general, FWS agreed with the Proposed Final Program, but it believed full restoration of water flow to the Eklutna River and fish passage to and from Eklutna Lake was an "important component of a long-term mitigation strategy and that the Proposed Final Program was a starting point to reconnecting the River with their phased approach." They also commented that "[n]either an engineering solution nor funding support have yet been identified that can accomplish all criteria, but we look forward to exploring opportunities to accomplish river connectivity and return an anadromous sockeye salmon run to the Eklutna River". [31]

FWS requested one modification to the Proposed Final Program. FWS requested that if the Fixed Wheel Gate is determined to not be feasible, that the $10 million in funding committed for that purpose be allocated for other protection, mitigation, and enhancement measures "to improve habitat by other means." [32]

4. NMFS Comments

NMFS raised similar issues raised by FWS but did not object to the Proposed Final Program. It concluded the "Program provides a framework to initiate the protection, mitigation and enhancement of fish and wildlife resources and will support the next

---

31 Sara Boario, Regional Director, FWS, letter to Governor Dunleavy, June 24, 2024.

32 Id.

iteration of a mitigation plan."[33] NMFS had one request for a modification of the Proposed Final Plan. NMFS requested that if the Fixed Wheel Gate was determined to not be feasible or did not proceed, that either the $10 million committed for that purpose be allocated for other protection, mitigation, and enhancement measures in coordination with the Monitoring and Adaptive Management Committee, or that the NVE pump station alternative be studied.[34]

5. NVE Comments

NVE maintains the primary purpose of the Agreement was to "restore and maintain sockeye salmon that depend on free passage into and out of Eklutna Lake, their preferred spawning habitat."[35] NVE further states the Program is deficient in the following ways:

a. Failure to restore water to all 12 miles of the Eklutna River from the dam downstream at sufficient volumes to support salmon habitat;
b. Failure to permit passage of sockeye salmon to and from Eklutna Lake;
c. Low water flows only minimally enhance chinook and coho salmon habitat;
d. Jeopardizes Anchorage drinking water; and
e. Burdens ratepayers and taxpayers with excessive costs.[36]

---

33 Jonathan M. Kurland, Regional Administrator, National Marine Fisheries Service, letter to Governor Dunleavy June 21, 2024. Mr. Kurland's letter acknowledges that the mitigation process is ongoing and repeats every 35 years beginning 25 years after implementation of the Final Fish and Wildlife Program has been implemented.

35 Aaron Leggett, Chair/President, NVE, letter to Governor Dunleavy, June 21, 2024.

36 Id.

6. Operators' Reply to Comments

The Operators replied to the comments from the other Parties and NVE and continued to maintain the Proposed Final Program was consistent with the Agreement. The Operators identified the federal Parties generally approved the Proposed Final Program with some reservations and they identified some key disagreement with MOA and NVE, including:

a. Flow regimes will enhance spawning habitat for chinook, coho, chum and pink salmon that currently exist in the Eklutna River;

b. Included a limited reopener in the Proposed Final Program for the Monitoring and Adaptive Management Committee to address fish passage to and from the Eklutna Lake in the future;

c. Operators worked with AWWU to negotiate agreements that protected the supply of drinking water to Anchorage;

d. NVE's proposed Pumped Station alternative posed higher costs and increased risks to the Project;

e. Removal of the Eklutna Dam in 10 years was not feasible due to foreseeable energy needs, inhibition of renewable energy goals, excessive replacement and removal costs, and damage to infrastructure and property downstream; and

f. The two-year delay requested by MOA for further study will thwart implementation of the Final Approved Program in the timeline required by the Agreement.[37]

7. Joint MOA/NVE Resolution for Pumped Storage Hydropower

Well after the comment period had expired and even after the deadline for Owners' reply to the comments, MOA and NVE provided the Governor and the other Parties a joint resolution recommending a new alternative, pumped storage hydropower, they believed "could result in full restoration of waterflow to the River, protection of Anchorage's drinking water source, and increased power generation, potentially with lower costs to municipal taxpayers and ratepayers".[38] MOA and NVE claim that pumped storage hydropower is used worldwide and it has the "potential to maintain and improve existing power production, meet municipal water supply needs and provide full river hydrological function and connection into and out of Eklutna Lake for fish passage". They requested the Governor require, as part of the Final Approved Program, Owners to use two years of the three year pre-implementation period in the Agreement to explore alternative infrastructure options, including pumped storage hydropower, so water could be restored to the entire Eklutna River and permit fish passage to and from the Eklutna Lake.[39] This joint resolution was virtually identical to MOA's prior request to delay the Governor's decision on a final

---

37 Operators Response to Comments, July 24, 2024.
38 Anchorage Assembly and NVE Joint Resolution, No. 2024-001.
39 Id.

program, with the exception of it now identified a proposed alternative to pursue, i.e., pumped storage hydropower. The Operators did not have an opportunity to respond to this joint resolution, but it was addressed in the meeting of the Parties with the Governor's office on September 9, 2024.

IV. DISCUSSION

The Proposed Final Program and the comment period that followed ends a long public process that started with the Agreement in 1991. The most recent process started in March 2019 and included:

- Years of studies, consultations, and alternative analysis;
- Several public meetings;
- Extensive public comments;
- A draft fish and wildlife program;
- Numerous parties' comments, meetings, and discussions; and
- A Proposed Final Program.[40]

Almost all the Parties have described the process of reaching the Proposed Final Program as a negotiation.[41] As with any negotiation, participants do not always come away with

---

[40] Operators Response to Comments on Proposed final Fish & Wildlife Program, July 2024 at P. 1.

[41] Transcript of Proceedings before the Governor's Office, September 9, 2024 at Pp. 26 (Operators); P. 73 (FWS); and P. 83 (NMFS). NVE although not a Party to the Agreement also commented that the process included negotiations. Id. at P. 85. MOA did not describe the process as a negotiation, but is now represented by a different administration than the one in place when the Proposed Final Program was drafted. However, see Former Mayor Bronson's letter of support to the Governor's office on April

what they want, and the end result is a resolution that neither side may be completely happy with but nevertheless agree to the terms to move the matter forward. This is certainly the case with the Proposed Final Program put forth by the Operators. The Parties have disagreements as to what should be included and how far the Final Program should go. The Parties, at the time they entered the Agreement, clearly understood that not everyone would get what it desired. The Agreement includes provisions on how to resolve those differences.

A. Governor as Final Decision Maker

1. Review Standard

The Agreement sets forth the role of the Governor in establishing a Final Program. The Governor is required to "review the Proposed Final Program, comments, testimony, summary and analysis materials, and any alternative recommendations for the protection, mitigation, and enhancement of fish and wildlife resources".[42] He is then tasked with "attempting to reconcile any differences between the Parties, giving due weight to the recommendations, expertise, and statutory responsibilities of FWS, NMFS, the State Resource Management Agencies and the Purchasers".[43] Finally, the Agreement provides:

> In order to ensure that Eklutna . . . [is] best adapted for power generation and other beneficial public uses, the Governor shall give equal consideration to the purposes of efficient and economical power production, energy conservation, the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat), the protection of recreation opportunities, municipal water

---

26, 2024, wherein he states MOA (Anchorage Hydropower) was involved in the process every step of the way.

42 Agreement at Section 5, P. 4.

43 Id.

supplies, the preservation of other aspects of environmental quality, other beneficial public uses, and requirements of State law ("Eight Factors").[44]

The Governor is then tasked with establishing the Final Program that adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources affected by the Project.

2. Operators' Proposed Final Program and Analysis of Eight Factors

We must first evaluate the Proposed Final Program in light of the Eight Factors outlined in the Agreement.

a. Efficient and Economic Power Production and Energy Conservation - Factors One and Two

The Operators assert the Project "produces nearly six percent of the Owners' combined generation portfolio, which also amounts to roughly 25% of Chugach's renewable energy and 44% for Matanuska."[45] This power is also alleged to be the lowest cost resource for power in the Alaska Railbelt.[46] The Project also assists with power reliability for the region.[47] None of the Parties challenge these assertions. Obviously, the downside to restoring water flow to the River from a power production standpoint is the loss of the water for that production. This comes at a cost, both financial and in terms of

---

44 Id.

45 Operators' Brief to Governor, September 4, 2024 at P. 4.

46 Id. citing SID at 2.2.2

47 Operators' Brief, September 4, 2024, P.p. 4-5. Operators also cite an example of how the Project assists other power production in the region. When a natural gas company experienced delivery problem, Operators were able to maximize their usage of the Project to maintain system reliability. Id. (Citing Tony Zellers, et al, letter to MOA, February 12, 2024).

power availability, which cannot be overlooked. Maximizing the Project's power output results in energy conservation by reducing natural gas usage, avoidance of diesel usage for power generation and thus lower emissions, and thus reduced costs if these other power production methods were employed.

The Operators chosen method for restoring instream water flow to the River was also based on using cost effective means to achieve the goal and consideration of the costs to the rate payer. They also rejected alternatives that shut the Project down for lengthy periods of time which would have impacted the Project's value for capacity reserves and grid reliability.[48] These facts are likewise not challenged by any Party.

b. Protection, Mitigation of Damage to, and Enhancement of Fish and Wildlife (including related spawning grounds and habitat) – Factor Three

The Proposed Final Program provides several steps for restoring water flow to the River and thus enhancing, protecting, and mitigating damage to fish and wildlife. The Program restores water flow to the River at rates between 27cfs and 40cfs throughout the year.[49] It also requires periodic channel maintenance flows up to 220cfs.[50] It rewaters 11 of the 12 miles of River at the rates noted above thus restoring water flow to the River that has not existed for years. The plan also creates a Monitoring and Adaptive Management Committee of experts to review, evaluate and modify flow regimes within a water budget to increase and enhance fish habitat. Likewise, the increased flow and enhancement of fish habitat will have a corresponding effect on other wildlife, including

---

48 Id.

49 Proposed Final Fish and Wildlife Program, Section 2.1.2.

50 Id. at Section 2.2.

bear and moose populations. Operators' modeling projects increases in chinook spawning and rearing habitat by 209 and 53 percent respectively with increases for coho by 65 and 67 percent, respectively.[51] Limited Reopeners are also included, i.e., potential installation of a fixed wheel gate and fish passage in the future.

The federal Parties, NVE, and MOA correctly point out that the Proposed Final Program fails to include rewatering of the entire River and allow for fish passage to and from Eklutna Lake. NVE and MOA believe that this failure alone makes the Proposed Final Program deficient. They also challenge whether the flows proposed will result in any substantial benefit to salmon habitat. The federal Parties, although proponents of full water flow and fish passage, realize that this process is long and with technological advancements in the future, the goals can be achieved. For that reason, they did not reject the Proposed Final Program. The Agreement provides the Governor must give due weight to the recommendations, expertise, and statutory responsibilities of the Parties, including FWS and NMFS.[52] Due weight is given to the FWS and NMFS' expertise and the fact that they have not objected to proceeding with the Proposed Final Program is a very strong indicator that it meets Factor Three.

---

51 SID at Section 4.10.1.

52 Agreement at Section 5, P. 4. The Agreement also permits the Governor to give due weight to the Purchasers, which includes MOA. However, MOA gave up their right to vote on operations at the Project and conceded they lacked the expertise to participate in the Project's operations, which included establishing the Proposed Final Program per the Agreement. See RCA Order U-18-102(44)/U-19-020(39)/U-19-021(39) and Surrender of Eklutna Operation Committee (EOC) Voting Rights dated as of October 27, 2020, and filed with the RCA in docket number U-18-102(44).

As stated earlier herein, fish passage is not a requirement in the Agreement, nor is restoration of complete waterflow to the River and fish passage. However, from a review of the record, it appears all parties recognize the importance of eventual complete waterflow restoration and fish passage. The difference between the Parties is focused on the methods and timeline to achieve those goals. The Proposed Final Program includes a Limited Reopener to achieve full water restoration and fish passage, understanding that as technology advances, those goals may be cost effective or technically feasible to achieve in the future.[53]

c. The Protection of Recreation Opportunities – Factor Four

Several positive impacts on recreational activities are included within the Proposed Final Program:

- Commitment of $234,000 as a match to Chugach State Park or its designee for lakeside trail repairs;
- Potential fishing in the River;
- Kayaking on the Eklutna Lake
- Hunting opportunities;
- Camping;
- Wildlife viewing; and
- Protection of the tailrace fishery.[54]

---

[53] See Section IV.A.3. herein for further discussion on restoration of complete waterflow and fish passage.

[54] Operators' Brief, September 4, 2024, P.p. 8-9.

The other Parties did not address this issue in their briefs.[55] There are clear benefits and protections from the Proposed Final Program as outlined above.

d. Municipal Water Supplies – Factor Five

The Parties once again disagree on the impacts the Proposed Final Program will have on municipal water supply. Operators acknowledge they will use AWWU infrastructure to restore water flow to the River. They assert it will not negatively affect the water supply and, in some ways, enhance the water supply infrastructure. MOA and NVE on the other hand believe it will negatively affect municipal water supply. However, neither MOA nor NVE have been able to adequately detail these alleged negative effects. Once again, the Agreement permits the Governor to rely on the expertise of the Operators and give due weight to their findings.[56]

Operators maintain the Project's infrastructure and Anchorage's municipal water supply have been "inextricably linked as a matter of physical infrastructure, operations, contract, water rights, and authorizing law since the 1980s when AWWU connected its intake pipe to the Project's intake structure".[57] Operators assert they worked closely with AWWU leadership and engineers to develop legal terms and agreements by which AWWU will be comfortable with the use of AWWU infrastructure to release water into

---

55 MOA makes a passing reference that the "proposed program fails to adequately advance recreational and other beneficial public uses such as fishing or taking in the beauty of a real mountain river with real water in it". MOA Brief at P. 11.

56 See also, Footnote 51.[57] Operators' Brief, September 4, 2024, P. 9.

57 Operators' Brief, September 4, 2024, P. 9.

the River.[58] AWWU and Operators have agreed on key terms for an agreement to govern the construction and use of the Eklutna River Release Facility and an agreement for the long term sharing of Eklutna Lake water rights. AWWU and Operators also negotiated three agreements to detail and govern the arrangement if the Governor approves the Proposed Final Program. Finally, Operators agreed to commit to not take any action in connection with the Fish and Wildlife Program that would compromise Anchorage's water supply, and they agreed to accept liability if they did so. Additionally, other benefits flowed to AWWU, including design approval rights, the construction of eight new bridges over Eklutna River for AWWU to maintain access to its infrastructure, new communications systems, flow meters and a new isolation valve structure for safer maintenance of their facilities, as well as other benefits. AWWU receives its water under a contract with the Eklutna Owners; the proposed term sheet according to Operators would reduce the current water supply costs by half under the new contract to replace contract expiring at end of 2025. For all these reasons, the Proposed Final Program does meet the requirements of the Agreement concerning municipal water supply.

The central issue here is not whether the water supply is protected and/or enhanced, as the evidence clearly demonstrates it is, but rather, whether the Operators and AWWU's agreements must be approved by MOA and to date that approval has not been achieved. In Resolution 2024-182(S-1), the Assembly stated "The Municipality of Anchorage does not intend to issue authorizations or provide funds or any other form of

---

58 Id.

support of the Proposed Final Program or any alternative that doesn't work toward the restoration of the full length of the River…"[59]. The Operators believe they have legal avenues to pursue the agreements even if MOA withholds approval, but litigation does not move the Final Program forward, creates delay in restoring water flows to the River, and impedes implementation of the Final Program.

e. The Preservation of Other Aspects of Environmental Quality – Factor Six

The redirection of lake water to the River instead of the Project's powerhouse reduces the generation of carbon free power that will most likely be replaced by natural gas generation. However, all alternatives considered reduce the power generation from the Project. The Proposed Final Program has the smallest impact in this regard of all the alternatives considered.

f. Other Beneficial Public Uses – Factor Seven

The Operators cite restoration of salmon habitat in the River as another beneficial public use and that flows will not impact infrastructure downriver, including bridges over the River. Enhanced salmon habitat is important to the public and to NVE and its people. Protecting existing infrastructure used by the public is also a beneficial public use.

g. Requirements of State Law – Factor Eight

Numerous areas of State law are impacted by this Proposed Final Program, including permitting, safety, fish and game, natural resources to list a few. The Operators

---

[59] MOA Resolution 2024-182(S-1), June 25, 2024

acknowledge the need to comply with all State laws that apply to the Proposed Final Program and their need to obtain an amendment to their certificate of authority from DNR to permit the conveyance and release of water into the River. Additionally, as operators of an electric utility, Operators also have an obligation to comply with all State laws related to utility operations.

h. MOA and NVE Proposed Alternatives

Neither MOA nor NVE have provided any analysis with respect to how their proposed alternatives consider the Eight Factors. Rather, they seem to rely on the belief that their proposed alternatives, such as dam removal or pumped storage hydro, will result in full water restoration to the River and allow for fish passage thus promoting the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat). While that is one factor that must be considered, the Governor is required to give equal consideration to all Eight Factors. They have not provided any evidence or analysis of how these proposed alternatives will impact the other seven factors. For example, there is no evidence of how these alternatives will promote the purposes of efficient and economical power production and energy conservation or impact municipal water supplies.

3. Differences Between the Parties

In addition to giving equal consideration to the Eight Factors, the Governor must also attempt to reconcile differences among the Parties. Although the Parties have generally agreed that the Proposed Final Program was arrived at through rigorous studies, public review, comment, and negotiation, two glaring differences were identified, 1)

water flow for the entire Eklutna River from the dam downstream; and 2) fish passage to and from Eklutna Lake.[60]

The Operators believe that current technology and cost are major prohibitions to obtaining full water flow throughout the River and fish passage to and from the lake at the present time. They posit that the agreement provides a mechanism to continually review these goals and as technology evolves and costs decline, the goals may be achievable, and have provided for this to be regularly evaluated by the Monitoring and Adaptive Management Committee.

FWS and NMFS believe that complete water flow and fish passage were intended as part of the Agreement, but they also indicate that the process must start somewhere and

---

[60] MOA and NVE allege the process to arrive at the Operators' Final Proposed Program was flawed. MOA asserts it was denied a viable way to participate due to the fact it lost its vote as an Owner of the Project via an RCA order. However, MOA's assertion in this regard is misguided for three reasons. First, MOA voluntarily gave up its right to vote on matters affecting the operation of the Project and the 1991 Agreement. Secondly, Mayor Bronson formally acknowledged the MOA's complete participation in "every step in the process that led to the Proposed Final Program" and that MOA supported the agreement with the Proposed Final Program. See Mayor Bronson letter to Governor Dunleavy, April 26, 2024. Thirdly, the Operators assert that they and MOA conducted themselves as equals throughout the process and made all decision on the Proposed Final Program through unanimous consent. The record contains no evidence to the contrary. NVE asserts that the Operators failed to pursue alternatives that would have provided for rewatering the entire river and allowed fish passage. Operators counter that they did look at several other alternatives, including NVE's pump station alternative and dam removal, and for various reasons, including economics and other risks, it chose to proceed as outlined in the Proposed Final Program. See NVE comments, June 21, 2024 and Operators' Reply to Comments, July 2024 at Pp. 22-23.

there is time to achieve both and still comply with the Agreement's requirements.[61] They are each committed to pursuit of any alternatives that will achieve those goals.

MOA and NVE however, believe that both goals should be pursued now and absent complete River waterflow and fish passage, the Program should not be adopted. First, the Agreement does not require complete waterflow and fish passage. Had the Parties intended to make those requirements of the Program, they could have and should have so stated in the Agreement itself.[62] Rather, the Agreement outlines requirements to protect, mitigates damage to, and enhances fish and wildlife resources affected by the Project. At the time the Agreement was signed, the River did not enjoy complete waterflow nor were fish able to pass from River to lake and lake to River. As NVE acknowledges, these goals were not achievable until the lower diversion dam was removed in 2018.[63] Courts cannot add words to the contract that would impermissibly re-write that contract, nor can the Governor in this situation.[64] Simply put, the Agreement is not ambiguous. Rather, complete waterflow and fish passage can be adopted in a final

---

61 ". . . the Program provides a framework to initiate the protection, mitigation and enhancement of fish and wildlife resources, and will support the next iteration of a mitigation plan". NMFS Comments to Proposed Final Fish and Wildlife Program, June 21, 2024 at P. 2. "Although the proposed Program does not immediately meet the FWS's goals of ecological connectivity . . . the Program, with commitment of all stakeholders, could be an interim step to reconnecting the river, consistent with our request for a phased approach". FWS comments on the Proposed Final Program, June 24, 2024 at P. 4.

62 *McConnell v. Pickering Lumber Corp.*, 217 F.2d 44, 47 (9th Cir. 1954) ("Appellants would have the court under the guise of construction add words to the contract which are not to be found in it. We do not understand such to be the function of the court.").

63 NVE Brief to Governor Dunleavy, September 4, 2024 at P. 7.

64 *JAE Properties, Inc. v. AMTAX Holdings 2001-XX, LLC*, __ F. Supp. Ed __, 2024 WL 538570 (USDC S. D. Cal. 2024).

program if supported by an analysis of the factors in the Agreement, but the Agreement did not mandate it.

NVE and MOA also seem to place all their emphasis on Factor Three, i.e., protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat) without providing for equal consideration of the other seven factors. The Agreement clearly and unequivocally requires the Governor to give "equal consideration" to all Eight Factors.[65] Although Factor Three is an extremely important element of this process, it cannot be viewed alone or to the detriment of the other factors. Each factor has an impact on the final program.

However, with that said, it does not mean that the Governor cannot alter or improve the Proposed Final Program. The Proposed Final Program meets the requirements of the Agreement, giving equal consideration to the Eight Factors, and provides for the protection, mitigation of damage to, and enhancement of fish and wildlife habitat. It can, however, be improved in certain ways to try to reconcile the differences between the Parties per the requirements in the Agreement.

4. Governor's Amendments to Final Proposed Program

The Proposed Final Program is established with the following amendments. Discussion on the amendments will follow this section.

Section 3.1 Committee

This section is amended as follows:

---

[65] Agreement at Section 5, P. 4.

The Committee will consist of one voting representative from each of the following:

Alaska Department of Fish and Game – member appointed by the Commissioner;

Alaska Department of Natural Resources – member appointed by the Commissioner;

NMFS – member appointed by its Regional Director;

FWS – member appointed by its Regional Director;

NVE - member appointed by its Chair/President; and

Governor of Alaska – appoints one member.

The Committee will make decisions by consensus and four members shall constitute a quorum.

Section 4.1 Fixed Wheel Gate

If it is determined that the construction of the fixed wheel gate is not structurally or economically feasible, the Owners shall make available any remaining funds not expended of the $10,000,000.00 (up to $10,000,000.00 in April 2024 U. S. dollars)[66] for other protection, mitigation, and enhancement measures for fish and wildlife including impacted habitat loss and other effects

[66] The current estimate for that fixed wheel gate is $4 million. Operators committed up to $10 million in 2024 dollars. See Transcript of Proceedings, September 9, 2024 at P. 109.

related the Project in accordance with the terms and process previously outlined in Section 3.3.6.[67]

Section 4.0 Limited Reopeners

New Section 4.3 is added.

Section 4.3 Pumped Storage Hydropower

Pumped Storage Hydropower is added as a Limited Reopener.

The Parties are directed to study this upon terms and conditions they mutually agree to. The terms and conditions will include level of engineering, level of cost analysis, what Party or Parties will fund the study and in what amounts and any other matters the Parties find necessary to implement this Limited Reopener. The study should be consistent with studies performed for other alternatives reviewed by Operators. The Parties, assuming they agree on the above requirements, are directed to undertake the study immediately, but this study will not delay the implementation of the Governor's Approved Final Program or the review and study of the fixed wheel alternative. The results of the study will be reported to the Monitoring and Adaptive Management Committee ("Committee").

The Committee will analyze the study findings and perform the Eight Factor analysis required by the Agreement. The Committee will then provide the study findings and Eight Factor analysis to the Owners for the Owners review. If

---

67 See FWS comments to the Proposed Final Program, June 24, 2024 at Pp. 4-5.

the Owners approve the study findings and Eight Factors analysis, they will provide a statement of support to the Committee and the Committee and Owners will coordinate and cooperate to obtain the Governor's approval. Governor approval of the decision to pursue Pumped Storage Hydropower is required. If the Governor approves the proposal, then the 35-year timeframe requirement to repeat the consultation process required by the Agreement will restart from the date the Governor's approval. The construction of Pumped Storage Hydropower must minimize impacts to Project operations. The Project Owners will oversee all construction activities and will support the development and operation of Pumped Storage Hydropower facilities and infrastructure. This is a limited reopener and will not reopen any other components of the Fish and Wildlife Program.

Discussion of Amendments

Amendment to 3.1

Since the Proposed Final Program provides for ongoing review through the Monitoring and Adaptive Management Committee, and it is the Governor's role under the Agreement to establish a Final Program, adding a Governor appointed seat to the Monitoring and Adaptive Management Committee allows the Governor, and future Governors, to continue to fulfill his or her role under the Agreement to establish the Final Program as the work of the committee is ongoing. The definition of a quorum is added to assist in governance and ensure the recommendations made by the committee have robust involvement from the entities represented.

Amendment to 4.1

As one of the purposes of the Agreement and Final Program is to protect, mitigate damage to, and enhance fish and wildlife habitat, ensuring the funds already set aside for the fixed wheel gate alternative are available to be used for other protection, mitigation, and enhancement measures is consistent with the intent of the Agreement in the event the fixed wheel gate is found to be infeasible. This amendment is responsive to the modification of the Proposed Final Plan requested by NMFS and FWS.

Amendment to 4.0, addition of Section 4.3

MOA and NVE have suggested that Pumped Storage Hydropower ("PSH") is a viable alternative to the Proposed Final Program. They passed a joint resolution on September 5, 2024, advocating for PSH. They claim it is a "proven energy storage solution used worldwide that provides carbon free power production, storage and grid stabilization and that it has the potential to maintain or improve power production, meet municipal water needs and provide full River hydrological function and connection into and out of Eklutna Lake for fish passage.[68] They suggested that the Governor require the Owners use the first two years of the three year implementation period to explore this option.[69]

Neither MOA nor NVE have studied this potential alternative. The Operators have reviewed it but admittedly did not get to any final conclusions on its viability, nor did they engineer or model it to see if it was economically or engineeringly feasible at this location. At the meeting with the Governor's office, MOA, NVE and Operators each

---

68 MOA/NVE Joint Resolution, September 5, 2024

69 Id.

agreed that this was a potential option that could be explored.[70] However, Operators and the federal Parties do not want to delay implementation of the Final Approved Program to explore this option.

Implementation of the Final Approved Program should not be delayed or extended for an option of unknown cost and feasibility. However, if PSH is as promising as MOA and NVE indicate, there are numerous potential benefits and improvements to the Eight Factors which must be considered when evaluating this Program. As such, conducting this study, under terms agreeable to the Parties, will provide more information relevant to those factors and the potential benefit or harm to the protection, mitigation of damage to, and enhancement of fish and wildlife resources.

All other components and requirements of the Final Proposed Program are adopted herein unless otherwise amended hereby. The Owners are directed to begin implementation of the Final Approved Program as approved herein as soon as possible.

V. CONCLUSION

The Final Approved Program established today is the culmination of many years of difficult work, analysis, evaluation, discussion, and negotiation by the Parties. Each party did not get all they wanted in this Final Approved Program. However, this is a long-standing problem with no readily available easy solutions and implementation of this

---

[70] Transcript of Proceedings, September 9, 2024 at Pp. 105-122. The federal parties did not take a position other than to state they are in favor of exploring options that restores full waterflow to the river and allows for fish passage. Id. at Pp. 112-113.

Final Approved Program will put the River on track towards potential full water flow and fish passage.

CHUCACH ELECTRIC ASSOCIATION, INC. AND MATANUSKA ELECTRIC ASSOCIATION, INC.'S JOINT BRIEF REGARDING SURRENDER TERM

Pursuant to Order U-24-024(4),[1] Chugach Electric Association, Inc. ("Chugach") and Matanuska Electric Association ("MEA") hereby submit this joint brief regarding the interpretation of the following Commission language in Order U-18-102(44)/U-19-020(39)/U19-021(39) ("Order 39"):

> We can only find that [AHP][2] is managerially and technically fit to maintain an ownership interest in the Eklutna Project subject to the condition that before the effective date of either the Eklutna PPA or the MEA PPA, ML&P surrenders its vote on the EOC under the Eklutna Project agreements so that Chugach and MEA can jointly manage and operate the Eklutna Project, including negotiating compliance with the Fish and Wildlife Agreement, without [AHP] having a vote on operation or management decisions. **This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended**, and cannot be lifted until such time as [AHP] has shown to our satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC.

It would presumptuous and inappropriate for any party in this proceeding to tell the Commission what the Commission intended in a previous order. This is especially true

[1] U-24-024(4), Order Adopting Procedural Schedule, Denying Petition to Intervene, and Redesignating Commission Panel at 3 (emphasis in original).

[2] As the Commission is aware, the "stub utility" owned by the MOA was referred to in Order 39 as Municipal Hydro Power and "MHP"; we use Anchorage Hydropower or "AHP" herein because that is the name the MOA now uses when referring to the utility.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

with respect to a single substantive condition in an order dealing with a complicated docket approving, subject to conditions, an acquisition of over $800M in utility assets. Chugach and MEA recognize that Order 39 reflected the Commission's careful consideration of statutory requirements, public interest determinations, and a desire to "find a way to approve this transaction while leaving as much of the parties' bargain intact as possible."[3]

Consequently, Chugach and MEA offer the following considerations that might be useful to the Commission in evaluating its interpretation of (1) the required term length to be applied to the Municipality of Anchorage's ("MOA") surrender of voting rights ("Surrender") on the Eklutna Operating Committee ("EOC") and "under the Fish and Wildlife Agreement"[4] and (2) if, and how, such Surrender required term length can be set aside by the Commission upon MOA d/b/a Anchorage Hydropower ("AHP") request or otherwise. Chugach and MEA take no firm position on what the Commission meant with respect to consideration (1) above and will defer to the Commission's interpretation of its language in Order 39, but they do take a firm position with respect to consideration (2) above: if AHP proves to the Commission that AHP has acquired the expertise to participate as a voting member of the EOC, its return to the EOC must not be allowed to override decisions made by Chugach and MEA during the Surrender period, including with respect to 1991 Agreement fish and wildlife obligations, and must be restrained to focus on considerations of prudent utility practice and the Eklutna Hydroelectric Project's ("Eklutna Project's") operations within the Railbelt electric generation and transmission system.

I. BACKGROUND TO ORDER 39

The Commission's (i) Order 39 and (ii) conditional issuance of a certificate of public convenience and necessity ("CPCN") authorizing AHP's provision of wholesale public electric utility service from its ownership share of the Eklutna Project, were both

[3] Order 39 at 11.

based on, and must be interpreted with an understanding of, the extensive record that the Commission developed in its consideration of the various requests in dockets U-18-102/U-19-020/U19-021 (the "Acquisition Transaction Proceeding"). Chugach and MEA find the following parts of that record important to answering questions about the Surrender term.

A. The EOC, its Function, and Operation

The EOC was formed in connection with the 1997 purchase of the Eklutna Project from the federal government by Chugach, MEA, and MOA, which was then doing business as ML&P, a substantial municipal public utility providing electric service directly to a significant portion of Anchorage.[5] In that transaction, ML&P acquired 53.33% of the Eklutna Project, Chugach acquired 30% and MEA acquired 16.67%, with each having rights to the Eklutna Project's power and responsibility for operation costs equal to such percentages.[6] Each of the owners appointed a representative to the EOC, which was charged with operating and maintaining the Eklutna Project. EOC decisions were subject to vote by double majority, requiring a vote of at least two owners whose shares totaled 51% of the Eklutna Project shares, effectively granting MOA, as the majority owner of the Project, a veto right over decisions.[7]

As the Commission heard during Acquisition Transaction Proceeding testimony, the EOC acts as "an operations and maintenance type of committee" that is not charged with "higher-level functions" like "agreements and the transition agreements".[8] The Commission asked witnesses about the qualifications needed to sit on the EOC and perform its duties and was given somewhat differing answers from (i) Chugach through Dustin

Highers, Vice President of Production who spoke to prudent utility practices and knowledge of the Railbelt electric generation and transmission system;[9] (ii) ML&P through Anna Henderson, ML&P's General Manager who stated that while there were no unique requirements to serve on the EOC, no ML&P employees seeking employment with the MOA after the Acquisition Transaction were qualified to sit on the EOC,[10] and that if specific engineering type of expertise were needed, the MOA "would contract out for it";[11] and (iii) the MOA through Rebecca Windt Pearson, Municipal Attorney for the MOA.[12]

During the Acquisition Transaction Proceeding, the Commission also asked about EOC voting rights and was informed that, while ML&P possessed a double-majority voting right, the utilities were generally aligned and the EOC functioned without many contentious issues.[13]

B. The Chugach – MOA ML&P Transaction

Beginning in 2019, ML&P sought approval from the Commission to sell the majority of its electric utility assets to Chugach, except for the Eklutna Project ("Acquisition Transaction").[14] While some of the terms of the deal changed during the Commission's consideration, broadly ML&P sought to retain ownership over its share of the Eklutna Project through a newly created "Municipal Hydropower[15]", or a "stub

utility"[16] that in function, would only retain ML&P's interests in the Eklutna Project and sell its output created by such interests wholesale through two long-term power purchase agreements with each of Chugach and MEA.

Under the power purchase agreement with Chugach ("Eklutna PPA"), Chugach agreed to take over operational and cost responsibility for 64% of MOA's share of the Eklutna Project, to obtain rights to all power associated with that portion of the project, and to pay the MOA an annual predetermined payment for power not tied to the amount of power generation.[17] Chugach was provided the option – at its discretion – to purchase that portion of the Eklutna Project at the end of the Eklutna PPA term for the net book value at the end of the PPA term.[18] Following examination of the Eklutna PPA (the risks and costs borne by Chugach as "Buyer" therein), the Commission ultimately found the Eklutna PPA in Order 39 to not actually be a wholesale power purchase agreement, but rather a "deferred payment mechanism for Chugach's acquisition of most ML&P assets."[19]

Under the more classic power purchase agreement with MEA ("MEA PPA"), on the other hand, MEA obtained the rights to the power from 37.51% of the MOA's share of the Eklutna Project, paying for delivered energy every month, with MOA retaining cost and operational responsibility for that share.[20] Similarly to the Eklutna PPA, MEA also has a purchase option at the end of the 35 year term for such 37.51% share.[21]

Under both agreements, language was included that MOA would stay on the EOC, with a requirement in both the Eklutna PPA and the MEA PPA that Seller consult with Purchaser when selecting such representative, and an additional requirement that the

MOA's EOC representative act consistent with prudent utility practice.[22] The term of each agreement is 35 years and may be extended if the purchase options are not exercised.[23]

During the Acquisition Transaction Proceeding, the Commission sought information related to how the stub utility would be staffed with respect to the Eklutna Project and its role on the EOC. In connection with the Acquisition Transaction, witnesses explained that such MOA majority ownership role would transition from ML&P, a fully staffed electric utility providing public electric utility service to 31,081 service locations with 444.3 megawatts of installed generation capacity[24], to the stub utility (AHP) with no employees that would exist solely for the purpose of owning part of the Eklutna Project. The MOA initially proposed that the Municipal Manager would run AHP[25] and sit on the EOC and if necessary, AHP would hire outside consultants to fill the position,[26] although at the time MOA was not aware if such experience existed in the consulting community:

> ALJ WALKER: Is the Municipality, after the closure of this transaction, retaining any employees of ML&P?
>
> MS. WINDT PEARSON: The plan is not to. And I know that we have discussed what we would to do to have the necessary advice, expertise, and personnel in order to continue to participate in the Eklutna Operating Committee. I think that we envision the stub utility being a department that reports to the municipal manager. And that, more likely than not, we would utilize consultant services to provide that industry-specific expertise and staffing to help us make informed decisions as a continuing member of the Eklutna Operating Committee. Because we would not be retaining any employees of Municipal Light & Power.
>
> ALJ WALKER: Have you investigated to see if any such expertise exists in the consulting community?
>
> MS. WINDT PEARSON: We have not done so yet.[27]

Seattle, WA 98104-7036
PHONE 206.883.2500

ML&P further acknowledged that (i) "ML&P's current operating and maintenance responsibilities at the [Eklutna] Project [would] be transitioned to the other two owners, Chugach and MEA",[28] (ii) AHP's main responsibility after the Acquisition Transaction would be "rendering of the bill and receiving payment", and (iii) "the stub utility appears more than adequate to meet the very diminished responsibilities that the stub utility will have post-closing."[29]

When asked, ML&P's witness told the Commission that if the Commission found that the MOA through AHP was not "managerially fit under AS 42.05.241 to hold a certificate of public convenience and necessity," the entire Acquisition Transaction would have to be renegotiated.[30] So, the facts before the Commission in 2020 were that if the Commission wanted to approve the Acquisition Transaction, it would have to issue a CPCN to a "utility" clearly lacking the expertise to participate in, let alone sit in a role with majority owner veto power over, the management and operation of the Eklutna Project.

On May 20, 2020, the Commission approved the requested Acquisition Transaction subject to certain conditions in Order 39. The Commission found that as the Acquisition Transaction was proposed, AHP would be a public utility "required to hold" a CPCN pursuant to AS 42.05.241 in "order to provide **wholesale** public electric utility service **through its ownership share of the Eklutna Project**".[31] In assessing whether AHP was technically and managerially fit to hold the newly sought CPCN in the capacity of providing its public utility service as a **majority owner** of the Eklutna Project, however, the Commission wrote that:

> …we cannot unconditionally find that [AHP] is managerially or technically fit to maintain majority ownership of the Eklutna Project. We can only find that [AHP] is managerially and technically fit to maintain an ownership interest in the Eklutna Project subject to the condition that before the effective date of either the Eklutna

> PPA or the MEA PPA, ML&P surrenders its vote on the EOC under the Eklutna Project agreements so that Chugach and MEA can jointly manage and operate the Eklutna Project, including negotiating compliance with the Fish and Wildlife Agreement, without [AHP] having a vote on operation or management decisions. This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended, and cannot be lifted until such time as [AHP] has shown to our satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC. This does not prohibit [AHP] from attending EOC meetings, but may not allow [AHP] any ability to delay or change the Eklutna Project decisions made by the Chugach and MEA representatives on the EOC.[32]

While the Commission did not specifically enumerate a process to be followed by AHP to demonstrate that AHP had acquired the expertise required to fully participate as a voting member of the EOC in the future, the Commission makes clear that at a minimum, any EOC voting member must have knowledge of prudent utility practice and knowledge of the Railbelt generation and transmission system.[33]

C. The Surrender Period

On October 30, 2020, in order to close the Acquisition Transaction, the MOA filed a notice complying with the Commission's surrender condition and attached the Surrender specifically with respect to voting rights "as an EOC member and under the Fish and Wildlife Agreement."[34] It was signed by all three Project Owners and states that "the surrender shall remain in effect until ML&P's successor complies with the RCA requirements pertaining to qualifications for ML&P's representation on the EOC".[35] The Surrender itself, however, was silent on a specific term length.

Over the past four years, the MOA has at times sent different representatives to participate in EOC meetings, including Mark Corsentino who has been employed by the MOA in his current role at AWWU since 2019.[36] Since that time, as explained by Eugene

Ori and Tony Zellers in their prefiled responsive testimonies herein, all decisions on the EOC have been made unanimously by the technical experts from Chugach and MEA, but Chugach and MEA have nonetheless continued to seek the input of any MOA representatives in attendance and there have been no significant areas of contention or disagreement from such representatives with the Project Owners' decisions.[37]

Both before and during this Surrender period, all three owners of the Eklutna Project also worked collaboratively and devoted a significant number of resources to complying with their implementation responsibilities under the 1991 Agreement[38], a process that has not yet significantly involved the EOC (the EOC will, however, be involved in future implementation).[39] As with the EOC, the MOA, despite surrendering its vote on this process, has also participated and until after the submission of a Proposed Final Program to the Governor in April 2024[40], such participating representatives had been in complete agreement with all decisions of Chugach and MEA.[41] In the background, however, of this work, was a clear opposition from the Anchorage Assembly ("Assembly"), who, despite the MOA's lack of voting powers on the EOC or lack of voting rights to impact the Fish and Wildlife implementation process, have taken numerous actions in a clear attempt to delay or modify the Final Fish and Wildlife Program.[42] The Assembly also petitioned the Commission to intervene out of time in the closed Acquisition Transaction Proceeding dockets, requesting the Commission reopen the docket on an expedited basis and fundamentally change Order 39 to restore AHP voting rights without

any regard for the reasoning behind the Surrender condition or the underlying Acquisition Transaction facts. The Commission denied the Assembly's petitions in Order U-18-102(52)/U-19-020(49)/U19-021(49) and the Assembly has since appealed the Commission's order.[43]

Despite the fact that (i) Mr. Corsentino has been employed by the MOA in his current role at AWWU since before the Acquisition Transaction closed, and (ii) at the time of the Acquisition Transaction, the General Manager of ML&P nonetheless stated that there was no one at the MOA to fill the AHP role on the EOC, it was only soon after the change in Anchorage municipal leadership and during the Governor's review of the Proposed Final Program, that the MOA decided it did have the requisite expertise and took action to regain its voting rights on the EOC. On July 2, 2024, the Assembly appointed Mr. Corsentino as the Utility Director of Anchorage Hydropower.[44] On July 18, 2024, AHP submitted a notice and request for acknowledgement from the Commission ("Request for Acknowledgement") stating that it had "acquired" the expertise through Mr. Corsentino and Mr. Schimscheimer, the Engineering Director at AWWU, to participate as a voting member of the EOC, writing that "Order 39 required that the surrender must remain in effect until the MOA 'has shown to [the Commission's] satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC."[45]

II. DISCUSSION

In the Prehearing Conference in this proceeding, Administrative Law Judge ("ALJ") Walker noted that the quote used by AHP in its initial request was incomplete, omitting entirely the language requiring that the term of the surrender be at least equal to

[43] Notice of Appeal, Anchorage Municipal Assembly v. Regulatory Commission of Alaska, 3AN-24-06001CI (filed April 24, 2024).

the terms of the PPA.[46] ALJ Walker also noted that the AHP had neither requested or acknowledged in its motion any evidence or discussion of why the Commission should set aside the minimum term. Further, ALJ Walker noted the lack of discussion about the length Mr. Corsentino's employment with the MOA as compared with the term length of the PPAs.[47] ALJ Walker then stated that "the Commission should be considering dismissal of the notice and request for acknowledgement as being prematurely filed" for failing to acknowledge or address the required term length.[48] Based on the understanding, however, the MOA disagreed with the ALJ's reading of the term length requirements of its own Order 39, and ALJ Walker requested briefing from the parties on the term length issue.[49]

In the MOA brief on this issue,[50] the MOA argues that there was a "universal, contemporaneous, continuous, and public understanding" that, while Order 39 required the term of the surrender to be equal to the terms of the Eklutna and MEA PPAs, that term was subject to termination, and the surrender was subject to being "lifted", at any time after the MOA made a showing to the Commission's satisfaction that MHP had acquired the expertise required to fully participate as a voting member of the EOC.[51]

Chugach and MEA admit that until ALJ Walker raised this issue in this proceeding, they had not examined this issue closely and were theoretically comfortable with an interpretation of the Surrender that if and when the MOA could demonstrate technical and managerial fitness, potentially with certain conditions imposed on the MOA to require MOA act consistently with prudent utility practice, to prevent the MOA from undermining the Project Owners' work in implementing the Final Fish and Wildlife Program, and to

protect the Eklutna Project as a valuable resource in the Railbelt, the MOA would be entitled to regain its voting rights on the EOC and with respect to the Fish and Wildlife Agreement before the end of the PPA terms.

Upon further review in this proceeding, however, Chugach and MEA no longer think that this matter is so simple for two primary reasons. First, with respect to this narrow issue, the Commission is asking the parties if they agree or disagree with the Commission's interpretation of the applicability of the term length language, and because Chugach and MEA do see ambiguity in the language, the Commission is in the best position to explain what it intended. There also exists ample reasonable legal basis, well supported by facts, for the Commission's interpretation that the Surrender must last for the duration of the PPA terms centered on the fact that MOA has ceded most of its rights and responsibilities to the Eklutna Project during the duration of those PPAs. Further, the facts that justified the Surrender requirement in the first place are materially unchanged. Second, even if the Commission intended, through its language, to create a path for MOA to regain its voting rights before the end of the PPA terms, such process should not render the length of term requirement language meaningless as MOA's Brief position would. Rather, there must be an acknowledgement of the Surrender term requirement and a demonstration that the concerns behind such requirement will be addressed for the duration of the PPA terms.

Finally, if the Commission finds that that AHP has acquired the expertise to fully participate as a voting member of the EOC, its return to the EOC must not be allowed to override decisions made by Chugach and MEA during the Surrender period and must be restrained to focus on considerations of prudent utility practice and the Eklutna Project's operations within the Railbelt electric generation and transmission system.

A. The Commission's interpretation of its own requirements should be given deference in this situation without regard to any inconsistent understanding of any of the parties to the PPAs.

ALJ Walker indicated in the Prehearing Conference that he had already reached an initial conclusion about the meaning behind the Commission's inclusion of the term length

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

requirement, stating that he sees no "evidence or discussion of why the Commission should set aside the **minimum term of voting rights surrender required** in Order 44."[52] AHP then indicated in response that it did "disagree with the interpretation of Order 39 that [ALJ Walker] indicated," to which ALJ Walker later responded "since AHP disagrees with the Commission's interpretation of Order 44, I would like to see briefing on that issue." [53]

This back and forth in the Prehearing Conference indicated that ALJ Walker's initial read of Order 39 was that the language stating that, as a condition to issuing a CPCN to AHP under AS 42.05,[54] the surrender "must have a term at least equal to the term of the PPAs, as those agreements may be extended, and cannot be lifted until such time as AHP has shown to the Commission's satisfaction that AHP has acquired the expertise required to fully participate as a voting member of the EOC" means, at the very least, that AHP may not obtain its voting rights back at any point while the PPAs are in effect without, in addition to showing technical and managerial fitness, acknowledging that it is prematurely ending the surrender requirement and provided evidence to the Commission as to why it is reasonable to set aside such requirement.[55]

The language in question is ambiguous and upon a plain reading, can be interpreted in at least two ways. First, the use of "at least equal to the term of the [PPAs]"[56] could be interpreted as ALJ Walker has indicated: that absent a demonstration to the Commission justifying that such a requirement be set aside, the term of the Surrender shall not be shorter than the length of the PPAs, regardless of any expertise gained or not, but that it could

potentially be longer. Alternatively, a second interpretation – that the MOA is arguing for – is that while the Surrender term has to match the minimum PPA term length per the first part of the clause, the second part creates a pathway to shorten that term by AHP showing that is has acquired the expertise required to fully participate.

1. The Context Leading to Order 39 Surrender Matters.

As a starting point, interpretation of this ambiguity in Order 39 must be conducted within the context of the Acquisition Transaction hearing record and the underlying situation. A review of the hearing transcripts in the Acquisition Transaction Proceeding shows that ALJ Walker was on point for the Commission throughout the hearings in 2019 on this very issue. ALJ Walker therefore likely had a hand in fashioning the solution to the problem that the lack of AHP's expertise created and which threatened the entire Acquisition Transaction: how to approve a CPCN for a stub utility without requisite expertise. From the hearing transcripts cited above, the Commission could have reasonably assumed from ML&P's witnesses' statements that the MOA had little or no interest in managing the Eklutna Project or participating in its operations and maintenance through its seat the EOC. The record reflects that: (i) the MOA planned to have no staff or expertise at AHP; (ii) the MOA had not even inquired as to whether any outside consultants could be hired to fill that role; (iii) the MOA affirmatively planned that management of the Eklutna Project "[would] be transitioned to the other two owners, Chugach and MEA", and (iv) AHP's main responsibility would be "rendering of the bill and receiving payment."[57] Order 39 reflects these findings in explaining the need for the Surrender. Upon such understanding, ALJ Walker's read of the section requiring for Surrender for the term of the PPAs would seem quite reasonable. If the MOA had no interest in managing the Eklutna Project during the terms of the two PPAs, it makes sense that MOA would only be considered "managerially or technically fit" to "maintain majority ownership of the

PHONE 206.883.2500

Eklutna Project" if it surrendered its vote on the EOC for at least the duration of the two PPAs to the utility offtakers that possess the requisite fitness and expertise.[58]

2. Actions and Statements Since Order 39 Reflect Ambiguity.

The ambiguous understanding of the term length language by the parties has been prevalent since soon after Order 39 was released, and was clearly demonstrated on October 22, 2020 when Commission staff indicated to MEA and MOA in an exchange that has since been added to the docket for TA379-121, that it believed that Section 4.2(B) of the MEA PPA "appears to allow MOA/ML&P to keep its vote on the EOC" and that this was inconsistent with the requirement that MOA/ML&P surrender its vote on the EOC so Chugach and MEA could manage the Project. The MOA responded to the RCA that it was not inconsistent because after the Surrender there would simply be no MOA voting representative on the EOC so long as the Surrender was in place, and as a result, during such time, 4.2(B) would have no affect.[59] While MOA's response clearly demonstrates its view that it could seek to regain its rights during the terms of the PPAs, contrary to the argument in the MOA Brief that this issue was explicitly addressed[60], this exchange is by no means dispositive of the underlying ambiguity. There is no indication that the Commission responded, nor was a response necessary because Section 4.2(B) of the PPA is simply not applicable so long as there is no MOA voting member, a reality that could easily last indefinitely if Chugach and MEA exercise their purchase options.

Such ambiguity was then only further cemented through the language of the Surrender document itself, which states that "this surrender of voting rights shall remain in effect until ML&P's successor complies with the RCA requirements pertaining to qualifications for ML&P's representation on the EOC…" and "until ML&P's successor

complies with the qualification terms of RCA order U-18-102(44), all EOC decisions will be by unanimous vote of Chugach and [MEA]."[61] The Surrender itself is therefore silent on the term length issue, instead tying any lifting to just "RCA requirements pertaining to qualifications," which is exactly where such ambiguity lies.[62]

3. Chugach and MEA Defer to the Commission in Addressing the Ambiguity in Order 39.

Broadly, Chugach and MEA's joint position is that the Commission's interpretation of its own Order language – both what it means and how to apply it to the facts at hand – should generally be given reasonable deference, as it is the Commission who has the broadest understanding of (i) how it reached the conclusion to include the Surrender language, inclusive of the term length, in Order 39 after the completion of a complex proceeding, (ii) exactly what meaning and requirements were intended by this language, and (iii) how such decision is within the clear purview of the Commission's authority to issue conditions over CPCNs in the name of public interests rooted in ratepayer obligations, prudent utility practice and other matters of Commission expertise. Alaska courts, in reviewing agency actions, take the same view, that in situations where a matter involves agency expertise, agency interpretation received deference so long as they are rooted in a reasonable basis in fact and law.[63]

The central question therefore is whether the Commission's reading of a term length requirement "is supported by the facts and has a reasonable basis in law."[64] As overviewed in the above summary of the record, and as further discussed in the next section, the underlying record and circumstances supporting the complex Acquisition

Transaction and Surrender created multiple reasonable reasons for tying the Surrender to the PPA term lengths, each directly relevant to the Commission's authority to protect the public interest and ensure utility fitness for providing utility service under AS 42.05.241. Further, despite the MOA's statements in its MOA Brief in this proceeding that such an action would be "unreasonable and arbitrary"[65] and "unfair"[66], since 2020, there have been no material changes in fact with respect to MOA's technical and managerial fitness or with respect to the Acquisition Transaction, those same facts which initially led the Commission to issue the Surrender requirement, inclusive of its term length, in the first place.

4. The factual circumstances of the acquisition transaction created numerous public interest reasons within the RCA's legal authority that justify the Commission's interpretation of a strict term length.

A strict PPA-term Surrender term limit reading by the Commission is clearly supported by at least five key factual aspects from the Acquisition Transaction Proceeding.

First, the CPCN for the stub utility was fundamentally much more limited in scope than that of ML&P's CPCN or those CPCNs held by Chugach and MEA. Such CPCNs authorize the utilities to provide retail electric service to a customers in a set territory, and which come with significant responsibilities to ratepayers, including providing service to the public at large,[67] avoiding discrimination between similarly-situated customers,[68] and complying with various RCA regulations, such as the obligation to locate staff and business officers such that the general public has "reasonably convenient access to qualified personnel, including supervisors."[69] AHP's CPCN on the other hand, only authorizes AHP to provide wholesale electric power "from the Eklutna Hydroelectric Project

Switchyard."[70] All wholesale power provided by MOA from the Eklutna Hydroelectric Project Switchyard is then contractually obligated to be sold to Chugach or MEA pursuant to the Eklutna PPAs for the term length of the Eklutna PPAs. In essence, therefore, the CPCN held by AHP serves one purpose: to enable MOA to meet its obligations under the Eklutna PPAs for at least the next 35 years.

Second, through the Eklutna PPA, which, as the Commission made clear, is more akin to a deferred payment mechanism than a power purchase agreement, the MOA ceded to Chugach a significant amount of management and cost responsibility, and the associated risks, of the long-term operation of the Eklutna Project. For example, Chugach is tasked with managing, controlling, operating, and maintaining its portion of AHP's ownership share, Chugach is responsible for payment of all capital expenditures and operating and maintenance expenses that are payable with respect to the Chugach portion, and Chugach is required to pay AHP an annual payment unconnected to the amount the Project generates.[71] While MOA is still the legal Owner of the portion subject to the Eklutna PPA, MOA clearly ceded its liabilities and all of its costs associated with approximately 64% of its ownership share to Chugach. This also means that Chugach, when totaling its own share and its rights to 64% of MOA's share, currently bears the benefits and burdens of an Owner for approximately 64% of the entire Eklutna Project.[72] In this context, during the term of the Eklutna PPA, the MOA's voting seat on the EOC could be determined to be less

[70] In fact, when issuing CPCN 780, the RCA noted that, "due to the scope of the operation of the Anchorage Hydropower, the Regulatory Commission of Alaska has determined that a description of the authorized service area is not applicable under these circumstances." *See* Letter to Anna C. Henderson, MOA d/b/a Anchorage Hydropower, with attached certificate in U-18-102/U-19-020/U-19-021 (April 9, 2021).

[72] *Id.* at § 2.2(A) ("the 'Chugach Portion' shall equal 64.29% of the Seller's Interest. Such percentage interest, when combined with the Purchaser's existing ownership of 30% of the Facility, will give Purchaser rights to 62.29% of the Facility").

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

important under a deferred payment mechanism contract, rather than under a long-term PPA with typical performance obligations on the seller rather than on the offtaker.

Third, while the MEA PPA is structured differently, with AHP maintaining cost and operational responsibility for the 35.71% of the MOA's share in the Project that is allocated for power delivery to MEA (19% of the Project overall), MOA still has prudent operation obligations under the MEA PPA that will last the duration of the MEA PPA.

Fourth, both MEA and Chugach have the options to purchase the subject portions of MOA's ownership shares for then book-value, as set forth in each of their PPAs, at the end of the 35-year terms.[73] If these are exercised, the MOA will have no interest or stake in the Eklutna Project beyond the PPA terms.

Fifth, in the event of disagreement, prior to the Acquisition Transaction, EOC decisions were decided by a double majority or a vote of two of the three Eklutna Purchasers whose shares total at least 51% of the Eklutna Project shares. This means that ML&P previously had formal veto rights over Eklutna Project operating decisions. As was overviewed by Lee Thibert in the Order 39 proceeding transcripts, however, when ML&P – as an operating utility with a stake in and technical expertise regarding the performance of the Eklutna Project – was part of the EOC, disagreements resulting in formal votes were not common given that all parties were incented to run the project as cost effectively as possible.[74] After the Acquisition Transaction, however, the MOA was no longer in the same position (with no ratepayer obligations and significantly diminished cost responsibility and risk in the Eklutna Project). Yet, if AHP's voting rights are now restored to match that of ML&P prior to the Acquisition Transaction, the MOA would gain the right to impose veto power over decisions of Chugach and MEA with respect to the operation of the Eklutna Project despite the facts that (1) only Chugach and MEA rely on the ongoing operation of the Project as part of their ratepayer obligations, (2) the MOA

[73] *Id.* at § 14.3; MEA PPA at § 17.3.

PHONE 206.883.2500

is only responsible for 19% of Project costs, and (3) both MEA and Chugach have purchase options at the end of the PPA terms. Such veto power simply makes no sense.

Taken together, these facts clearly demonstrate ample support for linking the MOA's surrender of voting rights to the terms of the Eklutna PPAs even if the MOA regains technical and managerial expertise, given that the management of the Eklutna Project and the purpose of the MOA utility has so fundamentally changed after the Acquisition Transaction, a fact that will remain for the duration of the Eklutna PPA terms.

Building off this strong factual support, a reading by the Commission of a strict term length is clearly within the purview of the Commission's broad regulatory authorities under AS 42.05.241 to (i) ensure that an applicant for a CPCN be fit, willing and able to provide the utility services applied for – in this case only the wholesale sale of electric power from the Eklutna Project, and (ii) to impose "conditions [on such CPCN] necessary to protect and promote the public interest."[75] Such public interests include (i) ensuring the ongoing operation of the Eklutna Project – a critical Railbelt resource providing low cost, reliable power – in accordance with prudent utility practice and (ii) protecting each of Chugach's and the MEA's rights under the Eklutna PPAs.

5. The Underlying Material Facts Behind the Surrender Remain Unchanged.

None of the above facts have changed materially during the past four years and the MOA has taken no practical action to become more technically or managerially fit to serve the majority owner role on the EOC then when the Commission issued the surrender condition in the first place. Mark Corsentino has worked for AWWU in his current role since 2019.[76] The only thing that has changed is that the Fish and Wildlife implementation process progressed and the Anchorage Assembly did not like Chugach and MEA's Proposed Program and has sought multiple avenues to try to influence that program.[77]

While the Proposed Fish and Wildlife Program was a significant undertaking, the EOC actually had little to do with the implementation process to date as this was an Owner-run process, and going forward, implementation will only be a small part of the many responsibilities of the EOC.[78] All of the relevant facts and associated concerns related to allowing a stub utility to hold a majority owner right over a major Railbelt resource management body remain unchanged. It would therefore be reasonable for the Commission to find – as it did in 2020 based on the same facts – that the Surrender must continue or that voting rights must be changed during the PPA terms.

B. Failing to give any weight to the term length requirement and its underlying reasoning would run counter to clear Commission intent and principles of statutory interpretation.

The MOA, in its Request for Acknowledgement and MOA Brief, has failed to acknowledge any real purpose behind the term length requirement of the Surrender. In its Request for Acknowledgement, it was not mentioned at all. And in its MOA Brief, it is suggested that it was intended to serve only as a base term if the AHP took no action, despite the use of the words "at least" before "equal to the term of" the PPAs.[79]

If, however, the Commission had truly intended to just allow the MOA to regain voting rights upon a demonstration that it has found a single staffer at another department with knowledge of prudent utility practice and Railbelt electricity assets, there simply would have been no reason to include the PPA term length reference in the first place. The same sentence, omitting the term length reference, would have the same effect through stating that "the Surrender cannot be lifted until such time as [AHP] has shown to our satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC." Any reading, therefore, that gives no significant import to the term length language would render that entire clause unnecessary. The Alaska Supreme Court has adopted a rule for statutory construction in which "every word, sentence, or provision

of a statute to have some purpose, force, and effect, and that no words or provisions are superfluous."[80] In U-08-005(6), the RCA adopted this rule of statutory construction to aid its interpretation of an RCA regulation.[81] The Commission must assume, therefore, that there was a clear reason behind its linking the surrender to the PPA terms, and therefore at a minimum, in order for the MOA to regain voting rights prematurely, the MOA must acknowledge the importance and meaning behind the term length requirement and require that the MOA address the concerns underlying the original requirement (e.g. the lack of operational responsibility and risk given how much responsibility has been ceded to Chugach in the Eklutna PPA, and the impact of decision making on the purchase options, AHP's very limited CPCN scope). The MOA should also demonstrate that such concerns will remain addressed throughout the life of the PPAs despite any MOA staffing changes or MOA administrative or Assembly changes.[82] The MOA includes no such acknowledgments or demonstration in its MOA Brief and rather its arguments lead only to an unreasonable conclusion that the term length reference was superfluous.

C. If the Commission decides to allow the MOA or AHP to regain its voting Rights and end the Surrender, the Commission must ensure that actions under the Surrender are not undone.

If the Commission allows AHP to regain voting rights on the EOC and with respect to the Fish and Wildlife Agreement during the term of the PPAs and AHP proves to the Commission that AHP has acquired the expertise to fully participate as a voting member of the EOC and has otherwise made demonstrations required by the Commission, the return of its EOC voting rights must not be allowed to override decisions that were made by the Chugach and MEA during the Surrender period and must be restrained to focus on considerations of prudent utility practice and the Eklutna Project's operations within the Railbelt electric generation and transmission system.

To be clear, Chugach and MEA will welcome on the EOC any AHP expertise that the Commission finds sufficient under the tests that it established in Order 39 whenever the Commission deems that to be appropriate provided that the Commission also clarify that AHP must accept the following understandings before it can regain voting rights:

1) the EOC is, and should remain, an operations and maintenance committee for the Project, dealing with project operations, maintenance, water reservoir planning, hydroelectric turbines, systems and controls, engineering, and budgets, that works best on decisions made by consensus of those with appropriate expertise, knowledge of prudent utility practices, and how the Eklutna Project operates within the Railbelt;[83]

2) the proper place to discuss the 1991 Agreement process and implementation the Final Fish and Wildlife Program is within the Project Owners group of collaborative co-equal owners that created and negotiated what became the Final Fish and Wildlife Program, as explained in testimony by Tony Zellers;[84]

3) both EOC's and the Owners' decisions previously made during the Surrender period, including, but not limited to, budgets, expenses, and the Final Fish and Wildlife

[83] Ori at 6-9; Zellers at 13.

PHONE 206.883.2500

Program must be accepted "as-is"; regaining voting rights on the EOC does not give AHP power to undo, or force a review of, prior EOC and Project Owners' decisions;

4) to the extent that AHP loses its expertise that the Commission found sufficient for its EOC voting rights, AHP must notify Chugach, MEA, and the Commission and surrender its voting rights on the EOC until such time as it makes similar demonstration of expertise to the Commission;

5) AHP's representative must focus on considerations of prudent utility practice and the Eklutna Project's operations within the Railbelt electric generation and transmission systems; these obligations must preempt any directives from the Assembly or MOA leadership that would require a vote in contravention of such practices and obligations; and if such representative is unable to vote in line with such practice and obligations because of such a contradictory Assembly or leadership directive on a particular decision, such representative will recuse himself from the applicable vote; and

6) in the event that strategy must be discussed, or a contractual or legal decision must be made, in the Project Owners group or within the EOC in which the interests of AWWU or other parts of the MOA conflict or are otherwise substantially involved, AHP's representative(s) will recuse themselves and Chugach's and MEA's representatives will make decisions through consensus just as they have during the Surrender period.[85]

III. CONCLUSION

For the reasons explained above, there is ample factual and legal support for the Commission's strict term limit reading of the Surrender, however the Commission is best positioned to decide whether the minimum term of the surrender extends the full term of the PPAs. If, however, the Commission determines that AHP may regain voting rights during the Surrender term and if the Commission finds AHP's expertise and qualifications sufficient under the tests it established in Order 39, the Commission should

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

OFFICE OF THE ATTORNEY GENERAL'S BRIEF ON INTERPRETATION OF ORDER 39

I. Introduction

Order U-18-102(44)/U-19-020(39)/U-19-021(39) (Order 39) did not find that AHP[1] was managerially or technically fit to maintain majority ownership in the Eklutna Project and required the Municipality of Anchorage d/b/a Municipal Light & Power to surrender its voting rights on the Eklutna Operating Committee (EOC). Order 39 stated in part:

> This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended, and cannot be lifted until such time as MHP has shown to our satisfaction that MHP has acquired the expertise required to fully participate as a voting member of the EOC.[2]

[1] Anchorage Hydropower, referred to in Order 39 as MHP.

[2] Order 39 at 67.

Attorney General
Regulatory Affairs & Public Advocacy

At the August 30, 2024, prehearing conference, the Commission—through ALJ Walker—noted two things. First, that neither AHP's request for acknowledgement nor the motion for expedited consideration discussed why the Commission should set aside the minimum time-period for the voting rights surrender.[3] And second, "it appears that the Commission should be considering dismissal of the notice and request for acknowledgment as being prematurely filed…."[4]

When examining AHP's Notice and Request for Acknowledgment, the Office of the Attorney General, Regulatory Affairs & Public Advocacy Section (RAPA) incorrectly focused on the second half of the above-quoted language from Order 39 and not the issues raised by the Commission. RAPA now addresses those issues.

- The language of Order 39 establishes a minimum time-period for the surrender of voting rights.
- Conflicts in language between Order 39 and the PPAs do not show that the Commission intended to have the PPAs override the requirements of Order 39.
- Any conflict between the PPAs and Order 39 is resolved because PPA provisions provide that the language in Order 39 controls.

II. Argument

A. Does Order 39 establish a minimum time-period for the surrender of voting rights?

The above-quoted language from Order 39[5] consists of an independent clause (the first part of the sentence before the word "and") and a subordinate clause (the second part of the sentence). The independent clause is a complete sentence that requires the surrender to have a "term at least equal to…" the duration of the PPAs. The second part of the sentence is not a complete sentence and is also subordinate to the independent clause's stated requirements. Unless AHP shows that the subordinate clause (the second part of the sentence) sets aside the minimum time-period for the surrender of voting rights, the Commission should consider dismissing the notice and request for acknowledgment as being prematurely filed.

As noted above, the language from Order 39 includes two clauses: (1) "This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended" and (2) "cannot be lifted until such time as MHP has shown to our satisfaction that MHP has acquired the expertise required to fully participate as a voting member of the EOC." The grammar principle of subordinating conjunctions helps in understanding this sentence.

[5] RAPA does not pretend to be able to tell the Commission what it meant in the Commission's own order. Instead, RAPA provides this briefing as requested.

Attorney General
Regulatory Affairs & Public Advocacy
1031 West Fourth Avenue, Suite 200
Anchorage, Alaska 99501
(907) 334-2394, (907) 269-5100, (907) 276-3697 Fax

The second clause is connected to the first, independent clause, with subordinating conjunctions: being "and" and "until." Grammerly.com explains:

> A subordinating conjunction is a word or phrase that links a dependent clause to an independent clause. This word or phrase indicates that a clause has informative value to add to the sentence's main idea, signaling a cause-and-effect relationship or a shift in time and place between the two clauses.
>
> A dependent clause, also known as a subordinate clause, is a clause with two specific qualities. Firstly, it does not express a complete unit of thought on its own; it cannot stand as its own sentence. Secondly, it *depends* upon an independent clause—one that can stand on its own as a complete sentence—to form a complete idea. If independent and dependent clauses could be likened to Batman and Robin, the dependent, or *subordinate,* clause would be Robin, Batman's assistant. The independent, main clause would be Batman, his superhero boss.[6]

Grammerly.com lists subordinating conjunctions and includes the word "until."[7]

The second clause satisfies the above dependent (subordinate) clause description. First, the second part of the sentence cannot stand on its own. That is because there is no subject (e.g., "it" or "the Surrender") in the clause: "and cannot be lifted until such time as MHP has shown to our satisfaction that MHP has acquired the expertise required to fully participate as a voting member of the EOC." Second, it depends on the first clause. That part of Order 39 is an independent clause that can stand on its own as a complete

Anchorage, Alaska 99501
(907) 334-2394, (907) 269-5100, (907) 276-3697 Fax

sentence: "This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended[.]" Third, the second clause uses the word "until" making it subordinate[8] to the first clause in Order 39.

The subordinate clause relies on the language of the independent clause for the subordinate clause to have any cause or effect. Without the first clause, the second clause has no meaning. Stated another way, if the independent clause was removed from Order 39 then the subordinate clause would not make any sense. If the subordinate clause basically cannot exist without the independent clause, then the subordinate clause cannot overrule the requirements of the independent clause.

Examining the grammar principles for the language in Order 39 indicates that the surrender of voting rights was for a term at least equal to the duration of the PPA. The subordinate clause shows that AHP cannot seek to have the surrender lifted until the PPAs have expired.

//

//

[8] Black's Law Dictionary at 1426 defines "subordinate" as "Placed in a lower order, class, or rank; occupying a lower position in a regular descending series; inferior in order, nature, dignity, power, importance, or the like; belonging to an inferior order in classification, and having a lower position in a recognized scale; secondary, minor." (6th ed. 1990).

B. Do conflicts in language between Order 39 and the PPAs show that the Commission intended to have the PPAs override the requirements of Order 39?

AHP asserts that Order 39 could not have required a minimum time-period for the surrender because the idea of a minimum time-period is contradicted by the language in the approved PPAs.[9] There are two PPAs involved: the Eklutna PPA and the MEA PPA.

1. The Eklutna PPA

In Order 39 the Commission held "that the Eklutna PPA is a deferred payment mechanism for Chugach's acquisition of most ML&P assets."[10] The Commission recently restated this holding:

> We also found that the Eklutna PPA was not a power purchase agreement. We found that the Eklutna PPA might be considered a lease, or merely a secured acquisition payment mechanism, but it was not entitled to the protections offered to wholesale power purchase agreements under AS 42.05.431(b).[11]

AHP does not explain how a provision in a deferred payment mechanism is sufficient to override the language in Order 39. Stated another way, Order 39 stated that AHP was not managerially or technically fit until the conditions in Order 39 were met. There is no indication in the Commission's approval of the deferred payment

---

9 APH Brief at 9.

10 Order 39 at 75.

11 Order U-23-047(12)/U-23-048(12) at 11.

Attorney General
Regulatory Affairs & Public Advocacy
1031 West Fourth Avenue, Suite 200
Anchorage, Alaska 99501
(907) 334-2394, (907) 269-5100, (907) 276-3697 Fax

mechanism that the Eklutna PPA was meant to override Order 39's managerial and technically fit requirements.

Further, Order 39 required that the AHP representative have knowledge of prudent utility practice and the Railbelt electric generation and transmission system. But the Eklutna PPA does not require AHP's representative to have knowledge of the Railbelt electric generation and transmission system: "The Seller's Representative shall make all decisions on the Operating Committee consistent with Prudent Utility Practice and the rights and obligations of the Parties under this PPA."[12] Accepting AHP's argument means that the Commission set forth requirements in Order 39 and then immediately countermanded part of those requirements—knowledge of Railbelt generation and transmission system—by approving the Eklutna PPA.

Further, AHP's Notice and Request for Acknowledgement undermines AHP's own assertions. AHP advocates that Mr. Corsentino has both knowledge of prudent utility practice and knowledge of the Railbelt generation and transmission system.[13] If the language in the Eklutna PPA shows that the Commission intended to allow the AHP to have a representative on the EOC as provided in the PPA, then AHP's Notice and Request for Acknowledgement would have followed the requirements of the PPA rather than Order 39.

Attorney General
Regulatory Affairs & Public Advocacy

[12] Order 39 at Appendix D at 9 of 92.

[13] AHP Notice and Request for Acknowledgement at 3-4.

There is no indication that the Commission intended the Eklutna PPA to override the stated requirements in Order 39.

2. The MEA PPA

After Order 39, AHP and MEA made tariff filings for approval of the MEA PPA.[14] Commission Staff noted a possible inconsistency between the MEA PPA and Order 39.[15] Commission Staff pointed out that page 67 of Order 39 required MOA/ML&P to surrender its vote on the EOC so that Chugach and MEA could manage the project, but that section 4.2 of the MEA PPA appeared to allow the MOA/ML&P to keep its vote on the EOC.[16]

Commission Staff asked if this was a conflict.[17] The MOA/ML&P responded that there was no conflict.[18] The MOA/ML&P asserted:

> Like Section 4.2(B) of the Chugach Eklutna PPA, Section 4.2(B) of the MEA Eklutna PPA requires MHP, in consultation with the Purchaser, to select MHP's representative on the EOC. As a result of Order 39, MHP won't have any voting representative on the EOC until the surrender is terminated upon a positive finding by the RCA that MHP's proposed representative is qualified. Thus,

17 TA379-121 Oct. 27, 2020 Supplemental Tariff Filing; TA525-15 Oct. 23, 2020 Supplemental Tariff Filing.

18 TA379-121 Oct. 27, 2020 Supplemental Tariff Filing.

Attorney General
Regulatory Affairs & Public Advocacy
1031 West Fourth Avenue, Suite 200
Anchorage, Alaska 99501
(907) 334-2394, (907) 269-5100, (907) 276-3697 Fax

> Section 4.2(B) of neither PPAs need to be amended. In addition, Section 4.2(B) should remain as written as it will be relevant if and when MHP's voting rights surrender is terminated in the future upon the necessary finding of the RCA.[19]

But MEA had a different response and admitted that a conflict existed.

> The MEA Eklutna Hydro PPA, by and between MEA and the MOA, was entered into and executed in September 2019, several months prior to the RCA's May 2020 decision requiring ML&P to surrender its vote on the EOC as a condition of approving the sale of ML&P. This appears to be the reason for the "conflict" you reference because at the time the PPA was negotiated, the parties had no way of knowing the future RCA decision regarding ML&P's surrendering of EOC voting rights. MEA notes that the provision you reference and cite as a conflict in the MEA Eklutna Hydro PPA is contained verbatim in the Chugach Eklutna Hydro PPA (see Appendix D of Order U-18-102(44), Section 4.2(B) at page 9 of 92), which the RCA conditionally approved as part of Order U-18-102(44).
>
> In MEA's view, if the RCA wishes to resolve this perceived conflict, the remedy should be similar and consistent with how the RCA remedied the same conflict in the Chugach Eklutna Hydro PPA, which could include approving the MEA PPA subject to the same conditions the RCA previously imposed in Order U-18-102(44). Specifically, MEA is agreeable to having the same vote surrender language in order U-18-102(44) at page 67 apply to the MEA Eklutna Hydro PPA. Hopefully this helps resolves this matter.[20]

[19] *Id.*

[20] TA525-18 Oct. 23, 2020 Supplemental Tariff Filing.

Attorney General

(907) 334-2394, (907) 269-5100, (907) 276-3697 Fax

MEA disagreed with MOA/ML&P about a potential conflict. When the parties do not agree on the meaning of an essential part of the MEA PPA, being Section 4.2, there is no "meeting of the minds."[21] If there is no meeting of the minds there is no agreement on this aspect.[22]

The above undercuts AHP's argument that when the Commission approved the MEA PPA that Order 39 could not have had a minimum time-period for surrendering voting rights. And like the Eklutna PPA, the MEA PPA also conflicts with Order 39 because it does not require the AHP representative to have knowledge of the Railbelt generation and transmission system.[23]

There is no indication that the Commission intended the language in the MEA PPA to override the requirements of Order 39. But regardless of any potential or actual conflict, the PPAs themselves resolve this issue.

C. Any conflict between the PPAs and Order 39 is resolved because the PPA provisions provide that the language in Order 39 controls.

The PPAs provide that after approval each PPA will at all times be "subject to the RCA's continuing authority over wholesale power agreements."[24] The PPAs address applicable laws and require "[e]ach Party shall at all times comply with all Applicable

Laws."[25] Applicable Law is defined as "any statute law ordinance, regulation, rule, code, *order*, constitution, treaty, common law judgment, decree, Permit requirement, other binding requirement or rule of law of, or compulsory standard established by, any Governmental Authority."[26]

The terms of the PPA require the parties to comply with an order, which includes the Commission's Order 39. This shows that the requirements of Order 39 control over provisions in the PPA. Also, each PPA contains a severability provision that invalidates or renders unenforceable any provision that conflicts with the law—in this case Order 39—and allows the PPA to remain in effect without the violating provision.[27]

To the extent that the PPAs provisions conflict with Order 39, the language in the PPAs is severable and unenforceable. The remainder of the PPAs remains intact. The above language contained in the PPAs resolves any dispute in favor of the requirements from Order 39.

III. Conclusion

In response to the Commission's question of whether it should set aside the minimum time-period for the voting rights surrender and if it appears that the

RECEIVED
By the Regulatory Commission of Alaska on Oct 08, 2024

STATE OF ALASKA

BEFORE THE REGULATORY COMMISSION OF ALASKA

Before Commissioners: John M. Espindola, Chairman
Robert M. Pickett
John C. Springsteen

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

PREFILED RESPONSIVE TESTIMONY OF EUGENE A. ORI

I. Introduction

1. Q. Please state your name, present position, and business address.

A. My name is Eugene A. Ori. I am employed by Chugach Electric Association, Inc. (Chugach) as Vice President, Power Production. My business address is 5601 Electron Drive, Anchorage, Alaska 99518.

2. Q. What is the purpose of your testimony?

A. The purpose of my testimony is to provide the Commission with information related to the Eklutna Operating Committee (EOC), its function and processes, how the EOC operates and maintains the Eklutna Hydroelectric Project (Eklutna Project), and how the EOC determines and applies prudent utility practices to ensure that the Eklutna Project continues to provide lowest cost energy and capacity (that is also renewable) for the benefit of its owners, ratepayers, taxpayers, and system reliability in the Railbelt.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

3. Q. Have you previously submitted testimony before the Commission?

A. Yes. I provided prefiled direct and prefiled responsive testimony for the Municipality of Anchorage (MOA) d/b/a Anchorage Municipal Light & Power (ML&P's) in its rate cases U-13-184 and U-16-094/U-17-008.

4. Q. Please describe how your testimony is organized.

A. First, I will describe my professional qualifications. Second, I will describe the functions and responsibilities of the EOC in its role operating and maintaining the Eklutna Project. Third, I will describe the Eklutna Project's ownership and management history, with specific focus on the 2020 transaction in which Chugach acquired most of the assets of ML&P and how this affected and continues to affect Eklutna Project management. Fourth, I will describe my understanding of prudent utility practices, specifically in the context of the EOC and its functions related to the Eklutna Project.

II. Qualifications

5. Q. Please summarize your professional qualifications.

A. I have been managing and operating electric generation assets in the Railbelt for 19 years. Before working for Chugach, I worked at ML&P for 15 years, including eight years as its Generation Manager following seven years as Assistant Generation Manager. Four years ago, when Chugach acquired ML&P, I joined Chugach where I managed integration of ML&P's generation portfolio into the Chugach system. For the past two years, I have run the power production team at Chugach as Vice President of Power Production. My resume is attached as **Exhibit EAO-01.**

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

6. Q. What is your experience with operating and maintaining generation assets and, in particular, hydroelectric projects?

A. During my professional career, I have worked on and managed teams that operated and maintained most of the turbine electric generation assets in Alaska's Railbelt, including those listed in the table below:

Project	Type	Capacity
Eklutna Project	Hydro	40 MW
Cooper Lake Power Plant	Hydro	19 MW
Beluga Power Plant	Natural gas	332 MW
Hank Nikkels Plant	Natural gas	66.5 MW
George M. Sullivan Plant	Natural gas	293.5 MW
Southcentral Power Project	Natural gas	200 MW

Among these projects, I have extensive experience with the two hydroelectric projects: the Eklutna Project and Cooper Lake Hydroelectric Project. For 15 years at ML&P and for the last two years at Chugach, I was, and continue to be, involved in and responsible for the maintenance and operation of the Eklutna Project, including managing turbine and generator overhauls, controls updates, equipment updates, and managing other work to maintain the operational reliability of the Eklutna Project.

This has been a significant and specialized undertaking and responsibility for a few reasons (1) the Eklutna Project was built in the 1950s by the federal government, which, at the time, did not need to comply with any state or federal dam safety or OSHA requirements with respect to design, and (2) the federal government operated the Eklutna Project until Chugach, the MOA, and Matanuska Electric Association (MEA, and together with the other two owners, the Project Owners) purchased it in 1997, and for those years of operation, the federal

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

government was not subject to the same ongoing hydroelectric operational regulatory compliance obligations required of private hydroelectric project owners.

With respect to the Cooper Lake Project, in addition to operations and maintenance of that project, I have also had experience with, and responsibility for, operating facilities built to benefit fish and wildlife impacted by the project pursuant to Chugach's ongoing federal hydropower relicensing obligations.

7. Q. Please explain why your prior experience with hydroelectric projects and specifically turbines is important in your current role?

A. All of the electric generation projects I have been involved with have complex integrated generators, electrical controls, and other equipment unique to electric generation projects, including turbines as the prime moving generation mechanism, whether powered by the movement of water directly or from the combustion of fuel. I have extensive experience in installing, commissioning, operating, and managing maintenance/overhaul practices of combustion turbines. While with GE earlier in my career, I commissioned over 2500MW of combustion turbines of various types and sizes in various states and countries.

Maintenance of these types of turbines is complex and vital to the reliability of the systems in which they operate, and requires a specific set of knowledge and skills that I have acquired over my career. For example, upon my arrival at ML&P, I found that it was common practice to shut down Eklutna Unit 2 at night via the butterfly isolation valve because the air brake system could not stop the shaft rotation due to wicket gate leakage. This is not the correct application for continued operation because the butterfly valve was designed as an emergency device, not one for consistent actuation. When the major overhaul was undertaken years later to fix the leaky wicket gates, the butterfly valve needed extensive overhaul, and damaged equipment downstream of the valve also needed extensive repairs. This is just one example of understanding proper application and use of equipment.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

In addition, hydroelectric projects require operational knowledge of the gates, valves, penstock, intake, water levels and reservoir operations, and performance curves, as well as how the project interacts with other generation assets (e.g., wind generation), the assets of other utilities, and the grid generally. Operating these projects also requires extensive knowledge of their capabilities and limits to maintain readiness and flexibility to serve load and maintain system reliability in all seasons and conditions (include system-wide emergencies). While there are differences between hydroelectric projects that require unique knowledge, prior experience with projects of a similar size and technology to the Eklutna Project has proved very valuable in my current work with the Eklutna Project.

8. Q. Please describe your role at Chugach broadly and then particularly with respect to the Eklutna Project and others involved with the project.

A. I lead a 90-person team of professionals that operate and maintain all six of Chugach's power plants, including the two hydroelectric projects and four natural gas combustion turbine generation projects. I am ultimately responsible for all aspects of staffing, reliable and safe operation, maintenance, operation expenses and capital expenditure planning and budgeting. All environmental air permit and pollution compliance of these plants is also my responsibility. I work closely with the System Control team in planning for N-2+ generation contingency scenarios and other aspects of reliable plant operation.

I also represent Chugach with respect to the collaborative management decision process for the two projects that Chugach owns jointly with other utilities: the Eklutna Project and the Bradley Lake Project. I am the current chair of the EOC and have served on it for several years. Like all utility-designated members of the EOC, I have an alternate member of the EOC: Nat Lewis. I also coordinate closely with Russ Thornton, Vice President G&T System Control at Chugach, who dispatches the Eklutna Project, Kevin Skiba, Manager, Fuel Supply & Operations,

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

and Susan Imlach, our Fuel Supply and Operations Analyst who accounts for water and energy usage for the Eklutna Project.

III. The EOC

9. Q. Please describe the history of the ownership and management of the Eklutna Project from 1997 to 2020.

A. The Project Owners purchased the Eklutna Project from the federal government in October 1997. Since that time, the Project Owners have delegated operations and management of the Eklutna Project to the EOC -- a committee of designated representatives of each utility with the qualifications and knowledge to operate and maintain the Eklutna Project.

Since the initial Eklutna Project purchase and until October 2020, both the energy output and the costs of operating and maintaining the Eklutna Project were allocated according to ownership of the Eklutna Project, and each member of the EOC had voting rights equal to their ownership shares. While there were disagreements among the Project Owners' representatives on the EOC from time to time, most decisions about Eklutna Project operations were made on a consensus basis and were centered around the goal of taking the actions to maximize capacity and generation of the Eklutna Project safely and consistent with prudent utility practices. Over time, the few disagreements lessened even more as the assets were brought into full compliance with industry standards, ownership of portions of the transmission lines from the Eklutna Project were transferred to MEA and Chugach, and matters related to encroachments and easements were eliminated.

10. Q. What are the typical annual responsibilities of the EOC?

A. The EOC is responsible for the Eklutna Project's: (1) oversight of major maintenance and operations (power plant and switchyard) and dam safety and inspections; and (2) preparation of the annual project budget, reliability and scheduling occurrences, project status reports, monthly revenue reports and

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

energy usage among members, and notifications related to factors that limit energy or capacity, such as reservoir levels and transmission constraints.

11. Q. What was your role in the 2020 transaction by which Chugach acquired most of ML&P's assets?

A. As the MOA prepared to sell most of the ML&P assets to Chugach, I was tasked with integrating the generation plants and the teams operating them into a single, well-functioning generation system and team.

12. Q. How was the ownership of the Eklutna Project treated within the terms of that transaction?

A. When Chugach purchased the ML&P assets in 2020, it did not purchase the Eklutna Project. As I understand it, Chugach and the MOA executed a long-term 35-year power purchase agreement in which Chugach would pay a large fixed sum to the MOA over time, Chugach would operate and control all (or a part if MEA opted to also enter into a power purchase agreement, which they later did) the MOA's interests in the Eklutna Project and receive the energy associated with those interests, Chugach would pay the costs of operations and the implementation of the 1991 Agreement,[1] and at the end of the term, Chugach could buy the applicable portion of the MOA's interests in the Eklutna Project at then net book value. This agreement between the MOA and Chugach is referred to in this testimony as the "MOA - Chugach PPA" and is attached as **Exhibit EAO-02**. Relatedly, MEA also entered into a separate power purchase agreement with MOA for a portion of MOA's interest in the Eklutna Project, pursuant to which MEA would purchase power from the MOA for a period of 35 years.

[1] Agreement Between the Municipality of Anchorage d/b/a Anchorage Municipal Light and Power, Chugach Electric Association, Inc., Matanuska Electric Association, Inc., U.S. Fish and Wildlife Service, National Marine Fisheries Service, Alaska Energy Authority, and the State of Alaska Relative to the Eklutna and Snettisham Hydroelectric Projects (Aug. 7, 1991) (1991 Agreement) (a copy is attached to Tony Zeller's testimony as **TRZ-03**).

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

The asset acquisition transaction between the MOA and Chugach, and the related PPAs, required approval by this Commission. In examining the aspects of the deals related to the Eklutna Project, the Commission found that after the transaction closed, the MOA would no longer have the requisite expertise and capabilities to manage the asset through a representative on the EOC.[2] Most of the team with significant knowledge about the generation assets formerly at ML&P (including myself) took positions at Chugach. The Commission therefore required that the MOA surrender its voting rights on the EOC for a term length at least equal to the terms of the related PPAs and until the MOA could attain the requisite sufficient knowledge of prudent utility practice and of the Railbelt electric system.[3] The MOA also surrendered voting rights with respect to the Project Owners' responsibility to implement fish and wildlife obligations under the 1991 Agreement. The MOA surrendered these voting rights in the form of a three-party agreement on October 27, 2020 (Surrender) and provided notice to the Commission of this Surrender on October 30, 2020, the day that the acquisition transaction closed. The MOA's notice and Surrender are attached as **Exhibit EAO-03**.

13. Q. How did the 2020 transaction impact the EOC and how has it operated since the Surrender?

A. Pursuant to the Surrender, all decisions related to the EOC have been made unanimously by Chugach and MEA. Consequently, there have been no formal votes taken on the EOC with respect to any major decisions related to the Eklutna Project, including with respect to the budgets implementing the Project Owners' fish and wildlife mitigation responsibilities pursuant to the 1991 Agreement.

[2] Commission Order U-18-102(44)/U-19-020(39)/U-19-021(39), Order Accepting Stipulation in Part, Subject to Conditions; Transferring and Issuing Certificates of Public Convenience and Necessity, Subject to Conditions; Addressing Beluga River Unit Management, Gas Transfer Prices, and Third-Party Sales Gas Pricing; and Requiring Filings, dated May 28, 2020 (Order 39), at 61-62.

[3] *Id.* at 67.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

Chugach and MEA have continued to seek the input of the MOA in these meetings; the MOA has sent representatives during this period who participated in the meetings, including Anna Henderson (MOA Deputy Municipal Manager, who was ML&P's General Manager), Ben Bowman (Assistant Municipal Attorney), and Mark Corsentino (AWWU General Manager).

14. Q. What major decisions has the EOC made with respect to the 1991 Agreement or otherwise since the MOA surrendered its voting rights in 2020?

A. None. The EOC did not play a significant role in the development of the fish and wildlife program required under the 1991 Agreement. Rather, we provided certain technical information and support related to the operations, capabilities, and limitations of the Eklutna Project. Each of the three Project Owners appointed representatives that, with an outside consulting team, made all decisions through consensus as an owners group implementing the 1991 Agreement in the five-year process leading to a final fish and wildlife program approved by the Governor on October 2, 2024 (Final Program). I did not typically participate in the Project Owners' group meetings implementing the 1991 Agreement process, but Tony Zellers was MEA's representative and can answer questions about that.

15. Q. What role will the EOC play with respect to the Final Program approved by the Governor on October 2, 2024?

A. The EOC will implement the Final Program that was approved by the Governor on October 2, 2024, as directed by the Project Owners and in a manner consistent with its requirements, applicable law, and prudent utility practice. Specifically, we will develop the budgets, contract with engineers and contractors who will build the facilities necessary to manage instream flows, and then operate and maintain these flows as an integral part of the Eklutna Project operations.

PHONE 206.883.2500

IV. Prudent Utility Practice

16. Q. What is your knowledge of prudent utility practice?

A. "Prudent Utility Practice" is a standard of acceptable behavior by utility managers regarding the operations, maintenance, and safety standards for utility operations that has a long established and accepted usage in the utility industry. With respect to a hydropower asset specifically, it is, in essence, "the right thing to do" based on the reasonable judgment of a typical prudent hydropower or utility owner in maintaining and operating utility assets in accordance with manufacturer specifications, operating and reliability standards, permits, and applicable state and federal law. I have been studying and implementing evolving prudent utility practices for most of my professional career.

"Prudent Utility Practice" is sometimes further specifically defined in statutes or regulations, but it is also almost always found defined in formalized contracts related to power and operations of utility assets based on industry expectations. In Alaska, the definition of "Prudent Utility Practice" is usually defined in contracts.

17. Q. How is prudent utility practice defined in the Chugach PPA?

A. The MOA – Chugach PPA defines the "Prudent Utility Practice" as follows:

> "**Prudent Utility Practice**" means any applicable practices, methods, and acts engaged in or approved by a significant portion of (a) as to Seller, the hydroelectric generating industry in the United States of America, or (b) as to Purchaser, the electric utility industry in the United States of America, during the relevant time period, or the practices, methods and acts which, in the exercise of reasonable judgment by a prudent hydroelectric generator operator (or prudent utility operator, if applicable to Purchaser) in light of the facts known or which should reasonably have been known at the time the decision was made, could have been expected to accomplish the desired result at the lowest reasonable cost consistent with good business practices, reliability, safety, expedition and the requirements of any governing authority having jurisdiction. Without limitation of the foregoing, "Prudent Utility Practice" shall include the applicable operating policies, standards, criteria, or guidelines of any applicable governing authority and any manufacturer of a component of the Project. "Prudent Utility Practice" is

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

not intended to be limited to the optimum practice, method or act to the exclusion of all others, but rather to the acceptable practices, methods or acts generally accepted (a) as to Seller, by the hydroelectric energy electric generating industry in the United States of America or (b) as to Purchaser, by the electric utility industry in the United States of America.

18. Q. Are costs and efficiency elements of "Prudent Utility Practice"?

A. Yes. As a prudent utility operator, Chugach is obligated to use the least cost, most efficient means to operate and maintain our assets. The "Prudent Utility Practice" definition in the MOA – Chugach PPA also requires the "lowest reasonable cost consistent with good business practices, reliability, safety, expedition and the requirements of any governing authority having jurisdiction". Our management, regulators, and member-ratepayers therefore expect that we will spend capital conservatively.

19. Q. Should AHP regain voting rights on the EOC, what does the Chugach PPA require of MOA with respect to the EOC?

A. Section 4.2(B) of the MOA – Chugach PPA provides:

> (B) During the Term, Seller shall, in consultation with Purchaser, select the person to serve as Seller's representative to the Operating Committee (the "**Seller's Representative**"). The Seller's Representative shall make all decisions on the Operating Committee consistent with Prudent Utility Practice and the rights and obligations of the Parties under this PPA. Seller's Representative shall also be Seller's representative for any consultation, study, and implementation processes required under the Fish and Wildlife Agreement relating to the Facility. The Seller's Representative shall make all decisions with respect to any processes required under the Fish and Wildlife Agreement with due regard for the rights and obligations of the Parties under this PPA.

The underlined portions of this quoted section of the MOA - Chugach PPA makes clear that if the MOA regains voting rights on the EOC, the MOA's representative must act in a manner consistent with the "Prudent Utility Practice" and with due regard for Chugach's rights under the PPA.

20. Q. In your view, is the Fish and Wildlife Program approved by the Governor consistent with prudent utility practice?

A. Yes. While I did not develop and negotiate the Final Fish and Wildlife

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

Program, I understand its key operational components and I am confident that the EOC can implement it in a manner consistent with prudent utility practices. Implementation of the Final Fish and Wildlife Program will have significant costs, but the expected costs reflect the most efficient means to achieve the objectives set forth in the 1991 Agreement.

21. Q. In your view, is the pumped storage hydro alternative currently being proposed by the MOA consistent with prudent utility practice?

A. No. While I have not studied the proposal in depth, I do know that the Eklutna Project designed and built in the 1950s was not designed to be operated in a bidirectional manner. Replacing the existing turbines alone would be quite costly. Based on my professional experience, I expect that retrofitting the project to operate in a manner it was never intended to operate, but consistent with prudent utility practices, would be very costly.

22. Q. Does this conclude your testimony?

A. Yes, thank you.

Key Accomplishments/Projects

- Successfully integrated ML&P's Generation Division into Chugach's Electric Power Production Division (including team, assets, controls).
- Project Manager/Project Sponsor for $300MM new 2 X 1 LM6000 combined cycle project (ML&P Plant 2A, now George M Sullivan Plant):
  -Managed every aspect from concept, land acquisition and development, owner's engineering, all permitting, obtaining political approval, and EPC project development and successful execution.
  -Most efficient thermal plant in Alaska saving more than $10MM annually in natural gas while reducing NOX pollution 90% and CO2 25% respectively.
- Designed and implemented large district heating system in the form of waste heat sharing and inlet air chilling with Anchorage Water and Wastewater utility.
- Responsible for overhaul and upgrades of Eklutna Project's 60 year old Francis hydroelectric turbines and various power plant upgrades to power plants and safe retirement of older turbines at legacy plants.
- Project Manager and Representative for utility's 30% interest in construction of Southcentral Power Plant $400MM thermal power plant; completed under budget.
- Project Manager for safe and timely installation of new $30MM LM2500+ gas turbine installation at Hank Nikkels Plant and environmental site remediation.

Experience

Chugach Electric Association, Anchorage, Alaska

VP Power Production Aug 2022-Present
With 90 employees over 6 power plants, responsible for the reliable and safe production of power in varied circumstances and locations and situations. Stepped into role running, bringing calm and thoughtful management to unsettled situations.

Sullivan Plant Manager Nov 2020-Jul 2022
Responsible for the reliable and safe production of power at Alaska's newest and most efficient thermal power plant. Continued integration of plant and team into new entity.

Anchorage Municipal Light & Power, Anchorage, Alaska 2005-2020

Generation Manager 2012-2020
Responsible for the safe, reliable, operation and maintenance of electricity generation for ML&P's native and economic electricity needs via owned or ownership interest in 4 thermal and/or hydroelectric power plants. Exceled at hiring processes and overseeing

generational shift in operating workforce. Integrated ML&P Generation into CEA as a part of utility asset acquisition.

Plant 1 Manager/ Assistant Generation Manager 2007-2012
Responsible for daily, reliable, and safe production of power. Adhered to all HSE rules and promotes safety culture in all policies and decisions. Thorough understanding of IBEW union contract issues; Representative in collective bargaining agreement negotiations. Proficient at spill response plan and ADEC air permit compliance. Compliant with NEC/NESC, NFPA, and all other relevant codes with projects and maintenance activities.

Assistant Generation Manager 2005-2007
Exceled at operational, personnel, and budget decisions for 70 generation personnel at 3 power plants. Managed $10MM capital and $20MM expense budget annually. Member of the Incident Management Team, for the city's Emergency Operations Center.

GE Energy Services – Installation & Field Services, Atlanta, Georgia 2003-2005

Field Engineering Manager
Direct Manager for 55 controls field engineers. Analyzed needs and matched properly skilled Controls Field Engineer with gas and steam turbine jobs throughout the world. Responsible for the training and development needs all of the Controls Field Engineers.

GE Controls Field Engineer/F-class Turbine Tuner, Atlanta, GA 2000 – 2003

Field Engineer/DLN Tuner
Lead Controls Field Engineer for multi-turbine power plant startups. Commissioned E & F-class turbines for Southern Company, Reliant Energy, and Duke Energy. Excelled at MKV/MKVI turbine controls commissioning, troubleshooting, and training of customer technicians. Mentored/Certified new controls Field Engineers and DLN tuners.

GE Energy Services – Inspection & Repair Services, Houston, TX 1998-1999

Production/Process Engineer
Responsible for inspection, diagnosis, and repair of $27MM worth of GE gas turbine hot gas path components. Excelled at managing plant processes and repair quality control. Developed weld repair advanced process, WRAP, of single crystal alloy turbine blades.

Control Craft Inc , Anchorage, AK 1996-1997

SCADA Engineer/ Controls Fabricator
Designed, Built, Tested, and Commissioned control panels and PLCs for various industrial processes.

EKLUTNA
POWER PURCHASE AGREEMENT
BETWEEN
CHUGACH ELECTRIC ASSOCIATION, INC.
AND
MUNICIPALITY OF ANCHORAGE

This Eklutna Power Purchase Agreement (this "**PPA**"), dated as of December 28, 2018 (the "**Effective Date**"), is made and entered into by and between (i) **CHUGACH ELECTRIC ASSOCIATION, INC.**, an Alaska not-for-profit electric cooperative corporation ("**Purchaser**"), and (ii) the **MUNICIPALITY OF ANCHORAGE,** a political subdivision organized under the laws of the State of Alaska ("**Seller**"). Purchaser and Seller are hereinafter referred to individually as a "**Party**" and collectively as the "**Parties**".

WHEREAS, as of the Effective Date, Purchaser is the owner of a 30% undivided interest in the Facility (as defined herein) (the "**Purchaser's Interest**") and Seller is the owner of a 53.33% undivided interest in the Facility (the "**Seller's Interest**"); and

WHEREAS, the Facility is subject to the terms of the Transition Plan (as defined herein), which provides for the sale of interests in the Facility by the Owners (as defined herein); and

WHEREAS, Seller desires to sell and deliver and Purchaser desires to accept and receive and pay for certain Power (as defined herein) delivered from the Facility to the Delivery Point on the terms and conditions, including the prices, set forth in this PPA; and

WHEREAS, in connection with the sale of such Power, Seller desires to grant to Purchaser an option to purchase all or a portion of the Seller's Interest, subject to the terms of the Transition Plan; and

WHEREAS, in order to determine the size of the interest in the Facility that will be subject to the terms of this PPA, the Parties intend to comply with the terms of the Transition Plan by following the procedure set forth herein.

NOW THEREFORE, in consideration of the mutual covenants herein contained, the sufficiency and adequacy of which are hereby acknowledged, the Parties agree to the following:

ARTICLE 1
RULES OF INTERPRETATION

Section 1.1 Interpretation.

(A) Capitalized terms listed in this PPA shall have the meanings set forth in Exhibit A or as otherwise defined in this PPA, whether in the singular or the plural or in the present or past tense. Words not otherwise defined in this PPA shall (i) have meanings as

commonly used in the English language, (ii) be given their generally accepted meaning consistent with Prudent Utility Practice, and (iii) be given their well-known and generally accepted technical or trade meanings.

(B) For purposes of this PPA, (1) the words "include," "includes" and "including" shall be deemed to be followed by the words "without limitation"; (2) the word "or" is not exclusive; (3) the masculine shall include the feminine and neuter; and (4) the words "herein," "hereof," "hereby," "hereto" and "hereunder" refer to this PPA as a whole. Unless the context otherwise requires, references herein: (x) to Articles, Sections, and Exhibits means the Articles, Sections and Exhibits contained in and attached to this PPA; (y) to an agreement, instrument or other document means such agreement, instrument or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof and (z) to a statute means such statute as amended from time to time and includes any successor legislation thereto and any regulations promulgated thereunder. This PPA shall be construed without regard to any presumption or rule requiring construction or interpretation against the party drafting an instrument or causing any instrument to be drafted.

Section 1.2 Consents and Approvals; Commercially Reasonable Standard. Unless expressly provided otherwise in this PPA, (a) when this PPA requires the consent, approval, or similar action by a Party, such consent or approval shall not be unreasonably withheld, conditioned or delayed, and (b) wherever this PPA gives a Party a right to determine, require, specify or take similar action with respect to a matter, such determination, requirement, specification or similar action shall be Commercially Reasonable.

Section 1.3 Waiver. The failure of either Party to enforce or insist upon compliance with or strict performance of any of the terms or conditions of this PPA, or to take advantage of any of its rights hereunder, shall not constitute a waiver or relinquishment of any such terms, conditions, or rights, but the same shall be and remain at all times in full force and effect.

ARTICLE 2
DETERMINATION OF CHUGACH PORTION

Section 2.1 Offer to MEA. MEA is the owner of a 16.67% undivided interest in the Facility. Seller has offered to MEA the option either to (A) purchase from Seller at fair market value a portion of the Seller's Interest, on a pro rata basis with Purchaser, equal to a 35.71% share of the Seller's Interest and a 19.04% interest in the Facility (the "**MEA Proportionate Interest**"), or (B) enter into a power purchase agreement with Seller with respect to the MEA Proportionate Interest on terms and conditions comparable to those set forth herein, in each case on the terms set forth in Exhibit C (such alternative offers, collectively, the "**MEA Offer**").

Section 2.2 Determination of Chugach Portion.

(A) If, prior to the fulfillment or waiver of all PPA Contingencies, MEA accepts the MEA Offer and consummates a purchase of the MEA Proportionate Interest (or enters into a binding power purchase agreement for the purchase of all of the Power attributable to the MEA Proportionate Interest), the "**Chugach Portion**" shall equal 64.29% of the Seller's

Interest. Such percentage interest, when combined with Purchaser's existing ownership of 30% of the Facility, will give Purchaser rights to 64.29% of the Facility.

(B) If, prior to the fulfillment or waiver of all other PPA Contingencies, MEA conclusively rejects (or is deemed to have conclusively rejected) the MEA Offer, the "**Chugach Portion**" shall, for the duration of the Term, be a percentage interest equal to the Seller's Interest.

(C) If, on the day that all other PPA Contingencies have been fulfilled or waived, MEA has either accepted or has not conclusively rejected the MEA Offer but has not yet either (i) consummated a purchase of the MEA Proportionate Interest or (ii) entered into a binding power purchase agreement without contingencies for all of the Power attributable to the MEA Proportionate Interest, the "**Chugach Portion**" shall be deemed to be a percentage interest equal to the Seller's Interest; *provided, however,* that if MEA consummates a purchase of the MEA Proportionate Interest or a lesser portion of the Seller's Interest (or enters into a binding power purchase agreement without contingencies for all of the Power attributable to the MEA Proportionate Interest or a lesser portion of the Seller's Interest) at the Closing under the Asset Purchase Agreement, the Chugach Portion shall, effective as of the effectiveness of such acquisition or such power purchase agreement, be reduced by that portion of the Seller's Interest acquired by MEA (or by the Power attributable to that portion of the Seller's Interest with respect to which MEA enters into a binding power purchase agreement).

ARTICLE 3
TERM AND TERMINATION

Section 3.1 PPA Contingencies. This PPA and the Parties' obligations set forth herein are contingent upon the occurrence or waiver of each of the following events (the "**PPA Contingencies**"):

(A) The Parties shall have determined the Chugach Portion in accordance with ARTICLE 2 and shall have memorialized the determination in a writing agreed to by the Parties;

(B) The Closing (as defined in the Asset Purchase Agreement) shall have occurred;

(C) RCA PPA Approval shall have been obtained;

(D) Seller shall have received an original, fully executed copy of the Officers' Certificate of Excludable Property, and evidence of delivery and recording of the Trustee's release of its lien in such Excludable Property, pursuant to Section 15.14(B); and

(E) The representations and warranties of Purchaser in Section 15.14(B) shall have been true and correct as of the Effective Date and the Commencement Date.

Section 3.2 Commencement Date. The commencement date under this PPA (the "**Commencement Date**") shall be the date that is the later of (a) the Effective Date and (b) the date on which each of the PPA Contingencies has occurred or has been waived by the Parties.

Section 3.3 Term.

(A) The term of this PPA shall commence on the Commencement Date, and shall continue in full force and effect until 11:59 p.m. (Facility local time) on the Scheduled Termination Date, subject to early termination or extension as provided in this PPA or otherwise agreed to by the Parties (the "**Term**").

(B) The effectiveness of this Agreement is expressly contingent upon the occurrence of the Closing provided for under the Asset Purchase Agreement. In the event that the Asset Purchase Agreement is terminated before the Commencement Date, this PPA shall automatically terminate, and become null and void, at the same time as the termination of the Asset Purchase Agreement.

ARTICLE 4
FACILITY DESCRIPTION AND OPERATION

Section 4.1 Description. The Facility is described in Exhibit B. A scaled map that identifies the Site, the location of the Facility, the Delivery Point and other important facilities, is included in Exhibit B.

Section 4.2 Operation of the Facility.

(A) In accordance with the Operations Agreement (as may be amended by the Operations Agreement Amendment), during the Term Purchaser shall manage, control, operate and maintain the Chugach Portion in a manner consistent with Prudent Utility Practice.

(B) During the Term, Seller shall, in consultation with Purchaser, select the person to serve as Seller's representative to the Operating Committee (the "**Seller's Representative**"). The Seller's Representative shall make all decisions on the Operating Committee consistent with Prudent Utility Practice and the rights and obligations of the Parties under this PPA. Seller's Representative shall also be Seller's representative for any consultation, study, and implementation processes required under the Fish and Wildlife Agreement relating to the Facility. The Seller's Representative shall make all decisions with respect to any processes required under the Fish and Wildlife Agreement with due regard for the rights and obligations of the Parties under this PPA.

(C) The Parties acknowledge and agree that Seller has prior rights to not less than 41 million gallons of water per day from Eklutna Lake for public water supply pursuant to the Act of October 30, 1984, 98 Stat. 2823; Alaska Statutes 46.15.150(a); and Certificate of Appropriation ADL 44944. The Parties agree that during the Term, the supply of water available for production of Power by the Seller's Interest shall be net of all water taken by Anchorage Water and Wastewater Utility for public water supply purposes.

Section 4.3 Books and Records. Seller and Purchaser shall each keep complete and accurate books and records and all other data required by each of them for the purposes of metering, billing, payment, and administration of this PPA, including such Operating Records and other records as may be required by Applicable Law, Governmental Authorities, NERC, or any ERO or ISO. Each Party shall maintain such books and records in accordance with relevant accounting standards, as applicable, and shall provide the other Party Commercially Reasonable access to such books and records. All books and records pertaining to the operation of the Facility shall be maintained on the premises of the Facility or such other location as is mutually agreed to by the Parties. Either Party may audit and examine any such books and records from time to time upon request and during normal business hours. Each Party shall maintain any books and records that it is required to keep under this Section 4.3 for a period of at least six (6) years after the preparation of such books or records.

ARTICLE 5
DELIVERY

Section 5.1 Electric Delivery Arrangements.

(A) During the Term, Purchaser shall be responsible for maintaining and paying the costs associated with the interconnection of the Facility to Purchaser's transmission system at the Delivery Point.

(B) Purchaser shall be responsible for all electric losses, transmission and ancillary service arrangements, and costs and expenses required for delivery of the Power from the Facility to the Delivery Point and for transportation and delivery of the Power from and after the Delivery Point.

Section 5.2 Electric Metering. The Facility Metering used to measure Energy delivered to the Delivery Point under this PPA shall be owned, installed, and maintained by Purchaser at the Delivery Point, or as close thereto as is reasonably possible.

Section 5.3 Scheduling. Purchaser shall nominate and schedule for delivery to Purchaser (in accordance with Prudent Utility Practice) all Energy attributable to the Chugach Portion.

ARTICLE 6
SALE AND PURCHASE

Section 6.1 General Obligation.

(A) Beginning on the Commencement Date and continuing thereafter throughout the Term, Seller shall generate from the Facility, deliver to the Delivery Point, and sell to Purchaser, and Purchaser shall receive and purchase at the Delivery Point, all Energy, Capacity, Renewable Attributes, and Ancillary Services (collectively, the "**Power**") that are

available from the Facility and attributable to the Chugach Portion, in accordance with Applicable Law.

(B) Seller shall not curtail or interrupt deliveries of Power from the Facility except as required by Applicable Law or Prudent Utility Practice.

(C) Title to the Power shall transfer from Seller to Purchaser at the Delivery Point free and clear of all liens, security interests, claims and encumbrances or any interest therein or thereto by any other Person.

Section 6.2 Additional Products; Ancillary Services.

(A) The Parties acknowledge that existing and future Applicable Laws create value in the ownership, use, or allocation of Renewable Attributes. To the full extent allowed by Applicable Law, Purchaser shall own and be entitled to claim all Renewable Attributes attributable to the Chugach Portion from the Commencement Date until the end of the Term, to the extent such Renewable Attributes may exist or be created during such period. For purposes of effectuating the foregoing, the following shall apply:

1. Seller hereby automatically and irrevocably assigns to Purchaser all rights, title and authority for Purchaser to register the Facility and own, hold, and manage the Renewable Attributes attributable to the Chugach Portion in Purchaser's own name and to Purchaser's account, including any rights associated with any renewable energy information or tracking system that exists or may be established (including but not limited to participants in any applicable REC Registration Program and the United States government) with regard to monitoring, registering, tracking, certifying, or trading Renewable Attributes. Seller hereby authorizes Purchaser to act as its agent for the purposes of registering the Facility for such purposes, and tracking and certifying Renewable Attributes, and Purchaser shall have full authority to hold, sell, or trade Renewable Attributes attributable to the Chugach Portion for its own account in connection with any renewable energy information or tracking systems. Upon the request of Purchaser, at Purchaser's cost and expense, (i) Seller shall deliver or cause to be delivered to Purchaser such attestations/certifications of Renewable Attributes attributable to the Chugach Portion, and (ii) Seller shall cooperate with Purchaser's registration and certification of Renewable Attributes attributable to the Chugach Portion.

2. Prior to the Commencement Date and as required thereafter for Purchaser to claim, own, or realize the available benefits of any Renewable Attributes attributable to the Chugach Portion, Seller shall, at Purchaser's cost and expense, make all applications or filings required by Applicable Law for Renewable Attribute accreditation and for the provision of such Renewable Attributes to Purchaser.

(B) On and after the Commencement Date until the end of the Term, Seller shall make available to Purchaser all Ancillary Services attributable to the Chugach Portion at no additional charge under this PPA. Any compensation that Seller receives under Applicable Law or otherwise for Ancillary Services attributable to the Chugach Portion during such period shall be provided to Purchaser at no additional cost to Purchaser under this PPA. Seller shall credit

Purchaser, as a reduction to Seller's monthly invoice or other mutually-agreed mechanism, for any compensation that Seller receives for Ancillary Services attributable to the Chugach Portion during such period.

1. Seller shall, at the request of Purchaser, use Commercially Reasonable Efforts to maximize the availability of such Ancillary Services during such period; *provided, however*, that Seller shall not be required to make any capital expenditures or incur any operating expenses in connection with such efforts.

2. In the event any Governmental Authority implements new or revised requirements for generators to create, modify, change, or supply Ancillary Services requiring Seller to install additional equipment after the Commencement Date to meet such requirements, Purchaser shall, in accordance with the provisions of Section 7.2, be responsible for payment of any costs and expenses of such additional equipment; provided that such costs and expenses shall be includable in the net book value of the Chugach Portion for purposes of determination of the Purchase Price pursuant to Section 14.3(B).

ARTICLE 7
PAYMENT FOR POWER

Section 7.1 Annual Payment.

(A) As consideration for Seller's sale of the Power attributable to the Chugach Portion, Purchaser shall pay Seller for such Power at the annual rate set forth in Exhibit D (the "**Annual Payments**"). Purchaser and Seller acknowledge and agree that the Annual Payments are structured to include all required compensation for any and all Power (including, for the avoidance of doubt, any and all Capacity, Ancillary Services, and Renewable Attributes) required to be delivered to Purchaser under this PPA during the Term and that Purchaser is not required to make any additional payments to Seller therefor.

(B) From and after the Commencement Date, Purchaser's obligation to make all Annual Payments hereunder throughout the Term, and the rights of the Seller in and to such Annual Payments, shall, except as expressly provided in Section 8.2 and Section 8.3, be absolute, unconditional, and irrevocable and shall not be affected by any circumstance of any nature or character whatsoever. Without limiting the foregoing, the following events shall not affect Purchaser's obligation to make all Annual Payments:

1. Any occurrence of Force Majeure;

2. Any Forced Outage or any other interruption or curtailment of the output of the Facility for any environmental, economic, or other reason other than by Seller in breach of this PPA;

3. Any casualty to or condemnation of the Facility or any of the property of either Party;

4. Any change in Applicable Law;

5. Any decision by the Owners to modify, reduce, or cease operations of the Facility; and

6. Any Event of Default with respect to Purchaser.

Section 7.2 Additional Consideration. As additional consideration for Seller's sale of the Power attributable to the Chugach Portion, Purchaser shall during the Term be responsible for payment of all capital expenditures and operating and maintenance expenses that are payable with respect to the Chugach Portion, including any expenditures or capital investment related to any environmental compliance or other compliance with requirements of Governmental Authorities applicable to the Chugach Portion. In the event that Seller pays any such expenditure or expense, Purchaser shall reimburse Seller for such expenditure or expense within thirty (30) days after Purchaser's receipt of an invoice or other Commercially Reasonable evidence of such expenditure or expense.

ARTICLE 8
BILLING AND PAYMENT

Section 8.1 Billing.

(A) The billing period shall be the calendar month. Purchaser shall pay in arrears one-twelfth of the Annual Payment due to Seller for the applicable Contract Year by ACH (automated clearinghouse) transfer (or any other mutually acceptable method) on or before the fifteenth (15^{th}) Day of the calendar month, or if such fifteenth (15^{th}) Day falls on a Day that is not a Business Day, the next Business Day.

(B) If a payment by either Party under this PPA is late, interest, calculated using the annual prime rate of interest as published on the date of the invoice in *The Wall Street Journal* (or, if unavailable, an equivalent publication on or about that date) plus two percent (2%) per year, shall accrue on the unpaid balance for the number of days payment was late and shall be added to the next billing statement.

(C) Seller and Purchaser shall net their obligations to each other under this PPA, and payment of the net amount will discharge all mutual undisputed obligations between the Parties.

Section 8.2 Set Off.

(A) In the event that (i) Purchaser has notified Seller under Section 8.05 of the Asset Purchase Agreement that Purchaser is entitled to indemnification from Seller with respect to any Third Party Claim (as defined in the Asset Purchase Agreement) or Direct Claim (as defined in the Asset Purchase Agreement), (ii) Seller has notified Purchaser that (A) Seller has determined that it will assume the defense of such Third Party Claim or (B) Seller acknowledges that Purchaser is entitled to indemnification from Seller for such Direct Claim, and (iii) either

(A) Seller has not, within sixty (60) days after delivery of any such notice to Purchaser, requested an appropriation of funds from the Assembly of Seller for purposes of paying any amount required to be paid or reimbursed in connection with such Third Party Claim or Direct Claim, or (B) Seller has requested an appropriation of funds from the Assembly of Seller for such purposes but has not received an appropriation of such funds, Purchaser will be entitled to withhold all or part of any amount due to Seller under this PPA for purposes of paying or reimbursing any Losses (as defined in the Asset Purchase Agreement) that have been determined, in accordance with the provisions of ARTICLE VIII of the Asset Purchase Agreement, to be due and owing from Seller to any Purchaser Indemnitee under ARTICLE VIII of the Asset Purchase Agreement in connection with such Third Party Claim or Direct Claim. In the event that (i) Purchaser has notified Seller under Section 8.05 of the Asset Purchase Agreement, that Purchaser is entitled to indemnification from Seller with respect to any Third Party Claim or Direct Claim, (ii) Seller fails to assume the defense of such Third Party Claim or provide indemnification for such Direct Claim, (iii) Purchaser, in accordance with the provisions of ARTICLE VIII of the Asset Purchase Agreement, pursues its available legal remedies against Seller for such failure and obtains a final judgment requiring Seller to indemnify Purchaser in accordance with ARTICLE VIII of the Asset Purchase Agreement for Purchaser's Losses in connection with such Third Party Claim or Direct Claim, and (iv) either (A) Seller has not, within sixty (60) days after issuance of such judgment, requested an appropriation of funds from the Assembly of Seller for purposes of paying such Losses, or (B) Seller has requested an appropriation of funds from the Assembly of Seller for such purposes but has not received an appropriation of such funds, Purchaser will be entitled to withhold all or part of any amount due to Seller under this PPA for purposes of paying or reimbursing such Losses.

(B) Set-off shall not be Purchaser's exclusive remedy with respect to any indemnification claim.

Section 8.3 Subordination. The Parties agree that Purchaser's payment obligations hereunder are payable on a parity with Purchaser's other operating expenditures, but subordinate to (i.e., neither on a parity with nor superior to) Purchaser's payment obligations under the Bradley Lake Agreement only if and to the extent, and for the period, that making such payments would prevent Purchaser from making timely payment of any amounts due from it under the Bradley Lake Agreement.

Section 8.4 Billing Disputes. Either Party may dispute invoiced amounts, but shall pay at least the undisputed portion on or before the date due. To resolve any billing dispute, the Parties shall use the procedures set forth in Article 10. When the billing dispute is resolved, the Party owing any amount shall pay such amount within five (5) Business Days after the date of such resolution, together with late payment interest as provided in Section 8.1(B).

ARTICLE 9
DEFAULT AND REMEDIES

Section 9.1 Events of Default. Any of the following events shall constitute an Event of Default with respect to the specified Party, which shall be the defaulting Party with respect to

such Event of Default, if such event has not been cured within the cure period specified for such event:

(A) Such Party's failure to pay any amount due to the other Party as required by this PPA, Actual Damages, any required indemnification, or any other required payment, and such amount remains unpaid for a period of ten (10) Business Days after the date such Party receives Notice from the non-defaulting Party that the amount is overdue.

(B) Such Party's application for, or consent (by admission of material allegations of a petition or otherwise) to, or failure to oppose the appointment of a receiver, trustee or liquidator for a Party or for all or substantially all of its assets, or its authorization of such application or consent, or the commencement or institution of any proceedings seeking such appointment against a Party which proceedings continue undismissed or unstayed for a period of sixty (60) Days from their inception.

(C) Such Party's authorization or filing of a voluntary petition in bankruptcy, or its application for, or consent (by admission of material allegations of a petition or otherwise) to, or failure to oppose an involuntary petition in bankruptcy, or the application of any bankruptcy, reorganization, readjustment of debt, insolvency, dissolution, liquidation or other similar law of any jurisdiction to a Party, or the commencement or institution of any such proceedings against a Party which proceedings remain undismissed or unstayed for sixty (60) Days from its inception or which result in adjudication of bankruptcy or insolvency within such time.

(D) Such Party's unauthorized assignment of this PPA, which unauthorized assignment shall be an Event of Default immediately upon its occurrence and without further notice from the non-defaulting Party.

(E) There is any lien or security interest in or on any assets of Purchaser that encumbers the Collateral as of the Commencement Date, and such lien or security interest continues to encumber the Collateral thirty (30) Days after Notice thereof shall have been given by Seller to Purchaser.

(F) The failure by either Party to perform or observe any other material obligation to the other Party under this PPA, which failure is not excused by Force Majeure and remains unremedied for thirty (30) Days after Notice thereof shall have been given by the non-defaulting Party; *provided, however*, that if the failure is not reasonably capable of being cured within the thirty (30) Day period, the defaulting Party will have such additional time (not exceeding an additional ninety (90) Days) as is reasonably necessary to cure the failure, so long as the Party promptly commences and diligently pursues the cure.

(G) An event of default has occurred with respect to such Party under the Asset Purchase Agreement or the PILT Agreement (as defined in the Asset Purchase Agreement), and such event of default has not been cured within any applicable cure, notice, or grace period.

Section 9.2 Remedies. Upon the occurrence of any Event of Default of this PPA, the non-defaulting Party may pursue all rights and remedies available to it at law and in equity and in accordance with the terms of this PPA. Except as explicitly provided to the contrary in this PPA, each right or remedy of the Parties provided for in this PPA shall be cumulative of and shall be in addition to every other right or remedy provided for in this PPA, and the exercise of one or more of the rights or remedies provided for herein shall not preclude the simultaneous or later exercise by such Party of any other rights or remedies provided for herein.

(A) Termination and Damages. For any uncured Event of Default, the non-defaulting Party may, at its option do any, some, or all of the following:

1. Net from any payments due from the non-defaulting Party any amount otherwise due from the defaulting Party under or in connection with this PPA, including any unpaid Actual Damages;

2. Seek Actual Damages in such amounts and on such basis for the default as authorized by this PPA;

3. Terminate this PPA immediately upon Notice, without penalty or further obligation to the defaulting Party. Upon the termination of this PPA under this Section 9.2, the non-defaulting Party shall be entitled to receive from the defaulting Party all of the Actual Damages in connection with the Event of Default resulting in such termination.

(B) Damages for Events of Default. The non-defaulting Party shall be entitled to receive from the defaulting Party all direct damages incurred by the non-defaulting Party that are proximately caused by Event of Default ("**Actual Damages**").

Section 9.3 Limitation on Damages. The Parties confirm that the express remedies and measures of damages provided in this PPA satisfy the essential purposes hereof. If no remedy or measure of damages is expressly herein provided, the obligor's liability shall be limited to Actual Damages only. Neither Party shall be liable to the other Party for consequential, incidental, punitive, exemplary, special, equitable or indirect damages, lost profits or other business interruption damages by statute, in tort or contract (except to the extent expressly provided herein); *provided, however*, that if either Party is held liable to a third party for such damages and the Party held liable for such damages is entitled to indemnification from the other Party hereto, the indemnifying Party shall be liable for, and obligated to reimburse the indemnified Party for, such damages. To the extent any damages required to be paid hereunder are liquidated, the Parties acknowledge that the damages are difficult or impossible to determine, that otherwise obtaining an adequate remedy is inconvenient, and that the liquidated damages constitute a reasonable approximation of the harm or loss.

ARTICLE 10
DISPUTE RESOLUTION

Section 10.1 Dispute Resolution. In the event of any dispute arising under this PPA (a "**Dispute**"), within ten (10) Business Days following Notice by either Party, (i) each Party shall

appoint a representative, and (ii) the representatives shall meet, negotiate and attempt in good faith to resolve the Dispute quickly, informally and inexpensively. In the event the representatives cannot resolve the Dispute within thirty (30) Days after the first meeting, either Party may request that consideration and resolution of the Dispute be transferred to a designated representative of each Party's senior management. Within ten (10) Days following such a request, each Party shall submit a written summary of the Dispute describing the issues and claims to a senior officer of each Party designated to address the Dispute. Within ten (10) Business Days after receipt of each Party's Dispute summaries, the senior management representatives for both Parties shall negotiate in good faith to resolve the Dispute. If such senior management representatives are unable to resolve the Dispute within thirty (30) Days thereafter, either Party may pursue any available legal remedies; *provided, however*, that if and to the extent that a Dispute involves the Justness or Reasonableness Conditions, and the Dispute is not resolved by negotiations of senior management representatives of the Parties, neither Party shall have any right to pursue any further legal remedies to resolve such Dispute and such Dispute shall be deemed to be resolved finally and conclusively by enforcement of the obligation of Purchaser under this PPA to pay the Annual Payments set forth in Exhibit D.

ARTICLE 11
FORCE MAJEURE

Section 11.1 Applicability of Force Majeure. Except as explicitly provided otherwise herein, a Party shall be relieved of its obligations to perform this PPA and shall not be considered to be in default with respect to any obligation under this PPA to the extent that such Party is prevented from fulfilling such obligation by Force Majeure, *provided, however*, that: (i) such Party gives prompt Notice describing the circumstances and impact of the Force Majeure; (ii) the relief from its obligations sought by such Party is of no greater scope and of no longer duration than is required by the Force Majeure; (iii) such Party proceeds with due diligence to overcome the Force Majeure and resume performance of its obligations under this PPA; and (iv) such Party provides prompt Notice of the conclusion of the Force Majeure.

Section 11.2 Limitations on Effect of Force Majeure.

(A) Force Majeure shall relieve a Party from performing only such obligations as are actually prevented by the Force Majeure.

(B) Except to the extent that Force Majeure prevents a Party from completing a transfer of money to the other Party, Force Majeure shall not excuse a Party from making any payment to the other on or before the date that such payment becomes due and payable.

(C) In no event will the existence of Force Majeure extend this PPA beyond its stated Term.

ARTICLE 12
INSURANCE

Section 12.1 General Insurance Requirements. On or prior to the Commencement Date and thereafter throughout the Term, Purchaser shall use Commercially Reasonable efforts to obtain and maintain at its own cost and expense insurance coverages for the Chugach Portion satisfying the requirements of this ARTICLE 12 and of Exhibit E. No later than the Commencement Date and on or before June 1 of each year during the Term, Purchaser shall provide Seller with a copy of insurance certificates reasonably acceptable to Seller evidencing that insurance coverages for the Facility are in compliance with such requirements. Such certificates shall (a) name Seller as an additional insured (except worker's compensation); (b) provide that Seller shall receive thirty (30) Days prior Notice of non-renewal, cancellation of, or significant modification to any of the corresponding policies (except that such Notice shall be ten (10) Days for non-payment of premiums); (c) provide a waiver of any rights of subrogation against Seller, its Affiliates and their officers, directors, agents, subcontractors, and employees; and (d) indicate that the policies have been endorsed in accordance with the requirements set forth herein. All policies shall be written with insurers with an AM Best rating of at least A-VII. All policies shall be written on an occurrence basis, except as provided in Section 12.2. All policies shall contain an endorsement that Purchaser's policy shall be primary in all instances regardless of like coverages, if any, carried by Seller. Purchaser's liability under this PPA is not limited to the amount of insurance coverage required herein.

Section 12.2 Term and Modification of Insurance.

(A) All insurance required under this PPA shall cover occurrences during the Term and for a period of two (2) years after the Term. In the event that any insurance as required herein is commercially available only on a "claims-made" basis, such insurance shall provide for a retroactive date not later than the date of this PPA and such insurance shall be maintained by Seller for a minimum of six (6) years after the Term.

(B) If any insurance required to be maintained by Purchaser hereunder ceases to be reasonably available and commercially feasible in the commercial insurance market, Purchaser shall provide Notice to Seller, accompanied by a certificate from an independent insurance advisor of recognized national standing, certifying that such insurance is not reasonably available and commercially feasible in the commercial insurance market for electric generating plants of similar type, geographic location and capacity. Upon receipt of such Notice, Purchaser shall use Commercially Reasonable attempts to obtain other insurance that would provide comparable protection against the risk to be insured.

Section 12.3 Application of Proceeds. Purchaser and Seller agree that, in the event of a catastrophic loss of all or a portion of the Facility, unless the Parties mutually agree otherwise, the Facility shall be repaired, replaced, or rebuilt, and any insurance proceeds received in connection with such loss shall be used only for such repair, replacement, or rebuilding. If the Parties have agreed that the Facility is to not be repaired, replaced, or rebuilt, any insurance proceeds received in connection with such loss shall be used first for purposes of the payment of remaining Annual Payments.

ARTICLE 13
INDEMNITY

Section 13.1 Indemnification. Each Party (the "**Indemnifying Party**") agrees (but in the case of Seller as the Indemnifying Party, only subject to appropriation of the requisite funds by the Assembly of Seller) to indemnify, defend, and hold harmless the other Party (the "**Indemnified Party**") from and against all third party claims, demands, losses, liabilities, penalties, and expenses (including attorneys' fees) for personal injury or death to persons and damage to the Indemnified Party's real property and tangible personal property or facilities or the property of any other Person to the extent arising out of, resulting from, or caused by any (i) Event of Default or other breach under this PPA, (ii) violation of Applicable Laws, (iii) negligent or tortious acts, errors, or omissions, or (iv) willful misconduct, in each case of the Indemnifying Party or any of its Affiliates, directors, officers, employees, or agents.

(A) The indemnification obligations of the Indemnifying Party shall apply notwithstanding any negligence of the Indemnified Party, but the Indemnifying Party's liability to indemnify the Indemnified Party shall be reduced in proportion to the percentage by which the Indemnified Party's negligent acts, errors, or omissions caused the damages.

(B) Neither Party shall be indemnified for its damages resulting from its sole negligence or willful misconduct. The indemnity provisions of this PPA shall not be construed to relieve any insurer of its obligation to pay claims consistent with the provisions of a valid insurance policy.

(C) Nothing in this Section 13.1 shall enlarge any liability of either Party to the other Party for any breach of this PPA or relieve either Party of any liability to the other Party for any breach of this PPA.

(D) A Party will not be liable more than once for the same losses, even if those losses may be recovered under multiple sections or subsections of this PPA or under both this PPA and the Asset Purchase Agreement. By way of example, if the Indemnified Party experiences losses for which the Indemnifying Party would be liable under the Asset Purchase Agreement, the Indemnifying Party's liability for those specific losses under this ARTICLE 13 will be reduced or eliminated to the extent of any indemnification, payment, or reimbursement in respect of the same losses under the Asset Purchase Agreement to avoid a double recovery by the Indemnified Party with respect to such losses. Accordingly, the amount owing to the Indemnified Party under this ARTICLE 13 shall be reduced by any amount paid to the Indemnified Party under the indemnification provisions of the Asset Purchase Agreement for the same breach, event, violation, circumstance, act, error, omission, or condition.

Section 13.2 Notice of Claim. Promptly after receipt by a Party of any claim or notice of the commencement of any action, administrative proceeding, legal proceeding, or investigation as to which the indemnity provided for in this ARTICLE 13 may apply, the Indemnified Party shall provide Notice thereof to the Indemnifying Party. The Indemnifying Party shall assume the defense thereof with counsel designated by such Party and satisfactory to the Indemnified Party, *provided, however*, that if the defendants in any such action include both

the Indemnified Party and the Indemnifying Party and the Indemnified Party shall have reasonably concluded that there may be legal defenses available to it which are different from or additional to, or inconsistent with, those available to the Indemnifying Party, the Indemnified Party shall have the right to select and be represented by separate counsel, at the Indemnifying Party's expense, unless a liability insurer has agreed to pay such costs.

Section 13.3 Settlement of Claim. If the Indemnifying Party fails to assume the defense of a claim meriting indemnification, the Indemnified Party may, at the expense of the Indemnifying Party, contest, settle, or pay such claim, *provided, however*, that settlement or full payment of any such claim may be made only following consent of the Indemnifying Party, which consent will not be unreasonably withheld, conditioned, or delayed, or, absent such consent, written opinion of the Indemnified Party's counsel that such claim is meritorious or warrants settlement.

Section 13.4 Amounts Owed. Except as otherwise provided in this ARTICLE 13, in the event that a Party is obligated to indemnify and hold the other Party and its successors and assigns harmless under this ARTICLE 13, the amount owing to the Indemnified Party will be the amount of the Indemnified Party's actual loss net of any insurance proceeds received by the Indemnified Party following a Commercially Reasonable effort by the Indemnified Party to obtain such insurance proceeds (which Commercially Reasonable effort will not in any event include any obligation to initiate litigation or any other dispute resolution proceeding against any insurer).

Section 13.5 Survival. The provisions of this ARTICLE 13 shall survive the expiration or earlier termination of this PPA.

ARTICLE 14
ASSIGNMENT AND OTHER TRANSFER RESTRICTIONS; LENDER PROVISIONS

Section 14.1 Transfer Without Consent is Null and Void. Except as provided in ARTICLE 2, any sale, transfer, or assignment of any interest in the Seller's Interest or in this PPA made without fulfilling the requirements of this ARTICLE 14 shall be null and void and a breach of this PPA.

(A) Except as permitted in this Section 14.1, neither Party shall assign this PPA, or any right, title or interest therein, without the prior written consent of the other Party, which consent shall not be unreasonably withheld, conditioned, or delayed; *provided, however*, that: (i) Notice of any proposed assignment requiring consent of the other Party shall be given to such other Party at least thirty (30) Days prior to the proposed effective date of such assignment; and (ii) with respect to any assignment hereunder, whether requiring consent or not, (a) except with respect to any assignment under Section 14.2, any assignee shall expressly assume the assignor's obligations under this PPA unless otherwise agreed by the other Party; (b) no assignment shall relieve the assignor of its obligations under this PPA in the event the assignee fails to perform, unless the other Party waives or releases in writing the assignor's continuing

obligations under this PPA; and (c) the assignment shall be subject to receipt of all such approvals as may be required by any applicable Governmental Authorities.

(B) Except as set forth in Section 15.14(B) with respect to the Collateral and Seller's consent rights with respect thereto, Purchaser shall have the right to assign all or a portion of its rights or obligations under this PPA without the prior written consent of Seller as follows:

1. to a Lender as collateral security for obligations under the Financing Documents entered into with such Lender, *provided* that: (i) Purchaser provides Seller with written Notice of such proposed collateral assignment not less than thirty (30) Days prior to such collateral assignment, and (ii) the applicable form of collateral assignment and related documentation is reasonably acceptable to Seller, as provided in Section 14.2;

2. to an Affiliate of Purchaser that is either (i) a Creditworthy Entity and Qualified Operator or (ii) a Creditworthy Entity that contracts with a Qualified Operator;

3. pursuant to Section 14.2, to a Creditworthy Entity and Qualified Operator or to a Creditworthy Entity that contracts with a Qualified Operator to operate the Facility after a Lender has exercised its foreclosure rights with respect to this PPA; and

4. to a Person succeeding to all or substantially all of the assets of Purchaser, *provided* that such Person's creditworthiness is equal to or better than that of Purchaser and such Person is a Qualified Operator or has contracted with a Qualified Operator to operate the Facility.

(C) Seller acknowledges that upon an event of default under any Financing Documents relating to this PPA, a Lender may (but shall not be obligated to) assume, or cause its designee to assume, all of the interests, rights, and obligations of Purchaser thereafter arising under this PPA, in which case such Lender or such designee shall assume and agree to be bound by all the terms and provisions of this PPA arising on or after the date of such assumption by such Lender or such designee; *provided* that, such designee shall be required to be a Qualified Operator; and *provided, further*, that, regardless of whether any such Lender or such designee assumes all of the interests, rights, and obligations of Purchaser thereafter arising under this PPA, Seller's interests, rights, and obligations under this PPA will remain in full force and effect.

Section 14.2 Lender Provisions.

(A) Except as set forth in Section 15.14(B) with respect to the Collateral and Seller's consent rights with respect thereto, Purchaser may, without approval of Seller, charge or otherwise encumber its interest under this PPA for security purposes in accordance with the provisions of Section 14.1 and this Section 14.2.

(B) Promptly after making any such encumbrance, Purchaser shall notify Seller in writing of the name, address, and telephone and facsimile numbers of each Lender to which Purchaser's interest under this PPA has been encumbered. Such Notice shall include the

names of the account managers or other representatives of the Lenders to whom all written and telephonic communications may be addressed.

(C) After giving Seller the initial Notice under Section 14.2(B), Purchaser shall promptly give Seller Notice of any change in the information provided in the initial Notice or any subsequent Notice.

(D) If Purchaser encumbers its interest under this PPA as permitted by this Section 14.2, the following provisions shall apply:

1. The Parties, except as provided by the terms of this PPA, shall not modify or cancel this PPA without the prior written consent of the Lender, such consent not to be unreasonably withheld, conditioned or delayed.

2. The Lender or its designees shall have the right, but not the obligation, to perform any act required to be performed by Purchaser under this PPA to prevent or cure an Event of Default with respect to Purchaser and such act performed by the Lender or its designees shall be as effective to prevent or cure an Event of Default as if done by Purchaser, *provided* that, if any such Lender or any such designee elects to perform any act required to be performed by Purchaser under this PPA to prevent or cure an Event of Default by Purchaser, Seller will not be deemed to have waived or relinquished any of its rights and remedies as provided in this PPA; and *provided, further*, that Purchaser hereby releases Seller, to the fullest extent permitted by Applicable Law, from any and all liability arising from Seller's performance under this PPA pursuant to instructions of the Lender following an event of default with respect to Purchaser under Lender's Financing Documents.

3. Seller shall, promptly following any request by Purchaser, execute statements certifying that this PPA is unmodified (or, if modified, stating the nature of the modification), in full force and effect and the absence or existence (and the nature thereof), to Seller's actual knowledge, of Events of Default hereunder by Purchaser and documents of consent to such assignment to the encumbrance and any assignment to such Lender, all in form and substance reasonably acceptable to Seller.

4. Promptly following the receipt of a written request from Purchaser or any Lender, Seller shall execute, or arrange for the delivery of, such reasonable certificates and other documents as may be reasonably necessary and appropriate in order for Purchaser to consummate any financing or refinancing of the Facility or any part thereof and enter into such reasonable agreements as may be reasonably requested by such Lender, which agreements will grant such rights to the Lender as are specifically provided for in such documents, including that (a) this PPA shall not be terminated (otherwise than pursuant to the terms of this PPA) without the consent of the Lender, which consent shall not be unreasonably withheld, conditioned, or delayed; (b) the Lender shall be given notice of, and the opportunity to cure any breach or default of this PPA by Purchaser in accordance with this PPA; (c) if the Lender forecloses, takes a deed in lieu of foreclosure, or otherwise exercises its remedies pursuant to any security documents, then (i) Seller shall, at the Lender's request, continue to perform all of its obligations hereunder, and the Lender or (without in any way limiting any obligation or liability of the Lender) its

nominee may perform in the place of Purchaser, and may assign this PPA to another Person that is a Creditworthy Entity and Qualified Operator in place of Purchaser, (ii) the Lender shall have no liability under this PPA except during the period of such Lender's ownership of the Purchaser's Interest or operation of the Facility, and (iii) Seller shall accept performance in accordance with this PPA by the Lender or its nominee; and (d) Seller shall make such representations and warranties to the Lender as Lender may reasonably request with regard to (1) Seller's authority to execute, deliver, and perform this PPA, (2) the binding nature on Seller of the document evidencing Seller's consent to assignment to the Lender and this PPA, and (3) the receipt of regulatory approvals by Seller with respect to its execution and performance under this PPA.

5. Purchaser shall reimburse Seller for the out-of-pocket costs and expenses (including the fees and expenses of counsel) incurred by Seller in connection with the preparation, negotiation, or execution of any statements, certificates, agreements, or other documents required under this Section 14.2.

Section 14.3 Purchase Option. Purchaser (or its designated Affiliate) shall have the option to purchase the Chugach Portion effective as of the expiration of the Term on the terms and conditions hereinafter set forth (the "**Purchase Option**"). On or before the thirtieth (30^{th}) anniversary of the Commencement Date, Seller will deliver to Purchaser Notice of the date, location, and time of a joint meeting between Seller and Purchaser to discuss Purchaser's plan regarding the potential exercise the Purchase Option. During the last five (5) Contract Years, Purchaser shall have the right at any time prior to the last day of the Term to deliver Notice to Seller that Purchaser is exercising the Purchase Option. If Seller fails to provide Notice of such joint meeting or fails to meet with Purchaser, Seller shall not be in breach of this Agreement, but if Purchaser then fails to deliver Notice of exercise of the Purchase Option prior to the last day of the Term, the Term shall be extended for a period of one year beyond such date (the "**Term Extension**"), during which (i) Purchaser may deliver its Notice of exercise of the Purchase Option at any time prior to the last day of the Term Extension, and (ii) Purchaser shall continue to make Annual Payments equal to (x) the amount for Contract Year 35 as set forth on Exhibit D hereto, plus (y) an amount equal to one percent (1%) of such amount, until the earlier of the expiration of the Term Extension or the closing of the purchase and sale agreement for the Purchase Option. If Purchaser exercises its Purchase Option, Seller and Purchaser shall enter into a purchase and sale agreement for the Chugach Portion in a form to be mutually agreed by the Parties prior to the Closing under the Asset Purchase Agreement.

(A) Determination of Chugach Portion for Purposes of Purchase Option. If MEA has not accepted the MEA Offer and consummated a purchase of the MEA Proportionate Interest prior to the Commencement Date, the Chugach Portion shall be deemed to be a percentage interest equal to the Seller's Interest for purposes of the Purchase Option; *provided, however*, that if MEA, in connection with the exercise of the Purchase Option by Purchaser, exercises any rights that MEA may have under the Transition Plan to consummate a purchase of the MEA Proportionate Interest effective as of the expiration of the Term, the Chugach Portion shall, for purposes of the Purchase Option, be reduced by the MEA Proportionate Interest.

(B) Purchase Price. Upon any exercise of the Purchase Option, the purchase price for the Chugach Portion shall be the Purchase Price; *provided* that Purchaser may offset any Purchase Price Adjustment against the Purchase Price. The Parties agree that, for the purposes of calculating the Purchase Price, the following expenditures shall be capitalized or, if necessary, deferred and amortized, for purposes of determining the "net book value" of the Chugach Portion for purposes of determining the Purchase Price:

1. all overhaul costs for the Facility, whether treated as expenses or otherwise for purposes other than determining the Purchase Price, that have been paid by Purchaser with respect to the Seller's Interest prior to any acquisition by MEA of all or any portion of the Seller's Interest; and

2. any other expenditures or regulatory assets related to compliance with Applicable Law made by Purchaser with respect to the Seller's Interest prior to any acquisition by MEA of all or any portion of the Seller's Interest; and

3. any other improvement, contribution, or expense (other than operating expenses) made or paid by or on behalf of Purchaser with respect to the Facility to the extent that such improvement, contribution or expense increases the value of the Facility above the value of the Facility immediately before such improvement, contribution or expense is made or paid and that, after amortization, has a positive value that extends beyond the Term.

If, for any reason, any generation unit overhaul costs or expenditures related to environmental compliance or other compliance with Applicable Law are not capitalized on Seller's financial statements, then such costs or expenditures shall be imputed as a capital investment in Seller's Interest and deferred and amortized for the purposes of establishing "net book value."

(C) Purchase Price Adjustment. If MEA acquires any portion of the Seller's Interest from Seller at or prior to the time set forth in Section 14.3(D) so that the portion of the Seller's Interest available to be purchased by Purchaser under the Purchase Option is less than the Chugach Portion as of the Effective Date, Seller will reimburse Purchaser, from the proceeds of such sale to MEA, for Purchaser's pro-rata portion of the sum of the following amounts (the "**Purchase Price Adjustment**"):

1. All capital improvements or other capital contributions made by Purchaser with respect to such portion of the Seller's Interest prior to MEA's acquisition of such portion of the Seller's Interest;

2. all overhaul costs for the Facility, whether treated as expenses or otherwise for purposes other than determining the Purchase Price or Purchase Price Adjustment, that have been paid by Purchaser with respect to such portion of the Seller's Interest prior to MEA's acquisition of such portion of the Seller's Interest;

3. any other expenditures or regulatory assets related to compliance with Applicable Law made by Purchaser with respect to such portion of the Seller's Interest prior to the date of such acquisition; and

4. any other improvement, contribution, or expense (other than operating expenses) made or paid by or on behalf of Purchaser with respect to the Facility to the extent that such improvement, contribution or expense increases the value of the Facility above the value of the Facility immediately before such improvement, contribution or expense is made or paid and that, after amortization, has a positive value that extends beyond the Term.

As used in this Section 14.3(C), "pro-rata" means in accordance with the ratio of (i) that portion of the Seller's Interest acquired by MEA to (ii) the entire Seller's Interest. It is the intent of the Parties that the Purchase Price Adjustment fully reimburse Purchaser for any improvements to, or increased value of, the Facility to the extent that such improvement is acquired by MEA rather than by Purchaser pursuant to the Purchase Option.

(D) Closing. The closing of the purchase pursuant to any exercise of the Purchase Option will occur on a date selected by Purchaser, which date will be not less than five (5) months and not more than nine (9) months after Purchaser has exercised the Purchase Option. Purchaser will select the closing date by giving a minimum of 30 days written notice to Seller.

ARTICLE 15
MISCELLANEOUS

Section 15.1 Forward Contract; Forward Agreement. The Parties acknowledge and intend that (a) this PPA, the transactions contemplated hereby, and any instruments that may be provided by either Party hereunder will each, and together, constitute one and the same "forward contract" and "forward agreement" within the meaning of the Bankruptcy Code; (b) Purchaser and Seller are "forward contract merchants," "swap participants," and "master netting agreement participants" within the meaning of the Bankruptcy Code; (c) all payments made or to be made by one Party to the other Party pursuant to this PPA constitute "settlement payments" within the meaning of the Bankruptcy Code; (d) this PPA constitutes a "master netting agreement" within the meaning of the Bankruptcy Code; (e) the Annual Payments (including each monthly payment thereof) and all other amounts due from Purchaser hereunder are (i) settlement payments (as defined in the Bankruptcy Code), (ii) transfers in connection with a forward contract, swap agreement and master netting agreement (as used in Sections 546(e), 546(g) and 546(j) of the Bankruptcy Code), and (iii) attributable solely to the expected costs of acquiring the Energy attributable to the Chugach Portion during the Term (based on the anticipated minimum amount of Energy that will be generated by the Facility and attributable to the Chugach Portion during the Term), as determined as of the date hereof; (f) the date of each monthly payment of the Annual Payments is a "maturity date" (as used in the definition of "forward contract" in Section 101 of the Bankruptcy Code) with respect to the Energy attributable to the Chugach Portion delivered to Purchaser during the period since the prior monthly payment; and (h) this PPA was entered into by Purchaser for the purpose of hedging against price fluctuations in the market for

electricity, by paying a fixed price for the Energy attributable to the Chugach Portion during the Term; (i) Purchaser intends to pass on the costs of its Energy purchases hereunder to its own customers, subject to Applicable Law; and (j) all remedies for a non-defaulting Party hereunder (including as set forth in Section 9.2) are "contractual rights" as used in Sections 362(b)(6), 362(b)(17), 362(b)(27), 556, 560 and 561 of the Bankruptcy Code. Each Party agrees that it will not make any assertion or claim, in any dispute or otherwise, or otherwise take any position to the effect that this PPA, the transactions contemplated hereby, and any instrument(s) that may be provided by either Party hereunder do not each, and together, constitute one and the same "forward contract," "commodity forward agreement," and "master netting agreement" within the meaning of the Bankruptcy Code, or that Purchaser and Seller are not "forward contract merchants," "swap participants," and "master netting agreement participants" within the meaning of the Bankruptcy Code.

Section 15.2 Notices. All notices, requests, consents, claims, demands, waivers and other communications hereunder (any of the foregoing, a "**Notice**") shall be in writing and shall be deemed to have been given (a) when delivered by hand (with written confirmation of receipt); (b) when received by the addressee if sent by a nationally recognized overnight courier (receipt requested); (c) on the date sent by e-mail of a PDF document (with confirmation of transmission) if sent during normal business hours of the recipient, and on the next Business Day if sent after normal business hours of the recipient or (d) on the third day after the date mailed, by certified or registered mail, return receipt requested, postage prepaid. Such communications must be sent to the respective Parties at the following addresses (or at such other address for a Party as shall be specified in a notice given in accordance with this Section 15.1):

If to Seller:	Municipality of Anchorage 632 W. 6th Avenue, Suite 850 Anchorage, AK 99501 E-mail: william.falsey@anchorageak.gov Attention: William D. Falsey, Municipal Manager
with a copy to:	Municipality of Anchorage 632 W. 6th Avenue, Suite 850 Anchorage, AK 99501 E-mail: rebecca.windtpearson@anchorageak.gov Attention: Rebecca A. Windt Pearson, Municipal Attorney
and a copy to:	K&L Gates LLP 925 Fourth Avenue, Suite 2900 Seattle, WA 98104-1158 E-mail: eric.freedman@klgates.com Attention: Eric E. Freedman

If to Purchaser:	Chugach Electric Association, Inc. 5601 Electron Drive Anchorage, AK 99518 E-mail: Lee_Thibert@chugachelectric.com Attention: Lee D. Thibert, Chief Executive Officer
with a copy to:	Chugach Electric Association, Inc. 5601 Electron Drive Anchorage, AK 99518 E-mail: Matthew_Clarkson@chugachelectric.com Attention: Matthew C. Clarkson, General Counsel
and a copy to:	Stinson Leonard Street LLP Suite 2600 50 South Sixth Street Minneapolis, MN 55402 E-mail: james.bertrand@stinson.com Attention: James J. Bertrand

Section 15.3 Compliance With Applicable Laws. Each Party shall at all times comply with all Applicable Laws; *provided, however* that any non-compliance with Applicable Law that, individually or in the aggregate, could not reasonably be expected to have a material adverse effect on the business or financial condition of the Party or its ability to fulfill its commitments hereunder shall not be deemed to be a breach of this PPA. Each Party shall promptly disclose to the other, any material violation of any Applicable Laws arising out of or in connection with the Facility and this PPA. This PPA will not take effect until the prior approval of the RCA as required by AS 42.05.431(b).

Section 15.4 Rates, Terms, and Conditions Binding. The Parties agree that the rates (including Annual Payments), terms, and conditions for products and services specified in this PPA shall remain in effect for the Term. In addition, to the fullest extent permitted by Applicable Law, each Party, for itself and its successors and assigns, hereby expressly and irrevocably (i) waives any rights that it may have, now or in the future, whether under AS 42.05.431(a), AS 42.05.431(b), or otherwise, to seek to obtain from the RCA by any means, directly or indirectly (through complaint, investigation, or otherwise), and (ii) covenants and agrees not at any time to seek so to obtain, an order from the RCA changing any section of this PPA specifying the rate, charge, or classification ("**Justness or Reasonableness Conditions**") agreed to by the Parties, it being the express intent of the Parties that, to the fullest extent permitted by Applicable Law, neither Party will unilaterally seek to obtain from the RCA any relief changing the Justness or Reasonableness Conditions of this PPA, notwithstanding any subsequent changes that may occur in Applicable Law or market conditions.

Section 15.5 Public Announcements. Neither Party shall at any time make, with respect to the transactions to be consummated by this PPA, publish, or communicate to any

Person in any public forum any defamatory, maliciously false, or disparaging remarks, comments, or statements concerning the other Party or any of its employees, officers, officials or directors.

Section 15.6 No Third-Party Beneficiaries. This PPA is for the sole benefit of the Parties and their respective successors and permitted assigns and nothing herein, express or implied, is intended to or shall confer upon any other Person or entity any legal or equitable right, benefit or remedy of any nature whatsoever under or by reason of this PPA.

Section 15.7 Amendment and Modification; Waiver. This PPA may only be amended, modified or supplemented by an agreement in writing signed by each Party. No waiver by any Party of any of the provisions hereof shall be effective unless explicitly set forth in writing and signed by the Party so waiving. No waiver by any Party shall operate or be construed as a waiver in respect of any failure, breach or default not expressly identified by such written waiver, whether of a similar or different character, and whether occurring before or after that waiver. No failure to exercise, or delay in exercising, any right, remedy, power or privilege arising from this PPA shall operate or be construed as a waiver thereof; nor shall any single or partial exercise of any right, remedy, power or privilege hereunder preclude any other or further exercise thereof or the exercise of any other right, remedy, power or privilege.

Section 15.8 Governing Law; Submission to Jurisdiction; Waiver of Jury Trial.

(A) This PPA shall be governed by and construed in accordance with the internal laws of the State of Alaska, without regard to conflict of law principles that would result in the application of the laws of any other jurisdiction.

(B) ANY LEGAL SUIT, ACTION OR PROCEEDING ARISING OUT OF OR BASED UPON THIS PPA OR THE TRANSACTIONS CONTEMPLATED HEREBY MAY BE INSTITUTED IN THE SUPERIOR COURT OF THE STATE OF ALASKA IN IN THE THIRD JUDICIAL DISTRICT, LOCATED IN ANCHORAGE, ALASKA, AND EACH PARTY IRREVOCABLY SUBMITS TO THE EXCLUSIVE JURISDICTION OF SUCH COURT IN ANY SUCH SUIT, ACTION OR PROCEEDING. SERVICE OF PROCESS, SUMMONS, NOTICE OR OTHER DOCUMENT BY MAIL TO SUCH PARTY'S ADDRESS SET FORTH HEREIN SHALL BE EFFECTIVE SERVICE OF PROCESS FOR ANY SUIT, ACTION OR OTHER PROCEEDING BROUGHT IN SUCH COURT. THE PARTIES IRREVOCABLY AND UNCONDITIONALLY WAIVE ANY OBJECTION TO THE LAYING OF VENUE OF ANY SUIT, ACTION OR ANY PROCEEDING IN SUCH COURT AND IRREVOCABLY WAIVE AND AGREE NOT TO PLEAD OR CLAIM IN ANY SUCH COURT THAT ANY SUCH SUIT, ACTION OR PROCEEDING BROUGHT IN SUCH COURT HAS BEEN BROUGHT IN AN INCONVENIENT FORUM.

(C) EACH PARTY ACKNOWLEDGES AND AGREES THAT ANY CONTROVERSY WHICH MAY ARISE UNDER THIS PPA IS LIKELY TO INVOLVE COMPLICATED AND DIFFICULT ISSUES AND, THEREFORE, EACH SUCH PARTY IRREVOCABLY AND UNCONDITIONALLY WAIVES ANY RIGHT IT MAY HAVE TO A TRIAL BY JURY IN RESPECT OF ANY LEGAL ACTION ARISING OUT OF OR

RELATING TO THIS PPA OR THE TRANSACTIONS CONTEMPLATED HEREBY. EACH PARTY TO THIS PPA CERTIFIES AND ACKNOWLEDGES THAT (A) NO REPRESENTATIVE OF ANY OTHER PARTY HAS REPRESENTED, EXPRESSLY OR OTHERWISE, THAT SUCH OTHER PARTY WOULD NOT SEEK TO ENFORCE THE FOREGOING WAIVER IN THE EVENT OF A LEGAL ACTION, (B) SUCH PARTY HAS CONSIDERED THE IMPLICATIONS OF THIS WAIVER, (C) SUCH PARTY MAKES THIS WAIVER VOLUNTARILY, AND (D) SUCH PARTY HAS BEEN INDUCED TO ENTER INTO THIS PPA BY, AMONG OTHER THINGS, THE MUTUAL WAIVERS AND CERTIFICATIONS IN THIS SECTION 15.8.

Section 15.9 Specific Enforcement. The Parties agree that irreparable damage would occur if any provision of this PPA were not performed in accordance with the terms hereof and that the Parties shall be entitled to specific performance of the terms hereof, in addition to any other remedy to which they are entitled at law or in equity. The Parties acknowledge and agree that (A) the Parties shall be entitled to an injunction, specific performance or other equitable relief to prevent breaches of this PPA and to enforce specifically the terms and provisions hereto, without proof of damages, this being in addition to any other remedy to which they are entitled under this PPA and (B) the right to specific enforcement is an integral part of the transactions contemplated by this PPA and without that right, neither Seller nor Purchaser would have entered into this PPA. Each Party agrees that it will not oppose the granting of specific performance and other equitable relief on the basis that the other Party has an adequate remedy at law or that an award of specific performance is not an appropriate remedy for any reason at law or equity. The Parties acknowledge and agree that any Party seeking an injunction to prevent breaches of this PPA and to enforce specifically the terms and provisions of this PPA in accordance with this Section 15.9 shall not be required to provide any bond or other security in connection with any such injunction.

Section 15.10 Waiver of Sovereign Immunity. Seller agrees that it is subject to civil and commercial suit for any breach of contract obligations under this PPA. To the extent that Seller may be entitled to claim sovereign, governmental, or municipal immunity from any liability in such a civil or commercial suit by Purchaser, Seller hereby agrees not to claim, and hereby waives, such sovereign, governmental, or municipal immunity.

Section 15.11 RCA PPA Approval. Seller and Purchaser will use Commercially Reasonable efforts to cooperate and each advocate to obtain an order from the Regulatory Commission of Alaska (the "**RCA**") approving the amendment of the certificate of public convenience and necessity of each of Purchaser and Seller to reflect the transactions to be consummated hereby, which order includes approval of (A) recovery by Purchaser in future rates of payments made under this PPA and (B) this PPA; and which order from the RCA shall not contain any condition or conditions materially adverse to either Purchaser or Seller, as determined by Purchaser or Seller with respect to itself in good faith and in the exercise of its Commercially Reasonable business judgment ("**RCA PPA Approval**"). In addition, Seller and Purchaser will use commercially reasonable efforts to cooperate and advocate to obtain an order from the RCA approving, as part of the transactions to be consummated hereby, recovery by Buyer in future rates of the costs associated with consummating the transactions to be consummated hereby.

Section 15.12 Relationship of the Parties. This PPA shall not be interpreted to create an association, joint venture, or partnership between the Parties or to impose any partnership obligation or liability upon either Party. Except as specifically provided for in this PPA to the contrary, neither Party shall have any right, power, or authority to enter into any agreement or undertaking for, or act on behalf of, or to act as an agent or representative of, the other Party.

Section 15.13 Successors and Assigns. Subject to the provisions of Section 14.1, Agreement shall be binding upon and shall inure to the benefit of the Parties and their respective successors and permitted assigns. No assignment shall relieve the assigning party of any of its obligations hereunder.

Section 15.14 Security Interest.

(A) The Parties agree, acknowledge and intend that the legal status of this PPA is and shall be as a power purchase agreement, a forward contract (as defined in the Bankruptcy Code), a commodity forward agreement (and thus a swap agreement as defined in the Bankruptcy Code), and a master netting agreement (as defined in the Bankruptcy Code), and not a secured purchase of the Chugach Portion or any other alternative form of transaction, and that Seller will at all times during the Term have and retain full undivided ownership of the Chugach Portion. Accordingly, each Party acknowledges and agrees that: (1) it shall not assert that the transactions contemplated under this PPA are a secured financing of any sort; and (2) it shall cooperate with the other Party in defending against any assertion by a third party that the transactions contemplated hereunder constitute a secured financing.

(B) Notwithstanding the foregoing, as security for the prompt payment and performance of all obligations of Purchaser under this PPA, including the payment of all Annual Payments to Seller, and solely as a precaution in the event that this PPA should be construed as a secured financing such that Purchaser shall be deemed to have acquired title to the Chugach Portion at any time (other than by exercise of the Purchase Option under Section 14.3), Purchaser hereby grants to Seller a senior, first priority purchase money lien on and security interest in and to, and right of set-off with respect to, all right, title, and interest of Purchaser in and to the Chugach Portion (including all right, title, and interest in and to any Power attributable to the Chugach Portion, except as and to the extent that such Power is delivered to Purchaser at the Delivery Point under and in accordance with the express provisions of this PPA) and all proceeds thereof (collectively, the "**Collateral**"). In addition, notwithstanding ARTICLE 14, Purchaser (i) represents and warrants to Seller as of each of the Effective Date and the Commencement Date that (a) Purchaser has provided Seller with a true and correct copy of the Trust Indenture, including all supplements and amendments thereto that were executed after January 20, 2011 and (b) there are no liens or security interests in or on the assets of Purchaser that encumber the Collateral as of the Effective Date, and that there will be no liens or security interests in or on the assets of Purchaser that will encumber the Collateral as of the Commencement Date; (ii) covenants and agrees that Purchaser shall provide to Seller, at or prior to the Closing under the Asset Purchase Agreement, (a) an original, fully executed copy of an Officers' Certificate of Excludable Property (as such terms are defined in the Trust Indenture), in form and substance reasonably satisfactory to Seller, identifying the Collateral as Excludable Property under the Trust Indenture and including a confirmation by the Trustee (as defined in the

Trust Indenture) that the Collateral is Excludable Property and is not subject to the lien of the Trust Indenture pursuant to a release under Section 6.10 of the Trust Indenture, in form and substance reasonably satisfactory to Seller, (b) evidence of Purchaser's delivery of such Officers' Certificate to the Trustee and the Trustee's execution of such release, and (c) evidence of the recording of such release in all recording offices in the State of Alaska in which the lien of the Trust Indenture has been recorded; and (iii) covenants and agrees that Purchaser shall not, without Seller's prior written consent, grant any security interest in the Collateral, including (a) in connection with this PPA, the Asset Purchase Agreement, and the transactions contemplated hereunder and thereunder, or (b) any grant of a lien to the Trustee pursuant to Granting Clause Third of the Trust Indenture or otherwise. In connection with the lien and security interest granted in this Section 15.14(B), Seller shall have the rights and remedies of a secured party or mortgagee under Applicable Law, including the UCC. Purchaser hereby authorizes Seller to file UCC financing statements and to record instruments with any appropriate Governmental Authority, and to make other similar filings and recordings with respect hereto as Seller shall elect in its sole discretion for the purposes of recording and perfecting its lien and security interest in the Collateral.

Section 15.15 Survival of Obligations. The applicable provisions of this PPA shall continue in effect after termination to the extent necessary to (A) provide for final billings, payments, and adjustments, (B) enforce or complete the duties, obligations, or responsibilities of the Parties, and (C) address any remedies or indemnification rights arising prior to termination. Cancellation, expiration, or earlier termination of this PPA shall not relieve the Parties of obligations, including warranties, remedies, or indemnities, that by their nature should survive such cancellation, expiration, or termination, which obligations shall survive for the period of the applicable statute(s) of limitation.

Section 15.16 Further Assurances. Upon the receipt of a written request from the other Party, each Party shall execute such reasonable additional documents, instruments and assurances and take such additional actions as are reasonably necessary and desirable to carry out the terms and intent hereof. Neither Party shall unreasonably withhold, condition, or delay its compliance with any reasonable request made pursuant to this Section 15.16.

Section 15.17 Severability. If any term or provision of this PPA is invalid, illegal or unenforceable in any jurisdiction, such invalidity, illegality or unenforceability shall not affect any other term or provision of this PPA or invalidate or render unenforceable such term or provision in any other jurisdiction. Upon such determination that any term or other provision is invalid, illegal or unenforceable, the Parties shall negotiate in good faith to modify this PPA so as to effect the original intent of the Parties as closely as possible in a mutually acceptable manner in order that the transactions contemplated hereby be consummated as originally contemplated to the greatest extent possible.

Section 15.18 Complete Agreement. This PPA constitutes the sole and entire agreement of the Parties with respect to the subject matter contained herein, and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such subject matter. In the event of a conflict between the terms of this PPA and the Asset Purchase Agreement, the terms of the Asset Purchase Agreement shall control.

Section 15.19 Headings. The headings in this PPA are for reference only and shall not affect the interpretation of this PPA.

Section 15.20 Counterparts. This PPA may be executed in counterparts, each of which shall be deemed an original, but all of which together shall be deemed to be one and the same agreement. A signed copy of this PPA delivered by facsimile, e-mail or other means of electronic transmission shall be deemed to have the same legal effect as delivery of an original signed copy of this PPA.

Section 15.21 Exhibits. Exhibits may be changed to the extent allowed by specific provisions of this PPA or with the mutual consent of both Parties.

EXHIBIT A

DEFINITIONS

The following terms shall have the meanings set forth herein:

"**Actual Damages**" has the meaning set forth in Section 9.2(B).

"**Affiliate**" of a Person means any other Person that directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, such Person. The term "control" (including the terms "controlled by" and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of a Person, whether through the ownership of voting securities, by contract, or otherwise.

"**Ancillary Services**" all ancillary products associated, in accordance with Prudent Utility Practice, with the generation of Energy, including spinning reserves, non-spinning reserves, reactive power and voltage control.

"**Annual Payments**" has the meaning set forth in Section 7.1(A).

"**Applicable Law**" means any statute, law, ordinance, regulation, rule, code, order, constitution, treaty, common law, judgment, decree, Permit requirement, other binding requirement or rule of law of, or compulsory standard established by, any Governmental Authority.

"**Asset Purchase Agreement**" means that certain Asset Purchase and Sale Agreement dated as of December 28, 2018, 2018 pursuant to which Purchaser has acquired substantially all of the assets of Seller's electric utility referred to as Municipal Light and Power ("**ML&P**") other than the Seller's Interest.

"**Bankruptcy Code**" means 11 U.S.C. §§ 101 et seq. (Title 11, United States Code).

"**Bradley Lake Agreement**" means the Bradley Lake Hydroelectric Project Agreement for the Sale and Purchase of Electric Power dated as of December 8, 1987 by and among the Alaska Energy Authority as successor to The Alaska Power Authority, Purchaser, The Golden Valley Electric Association, Inc., Seller, The City of Seward d/b/a/Seward Electric System, The Alaska Electric Generation & Transmission Cooperative, Inc., The Homer Electric Association, Inc., and MEA.

"**Business Day**" means any Day that is not a Saturday, a Sunday, NERC recognized holiday, or any other Day on which commercial banks in Anchorage, Alaska are required to be closed for business.

"**Capacity**" means the total electrical generating capacity of the Facility, including any capacity products that are able to be accredited under Applicable Law.

"**Chugach Portion**" means that portion of the Seller's Interest as determined pursuant to Section 2.2 or Section 14.3(A).

"**Collateral**" shall have the meaning set forth in Section 15.14(B).

"**Commencement Date**" shall have the meaning set forth in Section 3.2.

"**Commercially Reasonable**" or "**Commercially Reasonable Efforts**" means, with respect to any action required to be made, attempted or taken by a Party under this PPA, the level of effort in light of the facts known to such Party at the time a decision is made that: (a) can reasonably be expected to accomplish the desired action at a reasonable cost; (b) is consistent with Prudent Utility Practice; and (c) takes into consideration the amount of advance notice required to take such action, the duration and type of action and the competitive environment in which such action occurs.

"**Contract Year**" has the following meaning: the first Contract Year means the period beginning on the Commencement Date and ending on the last calendar day of the month of the first anniversary of the Commencement Date. The second Contract Year and each subsequent Contract Year means the period beginning on the first day after the last day of the previous Contract Year and ending on the last day of the twelfth calendar month thereafter.

"**Credit Rating**" means (i) with respect to any entity other than a financial institution, the current (A) rating issued or maintained by S&P or Moody's with respect to such entity's long-term senior, unsecured, unsubordinated debt obligations (not supported by insurance provider or other third-party credit enhancements) or (B) corporate credit rating or long-term issuer rating issued or maintained with respect to such entity by S&P or Moody's, or (ii) if such entity is a financial institution, the ratings issued or maintained by S&P or Moody's with respect to such entity's long-term, unsecured, unsubordinated deposits.

"**Creditworthy Entity**" means a Person having at the applicable time a Credit Rating of (a) BBB or better from S&P, or (b) Baa2 or better from Moody's, or (c) if such Person has a Credit Rating at such time from both S&Ps and Moody's, BBB or better from S&P and Baa2 or better from Moody's.

"**Day**" means a calendar day.

"**Delivery Point**" means the low side of the step-up transformer(s) within the Facility switchyard.

"**Dispute**" shall have the meaning set forth in Section 10.1.

"**Effective Date**" shall have the meaning set forth in the preamble.

"**Eligible Energy Resource**" means any resource that qualifies as a renewable energy resource eligible to be certified to receive, claim, own or use renewable energy certificates pursuant to the protocols and procedures under any applicable REC Registration Program.

"**Energy**" means the net electric energy that is generated from the Facility (or capable of being generated by any water spilled from the Facility) that is delivered to the Delivery Point, as measured in accordance with Section 5.2. Energy shall be net of energy self-generated and concurrently consumed by the Facility, and net of all losses prior to the Delivery Point, including line, inverter, and transformer losses.

"**ERO**" means the Electric Reliability Organization certified by FERC pursuant to Section 215 of the Federal Power Act or any successor organization.

"**Event of Default**" shall have the meaning set forth in Section 9.1.

"**Extension Agreement**" means that certain Agreement for Extension of 1996 Eklutna Hydroelectric Project Transition Plan dated October 2, 1997 by and among the Owners.

"**Facility**" means the Eklutna Hydroelectric Project, as further described in Exhibit B, including all of the following: all equipment, buildings, generators, inverters, step-up transformers, output breakers, protective and associated equipment, improvements, and other tangible assets, contract rights, easements, rights of way, surface use agreements and other interests or rights in real estate reasonably necessary for construction, operation, maintenance, generation and delivery of the Energy, Ancillary Services, and Capacity subject to this PPA.

"**Facility Metering**" means revenue quality meters, metering equipment and data processing equipment used to measure, record or transmit data relating to the output from the Facility, including the metering current transformers and the metering voltage transformers.

"**Federal Power Act**" means the provisions of 16 U.S.C. 791(A) et seq. and amendments or supplements thereto.

"**FERC**" means the Federal Energy Regulatory Commission or any successor agency.

"**Financing Documents**" means the loan and credit agreements, notes, bonds, indentures, security agreements, lease financing agreements, mortgages, deeds of trust, interest rate exchanges, swap agreements, and other documents relating to a Party's financing transactions, including any credit enhancement, credit support, working capital financing, or refinancing documents, and any and all amendments, modifications, or supplements to the foregoing that may be entered into from time to time at the discretion of the Party.

"**Fish and Wildlife Agreement**" is the August 7, 1991 Agreement Between The Municipality of Anchorage, DBA Anchorage Municipal Light And Power, Chugach Electric Association, Inc., Matanuska Electric Association, Inc., U. S. Fish and Wildlife Service, National Marine Fisheries Service, Alaska Energy Authority and The State of Alaska, Relative to the Eklutna and Snettisham Hydroelectric Projects .

"**Force Majeure**" means an event or circumstance that prevents a Party from performing its obligations under this PPA, which event or circumstance (i) was not reasonably anticipated as of the Date of this PPA, (ii) is not within the reasonable control of or the result of the fault or negligence of the Party claiming its occurrence, and (iii) which by exercise of due diligence and

foresight could not reasonably have been avoided, *provided, however*, that such an event or circumstance shall not include: (a) inability, or excess cost, to procure any equipment necessary to perform the obligations of this PPA; (b) delays or nonperformance by suppliers, vendors, or other third parties with which a Party has contracted, except to the extent that such delays or nonperformance were due to circumstances that would constitute "Force Majeure" as defined above; (c) mechanical or equipment breakdown or inability to operate unless caused by reason of Force Majeure; (d) changes in market conditions; (e) any labor strikes, slowdowns, work stoppages, or other labor disruptions limited only to a Party or a Party's Affiliates; (f) Seller's inability to obtain any credit or incentive in connection with the Facility, including any such inability that is attributable to any failure to meet placed-in-service or safe harbor provisions regardless of whether an event of Force Majeure may have caused or contributed to such failure, (g) the loss of Purchaser's markets or Purchaser's inability economically to use or resell any of the Power purchased hereunder, except to the extent that such loss of markets or inability to use or resell were due to circumstances that would constitute "Force Majeure" as defined above; (h) Purchaser's failure to contract for and reserve sufficient firm transmission capacity to deliver the Power to any transmission point(s) of receipt or any delivery point(s); (i) Seller's ability to sell Power to a market at a more advantageous price; or (j) Purchaser's ability to purchase Power in or from any market at a more advantageous price.

"**Forced Outage**" means any condition at the Facility that requires the immediate and unplanned removal of the Facility, or at least ten percent thereof, from service, another outage state, or a reserve shutdown state, resulting from immediate mechanical/electrical/hydraulic control system trips and operator-initiated trips in response to abnormal Facility conditions or alarms.

"**Governmental Authority**" means any federal, state, local or foreign government, or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations, or orders of such organization or authority have the force of Law), or any arbitrator, court, or tribunal of competent jurisdiction. References to "Governmental Authority" shall exclude Seller except Seller is acting in a legislative or regulatory capacity as expressly authorized by Applicable Law.

"**Indemnified Party**" shall have the meaning set forth in Section 13.1.

"**Indemnifying Party**" shall have the meaning set forth in Section 13.1.

"**ISO**" means an independent system operator or regional transmission organization that coordinates, controls and monitors the operation of a public electrical power system or any similar operator or organization created by Applicable Law after the date of this PPA.

"**Justness or Reasonableness Conditions**" shall have the meaning set forth in Section 15.4.

"**Lender**" means any commercial bank, investment bank or trustee under Financing Documents that makes a loan to or extends other credit in favor of Purchaser.

"**MEA**" means Matanuska Electric Association, Inc., a not-for-profit Alaska electric cooperative corporation.

"**MEA Offer**" shall have the meaning set forth in Section 2.1.

"**MEA Proportionate Interest**" shall have the meaning set forth in Section 2.1.

"**Moody's**" means Moody's Investors Services, Inc.

"**NERC**" means the North American Electric Reliability Council or any successor organization.

"**Notice**" shall have the meaning set forth in Section 15.1.

"**Operating Committee**" shall mean the "Eklutna Operating Committee" or "EOC" set forth in the Operations Agreement.

"**Operating Records**" means all agreements associated with the Facility, operating logs, blueprints for construction, operating manuals, all warranties on equipment, and all documents, whether in printed or electronic format, that Seller uses or maintains for the operation of the Facility.

"**Operations Agreement**" means the Eklutna Purchasers Manner of Acting, Functional Responsibilities, and Staffing, attached as Exhibit E to the Transition Plan, as the same has been amended from time to time by the Owners.

"**Operations Agreement Amendment**" shall have the meaning set forth in Section 3.1.

"**Owners**" means the owners of the Facility. As of the Effective Date, the Owners are Seller (with respect to the Seller's Interest), Purchaser (with respect to the Purchaser's Interest), and MEA (with respect to the remaining 5/30 (approximately 16.7%) undivided ownership interest in the Facility).

"**Party**" and "**Parties**" shall have the meanings set forth in the introductory paragraph.

"**Permit(s)**" means all applicable construction, land use, air quality, emissions control, environmental and other permits, licenses and approvals from any Governmental Authority required under Applicable Laws for construction, ownership, operation and maintenance of the Facility and the generation and delivery of any output from the Facility to Purchaser.

"**Person**" means an individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

"**Power**" shall have the meaning set forth in Section 6.1(A).

"**PPA Contingencies**" shall have the meaning set forth in Section 3.1.

"**Prudent Utility Practice**" means any applicable practices, methods, and acts engaged in or approved by a significant portion of (a) as to Seller, the hydroelectric generating industry in the United States of America, or (b) as to Purchaser, the electric utility industry in the United States of America, during the relevant time period, or the practices, methods and acts which, in the exercise of reasonable judgment by a prudent hydroelectric generator operator (or prudent utility operator, if applicable to Purchaser) in light of the facts known or which should reasonably have been known at the time the decision was made, could have been expected to accomplish the desired result at the lowest reasonable cost consistent with good business practices, reliability, safety, expedition and the requirements of any governing authority having jurisdiction. Without limitation of the foregoing, "Prudent Utility Practice" shall include the applicable operating policies, standards, criteria, or guidelines of any applicable governing authority and any manufacturer of a component of the Project. "Prudent Utility Practice" is not intended to be limited to the optimum practice, method or act to the exclusion of all others, but rather to the acceptable practices, methods or acts generally accepted (a) as to Seller, by the hydroelectric energy electric generating industry in the United States of America or (b) as to Purchaser, by the electric utility industry in the United States of America.

"**Purchase Option**" shall have the meaning set forth in Section 14.3.

"**Purchase Price**" means the sum of the net book value (or its equivalent) of the Chugach Portion as of the last day of the Term, as reduced (although not below zero) by the aggregate amount of the net book value of any capital expenditures made by Purchaser with respect to the Chugach Portion during the Term. For purposes of the Chugach Portion, "net book value" means gross plant in service (including customer-contributed plant) at original cost, less accumulated depreciation and amortization.

"**Purchase Price Adjustment**" shall have the meaning set forth in Section 14.3(C).

"**Purchaser**" shall have the meaning set forth in the first paragraph of this PPA.

"**Purchaser's Interest**" shall have the meaning set forth in the second paragraph of this PPA.

"**Qualified Operator**" means an operator that operates one or more hydropower generating facilities of a type and size comparable to the Facility, is nationally recognized, and has not less than three years' experience in the operation of one or more hydropower generating facilities.

"**RCA**" shall have the meaning set forth in Section 15.10.

"**RCA PPA Approval**" shall have the meaning set forth in Section 15.10.

"**REC Registration Program**" means any state, regional or federal program established to register Eligible Energy Resources and create and certify renewable energy certificates arising from energy generated from such Resource, including any rights associated with any renewable energy information or tracking system that exists or may be established by Applicable Law with regard to monitoring, registering, tracking, certifying, or trading such credits.

"**Renewable Attributes**" means any and all renewable resource attributes (including renewable energy certificates or credits or similar rights arising out of any applicable REC Registration Program), green tags, emissions or carbon credits, reductions, offsets, and allowances, and any other environmentally related attributes that are, or in the future may be, recognized by any Governmental Authority, and that are attributable to the availability, production, purchase or sale of Energy from the Facility. For the avoidance of doubt, "Renewable Attributes" do not include any Tax Benefits.

"**S&P**" means the Standard & Poor's Rating Group, a division of The McGraw-Hill Companies.

"**Scheduled Termination Date**" means the last day of the calendar month thirty-five (35) years after the Commencement Date.

"**Seller**" shall have the meaning set forth in the first paragraph of this PPA.

"**Seller's Interest**" shall have the meaning set forth in the recitals to this PPA.

"**Seller's Representative**" shall have the meaning set forth in Section 4.2.

"**Site**" means the parcel of real property on which the Facility is constructed and located, including any easements, rights of way, surface use agreements and other interests or rights in real estate reasonably necessary for the operation and maintenance of the Facility. The Site is more specifically described in Exhibit B to this PPA.

"**Tax Benefits**" means any and all (i) tax credits based on ownership of, investment in or energy production from the Facility or any portion thereof, (ii) grants based on ownership of, investment in or energy production from the Facility or any portion thereof, including the grant described in Section 1603 of the American Recovery and Reinvestment Tax Act of 2009 and (iii) other tax benefits, including depreciation and other cost recovery deductions, arising in connection with ownership of, investment in, or operation of the Facility, or any portion thereof, in each case allocated, allowed, allowable, assigned, awarded, certified or otherwise transferred or granted to Seller or Purchaser by any Governmental Authority in any jurisdiction in connection with the Facility.

"**Term**" means the period of time during which this PPA shall remain in full force and effect as further defined in Section 3.3 and as may be extended pursuant to Section 14.3.

"**Term Extension**" shall have the meaning set forth in Section 14.3.

"**Transition Plan**" means the 1996 Eklutna Hydroelectric Project Transition Plan dated May 28, 1996 by and among the United States of America d/b/a Alaska Power Administration, a unit of the Department of Energy, and the Owners, as the same has been amended and extended by the Extension Agreement.

"**Trust Indenture**" means that certain Second Amended and Restated Indenture of Trust, dated as of January 20, 2011, between Purchaser and U.S. Bank National Association, as Trustee, as recorded in Recording Dist.: 301 - Anchorage, State of Alaska, on January 20, 2011, under

reference no. 2011-003688-0, in Recording Dist.: 302 - Kenai, State of Alaska, on January 20, 2011, under reference no. 2011-000608-0, in Recording Dist.: 314 - Seward, State of Alaska, on January 20, 2011, under reference no. 2011-000062-0, and in the Palmer, State of Alaska, Recording District on January 20, 2011, under reference no. 2011-001410-0, as the same has been or may be amended or supplemented from time to time.

"**UCC**" means the Uniform Commercial Code of the State of Alaska.

EXHIBIT B

FACILITY DESCRIPTION AND SITE MAPS

Eklutna Purchase Agreement
Exhibit A

August 2, 1989
Page 1 of 2

Lands, Easements and Rights-of-Way

Exhibit A consists of this narrative (pages 1 and 2 of 2) and the map prepared by BLM, signed and dated February 3, 1989.

This exhibit describes and displays present land status for the Eklutna Hydroelectric Project and describes in general terms the conveyances of land and land rights contemplated in the purchase agreement.

1. BLM - managed lands and military lands used for Eklutna Project for which BLM is to provide APAd rights-of-way sufficient for operation, maintenance, repair and replacement of Eklutna facilities, such rights-of-way to be assigned by APAd to the Purchasers.

Legend Symbols and Description.

Withdrawals. Refers to approximately 863 acres of public lands withdrawn for Eklutna at the "Intake Area," "Power Tunnel," "Eklutna Powerplant" and "Anchorage Substation." The total acreage is comprised of the following land:

a. Approximately 320 acres withdrawn for the "Power Tunnel" under Public Land Order 1231 dated September 28, 1955.

b. Approximately 230 acres utilized for the "Intake Area" and approximately 60 acres for a portion of "Eklutna Powerplant" as described by ANCSA 3(e) determination AA-51183 dated July 30, 1986.

c. Approximately 243 acres utilized for "Eklutna Powerplant" as described by ANCSA 3(e) determination AA-42534 dated September 1, 1982.

d. Approximately 10 acres withdrawn for "Anchorage Substation" under Secretarial Order dated April 4, 1952.

State Land-R/W. Refers to rights-of-way across State-selected lands covering the transmission line east of "Eklutna Powerplant" to the Knik River.

Military Land-R/W. Refers to rights-of-way across military lands used for Eklutna transmission lines.

Acquired-3(e). Refers to approximately 2.5 acres of acquired land used for "Reed Substation" as described by ANCSA 3(e) determination AA-45155 dated July 30, 1985.

2. ANCSA 17(b) Easements.

Map symbol: Native Land - 17(b) Easements.

Refers to rights-of-way that are reserved for portions of the 115kV transmission line, access roads and other Eklutna facilities located on Native corporation lands, and exist as easement reservations in the ANCSA conveyances to the Native corporations pursuant to Section 17(b) of ANCSA. These easements will not be altered by the sale of Eklutna and the Purchasers may use these easements for their intended purposes.

3. APAd Acquired Land and Easements.

Refers to land and easements acquired by the Bureau of Reclamation (predecessor of APAd) during construction of Eklutna and now controlled by APAd. APAd will assign the land and easements to the Purchasers.

Legend Symbols and Description:

Acquired. Refers to approximately 0.8 acres of land owned by APAd at Palmer Substation.

Acquired-Easements. Refers to approximately 33 easements across private lands acquired by the Bureau of Reclamation (predecessor of APAd) and now held by APAd.

4. Other Easements on Private Land.

Map [Symbol]: Note: Other Easements on Private Lands To Be Acquired - See Exhibit A Narrative

Refers to approximately two hundred and fifty (250) parcels of private land located along the 115kV transmission line, many of which require title curative action for purposes of perfecting assignable easement rights or rights-of-way for the Purchasers. APAd shall be responsible for acquiring assignable easement rights or rights-of-way across these lands, for subsequent assignment to Purchasers.

5. Reservoir.

Eklutna Lake as designated on the map is the reservoir described in the body of the Agreement.

EXHIBIT C

TERMS OF MEA OFFER

The MEA Offer must provide that the effectiveness of any purchase by MEA of the MEA Proportionate Interest and the effectiveness of any binding power purchase agreement between Seller and MEA with respect to the MEA Proportionate Interest must be conditioned on the occurrence of the Closing under the Asset Purchase Agreement.

Any purchase option for the MEA Portion in a PPA must be on terms and conditions substantially the same as those set forth in Section 14.3.

EXHIBIT D

ANNUAL PAYMENTS

Annual Payments to the Municipality of Anchorage: 35-Year Term

	PPA Annual Payments (Nominal $)	
	Chugach Portion: 100%	*Chugach Portion: 64.29%*
Contract Year		
1	$3,908,021	$2,512,467
2	$3,947,101	$2,537,591
3	$3,986,572	$2,562,967
4	$4,026,438	$2,588,597
5	$4,066,702	$2,614,483
6	$4,107,369	$2,640,628
7	$4,148,443	$2,667,034
8	$4,189,927	$2,693,704

In the event that the Chugach Portion is neither 100% or 64.29%, the Annual Payment shall be pro-rated based on the percentage of the Chugach Portion.

EXHIBIT E

INSURANCE COVERAGE

INSURANCE PROVISIONS SHOULD PROVIDE THAT CASUALTY COVERAGE SHOULD EQUAL OR EXCEED THE NET PRESENT VALUE OF THE AMOUNT OF REMAINING ANNUAL PAYMENTS USING A 5% DISCOUNT RATE; PROVIDED THAT IN NO EVENT SHALL PURCHASER BE REQUIRED TO PROVIDE CASUALTY INSURANCE IN EXCESS OF THE ACTUAL CASH VALUE OF THE CHUGACH PORTION.

AMENDMENT NO. 1 TO EKLUTNA POWER PURCHASE AGREEMENT

This AMENDMENT NO. 1 TO EKLUTNA POWER PURCHASE AGREEMENT, dated as of the 27th day of September, 2019 (this "**Eklutna PPA Amendment**"), is made and entered into by and between (i) **CHUGACH ELECTRIC ASSOCIATION, INC.**, an Alaska not-for-profit electric cooperative corporation ("**Purchaser**"), and (ii) the **MUNICIPALITY OF ANCHORAGE,** a political subdivision organized under the laws of the State of Alaska ("**Seller**"). Purchaser and Seller are hereinafter referred to individually as a "**Party**" and collectively as the "**Parties**".

RECITALS

WHEREAS, Purchaser and Seller entered into that certain Eklutna Power Purchase Agreement dated as of December 28, 2018 (the "**Eklutna PPA**");

WHEREAS, Section 15.7 of the Eklutna PPA provides that Purchaser and Seller may amend the Eklutna PPA upon the execution and delivery of a written agreement executed by each Party; and

NOW, THEREFORE, pursuant to Section 15.7 of the Eklutna PPA and in consideration for the premises and agreements hereinafter set forth, the Parties, intending to be legally bound, agree as follows:

1. Revision to Section 15.11. The following sentence is added at the end of Section 15.11 of the Eklutna PPA:

> It is the understanding of the Parties that this PPA, as a wholesale power agreement between public utilities governed by AS 42.05.431(b), will not take effect without the prior approval of the RCA, and will at all times after any such approval be subject to the RCA's continuing authority over wholesale power agreements.

2. Effective Date and Incorporation of Terms of Eklutna PPA. This Amendment shall be deemed effective as of the Effective Date as defined in Exhibit A to the Eklutna PPA and, without in any way limiting the effect of the amendment set forth in Section 1 of this Amendment, shall be subject to all the terms and conditions of the Eklutna PPA.

3. Counterparts. This Amendment may be executed in counterparts, each of which shall be deemed an original, but all of which together shall be deemed to be one and the same agreement. A signed copy of this Amendment delivered by facsimile, e-mail or other means of electronic transmission shall be deemed to have the same legal effect as delivery of an original signed copy of this Amendment.

[Remainder of the page intentionally left blank]

IN WITNESS WHEREOF, the Parties have caused this Amendment to be executed as of the date first written above by their respective officers and officials thereunto duly authorized.

AMENDMENT NO. 2 TO EKLUTNA POWER PURCHASE AGREEMENT

This AMENDMENT NO. 2 TO EKLUTNA POWER PURCHASE AGREEMENT, dated as of the 28th day of October, 2019 (this "**Eklutna PPA Amendment**"), is made and entered into by and between (i) **CHUGACH ELECTRIC ASSOCIATION, INC.**, an Alaska not-for-profit electric cooperative corporation ("**Purchaser**"), and (ii) the **MUNICIPALITY OF ANCHORAGE,** a political subdivision organized under the laws of the State of Alaska ("**Seller**"). Purchaser and Seller are hereinafter referred to individually as a "**Party**" and collectively as the "**Parties**".

RECITALS

WHEREAS, Purchaser and Seller entered into that certain Eklutna Power Purchase Agreement dated as of December 28, 2018 (the "**Eklutna PPA**");

WHEREAS, Section 15.7 of the Eklutna PPA provides that Purchaser and Seller may amend the Eklutna PPA upon the execution and delivery of a written agreement executed by each Party; and

NOW, THEREFORE, pursuant to Section 15.7 of the Eklutna PPA and in consideration for the premises and agreements hereinafter set forth, the Parties, intending to be legally bound, agree as follows:

1. Revision to Section 10.1. Section 10.1 of the Eklutna PPA is deleted in its entirety and replaced with the following:

> **Section 10.1 Dispute Resolution.** In the event of any dispute arising under this PPA (a "**Dispute**"), within ten (10) Business Days following Notice by either Party, (i) each Party shall appoint a representative, and (ii) the representatives shall meet, negotiate and attempt in good faith to resolve the Dispute quickly, informally and inexpensively. In the event the representatives cannot resolve the Dispute within thirty (30) Days after the first meeting, either Party may request that consideration and resolution of the Dispute be transferred to a designated representative of each Party's senior management. Within ten (10) Days following such a request, each Party shall submit a written summary of the Dispute describing the issues and claims to a senior officer of each Party designated to address the Dispute. Within ten (10) Business Days after receipt of each Party's Dispute summaries, the senior management representatives for both Parties shall negotiate in good faith to resolve the Dispute. If such senior management representatives are unable to resolve the Dispute within thirty (30) Days thereafter, either Party may pursue any available legal remedies.

2. Effective Date and Incorporation of Terms of Eklutna PPA. This Amendment shall be deemed effective as of the Effective Date as defined in Exhibit A to the Eklutna PPA and, without in any way limiting the effect of the amendment set forth in Section 1 of this Amendment, shall be subject to all the terms and conditions of the Eklutna PPA.

3. Counterparts. This Amendment may be executed in counterparts, each of which shall be deemed an original, but all of which together shall be deemed to be one and the same agreement. A signed copy of this Amendment delivered by facsimile, e-mail or other means of electronic transmission shall be deemed to have the same legal effect as delivery of an original signed copy of this Amendment.

AMENDMENT NO. 3 TO EKLUTNA POWER PURCHASE AGREEMENT

This AMENDMENT NO. 3 TO EKLUTNA POWER PURCHASE AGREEMENT, dated as of the 9th day of July, 2020 (this "**Eklutna PPA Amendment**"), is made and entered into by and between (i) **CHUGACH ELECTRIC ASSOCIATION, INC.**, an Alaska not-for-profit electric cooperative corporation ("**Purchaser**"), and (ii) the **MUNICIPALITY OF ANCHORAGE,** a political subdivision organized under the laws of the State of Alaska ("**Seller**"). Purchaser and Seller are hereinafter referred to individually as a "**Party**" and collectively as the "**Parties**".

RECITALS

WHEREAS, Purchaser and Seller entered into that certain Eklutna Power Purchase Agreement dated as of December 28, 2018 (the "**Eklutna PPA**");

WHEREAS, the Regulatory Commission of Alaska on May 28, 2020 issued Order No. U-18-102(44)/ U-19-020(39)/ U-19-021(39), *Order Accepting Stipulation in Part, Subject to Conditions; Transferring and Issuing Certificates of Public Convenience and Necessity, Subject to Conditions; Addressing Beluga River Unit Management, Gas Transfer Prices, and Third Party Sales Gas Pricing; and Requiring Filings* (the "**Final Order**");

WHEREAS, Section 15.7 of the Eklutna PPA provides that Purchaser and Seller may amend the Eklutna PPA upon the execution and delivery of a written agreement executed by each Party; and

NOW, THEREFORE, pursuant to Section 15.7 of the Eklutna PPA, Section III.E of the Stipulation (as defined in Exhibit A as amended pursuant to this Eklutna PPA Amendment), and the Final Order, and in consideration for the premises and agreements in the Stipulation and as hereinafter set forth, the Parties, intending to be legally bound, agree as follows:

1. Revision to Section 8.2. Section 8.2 of the Eklutna PPA is hereby amended by the addition of a new subsection (C) reading in its entirety as follows:

> (C) If (i) Seller has not, on or before the fifth anniversary of the Closing (as defined in the Asset Purchase Agreement) (the "**Expenditure Deadline**"), received an appropriation of funds from the Assembly of Seller in the amount of $15 million for purposes of the planning, permitting, design, and construction (including any required demolition of existing structures) of the Alaska Center for Treatment, all as provided in Section III.E of the Stipulation (such purposes, the "**Required Use**"), or such appropriation ceases, at any time prior to the expenditure by Seller of the full amount of such $15 million for the Required Use, to remain in full force and effect, (ii) such funds have not, on or before the Expenditure Deadline, been deposited into a dedicated fund for use only for the Required Use, or any such funds (other than any of such funds that have been expended for the Required Use) cease, at any time prior to the expenditure by Seller of the full amount of such $15 million for the Required Use,

to remain in such dedicated fund, (iii) one or more contracts requiring payment by Seller of the entire unexpended amount of such funds for the Required Use has not, on or before the Expenditure Deadline, been awarded by Seller pursuant to Title 7 of Anchorage Municipal Code, or (iv) Seller has not, on or before the Expenditure Deadline, become, or Seller ceases, at any time prior to the expenditure by Seller of the full amount of such $15 million for the Required Use, to remain, a party to such contract or contracts, then Purchaser shall offset against any amounts due to Seller under this PPA any portion of such $15 million amount that has not been spent by Seller for the Required Use.

2. Revision to Section 15.3. Section 15.3 of the Eklutna PPA is hereby deleted in its entirety and replaced as follows:

Section 15.3. Compliance with Laws. Each Party shall at all times comply with all Applicable Laws; *provided, however*, that any non-compliance with Applicable Law that, individually or in the aggregate, could not reasonably be expected to have a material adverse effect on the business or financial condition of the Party or its ability to fulfill its commitments hereunder shall not be deemed to be a breach of this PPA. Each Party shall promptly disclose to the other any material violation of any Applicable Laws arising out of or in connection with the Facility and this PPA.

3. Revision to Section 15.11. Section 15.11 of the Eklutna PPA is hereby amended to delete in its entirety the sentence that was added at the end thereof by Section 1 of Amendment No. 1 to the Eklutna PPA, dated as of September 27, 2019.

4. Amendment of Exhibit A. Exhibit A to the Eklutna PPA is hereby amended to add the following new defined terms:

"**Expenditure Deadline**" has the meaning set forth in Section 8.2(C).

"**Stipulation**" means the Stipulation Resolving All Issues entered into by and among Seller, Purchaser, Providence Health & Services, the Federal Executive Agencies, MEA, Homer Electric Association, Inc., Alaska Energy Authority, and ENSTAR Natural Gas Company, a Division of SEMCO Energy, Inc. dated October 25, 2019, and accepted and approved, subject to conditions, by the RCA on May 28, 2020 in the Final Order.

"**Required Use**" has the meaning set forth in Section 8.2(C).

5. Effective Date and Incorporation of Terms of Eklutna PPA. This Amendment shall be deemed effective as of the Effective Date as defined in Exhibit A to the Eklutna PPA and, without in any way limiting the effect of the amendment set forth in Section 1 of this Amendment, shall be subject to all the terms and conditions of the Eklutna PPA.

6. Counterparts. This Amendment may be executed in counterparts, each of which shall be deemed an original, but all of which together shall be deemed to be one and the same agreement. A signed copy of this Amendment delivered by facsimile, e-mail or other means of

electronic transmission shall be deemed to have the same legal effect as delivery of an original signed copy of this Amendment.

[*Remainder of the page intentionally left blank*]

IN WITNESS WHEREOF, the Parties have caused this Amendment to be executed as of the date first written above by their respective officers and officials thereunto duly authorized.

AMENDMENT NO. 4 TO EKLUTNA POWER PURCHASE AGREEMENT

This AMENDMENT NO. 4 TO EKLUTNA POWER PURCHASE AGREEMENT, dated as of the 23rd day of September, 2020 (this "**Amendment**"), is made and entered into by and between (i) **CHUGACH ELECTRIC ASSOCIATION, INC.**, an Alaska not-for-profit electric cooperative corporation ("**Purchaser**"), and (ii) the **MUNICIPALITY OF ANCHORAGE,** a political subdivision organized under the laws of the State of Alaska ("**Seller**"). Purchaser and Seller are hereinafter referred to individually as a "**Party**" and collectively as the "**Parties.**"

RECITALS

WHEREAS, Purchaser and Seller entered into that certain Eklutna Power Purchase Agreement dated as of December 28, 2018 (the "**Eklutna PPA**");

WHEREAS, Section 15.7 of the Eklutna PPA provides that Purchaser and Seller may amend the Eklutna PPA upon the execution and delivery of a written agreement executed by each Party;

WHEREAS, the last sentence of the first paragraph of Section 14.3 of the Eklutna PPA provides as follows: "If Purchaser exercises its Purchase Option, Seller and Purchaser shall enter into a purchase and sale agreement for the Chugach Portion in a form to be mutually agreed by the Parties prior to the Closing under the Asset Purchase Agreement"; and

WHEREAS, Purchaser and Seller wish to replace the last sentence of the first paragraph of Section 14.3 of the Eklutna PPA with a new last sentence as set forth in this Amendment.

NOW, THEREFORE, pursuant to Section 15.7 of the Eklutna PPA, and in consideration for the premises and agreements as hereinafter set forth, the Parties, intending to be legally bound, agree as follows:

1. Revision to Section 14.3. The last sentence of the first paragraph of Section 14.3 of the Eklutna PPA is hereby deleted and replaced with the following sentence:

> If Purchaser exercises its Purchase Option, Seller and Purchaser shall enter into a purchase and sale agreement for the Chugach Portion in a form to be mutually agreed by the Parties within one (1) year after the Closing under the Asset Purchase Agreement.

2. Effective Date and Incorporation of Terms of Eklutna PPA. This Amendment shall be deemed effective as of the Effective Date as defined in Exhibit A to the Eklutna PPA and, without in any way limiting the effect of the amendment set forth in Section 1 of this Amendment, shall be subject to all the terms and conditions of the Eklutna PPA.

3. Counterparts. This Amendment may be executed in counterparts, each of which shall be deemed an original, but all of which together shall be deemed to be one and the same agreement. A signed copy of this Amendment delivered by facsimile, e-mail or other means of electronic transmission shall be deemed to have the same legal effect as delivery of an original signed copy of this Amendment.

In Order No. U-18-102(44)/U-19-020(39)/U-19-021(39) ("Order 39"), the Regulatory Commission of Alaska ("RCA") approved, subject to conditions, the sale to Chugach Electric Association, Inc. ("Chugach") of most of the electric utility assets of the Municipality of Anchorage d/b/a Municipal Light and Power ("ML&P") ("Transaction"). Order 39 also approved the MOA-Chugach Eklutna Power Purchase Agreement ("Chugach PPA"), subject to conditions, effective on the date of closing of the Transaction. In Order 39, the RCA granted to the MOA, effective upon the date of closing of the Transaction, a certificate of public convenience and necessity authorizing ownership and provision of generation electric utility service to the public for compensation from its share of Eklutna, subject to conditions, including that before the effective date of the Chugach PPA or the MOA-Matanuska Electric Association, Inc. ("MEA") Power Purchase Agreement ("MEA PPA"), the MOA has filed documentation that it has surrendered its voting rights on the Eklutna Operating Committee ("EOC").[1] In Order 39, the RCA required that the MOA's surrender of its EOC voting rights "cannot be lifted until such time as [the MOA] has shown to our satisfaction that [the MOA] has acquired the expertise required to fully participate as voting member of the EOC."[2]

Enclosed as Exhibit 1 is a Surrender of Eklutna Operating Committee Voting Rights document, signed by ML&P, Chugach, and MEA. The Surrender will remain in effect until the MOA shows to the RCA's satisfaction that the MOA has acquired the expertise required to participate as a voting member of the EOC (or upon expiration or termination of the terms of the Chugach PPA and the MEA PPA).

Exhibit 1

October 27, 2020

Surrender of Eklutna Operating Committee (EOC) Voting Rights

In accordance with the requirements of order U-18-102(44), the Municipality of Anchorage, dba Municipal Light & Power(ML&P), hereby surrenders its voting rights as an EOC member and under the Fish and Wildlife Agreement effective as of the Closing of the Asset Purchase Agreement between ML&P and Chugach Electric Association (Chugach). This surrender of voting rights shall remain in effect until ML&P's successor complies with the RCA requirements pertaining to qualifications for ML&P's representation on the EOC.

Until ML&P's successor complies with the qualification terms of RCA order U-18-102(44), all EOC decisions will be by unanimous vote of Chugach and Matanuska Electric Association, Inc. (MEA). Eklutna hydro operations, dispatch and maintenance will continue to follow past practices and policies unless changes are approved through the EOC process.

STATE OF ALASKA

BEFORE THE REGULATORY COMMISSION OF ALASKA

Before Commissioners: John M. Espindola, Chairman
Robert M. Pickett
John C. Springsteen

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

PREFILED RESPONSIVE TESTIMONY OF TONY R. ZELLERS

I. Introduction

1. Q. Please state your name, present position, and business address.

A. My name is Tony Zellers. I am the Chief Operating Officer of Matanuska Electric Association, Inc. (MEA). My business address is 163 East Industrial Way, Palmer, Alaska 99645.

2. Q. What is the purpose of your testimony?

A. The purpose of my testimony is to provide the Commission with information related to: (1) the Eklutna Hydroelectric Project (Eklutna Project), the Eklutna Operating Committee (EOC), its function and processes, and how its members use prudent utility practices to operate and maintain the Eklutna Project; (2) the importance of the Eklutna Project to providing lowest cost energy and capacity for the benefit of its owners, ratepayers, taxpayers, and maintaining system reliability in the Railbelt interconnected electric generation and transmission system (Railbelt); and (3) how the three owners of the Eklutna Project (Project

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

Owners) have implemented the 1991 Agreement[1] leading to the Final Fish and Wildlife Program approved by the Governor on October 2, 2024.

3. Q. Have you previously submitted testimony before the Commission?

A. Yes. I provided prefiled direct and prefiled responsive testimony for MEA's rate case in 2017 (TA485-18).

4. Q. Please describe how your testimony is organized.

A. First, I will describe my qualifications and experience operating and maintaining the Eklutna and other hydroelectric projects. Second, I will offer my perspectives on the importance of the Eklutna Project to the operations and reliability of the Railbelt generation and transmission system. Third, I will describe the functions and responsibilities of the EOC and its role operating and maintaining the Eklutna Project in a manner consistent with prudent utility practice. Fourth, I will give an overview of the 1991 Agreement and describe how the Project Owners have implemented it both before and after the MOA's surrender of its voting rights. Finally, I describe potential conflicts of interests with AWWU that might arise in implementing the Final Fish and Wildlife Program going forward.

II. <u>Qualifications</u>

5. Q. Please summarize your professional qualifications.

A. I have been dispatching, managing and operating electric generation assets in the Railbelt for 19 years. I started my career with MEA as a dispatcher in 2005 where I was responsible for dispatching assets to meet distribution utility reliability standards and working with other utility dispatchers to maintain system reliability throughout the Railbelt. I then became the Director of Operations for MEA for two

[1] Agreement Between the Municipality of Anchorage d/b/a Anchorage Municipal Light and Power, Chugach Electric Association, Inc., Matanuska Electric Association, Inc., U.S. Fish and Wildlife Service, National Marine Fisheries Service, Alaska Energy Authority, and the State of Alaska Relative to the Eklutna and Snettisham Hydroelectric Projects (Aug. 7, 1991) (1991 Agreement).

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100

PHONE 206.883.2500

years and then spent four years as the project manager for the construction of Eklutna Generation Station (EGS) power project before becoming the Senior Director of Power Supply in 2015. In that role for eight years, I managed a team that operated and maintained MEA's entire power supply portfolio, including its hydroelectric generation assets and related power purchase arrangements. In November 2023, I became the Chief Operating Officer for MEA. In that role, I am responsible for all aspects of utility operations, including generation, transmission, and distribution systems and activities, compliance, and short-term and long-term planning. My resume is attached as **Exhibit TRZ-01**.

6. Q. What is your experience with operating and maintaining generation assets and, in particular, hydroelectric projects?

A. During my professional career, I have been directly involved with the management teams that operate and maintain the following electric generating assets in Alaska's Railbelt (from oldest to newest):

Project	Type	Capacity
Eklutna Hydro	Hydro	44 MW
Bradley Lake	Hydro	126 MW
Eklutna Generation Station	Thermal	171 MW
Battle Creek Diversion	Hydro	added 10% more energy to Bradley Lake

Among these projects, I have extensive experience with the Eklutna and Bradley Lake Hydroelectric Projects. During most of my career at MEA, I have been involved in and responsible for the management of the Eklutna Project, including oversight of turbine and generator overhauls, controls updates, equipment updates, dam safety, water rights, and other work all to maintain the operational reliability of the project. The Eklutna Project is located in MEA service territory and interconnects with MEA's transmission and distribution system, so I have

WILSON SONSINI GOODRICH & ROSATI, P.C.

PHONE 206.883.2500

significant experience managing the systems interconnecting the Eklutna Project with the MEA system electrically. The sale of ML&P assets to Chugach resulted in the Eklutna Project transmission assets being separated from the Eklutna Project and sold to MEA and Chugach. The transmission line from the Eklutna Project to Chugach plant 2 is now owned 50/50 between Chugach and MEA. The line from the Eklutna Project to Palmer Substation is now wholly-owned by MEA.

With respect to the Bradley Lake Project, I have been MEA's alternate on the Bradley Lake Management Committee (BPMC) since October 2017. MEA has rights to 13.8% of Bradley Lake's water. The BPMC is the body that oversees the management of the project. As MEA's representative on the BPMC, I am responsible for representing MEA's interests and ensuring the project is operated and maintained in a manner consistent with prudent utility practices.

7. Q. Please describe your role at MEA with respect to the Eklutna Project.

A. In 2009-2010, I was MEA's primary representative on the EOC – the technical committee that operates and maintains the Eklutna Project; between 2016-2022, I served as the primary representative on the EOC; and since 2022, I have served as MEA's alternate. Josh Crowell (Senior Manager of Power Supply) is now MEA's primary representative on the EOC. Josh Crowell reports to me, so I am aware of everything that goes on at the EOC even when I am not at a meeting.

In addition, over the past five years, I have served as MEA's representative with respect to the Project Owners' implementation of the 1991 Agreement as discussed in Section IV below.

III. <u>The Eklutna Project and the Railbelt</u>

8. Q. Please describe your knowledge of the Railbelt generation and transmission system.

A. After having served in the roles described above, I am comfortable that I have a solid command of how the Railbelt operates generally (generation,

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

transmission, and distribution) and a specific expertise on how the Eklutna Project operates to provide a vital and integrated source of energy and capacity to the Railbelt, its utilities, and their customers, as well as the how the Eklutna Project operates within the Railbelt transmission grid.

9. Q. Why is the Eklutna Project important to MEA and the Railbelt?

A. The Eklutna Project produces nearly 6 percent of the Project Owners' combined total generation portfolio and about 44 percent of MEA's renewable energy, and is also consistently the lowest-cost resource for power in MEA's generation portfolio.

Additionally, the Eklutna Project is critical to grid reliability and has been particularly essential in emergency situations as demonstrated in early 2024 during an extended period of cold weather in Anchorage. When ENSTAR Natural Gas Company ("ENSTAR") experienced gas deliverability problems, Chugach and MEA voluntarily maximized their usage of the Eklutna Project (and other hydro resources) to maintain system reliability. The Eklutna Project provided 8 percent and 9 percent of the respective energy needs to meet MEA's load and Chugach's load during the cold snap and created significant natural gas savings, decreased emissions, and allowed ENSTAR to avoid issuing a yellow alert designation for natural gas delivery to its customers, which would have included, in part, requiring MEA and Chugach to shift to available diesel generation to provide additional gas to ENSTAR, and use fuel more than twice as expensive as natural gas that would have increased bills for utility customers.

The Eklutna Project also provides important inertia (spinning mass) for the benefit of the entire Railbelt system. As the Railbelt's generation assets have moved from heavier turbines to lighter aeroderivative generating units, the Railbelt system has become "lighter" meaning there is less inertia on the system. Inertia is needed to keep a system stable and helps keep the frequency within an acceptable

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

range until the system constantly rebalances load and generation resources. Inverter based generation like solar and wind generation does not provide inertia to the system. Eklutna hydroelectric turbines provide that important inertia for the benefit of its utility owners as well as Railbelt system reliability.

10. Q. If the Eklutna Project were to stop generating power or significantly reduce power generation, what impact would that have on MEA and its ratepayers?

A. All lost generation will need to be replaced with more expensive power (energy and capacity), the costs of which will be borne by ratepayers. The most likely source of such replacement energy is thermal generation that, besides being more expensive, would also increase carbon emissions. MEA would likely need to add an additional natural gas/diesel thermal generation unit at the Eklutna Generation Station. The amount of water released from the Eklutna Project, and the timing of such releases also impacts the amount of lost generation and its costs; proposals that require shutdowns of the Eklutna Project create exorbitant costs and would even cause MEA to violate its power capacity reserve reliability standard requirements if not replaced with costly new fossil generation.

11. Q. Please explain why the Eklutna Project is important to MEA's power capacity reserve reliability standard requirements?

A. Like all utilities in the Railbelt, MEA must maintain operating reserves of 130 percent. Currently, Railbelt utilities maintain this percent of firm power of their rolling three year average of the highest hourly peak in a year. This requirement ensures a utility has the firm capacity to meet load requirements even when a generating unit or plant is out of service for scheduled maintenance or in a forced outage situation. MEA relies, in part, on its share of the Eklutna Project to meet this reserve requirement.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

12. Q. MEA purchases the output of AWWU's Eklutna Water Station. Is it a significant source of energy or capacity to MEA or the Railbelt?

A. No. AWWU's Eklutna Water Station is an automated generation station that provides about 750kW of energy recovery generation as a byproduct of AWWU's use water from the Eklutna Project for Anchorage's water supply. AWWU's energy recovery generation system is not actively managed by any utility or dispatchable, so while it provides a modest amount of renewable energy, I would not characterize it as an important generating asset to MEA or the Railbelt when compared to the utility generating assets described above, like the Eklutna Project. AWWU's non-firm generator is small and not dispatchable; from an operational perspective, its output is more like wind or solar generation where we use the generation when it is delivered, but we cannot rely upon it to meet load obligations.

IV. The EOC & Prudent Utility Practices

13. Q. In his Prefiled Responsive Testimony in this proceeding, Mr. Ori describes the history of the ownership and management of the Eklutna Project and the role of the EOC; do you have anything to add?

A. I would only add that it is important for the EOC to follow prudent utility practices to maintain and operate the Eklutna Project in such a way as to maximize its benefit to all members.

14. Q. How have EOC-decision making processes evolved over time?

A. I would agree with Mr. Ori's assessment in his Prefiled Responsive Testimony in this proceeding that many of the more contentious issues related to operating and maintaining the Eklutna Project have declined since the sale of ML&P and the surrender of the MOA's voting rights on the EOC and under the 1991 Agreement. Prior to the sale, voting on the EOC was by double majority. After the surrender, the voting changed to a system in which only Chugach and MEA had to agree before an item would be moved forward. This arrangement

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

has lessened contentious issues at the EOC because consensus must be achieved on every decision rather than out-voting someone who disagrees. Additionally, Chugach and MEA are now operating the Power Pool together and the Eklutna Project is a generating asset that is scheduled through the Power Pool. With the divestiture of the transmission assets from the Eklutna Project as described above, the EOC now focuses on plant maintenance and operations to ensure that the plant provides value to our members and Railbelt.

At this point, the EOC is largely focused on plant related issues, such as dam safety, water tracking, and maintenance and controls that require knowledge and expertise of operating aging hydroelectric projects. As described below, the EOC will now have to implement the Final Fish and Wildlife Program along with tracking and ensuring its compliance.

15. Q. In your experience, what is required to be an effective member of the EOC?

A. An effective member of the EOC should have deep knowledge of hydroelectric facilities, their operations and maintenance, and applicable prudent utility practices, as well as a broad understanding of the Railbelt, its systems, reliability standards, how utilities interact with each other to maintain the Railbelt system, and how the Eklutna Project plays a key role in the Railbelt.

16. Q. Mr. Ori describes the 2020 transaction in which Chugach acquired most of the ML&P's assets, Chugach entered into a 35 year PPA, and the MOA surrendered its voting rights on the EOC; how did this transaction affect MEA?

A. The Chugach-MOA transaction regarding the ML&P Assets created an opportunity for MEA to purchase a greater portion of the output of the Eklutna Project from the MOA. This resulting agreement between the MOA and MEA is referred to as the "MOA – MEA PPA", attached as **Exhibit TRZ-02**. As a result

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

of the Chugach-MOA transaction and PPAs, MEA takes 35.71% of the power output of the Eklutna Project and Chugach takes 64.29%.

17. Q. Do the ownership interests align with the cost responsibilities?

A. No. The Chugach and MEA PPAs with the MOA differ significantly with respect to which offtaker bears the MOA's costs of operating and maintaining the Eklutna Project and paying the costs associated with implementing the 1991 Agreement. In short, Chugach bears the costs of the Eklutna Project associated with the generation it buys from the MOA, while the MOA bears the costs of the costs associated with the generation of the power it sells to MEA. Before the acquisition transaction, the costs were allocated among the Project Owners in a manner consistent with ownership interests: MOA – 53.33%; Chugach – 30%; MEA 16.67%. After the transaction (and effectiveness of the PPAs) this became: Chugach – 64.29%; MOA – 19.04%; MEA 16.67%.

18. Q. **How is "prudent utility practice" defined in the MOA-MEA PPA?**

A. The definition is the same as in the MOA – Chugach PPA:

> "**Prudent Utility Practice**" means any applicable practices, methods, and acts engaged in or approved by a significant portion of (a) as to Seller, the hydroelectric generating industry in the United States of America, or (b) as to Purchaser, the electric utility industry in the United States of America, during the relevant time period, or the practices, methods and acts which, in the exercise of reasonable judgment by a prudent hydroelectric generator operator (or prudent utility operator, if applicable to Purchaser) in light of the facts known or which should reasonably have been known at the time the decision was made, could have been expected to accomplish the desired result at the lowest reasonable cost consistent with good business practices, reliability, safety, expedition and the requirements of any governing authority having jurisdiction. Without limitation of the foregoing, "Prudent Utility Practice" shall include the applicable operating policies, standards, criteria, or guidelines of any applicable governing authority and any manufacturer of a component of the Project. "Prudent Utility Practice" is not intended to be limited to the optimum practice, method or act to the exclusion of all others, but rather to the acceptable practices, methods or acts generally accepted (a) as to Seller, by the hydroelectric energy electric generating industry in the United States of America or (b) as to Purchaser, by the electric utility industry in the United States of America.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

19. Q. As the Chief Operating Officer of the second largest utility in Alaska, would you like to add any further understanding of "prudent utility practice" to the definition and explanation Mr. Ori offered?

A. What often gets lost in the concept of "prudent utility practice" is the difference between reasonable costs and lowest cost. At times, this may mean deferring or accelerating maintenance to a time when a unit may be taken down to lessen the impact of the outage on not just the generating plant but the overall Railbelt system. I am constantly balancing decisions or actions that may affect cost, reliability or safety. As the MOA-MEA PPA states, we make decisions that are "expected to accomplish the desired result at the lowest reasonable cost consistent with good business practices, reliability, safety, expedition and the requirements of any governing authority having jurisdiction."

V. <u>The Surrender and Implementation of the 1991 Agreement</u>

20. Q. What were the specific terms and requirements of MOA's surrender of voting rights?

A. During the approval process regarding the Chugach-MOA transaction and the two PPAs, the Commission recognized that the MOA would not, after the transaction, have the staff or expertise with regard to prudent utility practices and the Railbelt electric generation system within the newly created Anchorage hydropower utility necessary to effectively participate in the EOC, writing:

> . . . we can only find that MHP is managerially and technically fit to maintain an ownership interest in the Eklutna Project subject to the condition that… ML&P surrenders its vote on the EOC… **so that Chugach and MEA can jointly manage and operate the Eklutna Project, including negotiating compliance with the Fish and Wildlife Agreement**, without MHP having a vote on operation or management decisions.[2]

[2] Commission Order U-18-102(44)/U-19-020(39)/U-19-021(39), Order Accepting Stipulation in Part, Subject to Conditions; Transferring and Issuing Certificates of Public Convenience and Necessity, Subject to Conditions; Addressing Beluga River Unit Management, Gas Transfer Prices, and Third-Party Sales Gas Pricing; and Requiring Filings, dated May 28, 2020 (Order 39), at 67 (emphasis added).

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

Accordingly, when the Commission issued Order 39 approving the transaction, it conditioned its approval upon the MOA's surrender of its voting rights so that Chugach and MEA could manage the Eklutna Project and the 1991 Agreement process, during the term of the Chugach and MOA PPAs and until such time as MOA could demonstrate the necessary technical and managerial fitness. The MOA complied and executed a binding surrender of voting rights with Chugach and MEA, and filed it on October 30, 2020. See **EAO–03** attached to Mr. Ori's prefiled responsive testimony. After the MOA willingly surrendered these voting rights in 2020, the MOA had no voting rights with respect to operating or maintaining the Eklutna Project or implementing the 1991 Agreement.

21. Q. Please give an overview of the implementation of the 1991 Agreement?

A. As the Commission knows, the Project Owners purchased the Eklutna Project from the federal government in 1997. In connection with that transaction, the Project Owners entered into the 1991 Agreement with two federal agencies and the State of Alaska committing to, every 35 years, study the impacts of the Project on fish and wildlife and propose – for Governor approval – a program to protect, mitigate damages to, and enhance fish and wildlife affected by the Eklutna Project. The 1991 Agreement is attached as **Exhibit TRZ-03**.

The Project Owners began the first process to implement the 1991 Agreement in 2019; over the last five years, the Project Owners have spent approximately $8 million, countless staff resources, and significant management time conducting a process of consultation with state and federal resource agencies, rigorous scientific and engineering studies, stakeholder engagement, and careful analysis of dozens of fish and wildlife protection, mitigation, and enhancement proposals. These efforts culminated in the Project Owners' release of a Draft Fish and Wildlife Program in October 2023. After subsequent public comment, meetings to reconcile differences, and negotiations with the other parties to the

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

1991 Agreement and NVE, the Project Owners modified the program to account for such comments and negotiations, while still conforming to the 1991 Agreement requirements. The Project Owners submitted the Proposed Final Fish and Wildlife Program to the Governor on April 25, 2024. For an overview of the process, see sections 3 and 4 of the Supporting Information Document, submitted to the Governor on April 25, 2024, attached hereto as **Exhibit TRZ-04**.

22. Q. During the period following the Surrender, the MOA had no EOC voting rights. How did this affect the implementation of the 1991 Agreement?

A. As a starting point, it is important to recognize that the EOC did not manage the process implementing the 1991 Agreement. Rather, in 2019 the Owners created a Project Owners group of appointed representatives of each utility who, along with an outside consulting team with expertise in hydro relicensing, managed and led the five-year process for the Project Owners. The EOC's only responsibility was tracking and billing of the budgets for the 1991 Agreement process.

When the MOA surrendered its voting rights on the EOC and under the Fish and Wildlife Agreement in October 2020, the Project Owners group were already fully engaged in the process implementing the 1991 Agreement. At the direction of Chugach's and MEA's Chief Executive Officers and MOA's Municipal Manager, the three Project Owners continued to conduct themselves as equals through the Project Owners group and made all decisions through unanimous consent. I served as MEA's primary representative and participated in nearly all of the Project Owners group meetings and discussions. No formal vote among the Project Owners was ever needed or taken with respect to the process, the Draft Program, or the Proposed Final Program submitted to the Governor in April 2024. All three Project Owners maintained complete agreement on the Proposed Final Program process, development, and submission. The MOA's support of the

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

process and the Proposed Final Program is clearly reflected in Mayor Dave Bronson's letter to the Governor on April 26, 2024.[3]

The Governor approved our Proposed Final Program as the Final Fish and Wildlife Program last Wednesday, on October 2, 2024, attached hereto as **Exhibit TRZ-05**. MEA and Chugach will faithfully implement the Final Program in its entirety in a manner consistent with prudent utility practices, but the Commission should know that Final Program included an additional provision not included in the Proposed Final Program requested by the MOA in contravention of Order 39.

23. Q. What role will the EOC play with respect to the Final Program approved by the Governor on October 2, 2024?

A. Mr. Ori is correct in that the EOC did not play a significant role in the development of the fish and wildlife program required under the 1991 Agreement. To date, the EOC's role was limited to providing certain technical information and support related to the operations, capabilities, and limitations of the Eklutna Project and maintained budgets. Going forward, however, as Mr. Ori explains, the EOC will be charged with implementing the Final Fish and Wildlife Program in a manner consistent with its requirements, applicable law, and prudent utility practice.

24. Q. Did the MOA act in a manner consistent with the Surrender?

A. The Municipal Administration actively participated in the Project Owners group implementing the 1991 Agreement from 2019 through June 2024 in a manner consistent with the Surrender, but the Anchorage Assembly did not.

Despite the Surrender and in contravention to the RCA's explicit requirement in Order 39 that the MOA should not have "any ability to delay or change the Eklutna Project decisions made by Chugach or MEA" during such

[3] Letter from Dave Bronson, Mayor, Municipality of Anchorage to Mike Dunleavy, Governor of Alaska (Apr. 26, 2024).

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

Surrender period,[4] the Assembly took several actions attempting to change, delay and undermine the Proposed Final Program, including (1) adding language to the Anchorage Municipal Code stating that it is the MOA's policy to restore continuous water flows into the Eklutna River; (2) passing an ordinance asserting an Assembly approval requirement over the Draft Program; and (3) passing an ordinance calling upon the Governor to modify the process outlined in the 1991 Agreement and requiring the Project Owners to use two years of the three-year implementation period to identify an alternative pumped storage hydropower solution and to remove substantive aspects (the "limited reopeners") from the Proposed Final Program. The Assembly's proposal to study an alternative made it into the Final Program as a third reopener, which is a change to what Chugach and MEA proposed, but they were not successfully able to delay to the implementation of the Final Program.

25. Q. Did MEA and Chugach follow the Assembly's directives?

A. While the MOA administration participated in the Project Owners group at every stage of the process, we also met with and engaged with the Anchorage Assembly more than ten times through the process. When the MOA administration and Assembly's directions differed, we decided to continue proceeding through the entire process through the consensus of Chugach, MEA, and the MOA administration. We recognized that the Assembly had no authority over Chugach and MEA with respect to implementation of the 1991 Agreement or no right to seek to impose additional requirements into the Proposed Final Program pursuant to the RCA's Order 39 and the Surrender. Where municipal ordinances conflict with the RCA's jurisdiction and authority over public utilities operating within that municipality, the Commission's regulatory authority set forth in Order 39 takes

[4] Order 39 at 67.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

precedence.[5] So we understood that the Assembly actions attempting to modify the Proposed Final Program are superseded by RCA's authority in Order 39 and the Surrender.

26. Q. Why are these Assembly's actions during the Surrender period relevant now that the Governor has issued the Final Program?

A. The Assembly has sought to influence and override the decisions of MEA and Chugach during the time during which the MOA had no voting rights on the EOC and with respect to the 1991 Agreement. Specifically, the Assembly sought to, and was ultimately partially successful in imposing, its views on the fish and wildlife program under the 1991 Agreement, overriding the proposed program designed by utilities that know prudent utility practices and understand the value of the Eklutna Project to the Railbelt. Should the MOA regain its voting rights, we expect that the Assembly will attempt to undo, redo or otherwise block the Project Owners' implementation of the Final Fish and Wildlife Program approved by the Governor on October 2, 2024 in pursuit of its own policy goals. We do not trust how the MOA might act if it regains majority voting rights in matters related to the Eklutna Project, the 1991 Agreement, and implementation of the Final Fish and Wildlife Program.

We read the Commission's surrender requirements in Order 39 as a fundamental requirement that the MOA should only regain its voting rights with respect to the EOC, implementation of the 1991 Agreement, and operations and maintenance of the Eklutna Project when and only when the MOA demonstrates its representatives will act in a manner consistent with prudent utility practices and with due respect for how the Eklutna Project plays a key role in the generation,

[5] AS 42.05.641 ("[i]n the event of a conflict between a … regulation of the commission and a … regulation of such a local governmental entity, the … regulation of the commission shall prevail.").

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

transmission, and overall reliability of the Railbelt. We have no confidence that the Assembly respects that the Commission's requirements on a certificated utility cannot be overridden by the policy desires of a political body that does not have the requisite expertise that the Commission specifically requires. The Assembly's dictates may ultimately lead to the MOA representative not acting in a manner consistent with prudent utility practice.

27. Q. What did the Governor include in Final Program at the request of the MOA?

A. Along with two other amendments to the Proposed Final Program that the Project Owners find acceptable, the Governor included a limited reopener requirement to study a pumped storage hydropower alternative that the Assembly submitted to the Governor after the comment period had expired and the deadline for Project Owners to reply had run. See Section III.7 of the Final Program (at p. 14 of **Exhibit TRZ-05**) and new Section 4.3 (at p. 29 of **Exhibit TRZ-05**), and Discussion of Amendments (at p. 31-32 of **Exhibit TRZ-05**).

Chugach and MEA did not receive any information regarding the MOA's pumped storage hydropower alternative directly from the MOA, but in the MOA's Brief Addressing the Governor's Questions about the Final Proposed Fish and Wildlife Program, MOA referenced a presentation by Mr. Corsentino that formed the basis of the proposal available on the Assembly's website: "Modified PSH Concept with Wind & Solar at Eklutna Lake with River Restoration and Fish Passage, Municipality of Anchorage, Anchorage Hydropower Utility, Presentation to the Joint Worksession of the Anchorage Assembly and the Native Village of Eklutna, Friday August 23, 2024" attached hereto as **Exhibit TRZ-06**.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

28. Q. Will MEA and Chugach implement the Final Program approved by the Governor?

A. Yes. MEA and Chugach will faithfully implement the Final Program in its entirety in a manner consistent with prudent utility practices, the 1991 Agreement, and state and federal law.

29. Q. What do you know of MOA's pumped storage hydro alternative that the parties to the 1991 Agreement and NVE must now study and potentially implement if various levels of approval are sought and gained?

A. Chugach and MEA know very little about the MOA's pumped storage hydro alternative, other than what is in the powerpoint (**Exhibit TRZ-06**) and what Mr. Corsentino's stated before the "Joint Worksession of the Anchorage Assembly and Native Village of Eklutna re Eklutna Hydropower Discussion", on August 23, 2024.[6] We sought discovery of the work papers, supporting documents, and cost estimates of the proposal, but the MOA refused to provide any such documents on the grounds that the information is irrelevant.

30. Q. Based on what you know, do you have concerns with the pumped storage hydropower alternative?

A. As a starting point, we think that the purpose of the 1991 Agreement is to mitigate the effects of the existing Eklutna Project, not build a new project. We are uncertain at this point, but we preliminarily expect that the pumped storage hydropower alternative would constitute a new hydroelectric project and would be subject to regulation by the Federal Energy Regulatory Commission.

Our engineering consultants, with extensive experience in both the Eklutna Project and pumped storage project development, have also evaluated the MOA's alternative to the extent possible, and determined that converting the Eklutna

[6] Meeting Transcript "In The Matter Of: Alaska Office of the Governor 1991 Fish and Wildlife Program" (September 9, 2024).

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

Project to a pumped storage project would present significant technical and logistical challenges, making the proposal infeasible from an engineering perspective and likely economically prohibitive.

For instance, the MOA's pumped storage hydropower alternative proposes to use Knik River water for additional supply into the Eklutna Project reservoir (TRZ-06 at 6). Yet, the Eklutna Project's tailrace is within the range of tidal influence so suspended sediment and brackish water from the Knik River could be pumped into Eklutna Lake. It would seem that such result would severely impact the public water supply and the Eklutna Lake and River ecosystem. While this would seemingly offend the 1991 Agreement's objective to protect municipal water supplies, I believe this would potentially breach the 1984 agreement regarding use of the Eklutna Project water rights for Anchorage water supply, which obligates the Project Owners:

> … take no action regarding Eklutna Lake which has the effect of reducing the quality or increasing the turbidity of the lake reducing the quality or increasing the turbidity of the lake water from those conditions which presently exist; nor will [Project Owners] take or authorize any other action with regard to Eklutna Lake which may have the effect of reducing its present suitability for use as a source of public water supply.[7]

[7] "Agreement for Public Water Supply and Energy Generation from Eklutna Lake, Alaska", dated February 17, 1984, as amended (provides terms and conditions relating to (i) AWWU facility interconnection to Eklutna Project; and (ii) the compensation by AWWU to the Owners for AWWU's diversion of water for public water supply that reduces the Project Water Rights otherwise available for use to generate energy at the Eklutna Project).

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

The Eklutna Project was built in the 1950s, and similar to other hydroelectric projects developed during that time, was never designed to be operated in a bidirectional manner, so the engineering and retrofitting costs will be substantial and the risks to the Project could be well beyond those that a prudent utility operator would take.

31. Q. In your view, is the MOA's pumped storage hydro alternative consistent with prudent utility practice?

A. While a pumped-storage hydroelectric project could be built and operated in a manner consistent with prudent utility practices, the MOA's pumped storage hydro alternative is nowhere near that standard now. More importantly, the MOA's pumped storage hydro alternative and the process by which it was advanced and included in the Governor's Final Program reflects the outcome of a policy goal rather than prudent utility practice and knowledge of the Eklutna Project and its fundamental part of the Railbelt. At the bottom line, the alternative set forth in **Exhibit TRZ-06** does not reflect an approach taken by utilities acting prudently.

VI. <u>Conflicts of Interest</u>

32. Q. When implementing the Final Program, will the Project Owners need to deal with AWWU?

A. Yes. The Project Owners and AWWU have reached final agreements concerning the use of AWWU's infrastructure as outlined in the Final Program, which are subject to Assembly approval. For a summary of those agreements, see Section 4.6 of the Supporting Information Document (**TRZ-04** at 54-57).

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

33. Q. What happens if the Assembly does not approve the agreements between the Project Owners and AWWU?

A. The Project Owners will consider other options to implement the Final Fish and Wildlife Program, such as an application to the Commission for the joint use and interconnection of AWWU's facilities pursuant to the policies outlined in AS 42.051.321(a).

34. Q. Do you think it would be reasonable for any AWWU executive to represent or make decisions relative to these matters for the Project Owners given that contractual or legal adversity with AWWU?

A. No. I don't think that it would be reasonable or possible for such an executive to take a position against his own organization in negotiating agreements or filing an application for joint use and interconnection rights before the Commission. I would think that the executive should recuse himself and let those not conflicted make the decisions. As we move forward implementing the 1991 Agreement and the Final Program, the Project Owners will need to have confidential discussions about various matters and strategy as it relates to AWWU. It makes no sense and is a direct conflict of interest to have the General Manager of AWWU in those discussions.

35. Q. Does this conclude your testimony?

A. Yes, thank you.

Dated: October 8, 2024

EKLUTNA
POWER PURCHASE AGREEMENT
BETWEEN
MUNICIPALITY OF ANCHORAGE
AND
MATANUSKA ELECTRIC ASSOCIATION, INC.

This Eklutna Power Purchase Agreement (this "**PPA**"), dated as of September 16, 2019 (the "**Effective Date**"), is made and entered into by and between the **MUNICIPALITY OF ANCHORAGE,** a political subdivision organized under the laws of the State of Alaska ("**Seller**"), and **MATANUSKA ELECTRIC ASSOCIATION, INC.**, an Alaska not-for-profit electric cooperative corporation ("**Purchaser**"). Seller and Purchaser are hereinafter referred to individually as a "**Party**" and collectively as the "**Parties**".

WHEREAS, as of the Effective Date, Seller is the owner of a 53.33% undivided interest in the Facility (as defined herein) (the "**Seller's Interest**") and Purchaser is the owner of a 16.67% undivided interest in the Facility (the "**Purchaser's Interest**"), and if all of the PPA Contingencies (as hereinafter defined) have been fulfilled or waived, the "**MEA Portion**" shall, effective as of the Commencement Date (as hereinafter defined) and for the remainder of the Term (as hereinafter defined), equal a 35.71% share of the Seller's Interest and a 19.05% interest in the Facility. Such percentage interest, when combined with Purchaser's existing ownership of 16.67% of the Facility, will give Purchaser rights to 35.71% of the Facility; and

WHEREAS, the Facility is subject to the terms of the Transition Plan (as defined herein), which provides for the sale of interests in the Facility by the Owners (as defined herein), and it is the intent of the Parties that the Transition Plan will continue to govern the rights and obligations of the Owners in such capacity; and

WHEREAS, Seller desires to sell and deliver and Purchaser desires to accept and receive and pay for certain Power (as defined herein) delivered from the Facility to the Delivery Point on the terms and conditions, including the price, set forth in this PPA; and

WHEREAS, in connection with the sale of such Power, Seller desires to grant to Purchaser an option to purchase the MEA Portion (as defined herein), subject to the terms of the Transition Plan; and

WHEREAS, Seller intends to operate the MEA Portion during the Term in a manner consistent with Prudent Utility Practice, the Transition Plan, and the directives and decisions of the Operating Committee (as hereinafter defined), acting as a reasonable owner would, and bearing all the risks and responsibilities of such ownership in accordance with the provisions of this Agreement.

NOW THEREFORE, in consideration of the mutual covenants herein contained, the sufficiency and adequacy of which are hereby acknowledged, the Parties agree to the following:

ARTICLE 1
RULES OF INTERPRETATION

Section 1.1 Interpretation.

(A) Capitalized terms listed in this PPA shall have the meanings set forth in Exhibit A or as otherwise defined in this PPA, whether in the singular or the plural or in the present or past tense. Words not otherwise defined in this PPA shall (i) have meanings as commonly used in the English language, (ii) be given their generally accepted meaning consistent with Prudent Utility Practice, and (iii) be given their well-known and generally accepted technical or trade meanings.

(B) For purposes of this PPA, (1) the words "include," "includes" and "including" shall be deemed to be followed by the words "without limitation"; (2) the word "or" is not exclusive: (3) the masculine shall include the feminine and neuter; and (4) the words "herein," "hereof," "hereby," "hereto" and "hereunder" refer to this PPA as a whole. Unless the context otherwise requires, references herein: (x) to Articles, Sections, and Exhibits means the Articles, Sections and Exhibits contained in and attached to this PPA; (y) to an agreement, instrument or other document means such agreement, instrument, or other document as amended, supplemented and modified from time to time to the extent permitted by the provisions thereof and (z) to a statute means such statute as amended from time to time and includes any successor legislation thereto and any regulations promulgated thereunder. This PPA shall be construed without regard to any presumption or rule requiring construction or interpretation against the party drafting an instrument or causing any instrument to be drafted.

Section 1.2 Consents and Approvals; Commercially Reasonable Standard. Unless expressly provided otherwise in this PPA, (a) when this PPA requires the consent, approval, or similar action by a Party, such consent or approval shall not be unreasonably withheld, conditioned or delayed, and (b) wherever this PPA gives a Party a right to determine, require, specify or take similar action with respect to a matter, such determination, requirement, specification or similar action shall be Commercially Reasonable.

Section 1.3 Waiver. The failure of either Party to enforce or insist upon compliance with or strict performance of any of the terms or conditions of this PPA, or to take advantage of any of its rights hereunder, shall not constitute a waiver or relinquishment of any such terms, conditions, or rights, but the same shall be and remain at all times in full force and effect.

ARTICLE 2
CHUGACH ASSET PURCHASE AGREEMENT; CHUGACH POWER PURCHASE AGREEMENT

Section 2.1 Chugach Asset Purchase Agreement; Chugach Power Purchase Agreement. Purchaser acknowledges that Seller and Chugach have entered into an Asset Purchase and Sale Agreement dated as of December 28, 2018, pursuant to which Seller has agreed to sell to Chugach, and Chugach has agreed to purchase from Seller, substantially all of the assets of ML&P other than the Seller's Interest (the "**Chugach Asset Purchase**

Agreement"). The assets that Seller has agreed to sell to Chugach, and that Chugach has agreed to purchase from Seller, under the Chugach Asset Purchase Agreement include all of Seller's right, title, and interest in and to the Eklutna Transmission Assets. Purchaser further acknowledges that Seller and Chugach have entered into that certain Eklutna Power Purchase Agreement dated as of December 28, 2018, pursuant to which Seller has agreed to sell to Chugach, and Chugach has agreed to purchase from Seller, power produced by the Facility and attributable to the "Chugach Portion" (as hereinafter defined) (the "**Chugach Power Purchase Agreement**").

ARTICLE 3
TERM AND TERMINATION

Section 3.1 PPA Contingencies. This PPA and the Parties' obligations set forth herein are contingent upon the occurrence or waiver of each of the following events (the "**PPA Contingencies**"):

(A) RCA PPA Approval shall have been obtained;

(B) The Chugach Power Purchase Agreement shall have been approved by the RCA in accordance with the terms and conditions of the Chugach Power Purchase Agreement;

(C) The Closing under the Chugach Asset Purchase Agreement shall have occurred; and

(D) The representations and warranties of Purchaser in Section 18.14(B) shall have been true and correct as of the Effective Date and the Commencement Date, and Seller shall have received an original, fully executed copy of the CFC Subordination Agreement (including the acknowledgement and acceptance attached thereto, as executed by Purchaser) and evidence of recording of the CFC Subordination Agreement pursuant to Section 18.14(B).

Section 3.2 Commencement Date. The commencement date under this PPA (the "**Commencement Date**") shall be the date on which each of the PPA Contingencies has occurred or has been waived by the Parties.

Section 3.3 Term.

(A) The term of this PPA shall commence on the Commencement Date, and shall continue in full force and effect until 11:59 p.m. (Facility local time) on the Scheduled Termination Date, subject to early termination or extension as provided in this PPA or otherwise agreed to by the Parties (the "**Term**"). No interruption or curtailment of purchases or sales, whether due to Force Majeure or otherwise, will operate to extend the Term.

(B) The effectiveness of this PPA is expressly contingent upon the occurrence of the Closing under the Chugach Asset Purchase Agreement. In the event that the Chugach Asset Purchase Agreement is terminated before the Commencement Date, this PPA shall

automatically terminate, and become null and void, at the same time as the termination of the Chugach Asset Purchase Agreement.

ARTICLE 4
FACILITY DESCRIPTION AND OPERATION

Section 4.1 Description. The Facility is described in Exhibit B. A scaled map that identifies the Site, the location of the Facility, the Delivery Point and other important facilities, is included in Exhibit B.

Section 4.2 Operation of the Facility.

(A) During the Term Seller shall, at its cost and expense, manage, control, operate, and maintain the MEA Portion in accordance with the Operations Agreement and in a manner consistent with Prudent Utility Practice. Without limiting the foregoing, during the Term, as between Seller and Purchaser, Seller shall be responsible for all capital costs, all operations and maintenance expenses, and all costs and expenses for environmental compliance and compliance with Applicable Laws relating to the MEA Portion.

(B) During the Term, Seller shall, after giving Purchaser a reasonable opportunity to consult with Seller, but without in any way limiting Seller's discretion as a result of any such consultation, select the person to serve as Seller's representative to the Operating Committee (the "**Seller's Representative**"). The Seller's Representative shall make all decisions on the Operating Committee consistent with Prudent Utility Practice and the rights and obligations of the Parties under this PPA and the rights and obligations of the parties under the Chugach Power Purchase Agreement. The Seller's Representative shall also be Seller's representative for any consultation, study, and implementation processes required under the Fish and Wildlife Agreement relating to the Facility. The Seller's Representative shall make all decisions with respect to any processes required under the Fish and Wildlife Agreement with due regard for the rights and obligations of the Parties under this PPA.

(C) The Parties acknowledge and agree that Seller has prior rights to not less than 41 million gallons of water per day from Eklutna Lake for public water supply pursuant to the Act of October 30, 1984, 98 Stat. 2823; Alaska Statutes 46.15.150(a); and Certificate of Appropriation ADL 44944. The Parties agree that during the Term, the supply of water available for production of Power by the Seller's Interest shall be net of all water taken by Anchorage Water and Wastewater Utility for public water supply purposes consistent with the aforementioned water rights.

Section 4.3 Books and Records. Seller and Purchaser shall each keep complete and accurate books and records and all other data required by each of them for the purposes of metering, billing, payment, and administration of this PPA, including such Operating Records and other records as may be required by Applicable Law, Governmental Authorities, or any ERO or ISO. Each Party shall maintain such books and records in accordance with relevant accounting standards, as applicable, and shall provide the other Party Commercially Reasonable access to such books and records. All books and records pertaining to the operation of the Facility shall be

maintained on the premises of the Facility or such other location as is mutually agreed to by the Parties. Either Party may audit and examine any such books and records from time to time upon request and during normal business hours. Each Party shall maintain any books and records that it is required to keep under this Section 4.3 for a period of at least six (6) years after the preparation of such books or records.

ARTICLE 5
DELIVERY; SCHEDULING; FACILITY METERING

Section 5.1 Power Delivery Arrangements. Seller shall be responsible for all electric losses, transmission and ancillary service arrangements, and costs and expenses required for delivery of the Power from the Facility to the Delivery Point. Purchaser shall be responsible for all electric losses, transmission and ancillary service arrangements, and costs and expenses required for transportation and delivery of the Power from and after the Delivery Point.

Section 5.2 Scheduling. Purchaser shall at all times during the Term nominate and schedule for delivery to Purchaser, consistent with past practice at the Facility and in accordance with Prudent Utility Practice and the provisions of this PPA and the Transition Plan, the maximum quantity of Power that is available at such time for scheduling and delivery from the MEA Portion in accordance with the provisions of this PPA.

Section 5.3 Facility Metering. The Facility Metering used to measure Power delivered to the Delivery Point under this PPA shall be located at the Delivery Point, or as close thereto as is reasonably possible.

Section 5.4 Facility Metering Testing. Purchaser will provide to Seller copies of all Facility Metering calibration test results. If any test of the Facility Metering discloses an inaccuracy of more than one-half percent (0.5%) fast or one-half percent (0.5%) slow, any payments or adjustments made or calculated under this PPA that would have been affected by the inaccuracy will be recalculated to correct for the inaccuracy. For purposes of such correction, if the inaccuracy is traceable to a specific event or occurrence at a reasonably ascertainable time, then the adjustment will extend back to that time; otherwise, it will be assumed that the error has existed for a period equal to one-half of the time elapsed since the Facility Metering was installed or one-half of the time since the last Facility Metering test, whichever is later. Either Party may, at its option and expense, have check Facility Metering installed. If any such check Facility Metering is installed, it will be used, in accordance with practices and procedures established by the Parties, for billing adjustments of discovered Facility Metering inaccuracies. If at any time both the billing and check Facility Metering at any location should fail to register, Purchaser will determine the delivered Power from the best available data, unless Seller objects to such determination within sixty (60) days after receipt of such determination. Any such disagreement will be resolved pursuant to the dispute resolution provisions set forth in Section 12.1. If either Party determines, as a result of correction of measurements made by inaccurate Facility Metering, that any payments or adjustments made pursuant to this PPA are incorrect, the Parties will use the corrected measurements to recompute such payments or adjustments. Any amounts that are determined to be payable or subject to refund as a result of such recomputation

will be paid to the Party entitled to such amounts within twenty (20) days after the paying Party is notified of the recomputation, with interest at the Interest Rate from the original payment due date to the date of payment or refund of such adjustment.

ARTICLE 6
SALE AND PURCHASE OF POWER

Section 6.1 General Obligation.

(A) Beginning on the Commencement Date and continuing thereafter throughout the Term, Seller shall generate from the Facility and deliver and sell to Purchaser, and Purchaser shall schedule and receive and purchase at the Delivery Point, any and all Energy, Capacity, Environmental Attributes, and Ancillary Services (collectively, the "**Power**") that is available from the Facility and attributable to the MEA Portion.

(B) The Power sold under this PPA is unit contingent. The Facility will be considered to be available for purposes of producing Power for delivery to Purchaser only when and to the extent that the Facility is capable of producing such Power in accordance with the provisions of this PPA, the Transition Agreement, Applicable Law, and Prudent Utility Practice. Seller shall have no obligation to sell and deliver Power, and Purchaser shall have no right to schedule or receive Power, at any time when the Facility is unavailable to generate such Power, whether in whole or in part, as a result of any Force Majeure, Forced Outage, or Planned Outage: *provided, however*, that if the Facility is partially available, Purchaser shall schedule, and Seller shall deliver, such amount of Power as is available on a proportionate basis from the MEA Portion at such time.

(C) Title to and risk of loss of the Power shall transfer from Seller to Purchaser at the Delivery Point. Title to the Power shall transfer from Seller to Purchaser free and clear of all liens, security interests, claims and encumbrances or any interest therein or thereto by any other Person.

Section 6.2 Additional Products; Ancillary Services.

(A) The Parties acknowledge that existing and future Applicable Laws create value in the ownership, use, or allocation of Environmental Attributes. To the full extent allowed by Applicable Law, Purchaser shall own and be entitled to claim all Environmental Attributes attributable to the MEA Portion from the Commencement Date until the end of the Term, to the extent such Environmental Attributes may exist or be created during such period. For purposes of effectuating the foregoing, the following shall apply:

1. Seller hereby automatically and irrevocably assigns to Purchaser all rights, title and authority for Purchaser to register the Facility and own, hold, and manage the Environmental Attributes attributable to the MEA Portion in Purchaser's own name and to Purchaser's account, including any rights associated with any renewable energy information or tracking system that exists or may be established (including but not limited to participants in any applicable REC Registration Program and the United States government) with regard to

monitoring, registering, tracking, certifying, or trading Environmental Attributes. Seller hereby authorizes Purchaser to act as its agent for the purposes of registering the Facility for such purposes, and tracking and certifying Environmental Attributes, and Purchaser shall have full authority to hold, sell, or trade Environmental Attributes attributable to the MEA Portion for its own account in connection with any renewable energy information or tracking systems. Upon the request of Purchaser, at Purchaser's cost and expense, (i) Seller shall deliver or cause to be delivered to Purchaser such attestations/certifications of Environmental Attributes attributable to the MEA Portion, and (ii) Seller shall cooperate with Purchaser's registration and certification of Environmental Attributes attributable to the MEA Portion.

2. Prior to the Commencement Date and as required thereafter for Purchaser to claim, own, or realize the available benefits of any Environmental Attributes attributable to the MEA Portion, Seller shall, at Purchaser's reasonable cost and expense, make all applications or filings required by Applicable Law for Environmental Attribute accreditation and for the provision of such Environmental Attributes to Purchaser.

(B) On and after the Commencement Date until the end of the Term, Seller shall make available to Purchaser all Ancillary Services attributable to the MEA Portion at no additional charge under this PPA. Any compensation that Seller receives under Applicable Law or otherwise for Ancillary Services attributable to the MEA Portion during such period shall be provided to Purchaser at no additional cost to Purchaser under this PPA. Seller shall credit Purchaser, as a reduction to Seller's monthly invoice or other mutually-agreed mechanism, for any compensation that Seller receives for Ancillary Services attributable to the MEA Portion during such period.

1. Seller shall, at the request of Purchaser, use Commercially Reasonable Efforts to maximize the availability of such Ancillary Services during such period; *provided, however*, that Seller shall not be required to make any capital expenditures or incur any operating expenses in connection with such efforts.

2. In the event any Governmental Authority implements new or revised requirements for generators to create, modify, change, or supply Ancillary Services requiring Seller to install additional equipment after the Commencement Date to meet such requirements, Seller shall be responsible for payment of any costs and expenses of such additional equipment.

ARTICLE 7
PAYMENT FOR POWER

Section 7.1 Contract Price. In consideration for Seller's sale to Purchaser of the Power attributable to the MEA Portion and delivered to Purchaser under this PPA, Purchaser shall pay Seller for such Power an amount determined in accordance with the provisions of Exhibit C (the "**Contract Price**"). Purchaser and Seller acknowledge and agree that the Contract Price is structured to include all required compensation for any and all Power (including, for the avoidance of doubt, any and all Capacity, Ancillary Services, and Environmental Attributes)

delivered by Seller and received by Purchaser under this PPA during the Term and that Purchaser is not required to make any additional payments to Seller therefor.

ARTICLE 8
GOVERNMENTAL CHARGES

Section 8.1 Allocation of Governmental Charges.

(A) Seller will pay or cause to be paid all Governmental Charges that are imposed on or with respect to the generation of Power and the sale and delivery to Purchaser of Power before delivery of such Power to the Delivery Point.

(B) Purchaser will pay or cause to be paid all Governmental Charges that are imposed on or with respect to the purchase and receipt by Purchaser of Power at and from the Delivery Point.

(C) If a Party is required to remit or pay Governmental Charges that are the other Party's responsibility under this Section 8.1, such Party will promptly reimburse the other Party for such Governmental Charges. Both Parties will use reasonable efforts to administer this PPA and implement the provisions in accordance with their intent to minimize Governmental Charges, so long as no Party is materially adversely affected by such efforts. For greater certainty, each Party is responsible for any Governmental Charges levied on the basis of its own net income.

(D) Nothing in this Section 8.1 will obligate or cause a Party to pay or be liable to pay any Governmental Charge for which it is exempt under Applicable Law. If any sale of Power under this PPA is exempt from or not subject to any particular Governmental Charge, the Party subject to such exemption or exclusion shall timely provide the other Party with all reasonable documentation to evidence such exemption or exclusion.

(E) Either Party may deduct or withhold any Governmental Charges that such Party may be legally obligated to deduct or withhold from any amounts payable to the other Party under this PPA, and payment to such other Party as reduced by such deductions or withholdings will constitute full payment and settlement to such other Party under this PPA.

(F) Seller will provide Purchaser with any forms, documents, or certifications as may be required for Purchaser to satisfy any information reporting or withholding tax obligations with respect to any payments under this PPA.

ARTICLE 9
BILLING AND PAYMENT

Section 9.1 Billing and Payment.

(A) Each month following a full or partial month during the Term, Seller will render to Purchaser by email to the address provided in Section 18.2 an invoice setting forth the

total Contract Price and resulting total amount due for all Power delivered to Purchaser in accordance with the requirements of this PPA during such preceding month, any amounts payable to Seller under ARTICLE 10, and any credits to Purchaser under ARTICLE 10. Billing and payment will be based on the Contract Price and on delivered Power quantities. Payment of any such invoice will be made by Purchaser to Seller, via ACH or wire transfer of immediately available funds, on or before the later of (a) the 15th day of the month in which the invoice was rendered or (b) the 10th day following presentation of such invoice; *provided*, that if such due date is not a Business Day, payment will be due on the next Business Day following such date.

(B) If a payment by either Party under this PPA is late, interest shall accrue at the Interest Rate on the unpaid balance for the number of days payment was late and shall be added to the next billing statement.

(C) Seller and Purchaser shall net their obligations to each other under this PPA, and payment of the net amount will discharge all mutual undisputed obligations between the Parties.

Section 9.2 Subordination. The Parties agree that Purchaser's payment obligations hereunder are payable on a parity with Purchaser's other operating expenditures, but subordinate to (i.e., neither on a parity with nor superior to) Purchaser's payment obligations under the Bradley Lake Agreement only if and to the extent, and for the period, that making such payments would prevent Purchaser from making timely payment of any amounts due from it under the Bradley Lake Agreement.

Section 9.3 Billing Disputes. Either Party may dispute invoiced amounts, but shall pay at least the undisputed portion on or before the date due. To resolve any billing dispute, the Parties shall use the procedures set forth in ARTICLE 12. When the billing dispute is resolved, the Party owing any amount shall pay such amount within five (5) Business Days after the date of such resolution, together with late payment interest as provided in Section 9.1(B).

ARTICLE 10
LIABILITY FOR FAILURE TO DELIVER OR RECEIVE

Section 10.1 Failure to Deliver. Unless excused by Purchaser's failure to perform or Force Majeure, if Seller fails to deliver scheduled Power in accordance with the requirements of this PPA, Seller will pay to Purchaser the positive difference, if any, obtained by subtracting (a) the Contract Price for the scheduled Power not delivered by Seller from (b) the Replacement Price.

Section 10.2 Failure to Receive. Unless excused by Seller's failure to perform or Force Majeure, if Purchaser fails to receive (or to cause to be received) scheduled Power in accordance with the requirements of this PPA. Purchaser will pay to Seller the positive difference, if any, obtained by subtracting (a) the Sales Price from (b) the Contract Price for the scheduled Power not received by Purchaser.

Section 10.3 Payment for Nonperformance. Invoicing and payment of any amounts due under this ARTICLE 10 will be made in accordance with the provisions of ARTICLE 9.

Section 10.4 Acknowledgement of the Parties. The Parties hereby stipulate that the payment obligations set forth in this ARTICLE 10 are reasonable in light of the anticipated harm and the difficulty of estimation or calculation of actual damages, and each Party hereby waives the right to contest such payments as unfair, unreasonable, inadequate or void as a penalty. Without limiting to any extent the provisions of ARTICLE 11, the remedy set forth in this ARTICLE 10 will be the sole and exclusive remedy of Purchaser for the failure of Seller to deliver, or of Seller for the failure of Purchaser to receive, the required Power and all other damages and remedies are hereby waived.

ARTICLE 11
EVENTS OF DEFAULT AND REMEDIES

Section 11.1 Events of Default. Any of the following events shall constitute an Event of Default with respect to the specified Party, which shall be the defaulting Party with respect to such Event of Default, if such event has not been cured within the cure period specified for such event:

(A) Such Party's failure to pay any amount due to the other Party as required by this PPA, Actual Damages, any required indemnification, or any other required payment, and such amount remains unpaid for a period of ten (10) Business Days after the date such Party receives Notice from the non-defaulting Party that the amount is overdue.

(B) Such Party's application for, or consent (by admission of material allegations of a petition or otherwise) to, or failure to oppose the appointment of a receiver, trustee or liquidator for a Party or for all or substantially all of its assets, or its authorization of such application or consent, or the commencement or institution of any proceedings seeking such appointment against a Party which proceedings continue undismissed or unstayed for a period of sixty (60) days from their inception.

(C) (i) Such Party's authorization or filing of a voluntary petition in bankruptcy, or its application for, or consent (by admission of material allegations of a petition or otherwise) to, or failure to oppose an involuntary petition in bankruptcy or the application of any bankruptcy, reorganization, readjustment of debt, insolvency, dissolution, liquidation or other similar law of any jurisdiction to such Party, or (ii) the commencement or institution of any such proceedings against such Party which proceedings remain undismissed or unstayed for sixty (60) days from their inception or which result in adjudication of bankruptcy or insolvency within such time.

(D) Such Party's unauthorized assignment of this PPA, which unauthorized assignment shall be an Event of Default immediately upon its occurrence and without further notice from the non-defaulting Party.

(E) The failure by either Party to perform or observe any other material obligation to the other Party under this PPA (other than any events that are otherwise specifically covered in this Section 11.1 as a separate Event of Default, or Seller's obligation to deliver, and Purchaser's obligation to receive, for which a separate remedy is provided in ARTICLE 10), which failure is not excused by Force Majeure and remains unremedied for thirty (30) days after Notice thereof shall have been given by the non-defaulting Party; *provided, however*, that if the failure is not reasonably capable of being cured within the thirty (30) day period, the defaulting Party will have such additional time (not exceeding an additional ninety (90) days) as is reasonably necessary to cure the failure, so long as the Party promptly commences and diligently pursues the cure.

Section 11.2 Remedies. Upon the occurrence of any Event of Default of this PPA, the non-defaulting Party may pursue all rights and remedies available to it at law and in equity and in accordance with the terms of this PPA. Except as explicitly provided to the contrary in this PPA, each right or remedy of the Parties provided for in this PPA shall be cumulative of and shall be in addition to every other right or remedy provided for in this PPA, and the exercise of one or more of the rights or remedies provided for herein shall not preclude the simultaneous or later exercise by such Party of any other rights or remedies provided for herein.

(A) Termination and Damages. For any uncured Event of Default, the non-defaulting Party may, at its option do any, some, or all of the following:

1. Net from any payments due from the non-defaulting Party any amount otherwise due from the defaulting Party under or in connection with this PPA, including any unpaid Actual Damages;

2. Seek Actual Damages in such amounts and on such basis for the default as authorized by this PPA;

3. Terminate this PPA immediately upon Notice, without penalty or further obligation to the defaulting Party. Upon the termination of this PPA under this Section 11.2, the non-defaulting Party shall be entitled to receive from the defaulting Party all of the Actual Damages in connection with the Event of Default resulting in such termination.

(B) Damages for Events of Default. The non-defaulting Party shall be entitled to receive from the defaulting Party all direct damages incurred by the non-defaulting Party that are proximately caused by Event of Default ("**Actual Damages**").

(C) Seller Security Interest. In the event Purchaser shall be deemed to have acquired title to the MEA Portion at any time (other than by exercise of the Purchase Option under Section 17.3), Seller shall have all of the rights and remedies of a secured party with respect to the Seller Security Interest under Article 9 of the UCC and other Applicable Law, including the right to foreclose on the Seller Security Interest upon an Event of Default.

Section 11.3 Limitation on Damages. The Parties confirm that the express remedies and measures of damages provided in this PPA satisfy the essential purposes hereof. If no

remedy or measure of damages is expressly herein provided, the obligor's liability shall be limited to Actual Damages only. Neither Party shall be liable to the other Party for consequential, incidental, punitive, exemplary, special, equitable or indirect damages, lost profits or other business interruption damages by statute, in tort or contract (except to the extent expressly provided herein); *provided, however*, that if either Party is held liable to a third party for such damages and the Party held liable for such damages is entitled to indemnification from the other Party hereto, the indemnifying Party shall be liable for, and obligated to reimburse the indemnified Party for, such damages. To the extent any damages required to be paid hereunder are liquidated, the Parties acknowledge that the damages are difficult or impossible to determine, that otherwise obtaining an adequate remedy is inconvenient, and that the liquidated damages constitute a reasonable approximation of the harm or loss.

ARTICLE 12
DISPUTE RESOLUTION

Section 12.1 Dispute Resolution. In the event of any dispute arising under this PPA (a "**Dispute**"), within ten (10) Business Days following Notice by either Party, (i) each Party shall appoint a representative, and (ii) the representatives shall meet, negotiate and attempt in good faith to resolve the Dispute quickly, informally and inexpensively. In the event the representatives cannot resolve the Dispute within thirty (30) days after the first meeting, either Party may request that consideration and resolution of the Dispute be transferred to a designated representative of each Party's senior management. Within ten (10) days following such a request, each Party shall submit a written summary of the Dispute describing the issues and claims to a senior officer of each Party designated to address the Dispute. Within ten (10) Business Days after receipt of each Party's Dispute summaries, the senior management representatives for both Parties shall negotiate in good faith to resolve the Dispute. If such senior management representatives are unable to resolve the Dispute within thirty (30) days thereafter, either Party may pursue any available legal remedies; *provided, however*, that if and to the extent that a Dispute involves the Justness or Reasonableness Conditions, and the Dispute is not resolved by negotiations of senior management representatives of the Parties, neither Party shall have any right to pursue any further legal remedies to resolve such Dispute and such Dispute shall be deemed to be resolved finally and conclusively by enforcement of the obligation of Purchaser under this PPA to pay the Contract Price and resulting amount due in accordance with the requirements of this PPA.

ARTICLE 13
FORCE MAJEURE

Section 13.1 Applicability of Force Majeure. Except as explicitly provided otherwise herein, a Party shall be relieved of its obligations to perform this PPA and shall not be considered to be in default with respect to any obligation under this PPA to the extent that such Party is prevented from fulfilling such obligation by Force Majeure, *provided, however*, that: (i) such Party gives prompt Notice describing the circumstances and impact of the Force Majeure; (ii) the relief from its obligations sought by such Party is of no greater scope and of no longer duration than is required by the Force Majeure; (iii) such Party proceeds with due diligence to overcome

the Force Majeure and resume performance of its obligations under this PPA; and (iv) such Party provides prompt Notice of the conclusion of the Force Majeure.

Section 13.2 Limitations on Effect of Force Majeure.

(A) Force Majeure shall relieve a Party from performing only such obligations as are actually prevented by the Force Majeure.

(B) Except to the extent that Force Majeure prevents a Party from completing a transfer of money to the other Party, Force Majeure shall not excuse a Party from making any payment to the other on or before the date that such payment becomes due and payable.

(C) In no event will the existence of Force Majeure extend this PPA beyond its stated Term.

Section 13.3 Termination Relating to Force Majeure Events.

(A) If Seller is excused from its obligations under this PPA for ninety (90) consecutive days because of a Force Majeure event, Purchaser may, at any time prior to the termination of the Force Majeure event, terminate this PPA effective upon not less than three (3) days' notice to Seller; *provided*, that in the event that Seller holds Purchaser harmless from the effects of such non-performance, such ninety (90)-day period will be suspended for such period, not in any event to exceed one hundred and eighty (180) days' suspension, as Seller continues so to hold Purchaser harmless. For purposes of this Section 13.3(A), "hold harmless" means the implementation by Seller of alternative arrangements for the delivery to Buyer of Power, the delivery of which has been affected by the relevant Force Majeure event.

(B) In the event of termination pursuant to this Section 13.3, neither Party will have any liability whatsoever to the other Party under or in connection with this PPA; *provided*, that no such termination will relieve either Party of liability for any costs or other obligations incurred prior to the effectiveness of such termination.

ARTICLE 14
CHANGE IN LAWS

Section 14.1 Change in Laws.

(A) If a Party becomes aware that there has occurred or is reasonably likely to occur a Change in Laws that directly prohibits, prevents, or materially impedes a Party from performing its obligations under this PPA or materially impacts or alters the rights, benefits, or allocation of risks under this PPA, such Party shall notify the other Party of such Change in Laws. The Parties shall promptly following any such notice negotiate in good faith amendments to or a replacement of this PPA that will result in substantially the same allocation of rights, benefits, and risks as this PPA as of the Effective Date. If such good faith negotiations do not result in such an amendment to or replacement of this PPA within a period of ninety (90) days following the start of such negotiations (or any longer time period to which the Parties may

agree), either Party may, effective upon not less than sixty (60) days' prior written notice to the other Party, terminate this PPA at any time while such Change in Laws is continuing, without any penalty or liability of either Party to the other Party; *provided, however*, that in no event will any such termination excuse any obligation to make payments due or becoming due under this PPA for performance rendered prior to such termination. Unless and until any such termination of this PPA, each Party shall continue to perform its obligations under this PPA to the fullest extent not actually prohibited, prevented, or impeded by such Change in Laws.

(B) Consistent with Section 14.1(A), nothing in this PPA shall require either Party to perform any obligations that are prohibited or prevented by a Change in Laws. To the extent a Change in Laws occurs that directly prohibits, prevents, or materially impedes either Party from performing its obligations under this PPA and the Parties are unable to follow the procedures set forth in Section 14.1(A), such Change in Laws will be treated as an event of Force Majeure and the affected Party will be entitled to relief therefor in accordance with the provisions of ARTICLE 13 to the extent and for the period necessary to allow the Parties to complete the process set forth in Section 14.1(A).

(C) A Party that actively petitions for or otherwise requests a Change in Laws shall not be entitled to obtain relief from such Change in Laws under this Section 14.1 without the consent of the other Party.

(D) For purposes of this Section 14.1, "materially" means a level of significance that would, as of the Effective Date, have been reasonably likely to have affected any decision of a reasonable person in the applicable Party's position regarding whether or not to enter into this PPA or consummate the transaction(s) contemplated in this PPA on the terms and conditions thereof.

ARTICLE 15
INSURANCE

Section 15.1 General Insurance Requirements. On or prior to the Commencement Date and thereafter throughout the Term, Seller shall use Commercially Reasonable efforts to obtain and maintain at its own cost and expense insurance coverages for the MEA Portion satisfying the requirements of this ARTICLE 15. No later than the Commencement Date and on or before June 1 of each year during the Term, Seller shall provide Purchaser with a copy of insurance certificates reasonably acceptable to Purchaser evidencing that insurance coverages for the Facility are in compliance with such requirements. Such certificates shall (a) name Purchaser as an additional insured (except worker's compensation); (b) provide that Purchaser shall receive thirty (30) days' prior Notice of non-renewal, cancellation of, or significant modification to any of the corresponding policies (except that such Notice shall be ten (10) days for non-payment of premiums); (c) provide a waiver of any rights of subrogation against Purchaser, its Affiliates and their officers, directors, agents, subcontractors, and employees; and (d) indicate that the policies have been endorsed in accordance with the requirements set forth herein. All policies shall be written with insurers with an AM Best rating of at least A-VII. All policies shall be written on an occurrence basis, except as provided in Section 15.2. All policies shall contain an endorsement

that Seller's policy shall be primary in all instances regardless of like coverages, if any, carried by Seller. Neither Party's liability under this PPA shall be limited to the amount of insurance coverage required herein.

Section 15.2 Term and Modification of Insurance.

(A) All insurance required under this PPA shall cover occurrences during the Term and for a period of two (2) years after the Term. In the event that any insurance as required herein is commercially available only on a "claims-made" basis, such insurance shall provide for a retroactive date not later than the date of this PPA and such insurance shall be maintained by Seller for a minimum of six (6) years after the Term.

(B) If any insurance required to be maintained by Seller hereunder ceases to be reasonably available and commercially feasible in the commercial insurance market, Seller shall provide Notice to Purchaser, accompanied by a certificate from an independent insurance advisor of recognized national standing, certifying that such insurance is not reasonably available and commercially feasible in the commercial insurance market for electric generating plants of similar type, geographic location and capacity. Notwithstanding such Notice, Seller shall use Commercially Reasonable attempts to obtain other insurance that would provide comparable protection against the risk to be insured.

ARTICLE 16
INDEMNITY

Section 16.1 Indemnification. Each Party (the "**Indemnifying Party**") agrees (but in the case of Seller as the Indemnifying Party, only subject to appropriation of the requisite funds by the Assembly of Seller) to indemnify, defend, and hold harmless the other Party (the "**Indemnified Party**") from and against all third party claims, demands, losses, liabilities, penalties, and expenses (including attorneys' fees) for personal injury or death to persons and damage to the Indemnified Party's real property and tangible personal property or facilities or the property of any other Person to the extent arising out of, resulting from, or caused by any (i) Event of Default or other breach under this PPA, (ii) violation of Applicable Laws, (iii) negligent or tortious acts, errors, or omissions, or (iv) willful misconduct, in each case of the Indemnifying Party or any of its Affiliates, directors, officers, employees, or agents.

(A) The indemnification obligations of the Indemnifying Party shall apply notwithstanding any negligence of the Indemnified Party, but the Indemnifying Party's liability to indemnify the Indemnified Party shall be reduced in proportion to the percentage by which the Indemnified Party's negligent acts, errors, or omissions caused the damages.

(B) Neither Party shall be indemnified for its damages resulting from its sole negligence or willful misconduct. The indemnity provisions of this PPA shall not be construed to relieve any insurer of its obligation to pay claims consistent with the provisions of a valid insurance policy.

(C) Nothing in this Section 16.1 shall enlarge any liability of either Party to the other Party for any breach of this PPA or relieve either Party of any liability to the other Party for any breach of this PPA.

(D) A Party will not be liable more than once for the same losses, even if those losses may be recovered under multiple sections or subsections of this PPA.

Section 16.2 Notice of Claim. Promptly after receipt by a Party of any claim or notice of the commencement of any action, administrative proceeding, legal proceeding, or investigation as to which the indemnity provided for in this ARTICLE 16 may apply, the Indemnified Party shall provide Notice thereof to the Indemnifying Party. The Indemnifying Party shall assume the defense thereof with counsel designated by such Party and satisfactory to the Indemnified Party, *provided, however*, that if the defendants in any such action include both the Indemnified Party and the Indemnifying Party and the Indemnified Party shall have reasonably concluded that there may be legal defenses available to it which are different from or additional to, or inconsistent with, those available to the Indemnifying Party, the Indemnified Party shall have the right to select and be represented by separate counsel, at the Indemnifying Party's expense, unless a liability insurer has agreed to pay such costs.

Section 16.3 Settlement of Claim. If the Indemnifying Party fails to assume the defense of a claim meriting indemnification, the Indemnified Party may, at the expense of the Indemnifying Party, contest, settle, or pay such claim, *provided, however*, that settlement or full payment of any such claim may be made only following consent of the Indemnifying Party, which consent will not be unreasonably withheld, conditioned, or delayed, or, absent such consent, written opinion of the Indemnified Party's counsel that such claim is meritorious or warrants settlement.

Section 16.4 Amounts Owed. Except as otherwise provided in this ARTICLE 16, in the event that a Party is obligated to indemnify and hold the other Party and its successors and assigns harmless under this ARTICLE 16, the amount owing to the Indemnified Party will be the amount of the Indemnified Party's actual loss net of any insurance proceeds received by the Indemnified Party following a Commercially Reasonable effort by the Indemnified Party to obtain such insurance proceeds (which Commercially Reasonable effort will not in any event include any obligation to initiate litigation or any other dispute resolution proceeding against any insurer).

Section 16.5 Survival. The provisions of this ARTICLE 16 shall survive the expiration or earlier termination of this PPA.

ARTICLE 17
ASSIGNMENT AND OTHER TRANSFER RESTRICTIONS; LENDER PROVISIONS

Section 17.1 Transfer Without Consent Is Null and Void. Except as provided in ARTICLE 2, any sale, transfer, or assignment of any interest in the Seller's Interest or in this PPA made without fulfilling the requirements of this ARTICLE 17 shall be null and void and a breach of this PPA.

(A) Except as permitted in this Section 17.1, neither Party shall assign this PPA, or any right, title or interest therein, without the prior written consent of the other Party, which consent shall not be unreasonably withheld, conditioned, or delayed; *provided, however*, that: (i) Notice of any proposed assignment requiring consent of the other Party shall be given to such other Party at least thirty (30) days prior to the proposed effective date of such assignment; and (ii) with respect to any assignment hereunder, whether requiring consent or not, (a) except with respect to any assignment under Section 17.2, any assignee shall expressly assume the assignor's obligations under this PPA unless otherwise agreed by the other Party; (b) no assignment shall relieve the assignor of its obligations under this PPA in the event the assignee fails to perform, unless the other Party waives or releases in writing the assignor's continuing obligations under this PPA; and (c) the assignment shall be subject to receipt of all such approvals as may be required by any applicable Governmental Authorities.

(B) Except as set forth in Section 18.14(B) with respect to the Collateral and Seller's consent rights with respect thereto, Purchaser shall have the right to assign all or a portion of its rights or obligations under this PPA without the prior written consent of Seller as follows:

1. to a Lender as collateral security for obligations under the Financing Documents entered into with such Lender, *provided* that: (i) Purchaser provides Seller with written Notice of such proposed collateral assignment not less than thirty (30) days prior to such collateral assignment, and (ii) the applicable form of collateral assignment and related documentation is reasonably acceptable to Seller, as provided in Section 17.2;

2. to an Affiliate of Purchaser that is a Creditworthy Entity;

3. pursuant to Section 17.2, to a Creditworthy Entity after a Lender has exercised its foreclosure rights with respect to this PPA; and

4. to a Person succeeding to all or substantially all of the assets of Purchaser, *provided* that such Person's creditworthiness is equal to or better than that of Purchaser.

(C) Seller acknowledges that upon an event of default under any Financing Documents relating to this PPA, a Lender may (but shall not be obligated to) assume, or cause its designee to assume, all of the interests, rights, and obligations of Purchaser thereafter arising under this PPA, in which case such Lender or such designee shall assume and agree to be bound by all the terms and provisions of this PPA arising on or after the date of such assumption by such Lender or such designee; *provided* that, regardless of whether any such Lender or such designee assumes all of the interests, rights, and obligations of Purchaser thereafter arising under this PPA, Seller's interests, rights, and obligations under this PPA will remain in full force and effect.

Section 17.2 Lender Provisions.

(A) Except as set forth in Section 18.14(B) with respect to the Collateral and Seller's consent rights with respect thereto, Purchaser may, without approval of Seller, charge or otherwise encumber its interest under this PPA for security purposes in accordance with the provisions of Section 17.1 and this Section 17.2.

(B) Promptly after making any such encumbrance, Purchaser shall notify Seller in writing of the name, address, and telephone and facsimile numbers of each Lender to which Purchaser's interest under this PPA has been encumbered. Such Notice shall include the names of the account managers or other representatives of the Lenders to whom all written and telephonic communications may be addressed.

(C) After giving Seller the initial Notice under Section 17.2(B), Purchaser shall promptly give Seller Notice of any change in the information provided in the initial Notice or any subsequent Notice.

(D) If Purchaser encumbers its interest under this PPA as permitted by this Section 17.2, the following provisions shall apply:

1. The Parties, except as provided by the terms of this PPA, shall not modify or cancel this PPA without the prior written consent of the Lender, such consent not to be unreasonably withheld, conditioned or delayed.

2. The Lender or its designees shall have the right, but not the obligation, to perform any act required to be performed by Purchaser under this PPA to prevent or cure an Event of Default with respect to Purchaser and such act performed by the Lender or its designees shall be as effective to prevent or cure an Event of Default as if done by Purchaser, *provided* that, if any such Lender or any such designee elects to perform any act required to be performed by Purchaser under this PPA to prevent or cure an Event of Default by Purchaser, Seller will not be deemed to have waived or relinquished any of its rights and remedies as provided in this PPA; and *provided, further*, that Purchaser hereby releases Seller, to the fullest extent permitted by Applicable Law, from any and all liability arising from Seller's performance under this PPA pursuant to instructions of the Lender following an event of default with respect to Purchaser under Lender's Financing Documents.

3. Seller shall, promptly following any request by Purchaser, execute statements certifying that this PPA is unmodified (or, if modified, stating the nature of the modification), in full force and effect and the absence or existence (and the nature thereof), to Seller's actual knowledge, of Events of Default hereunder by Purchaser and documents of consent to such assignment to the encumbrance and any assignment to such Lender, all in form and substance reasonably acceptable to Seller.

4. Promptly following the receipt of a written request from Purchaser or any Lender, Seller shall execute, or arrange for the delivery of, such reasonable certificates and other documents as may be reasonably necessary and appropriate in order for Purchaser to

consummate any financing or refinancing of the Facility or any part thereof and enter into such reasonable agreements as may be reasonably requested by such Lender, which agreements will grant such rights to the Lender as are specifically provided for in such documents, including that (a) this PPA shall not be terminated (otherwise than pursuant to the terms of this PPA) without the consent of the Lender, which consent shall not be unreasonably withheld, conditioned, or delayed; (b) the Lender shall be given notice of, and the opportunity to cure any breach or default of this PPA by Purchaser in accordance with this PPA; (c) if the Lender forecloses, takes a deed in lieu of foreclosure, or otherwise exercises its remedies pursuant to any security documents, then (i) Seller shall, at the Lender's request, continue to perform all of its obligations hereunder, and the Lender or (without in any way limiting any obligation or liability of the Lender) its nominee may perform in the place of Purchaser, and may assign this PPA to another Person that is a Creditworthy Entity in place of Purchaser, (ii) the Lender shall have no liability under this PPA except during the period of such Lender's ownership of the Purchaser's Interest, and (iii) Seller shall accept performance in accordance with this PPA by the Lender or its nominee; and (d) Seller shall make such representations and warranties to the Lender as Lender may reasonably request with regard to (1) Seller's authority to execute, deliver, and perform this PPA, (2) the binding nature on Seller of the document evidencing Seller's consent to assignment to the Lender and this PPA, and (3) the receipt of regulatory approvals by Seller with respect to its execution and performance under this PPA.

5. Purchaser shall reimburse Seller for the out-of-pocket costs and expenses (including the fees and expenses of counsel) incurred by Seller in connection with the preparation, negotiation, or execution of any statements, certificates, agreements, or other documents required under this Section 17.2.

Section 17.3 Purchase Option. Purchaser (or its designated Affiliate) shall have the option to purchase the MEA Portion effective as of the expiration of the Term on the terms and conditions hereinafter set forth (the "**Purchase Option**"). On or before the thirtieth (30th) anniversary of the Commencement Date, Seller will deliver to Purchaser Notice of the date, location, and time of a joint meeting between Seller and Purchaser to discuss Purchaser's plan regarding the potential exercise the Purchase Option. During the last five (5) Contract Years, Purchaser shall have the right at any time prior to the last day of the Term to deliver Notice to Seller that Purchaser is exercising the Purchase Option. If Seller fails to provide Notice of such joint meeting or fails to meet with Purchaser, Seller shall not be in breach of this PPA, but if Purchaser then fails to deliver Notice of exercise of the Purchase Option prior to the last day of the Term, the Term shall be extended for a period of one year beyond such date (the "**Term Extension**"), during which (i) Purchaser may deliver its Notice of exercise of the Purchase Option at any time prior to the last day of the Term Extension, and (ii) Purchaser shall continue to pay the Contract Price in the amount applicable to Contract Year 35 as calculated in accordance with Exhibit C hereto, plus an amount equal to one percent (1%) of such amount, until the earlier of the expiration of the Term Extension or the closing of the purchase and sale agreement for the Purchase Option. If Purchaser exercises its Purchase Option, Seller and Purchaser shall enter into a purchase and sale agreement for the MEA Portion in a form to be mutually agreed by the Parties prior to the Closing under the Chugach Asset Purchase Agreement.

(A) **Purchase Price.** Upon any exercise of the Purchase Option, the purchase price for the MEA Portion shall be the Purchase Price. If, for any reason, any generation unit overhaul costs or expenditures related to environmental compliance or other compliance with Applicable Law that have a positive value that extends beyond the Term are not capitalized on Seller's financial statements, then such costs or expenditures shall be imputed as a capital investment in Seller's Interest and deferred and amortized over a reasonable period of projected benefit for the purposes of establishing Net Book Value.

(B) **Closing.** The closing of the purchase pursuant to any exercise of the Purchase Option will occur on a date selected by Purchaser, which date will be not less than five (5) months and not more than nine (9) months after Purchaser has exercised the Purchase Option. Purchaser will select the closing date by giving a minimum of 30 days written notice to Seller.

(C) **Satisfaction of Requirements of Transition Plan.** Purchaser acknowledges and agrees that the rights granted to Purchaser in this PPA and the rights granted to Chugach in the Chugach Power Purchase Agreement are in compliance with each and all of the requirements of the Transition Plan, including the requirements of Section 1 of the Extension Agreement. Purchaser further acknowledges and agrees that the rights granted to Purchaser in this PPA, including the rights granted with respect to the Purchase Option, satisfy each and all of the obligations of Seller to Purchaser and of Chugach to Purchaser under the Transition Plan, including each and all of the obligations of Seller to Purchaser and of Chugach to Purchaser under Section 1 of the Extension Agreement, and that no further action and no further consents or approvals are required in order to satisfy any rights of Purchaser or obligations to Purchaser under Section 1 of the Extension Agreement. Purchaser agrees that it will not make any claim or assertion, and will not (either directly or indirectly) support any claim or assertion by any other Person, including in any proceeding before the RCA, that is contrary to or inconsistent with the acknowledgements and agreements of Purchaser in this Section 17.3(C).

ARTICLE 18
MISCELLANEOUS

Section 18.1 Forward Contract; Forward Agreement. The Parties acknowledge and intend that (a) this PPA, the transactions contemplated hereby, and any instruments that may be provided by either Party hereunder will each, and together, constitute one and the same "forward contract" and "forward agreement" within the meaning of the Bankruptcy Code; (b) Purchaser and Seller are "forward contract merchants," "swap participants," and "master netting agreement participants" within the meaning of the Bankruptcy Code; (c) all payments made or to be made by one Party to the other Party pursuant to this PPA constitute "settlement payments" within the meaning of the Bankruptcy Code; (d) this PPA constitutes a "master netting agreement" within the meaning of the Bankruptcy Code; (e) the Contract Price (including each monthly payment thereof) and all other amounts due from Purchaser hereunder are (i) settlement payments (as defined in the Bankruptcy Code), (ii) transfers in connection with a forward contract, swap agreement and master netting agreement (as used in Sections 546(e), 546(g) and 546(j) of the Bankruptcy Code), and (iii) attributable solely to the expected costs of acquiring the Power attributable to the MEA Portion during the Term (based on the anticipated minimum amount of

Power that will be generated by the Facility and attributable to the MEA Portion during the Term), as determined as of the date hereof; (f) the date of each monthly payment of the Contract Price is a "maturity date" (as used in the definition of "forward contract" in Section 101 of the Bankruptcy Code) with respect to the Power attributable to the MEA Portion delivered to Purchaser during the period since the prior monthly payment: (g) this PPA was entered into by Purchaser for the purpose of hedging against price fluctuations in the market for electricity. by paying a fixed price for the Power attributable to the MEA Portion during the Term; (h) Purchaser intends to pass on the costs of its Power purchases hereunder to its own customers, subject to Applicable Law; and (i) all remedies for a non-defaulting Party hereunder (including as set forth in Section 11.2) are "contractual rights" as used in Sections 362(b)(6), 362(b)(17), 362(b)(27), 556, 560 and 561 of the Bankruptcy Code. Each Party agrees that it will not make any assertion or claim, in any dispute or otherwise, or otherwise take any position to the effect that this PPA, the transactions contemplated hereby, and any instrument(s) that may be provided by either Party hereunder do not each, and together, constitute one and the same "forward contract," "commodity forward agreement," and "master netting agreement" within the meaning of the Bankruptcy Code, or that Purchaser and Seller are not "forward contract merchants," "swap participants," and "master netting agreement participants" within the meaning of the Bankruptcy Code.

Section 18.2 Notices. All notices, requests, consents, claims, demands, waivers and other communications hereunder (any of the foregoing, a "**Notice**") shall be in writing and shall be deemed to have been given (a) when delivered by hand (with written confirmation of receipt); (b) when received by the addressee if sent by a nationally recognized overnight courier (receipt requested); (c) on the date sent by e-mail of a PDF document (with confirmation of transmission) if sent during normal business hours of the recipient, and on the next Business Day if sent after normal business hours of the recipient or (d) on the third day after the date mailed, by certified or registered mail, return receipt requested, postage prepaid. Such communications must be sent to the respective Parties at the following addresses (or at such other address for a Party as shall be specified in a notice given in accordance with this Section 18.1):

If to Seller:	Municipality of Anchorage 632 W. 6th Avenue, Suite 850 Anchorage, AK 99501 E-mail: william.falsey@anchorageak.gov Attention: William D. Falsey, Municipal Manager
with a copy to:	Municipality of Anchorage 632 W. 6th Avenue, Suite 850 Anchorage, AK 99501 E-mail: rebecca.windtpearson@anchorageak.gov Attention: Rebecca A. Windt Pearson, Municipal Attorney
and a copy to:	K&L Gates LLP 925 Fourth Avenue, Suite 2900 Seattle, WA 98104-1158

	E-mail: eric.freedman@klgates.com Attention: Eric E. Freedman
If to Purchaser:	Matanuska Electric Association, Inc. 163 E. Industrial Way Palmer, AK 99645 E-mail: tony.izzo@mea.coop Attention: Tony Izzo, CEO
with a copy to:	Matanuska Electric Association, Inc. 163 E. Industrial Way Palmer, AK 99645 E-mail: Matthew.Reisterer@mea.coop Attention: Matt Reisterer, CFO

Section 18.3 Compliance With Applicable Laws. Each Party shall at all times comply with all Applicable Laws. Without limiting the foregoing, but subject to the provisions of Section 14.1, Seller shall during the Term comply with all applicable requirements of Applicable Law relating to the ownership and operation of the MEA Portion. Notwithstanding the foregoing or any other provision of this Agreement, any non-compliance with Applicable Law that, individually or in the aggregate, could not reasonably be expected to have a material adverse effect on the business or financial condition of the Party or its ability to fulfill its commitments hereunder shall not be deemed to be a breach of this PPA. Each Party shall promptly disclose to the other, any material violation of any Applicable Laws arising out of or in connection with the Facility and this PPA. This PPA will not take effect until the prior approval of the RCA as required by AS 42.05.431(b).

Section 18.4 Rates, Terms, and Conditions Binding. The Parties agree that the rates (including Contract Price), terms, and conditions for products and services specified in this PPA shall remain in effect for the Term. In addition, to the fullest extent permitted by Applicable Law, each Party, for itself and its successors and assigns, hereby expressly and irrevocably (i) waives any rights that it may have, now or in the future, whether under AS 42.05.431(a), AS 42.05.431(b), or otherwise, to seek to obtain from the RCA by any means, directly or indirectly (through complaint, investigation, or otherwise), and (ii) covenants and agrees not at any time to seek so to obtain, an order from the RCA changing any section of this PPA specifying the rate, charge, or classification ("**Justness or Reasonableness Conditions**") agreed to by the Parties, it being the express intent of the Parties that, to the fullest extent permitted by Applicable Law, neither Party will unilaterally seek to obtain from the RCA any relief changing the Justness or Reasonableness Conditions of this PPA, notwithstanding any subsequent changes that may occur in Applicable Law or market conditions.

Section 18.5 Public Announcements. Neither Party shall at any time make, with respect to the transactions to be consummated by this PPA, publish, or communicate to any Person in any public forum any defamatory, maliciously false, or disparaging remarks,

comments, or statements concerning the other Party or any of its employees, officers, officials or directors.

Section 18.6 No Third-Party Beneficiaries. This PPA is for the sole benefit of the Parties and their respective successors and permitted assigns and nothing herein, express or implied, is intended to or shall confer upon any other Person or entity any legal or equitable right, benefit or remedy of any nature whatsoever under or by reason of this PPA.

Section 18.7 Amendment and Modification; Waiver. This PPA may only be amended, modified or supplemented by an agreement in writing signed by each Party. No waiver by any Party of any of the provisions hereof shall be effective unless explicitly set forth in writing and signed by the Party so waiving. No waiver by any Party shall operate or be construed as a waiver in respect of any failure, breach or default not expressly identified by such written waiver, whether of a similar or different character, and whether occurring before or after that waiver. No failure to exercise, or delay in exercising, any right, remedy, power or privilege arising from this PPA shall operate or be construed as a waiver thereof; nor shall any single or partial exercise of any right, remedy, power or privilege hereunder preclude any other or further exercise thereof or the exercise of any other right, remedy, power or privilege.

Section 18.8 Governing Law; Submission to Jurisdiction; Waiver of Jury Trial.

(A) This PPA shall be governed by and construed in accordance with the internal laws of the State of Alaska, without regard to conflict of law principles that would result in the application of the laws of any other jurisdiction.

(B) ANY LEGAL SUIT, ACTION OR PROCEEDING ARISING OUT OF OR BASED UPON THIS PPA OR THE TRANSACTIONS CONTEMPLATED HEREBY MAY BE INSTITUTED IN THE SUPERIOR COURT OF THE STATE OF ALASKA IN IN THE THIRD JUDICIAL DISTRICT, LOCATED IN ANCHORAGE, ALASKA, AND EACH PARTY IRREVOCABLY SUBMITS TO THE EXCLUSIVE JURISDICTION OF SUCH COURT IN ANY SUCH SUIT, ACTION OR PROCEEDING. SERVICE OF PROCESS, SUMMONS, NOTICE OR OTHER DOCUMENT BY MAIL TO SUCH PARTY'S ADDRESS SET FORTH HEREIN SHALL BE EFFECTIVE SERVICE OF PROCESS FOR ANY SUIT, ACTION OR OTHER PROCEEDING BROUGHT IN SUCH COURT. THE PARTIES IRREVOCABLY AND UNCONDITIONALLY WAIVE ANY OBJECTION TO THE LAYING OF VENUE OF ANY SUIT, ACTION OR ANY PROCEEDING IN SUCH COURT AND IRREVOCABLY WAIVE AND AGREE NOT TO PLEAD OR CLAIM IN ANY SUCH COURT THAT ANY SUCH SUIT, ACTION OR PROCEEDING BROUGHT IN SUCH COURT HAS BEEN BROUGHT IN AN INCONVENIENT FORUM.

(C) EACH PARTY ACKNOWLEDGES AND AGREES THAT ANY CONTROVERSY WHICH MAY ARISE UNDER THIS PPA IS LIKELY TO INVOLVE COMPLICATED AND DIFFICULT ISSUES AND, THEREFORE, EACH SUCH PARTY IRREVOCABLY AND UNCONDITIONALLY WAIVES ANY RIGHT IT MAY HAVE TO A TRIAL BY JURY IN RESPECT OF ANY LEGAL ACTION ARISING OUT OF OR RELATING TO THIS PPA OR THE TRANSACTIONS CONTEMPLATED HEREBY. EACH PARTY TO THIS PPA

CERTIFIES AND ACKNOWLEDGES THAT (A) NO REPRESENTATIVE OF ANY OTHER PARTY HAS REPRESENTED, EXPRESSLY OR OTHERWISE, THAT SUCH OTHER PARTY WOULD NOT SEEK TO ENFORCE THE FOREGOING WAIVER IN THE EVENT OF A LEGAL ACTION, (B) SUCH PARTY HAS CONSIDERED THE IMPLICATIONS OF THIS WAIVER, (C) SUCH PARTY MAKES THIS WAIVER VOLUNTARILY, AND (D) SUCH PARTY HAS BEEN INDUCED TO ENTER INTO THIS PPA BY, AMONG OTHER THINGS, THE MUTUAL WAIVERS AND CERTIFICATIONS IN THIS SECTION 18.8.

Section 18.9 Specific Enforcement. The Parties agree that irreparable damage would occur if any provision of this PPA were not performed in accordance with the terms hereof and that the Parties shall be entitled to specific performance of the terms hereof, in addition to any other remedy to which they are entitled at law or in equity. The Parties acknowledge and agree that (A) the Parties shall be entitled to an injunction, specific performance or other equitable relief to prevent breaches of this PPA and to enforce specifically the terms and provisions hereto, without proof of damages, this being in addition to any other remedy to which they are entitled under this PPA and (B) the right to specific enforcement is an integral part of the transactions contemplated by this PPA and without that right, neither Seller nor Purchaser would have entered into this PPA. Each Party agrees that it will not oppose the granting of specific performance and other equitable relief on the basis that the other Party has an adequate remedy at law or that an award of specific performance is not an appropriate remedy for any reason at law or equity. The Parties acknowledge and agree that any Party seeking an injunction to prevent breaches of this PPA and to enforce specifically the terms and provisions of this PPA in accordance with this Section 18.9 shall not be required to provide any bond or other security in connection with any such injunction.

Section 18.10 Waiver of Sovereign Immunity. Seller agrees that it is subject to civil and commercial suit for any breach of contract obligations under this PPA. To the extent that Seller may be entitled to claim sovereign, governmental, or municipal immunity from any liability in such a civil or commercial suit by Purchaser, Seller hereby agrees not to claim, and hereby waives, such sovereign, governmental, or municipal immunity.

Section 18.11 RCA PPA Approval. Seller and Purchaser will use Commercially Reasonable efforts to cooperate and each advocate to obtain an order from the Regulatory Commission of Alaska (the "**RCA**") approving this PPA; and which order from the RCA shall not contain any condition or conditions materially adverse to either Purchaser or Seller, as determined by Purchaser or Seller with respect to itself in good faith and in the exercise of its Commercially Reasonable business judgment ("**RCA PPA Approval**"). It is the understanding of the Parties that this PPA, as a wholesale power agreement between public utilities governed by AS 42.05.431(b), will not take effect without the prior approval of the RCA, and will at all times after any such approval be subject to the RCA's continuing authority over wholesale power agreements.

Section 18.12 Relationship of the Parties. This PPA shall not be interpreted to create an association, joint venture, or partnership between the Parties or to impose any partnership obligation or liability upon either Party. Except as specifically provided for in this PPA to the contrary, neither Party shall have any right, power, or authority to enter into any agreement or undertaking for, or act on behalf of, or to act as an agent or representative of, the other Party.

Section 18.13 Successors and Assigns. Subject to the provisions of Section 17.1, Agreement shall be binding upon and shall inure to the benefit of the Parties and their respective successors and permitted assigns. No assignment shall relieve the assigning party of any of its obligations hereunder.

Section 18.14 Security Interest.

(A) The Parties agree, acknowledge and intend that the legal status of this PPA is and shall be as a power purchase agreement, a forward contract (as defined in the Bankruptcy Code), a commodity forward agreement (and thus a swap agreement as defined in the Bankruptcy Code), and a master netting agreement (as defined in the Bankruptcy Code), and not a secured purchase of the MEA Portion or any other alternative form of transaction, and that Seller will at all times during the Term have and retain full undivided ownership of the MEA Portion. Accordingly, each Party acknowledges and agrees that: (1) it shall not assert that the transactions contemplated under this PPA are a secured financing of any sort; and (2) it shall cooperate with the other Party in defending against any assertion by a third party that the transactions contemplated hereunder constitute a secured financing.

(B) Notwithstanding the foregoing, as security for the prompt payment and performance of all obligations of Purchaser under this PPA, including the payment of the Contract Price to Seller, and solely as a precaution in the event that this PPA should be construed as a secured financing such that Purchaser shall be deemed to have acquired title to the MEA Portion at any time (other than by exercise of the Purchase Option under Section 17.3), Purchaser hereby grants to Seller a senior, first priority purchase money lien on and security interest in and to, and right of set-off with respect to, all right, title, and interest of Purchaser in and to the MEA Portion (including all right, title, and interest in and to any Power attributable to the MEA Portion, except as and to the extent that such Power is delivered to Purchaser at the Delivery Point under and in accordance with the express provisions of this PPA) and all proceeds thereof (collectively, the "**Collateral**") (such senior, first priority purchase money lien on and security interest in and to the Collateral, the "**Seller Security Interest**"). In addition, notwithstanding ARTICLE 17, Purchaser (i) represents and warrants to Seller as of each of the Effective Date and the Commencement Date that (a) Purchaser has provided Seller with a true and correct copy of the Mortgage, including all supplements and amendments thereto and (b) there are no liens or security interests in or on the assets of Purchaser that encumber the Collateral as of the Effective Date, and that there will be no liens or security interests in or on the assets of Purchaser that will encumber the Collateral as of the Commencement Date; (ii) covenants and agrees that Purchaser shall provide to Seller, at or prior to the Closing under the Chugach Asset Purchase Agreement, (a) an original subordination agreement, executed by the Mortgagees and in the form set forth in Exhibit D, subordinating the priority of any lien that the Mortgagees may acquire in the Collateral, including as a result of any lien granted under the Mortgage in after-acquired property of Purchaser or any liens granted to the Mortgagees in any bankruptcy proceeding of Purchaser, to the priority of the Seller Security Interest (the "**CFC Subordination Agreement**"), and acknowledged by Purchaser through its execution of the acknowledgment and acceptance attached thereto; and (b) evidence of the recording of the CFC Subordination Agreement in all recording offices in the State of Alaska in which the lien of the Mortgage has been recorded: and (iii) covenants and agrees that Purchaser shall not, without

Seller's prior written consent, grant any security interest in the Collateral, including (a) in connection with this PPA and the transactions contemplated hereunder, or (b) any grant of a lien to the Mortgagees pursuant to Granting Clause 2.01 of the Mortgage or otherwise. In connection with the lien and security interest granted to Seller in this Section 18.14(B), Seller shall have the rights and remedies of a secured party or mortgagee under Applicable Law, including the UCC. Purchaser hereby authorizes Seller to file UCC financing statements and to record instruments with any appropriate Governmental Authority, and to make other similar filings and recordings with respect hereto as Seller shall elect in its sole discretion for the purposes of recording and perfecting its lien and security interest in the Collateral.

Section 18.15 Survival of Obligations. The applicable provisions of this PPA shall continue in effect after termination to the extent necessary to (A) provide for final billings, payments, and adjustments, (B) enforce or complete the duties, obligations, or responsibilities of the Parties, and (C) address any remedies or indemnification rights arising prior to termination. Cancellation, expiration, or earlier termination of this PPA shall not relieve the Parties of obligations, including warranties, remedies, or indemnities, that by their nature should survive such cancellation, expiration, or termination, which obligations shall survive for the period of the applicable statute(s) of limitation.

Section 18.16 Further Assurances. Upon the receipt of a written request from the other Party, each Party shall execute such reasonable additional documents, instruments and assurances and take such additional actions as are reasonably necessary and desirable to carry out the terms and intent hereof. Neither Party shall unreasonably withhold, condition, or delay its compliance with any reasonable request made pursuant to this Section 18.16.

Section 18.17 Severability. If any term or provision of this PPA is invalid, illegal or unenforceable in any jurisdiction, such invalidity, illegality or unenforceability shall not affect any other term or provision of this PPA or invalidate or render unenforceable such term or provision in any other jurisdiction. Upon such determination that any term or other provision is invalid, illegal or unenforceable, the Parties shall negotiate in good faith to modify this PPA so as to effect the original intent of the Parties as closely as possible in a mutually acceptable manner in order that the transactions contemplated hereby be consummated as originally contemplated to the greatest extent possible.

Section 18.18 Complete Agreement. This PPA constitutes the sole and entire agreement of the Parties with respect to the subject matter contained herein, and supersedes all prior and contemporaneous understandings and agreements, both written and oral, with respect to such subject matter.

Section 18.19 Headings. The headings in this PPA are for reference only and shall not affect the interpretation of this PPA.

Section 18.20 Counterparts. This PPA may be executed in counterparts, each of which shall be deemed an original, but all of which together shall be deemed to be one and the same agreement. A signed copy of this PPA delivered by facsimile, e-mail or other means of electronic

transmission shall be deemed to have the same legal effect as delivery of an original signed copy of this PPA.

Section 18.21 Exhibits. Exhibits may be changed to the extent allowed by specific provisions of this PPA or with the mutual consent of both Parties.

[Signature Page Follows]

IN WITNESS WHEREOF, the Parties have executed this PPA as of the Effective Date.

Seller:

MUNICIPALITY OF ANCHORAGE

By _____

Name: William D. Falsey
Title: Municipal Manager

Purchaser:

MATANUSKA ELECTRIC ASSOCIATION, INC.

By _____ 9/11/19

Name: Anthony M. Izzo
Title: Chief Executive Officer

EXHIBIT A

DEFINITIONS

The following terms shall have the meanings set forth herein:

"**Actual Damages**" has the meaning set forth in Section 11.2(B).

"**Affiliate**" of a Person means any other Person that directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, such Person. The term "control" (including the terms "controlled by" and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of a Person, whether through the ownership of voting securities, by contract, or otherwise.

"**Ancillary Services**" all ancillary products associated, in accordance with Prudent Utility Practice, with the generation of Energy, including spinning reserves, non-spinning reserves, reactive power and voltage control.

"**Applicable Law**" means any statute, law, ordinance, regulation, rule, code, order, constitution, treaty, common law, judgment, decree, Permit requirement, other binding requirement or rule of law of, or compulsory standard established by, any Governmental Authority.

"**Bankruptcy Code**" means 11 U.S.C. §§ 101 et seq. (Title 11, United States Code).

"**Bradley Lake Agreement**" means the Bradley Lake Hydroelectric Project Agreement for the Sale and Purchase of Electric Power dated as of December 8, 1987 by and among the Alaska Energy Authority as successor to The Alaska Power Authority, Chugach, The Golden Valley Electric Association, Inc., Seller, The City of Seward d/b/a/Seward Electric System, The Alaska Electric Generation & Transmission Cooperative, Inc., The Homer Electric Association, Inc., and Purchaser.

"**Business Day**" means any day that is not a Saturday, a Sunday, or any other day on which commercial banks in Anchorage, Alaska are required to be closed for business.

"**Capacity**" means the total electrical generating capacity of the Facility, including any capacity products that are able to be accredited under Applicable Law.

"**CFC Subordination Agreement**" shall have the meaning set forth in Section 18.14(B).

"**Change in Laws**" means any addition, amendment, decision, ruling, order, or binding interpretation to or regarding any Applicable Laws, by or of a Governmental Authority having jurisdiction or authority, that is enacted, issued, or becomes legally effective after the Effective Date.

"**Chugach**" means Chugach Electric Association, Inc., a not-for-profit Alaska electric cooperative corporation.

"**Chugach Asset Purchase Agreement**" has the meaning set forth in Section 2.1.

"**Chugach Portion**" means a portion of the Seller's Interest equal to a 64.29% share of the Seller's Interest; *provided, however*, that if this PPA is terminated for any reason at any time prior to the Scheduled Termination Date, the "Chugach Portion" shall, from the effectiveness of such termination until the Scheduled Termination Date (but only so long as the Chugach Power Purchase Agreement remains in full force and effect), be deemed to be a percentage interest equal to the Seller's Interest.

"**Chugach Power Purchase Agreement**" has the meaning set forth in Section 2.1.

"**Collateral**" shall have the meaning set forth in Section 18.14(B).

"**Commencement Date**" shall have the meaning set forth in Section 3.2.

"**Commercially Reasonable**" or "**Commercially Reasonable Efforts**" means, with respect to any action required to be made, attempted or taken by a Party under this PPA, the level of effort in light of the facts known to such Party at the time a decision is made that: (a) can reasonably be expected to accomplish the desired action at a reasonable cost; (b) is consistent with Prudent Utility Practice; and (c) takes into consideration the amount of advance notice required to take such action, the duration and type of action and the competitive environment in which such action occurs.

"**Contract Price**" has the meaning set forth in Section 7.1.

"**Contract Year**" has the following meaning: the first Contract Year means the period beginning on the Commencement Date and ending on the last day of the month of the first anniversary of the Commencement Date. The second Contract Year and each subsequent Contract Year means the period beginning on the first day after the last day of the previous Contract Year and ending on the last day of the twelfth calendar month thereafter.

"**Credit Rating**" means (i) with respect to any entity other than a financial institution, the current (A) rating issued or maintained by S&P or Moody's with respect to such entity's long-term senior, unsecured, unsubordinated debt obligations (not supported by insurance provider or other third-party credit enhancements) or (B) corporate credit rating or long-term issuer rating issued or maintained with respect to such entity by S&P or Moody's, or (ii) if such entity is a financial institution, the ratings issued or maintained by S&P or Moody's with respect to such entity's long-term, unsecured, unsubordinated deposits.

"**Creditworthy Entity**" means a Person having at the applicable time a Credit Rating of (a) BBB or better from S&P, or (b) Baa2 or better from Moody's, or (c) if such Person has a Credit Rating at such time from both S&Ps and Moody's, BBB or better from S&P and Baa2 or better from Moody's.

"**day**" means a calendar day.

"**Delivery Point**" means the low side of the step-up transformer(s) within the Facility switchyard.

"**Dispute**" shall have the meaning set forth in Section 12.1.

"**Effective Date**" shall have the meaning set forth in the preamble.

"**Eklutna Transmission Assets**" means the Transmission Assets of the Eklutna Hydroelectric Project set forth on Exhibit F to the Chugach Asset Purchase Agreement.

"**Eligible Energy Resource**" means any resource that qualifies as a renewable energy resource eligible to be certified to receive, claim, own or use renewable energy certificates pursuant to the protocols and procedures under any applicable REC Registration Program.

"**Energy**" means the net electric energy that is generated from the Facility that is delivered to the Delivery Point, as measured in accordance with Section 5.2. Energy shall be net of energy self-generated and concurrently consumed by the Facility, and net of all losses prior to the Delivery Point, including line, inverter, and transformer losses.

"**Environmental Attributes**" means any and all renewable resource attributes (including renewable energy certificates or credits or similar rights arising out of any applicable REC Registration Program), green tags, emissions or carbon credits, reductions, offsets, and allowances, and any other environmentally related attributes that are, or in the future may be, recognized by any Governmental Authority, and that are attributable to the availability, production, purchase or sale of Energy from the Facility. For the avoidance of doubt, "Environmental Attributes" do not include any Tax Benefits.

"**ERO**" means the Electric Reliability Organization certified by FERC pursuant to Section 215 of the Federal Power Act or any successor organization.

"**Event of Default**" shall have the meaning set forth in Section 11.1.

"**Extension Agreement**" means that certain Agreement for Extension of 1996 Eklutna Hydroelectric Project Transition Plan dated October 2, 1997 by and among the Owners.

"**Facility**" means the Eklutna Hydroelectric Project, as further described in Exhibit B, including all of the following: all equipment, buildings, generators, inverters, step-up transformers, output breakers, protective and associated equipment, improvements, and other tangible assets, contract rights, easements, rights of way, surface use agreements and other interests or rights in real estate reasonably necessary for construction, operation, maintenance, generation, and delivery of the Energy, Ancillary Services, and Capacity subject to this PPA; *provided, however*, that the Facility does not include any right, title, or interest of Seller in or to the Eklutna Transmission Assets.

"**Facility Metering**" means revenue quality meters, metering equipment and data processing equipment used to measure, record or transmit data relating to the output from the Facility, including the metering current transformers and the metering voltage transformers.

"**Federal Power Act**" means the provisions of 16 U.S.C. 791(A) et seq. and amendments or supplements thereto.

"**FERC**" means the Federal Energy Regulatory Commission or any successor agency.

"**Financing Documents**" means the loan and credit agreements, notes, bonds, indentures, security agreements, lease financing agreements, mortgages, deeds of trust, interest rate exchanges, swap agreements, and other documents relating to a Party's financing transactions, including any credit enhancement, credit support, working capital financing, or refinancing documents, and any and all amendments, modifications, or supplements to the foregoing that may be entered into from time to time at the discretion of the Party.

"**Fish and Wildlife Agreement**" means the August 7, 1991 Agreement between the Municipality of Anchorage, dba Anchorage Municipal Light and Power, Chugach, Purchaser, U. S. Fish and Wildlife Service, National Marine Fisheries Service, Alaska Energy Authority and the State of Alaska, Relative to the Eklutna and Snettisham Hydroelectric Projects.

"**Force Majeure**" means an event or circumstance that prevents a Party from performing its obligations under this PPA, which event or circumstance (i) was not reasonably anticipated as of the Effective Date, (ii) is not within the reasonable control of or the result of the fault or negligence of the Party claiming its occurrence, and (iii) which by exercise of due diligence and foresight could not reasonably have been avoided. *provided, however*, that such an event or circumstance shall not include: (a) delays or nonperformance by suppliers, vendors, or other third parties with which a Party has contracted, except to the extent that such delays or nonperformance were due to circumstances that would constitute "Force Majeure" as defined above; (b) mechanical or equipment breakdown or inability to operate unless caused by reason of Force Majeure; (c) changes in market conditions; (d) any labor strikes, slowdowns, work stoppages, or other labor disruptions limited only to a Party or a Party's Affiliates; (e) Seller's inability to obtain any credit or incentive in connection with the Facility, including any such inability that is attributable to any failure to meet placed-in-service or safe harbor provisions regardless of whether an event of Force Majeure may have caused or contributed to such failure, (f) the loss of Purchaser's markets or Purchaser's inability economically to use or resell any of the Power purchased hereunder, except to the extent that such loss of markets or inability to use or resell were due to circumstances that would constitute "Force Majeure" as defined above; (g) Purchaser's failure to contract for and reserve sufficient firm transmission capacity to deliver the Power to any transmission point(s) of receipt or any delivery point(s); (h) Seller's ability to sell Power to a market at a more advantageous price; or (i) Purchaser's ability to purchase Power in or from any market at a more advantageous price.

"**Forced Outage**" means any condition at the Facility that requires the immediate and unplanned removal of the Facility, or at least ten percent (10%) thereof, from service, another outage state, or a reserve shutdown state, resulting from immediate mechanical/electrical/hydraulic control system trips and operator-initiated trips in response to abnormal Facility conditions or alarms.

"**Governmental Authority**" means any federal, state, local or foreign government, or political subdivision thereof, or any agency or instrumentality of such government or political subdivision, or any self-regulated organization or other non-governmental regulatory authority or quasi-governmental authority (to the extent that the rules, regulations, or orders of such organization or authority have the force of Law), or any arbitrator, court, or tribunal of competent

jurisdiction. References to "Governmental Authority" shall exclude Seller except Seller is acting in a legislative or regulatory capacity as expressly authorized by Applicable Law.

"**Governmental Charges**" means any taxes, charges or costs that are assessed or levied by any Governmental Authority or other Person (other than charges imposed by any transmission provider), including local, state, or federal regulatory or taxing authorities that would affect the sale and purchase of Power contemplated by this PPA, either directly or indirectly.

"**Indemnified Party**" shall have the meaning set forth in Section 16.1.

"**Indemnifying Party**" shall have the meaning set forth in Section 16.1.

"**Interest Rate**" means, for any date, the lesser of (a) the per annum rate of interest equal to the prime lending rate as may from time to time be published in *The Wall Street Journal* under "Money Rates" on such day (or if not published on such day, on the most recent preceding day on which published), plus two percent (2%), and (b) the maximum rate permitted by Applicable Law.

"**ISO**" means an independent system operator or regional transmission organization that coordinates, controls and monitors the operation of a public electrical power system or any similar operator or organization created by Applicable Law after the date of this PPA.

"**Justness or Reasonableness Conditions**" shall have the meaning set forth in Section 18.4.

"**Lender**" means any commercial bank, investment bank or trustee under Financing Documents that makes a loan to or extends other credit in favor of Purchaser.

"**MEA Avoided Cost Rate**" means the rate (in $/MWh) as filed by Purchaser with the RCA in MEA Tariff Sheet No. 107, Line J or its successor.

"**MEA Portion**" shall have the meaning set forth in the recitals to this Agreement.

"**ML&P**" means Municipal Light and Power, an electric utility that, as of the Effective Date, is owned and operated by Seller and serves customers in the Municipality of Anchorage, Alaska.

"**Moody's**" means Moody's Investors Services, Inc.

"**Mortgage**" means the Amended and Restated Open End Mortgage and Security Agreement, dated as of June 11, 2012, by and among Purchaser, as Mortgagor, National Rural Utilities Cooperative Finance Corporation, as Mortgagee, and National Cooperative Services Corporation, as Mortgagee, as the same has been or may be amended or supplemented from time to time.

"**Mortgagees**" means, collectively, National Rural Utilities Cooperative Finance Corporation, as Mortgagee under the Mortgage, and National Cooperative Services Corporation, as Mortgagee under the Mortgage.

"**Net Book Value**" means, for purposes of determining the Purchase Price for the MEA Portion, gross plant in service (including customer-contributed plant) at original cost, less accumulated depreciation and amortization.

"**Notice**" shall have the meaning set forth in Section 18.1.

"**Operating Committee**" shall mean the "Eklutna Operating Committee" or "EOC" set forth in the Operations Agreement.

"**Operating Records**" means all agreements associated with the Facility, operating logs, blueprints for construction, operating manuals, all warranties on equipment, and all documents, whether in printed or electronic format, that Seller uses or maintains for the operation of the Facility.

"**Operations Agreement**" means the Eklutna Purchasers Manner of Acting, Functional Responsibilities, and Staffing, attached as Exhibit E to the Transition Plan, as the same has been or may be amended or supplemented from time to time.

"**Owners**" means the owners of the Facility. As of the Effective Date, the Owners are Seller (with respect to the Seller's Interest), Purchaser (with respect to the Purchaser's Interest), and Chugach (with respect to the remaining 9/30 (30.0%) undivided ownership interest in the Facility).

"**Party**" and "**Parties**" shall have the meanings set forth in the introductory paragraph.

"**Permit(s)**" means all applicable construction, land use, air quality, emissions control, environmental and other permits, licenses and approvals from any Governmental Authority required under Applicable Laws for construction, ownership, operation and maintenance of the Facility and the generation and delivery of any output from the Facility to Purchaser.

"**Person**" means an individual, corporation, partnership, joint venture, limited liability company, Governmental Authority, unincorporated organization, trust, association or other entity.

"**Planned Outage**" means any planned outage of the Facility or any portion thereof that is required for maintenance purposes.

"**Power**" shall have the meaning set forth in Section 6.1(A).

"**PPA Contingencies**" shall have the meaning set forth in Section 3.1.

"**Prudent Utility Practice**" means any applicable practices, methods, and acts engaged in or approved by a significant portion of (a) as to Seller, the hydroelectric generating industry in the United States of America, or (b) as to Purchaser, the electric utility industry in the United States of America, during the relevant time period, or the practices, methods and acts which, in the exercise of reasonable judgment by a prudent hydroelectric generator operator (or prudent utility operator, if applicable to Purchaser) in light of the facts known or which should reasonably have been known at the time the decision was made, could have been expected to

accomplish the desired result at the lowest reasonable cost consistent with good business practices, reliability, safety, expedition and the requirements of any governing authority having jurisdiction. Without limitation of the foregoing, "Prudent Utility Practice" shall include the applicable operating policies, standards, criteria, or guidelines of any applicable governing authority and any manufacturer of a component of the Project. "Prudent Utility Practice" is not intended to be limited to the optimum practice, method or act to the exclusion of all others, but rather to the acceptable practices, methods or acts generally accepted (a) as to Seller, by the hydroelectric energy electric generating industry in the United States of America or (b) as to Purchaser, by the electric utility industry in the United States of America.

"**Purchase Option**" shall have the meaning set forth in Section 17.3.

"**Purchase Price**" means the Net Book Value of the MEA Portion as of the last day of the Term.

"**Purchaser**" shall have the meaning set forth in the first paragraph of this PPA.

"**Purchaser's Interest**" shall have the meaning set forth in the recitals to this PPA.

"**RCA**" shall have the meaning set forth in Section 18.11.

"**RCA PPA Approval**" shall have the meaning set forth in Section 18.11.

"**REC Registration Program**" means any state, regional or federal program established to register Eligible Energy Resources and create and certify renewable energy certificates arising from energy generated from such Resource, including any rights associated with any renewable energy information or tracking system that exists or may be established by Applicable Law with regard to monitoring, registering, tracking, certifying, or trading such credits.

"**Replacement Price**" means the price at which Purchaser, acting in a commercially reasonable manner, purchases a replacement for any scheduled Power not delivered by Seller, plus (i) costs reasonably incurred by Purchaser in purchasing such substitute Power and (ii) additional transmission charges, if any, reasonably incurred by Purchaser to the Delivery Point, or, absent a purchase, the market price for such Power not delivered as determined by Purchaser in a commercially reasonable manner; *provided, however*, in no event will the Replacement Price include any penalties, ratcheted demand or similar charges, nor will Purchaser be required to utilize or change its utilization of its owned or controlled assets or market positions to minimize Seller's liability.

"**S&P**" means the Standard & Poor's Rating Group, a division of The McGraw-Hill Companies.

"**Sales Price**" means the price at which Seller, acting in a commercially reasonable manner, resells any scheduled Power not received by Purchaser, deducting from such proceeds any (i) costs reasonably incurred by Seller in reselling such Power and (ii) additional transmission charges, if any, reasonably incurred by Seller in delivering such Power to the third party purchasers, or, absent a sale (assuming that a sale could have been made by Seller with the

exercise of commercially reasonable efforts), the market price for such scheduled Power as determined by Seller in a commercially reasonable manner; *provided, however*, if Seller is unable after using commercially reasonable efforts to resell all or a portion of the Power not received by Purchaser, the Sales Price with respect to such Power will be deemed equal to zero; *provided, further*, in no event will the Sales Price include any penalties, ratcheted demand or similar charges, nor will Seller be required to utilize or change its utilization of its owned or controlled assets, including contractual assets, or market positions to minimize Purchaser's liability.

"**Scheduled Termination Date**" means the last day of the calendar month thirty-five (35) years after the Commencement Date.

"**Seller**" shall have the meaning set forth in the first paragraph of this PPA.

"**Seller Security Interest**" shall have the meaning set forth in Section 18.14(B).

"**Seller's Interest**" shall have the meaning set forth in the recitals to this PPA.

"**Seller's Representative**" shall have the meaning set forth in Section 4.2.

"**Site**" means the parcel of real property on which the Facility is constructed and located, including any easements, rights of way, surface use agreements and other interests or rights in real estate reasonably necessary for the operation and maintenance of the Facility. The Site is more specifically described in Exhibit B to this PPA.

"**Tax Benefits**" means any and all (i) tax credits based on ownership of, investment in or energy production from the Facility or any portion thereof, (ii) grants based on ownership of, investment in or energy production from the Facility or any portion thereof, including the grant described in Section 1603 of the American Recovery and Reinvestment Tax Act of 2009 and (iii) other tax benefits, including depreciation and other cost recovery deductions, arising in connection with ownership of, investment in, or operation of the Facility, or any portion thereof, in each case allocated, allowed, allowable, assigned, awarded, certified or otherwise transferred or granted to Seller or Purchaser by any Governmental Authority in any jurisdiction in connection with the Facility.

"**Term**" means the period of time during which this PPA shall remain in full force and effect as further defined in Section 3.3 and as may be extended pursuant to Section 17.3.

"**Term Extension**" shall have the meaning set forth in Section 17.3.

"**Transition Plan**" means the 1996 Eklutna Hydroelectric Project Transition Plan dated May 28, 1996 by and among the United States of America d/b/a Alaska Power Administration, a unit of the Department of Energy, and the Owners, as the same has been amended and extended by the Extension Agreement, including the exhibits to such agreement, and as the same may be amended or supplemented from time to time.

"**UCC**" means the Uniform Commercial Code of the State of Alaska.

FACILITY DESCRIPTION AND SITE MAPS

Eklutna Purchase Agreement
Exhibit A

August 2, 1989
Page 1 of 2

Lands, Easements and Rights-of-Way

Exhibit A consists of this narrative (pages 1 and 2 of 2) and the map prepared by BLM, signed and dated February 3, 1989.

This exhibit describes and displays present land status for the Eklutna Hydroelectric Project and describes in general terms the conveyances of land and land rights contemplated in the purchase agreement.

1. BLM - managed lands and military lands used for Eklutna Project for which BLM is to provide APAd rights-of-way sufficient for operation, maintenance, repair and replacement of Eklutna facilities, such rights-of-way to be assigned by APAd to the Purchasers.

   Legend Symbols and Description.

   Withdrawals. Refers to approximately 863 acres of public lands withdrawn for Eklutna at the "Intake Area," "Power Tunnel," "Eklutna Powerplant" and "Anchorage Substation." The total acreage is comprised of the following land:

   a. Approximately 320 acres withdrawn for the "Power Tunnel" under Public Land Order 1231 dated September 28, 1955.

   b. Approximately 230 acres utilized for the "Intake Area" and approximately 60 acres for a portion of "Eklutna Powerplant" as described by ANCSA 3(e) determination AA-51183 dated July 30, 1986.

   c. Approximately 243 acres utilized for "Eklutna Powerplant" as described by ANCSA 3(e) determination AA-42534 dated September 1, 1982.

   d. Approximately 10 acres withdrawn for "Anchorage Substation" under Secretarial Order dated April 4, 1952.

   State Land-R/W. Refers to rights-of-way across State-selected lands covering the transmission line east of "Eklutna Powerplant" to the Knik River.

   Military Land-R/W. Refers to rights-of-way across military lands used for Eklutna transmission lines.

Acquired-3(e). Refers to approximately 2.5 acres of acquired land used for "Reed Substation" as described by ANCSA 3(e) determination AA-45155 dated July 30, 1985.

2. ANCSA 17(b) Easements.

Map symbol: Native Land - 17(b) Easements.

Refers to rights-of-way that are reserved for portions of the 115kV transmission line, access roads and other Eklutna facilities located on Native corporation lands, and exist as easement reservations in the ANCSA conveyances to the Native corporations pursuant to Section 17(b) of ANCSA. These easements will not be altered by the sale of Eklutna and the Purchasers may use these easements for their intended purposes.

3. APAd Acquired Land and Easements.

Refers to land and easements acquired by the Bureau of Reclamation (predecessor of APAd) during construction of Eklutna and now controlled by APAd. APAd will assign the land and easements to the Purchasers.

Legend Symbols and Description:

Acquired. Refers to approximately 0.8 acres of land owned by APAd at Palmer Substation.

Acquired-Easements. Refers to approximately 33 easements across private lands acquired by the Bureau of Reclamation (predecessor of APAd) and now held by APAd.

4. Other Easements on Private Land.

Map [Symbol]: Note: Other Easements on Private Lands To Be Acquired - See Exhibit A Narrative

Refers to approximately two hundred and fifty (250) parcels of private land located along the 115kV transmission line, many of which require title curative action for purposes of perfecting assignable easement rights or rights-of-way for the Purchasers. APAd shall be responsible for acquiring assignable easement rights or rights-of-way across these lands, for subsequent assignment to Purchasers.

5. Reservoir.

Eklutna Lake as designated on the map is the ~~Exhibit~~ Reservoir described in the body of the Agreement.

EXHIBIT C

CONTRACT PRICE

The Contract Price during each year of the Term will be a fixed dollar amount for each MWh (or portion thereof) of Power delivered from the MEA Portion to the Delivery Point. The Contract Price during the first year of the Term will be an amount equal to 85% of the MEA Avoided Cost Rate effective on January 1 of the first year of the Term. The Contract Price will escalate at the rate of one percent (1%) on January 1 of each year of the Term thereafter; *provided, however*, that the Contract Price will reset on January 1 of every third year during the Term to 85% of the then effective MEA Avoided Cost Rate.

EXHIBIT D

FORM OF CFC SUBORDINATION AGREEMENT

SUBORDINATION AGREEMENT

This **SUBORDINATION AGREEMENT** (this "Agreement") dated as of _____, 2019, is by and between:

NATIONAL RURAL UTILITIES COOPERATIVE FINANCE CORPORATION, a cooperative association organized and existing under the laws of the District of Columbia ("CFC"), and **NATIONAL COOPERATIVE SERVICES CORPORATION**, a cooperative association organized and existing under the laws of the District of Columbia ("NCSC," and together with CFC, "Subordinated Creditor"); and

MUNICIPALITY OF ANCHORAGE, a political subdivision organized under the laws of the State of Alaska ("Senior Creditor," and together with Subordinated Creditor, the "Parties" and each a "Party").

W I T N E S E T H T H A T:

Pursuant to the Amended and Restated Open End Mortgage and Security Agreement, dated as of June 11, 2012, by and among **MATANUSKA ELECTRIC ASSOCIATION, INC.**, an Alaska not-for-profit electric cooperative corporation ("MEA"), as mortgagor, and CFC and NCSC, as mortgagees, as the same has been or may be amended or supplemented from time to time, including without limitation by that certain Modification dated June 20, 2013 and Second Modification dated October 2, 2014 (the "Mortgage"), MEA has granted a security interest to Subordinated Creditor in certain of MEA's real and personal property (including after-acquired property) as security for loans by CFC and NCSC, evidenced by certain promissory notes (referred to as "Notes" under the Mortgage, and hereunder as the "Notes") and loan agreements (referred to collectively as the "Loan Agreement" under the Mortgage, and hereunder as the "Loan Agreement").

Pursuant to the Eklutna Power Purchase Agreement, dated as of _____, 2019, between MEA and Senior Creditor, as the same has been or may be amended or supplemented from time to time (the "PPA"),[1] and solely as a precaution in the event that the PPA should be construed as a secured financing such that MEA shall be deemed to have acquired title to the MEA Portion at any time (other than by exercise of the Purchase Option under Section 17.3 of the PPA) (a "Title Transfer Ruling"), MEA has a granted a senior, first priority purchase money lien on and security interest to Senior Creditor in and to, and right of set-off with respect to, all right, title, and interest of MEA in and to the MEA Portion, including all right, title, and interest in and to any Power attributable to the MEA Portion, except as and to the extent that such Power is delivered to MEA at the Delivery Point under and in accordance with the express provisions of

[1] Pursuant to Section 1.5 below, capitalized terms used but not defined in the body of this Agreement are from the PPA, a copy of which is attached as Exhibit "A" hereto.

the PPA, and all proceeds thereof (collectively, the "Collateral, and such senior, first priority purchase money lien on and security interest in and to the Collateral, the "Seller Security Interest"), as security for the prompt payment and performance of all obligations of MEA under the PPA, including the payment of the Contract Price to Senior Creditor.

As a condition precedent to the effectiveness of the PPA (and referred to as a "PPA Contingency" under Section 3.1 thereof), and in order to induce Senior Creditor to enter into the PPA and for other good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, Subordinated Creditor hereby agrees with Senior Creditor that, so long as any Senior Indebtedness (as hereinafter defined) is outstanding, each Party shall comply with such of the following provisions as are applicable to it.

1. Certain Definitions.

1.1 Insolvency Proceeding. The term "Insolvency Proceeding" shall mean any voluntary or involuntary dissolution, winding-up, total or partial liquidation, reorganization or bankruptcy, insolvency, receivership or other statutory or common law proceedings involving MEA or any assignment by MEA for the benefit of creditors (an "ABC") or any marshalling of the assets or liabilities of MEA.

1.2 Senior Indebtedness. The term "Senior Indebtedness" shall mean any and all indebtedness, obligations and liabilities, now existing or hereafter arising, direct or contingent, of MEA now or hereafter owing to Senior Creditor, outstanding from time to time, pursuant to, in connection with or related to the PPA, the Seller Security Interest, and any related security agreements, instruments and financing statements (collectively, the "Senior Agreements"), whether accrued and owing prior to, during or following any Insolvency Proceeding, together with interest thereon and all fees, expenses and other amounts (including costs of collection and reasonable attorneys' fees) at any time owing to Senior Creditor, and which the Parties agree shall expressly include without limitation the Net Present Value (as determined under Section 1.2(c) below) of any and all amounts due as the Contract Price during the entirety of the Term of the PPA through the Scheduled Termination Date that have not yet been paid at the time of determination. All Senior Indebtedness shall be entitled to the benefits of this Agreement without notice thereof being given to Subordinated Creditor.

For the purpose of calculating the outstanding balance of Senior Indebtedness:

(a) The above definition shall apply regardless of the terms of any Title Transfer Ruling, the extent to which the PPA or the Seller Security Interest is enforceable against MEA or the Collateral, or the extent to which such amounts are allowed as claims against MEA or its bankruptcy, receivership or ABC estate in any Insolvency Proceeding, and shall include any interest accruing on the Senior Indebtedness after the commencement of any Insolvency Proceeding and any other interest that would have accrued thereon but for the commencement of such Insolvency Proceeding.

(b) In the event that all or any part of payment of the Senior Indebtedness is rescinded or recovered directly or indirectly from Senior Creditor as a preference,

fraudulent transfer or otherwise (whether by demand, settlement, litigation or otherwise), such rescinded or recovered payments shall constitute Senior Indebtedness for all purposes hereunder and the obligations of Subordinated Creditor hereunder shall continue and remain in full force and effect or be reinstated, as the case may be, as to such rescinded or recovered amounts.

(c) For the purpose of determining the "Net Present Value" of the Contract Price during the entirety of the Term, as provided above:

(i) the PPA shall be presumed not to have been terminated prior to the Scheduled Termination Date, and the Term shall be calculated through the Scheduled Termination Date as if a Title Transfer Ruling had not occurred;

(ii) the calculation of the Contract Price (pursuant to Exhibit C of the PPA) for portions of the Term that have not yet occurred, as of the date of determination, shall be based on average daily deliveries of Power during the most recently completed twelve (12) calendar months prior to such determination date;

(iii) the annual escalation of the Contract Price (pursuant to such Exhibit C) shall be applied for portions of the Term that have not yet occurred based on the Contract Price then in effect on such determination date, but (notwithstanding the proviso in such Exhibit C) there shall be no resettings of the Contract Price for such future portions of the Term based on any projected changes in the MEA Avoided Cost Rate; and

(iv) the applicable discount rate for Contract Price payments during such future portions of the Term shall be determined based on the return on investments comparable to the MEA Portion as of the date the PPA was executed, it being acknowledged and agreed by the Parties that a risk-adjusted rate for damages claims from the breach of a long-term power purchase agreement is inappropriate for calculating the Senior Indebtedness hereunder and shall not adequately compensate Senior Creditor for the risk of loss of ownership of the MEA Portion through a Title Transfer Ruling.

1.3 Subordinated Indebtedness. The term "Subordinated Indebtedness" shall mean all existing and hereafter arising indebtedness, obligations and liabilities of MEA to Subordinated Creditor, whether direct or contingent, including all rights of subrogation, reimbursement, or contribution against MEA which might arise by reason of such Subordinated Creditor's execution or performance of this Agreement, and all claims, rights, causes of action, judgments and decrees in respect of the foregoing, including, without limitation:

(a) all indebtedness and obligations under the Notes and the Loan Agreement;

(b) all indebtedness and obligations under any financing provided to MEA by Subordinated Creditor (whether by CFC and/or NCSC, together or separately) in connection with or during any Insolvency Proceeding ("Bankruptcy Financing"); and

(c) the obligations of each party (other than Subordinated Creditor) to, under or in respect of the Mortgage (including without limitation any replacement liens, substitute collateral or other adequate protection granted to Subordinated Creditor for the Mortgage in any Insolvency Proceeding), any liens or security interests securing the Bankruptcy Financing and any other agreement or instrument securing or guaranteeing any of MEA's obligations to Subordinated Creditor (the "Subordinated Security Documents") under the Notes, the Loan Agreement and any Bankruptcy Financing (the Notes, the Loan Agreement, the Bankruptcy Financing and the Subordinated Security Documents and any other agreements evidencing or relating to Subordinated Indebtedness being hereinafter collectively referred to as the "Subordinated Agreements").

For the purposes hereof, the term "Subordinated Creditor" shall mean Subordinated Creditor as named in the preamble to this Agreement, its successors and assigns, and any and all assignees or holders of Subordinated Indebtedness.

1.4 Collateral. Collateral, as used herein, shall include any property subject to replacement liens, any substitute collateral and any other adequate protection granted with respect to the Collateral in any Insolvency Proceeding, and any proceeds thereof.

1.5 Other Capitalized Terms from the PPA. Except as otherwise specified herein, capitalized terms used in this Agreement but not defined in the body hereof are from the PPA, a copy of which is attached as Exhibit "A" hereto.

2. Terms of Subordination.

2.1 Payment and Liens Subordinated. (a) Anything in the Subordinated Agreements to the contrary notwithstanding, except for payments of the Subordinated Indebtedness expressly permitted by the terms hereof:

(i) The payment of the Subordinated Indebtedness from the Collateral or any proceeds thereof is and shall be expressly subordinate and junior in right of payment and exercise of remedies to the prior indefeasible payment in full in cash of the Senior Indebtedness;

(ii) The Subordinated Indebtedness is hereby subordinated as a claim against the Collateral, whether such claim be (A) in the event of any distribution of the assets of MEA in any Insolvency Proceeding or (B) other than in connection with an Insolvency Proceeding, to the prior indefeasible payment in full in cash of the Senior Indebtedness;

(iii) Except as expressly permitted by the terms hereof or unless Senior Creditor shall otherwise consent in writing, MEA shall not make, and no holder of Subordinated Indebtedness shall demand, accept or receive, any payment from the Collateral or any proceeds thereof until all the Senior Indebtedness has been indefeasibly paid in full in cash; and

(iv) In the event that, notwithstanding the foregoing, any payment or distribution of the Collateral or any proceeds thereof of any kind or character, whether in cash, property or securities, shall be received by a holder of Subordinated Indebtedness in violation of the foregoing provisions before all Senior Indebtedness is indefeasibly paid in full in cash, such holder shall hold

in trust and immediately pay over such payment or distribution to Senior Creditor or the holder of the Senior Indebtedness, for application to the payment of all Senior Indebtedness remaining unpaid until all Senior Indebtedness shall have been indefeasibly paid in full in cash, after giving effect to any concurrent payment or distribution to the holders of Senior Indebtedness.

(b) Except for payments expressly permitted by the terms hereof, Subordinated Creditor hereby subordinates and makes junior any liens and security interests in the Collateral that are or may be created by the Subordinated Agreements (including without limitation any liens in after-acquired property of MEA), any obligations of MEA under the Subordinated Agreements with respect to such liens and security interests, and all rights, remedies, terms and covenants related to such liens and security interests to (i) the Senior Indebtedness, (ii) the Seller Security Interest, (iii) all of the terms, covenants, conditions, rights and remedies contained in the Senior Agreements, and (iv) all rights of Senior Creditor under this Agreement.

(c) No amendments, modifications, supplements, extensions, renewals, restatements, replacements or refinancings of either the Senior Indebtedness or the Subordinated Indebtenedess, or of the Senior Agreements or the Subordinated Agreements, nor any action or inaction which Senior Creditor or Subordinated Creditor may take or fail to take in respect of the Collateral, shall affect the subordination set forth herein.

(d) In furtherance thereof, Subordinated Creditor hereby acknowledges and agrees that notwithstanding the relative times and method of attachment or perfection thereof (or any failure to perfect) or the order of filing of any financing statement, mortgage, deed of trust or other perfection document, or anything in the Subordinated Agreements to the contrary, Senior Creditor's interest in the Collateral to the extent of the Senior Indebtedness shall, in all respects, be a first priority and senior security interest and lien, superior to any security interests and liens granted or to be granted to Subordinated Creditor in the Collateral pursuant to the Subordinated Agreements or otherwise (including without limitation in any Insolvency Proceeding), it being the express intention of the parties that, notwithstanding anything in this Agreement to the contrary, all liens and security interests granted to Senior Creditor in the Collateral from time to time, whether previously or hereafter, shall be prior and superior to any liens or security interests granted to Subordinated Creditor in the Collateral. Furthermore, Subordinated Creditor shall not in any manner interfere with the security interests in and liens on the Collateral in favor of Senior Creditor, unless and until Senior Creditor advises Subordinated Creditor that MEA has satisfied in full in cash the Senior Indebtedness and that Senior Creditor has terminated its security interests in and liens on the Collateral.

(e) In foreclosing on Senior Creditor's security interests and liens in the Collateral, so long as Senior Creditor proceeds in a commercially reasonable manner, Senior Creditor may proceed to foreclose on Senior Creditor's security interests and liens in any manner which Senior Creditor, in its sole discretion, chooses, even though a higher price might have been realized if Senior Creditor had proceeded to foreclose on Senior Creditor's security interests and liens in another manner.

2.2 Attorneys-in-Fact; Permitted Subordinated Creditor Actions.

(a) Attorneys-in-Fact. Subordinated Creditor, for itself and its successors and assigns, hereby irrevocably authorizes and directs Senior Creditor and any trustee in bankruptcy, receiver, custodian or assignee for the benefit of creditors of MEA in any Insolvency Proceeding, on Subordinated Creditor's behalf to take such action as may be necessary or appropriate to effectuate the subordination provided for in this Agreement and irrevocably appoints, which appointment is coupled with an interest, upon any Event of Default under the Senior Agreements and during the continuance thereof or any failure to comply with the terms of this Agreement, Senior Creditor and any such trustee, receiver, custodian or assignee, its attorneys-in-fact for such purpose with full powers of substitution and revocation.

(b) Permitted Subordinated Creditor Actions. With respect to the Collateral, Subordinated Creditor may, so long as any such actions do not contravene the rights of Senior Creditor hereunder:

(i) If an Insolvency Proceeding has been commenced by or against MEA, file a claim or statement of interest with respect to the Subordinated Indebtedness and take any other actions necessary vis-à-vis unsecured creditors to preserve its claim rights and lien rights;

(ii) Take any action (not adverse to the priority status of the liens on the Collateral securing the Senior Indebtedness, or the rights of Senior Creditor to exercise any remedies under the Senior Agreements, this Agreement or at law) in order to create or perfect its lien in and to the Collateral;

(iii) File any necessary responsive or defensive pleadings in opposition to any motion, claim, adversary proceeding, or other pleading made by any Person objecting to or otherwise seeking the disallowance of the claims of Subordinated Creditor, including any claims secured by the Collateral, if any;

(iv) Vote on any plan of reorganization and make any filings and motions that are, in each case, in accordance with, the terms of this Agreement, with respect to the Subordinated Indebtedness and the Collateral;

(v) Join (but not exercise any control with respect to) any judicial foreclosure proceeding or other judicial lien enforcement proceeding with respect to the Collateral initiated by Senior Creditor to the extent that any such action could not reasonably be expected, in any material respect, to restrain, hinder, limit, delay for any material period or otherwise interfere with the exercise of remedies under the Senior Agreements, this Agreement or at law by Senior Creditor (it being understood that Subordinated Creditor shall not be entitled to receive any proceeds thereof until the Senior Indebtedness is paid in full in cash or unless otherwise expressly permitted herein); and/or

(vi) Bid for or purchase Collateral at any public, private, or judicial foreclosure upon such Collateral initiated by Senior Creditor, or any sale of Collateral during an Insolvency Proceeding.

2.3 Effect of Provisions. The provisions hereof as to subordination are solely for the purpose of defining the relative rights of the holders of Senior Indebtedness on the one hand, and the holders of the Subordinated Indebtedness on the other hand, and none of such provisions shall impair, as between MEA and the holders of its Subordinated Indebtedness, the obligations of MEA, which are unconditional and absolute, to pay to such holders all of the Subordinated Indebtedness in accordance with the terms thereof, nor, except as provided in Section 2.4 (Exercise of Remedies by Subordinated Creditor) below, shall any such provisions prevent the holders of Subordinated Indebtedness from exercising all remedies otherwise permitted by applicable law or under the terms of such Subordinated Indebtedness upon a default thereunder, subject to the rights, if any, of the holders of Senior Indebtedness under the provisions of this Agreement.

2.4 Exercise of Remedies by Subordinated Creditor.

2.4.1 Exclusive Enforcement Rights. Until the indefeasible payment in full, in cash, of the Senior Indebtedness has occurred, whether or not any Insolvency Proceeding has been commenced by or against MEA, Senior Creditor shall have the exclusive right to exercise any rights and remedies with respect to the Collateral without any consultation with or the consent of Subordinated Creditor; provided, that any liens securing the Subordinated Indebtedness may attach to the proceeds of such Collateral released or disposed of, subject to the relative priorities described in Section 2.1. In connection with any exercise of rights or remedies, Senior Creditor may enforce the provisions of the Senior Agreements and this Agreement and exercise any remedies thereunder, all in such order and in such manner as Senior Creditor may determine at its sole option. Such exercise and enforcement shall include the rights of an agent appointed by Senior Creditor to dispose of Collateral, to incur expenses in connection with such disposition, and to exercise all the rights and remedies of a secured creditor under applicable law.

2.4.2 Retention of Proceeds. Subordinated Creditor shall not be permitted to retain any proceeds of Collateral in connection with any exercise of rights and remedies in any circumstance unless and until the Senior Indebtedness has been indefeasibly paid in full in cash.

2.4.3 Non-Interference. Subject to Section 2.2(b), Subordinated Creditor hereby:

(a) agrees that Subordinated Creditor shall not, directly or indirectly, take any action that would restrain, hinder, limit, delay, or otherwise interfere with any exercise of rights and remedies by Senior Creditor with respect to the Collateral, or that is otherwise prohibited hereunder, including any disposition of the Collateral, whether by enforcement, foreclosure or otherwise, and that it shall not oppose any motion filed or supported by Senior Creditor in any Insolvency Proceeding for relief from stay or for adequate protection in respect of its interest in the Collateral;

(b) waives any and all rights it may have as a junior lien creditor or otherwise, directly or indirectly, to object to the manner in which Senior Creditor seeks to enforce the Seller Security Interest or any other liens or security interests of Senior Creditor in the Collateral, regardless of whether any action or failure to act by or on behalf of Senior Creditor is adverse to the interest of Subordinated Creditor; and

(c) acknowledges and agrees that no covenant, agreement or restriction contained in the Subordinated Agreements shall be deemed to restrict in any way the

rights and remedies of Senior Creditor with respect to the Collateral as set forth in this Agreement and the Senior Agreements.

2.4.4 Unsecured Creditor Remedies. In the event that Subordinated Creditor becomes an execution creditor with a lien or a judgment lien creditor in respect of the Collateral as a result of its enforcement of its rights as an unsecured creditor with respect to the Subordinated Indebtedness, such lien shall be subject to the same terms of this Agreement for all purposes as apply hereunder to the other liens securing the Subordinated Indebtedness.

2.5 Agreements Relating to Collateral. Unless and until such time as the Senior Indebtedness has been paid in full, in cash:

(a) Subordinated Creditor shall have no right to participate in the adjustment or settlement of any insurance losses or condemnation claims with respect to the Collateral; provided that (i) Subordinated Creditor may participate in any such losses or claims that exceed the amount of the outstanding balance of the Senior Indebtedness and after payment in full of such outstanding balance, and (ii) any such participation by Subordinated Creditor is subject to Section 2.1 hereof.

(b) Subordinated Creditor hereby agrees, upon the request and at the direction of Senior Creditor, to endorse in favor of Senior Creditor any and all checks payable to Subordinated Creditor which represent insurance and/or condemnation proceeds paid for claims relating to the Collateral in any manner.

(c) Subordinated Creditor agrees, upon request by Senior Creditor, to assign to Senior Creditor any and all insurance proceeds and condemnation awards payable to Subordinated Creditor for claims relating to the Collateral, to the full extent of the outstanding balance of the Senior Indebtedness.

(d) Subordinated Creditor hereby appoints Senior Creditor as Subordinated Creditor's attorney-in-fact to settle all insurance and/or condemnation claims relating to the Collateral and to receive all payments and endorse all checks with respect to such claims to the full extent of the Senior Indebtedness; provided that (i) Subordinated Creditor may participate in any such claims that exceed the amount of the outstanding balance of the Senior Indebtedness and after payment in full of such outstanding balance, and (ii) any such participation by Subordinated Creditor is subject to Section 2.1 hereof.

(e) Subordinated Creditor shall have no right to possession of any portion of the Collateral or to foreclose upon any portion of the Collateral, whether by judicial action or otherwise, unless and until all of the Senior Indebtedness shall have been paid in full, in cash, and except as otherwise provided in Section 2.2(b) (Permitted Subordinated Creditor Actions).

(f) Senior Creditor shall provide prompt notice to Subordinated Creditor that a Title Transfer Ruling has occurred.

3. **Marshaling.** Subordinated Creditor, for itself and its successors and assigns, hereby expressly waives any right that it otherwise might have to require Senior Creditor or the holders of Senior Indebtedness to marshal any of the property of MEA or any guarantor (if any) of the Senior Indebtedness, to resort to Collateral in any particular order or manner, whether provided for by common law or statute, or to enforce any guaranty or any lien given by MEA as a condition precedent or concurrent to the exercise of any of their remedies.

4. **Additional Rights of Senior Creditor.** If Subordinated Creditor, in violation of this Agreement, shall commence, prosecute or participate in any suit, action or proceeding against MEA with respect to the Collateral. MEA may interpose as a defense or plea the making of this Agreement and Senior Creditor may intervene and interpose such defense or plea in Senior Creditor's name or in the name of MEA. If Subordinated Creditor, in violation of this Agreement, shall attempt to enforce any security agreement, real estate mortgage, deed of trust, guaranty, lien instrument or other encumbrance with respect to the Collateral, Senior Creditor may by virtue of this Agreement restrain the enforcement thereof in Senior Creditor's name or in the name of MEA.

5. **Waivers.** Subordinated Creditor hereby expressly waives: (a) the right to receive notice of the demand by Senior Creditor against MEA for observance or performance of, or enforcement of, any terms or provisions of the Senior Agreements; (b) all other notices and demands otherwise required by law with respect to the Collateral or the Seller Security Interest which Subordinated Creditor may lawfully waive; (c) all rights (statutory or otherwise) that require Senior Creditor to make an election of remedies where Senior Creditor holds security interests and liens in Collateral that consists of different types of property of MEA or to take recourse first or solely against any particular Collateral securing the Senior Agreements; (d) all rights (statutory or otherwise) that restrict, affect or impair the rights or remedies of Senior Creditor to collect any deficiency after the application to the Senior Indebtedness of any proceeds arising from foreclosure on the Collateral; (e) any defense based on the adequacy of a remedy at law which might be asserted as a bar to the remedy of specific performance of this Agreement in any action brought therefor by any Party hereto, and (f) so long as this Agreement remains in effect, the benefit of all other principles or provisions of law, statutory or otherwise, which are or might be in conflict with the terms hereof.

6. **Indulgences Not Waivers.** Neither the failure nor any delay on the part of Senior Creditor or Subordinated Creditor to exercise any right, remedy, power or privilege hereunder shall operate as a waiver thereof or give rise to an estoppel, nor be construed as an agreement to modify the terms of this Agreement, nor shall any single or partial exercise of any right, remedy, power or privilege with respect to any occurrence be construed as a waiver of such right, remedy, power or privilege with respect to any other occurrence. No waiver by a Party hereunder shall be effective unless it is in writing and signed by the Party making such waiver, and then only to the extent specifically stated in such writing.

7. **Covenant Not to Challenge.** This Agreement has been negotiated by the parties with the expectation and in reliance upon the assumption that the instruments and documents evidencing the Senior Indebtedness and the Subordinated Indebtedness are valid and enforceable. In determining whether to enter into this Agreement, Subordinated Creditor, on the one hand, and Senior Creditor, on the other hand, have assumed such validity and enforceability, and have agreed

to the provisions contained herein, without relying upon any reservation of a right to challenge or call into question such validity or enforceability. As between Subordinated Creditor, on the one hand, and Senior Creditor, on the other hand, such Parties hereby covenant and agree, to the fullest extent permitted by law, that neither Senior Creditor nor Subordinated Creditor shall initiate in any proceeding a challenge to the validity or enforceability of the documents and instruments evidencing or securing the Senior Indebtedness or the Subordinated Indebtedness, as applicable.

8. Effect of Bankruptcy. This Agreement is intended to be enforceable as a subordination agreement under Bankruptcy Code section 510 notwithstanding the commencement of any bankruptcy or other Insolvency Proceeding by or against MEA and, to the full extent permitted by law, shall apply with full force and effect to any indebtedness arising pursuant to debtor-in-possession financing arrangements or pursuant to financing arrangements entered into in connection with the confirmation of a plan of reorganization under Chapter 11 of the Bankruptcy Code.

9. Notices. All notices, requests, consents, claims, demands, waivers and other communications hereunder (any of the foregoing, a "Notice") shall be in writing and shall be deemed to have been given (a) when delivered by hand (with written confirmation of receipt); (b) when received by the addressee if sent by a nationally recognized overnight courier (receipt requested); (c) on the date sent by facsimile (with confirmation of transmission) if sent during normal business hours of the recipient, and on the next Business Day if sent after normal business hours of the recipient or (d) on the third Business Day after the date mailed, by certified or registered mail, return receipt requested, postage prepaid. Such Notices must be sent to the respective parties at the following addresses (or at such other address for a Party as shall be specified in a Notice given in accordance with this Section 9).

If to Senior Creditor:	Municipality of Anchorage 632 W. 6th Avenue, Suite 850 Anchorage, AK 99501 Facsimile: (907) 343-7180 Attention: William D. Falsey, Municipal Manager
with a copy to:	Municipality of Anchorage 632 W. 6th Avenue, Suite 850 Anchorage, AK 99501 Facsimile: (907) 343-4550 Attention: Rebecca A. Windt Pearson, Municipal Attorney
and a copy to:	K&L Gates LLP 925 Fourth Avenue, Suite 2900 Seattle, WA 98104-1158 Facsimile: (206) 370-6065 Attention: Eric E. Freedman

If to Subordinated Creditor: National Rural Utilities Cooperative Finance Corporation
20701 Cooperative Way
Dulles, VA 20166
Facsimile: 866-230-5635
Attention: General Counsel

and

National Cooperative Services Corporation
20701 Cooperative Way
Dulles, VA 20166
Facsimile: 866-230-5635
Attention: General Counsel

or, as to each Party, at such other address as shall be designated by such Party in a Notice to the other Party complying as to delivery with the terms of this Section.

10. Successors; Continuing Effect, Etc. This Agreement is being entered into for the benefit of Senior Creditor, Subordinated Creditor and the holders of the Senior Indebtedness and the Subordinated Indebtedness, and their respective successors and assigns. This Agreement shall be a continuing agreement and shall be irrevocable and shall remain in full force and effect so long as there are both Senior Indebtedness and Subordinated Indebtedness outstanding, *provided, however,* that this Agreement shall terminate as to Subordinated Creditor at such time as Senior Creditor provides the notice set forth in the last sentence of Section 2.1(d) hereof.

11. Entire Agreement; Amendment. This Agreement constitutes the entire agreement of the parties with respect to the subject matter hereof, and no modification or waiver of any provision of this Agreement shall in any event be effective unless the same shall be in writing signed by Senior Creditor and Subordinated Creditor.

12. Governing Law. This Agreement shall be governed by and construed in accordance with the internal laws of the State of Alaska, without regard to conflict of law principles that would result in the application of the laws of any other jurisdiction.

13. Headings. The headings in this Agreement are for convenience of reference only and shall not alter or otherwise affect the meaning hereof.

14. CONSENT TO VENUE; WAIVER OF JURY TRIAL.

(a) VENUE AND SERVICE OF PROCESS. ANY LEGAL SUIT, ACTION OR PROCEEDING ARISING OUT OF OR BASED UPON THIS AGREEMENT OR THE TRANSACTIONS CONTEMPLATED HEREBY MAY BE INSTITUTED IN THE SUPERIOR COURT OF THE STATE OF ALASKA IN THE THIRD JUDICIAL DISTRICT, LOCATED IN ANCHORAGE, ALASKA, OR THE UNITED STATES DISTRICT COURT LOCATED IN

ANCHORAGE, ALASKA. SERVICE OF PROCESS, SUMMONS, NOTICE OR OTHER DOCUMENT BY MAIL TO SUCH PARTY'S ADDRESS SET FORTH HEREIN SHALL BE EFFECTIVE SERVICE OF PROCESS FOR ANY SUIT, ACTION OR OTHER PROCEEDING BROUGHT IN SUCH COURT. THE PARTIES IRREVOCABLY AND UNCONDITIONALLY WAIVE ANY OBJECTION TO THE LAYING OF VENUE OF ANY SUIT, ACTION OR ANY PROCEEDING IN SUCH COURT AND IRREVOCABLY WAIVE AND AGREE NOT TO PLEAD OR CLAIM IN ANY SUCH COURT THAT ANY SUCH SUIT, ACTION OR PROCEEDING BROUGHT IN SUCH COURT HAS BEEN BROUGHT IN AN INCONVENIENT FORUM.

(b) **WAIVER OF JURY TRIAL.** EACH PARTY ACKNOWLEDGES AND AGREES THAT ANY CONTROVERSY WHICH MAY ARISE UNDER THIS AGREEMENT IS LIKELY TO INVOLVE COMPLICATED AND DIFFICULT ISSUES AND, THEREFORE, EACH SUCH PARTY IRREVOCABLY AND UNCONDITIONALLY WAIVES ANY RIGHT IT MAY HAVE TO A TRIAL BY JURY IN RESPECT OF ANY LEGAL ACTION ARISING OUT OF OR RELATING TO THIS AGREEMENT OR THE TRANSACTIONS CONTEMPLATED HEREBY. EACH PARTY TO THIS AGREEMENT CERTIFIES AND ACKNOWLEDGES THAT (A) NO REPRESENTATIVE OF ANY OTHER PARTY HAS REPRESENTED, EXPRESSLY OR OTHERWISE, THAT SUCH OTHER PARTY WOULD NOT SEEK TO ENFORCE THE FOREGOING WAIVER IN THE EVENT OF A LEGAL ACTION, (B) SUCH PARTY HAS CONSIDERED THE IMPLICATIONS OF THIS WAIVER, (C) SUCH PARTY MAKES THIS WAIVER VOLUNTARILY, AND (D) SUCH PARTY HAS BEEN INDUCED TO ENTER INTO THIS AGREEMENT BY, AMONG OTHER THINGS, THE MUTUAL WAIVERS AND CERTIFICATIONS IN THIS SECTION 14.

15. **Specific Enforcement.** The Parties agree that irreparable damage would occur if any provision of this Agreement were not performed in accordance with the terms hereof and that the Parties shall be entitled to specific performance of the terms hereof, in addition to any other remedy to which they are entitled at law or in equity. The Parties acknowledge and agree that (A) the Parties shall be entitled to an injunction, specific performance or other equitable relief to prevent breaches of this Agreement and to enforce specifically the terms and provisions hereto, without proof of damages, this being in addition to any other remedy to which they are entitled under this Agreement and (B) the right to specific enforcement is an integral part of the transactions contemplated by this Agreement and without that right, neither Party would have entered into this Agreement. Each Party agrees that it shall not oppose the granting of specific performance and other equitable relief on the basis that the other Party has an adequate remedy at law or that an award of specific performance is not an appropriate remedy for any reason at law or equity. The Parties acknowledge and agree that any Party seeking an injunction to prevent breaches of this Agreement and to enforce specifically the terms and provisions of this Agreement in accordance with this Section 15 shall not be required to provide any bond or other security in connection with any such injunction.

16. **No Third Party Beneficiaries.** This Agreement is solely for the benefit of Senior Creditor, Subordinated Creditor, and their respective successors and assigns, and neither MEA nor any other Person is intended to be a third party beneficiary hereunder or to have any right, benefit, priority or interest under, or because of the existence of, or to have any right to enforce, this

Agreement. Senior Creditor and Subordinated Creditor shall have the right to modify or terminate this Agreement at any time without notice to or approval of MEA or any other Person.

17. **Inconsistent or Conflicting Provisions.** In the event a provision of the documents evidencing or governing the Senior Indebtedness or the Subordinated Indebtedness is inconsistent or conflicts with the provisions of this Agreement, the provisions of this Agreement shall govern and prevail.

18. **Counterparts**. This Agreement may be executed and delivered in counterparts, including counterpart signatures delivered by telefacsimile or other electronic method of transmission (to be followed in due course by delivery of original signature counterparts, but the failure to deliver an original executed counterpart shall not affect the validity, enforceability, and binding effect of this Agreement), and shall be effective when each Party has delivered its counterpart signature, and all counterparts taken together shall be deemed a single original agreement.

19. **Recording.** This Agreement may be recorded by Senior Creditor in all recording offices in the State of Alaska in which the lien of the Mortgage has been recorded.

20. **Several Liability**. Each of CFC and NCSC shall be severally liable for all obligations of Subordinated Creditor hereunder, to the extent of its interest in the Subordinated Indebtedness, and shall comply with all obligations of Subordinated Creditor hereunder with respect to such interest.

AGREEMENT

**AGREEMENT BETWEEN
THE MUNICIPALITY OF ANCHORAGE,
DBA ANCHORAGE MUNICIPAL LIGHT AND POWER,
CHUGACH ELECTRIC ASSOCIATION, INC.,
MATANUSKA ELECTRIC ASSOCIATION, INC.,
U.S. FISH AND WILDLIFE SERVICE,
NATIONAL MARINE FISHERIES SERVICE,
ALASKA ENERGY AUTHORITY,
AND THE
STATE OF ALASKA,
RELATIVE TO THE EKLUTNA AND SNETTISHAM
HYDROELECTRIC PROJECTS**

This Agreement is entered into on August 7, 1991, between The Municipality of Anchorage, dba, Anchorage Municipal Light and Power, Chugach Electric Association, Inc., and Matanuska Electric Association, Inc. (hereinafter collectively "Eklutna Purchasers"), the United States Fish and Wildlife Service (hereinafter "USFWS"), the National Marine Fisheries Service (hereinafter "NMFS"), the Alaska Energy Authority (hereinafter "AEA") and the State of Alaska (hereinafter "the State"), regarding protection, mitigation of damages to, and enhancement of fish and wildlife (including related spawning grounds and habitat) affected by hydroelectric development of the Eklutna and Snettisham Projects. With respect to the implementation provisions called for in this Agreement, the Eklutna Purchasers will be responsible for the consultation, study and implementation provisions applicable to the Eklutna Project and AEA shall be responsible for the consultation, study and implementation provisions applicable to the Snettisham Project.

WITNESSETH THAT:

WHEREAS, subject to the approval of Congress, the Eklutna and Snettisham Projects will be transferred from the Federal Alaska Power Administration to the Eklutna Purchasers and AEA (collectively, "the Purchasers") without the necessity of their having to obtain a Federal Energy Regulatory Commission (FERC) License for project operation; and

WHEREAS, the Eklutna and Snettisham hydroelectric developments may have resulted in a yet to be quantified impact to fish and wildlife resources; and

WHEREAS, concerns have been expressed that without FERC licensing, there is no opportunity to determine the extent of that fish and wildlife impact, develop measures to protect, mitigate

damages to, and enhance fish and wildlife (including related spawning grounds and habitat), and implement fish and wildlife measures found to be in the public interest.

NOW THEREFORE, the parties agree as follows:

1. **FERC Licensing.**

NMFS, USFWS and the State agree that the following mechanism to develop and implement measures to protect, mitigate damages to, and enhance fish and wildlife (including related spawning grounds and habitat) obviate the need for the Eklutna Purchasers and AEA to obtain FERC licenses.

2. **Study Plan.**

The Purchasers agree to fund studies to examine, and quantify if possible, the impacts to fish and wildlife from the Eklutna and Snettisham Projects. The studies will also examine and develop proposals for the protection, mitigation, and enhancement of fish and wildlife affected by such hydroelectric development. This examination shall consider the impact of fish and wildlife measures on electric rate payers, municipal water utilities, recreational users and adjacent land use, as well as available means to mitigate these impacts.

3. **Carrying Out The Study Plan.**

Study Plans shall be developed by the Purchasers in consultation with the USFWS, NMFS, the Alaska Department of Fish and Game, the Alaska Department of Environmental Conservation and the Alaska Department of Natural Resources (the "State Resource Management Agencies"), or their successors to aid in the formulation of the Program called for in this Agreement. Prior to implementation, the parties to this Agreement shall review the plans and concur with their scope of work.

The Purchasers shall conduct the studies and prepare the evaluations called for in the plans, seeking input from the USFWS, NMFS, the State Resource Management Agencies and other interested parties as the studies progress. The USFWS, NMFS, and State Resource Management Agencies shall have an opportunity to comment on draft study reports, and their comments and a response to their comments shall be included in the final study reports. All study plans, data, reports and comments will be made available to the parties and, upon request, to the public.

4. Review of Findings.

After final study reports are prepared, the Purchasers shall prepare a draft Summary of Study Results and prepare a draft Fish and Wildlife Program. The draft Fish and Wildlife Program shall consist of the measures recommended by the Purchasers for the protection, mitigation of damages to, and enhancement of fish and wildlife (including related spawning grounds and habitat) and set a tentative schedule for their implementation. The Purchasers shall provide copies of the draft Summary and draft Fish and Wildlife Program to the USFWS, NMFS, and State Resource Management Agencies for comments or recommendations. If USFWS, NMFS, or the State Resource Management Agencies' comments or recommendations differ from those of the Purchasers, the Purchasers will attempt to resolve such differences giving due weight to the recommendations, expertise, and statutory responsibilities of USFWS, NMFS, and the State Resource Management Agencies.

Once comments and recommendations have been received, the Purchasers shall hold at least one public meeting each in Anchorage and the Matanuska Valley (with respect to the Eklutna Project) and in Juneau (with respect to the Snettisham Project) to receive public comment on the draft Summary, the draft Fish and Wildlife Program, and the comments and recommendations of the USFWS, NMFS, and the State Resource Management Agencies. At least thirty days prior to the proposed public meetings, copies of the draft Fish and Wildlife Program, reports and recommendations will be distributed to representative public libraries in the Anchorage and Matanuska Valley areas (in the case of the Eklutna Project) and in the Juneau area (in the case of the Snettisham Project). Public notice will also be posted in at least two newspapers serving the Anchorage and Matanuska Valley areas (for Eklutna) and the Juneau area (for Snettisham). The public notice shall specify meeting places, times and dates; where studies, reports and recommendations may be obtained for review; and where written comments may be sent. The Purchasers will provide copies of the draft Summary, draft Fish and Wildlife Program, and the comments and recommendations of the USFWS, NMFS, and State to interested members of the public at no charge.

5. Public Interest Determination.

The Purchasers shall compile all comments and testimony received; prepare a summary and analysis of them; develop a Proposed Final Fish and Wildlife Program to protect, mitigate, and enhance fish and wildlife resources; and prepare an explanatory statement describing the basis for its Proposed Final Fish and Wildlife Program. All comments, testimony, summary, and analysis materials and the Proposed Final Fish and Wildlife Program shall be provided to the parties to this Agreement and to the Governor

of Alaska. The parties shall have 60 days to submit written comments on the proposed Fish and Wildlife Program, and any alternative recommendations for the protection, mitigation, and enhancement of fish and wildlife resources, to the Governor. The Purchasers shall have 30 days to submit written reply comments to the Governor.

The Governor shall review the Proposed Final Fish and Wildlife Program, the comments, testimony, summary and analysis materials, and any alternative recommendations for the protection, mitigation, and enhancement of fish and wildlife resources. The Governor shall attempt to reconcile any differences between the parties, giving due weight to the recommendations, expertise, and statutory responsibilities of USFWS, NMFS, the State Resource Management Agencies and the Purchasers. In order to ensure that Eklutna and Snettisham are best adapted for power generation and other beneficial public uses, the Governor shall give equal consideration to the purposes of efficient and economical power production, energy conservation, the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat), the protection of recreation opportunities, municipal water supplies, the preservation of other aspects of environmental quality, other beneficial public uses, and requirements of State law. Based on his/her review and consideration, the Governor shall establish a final Fish and Wildlife Program that adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources (including affected spawning grounds and habitat) affected by the Eklutna Project and the Snettisham Project.

6. Implementation.

The Purchasers shall implement the Fish and Wildlife Program established by the Governor, subject to their right to judicial review as provided in Section 9 hereof. However, the Purchasers will implement all provisions of the Program that do not require major capital expenditures pending judicial review, unless otherwise agreed among the Parties or unless a stay is granted by the Court.

7. Schedule.

The consultation process leading to the Programs shall be initiated no later than 25 years after the Transaction Date specified in the respective Eklutna and Snettisham Agreements. The Study Plans shall include a schedule for the consultation, comment, and decision making, called for in this Agreement, which shall be adopted by the parties in consultation with the Governor. The schedule shall call for implementation of all provisions of the Fish and Wildlife Program by the Eklutna Purchasers to begin no

later than 30 years after the Transaction Date, and to be completed no later than 35 years after the Transaction Date. The schedule shall call for implementation of all provisions of the Fish and Wildlife Program by AEA (Snettisham) to begin no later than 35 years after the Transaction Date, and to be completed no later than 40 years after the Transaction Date. The schedules shall call for the issuance of the Fish and Wildlife Program by the Governor at least three years prior to the commencement of the period for implementation.

The Purchasers shall repeat the process called for in Sections 2 through 6 of this Agreement on a recurring basis every 35 years, beginning within 25 years of the time implementation of the Fish and Wildlife Program has been completed for the prior consultation process. In addition, prior to undertaking any major structural or operational modification substantially affecting water usage or fish and wildlife at the projects, the Purchasers shall follow the process called for in Sections 2 through 6 of this Agreement. Compliance with the terms of the Agreement for Public Water Supply and Energy Generation from Eklutna Lake, Alaska, entered into between the Alaska Power Administration and the Municipality of Anchorage on February 17, 1984, as amended by a Supplemental Agreement dated August 2, 1988, shall not be construed to be a major structural or operational modification. However, the Eklutna Purchasers will discuss major structural or operational changes from current operations with NMFS and USFWS and will consider any recommendations they have for fisheries mitigation related to such changes.

8. Dam Construction, Modification, Removal or Abandonment.

The Purchasers agree to comply with 11 AAC 93.151-.201 with respect to safety inspections, new construction or modifications to existing structures, removal and/or abandonment of all or part of the project.

9. Enforcement of Fish and Wildlife Program and Agreement.

The provisions of this Agreement, including the decisions of the Governor and the provisions of the Fish and Wildlife Program, shall be reviewable and enforceable in the United States District Court for the District of Alaska and the Court may order specific performance thereof.

At least thirty days prior to seeking review or enforcement in the United States District Court for the District of Alaska, a party shall send written notice of its concerns to all parties and hold a meeting to attempt informal resolution of its concerns. During the period of informal resolution, any statute of limitations shall toll.

10. **Authority of Parties.**

Each party to this Agreement warrants that it has the legal authority to sign this Agreement and be fully bound by its terms, subject to any administrative or regulatory approval, if required. This Agreement shall be binding upon and inure to the benefit of the parties and their successors and assigns.

11. **Term of Agreement.**

This Agreement shall be effective, as to each project, upon the Transaction Date specified in the respective Purchase Agreement and shall remain in full force and effect so long as that project remains in operation. The Agreement shall terminate, as to either project, if that Project becomes subject to the provisions of the Federal Power Act.

12. **Severability.**

If any section, paragraph, clause or provision of this Agreement or any agreement referred to in this Agreement shall be finally adjudicated by a court of competent jurisdiction or administrative agency to be invalid or unenforceable as to either project, the Agreement shall nonetheless remain in full force and effect as to the other project.

13. **Cooperation With Studies.**

The Parties agree that they will cooperate with one another in conducting studies pertaining to fish and wildlife other than those called for in this Agreement by:

a. Notifying and consulting with the other parties before beginning a new fish and wildlife study,

b. Providing each other with data on flows, fish populations, and other data already in their possession,

c. Having the option of funding fish and wildlife studies before the process called for in Sections 2 and 3 of this Agreement would otherwise require, whether such studies are conducted by the parties themselves, or by third parties.

IN WITNESS WHEREOF, the parties hereto have executed this agreement as of the day and year first above written.

1.0 Introduction

The Eklutna Hydroelectric Project (Project) is located in Southcentral Alaska, approximately 30 miles northeast of downtown Anchorage near the Native Village of Eklutna (NVE). The federal government completed construction of the Project in 1955. Decades later, Chugach Electric Association (CEA), Matanuska Electric Association (MEA), and the Municipality of Anchorage (MOA) (collectively the "Project Owners") agreed to purchase the Project and entered into a Purchase Agreement with the federal government in 1989. Shortly thereafter, concerns were raised about the Project's potential impacts on fish and wildlife and a desire to avoid federal regulation. This led to the execution of a binding agreement in 1991 (referred to as the "1991 Agreement") amongst the Project Owners, National Marine Fisheries Service (NMFS), U.S. Fish and Wildlife Service (USFWS), and the State of Alaska (collectively the "Parties") that requires the Project Owners to (1) study the Project's impacts to fish and wildlife, (2) develop proposals for the protection, mitigation, and enhancement of fish and wildlife affected by the development of the Project, (3) consider the impact of fish and wildlife measures on electric rate payers, municipal water utilities, recreational users and adjacent land use, and (4) identify available means to mitigate these impacts. The Project Owners must repeat this process every 35 years and it replaces regulation by the Federal Energy Regulatory Commission (FERC). The sale of the Project was authorized by U.S. Congress in 1995, and the Project was sold to the Project Owners in October 1997.

Per the 1991 Agreement, the Project Owners were required to initiate this process no later than 25 years after the sale of the Project. Since the Project was sold in October 1997, the Project Owners were not required to initiate this process until October 2022. In order to allow meaningful consultation process and adequate time for a comprehensive analysis, the Project Owners initiated the process in March 2019, more than three years early. After several years of study and consultation with all interested stakeholders detailed in the Supporting Information Document, the Project Owners issued a Draft Fish and Wildlife Program (Draft Program) as required in the 1991 Agreement in October 2023. The Project Owners met with the Parties and NVE several times from December 2023 through March 2024 to attempt to resolve differences. They also held six public meetings in January 2024 to solicit public comments. After considering all comments received, and giving due weight to the recommendations and expertise of the Parties and NVE, the Project Owners have developed this Proposed Final Fish and Wildlife Program (Proposed Final Program) for submittal to the Governor.

Accordingly, the Project Owners are excited for the next phase of the Project. The Proposed Final Program includes the following:

- Construction of the Eklutna River Release Facility and establishment of year-round instream flows in the Eklutna River;
- Automation of the existing outlet gate at the dam to provide periodic channel maintenance flows in the Eklutna River;
- Construction of eight new bridges along the Anchorage Water and Wastewater Utility (AWWU) access road to enable AWWU's access to critical infrastructure year-round following the establishment of instream flows;
- Payment to Chugach State Park for lakeside trail repairs;
- Establishment of a Committee to oversee implementation of the Monitoring and Adaptive Management Plan;
- Funding to conduct monitoring studies in the Eklutna River throughout the 35-year program;
- Funding for physical habitat enhancement in the Eklutna River based on the monitoring results;
- Procedures for the Committee to adaptively manage the flow regime in the Eklutna River based on the monitoring results;
- Provisions for banking water in Eklutna Lake and potentially increasing the water budget for instream flows in the future;
- Potential installation of a fixed wheel gate to accommodate higher inflows in the future and/or allow higher channel maintenance flows if needed; and
- Potential installation of upstream and downstream fish passage facilities that meet specific criteria.

Approval of the Proposed Final Program will enable the Project Owners to implement these significant fish and wildlife measures at the Project, while simultaneously protecting the municipal water supply and continuing to provide low cost, renewable energy to Southcentral Alaska. The Project Owners anticipate the Governor's issuance of a Final Fish and Wildlife Program (Final Program) by October 2024.

This Supplement Information Document sets forth in a single document a description of the Project, its components and operations, the requirements of the 1991 Agreement, and a detailed summary of process and considerations leading to the Proposed Final Program. This

document also provides a guide to the large quantity of supporting information gathered and prepared by the Project Owners through the process that began in 2019. Some of that information is presented in text, tables, and figures in this Supporting Information Document or Attachments, while other information is referenced, hyperlinked, and made publicly available on the Project website (www.eklutnahydro.com). All such information is incorporated in the Proposed Final Program by reference.

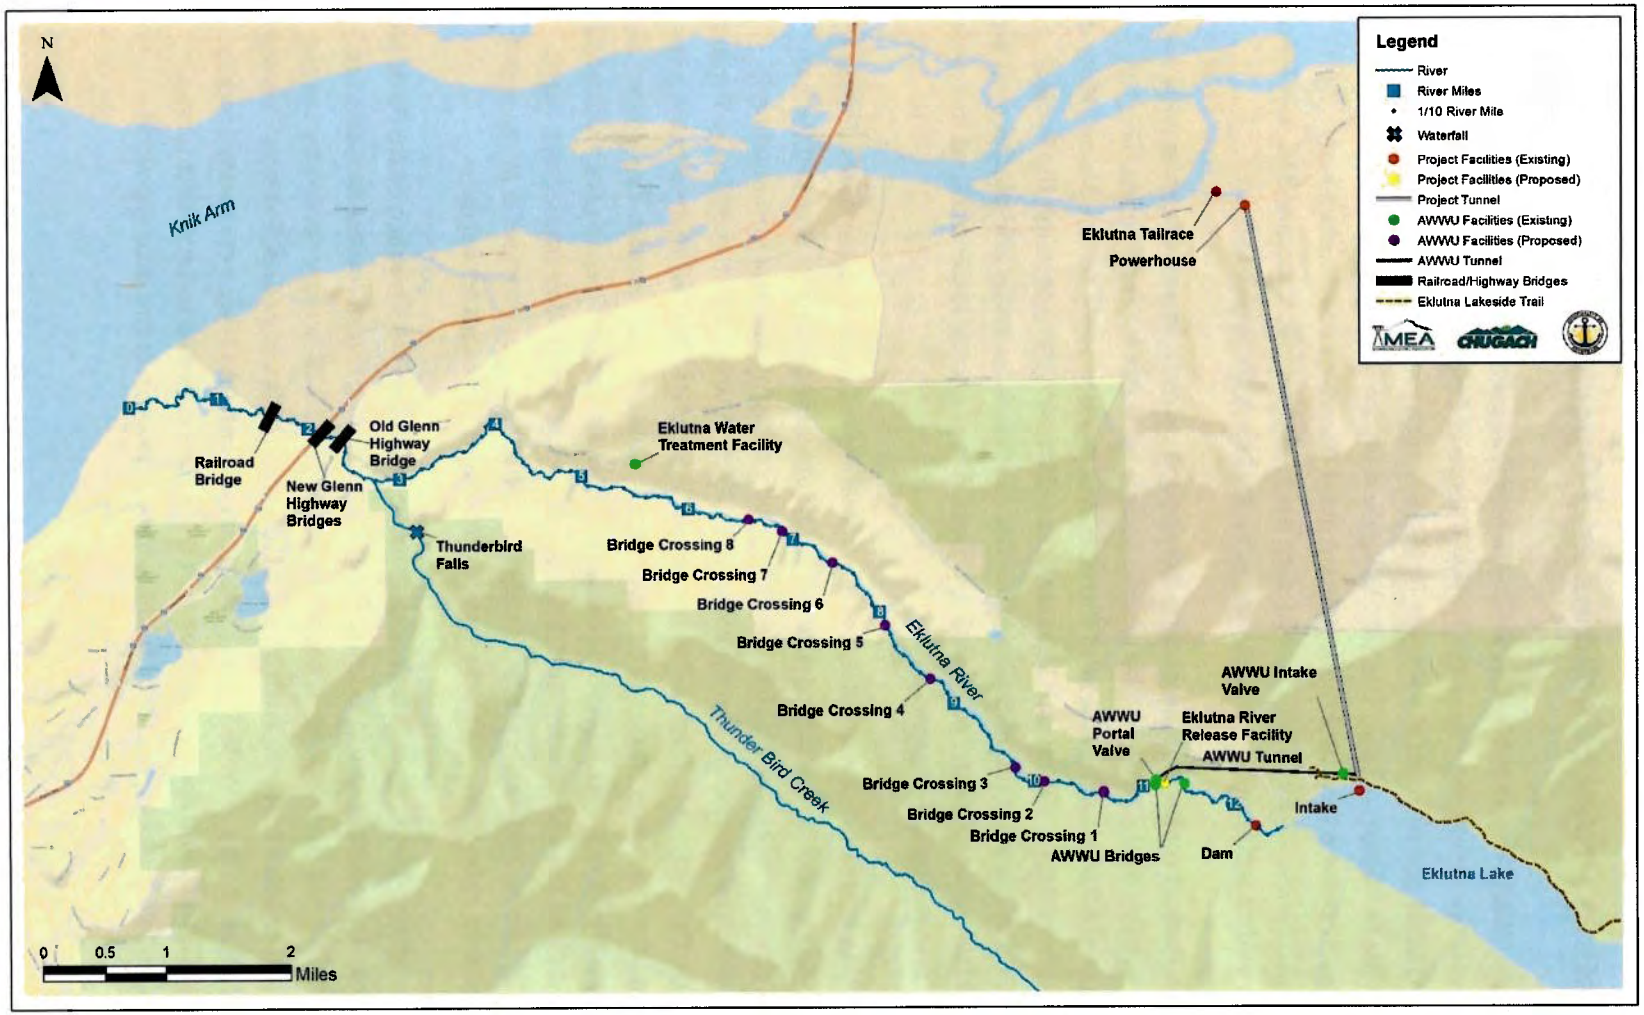

Figure 1-1. Existing and Proposed Infrastructure.

Exhibit TRZ-04
Page 13 of 83

2.0 Existing Project Facilities and Operations

The 40-megawatt (MW) Project is located in Southcentral Alaska, approximately 30 miles northeast of downtown Anchorage near the Native Village of Eklutna (NVE). The U.S. Bureau of Reclamation (USBR) constructed the Project in 1955, which included rehabilitation of the old dam at the outlet of Eklutna Lake. The rehabilitated dam was damaged in the 1964 earthquake, at which point a new and taller embankment dam was constructed just downstream. This new dam (the existing dam) is an earth and rockfill structure 815 feet long and 41 feet high with a rectangular concrete spillway that runs through the dam.

Eklutna Lake (the Project reservoir) is approximately seven miles long and one mile wide and is located within Chugach State Park. The lake is the source of water for the Project. The reservoir also provides almost 90 percent of the domestic water supply for the Municipality of Anchorage to the Anchorage Water and Wastewater Utility (AWWU) through the Project intake. Typically, the reservoir fills during the summer months from snow and glacial melt and is drained during the winter months to generate power. The reservoir is generally at its lowest elevation in May and peaks in September.

The Project facilities and operation are designed to minimize release of water to the Eklutna River from the existing dam by capturing runoff during late spring/summer and taking that water out of the storage reservoir/Eklutna Lake over the course of the year and sending it through the powerhouse located on the Knik Arm. The Project water right entitles the Project Owners to operate the Project to fully utilize the water in Eklutna Lake for hydroelectric power production, except for the water that may be diverted for public water supply. The Project also provides other important benefits to electric customers including spinning reserve, frequency and voltage regulation, load following, and firming up electric generation from intermittent renewables. Additionally, the Project tailrace below the powerhouse provides a popular put-and-take Chinook and coho fishery. This fishery is public and handicap accessible.

Figure 1-1 above shows the Project location, legislative boundary for Chugach State Park, and the current extent of anadromy in the Eklutna River. The existing hydro project facilities are shown as red dots, an old hydropower project constructed in 1929 is represented by purple dots, and other non-project features such as the Eklutna Lake Campground, Eklutna Tailrace Day-Use Fishing Access Site, AWWU Water Treatment Plant, and NVE are represented by green dots. Other AWWU infrastructure shown in the figure includes the AWWU tunnel, portal valve, and buried pipeline. All three bridges in the lower river are also shown in Figure 1-1.

2.1 Existing Project Facilities

The Project consists of several components that allow water from Eklutna Lake to be diverted through a 4.5-mile-long tunnel to the powerhouse and eventually discharged into the Knik River for the purpose of power generation. The Project facilities and AWWU water supply infrastructure that is connected to Project facilities are briefly described below. More detailed information on Project facilities is provided in the IIP document available on the Project website (www.eklutnahydro.com).

2.1.1 Dam and Spillway

The existing dam is located approximately 1,400 feet downstream of the natural outlet of Eklutna Lake. It is an earth and rock fill embankment dam with a crest length of 815 feet, a crest width of 30 feet, and a crest elevation (El.) of 891 feet[1]. The crest of the dam is finished with crushed rock material to form a stable road surface (Figure 2-1). An ungated overflow spillway is incorporated within the middle of the dam. The spillway crest is El. 871 feet and the crest length is 18 feet. The dam allows for storage of water in Eklutna Lake for use throughout the year for power generation. The dam also prevents water from flowing into the Eklutna River unless the lake level exceeds the spillway crest elevation and water "spills" from the lake into the river via the spillway (see Section 2.2.3).

Figure 2-1. Dam crest and ungated overflow spillway, looking north.

There is a natural glacial moraine at the outlet of Eklutna Lake. When the lake level is below the crest of the moraine (El. 860 feet), a pond is created between the moraine and the current dam (Figure 2-2). The water level in the pond is not monitored; however, the pond level can

[1] Multiple vertical survey datums are reported in and around the main features of the Project. Throughout this document, the elevation datum that shall be used is the "local datum" tied to the crest of Eklutna Dam. Engineering documentation and design drawings, as presented in Attachment I utilizes the NAVD88, GEOID12B datum for consistency purposes throughout all of the Project Features, which is offset from the Local Datum by approximately 3.6-feet.

differ from the lake level by up to 30 feet in an average year. A small tributary entering the pond approximately 400-ft upstream of the dam keeps the water level steady in the pond when the lake is disconnected from the dam, with a small outflow leaving the pond and entering Eklutna Lake.

There is a 30-inch by 30-inch drainage outlet gate in the base of the spillway crest at El. 852 feet that was designed to drain the pond when water becomes trapped there during late fall or early winter. At the time, it was thought that this water would cause detrimental frost action against the toe of the current dam and at the spillway inlet. However, no detrimental frost action has been observed, and the gate is currently not used for this purpose. This cast iron gate was replaced in 2021 with a stainless-steel gate to allow for study flow releases that same year.

Figure 2-2. Pond between the natural glacial moraine and existing dam in May 2020.

2.1.2 Reservoir

Eklutna Lake is a natural lake formed by the retreating Eklutna glacier. It is approximately 7 miles long, one mile wide, and 200 feet deep at its deepest. The natural lake elevation is El. 850 feet.

The current dam raises the water level of Eklutna Lake by 21 feet to a maximum regulated lake level of El. 871 feet (the elevation of the spillway crest). At this elevation, the lake has a surface area of 3,420 acres. The minimum regulated lake level is El. 814 feet, which provides an active storage capacity of 174,800 acre-feet. Storage between the spillway crest (El. 871 feet) and the dam crest (El. 891 feet) is an additional 72,800 acre-feet.

2.1.3 Intake

The intake is located on the north shore of Eklutna Lake approximately one mile east of the dam. Water is diverted from the lake through an inlet channel 100 feet wide and originally about 720 feet long excavated at the lake bottom (the original intake structure and portions of the original intake conduit damaged in the 1964 earthquake remain in the intake channel). The intake channel leads to the intake structure, which consists of a rectangular reinforced concrete box structure, open and protected by trash racks on its top, front, and both sides. Elevation of the invert (i.e., the base elevation of the intake) is El. 793.6 feet.

2.1.4 Tunnel and Surge Tank

A 4.5-mile-long tunnel through Goat Mountain conveys water from the intake to the penstock. The tunnel is a circular, concrete-lined pressure tunnel with a 9-foot inside diameter. The tunnel terminates in a surge chamber located directly over the tunnel prior to entering the project penstock. The surge tank is used to dampen pressure surges within the conveyance during operation.

2.1.5 Penstock

Extending from the surge tank at the end of the tunnel is the penstock, which conveys water to the power plant turbines. The overall length of the penstock is about 1,088 feet. The penstock is a variable-diameter (91-, 83-, and 75-inch-outside-diameter) welded and coupled steel pipe encased in concrete in a tunnel extending from the surge tank to the power plant. At the powerplant, the penstock bifurcates into two 51-inch-diameter 23-foot-long branches, which are connected to the spiral cases of the turbines. A 66-inch butterfly valve is installed in each penstock branch upstream from the turbines to provide means of dewatering the turbines for servicing or maintenance. These valves also serve as emergency shutoff valves in the event of damage to the turbines.

2.1.6 Power Plant and Switchyard

The Eklutna Power Plant (Figure 2-3) is located on the Old Glenn Highway. It houses two vertical-shaft Francis-style hydroelectric generating units with an installed nameplate capacity

of 44.4 MW. The switchyard equipment, consisting of the power circuit breakers, disconnecting switches, and main buses, is on the roof of the Eklutna Power Plant.

Figure 2-3. Eklutna Power Plant.

2.1.7 Tailrace

Water discharged from the turbines in the Eklutna Power Plant enters a 209-foot-long tailrace conduit through which the water is conducted under the Old Glenn Highway to a 2,000-foot-long open tailrace channel which discharges into the Knik River (Figure 2-4). The channel has a top width of about 75 feet, a bottom width of 25 feet, and a depth of about 12 feet 6 inches.

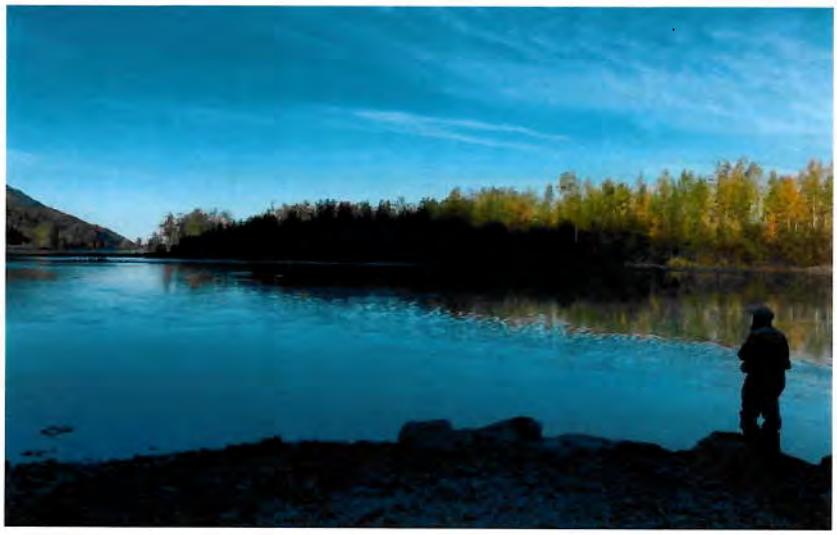

Figure 2-4. Fisherman at the Eklutna Tailrace.

2.1.8 AWWU Connection to Project Tunnel

A water supply project was constructed in 1988 to supply water to Anchorage from Eklutna Lake (Eklutna Water Project). It is now the main source of drinking water for the Anchorage service area. The Eklutna Water Project diverts Eklutna Lake water from the Project tunnel to a diversion tunnel that connects to a buried pipeline. Water flows by gravity through the one-mile-long diversion tunnel and the approximately six-mile-long buried pipeline down the Eklutna River valley to a 750-kW energy recovery station at the Eklutna Water Treatment Plant (see Figure 1-1).

A portal valve at the intersection of the AWWU tunnel and pipeline, located approximately one mile downstream of the existing dam, is used to shut down the pipeline for emergency or maintenance purposes. The pipeline drain valve is located approximately six miles downstream of Eklutna Dam. AWWU maintains an access road that roughly parallels the pipeline and crosses the riverbed in a series of bridges and fords. After treatment, water flows by gravity through a 23-mile-long buried pipeline to the distribution system. This system supplies water to the Anchorage service area, from Eklutna Village to Potter Marsh in South Anchorage. Approximately 10% of the water diverted from Eklutna Lake provides up to 90% of the public water supply for the Municipality of Anchorage. The remaining 90% of water diverted from Eklutna Lake is used for power production.

2.1.9 Water Rights

When the Project was originally authorized in the Eklutna Project Act of 1950,[2] Congress also created a federal reserved water right in Eklutna Lake and its tributaries for the purposes of operating the Project. Under federal and state law, the Project's water right dates back to December 31, 1954, when the Project began operations.[3]

Later, after Alaska statehood, the then-federal owner of the Project, the Alaska Power Administration (APA), applied for a Certificate of Appropriation from the State of Alaska in order to comply with newly-created state law. This permanent Certificate of Appropriation (Certificate) was originally granted in 1973 and is now referred to as "ADL 44944." As subsequently amended, ADL 44944 mirrors the federal reserved water right and authorizes the Project Owners to use any and all of the natural inflow to Eklutna Lake for hydroelectric power generation subject to other terms of the Certificate.

In 1984, MOA sought to use Eklutna Lake for public water supply. Typically, under Alaska law, such a new use would be disallowed due to the senior water right of the APA, but Alaska law

[2] Public Law 81-628, 64 Stat. 383 (1950).
[3] ALASKA STAT. § 46.15.050(b) (2022).

also permits the use of Alaska waters for public water supply even where there are prior appropriators given the importance of maintaining a sufficient water supply.[4] Such use is referred to as "preferred use".[5] In acknowledgement that such preferred use can burden or harm a prior appropriator (water right holder), Alaska law requires that such use be subject to compensation in order to minimize such burden or harm.[6] Accordingly, the MOA and the then-owner (APA) entered a long-term compensation agreement entitled "Agreement for Public Water Supply and Energy Generation from Eklutna Lake, Alaska" dated February 17, 1984, that expires in 2025 (Water Supply Agreement).

Further, MOA and APA worked with Congress to amend the *Eklutna Project Act* to include the additional public water usage of the Eklutna Lake that was otherwise reserved for the purposes of the Project.[7] MOA also obtained a 40-year permit to appropriate water from the State of Alaska to utilize water from Eklutna Lake, referred to as "LAS 2569." LAS 2569 expires on December 31, 2025, and may be replaced with a certificate of appropriation subject to the continuing obligation to compensate the holder of ADL 44944 (the Project Owners).

Upon the sale of the Project to the Project Owners in October 1997, the federal reserved water right and ADL 44944 were conveyed to the Project Owners in a quitclaim deed[8] and the Water Supply Agreement was assigned to by the Project Owners.[9]

2.1.10 Land Ownership and Management

Land ownership and management in the Project area are shown below in Figure 2-5. A majority of the land adjacent to the Eklutna River was once owned by the federal government and due to a number of Alaska Native Claims Settlement Act conveyances, is now owned by Eklutna, Inc. Such ownership includes the area where the lower dam on the Eklutna River was once located, and which Eklutna, Inc. subsequently removed.

Notable exceptions to this Eklutna, Inc. area ownership today remain, however, including that: (1) the land around the AWWU portal valve is owned by BLM, and (2) the land surrounding the Eklutna Dam is owned by the State of Alaska. When the Eklutna Dam was built, this land

[4] ALASKA STAT. § 46.15.150 (2022).
[5] ALASKA STAT. § 46.15.150 (2022). "Preferred use" is further defined under Title 11 of the Alaska Administrative Code Section 93.230, which provides: "Preferred use status allows the use of water for a preferred use when adequate water is not available from the same source to supply all lawful appropriators."
[6] ALASKA ADMIN. CODE tit. 11 § 93.240 (2023).
[7] Public Law 98-552, 98 Stat. 2824 (1984).
[8] "Quitclaim Deed, Federal Reserved Water Right Under the Eklutna Project Act of 1950, 64 Stat. 382, As Amended, Including State of Alaska Water Rights Certificate of Appropriation (Amended) ADL 44944", dated October 2, 1997.
[9] Assignment and Transfer of Agreement for Public Water Supply and Energy Generation from Eklutna Lake, Alaska, as Supplemented, dated October 2, 1997.

surrounding the Eklutna Dam was still owned by the federal government, but when the Project was transferred to the Project Owners in 1997, the federal government gave the Project Owners a perpetual right-of-way to access this land for operating the Project (serial number AA-70133) so long as the Project exists.[10] When that same land was subsequently transferred by the federal government to the State of Alaska in 1998, such transfer was subject to AA-70133.[11] AWWU also has all necessary rights-of-way to access and operate its facilities adjacent to the Eklutna River, including the AWWU portal valve, access road, and buried pipeline.

A majority of the land adjacent to Eklutna Lake is also owned by Eklutna, Inc. but is managed by ADNR as part of Chugach State Park.

[10] UNITED STATES DEPARTMENT OF THE INTERIOR, BUREAU OF LAND MANAGEMENT, RIGHT-OF-WAY GRANT, Serial Number AA-70133 (September 15, 1997).
[11] United States of America Patent No. 50-2019-0080.

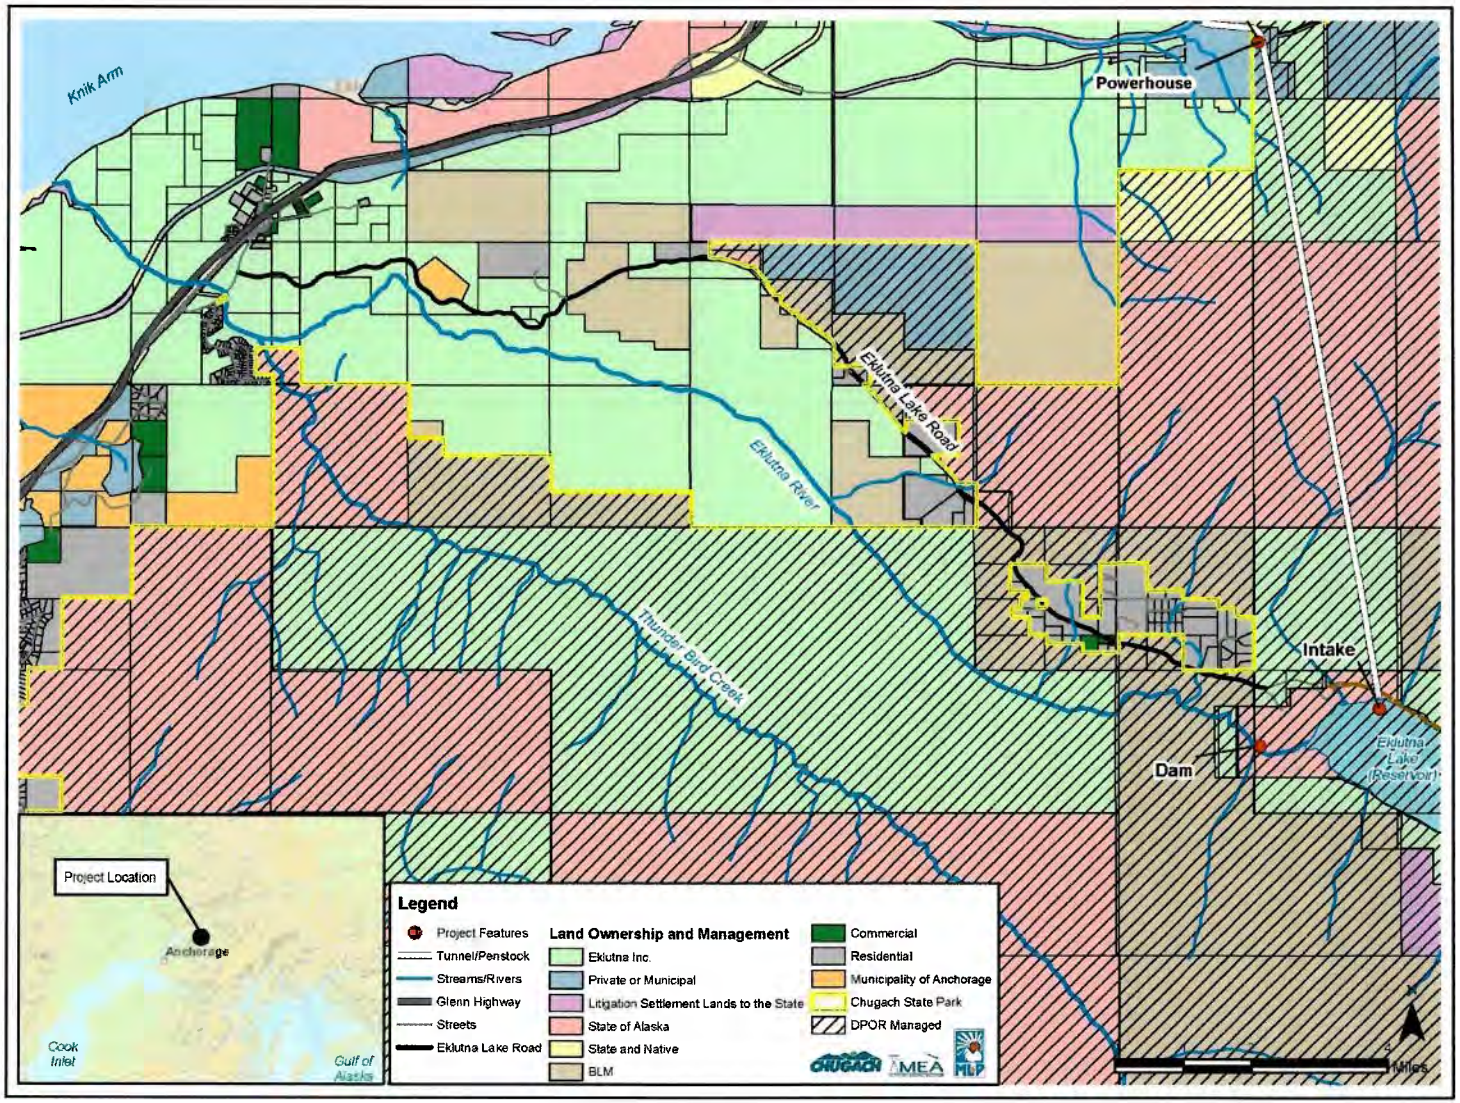

Figure 2-5. Land Ownership and Management in the Project Area.

Exhibit TRZ-04
Page 22 of 83

2.2 Existing Project Operations

The Project Owners operate the Project to provide firm, low-cost, renewable energy. Project-generated renewable energy offsets approximately 72,500 metric tons of CO_2 equivalent each year and can be used to regulate other renewable energy sources like wind and solar in the future. The Eklutna Dam allows storage of spring and summer runoff for power generation in the winter when it is needed most.

2.2.1 Reservoir Operations

Typical operation of the Project is to fill the reservoir during the summer and drain it during the winter months. The Project operators try to refill the reservoir as much as possible without spilling, and the extent of winter drawdown is based on power requirements and the operator's estimates of the winter snowpack. The lake level is generally at its lowest elevation in May and then peaks in September. As shown in Figure 2-6, the lake level is drawn down below the natural lake level (El. 850 feet) for about six months out of the year, and below the crest of the natural glacial moraine (El. 860 feet) for about 9 months out of the year.

The lake level increases as a result of inflows (mostly glacial melt) and is drawn down by operation of the tunnel/penstock system. Assuming no inflow, the lake can be drawn down by approximately four inches per day when the Eklutna Power Plant is generating at max capacity (660 cfs). Water conveyance can be closed at the lake intake structure by closing the intake bulkhead gate or by closing the turbine wicket gates or the turbine inlet valves within the powerhouse.

Flow through the Eklutna Power Plant is the primary means of controlling the water level in Eklutna Lake. In addition, the 30-inch by 30-inch drainage outlet in the base of the spillway (see Section 2.1.1) is controlled by a manually operated slide gate conduit and can release up to 190 cfs (with reservoir at the spillway crest). Operation of the spillway slide gate is checked on an annual basis and the operating mechanism lubricated.

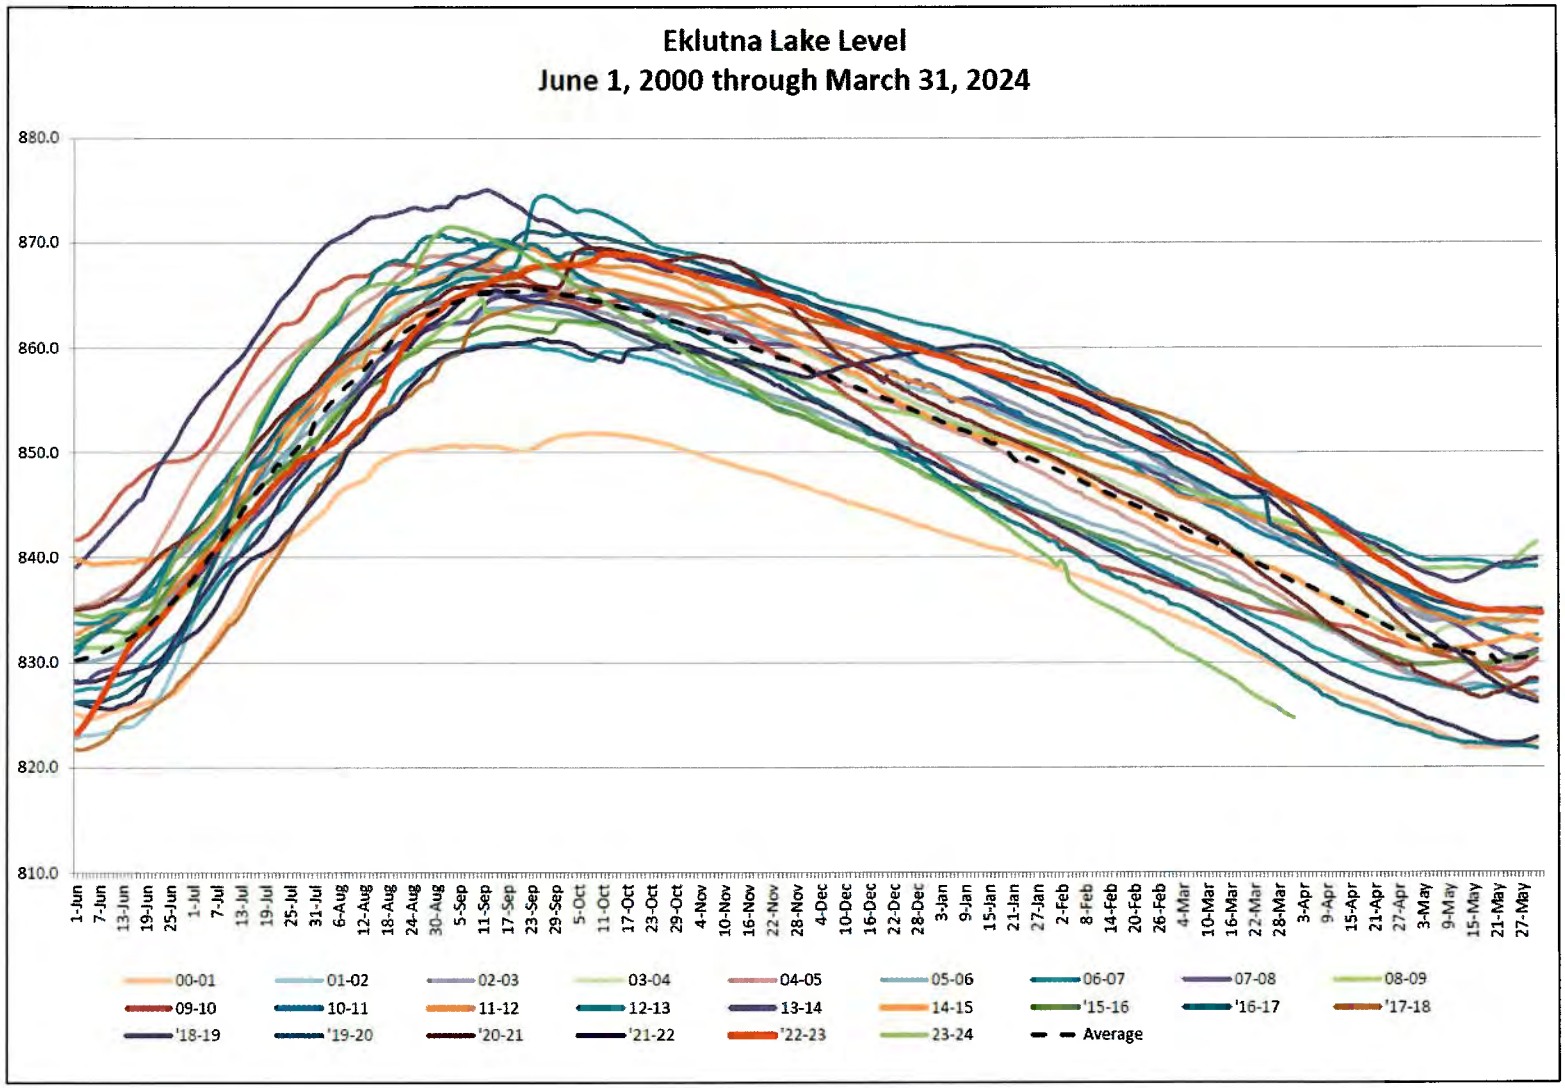

Figure 2-6. Eklutna Lake Level from June 1, 2000, through March 31, 2024.

Exhibit TRZ-04
Page 24 of 83

2.2.2 Energy Generation and Cost of Power

The Project produces nearly 6% of the Project Owners' combined total generation portfolio, approximately 44% of MEA's renewable generation portfolio, and approximately 25% of CEA's renewable generation portfolio. The Project is consistently the lowest-cost resource for power in the Railbelt (i.e., the inter-connected transmission line system that runs from Fairbanks to Homer) and is necessary for MEA to meet their power capacity reserve reliability standard requirements. The average monthly energy generation output of the project is presented in Figure 2-7.

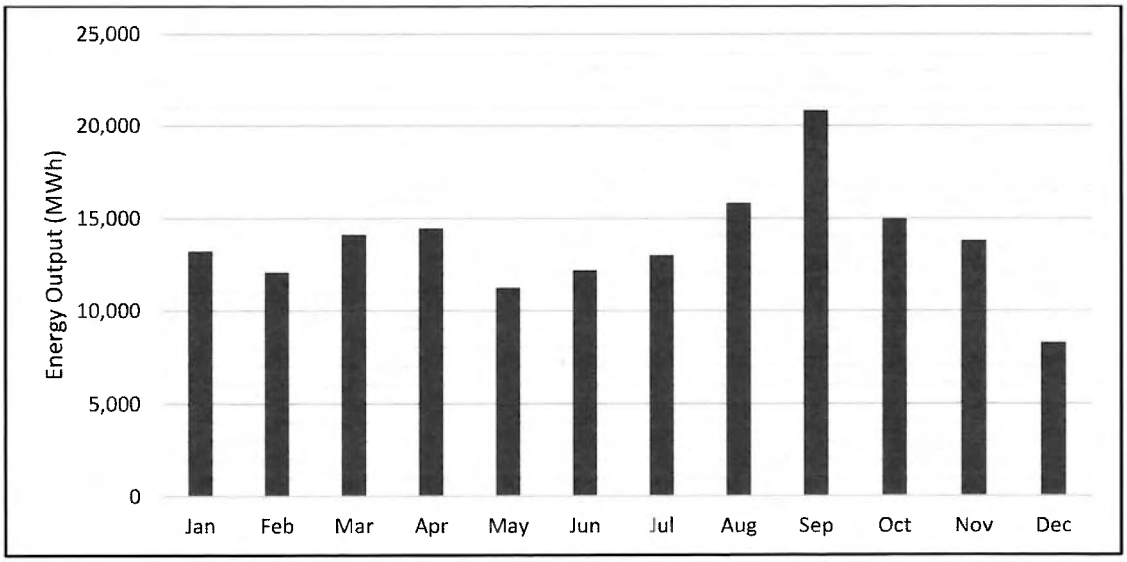

Figure 2-7. Eklutna Power Plant Average Monthly Energy Output.

One of the other major benefits of the Project is increased grid reliability through diversification of fuel for generation. With an uncertain future regarding natural gas supply and costs, hydropower plays an important alternate energy source if there is an interruption to the availability of natural gas. In addition, Project generation offsets approximately 72,500 metric tons of CO_2 equivalent each year.

The Project's value is underscored by the difficulty in locating replacement generation of similar characteristics. CEA and MEA are looking to add renewable resources to meet their respective clean energy goals, and they are grappling with considerable unknowns such as how renewable generation resources and the necessary new transmission lines for such resources can be contracted, permitted, financed, constructed, interconnected, and integrated with the existing Railbelt electric system. The cost of energy storage, integration, and regulation of intermittent generation resources adds considerable complexity and cost.

2.2.3 Spill Events

Spill occurs when water flows from Eklutna Lake into the Eklutna River via the ungated spillway (El. 871 feet). Since the spillway is ungated, the Project operators cannot control spill. Ten spill events have occurred since the existing dam was constructed in 1965. Table 2-1 summarizes the historical data and calculated values for each of these spill events.

Table 2-1. Summary of Spill Events at Eklutna Dam from 1965 to 2023.

Year	Spill Period	Duration (Days)	Peak Lake Level Elevation (ft)	Average Lake Level Elevation (ft)	Peak Spillway Flow (cfs)	Average Spillway Flow (cfs)	Total Volume Spilled (AF)
1967	9/20 – 10/11	22	872.99	-	160	-	-
1977	8/15 – 9/26	43	874.60	-	396	-	-
1981	8/15 – 9/23	40	873.50	-	226	-	-
1989	9/5 – 10/7	33	873.73	872.40	259	107	7,018
1990	9/12 – 9/27	16	872.31	871.78	85	43	1,370
1995	9/21 – 10/20	30	877.62	874.40	1,022	426	25,356
1997	8/19 – 10/31	74	875.51	873.33	561	242	35,591
2012	9/23 – 10/19	27	874.52	873.10	383	188	10,055
2013	8/9 – 10/1	54	874.99	873.18	464	201	21,567
2023	9/1 – 9/8	8	871.51	871.36	18	10	157

The highest lake level elevation ever recorded in Eklutna Lake was 877.62 feet on September 25, 1995. At this elevation, the flow through the spillway was calculated to be 1,022 cfs. The longest spill event at Eklutna Dam occurred in 1997 and lasted for a total of 74 days. The calculated total volume of water spilled during this time was 35,591 acre-feet.

3.0 Requirements of the 1991 Agreement

The 1991 Agreement is the guiding document that the Project Owners have followed during development of the Proposed Final Program and is available here on the Project website for reference. The Project Owners recognize that there is a high level of interest in the Eklutna River and are committed to meeting their obligations as outlined in the 1991 Agreement. The overarching goal of the Project Owners is to provide the information that will allow the Governor to make an informed decision with regard to the Final Program.

The main focus of the 1991 Agreement concerns protection, mitigation of damages to, and enhancement of fish and wildlife (including related spawning grounds and habitat) affected by hydroelectric development of the Eklutna Project. It specifies that the Project Owners are responsible for the consultation, study, and implementation provisions called for in the 1991 Agreement.

3.1 Procedural Requirements

The 1991 Agreement required the Project Owners to fund and conduct studies to examine and quantify, if possible, the impacts to fish and wildlife from the hydroelectric development of the Project. The studies were also designed to examine and develop proposed protection, mitigation, and enhancement (PME) measures to address those impacts. This examination also had to consider the impact of fish and wildlife measures on electric rate payers, municipal water utilities, recreational users, and adjacent land use, as well as available means to mitigate those impacts.

Per the 1991 Agreement, the study plans had to be developed by the Project Owners in consultation with the USFWS, NMFS, the Alaska Department of Fish and Game (ADFG), the Alaska Department of Environmental Conservation (ADEC), and the Alaska Department of Natural Resources (ADNR), collectively the "resource management agencies." The study plans had to include a schedule for the consultation, comment, and decision making required by the 1991 Agreement to be adopted by the Parties[12] in consultation with the Governor. Prior to implementation of the studies, the Parties had to review the study plans and concur with their scope of work. The Project Owners were required to seek input from the resource management agencies and other interested stakeholders as the studies progressed and provide the resource management agencies with an opportunity to comment on the Draft Study Reports. All comments and responses had to be included in the Final Study Reports.

[12] The Parties to the 1991 Agreement as it pertains to the Eklutna Hydroelectric Project are CEA, MEA, MOA, NMFS, USFWS, and the State of Alaska.

After the Final Study Reports were prepared, the Project Owners were required to prepare a Draft Summary of Study Results and a Draft Program. The Draft Program had to include the PME measures recommended by the Project Owners and set a tentative schedule for their implementation. The Project Owners were required to provide the resource management agencies with an opportunity to comment on the Draft Summary of Study Results and the Draft Program and/or provide recommendations. If the resource management agencies' comments or recommendations differ from those of the Project Owners, the Project Owners had to attempt to resolve such differences giving due weight to the recommendations, expertise, and statutory responsibilities of the resource management agencies.

Once comments and recommendations had been received, the Project Owners were required to hold at least one public meeting each in Anchorage and the Matanuska Valley to receive public comment on the Draft Summary of Study Results, the Draft Program, and the comments and recommendations of the resource management agencies. The Project Owners were required to prepare a summary and analysis of all comments received, develop a Proposed Final Program, and prepare an explanatory statement describing the basis for the Proposed Final Program. All of this information must be provided to the Parties and the Governor.

The Parties then have 60 days to submit written comments on the Proposed Final Program, and any alternative recommendations for the protection, mitigation, and enhancement of fish and wildlife resources, to the Governor. The Project Owners then have 30 days to submit written reply comments to the Governor. The Governor is required to review the Proposed Final Program as well as any comments or recommendations for alternative PME measures while giving equal consideration to:

1. Efficient and economical power production
2. Energy conservation
3. The protection, mitigation of damages to, and enhancement of fish and wildlife (including related spawning grounds and habitat)
4. The protection of recreational opportunities
5. Municipal water supplies
6. The protection of other aspects of environmental quality
7. Other beneficial public uses
8. Requirements of State law

Based on his review and consideration, the Governor is required to establish a Final Program that adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources (including affected spawning grounds and habitat) affected by the Project. The Project Owners are required to implement the Final Program established by the Governor. Pursuant to the 1991 Agreement and APA Asset Sale Act, the Governor's decision regarding the provisions of the Final Program is reviewable and enforceable by the Parties in the U.S District Court for the District of Alaska.

3.2 Schedule Requirements

The 1991 Agreement gives deadlines for specific milestones in the consultation, program development, and implementation processes. These deadlines, listed below, are all relative to the date on which ownership of the Project was officially transferred from the Federal government to the current Project Owners (October 2, 1997). This date is referred to as the Transaction Date.

- Initiate the consultation process no later than 25 years after the Transaction Date (October 2, 2022)
- Issuance of the Final Program by the Governor at least 3 years prior to implementation (October 2, 2024)
- Begin implementation of the Final Program no later than 30 years after the Transaction Date (October 2, 2027)
- Complete implementation of the Final Program no later than 35 years after the Transaction Date (October 2, 2032)

The Project Owners are required to repeat the process called for in the 1991 Agreement on a recurring basis every 35 years, beginning within 25 years of the time implementation of the Final Program has been completed for the prior consultation process. In addition, the Project Owners are required to repeat the process called for in the 1991 Agreement prior to undertaking any major structural or operational modifications substantially affecting water usage or fish and wildlife at the Project.

4.0 Compliance with the 1991 Agreement

The Project Owners have fully met the procedural and schedule requirements of the 1991 Agreement to date. In fact, the Project Owners have gone well beyond the requirements of the 1991 Agreement in terms of consultation, documentation, and analysis of alternatives. In terms of schedule requirements, the Project Owners began the process more than three years prior to the prescribed initiation date. The following sections describe the efforts undertaken by the Project Owners to date to comply with the 1991 Agreement and highlight the efforts that have gone beyond the requirements.

4.1 Early Consultation

The 1991 Agreement states that the Project Owners shall consult with the USFWS, NMFS, ADF&G, ADEC, and ADNR regarding the development of study plans and that "the consultation process shall be initiated no later than 25 years after the Transaction Date," (i.e., October 2, 2022).

The Project Owners began the consultation process in 2019, three years earlier than required by the 1991 Agreement. Recognizing the high level of public and tribal interest in the Project, the Project Owners did not limit consultation to the five federal and state agencies identified in the 1991 Agreement, but they reached out to many other entities with an interest in the Project. Their consultation efforts included in-person meetings, quarterly calls and newsletters, technical work groups, and involvement of interested stakeholders in the alternatives analysis process. A summary of consultation undertaken by the Project Owners is included in Attachment A; early consultation efforts are highlighted below.

4.1.1 Initial Consultation Meetings

In March and April of 2019, more than three years earlier than required by the 1991 Agreement, the Project Owners conducted in-person initial consultation meetings with multiple agencies and interested stakeholders. In total, the Project Owners met with 14 agencies and interested stakeholders as part of their initial consultation efforts, including:

- National Marine Fisheries Service (NMFS)
- U.S. Fish and Wildlife Service (USFWS)
- Alaska Department of Fish and Game (ADFG)
- Alaska Department of Environmental Conservation (ADEC)

- Alaska Department of Natural Resources (ADNR), including:
    - Division of Mining, Land, and Water
    - Division of Parks and Outdoor Recreation (State Parks)
    - Office of History and Archaeology (OHA)
- Alaska Department of Transportation & Public Facilities (ADOT&PF)
- Alaska Railroad Corporation (ARRC)
- Anchorage Water and Wastewater Utility (AWWU)
- U.S. Army Corps of Engineers (USACE)
- Eklutna, Inc.
- Native Village of Eklutna (NVE)
- The Conservation Fund (TCF)

After these initial consultation meetings, the Project Owners identified additional interested stakeholders and consulted with them as appropriate, including Cook Inlet Region, Inc. (CIRI), Cook Inlet Aquaculture Association (CIAA), The Alaska Center, Trout Unlimited (TU), the Alaska Energy Authority (AEA), the Alaska Institute for Climate and Energy (ALICE), staff from Alaska Pacific University (APU), the Anchorage Watershed and Natural Resources Advisory Commission (WNRC), and the U.S. Bureau of Land Management (BLM).

Some entities, while interested in the Project, declined to participate in the consultation process, including the U.S. Environmental Protection Agency (EPA), U.S. Geological Survey (USGS), National Weather Service (NWS), and the Anchorage Waterways Council.

4.1.2 Group Stakeholder Meeting

During the initial consultation meetings, several entities requested a follow-up group meeting to promote technical discussion amongst the agencies and interested stakeholders. In response to those requests, the Project Owners conducted an in-person follow-up group meeting on July 16, 2019. Discussion topics included a review of the contact list and existing information gathered to date, updates on on-going data collection by others, an overview of current Project operations, discussion regarding the initial comments and concerns of agencies and interested stakeholders, and next steps.

4.1.3 Project Website

In 2019 the Project Owners developed and launched a Project website, www.eklutnahydro.com. The purpose of this website is to provide information on the efforts being undertaken by the Project Owners to comply with the 1991 Agreement, including background information, the Project schedule, Project updates, reference and final documents, frequently asked questions, and a contact form.

4.1.4 Quarterly Update Calls

During the July 2019 Group Stakeholder Meeting, it was suggested that the Project Owners conduct quarterly calls to update the agencies and interested stakeholders on Project activities. The Project Owners conducted the first quarterly update call in November 2019, and since that time, have continued to conduct these calls approximately every three months.

4.1.5 Anchorage Assembly

In February 2020, the Project Owners were invited to give a brief presentation to the Anchorage Assembly at a work session regarding the Eklutna River. The Project Owners have continued to provide subsequent updates to the Anchorage Assembly's Enterprise and Utility Oversight Committee on a quarterly basis. All of the presentations that have been given to the Anchorage Assembly are available here on the Project website.

4.1.6 Native Village of Eklutna

Eklutna Village is located near the mouth of the Eklutna River. The historical and current presence of the Eklutna Dena'ina in the area is described in the IIP. The Project Owners first met with NVE as part of their initial consultation efforts (Section 4.1.1) and have continued to engage with NVE throughout this process.

In April 2020, NVE requested formal recognition as a consulting government, with their Land and Environment Department analogous to other governmental signatories, for purpose and processes of the 1991 Agreement applicable to the Project. In a May 2020 letter to the Project Owners, NVE recognized that amending the 1991 Agreement may entail substantial time and effort, and as an alternative invited a joint letter from the Project Owners to the effect that the Project Owners will act in good faith to help mitigate impacts to the Eklutna River and that the Project Owners will recognize NVE as a consulting government on a basis comparable to the governmental signatories to the 1991 Agreement.

In June 2020, the Project Owners responded to NVE's request by committing to a review and participation framework that ensures information NVE and its members share regarding the

Eklutna River and development of the Fish and Wildlife Program is appropriately considered and addressed. This includes:

- Providing significance and due weight to NVE's expertise throughout the development of the Fish and Wildlife Program
- Recognizing and including traditional ecological knowledge (TEK) in the review and development of the study plans and Fish and Wildlife Program
- Working with NVE to schedule additional meetings with the goal of hearing input from NVE and its members (one after the study program is completed and another following the development of the Draft Program) and coordinating with NVE on developing the agenda items for these meetings
- Recommitting to sharing all study plans, data, reports, and comments directly with NVE when developed to seek feedback
- Submitting an NVE-specific comment summary to the Governor for consideration along with the Project Owners' Proposed Final Program (see Section 4.12)

The Project Owners' letter also stated: "We value the unique perspectives of NVE's members regarding the Eklutna River, and we also understand that NVE is primarily interested in the presence of both water and salmon in the lower Eklutna River. While we are contractually and legally bound by the terms of the Agreement, please know that if the process set forth in the Agreement bears out the release of water from Eklutna Lake and the addition of salmon into the Eklutna River as part of the Fish and Wildlife Program, we will be prepared to support it."

Since then, NVE has been involved in all four Technical Work Groups (TWGs) (see Section 4.3), the alternatives analysis (see Section 4.5), and attempts to resolve differences (see Section 4.8). The Project Owners have also met with the NVE Tribal Council on several occasions, including meetings with the Boards of Directors for both CEA and MEA and the Anchorage Assembly.

4.1.7 Project Newsletter

In December 2020, the Project Owners published their first Project newsletter. These newsletters provided a status update regarding the Project Owners' efforts to comply with the 1991 Agreement and next steps. They have been issued quarterly and are all available here on the Project website.

4.2 Initial Information Package

Although not required by the 1991 Agreement, the Project Owners developed an Initial Information Package (IIP) document. The IIP established a baseline of existing information and informed the study planning process required by the 1991 Agreement. The Draft IIP was distributed to stakeholders in March 2020 for review and comment. The Project Owners received comments from NMFS, ADNR, ADOT&PF, NVE, TCF, TU, ALICE, and two members of the public. The Project Owners revised the document based on comments received and issued the Final IIP in September 2020. The Draft and Final IIP and all comments received are available here on the Project website. All reference documents used to develop the IIP are available here.

4.3 Technical Working Groups

In April 2020, a Technical Working Group (TWG) focused on aquatic resources was established to solicit technical input throughout study planning, implementation, and reporting. In October 2021, three more TWGs were established to address other resource areas, including the Terrestrial TWG, Cultural TWG, and Recreation TWG. Table 4-1 shows the entities that participated in each of the TWGs.

Table 4-1. Technical Working Group Members.

Entity	Aquatics	Terrestrial	Recreation	Cultural
Native Village of Eklutna	x	x	x	x
Alaska Department of Fish and Game	x	x	x	
ADNR Chugach State Park			x	
ADNR Office of History and Archaeology				x
U.S. Fish and Wildlife Service	x	x		x
National Marine Fisheries Service	x			
Trout Unlimited	x		x	
Alaska Pacific University	x	x		
Project Owners	x	x	x	x

The TWGs met regularly to assist in study planning and review technical information developed by the study program and by others. A total of 28 TWG meetings were held during the study program (see Attachment A).

4.4 Study Program

The 1991 Agreement required the Project Owners to fund studies to examine and quantify, if possible, the impacts to fish and wildlife from the Project. Per the 1991 Agreement, the studies had to examine and develop proposed PME measures to address those impacts. This examination had to also consider the impact of potential fish and wildlife measures on electric rate payers, municipal water utilities, recreational users, and adjacent land use, as well as available means to mitigate these impacts.

Beginning in 2020, the Project Owners consulted with the TWGs regarding the development of a comprehensive, 2-year study program implemented in 2021 and 2022. During that same time period, several other entities were also conducting studies in the Eklutna watershed. These studies included:

- Aquatic habitat monitoring conducted by ADFG, originally under an agreement with Eklutna Inc., then under a new agreement with TU. These study results were shared with the Project Owners.
- Sediment transport monitoring at the highway and railroad bridges conducted by Eklutna, Inc. These study results were shared with the Project Owners.
- Adult salmon spawner surveys conducted by NVE. The data collected in 2021-2022 were shared with the Project Owners.
- Minnow trapping in the lower Eklutna River conducted by NVE. The data collected in 2021-2022 were shared with the Project Owners.
- Habitat assessment of the East and West Forks of Eklutna Creek conducted by NVE. This study has not been completed yet.
- Stream gaging in the East and West Forks of Eklutna Creek conducted by APU. The data from this ongoing effort is publicly available.
- State-wide pumped hydro study conducted by AEA. This study has not been made publicly available.
- Pumped hydro system flow analysis and animation conducted by ALICE in coordination with NVE. This analysis has not been completed yet.
- Formal TEK assessment of the historic and cultural importance of the Eklutna River conducted by NVE in partnership with TU. This assessment has not been completed yet.

The Project Owners coordinated with each of these entities during study planning regarding relevant study methods, monitoring locations, etc. When available, the Project Owners incorporated the results of these other studies in their study reports. Of note, NVE shared their fish survey and habitat study data with the Project Owners, which were included in the Fish Species Composition and Distribution Study Report and the Eklutna Lake Aquatic Habitat and Fish Utilization Study Report (see Section 4.4.2).

4.4.1 Early Study Efforts

In May 2020 the Project Owners acquired LiDAR, aerial imagery, and spherical video of the entire Eklutna River as well as the northeastern shoreline of Eklutna Lake along the lakeside trail. The spherical video is available at https://biglook360.com/eklutna/.

In July 2020, the Project Owners conducted a site reconnaissance with ADFG staff to support study planning efforts. The Aquatics TWG met on July 23, 2020, to review the observations made during the site reconnaissance and to kick-off the study planning process. This meeting included initial discussions regarding the planned Instream Flow Study (see Section 4.4.2), potential study methods, and associated challenges with providing study flow releases.

In August 2020, the Project Owners conducted an initial condition assessment of the drainage outlet gate at the base of the spillway to determine if it could be used to provide study flow releases into the Eklutna River for the planned Instream Flow Study. In the same month, the Project Owners also established several monitoring transects and installed scour monitors in the Eklutna River in advance of any potential unplanned spill events to allow for subsequent data collection that could benefit the study program. There were no spill events in 2020; however, the established transects and scour monitors were later utilized during the Geomorphology and Sediment Transport Study (see Section 4.4.2) to assess erosion and sediment transport through the Eklutna River downstream from Eklutna Lake and to help calibrate the sediment transport model.

The final Eklutna River LiDAR and aerial imagery report, spillway and drainage outlet inspection report, geomorphology monitoring plan and transect locations are all available here on the Project website.

4.4.2 Year 1 Study Planning

Based on this early work, the Project Owners developed a Proposed Study Program Framework and presented it to Aquatics TWG on September 3, 2020. This meeting included discussion regarding how study efforts would occur over a two-year period, the goals and objectives, general study area, proposed methods for each study, the study plan outline, and the study planning schedule.

Draft Study Plans were distributed to the Aquatics TWG on October 26, 2020, for review and comment. The deadline for written comments was November 25, 2020. The Project Owners received comments from NVE, ADFG, USFWS, NMFS, TU, APU staff, and a member of the WNRC. Two meetings were held with the Aquatics TWG on November 30, 2020, and December 21, 2020, to review and address the Aquatics TWG's comments on the Draft Study Plans.

The Project Owners revised the Draft Study Plans based on the comments received, and the Revised Draft Study Plans were distributed to the Aquatics TWG on January 18, 2021, for review and comment. The deadline for written comments on the Revised Draft Study Plans was January 29, 2021.

Since several of the Aquatics TWG's comments on the Draft Study Plans were questions related to the operational capabilities of the Project, the Project Owners decided to start developing the proposed hydro operations model early and presented the preliminary modeling results to the Aquatics TWG at a meeting on January 26, 2021, to help inform the Aquatics TWG's comments on the Revised Draft Study Plans. The Project Owners also addressed additional clarifying questions from the Aquatics TWG at the January 2021 meeting in advance of the comment deadline.

The Project Owners received comments from ADFG, NMFS, TU, and APU staff and revised the study plans again based on comments received. As required by the 1991 Agreement, the Proposed Final Study Plans were distributed to the Parties on February 24, 2021, for review and concurrence on the scope of work.

A meeting amongst the State agencies involved in the Project was held on February 25, 2021, to determine how the State of Alaska, as a party to the 1991 Agreement, would concur on the scope of work in the study plans. The State agencies determined that it would be most appropriate for the Commissioners of each State agency (ADFG, ADEC, ADNR, and ADOT&PF) to sign a letter stating that they concur on the scope of work in the study plans, and then the Project Owners would send those concurrence letters to AEA, the Governor's representative, with the Proposed Final Study Plans for review and feedback.

The Project Owners received concurrence letters from all of the state and federal agencies, including the NMFS, USFWS, ADFG, ADEC, ADNR, and ADOT&PF. The State agency concurrence letters and the Proposed Final Study Plans were sent to AEA as the Governor's representative for review and feedback; however, the Project Owners did not receive any additional feedback from AEA. Each version of the Year 1 Study Plans, all comments received, and each of the concurrence letters are available here on the Project website.

Studies initiated in 2021 included the following:

- **Instream Flow Study** – informed how much habitat would be created by a range of potential flows for various species (Chinook, coho, sockeye) and life stages (spawning and rearing).
- **Geomorphology and Sediment Transport Study** – informed what peak flows might be needed in conjunction with year-round instream flows.
- **Fish Species Composition and Distribution Study** – identified what fish species were present in the Eklutna River, what habitat they were utilizing, and when.
- **Water Quality Study** – monitored various water quality parameters (temperature, dissolved oxygen, pH, turbidity, nutrients, etc.) in both the Eklutna River and Eklutna Lake.
- **Macroinvertebrate Study** – assessed the baseline community of aquatic organisms at three locations in the Eklutna River.
- **Stream Gaging** – collected continuous flow data at various points in the Eklutna River and select tributaries to Eklutna Lake.
- **Lake Aquatic Habitat and Fish Utilization Study** – examined the presence and health of fish in Eklutna Lake, as well as the availability of potential spawning habitat around the lake shoreline and in its tributaries.
- **Lakeside Trail Erosion Study** – identified areas along the Eklutna Lakeside Trail that were experiencing shoreline erosion and the potential causes.
- **Hydro Operations Model Development** – allows the assessment of different potential operational scenarios for the hydroelectric project.
- **Existing Infrastructure Assessment** – evaluated the condition and hydraulic capacity of downstream infrastructure, including the AWWU infrastructure, railroad bridge, and highway bridges.

One of the major components of the year 1 study program was the need to conduct study flow releases for both the Instream Flow Study and the Geomorphology and Sediment Transport Study. With the current infrastructure, the drainage outlet gate at the base of spillway in the dam is the only mechanism for providing controlled flow releases from the lake into the river. However, this gate had not been used regularly, and upon inspection, it was determined that the gate needed to be replaced. The Project Owners were able to design, procure, permit, and

install the new drainage outlet gate during the summer of 2021 before the planned study flow releases in the fall of 2021, which ranged from 150 cfs to 25 cfs over 3 weeks.

It should be noted that in 2018, a different dam (non-operational since 1955) was removed from the lower stretch of the Eklutna River by Eklutna, Inc. After the removal of this lower dam, a significant portion of the sediment wedge that had accumulated behind the lower dam for decades was left in the river. During year 1 study planning, some TWG members requested a flushing flow as part of the study program to flush the remaining sediment from behind the lower dam site. It was determined that this flushing flow was not necessary for study purposes. However, the Project Owners did commit to evaluating the need for conducting a higher calibration flow as part of the second study year.

In June 2021, before the study flow releases, the Project Owners organized a site visit with the Aquatics TWG (Figure 4-1) to identify and establish transect locations. A total of 30 transects were established throughout the river for the Instream Flow Study in relatively stable areas of the river that were not likely to change significantly as a result of the study flow releases. Additional transects were established throughout the river for the Geomorphology and Sediment Transport Study in relatively dynamic areas of the river that were more likely to change significantly as a result of the study flow releases.

Figure 4-1. Site Visit with the Aquatics TWG in June 2021.

In preparation for study flow releases, the Project Owners requested consent and waiver of liability from the principal landowners downstream of the dam for any damage that may result from the potential movement of Eklutna Inc.'s sediment wedge during the planned study flow

releases. The principal downstream landowners include Eklutna, Inc., ADOT&PF, ARRC, and the MOA/AWWU. Among them, only the MOA/AWWU consented and waived such potential liability.

4.4.3 Year 1 Study Reporting

The Project Owners held a series of TWG meetings in November 2021 to discuss the preliminary results of the year 1 studies. Draft year 1 study reports were distributed to the TWGs and other interested parties (including AWWU) in February 2022 for review and comment. The Project Owners received comments on the draft study reports from ADFG, NMFS, and AWWU. The study reports were then revised and finalized based on comments received. The year 1 study reports and all comments received are available here on the Project website.

4.4.4 Year 2 Study Planning

Based on observations made after the study flow releases and the preliminary results from the first year of studies, the Project Owners revised the Study Program Framework for year 2 and presented it to the TWGs during the November 2021 TWG meetings. As stated above, these meetings included discussions regarding preliminary results from year 1 (if applicable), what studies were being proposed for year 2 (Table 4-2), and the goals, general study area, and proposed methods for each study.

Table 4-2. Year 2 Study Program.

Studies Continued from Year 1 (2021)	Studies Initiated in Year 2 (2022)
Instream Flow Study	Engineering Feasibility and Cost Assessment
Geomorphology and Sediment Transport Study	Hydropower Valuation Study
Fish Species Composition and Distribution Study	Wetland and Wildlife Habitat Study
Lake Aquatic Habitat and Fish Utilization Study	Terrestrial Wildlife Study
Water Quality Study	Recreation Study
Stream Gaging	Cultural Resources Study
	LiDAR and Ortho Imagery Acquisition

Following their commitment in 2021, the Project Owners evaluated the need for a higher calibration flow in 2022. However, based on the data collected in 2021, it was determined that reasonably reliable models could be developed using the collected data, and that a higher calibration flow in 2022 was not necessary for study purposes.

The Draft Year 2 Study Plans were distributed to the Parties and TWGs on February 11, 2022, for review and comment. The deadline for written comments on the Draft Year 2 Study Plans was March 11, 2022. The Project Owners received comments from NVE, USFWS, NMFS, ADFG, ADEC, OHA, TU, and TCF.

A series of TWG meetings were held in March 2022 to address substantive comments on the Draft Year 2 Study Plans that required further discussion. The Project Owners then revised the study plans based on comments received and distributed the Proposed Final Year 2 Study Plans to the Parties on April 1, 2022, for review and concurrence.

The Project Owners received concurrence letters from each of the state agencies. The NMFS and USFWS also provided concurrence letters but only concurred with 10 of the 12 study plans. The federal agencies did not concur with the Geomorphology and Sediment Transport Study Plan or the Instream Flow Study Plan due to their uncertainty about the Project Owners ability to model higher flows without a significantly higher calibration flow.[13] The Project Owners documented this area of non-agreement and distributed the Proposed Final Year 2 Study Plans and State concurrence letters to AEA as the Governor's representative for review and feedback; however, the Project Owners did not receive any additional feedback from AEA. Each version of the Year 2 Study Plans, all comments received, and each of the concurrence letters are available here on the Project website.

It should be noted that although it was not included in the Year 2 Study Plans, the Project Owners also conducted a winter flow analysis to determine the range of flows that would be needed to promote favorable ice conditions. These study results were presented to the Aquatics TWG in March 2023 (see Section 4.4.6).

4.4.5 Year 2 Interim Reporting

The Project Owners held a series of meetings with the Aquatics TWG in September, October, and November 2022 to present the preliminary year 2 study results and potential engineering solutions (PME measures) for providing year-round instream flows, periodic peak flows, and fish passage both into and out of the lake. During those meetings, the Aquatics TWG determined which potential engineering solutions should be advanced to phase 1 engineering, which involved the development of 5% conceptual designs and Class 5 Opinion of Probable Construction Costs (OPCC) for each PME measure. The preliminary study results, potential PME measures, and all comments received are available here on the Project website.

[13] The Project Owners acknowledge the uncertainty associated with any modeling effort. And after reviewing the modeling results, both federal agencies have confirmed the validity of both models.

The proposed PME measures and those that were advanced to phase 1 engineering are shown below in Table 4-3.

Table 4-3. Proposed PME Measures.

Proposed PME Measures	Phase 1 Engineering
Year-round flow releases from the existing dam (RM 12)	Yes
Year-round flow releases from the existing dam (RM 12) and excavate the lake outlet	Yes
Year-round flow releases from a new siphon (RM 12)	Yes
Year-round flow releases from a new bypass tunnel (RM 11.5)	Yes
Year-round flow releases from the existing AWWU portal valve (RM 11)	Yes
Year-round flow releases from the existing AWWU pipeline (RM 5.5)	Yes
Reroute Lach Q'atnu Creek back into the Eklutna River	Yes
Groundwater pumping downstream of the existing dam	No
Channel maintenance flows with existing overflow spillway	Yes
Channel maintenance flows with a new radial gate	Yes
Channel maintenance flows with a new fixed wheel gate	Yes
Upstream fish passage with a fish ladder (gravity flow)	Yes
Upstream fish passage with a fish ladder (variable exits)	Yes
Upstream fish passage with a fish ladder (pump station and slide)	Yes
Upstream fish passage with trap and haul	Yes
Downstream fish passage with a spill event	Yes
Downstream fish passage with a floating surface collector	Yes
Downstream fish passage with a rotary screw and guide nets	No
Downstream fish passage through the existing intake	No
Trapping facility with hatchery spawning, rearing, and release	No
Physical habitat enhancement	Yes
New AWWU bridges	Yes
Lakeside trail improvements	Yes

The Project Owners held another Aquatics TWG meeting in February 2023 to present the preliminary 2D modeling results for the river. It was during this meeting that USFWS proposed a nature-like fishway that would go around the existing dam and NVE proposed dam replacement as potential PME measures. The Project Owners held two meetings with USFWS and NVE in March 2023 to discuss both options further. The Project Owners also had several subsequent meetings with Eklutna, Inc. to discuss details of the potential replacement dam.

Ultimately, the stand-alone nature-like fishway was not advanced, but the potential replacement dam was advanced through phase 1 engineering as quickly as possible.

4.4.6 Year 2 Study Reporting

Draft year 2 study reports and phase 1 engineering deliverables were distributed to the TWGs and other interested parties in March 2023 for review and comment. The Project Owners also held a series of TWG meetings in March 2023 to review and discuss the study results. The Project Owners received comments on the draft study reports from ADFG, ADNR, and USFWS. The study reports were then revised and finalized based on comments received. The year 2 study reports and all comments received are available here on the Project website.

4.4.7 Summary of Study Results

In addition to the individual study reports, the Project Owners developed a Draft Summary of Study Results as required by the 1991 Agreement. This document was distributed in October 2023 with the Draft Program (see Section 4.7). The Project Owners did not receive any comments on the Draft Summary of Study Results. The Final Summary of Study Results is provided in Attachment B.

4.5 Alternatives Analysis

The purpose of the alternatives analysis was to evaluate the costs, benefits, and impacts of a range of comprehensive alternatives (which may consist of multiple PME measures) in a consistent manner. This process was not required by the 1991 Agreement; however, the Project Owners felt that it was necessary to bridge the gap between study reporting and issuance of a Draft Program.

Based on the study results, the Project Owners made a commitment early in the alternatives analysis process to provide year-round flow releases into the Eklutna River as part of their Proposed Final Program. Based on this commitment, the primary objectives during the alternatives analysis were to determine how to release water into the Eklutna River and how much water to release for both year-round flows and periodic channel maintenance flows while considering estimated costs and potential impacts.

The alternatives analysis helped to narrow down the list of comprehensive alternatives by removing those that either did not provide a significant benefit, or where multiple alternatives provided similar benefits, those that were more costly could be removed from consideration. The following subsections detail the method of analysis, participation in the process, the purpose of each alternatives analysis meeting, and the comprehensive alternatives that were ultimately evaluated.

4.5.1 Cost Effectiveness and Incremental Cost Analysis

To help inform decision making, a cost effectiveness and incremental cost analysis was conducted to assess the relative benefits and costs of comprehensive alternatives. This method of analysis is an industry standard, developed by the USACE to compare environmental outputs and the economic costs of alternative plans for environmental restoration or mitigation projects. The cost effectiveness analysis compares the annual cost of a proposed alternative with the ecological lift it provides to help identify the least cost alternatives for a given level of environmental benefits.

The ecological lift used as a basis for comparison was the improvements in spawning and rearing habitat for Chinook, coho, and sockeye salmon that would result from providing flow to the Eklutna River, adding fish passage into and out of the lake, changing operation of the lake levels to provide additional lakeshore spawning habitat, or some combination of these measures. The specific gains in habitat were determined using the models that were developed as part of the Instream Flow Study and the results from the Lake Aquatic Habitat and Fish Utilization Study.

To determine the costs of each proposed alternative, the total capital costs, operations and maintenance costs, and replacement energy costs were combined and annualized over 35 years with appropriate escalation factors as described in Attachment C.

4.5.2 Participation

In March 2023, the Project Owners reached out to the Parties, the TWGs, and other stakeholders regarding their interest to participate in the alternatives analysis process. The following entities participated in one or more of the alternatives analysis meetings.

- Alaska Energy Authority (AEA)
- Alaska Department of Fish and Game (ADFG)
- Alaska Department of Natural Resources (ADNR)
    - Water Section
    - Chugach State Park
    - Office of History and Archaeology (OHA)
- National Marine Fisheries Service (NMFS)

- U.S. Fish and Wildlife Service (USFWS)
- Native Village of Eklutna (NVE)
- Eklutna, Inc.
- Anchorage Water and Wastewater Utility (AWWU)
- Trout Unlimited (TU)
- The Conservation Fund (TCF)
- Project Owners

4.5.3 Meetings

The Project Owners held a series of five meetings between April and August 2023 for the alternatives analysis. The general discussion topics for each meeting are summarized below, and the presentations from each meeting are available here on the Project website.

4.5.3.1 Meeting 1

The first alternatives analysis meeting was held on April 6, 2023. At this meeting, seven potential year-round instream flow levels were presented to the group. When developing these potential flow levels, the Project Owners considered the minimum flows needed for upstream migration through the canyon reach, the flows that provide the maximum amount of spawning habitat for Chinook and coho salmon below the dam, the range of flows that would optimize overwintering habitat, and the hydraulic limitations of the proposed PME measures. Corresponding channel maintenance flows for each potential flow level were also presented. The Project Owners also described how the cost effectiveness and incremental cost analysis would be conducted. At the end of the meeting, participants were invited to submit any potential comprehensive alternatives to the Project Owners within two weeks so they could be evaluated before the next meeting. A request form was provided to participants that allowed them to select one of the seven identified flow regimes (or write in a different flow regime) and any combination of the PME measures that were advanced though phase 1 engineering.

After the first meeting, the Project Owners received 33 comprehensive alternatives from eight entities (including the Project Owners). These alternatives were comprised of various flow regimes and PME measures, including flow releases from the existing dam (with and without fish passage), a replacement dam, a new bypass tunnel, the existing AWWU portal valve, or the existing AWWU pipeline. Alternatives also included periodic channel maintenance flows with uncontrolled spill or with a fixed wheel gate. None of the alternatives included the

siphon, rerouting Lach Q'atnu Creek, the radial gate, gravity flow fish ladder, the fish ladder with a pump station and slide, or trap and haul. The Project Owners conducted a cost effectiveness and incremental cost analysis for all 33 comprehensive alternatives.

4.5.3.2 Meeting 2

The second alternatives analysis meeting was held on May 17, 2023. At the beginning of the meeting, the conceptual design and cost estimate for the replacement dam (proposed by NVE in March 2023) were presented to the group. The sediment transport modeling results for each of the proposed channel maintenance flows were also presented. The Project Owners then reviewed the results of the cost effectiveness and incremental cost analysis for each of the 33 comprehensive alternatives that were submitted for evaluation. During the meeting, the group decided to discard the alternatives that involved flow releases from the existing AWWU pipeline (RM 5.5) or a new bypass tunnel because they did not make sense from a cost benefit perspective. Participants were then invited to revise their alternatives based on the information provided and resubmit them for analysis and discussion at Meeting 3.

After the second meeting, the Project Owners received 36 comprehensive alternatives from eight entities (including the Project Owners). Three of the entities had no changes to their alternatives, but five entities submitted revisions, including the Project Owners. The Project Owners conducted a cost effectiveness and incremental cost analysis for all 36 comprehensive alternatives.

4.5.3.3 Meeting 3

The third alternatives analysis meeting was held on June 14, 2023. In response to questions during the previous meeting regarding the feasibility and benefits of fish passage, the Project Owners began this meeting with a review of the downstream fish passage options/challenges and the documented fish habitat in Eklutna Lake and its tributaries. The Project Owners then presented the revised results for each of the revised alternatives. At the end of the meeting, participants were asked to consider the information presented and submit their preferred alternative(s) for analysis and discussion at Meeting 4.

After the third meeting, the Project Owners received 12 preferred alternatives from seven entities (including the Project Owners). Most entities provided one preferred alternative; however, some entities provided more than one preferred alternative (see Section 4.5.4). The Project Owners conducted a cost effectiveness and incremental cost analysis for all 12 preferred alternatives.

4.5.3.4 Meeting 4

The fourth alternatives analysis meeting was held on July 12, 2023. In response to a question from ADFG during the previous meeting regarding potential velocity barriers, the Project Owners presented modeling results for a range of higher flows (80 to 350 cfs) in the canyon reach. It was concluded that these higher flows would not create a barrier to upstream fish migration in the canyon reach. The Project Owners then presented the revised results for each of the preferred alternatives. The total present value of annualized costs (capital, O&M, and replacement energy) for each alternative ranged from $44 million to $385 million over the 35-year program. Potential impacts to CEA and MEA ratepayers and MOA taxpayers were also reviewed, along with results of the cost effectiveness and incremental cost analysis. During the meeting, TCF proposed a hybrid flow release alternative, releasing flows from the existing dam in the summer and the AWWU portal valve in the winter. The Project Owners committed to evaluating this alternative and discussing it at the next meeting. For the remainder of the meeting, the Project Owners reviewed the potential effects, both positive and negative, of the preferred alternatives on other resources including wetlands and wildlife, public water supply, and recreational use and facilities.

4.5.3.5 Meeting 5

The fifth and final alternatives analysis meeting was held on August 9, 2023. The meeting began with a discussion on the potential effects, both positive and negative, of the preferred alternatives on cultural resources. The Project Owners then presented their evaluation of the hybrid flow release alternative that was proposed by TCF in the previous meeting. This alternative ultimately had the same impacts to reservoir operations as releasing flows from the dam year-round and therefore was not advanced any further. The Project Owners then discussed potential adaptive management strategies and proposed using water budgets for both year-round instream flows and periodic channel maintenance flows. A water budget establishes a total amount of water available for release into the Eklutna River each year; adjustments can be made to the flow regime as long as the total volume of water to be released does not exceed the water budget. The remainder of the meeting was an open discussion regarding potential monitoring efforts. At the end of the meeting, the Project Owners invited participants to revise and resubmit their preferred alternatives if needed.

4.5.4 Preferred Alternatives

After the fifth meeting, the Project Owners received 12 preferred alternatives from eight entities (including the Project Owners). Most entities provided one preferred alternative; however, some entities provided more than one preferred alternative. The following subsections detail the components of each entity's preferred alternative(s).

4.5.4.1 Infrastructure Modifications

The infrastructure modifications proposed by each entity for their preferred alternative(s) are shown below in Table 4-4. If an entity provided more than one preferred alternative, then their alternatives were labeled in descending order of preference.

Table 4-4. Infrastructure Modifications for Preferred Alternatives.

Entity	Instream Flows	Channel Maintenance Flows	Upstream & Downstream Fish Passage	Other
NMFS[1]	AWWU Portal Valve	Fixed Wheel Gate	None	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs
	Replacement Dam	Fixed Wheel Gate	Variable Exit Fish Ladder[2] & Floating Surface Collector	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs
USFWS Alt A	Replacement Dam	Fixed Wheel Gate	Variable Exit Fish Ladder[2] & Juvenile Bypass Gate[3]	Physical Habitat Enhancement New AWWU Bridges Lakeside Trial Repairs
NVE	Replacement Dam	Fixed Wheel Gate	Variable Exit Fish Ladder[2] & Spill	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs
TCF	Replacement Dam	Fixed Wheel Gate	Variable Exit Fish Ladder[2] & Spill	None
USFWS Alt B	Existing Dam	Fixed Wheel Gate	Variable Exit Fish Ladder & Floating Surface Collector	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs
TU	Existing Dam	Fixed Wheel Gate	Variable Exit Fish Ladder & Spill	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs
USFWS Alt C[4]	Existing Dam	Fixed Wheel Gate	None	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs
USFWS Alt D[4]	AWWU Portal Valve	Fixed Wheel Gate	None	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs

Entity	Instream Flows	Channel Maintenance Flows	Upstream & Downstream Fish Passage	Other
ADFG Alt A[5]	AWWU Portal Valve	Fixed Wheel Gate	None	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs
ADFG Alt B[5]	AWWU Portal Valve	Fixed Wheel Gate	None	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs
ADNR Parks	AWWU Portal Valve	Existing Gate	None	Physical Habitat Enhancement New AWWU Bridges Lakeside Trail Repairs
Project Owners	AWWU Portal Valve	Existing Gate	None	Physical Habitat Manipulation New AWWU Bridges Lakeside Trail Repairs

1 NMFS's preferred alternative involved implementing the AWWU portal valve and fixed wheel gate as an immediate action (within 5 years as required by the 1991 Agreement), followed by the replacement dam and fish passage as long-term actions to be implemented after the implementation period specified in the 1991 Agreement.

2 The conceptual design for the replacement dam included a variable exist fish ladder with a nature-like entrance for upstream fish passage.

3 The conceptual design for the replacement dam included a juvenile bypass gate for downstream fish passage.

4 USFWS alternatives C and D were only if public and financial support for alternatives A and B could not be obtained.

5 ADFG alternatives A and B had the same infrastructure modifications but different flow regimes.

4.5.4.2 Year-Round Instream Flow Regimes

The year-round instream flow regimes proposed by each entity for their preferred alternative(s) are presented below in Table 4-5.

Table 4-5. Year-Round Instream Flow Regimes for Preferred Alternatives.

Entity	Flow Releases (cfs)											
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
NMFS[1]	75	75	75	75	75	160	160	160	160	160	75	75
USFWS Alt A	75	75	75	75	75	160	160	160	160	160	75	75
NVE[2]	65	65	65	65	160	255	350	350	150	150	108	65
TCF[2]	60	60	60	60	100	180	180	180	180	100	60	60
USFWS Alt B	75	75	75	75	75	160	160	160	160	160	75	75
TU[2]	61	61	61	61	134	206	206	206	134	61	61	61

Entity	Flow Releases (cfs)											
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
USFWS Alt C	75	75	75	75	75	160	160	160	160	160	75	75
USFWS Alt D[1]	75	75	75	75	75	160	160	160	160	160	75	75
ADFG Alt A	35	35	35	35	50	65	80	80	57	57	46	35
ADFG Alt B	31	31	31	31	41	50	60	60	48	48	39	31
ADNR Parks	27	27	27	27	34	40	40	40	40	40	34	27
Project Owners	27	27	27	27	34	40	40	40	40	40	34	27

[1] Given the infrastructure selected for the NMFS alternative and USFWS Alt D (the AWWU portal valve), the preferred flow regimes shown for these alternatives are not technically feasible.

[2] The NVE, TU, and TCF preferred alternatives include additional releases from the dam for downstream fish passage in April – June, which is not reflected in the instream flow regime presented.

4.5.4.3 Channel Maintenance Flow Regimes

The channel maintenance flow regime proposed by each entity for preferred alternative(s) are presented below in Table 4-6.

Table 4-6. Stakeholders' Preferred Channel Maintenance Flows.

Entity	Flow (cfs)	Duration (Hrs)	Recurrence (Yrs)
NMFS	700	72	3 of 10
USFWS Alt A	700	72	3 of 9
NVE	700	72	Annually
TCF	600	72	3 of 10
USFWS Alt B	700	72	3 of 9
TU	400	72	3 of 10
USFWS Alt C	700	72	3 of 9
USFWS Alt D	700	72	3 of 9
ADFG Alt A	400	72	3 of 10
ADFG Alt B	325	72	3 of 10
ADNR Parks	220	72	3 of 10
Project Owners	220	72	3 of 10

4.5.4.4 Cost Benefit Summary

Each of the preferred alternatives were analyzed as part of the cost effectiveness and incremental cost analysis. A summary of the total annualized costs and present worth of each preferred alternative for the 35-year program is presented below in Table 4-7 and Figure 4-2.

Table 4-7. Cost Summary for Stakeholders' Preferred Alternatives.

Entity	Capital Cost ($M)[1]	O&M Cost ($M)	Replacement Energy Cost ($M)	35-Year Annualized Cost ($M)	35-Year Present Worth ($M)
NMFS	170.8	1.7	4.9	23.5	385
USFWS Alt A	158.7	1.7	4.9	22.4	366
NVE	122.9	0.3	8.4	21.1	346
TCF	118.1	0.3	6.9	18.9	310
USFWS Alt B	88.6	2.1	5.2	17.7	289
TU	28.9	0.6	7.2	13.5	221
USFWS Alt C	18.0	0.5	5.2	8.7	142
USFWS Alt D	16.9	0.2	2.0	4.3	70
ADFG Alt A	16.9	0.2	2.0	4.3	70
ADFG Alt B	16.9	0.2	1.7	3.8	63
ADNR Parks	8.9	0.2	1.3	2.7	44
Project Owners	8.9	0.2	1.3	2.7	44

[1] Capital costs are based on Class 5 OPCC's and carry an expected accuracy range of -50% to +100%.

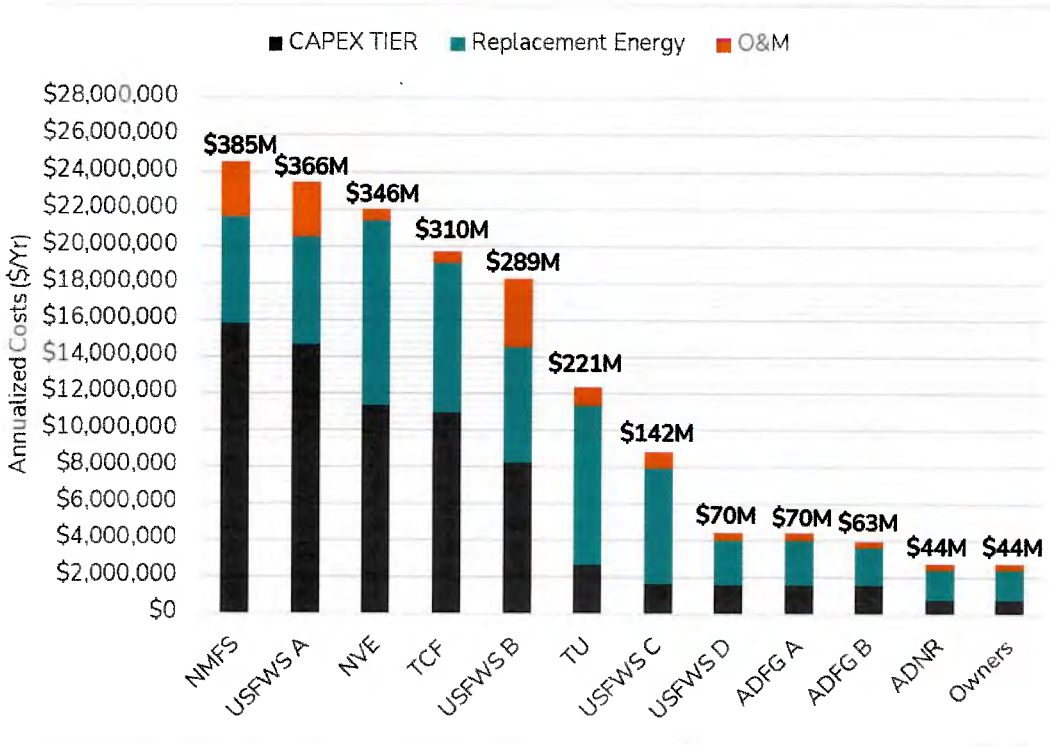

Figure 4-2. Comparison of Annualized Costs and Present Worth for Preferred Alternatives.

The associated ratepayer/taxpayer impacts are presented in Table 4-8. The supporting data for the cost effectiveness modeling is provided in Attachment C.

Table 4-8. Ratepayer/Taxpayer Impacts for Preferred Alternatives.

Entity	Ratepayer Impacts		Property Tax Increase	
	CEA	MEA	MOA	
	(%)	(%)	(mils)	($/100k)
NMFS	+ 4.73%	+ 5.81%	0.076	$7.63
USFWS Alt A	+ 4.53%	+ 5.45%	0.072	$7.21
NVE	+ 4.24%	+ 6.10%	0.046	$4.62
TCF	+ 3.80%	+ 5.29%	0.045	$4.46
USFWS Alt B	+ 3.53%	+ 4.66%	0.052	$5.23
TU	+ 2.38%	+ 4.11%	0.016	$1.60
USFWS Alt C	+ 1.70%	+ 2.96%	0.011	$1.13
USFWS Alt D	+ 0.84%	+ 1.31%	0.008	$0.81
ADFG Alt A	+ 0.84%	+ 1.31%	0.008	$0.81

Entity	Ratepayer Impacts		Property Tax Increase	
	CEA	MEA	MOA	
	(%)	(%)	(mils)	($/100k)
ADFG Alt B	+ 0.76%	+ 1.13%	0.008	$0.81
ADNR Parks	+ 0.53%	+ 0.84%	0.005	$0.51
Project Owners	+ 0.53%	+ 0.84%	0.005	$0.51

The models developed as part of the Instream Flow Study and the results of the Lake Aquatic Habitat and Fish Utilization Study were used to quantify habitat gains for three species (Chinook, coho, and sockeye) and two life stages (spawning and rearing). A summary of the habitat gains for each preferred alternative is presented below in Table 4-9.

Table 4-9. Summary of Habitat Gains for Stakeholders' Preferred Alternatives.

Stakeholder	Habitat Gains (Acres)				
	Chinook Spawning	Coho Spawning	Sockeye Spawning	Chinook Rearing	Coho Rearing
NMFS	3.9	4.0	3.0	15.5	22.8
USFWS Alt A	3.9	4.0	3.0	15.5	22.8
NVE	3.1	3.6	2.5	21.0	31.0
TCF	3.8	3.9	2.7	19.0	28.1
USFWS Alt B	4.9	5.0	4.0	19.1	28.2
TU	4.7	5.0	4.2	18.2	27.1
USFWS Alt C	2.0	2.1	1.1	19.1	28.2
USFWS Alt D	1.5	1.2	0.5	12.6	18.5
ADFG Alt A	1.6	1.6	1.2	8.7	12.7
ADFG Alt B	1.5	1.6	1.2	7.7	11.6
ADNR Parks	1.5	1.6	1.2	6.3	9.9
Project Owners	1.5	1.6	1.2	6.3	9.9

To further assess each preferred alternative, the incremental costs were analyzed to determine the annual spending per acre of habitat gained in the river and lake. This exercise helps to inform the consequences of increasing unit costs to achieve additional habitat gains. A summary of the incremental costs is presented below in Table 4-10.

Table 4-10. Incremental Costs Per Acre of Habitat for Preferred Alternatives.

Entity	Incremental Cost ($/Yr/Acre)				
	Chinook Spawning	Coho Spawning	Sockeye Spawning	Chinook Rearing	Coho Rearing
NMFS	$1,800,000	$1,700,000	$2,300,000	$400,000	$300,000
USFWS Alt A	$6,000,000	$5,900,000	$7,800,000	$1,500,000	$1,000,000
NVE	$5,700,000	$5,600,000	$7,500,000	$1,400,000	$1,000,000
TCF	$7,100,000	$6,100,000	$8,800,000	$1,000,000	$700,000
USFWS Alt B	$5,200,000	$5,100,000	$7,300,000	$1,000,000	$700,000
TU	$2,900,000	$2,700,000	$3,200,000	$700,000	$500,000
USFWS Alt C	$4,400,000	$4,100,000	$7,900,000	$500,000	$300,000
USFWS Alt D	$2,700,000	$2,700,000	$3,600,000	$500,000	$300,000
ADFG Alt A	$2,500,000	$2,400,000	$3,200,000	$500,000	$300,000
ADFG Alt B	$1,800,000	$1,700,000	$2,300,000	$400,000	$300,000
ADNR Parks	$1,800,000	$1,700,000	$2,300,000	$400,000	$300,000
Project Owners	$1,800,000	$1,700,000	$2,300,000	$400,000	$300,000

4.6 AWWU Agreements

After the alternatives analysis, the Project Owners initiated conversations with AWWU in August 2023 to ascertain if AWWU would be willing to allow for potential the use of its infrastructure to release water into the Eklutna River. These conversations concluded with a confidential binding term sheet in October 2023, pursuant to which the Project Owners and AWWU agreed to: (1) broad commercial terms to allow for the construction, interconnection, and operation of the Eklutna River Release Facility and transportation of water for instream flows if the AWWU portal valve alternative was included in the Final Program approved by the Governor; (2) negotiate three definitive contracts elaborating upon such terms prior to the submission of the Proposed Final Program to the Governor:

- A **Water Facilities Interconnection Agreement** to govern the rights and responsibilities of the Project Owners and AWWU with respect to the construction of the Eklutna River Release Facility and eight AWWU bridges over the Eklutna River that will be needed for year-round access to AWWU infrastructure;
- A **Long-Term Water Transportation Agreement** to govern the rights and responsibilities of the Project Owners and AWWU with respect to the transportation of

water from Eklutna Lake, through AWWU infrastructure and the Eklutna River Release Facility, and into the Eklutna River; and

- A **Public Water Supply Agreement** to replace a 1984 agreement between AWWU and the Project Owners governing AWWU's compensation for and use of the Project Owners' water rights to provide drinking water to AWWU customers from Eklutna Lake that expires in 2025.

In March 2024, the Project Owners and AWWU reached agreement on final drafts of these documents, which are provided in Attachment D. While these agreements themselves have not yet been signed by the parties, the parties have signed an amendment to the binding term sheet agreeing that the substantive terms of such documents are complete, provided that certain technical and procedural exhibits will still need to be finalized. The Project Owners and AWWU further agreed that they will execute the agreements upon (1) the approval of the Governor of a Final Program including the use of AWWU facilities as set forth in the Proposed Final Program, (2) the approval by the Anchorage Assembly to the extent necessary for the MOA to execute and perform under the agreements; and (3) any necessary MEA and CEA board approvals.

The binding term sheet and amendment are available here on the Project website.

4.6.1 Water Facilities Interconnection Agreement

The negotiated terms of the Water Facilities and Interconnection Agreement are summarized below.

- The Project Owners shall be responsible for the design, engineering, permitting, constructing, and testing the Eklutna River Release Facility and AWWU Bridges, and shall do such work in compliance with prudent industry standards.
- The proposed design for the Eklutna River Release Facility as developed by the Project Owners must be approved by AWWU.
- The Project Owners shall bear all the costs associated with constructing the Eklutna River Release Facility and will provide certain workmanship and other warranties with respect to the Eklutna River Release Facility for one year after commercial operation.
- AWWU shall provide access to the necessary land and AWWU facilities within its control to allow for such work. The Project Owners shall be responsible for obtaining any necessary third-party approvals for land access, with AWWU assistance.

- After the Eklutna River Release Facility is commercially operable, legal title to a certain portion of the Eklutna River Release Facility including the portions necessary for isolating AWWU's pipeline segment shall pass to AWWU. Legal title to AWWU bridges shall also pass to AWWU.

4.6.2 Long-Term Water Transportation Agreement

The negotiated terms of the Long-Term Water Transportation Agreement are summarized below.

- Beginning upon the commercial operation of the Eklutna River Release Facility and for at least 35 years thereafter, AWWU shall transport water belonging to the Project Owners upon request through AWWU's facilities to the Eklutna River Release Facility to be released into the Eklutna River.

- Under no circumstance shall AWWU be required to deliver water in such a way that will inhibit its ability to deliver a daily flow rate of at least 41 million gallons per day (MGD) to the downstream Eklutna Water Treatment Facility or to exceed the hydraulic capacity or design criteria of the AWWU facilities.

- The parties shall together develop detailed operating procedures before the beginning of the term which will be regularly updated throughout the term.

- As with the Water Facilities Interconnection Agreement, AWWU shall provide access to the necessary land and AWWU facilities within its control to allow for these water transportation services.

4.6.3 Public Water Supply Agreement

The negotiated terms of the Public Water Supply Agreement are summarized below.

- As partial consideration for the services and access to AWWU infrastructure being provided by AWWU pursuant to the Water Facilities Interconnection Agreement and the Long-Term Water Transportation Agreement, the Project Owners have agreed to make available and allow AWWU to continue to interconnect the Eklutna Water Treatment Facility to the Project infrastructure, to use certain of the Project Owners' facilities, and to use a portion of the Project Owners' water rights, up to 41 MGD, all for the public water supply through October 2060.

- In 2055, AWWU will have an option to obtain by transfer of title from the Project Owners' a portion of their first priority water rights up to 41 MGD at no cost to AWWU other than documentation and approvals.

- AWWU shall pay significantly reduced compensation to the Project Owners for associated reductions in electric energy generation.
- The Project Owners will remain responsible for Eklutna Lake reservoir operations and shall operate the reservoir in such a way that the projected allocations of water to AWWU are available upon request at a flow rate of 41 MGD.
- The Project Owners recommit to take no action regarding Eklutna Lake that has the effect of reducing the quality or increasing the turbidity of the lake water or otherwise allow any other action that might have the effect of reducing its suitability for use as a source of public water supply.

4.7 Draft Fish and Wildlife Program

Per the 1991 Agreement, the Project Owners distributed a Draft Program (with the Draft Summary of Study Results) to the Parties in October 2023. Both documents were also provided to NVE.

In the Draft Program, the Project Owners proposed to utilize the existing AWWU water supply infrastructure to provide a robust year-round base instream flow regime to 11 out of 12 miles of the Eklutna River and benefit all four species of salmon that are currently observed spawning in the lower river, while implementing measures to protect the public water supply and minimizing impacts to ratepayers, taxpayers, carbon emissions, and recreation. The proposed flows were determined based on modeling results and were designed to optimize habitat gains while minimizing the costs of replacement energy. The Draft Program also proposed periodic peak flows to maintain downstream fish habitat, construction of eight new bridges for the AWWU water supply access road, a funding commitment for monitoring studies, and an adaptive management framework. Due to the significant costs, impacts, and uncertainty regarding the viability of introducing anadromous species above the Project dam, no fish passage related facilities or changes in operations were proposed at that time.

The Parties and NVE had 30 days to review and provide comments to the Project Owners. The Project Owners received comment letters from ADFG, ADNR, NMFS, USFWS, NVE, and Eklutna, Inc. The Draft Program, Draft Summary of Study Results, and all comments received are available here on the Project website. Responses to comments on the Draft Program are provided in Attachment E.

In their comment letter dated December 4, 2023, NVE proposed a new alternative that involved the removal of Eklutna Dam "within ten years when sufficient renewable power generation is available to offset the lost power generation from dam removal." In response to this letter, the Project Owners committed to evaluate dam removal in further detail. A

memorandum documenting this evaluation is provided in Attachment F. This alternative was not selected for the Proposed Final Program for reasons described in Section 4.12.2.

4.8 Attempt to Resolve Differences

Per the 1991 Agreement, the Project Owners were required to attempt to resolve differences with the Parties giving due weight to their recommendations, expertise, and statutory responsibilities. The Project Owners held individual meetings with each of the Parties in December 2023 to discuss their comments on the Draft Program. The Project Owners continued to meet with the Parties through April 2024 and made substantive changes to the proposed program based on these discussions.

The Project Owners also met with NVE in December 2023 to discuss their comments on Draft Program and underlying interests. NVE declined to meet with the Project Owners again until March 2023, at which point the Project Owners presented the substantive changes to the program that had been negotiated with the Parties. Subsequent to this meeting, NVE proposed a new alternative that still involved the removal of Eklutna Dam by 2034 once 40 MW of replacement renewable energy is secured. In addition, NVE's new proposal also included the construction of a pump station that would pump water from deep in Eklutna Lake to the pond upstream of Eklutna Dam, and then release water from the dam into the river year-round. This alternative was not selected for the Proposed Final Program for reasons described in Section 4.12.3.

4.9 Public Meetings

After meeting with the Parties and NVE in December 2023 to attempt to resolve differences, the Project Owners were required to hold at least two public meetings, one in Anchorage and one in the Matanuska-Susitna Valley. The Project Owners ultimately held six public meetings, two in Anchorage, two in Palmer, and two in Eagle River. For each location, one meeting was held in the afternoon and one in the evening. All six meetings were held in January 2024 and were an open house format with a brief presentation followed by an opportunity for participants to meet with the Project Owners and their subject matter experts, ask questions, and submit comments. Members of the public had an opportunity to submit both written comments to the Project Owners using the comment forms provided at the public meetings or electronically via the Project website or email. Members of the public also had an opportunity to record their verbal comments at the public meetings.

The public comment period was open from October 27, 2023, when the Draft Program was issued, through February 19, 2024, one month after the last public meeting. The Project Owners received a total of 1,672 public comments, including 1,299 form letters. Individual

comments primarily addressed dam removal and the Draft Program, with comments supporting and opposing both dam removal and the Draft Program essentially evenly split. All of the form letters called for removal of Eklutna Dam; however, most of these form letters were from out of state. The Public Comment Summary and Analysis is provided in Attachment G.

4.10 Proposed Final Fish and Wildlife Program

After five years consultation, study, and analysis, the Project Owners are excited to submit their Proposed Final Program to the Governor. The Project Owners believe that the Proposed Final Program substantively protects, mitigates, and enhances fish and wildlife impacted by the Project, while balance costs and potential impacts to municipal water supply and recreation. The primary components of the Proposed Final Program are summarized below.

- Construction of the Eklutna River Release Facility adjacent to the AWWU portal valve and establishment of year-round instream flows in the Eklutna River.
- Automation of the existing outlet gate at the dam to provide periodic channel maintenance flows in the Eklutna River.
- Construction of eight new bridges along the AWWU access road to enable AWWU's access to critical infrastructure year-round following the establishment of instream flows.
- Payment to Chugach State Park for lakeside trail repairs.
- Establishment of a Committee to oversee implementation of the Monitoring and Adaptive Management Plan.
- Funding to conduct monitoring studies in the Eklutna River throughout the 35-year program.
- Funding for physical habitat enhancement in the Eklutna River based on the monitoring results.
- Procedures for the Committee to adaptively manage the flow regime in the Eklutna River based on the monitoring results.
- Provisions for banking water in Eklutna Lake and potentially increasing the water budget for instream flows in the future.

- Potential installation of a fixed wheel gate to accommodate higher inflows in the future and/or allow higher channel maintenance flows if needed.
- Potential installation of upstream and downstream fish passage facilities in the future if specific criteria are met.

Approval of the Proposed Final Program will enable the Project Owners to implement these significant fish and wildlife measures at the Project, while simultaneously protecting the municipal water supply and continuing to provide low cost, renewable energy to Southcentral Alaska. A comparison to existing conditions is provided in Attachment H. The Design Documentation Reports (DDRs) are provided in Attachment I.

4.10.1 Anticipated Benefits to Fish and Wildlife

Based on modeling results, the default flow regime should create significant new spawning and rearing habitat for salmon in the Eklutna River. The expected spawning and rearing habitat gains for Chinook and coho salmon are presented in Table 4-11.

Table 4-11. Chinook and Spawning and Rearing Habitat Gains.

	Chinook Habitat		Coho Habitat	
Criteria	Spawning	Rearing*	Spawning	Rearing*
Baseline Habitat (Acres)	0.7	11.8	2.5	14.7
Total Habitat with Proposed Base Flows (Acres)	2.2	18.1	4.1	24.6
Percent Gain	209%	53%	65%	67%
% of Maximum Available Habitat Below the AWWU Portal Valve	96.5%	n/a	99.6%	n/a
% of Maximum Available Habitat in the Eklutna River	81.7%	n/a	83.7%	n/a

*The % of maximum available habitat is not shown for Chinook or coho rearing habitat because the flow needed to achieve maximum rearing habitat for both species appears to be higher than the range of flows that was modeled.

The spawning habitat curves for Chinook and coho salmon habitat downstream of the AWWU Portal Valve are presented in Figure 4-3. Spawning and rearing habitat gains are presented graphically in Figure 4-4 and Figure 4-5, respectively.

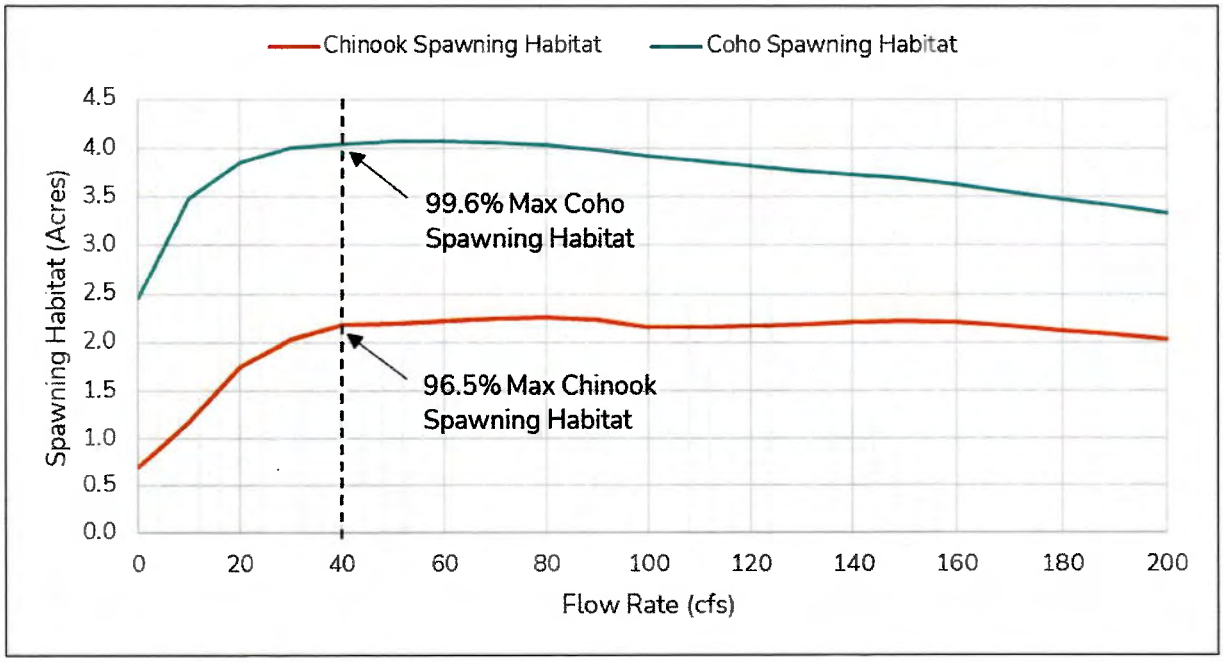

Figure 4-3. Spawning Habitat Curves for the Eklutna River below the AWWU Portal Valve.

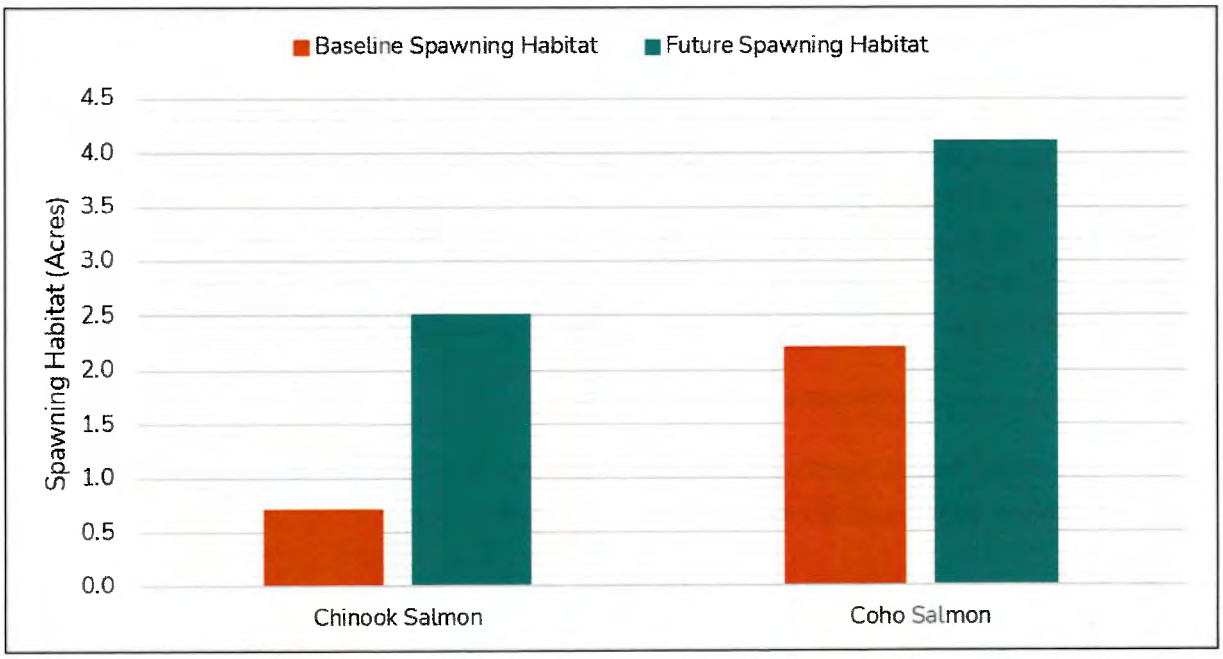

Figure 4-4. Spawning Habitat Comparison, Baseline vs. Future Flow Conditions.

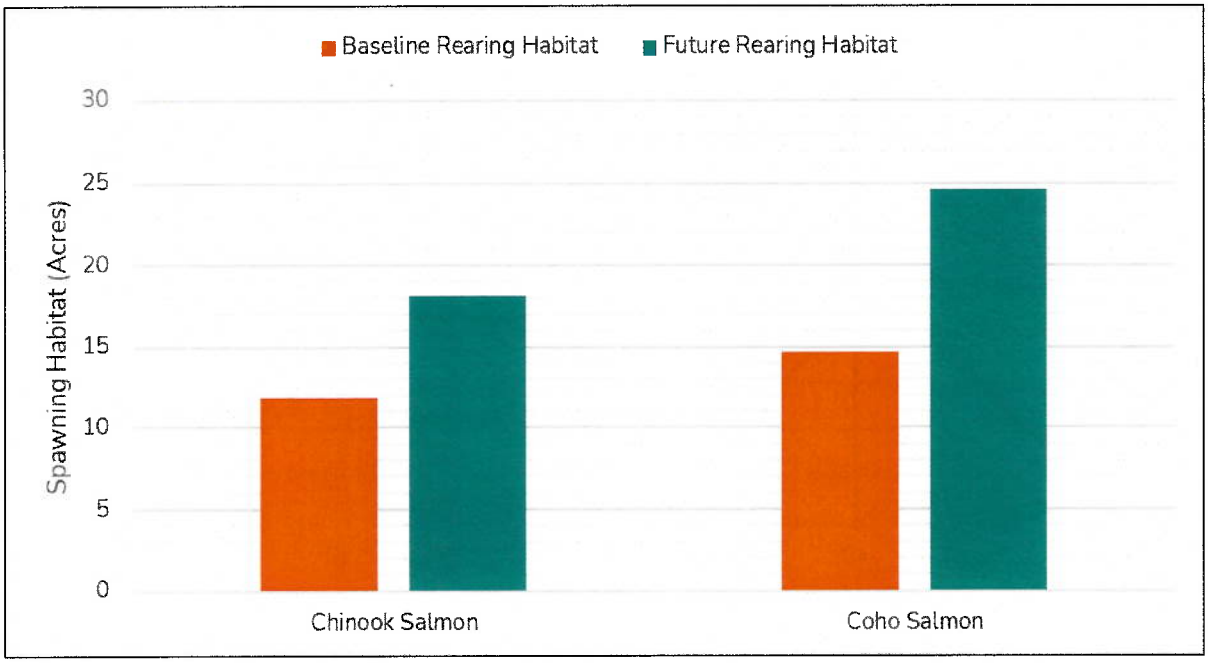

Figure 4-5. Rearing Habitat Comparison, Baseline vs. Future Flow Conditions.

Additional habitat gains for pink and chum salmon are expected to be similar to the prior two species but were not quantified as part of the study program. While these flow releases may also create potential spawning habitat for sockeye in the river, they are unlikely to create rearing habitat for sockeye since sockeye typically rear in lakes. Therefore, the potential spawning habitat for sockeye in the river is not shown. It should be noted that the limited reopener for fish passage (Section 4.2 of the Proposed Final Program) creates the opportunity to benefit sockeye in the future. Increased flow and salmon abundance will also directly or indirectly benefit several ecologically and/or culturally important wildlife species, including:

- Bears, especially brown bears (direct foraging)
- Moose (increased plant nutrients and forage; however, moose could also be negatively impacted as a result of increased bear densities)
- Wolves (direct foraging and potentially higher prey base)
- River otters and mink (direct foraging)
- Beavers (beaver dams would also create salmon rearing habitat)
- Piscivorous birds
- Marine mammals

Page 62 of 83

4.10.2 Anticipated Costs

A Class 4 OPCC with an accuracy range of -30% to +50% was developed for the capital improvements proposed in the Proposed Final Program. Both the capital costs and the O&M costs for the proposed improvements increased from the Class 5 OPCC in part due to modifications to the design that were requested by AWWU. Due to uncertainties whether the fixed wheel gate PME measure will be implemented in the future, the costs are broken out into total program costs with and without the fixed wheel gate.

The costs for implementing the Proposed Final Program will be distributed among the Project Owners based on their ownership percentages and long-term power purchase agreements that modify allocations of costs related to the 1991 Agreement. The resulting allocations are as follows:

- CEA is responsible for 64.29% of all costs, including Capital Costs, O&M Costs, and Replacement Energy Costs.
- MEA is responsible for 16.67% of the Capital Costs and O&M Costs, and 35.71% of Replacement Energy Costs.
- MOA is responsible for 19.04% of the Capital Costs and O&M Costs but does not incur any Replacement Energy Costs.

The total anticipated costs for the Project Owners to implement the Proposed Final Program are presented below in Table 4-12.

Table 4-12. Cost Summary for the Proposed Final Program.

Cost Description	Value
Capital Costs	
ERRF Capital Cost ($)[1]	$10,106,130
Dam Outlet Modifications Capital Cost ($)[1]	$769,373
AWWU Bridges Capital Cost ($)[1]	$4,558,256
Lakeside Trail Repairs ($)	$234,000
Monitoring Program Cost ($)	$450,000
Physical Habitat Enhancement ($)	$350,000
Fixed Wheel Gate ($)[1] *if implemented*	$4,015,100[2]
Subtotal Capital Costs w/o Fixed Wheel Gate ($)	$16,467,759
Subtotal Capital Costs w/ Fixed Wheel Gate ($)	$20,482,860

Cost Description	Value
O&M Costs	
ERRF O&M Cost ($/Yr)	$227,500
Dam Outlet Modifications O&M Cost ($/Yr)	$88,400
Subtotal O&M Costs ($/Yr)	$315,900
Replacement Energy Costs	
Average Annual Energy Reduction (MWh)	15,749
Replacement Energy Costs ($/MWh)	$84.65
Replacement Energy Cost ($/Yr)	$1,333,188
Annualized Costs w/o Fixed Wheel Gate	
Total Annualized Cost ($/Yr)	$3,555,527
CEA Share of Total Annualized Cost ($/Yr)	$2,360,729
MEA Share of Total Annualized Cost ($/Yr)	$897,638
MOA Share of Total Annualized Cost ($/Yr)	$297,160
Estimated Present Value of Total Annualized Costs ($)	$58,218,000
Annualized Costs w/ Fixed Wheel Gate	
Total Annualized Cost ($/Yr)	$3,898,161
CEA Share of Total Annualized Cost ($/Yr)	$2,599,245
MEA Share of Total Annualized Cost ($/Yr)	$955,068
MOA Share of Total Annualized Cost ($/Yr)	$343,848
Estimated Present Value of Total Annualized Costs ($)	$63,828,000[2]

[1] Capital costs at this level of design have an expected accuracy range of -30% to +50%.

[2] The Project Owners' maximum commitment to the fixed wheel gate is $10M, which would raise the Program's capital costs to about $26.5M and its 35-year present value to $72.2M.

Each Project Owner will be responsible for paying its proportionate share of the costs associated with implementing the Final Program. It is too early to determine whether and when such costs will be recovered in rates because any rate recovery will be determined through a rate-setting regulatory process before the Regulatory Commission of Alaska (RCA). Similarly, it is premature to estimate that the costs incurred by the MOA ill exceed its revenues under its long-term power purchase agreements such that the MOA will have to raise taxes Assuming that all such costs are passed directly through as increases to rates and taxes, however, the maximum ratepayer impacts for each utility and potential tax implications of these annualized costs are summarized in the following table.

Table 4-13. Summary of Ratepayer Impacts for Proposed Program.

Fish and Wildlife Program w/ Fixed Wheel Gate	
Cost Description	Value
CEA Rate Impact	+0.78%
MEA Rate Impact	+1.07%
MOA Property Tax Impact	.010 mils[1]

[1] 1 mil is $100 per $100,000 of taxable property value.

4.10.3 Implementation Schedule

The schedule for the remainder of the consultation process and implementation of the Final Program is outlined below in Table 4-14.

Table 4-14. Remaining Consultation Process and Implementation Schedule.

Entity	Milestone	Deadline
Parties	Provide comments to the Governor	June 24, 2024
Project Owners	Provide responses to the Governor	July 24, 2024
Governor	Issues the Final Program	October 2, 2024
Project Owners	Feasibility study for the fixed wheel gate	October 2, 2027
Project Owners	Begin implementation	October 2, 2027
Project Owners	Complete implementation (establish instream flows)	October 2, 2032
Project Owners	Reallocation of any additional inflows to the reservoir	October 2, 2042[1]
Committee	Limited reopener for the fixed wheel gate	October 2, 2042[1]
Committee	Limited reopener for fish passage	Any time after October 2, 2042[1]
Project Owners	Reallocation of any additional inflows to the reservoir	October 2, 2052[1]
Project Owners	Repeat the process called for by the 1991 Agreement	October 2, 2057

[1] These dates may change based on the actual date instream flows are established.

4.10.3.1 Review and Comment Period

The Parties will have 60 days to submit written comments on the Proposed Final Program and any alternative recommendations to the Governor. The Project Owners will then have 30 days to submit written responses to the Governor.

4.10.3.2 Final Fish and Wildlife Program

The Governor shall review the Proposed Final Program, supporting information, comments, and any alternative recommendations. The Governor shall attempt to reconcile any differences between the Parties, giving due weight to the recommendations, expertise, and statutory responsibilities of the resource management agencies and the Project Owners. In order to ensure that the Project is best adapted for power generation and other beneficial public uses, the Governor is required by the 1991 Agreement to give equal consideration to:

1. Efficient and economical power production
2. Energy conservation
3. The protection, mitigation of damages to, and enhancement of fish and wildlife (including related spawning grounds and habitat)
4. The protection of recreational opportunities
5. Municipal water supplies
6. The preservation of other aspects of environmental quality
7. Other beneficial public uses
8. Other requirements of State law

Based on his review, the Governor shall establish a Final Program that adequately and equitably protects, mitigates damages to, and enhances fish and wildlife resources affected by the Project. The Project Owners anticipate the Governor's issuance of a Final Program no later than October 2, 2024.

4.10.3.3 Additional Requirements to Implementing the Final Program

After the Governor's issuance of the Final Program in October 2024, the Project Owners will have three years to achieve the following additional requirements that are preconditions to the Project Owners' ability to implement the Final Program. Should any of these requirements fail to be achieved, the Project Owners may not be able to execute the Final Program.

- **AWWU Agreements:** As described in Section 4.6, the Project Owners and AWWU have reached agreement on the final drafts of all three agreements provided in Attachment D. The Project Owners and AWWU will execute these agreements upon (1) the approval by the Anchorage Assembly to the extent necessary for the MOA to

execute and perform under the agreements; and (2) any necessary MEA and CEA board approvals.

- **Water Right:** As described in Section 2.1.9, the Project Owners' current Certificate of Appropriation (ADL 44944) allows the Project Owners to use any and all of the natural inflow to Eklutna Lake for hydroelectric power generation, except that which is used for public water supply (up to 41 MGD). Therefore, in order for the Project Owners to intentionally release water into the Eklutna River for the purposes of creating fish habitat, ADNR must amend the current water right to allow for such use.

- **Land Rights:** As described in Section 2.1.10, the proposed Eklutna River Release Facility is located within AWWU's easement on BLM land that's managed as part of Chugach State Park. Therefore, the Project Owners anticipate that various land rights (rights of way, easements, etc.) will be required for both temporary and permanent infrastructure related to constructing the Eklutna River Release Facility. The Project Owners will also evaluate the need for any land rights that may be needed for both temporary and permanent infrastructure related to constructing the new AWWU bridges. Chugach State Park is responsible for obtaining any approvals that might be needed for the lakeside trail repairs. The Project Owners do not need any additional land rights for automation of the existing gate at the dam.

- **Dam Safety:** Per ADNR, the Project Owners will be required to update the current O&M manual for Project and seek approval from ADNR to maintain compliance with state dam safety regulations. Automation of the existing gate at the dam may also require a Certificate of Approval to Modify the Dam from ADNR. If the fixed wheel gate is implemented, the Project Owners will work closely with the State Dam Safety Engineer throughout design and construction to ensure compliance with all regulations.

- **Historic Properties:** Per ADNR, the automation of the existing gate at the dam would likely not be considered an adverse effect to the historic property. The Project Owners will seek concurrence from the State Historic Preservation Officer (SHPO) on this determination. If the fixed wheel gate is implemented, the Project Owners will consult with the SHPO at that time regarding a new determination of effect.

- **Permits:** The Project Owners will work with the relevant entities to determine if any other permits may be required and will seek to obtain such permits as needed.

4.11 Measures Not Selected for the Proposed Final Program

This section presents alternative means of mitigating Project impacts that were identified by others and evaluated during the alternatives analysis process described in Section 4.5.

4.11.1 Higher Flow Releases from the AWWU Portal Valve

Of the 12 preferred alternatives, five included using the AWWU portal valve to deliver flow into the Eklutna River. Three of these preferred alternatives proposed flow regimes higher than that of the Project Owners' Proposed Final Program. The increased flows are technically feasible to be released at the AWWU portal valve and provide increased habitat; however, the incremental gains in habitat are minor and result in significantly larger incremental unit costs, as presented in Figure 4-6.

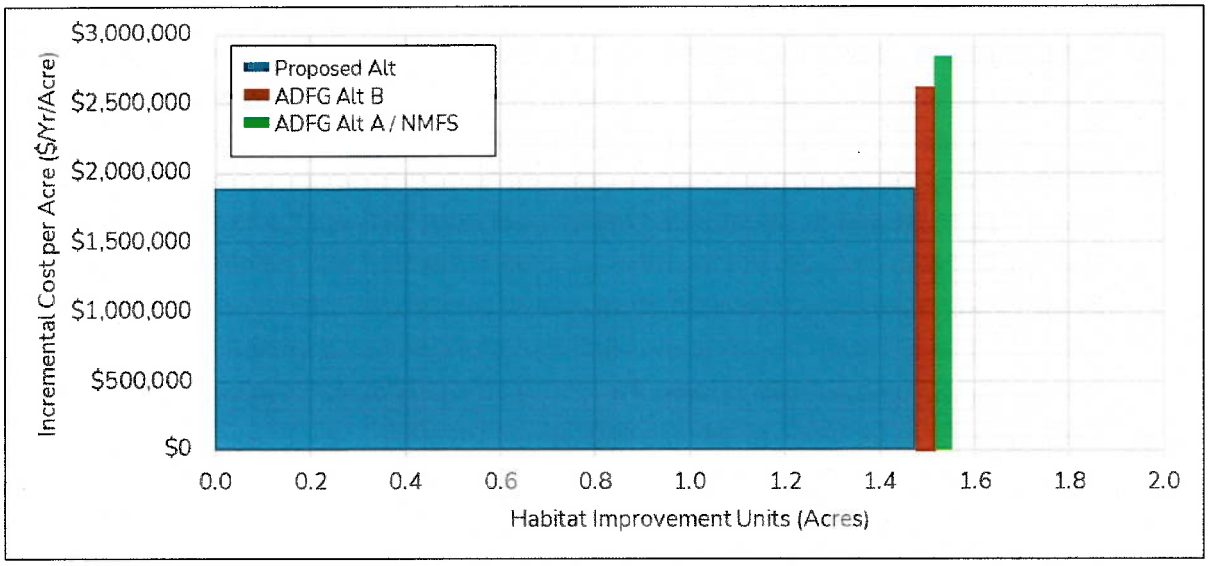

Figure 4-6. Incremental Cost Comparison – AWWU Portal Release Facility.

An additional means of analyzing the incremental gains of higher flow releases from the AWWU portal release facility is to quantify habitat improvements as a function of the maximum spawning habitat in the river. The Proposed Final Program year-round flow release enhances 82% of maximum spawning habitat for Chinook and 84% of the maximum spawning habitat for coho. In comparison, the higher flow release alternatives from the Eklutna River Release Facility have minor gains of approximately 1% - 3% of Chinook spawning habitat and 0.2% - 0.3% of coho spawning habitat. A comparison of the habitat change as a percentage of maximum available riverine habitat is presented in Table 4-15.

Table 4-15. Habitat Gains Comparison – AWWU Portal Release Facility.

Comprehensive Alternative	Chinook		Coho	
	Flow Rate in July/Aug (cfs)	Habitat Gain (% of Max River Habitat)	Flow Rate in Sep/Oct (cfs)	Habitat Gain (% of Max River Habitat)
Selected Alternative	40	82%	40	84%
ADFG Alt B	60	83%	48	84%
ADFG Alt A	80	85%	57	84%

4.11.2 Flow Releases from the Existing AWWU Pipeline

The AWWU pipeline segment P-4 runs along the Eklutna River from RM 5.5 to RM 11.0. Similar to the design of the Eklutna River Release Facility at the AWWU portal valve, an alternative was originally proposed to build a river release structure on the existing pipeline at or near RM 5.5, to take advantage of additional pipeline pressure resulting in a more compact facility. This location would have also eliminated the need to improve upstream AWWU road fords. This alternative was ultimately not selected as a preferred alternative due to the significant reduction in habitat that would benefit from releases. A summary of the gains in habitat if the preferred flow regime is released at the AWWU portal valve rather than RM 5.5 is presented in Table 4-16.

Table 4-16. Habitat Gains Comparison – AWWU Pipeline Release Facility.

Description	Chinook Spawning	Coho Spawning	Chinook Rearing	Coho Rearing
Habitat Gains (Acres) with AWWU Portal Releases	1.5	1.6	6.3	9.9
Habitat Gains (Acres) with AWWU Pipeline Releases	0.3	0.8	3.3	4.7
Incremental Cost ($/Yr/Acre) for AWWU Portal Releases	$1,833,000	$1,696,000	$428,000	$273,000
Incremental Cost ($/Yr/Acre) for AWWU Pipeline Releases	$8,486,000	$3,594,000	$860,000	$601,000

4.11.3 Flow Releases from a New Bypass Tunnel

As an alternative to the Eklutna River Release Facility at the AWWU portal valve, which utilizes the existing AWWU diversion tunnel, an alternative was brought forth to construct a new bypass tunnel in parallel to the existing AWWU tunnel complete with a river release facility at RM 11.5. This alternative was ultimately not selected due to the substantial capital costs to provide the same environmental benefits as using the AWWU portal valve. A comparison of the new bypass tunnel with the AWWU portal valve is presented in Table 4-17.

Table 4-17. Habitat Gains Comparison – New Bypass Tunnel Release Facility.

Description	Chinook Spawning	Coho Spawning	Chinook Rearing	Coho Rearing
Habitat Gains (Acres) with Portal Releases	1.5	1.6	6.3	9.9
Habitat Gains (Acres) with New Bypass Tunnel	1.5	1.6	6.3	9.9
Incremental Cost ($/Yr/Acre) for Portal Releases	$1,833,000	$1,696,000	$428,000	$273,000
Incremental Cost ($/Yr/Acre) for New Bypass Tunnel	$5,373,000	$5,037,000	$1,279,000	$814,000

4.11.4 Flow Releases from the Existing Dam

A measure that was included in three of the 12 comprehensive alternatives proposed by stakeholder groups was to modify the existing dam to release water into the river continuously. In doing so, operations of the reservoir would need to change substantially from current operations. In an average year, the water surface elevation fluctuates from El. 867.0 ft (local datum) to El. 830.0 ft with the ability to draw down to El. 814 ft if necessary. Releases year-round at the existing dam would require the reservoir to remain above El. 861 ft to maintain connectivity with the existing outlet gate at the dam. A representation of the proposed reservoir operation if flow releases were made at the existing dam compared to current operations is presented in Figure 4-7.

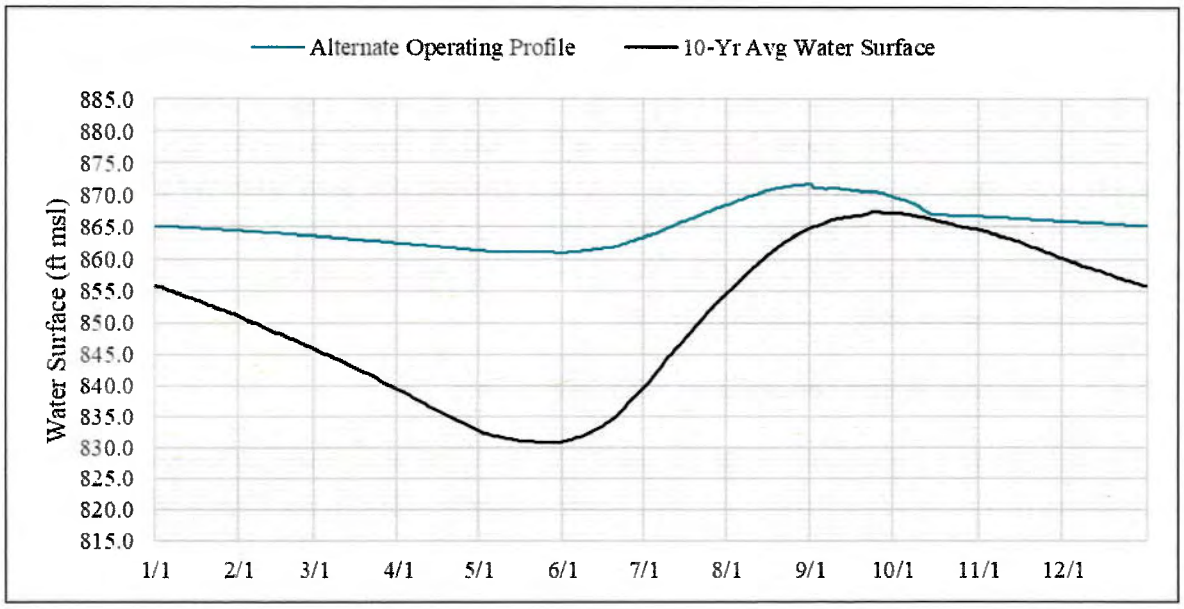

Figure 4-7. Water Surface Elevation Comparison – Existing Dam Releases.

This alternative was ultimately not selected due to the elimination of over 80% of the reservoir storage from being utilized for power generation purposes. Due to the reduction of inflows throughout the winter and the need for maintaining the reservoir above El. 861 ft for river release purposes, the powerhouse is unable to operate for up to eight months of the year. This results in a substantial loss of power generation when grid demand is highest, violates power capacity reserve requirements throughout the winter for MEA, and presents an unacceptable risk to the Project Owners.

4.11.5 Lach Q'atnu Creek Reroute

A proposal to provide year-round natural flows into the Eklutna River included the re-route of Lach Q'atnu Creek from its current path into Eklutna Lake to a location approximately 1,000 feet downstream of Eklutna Dam. Stream gauging records of the creek as part of the study program revealed negligible inflows in the winter (<1 cfs) with daily mean flow rates >10 cfs for about 30 days in the summer. Engineering challenges with the proposed reroute of the creek involve the risk of channel migration through the alluvial fan over time and the encroachment onto private property in the vicinity of the proposed alignment. For these reasons the cost associated with the re-routing combined with the risk of impacting private property deemed this alternative unsuitable for further analysis and was excluded from all preferred alternatives.

4.11.6 Channel Maintenance Flows with Uncontrolled Spill

Intentionally spilling water through the existing overflow spillway was considered for providing periodic channel maintenance flows to the Eklutna River. However, this PME measure was ultimately not selected because of the inherent risk associated with an uncontrolled spill event. In addition, it would require the reservoir to be raised above El. 871 ft which would cause more erosion of the lakeside trail and would limit the time of year when channel maintenance flows could be provided.

4.11.7 Channel Maintenance Flows with Radial Gate

The Project Owners considered adding a radial gate on top of the existing overflow spillway in order to provide controlled spill for periodic channel maintenance flows. However, this PME was ultimately not selected because it would still require the reservoir to be raised above El. 871 ft which would cause more erosion of the lakeside trail and would limit the time of year when channel maintenance flows could be provided.

4.11.8 Channel Maintenance Flows with Fixed Wheel Gate

During the consultation process, several stakeholders requested that the existing overflow spillway be replaced with a fixed wheel gate because either (1) climate change may cause inflows to the reservoir to increase significantly, which may increase the likelihood of future spill events, and a fixed wheel gate will allow the Project Owners to better manage those future spill events, or (2) while modeling results show that the default channel maintenance flow regime will maintain spawning gravels in the wetted reach of the Eklutna River, future monitoring may show that a higher magnitude channel maintenance flow that exceeds the combined hydraulic capacity of the existing outlet gate and the Eklutna River Release Facility may be warranted. Replacement of the existing overflow spillway with a new fixed wheel gate was evaluated during the study program and alternatives analysis and the Project Owners determined that it was not warranted at this time due to the need to perform additional design analysis to confirm whether significant dam safety concerns might exist, and the need for future monitoring of habitat conditions under the proposed flow regime. Recognizing that the fixed wheel gate might be warranted in the future, however, the Project Owners will continue to investigate the fixed wheel gate and will construct it if certain criteria are met.

4.11.9 Fish Passage

The Traditional Ecological Knowledge (TEK) from NVE indicates that there was a sockeye salmon run in Eklutna Lake before the lower dam was constructed in 1929. However, in a 2011 report, the USACE stated "It is doubtful that significant numbers of sockeye salmon ever spawned in the Eklutna River drainage because suitable spawning area upstream of the lake is

limited and water quality in the lake would likely have limited opportunities for spawning in the littoral zone of the lake. Fully 80 percent of the water entering Eklutna Lake comes from two glacial streams that would not be conducive to the consistent survival of sockeye salmon from egg to fry, and the remaining spawning area would not be sufficient to support large numbers of spawning anadromous salmon. In addition, the physical limnology studies of Eklutna Lake suggest that the turbidity in Eklutna Lake during much of the year is not conducive to significant primary production."

A separate study was conducted by Loso et al. to try to determine "whether there was an anadromous salmon run into Eklutna Lake prior to 1929" by using marine derived nutrients (MDN) as a biochemical marker in lake sediment. The study found that there was no significant difference in the composition of sediment layers from before and after 1929. However, a sensitivity test was conducted to assess the possibility that a small salmon run may have gone undetected by the isotopic analysis. It was determined that "a salmon run of up to 1,000 per year, and potentially as many as 15,000 per year, would be possible without noticeably altering the measured isotopic composition of the sediments in Eklutna Lake." Therefore, the results "provide no evidence that such runs occurred, but do not preclude the possible existence of a relatively small sockeye fishery in Eklutna Lake before 1929."

During the consultation process, several stakeholders requested that upstream fish passage of adult salmon into Eklutna Lake and downstream fish passage of juvenile salmon out of Eklutna Lake be evaluated. All fish passage measures proposed by the Project Owners and other stakeholders were evaluated during the study program and alternatives analysis (see Section 4.5). All of the volitional upstream fish passage measures that were evaluated either (1) would have significant impacts to the hydropower project (i.e., would reduce the storage capacity of the reservoir by approximately 40% or would require the Project powerhouse to be shutdown throughout the winter when energy is needed most), or (2) are cost prohibitive (the estimated present worth for the stakeholders' preferred alternatives that included volitional fish passage ranged from $221M to $385M including capex, operations and maintenance, and replacement energy). In addition, there are still significant concerns regarding the effectiveness of all the downstream fish passage facilities studied (i.e., low attraction flow velocities and/or the inability to operate the downstream fish passage facilities while the lake is frozen over). Therefore, fish passage measures are not proposed at this time. The lake study results and justification for the exclusion of each measure from the Project Owners' Proposed Final Program are presented in the following subsections.

Nonetheless, the Project Owners recognize that fish passage may become feasible in the future and that fish passage is important to NVE and the federal resource management agencies. The Project Owners have therefore included a limited reopener for fish passage in the Proposed Final Program.

4.11.9.1 Lake Studies

Much of the Eklutna Lake shoreline is steep, bouldery, or characterized by fine silt and grasses. The remaining shorelines that could be accessed during the study program (above the waterline) contained ~1.5 acres of potential habitat for lakeshore-spawning ocean-run salmon such as sockeye.

Most tributaries to Eklutna Lake are too steep to provide significant spawning or rearing habitat for ocean-run salmon. The only lake tributaries with accessible low-gradient habitat suitable for the migration and spawning of ocean-run salmon are the East and West Forks of Eklutna Creek where an estimated 0.77 – 3.61 acres of potential spawning habitat was documented based on water depth and substrate size. A small tributary to the West Fork of Eklutna Creek adds between 0.02 – 0.24 acres of potential spawning habitat.

Low water transparency (caused by high turbidity) and low nutrients levels in Eklutna Lake correlate with low levels of chlorophyll *a* (an indirect indicator of primary production). The low algal biomass within Eklutna Lake likely corresponds to low zooplankton densities (secondary production) and appears to be a limiting factor (i.e., food resource) for fish production in the lake, especially for the resident kokanee population.

A majority of the spawning kokanee collected from Eklutna Lake have Infectious Hematopoietic Necrosis (IHN) and were smaller (4.5-6.5 inches) than those reported in many other lake systems (10–12 inches). The kokanee in Eklutna Lake also differ from other kokanee in their low fecundity (only 20-30 eggs), lack of sexual dimorphism, and lack of spawning color that is typical of the species (Figure 4-8). These are likely an indication of low nutrient concentrations and limited food sources in the environment, and may indicate that Eklutna Lake, in its existing condition, may not provide productive potential rearing habitat for large populations of ocean-run salmon.

Figure 4-8. Typical spawning Kokanee in Eklutna Lake (left) vs. other lake systems (right).

It has been theorized, but not studied, that if fish passage was provided into Eklutna Lake, the spawning salmon would bring enough marine derived nutrients with them. However, high turbidity in Eklutna Lake would still limit light penetration. The high turbidity in the lake is caused by runoff from the retreating Eklutna Glacier. Like the Eklutna Glacier, the nearby Skilak Glacier is also retreating. Elevated runoff from the retreating Skilak Glacier produces more silt (i.e. turbidity), blocking sunlight, reducing the euphotic zone, and diminishing zooplankton densities. The result is fewer zooplankton (e.g. copepods) available as a food resource for juvenile sockeye. Research by ADFG in 2004 showed that the average weight of juvenile sockeye in Skilak Lake was almost half of what was typical. If a critical summer weight size isn't achieved, overwinter survival of juvenile sockeye will be poor and at some point, will have a substantial impact on sockeye returns. As the Eklutna Glacier retreats further, we can expect a similar trend of increasing turbidity in Eklutna Lake as well.

It also important to note that no adult sockeye were observed spawning in the lower river during the 2-year study program. Therefore, any attempt to establish a sockeye salmon run in the Eklutna watershed would either rely on sockeye straying from other river systems or intentional stocking efforts.

4.11.9.2 Upstream Fish Passage

Gravity Flow Fish Ladder

The gravity flow fish ladder measure includes the construction of a new technical fishway at the existing Eklutna Dam. The fish ladder would be of the weir and orifice or vertical slot style with an entrance below the dam and exit at fixed elevation on the upstream side of the dam. For proper function, the water surface elevation of the lake must maintain relatively constant during spawning season, resulting in the inability to utilize any of the reservoir storage for power generation purposes. For this reason, this alternative was not included in any of the preferred comprehensive alternatives.

Variable Exit Fish Ladder

The variable exit fish ladder measure is included in three of the 12 comprehensive alternatives proposed by stakeholders. The design and construction are similar to the gravity flow fish ladder measure; however, the exit includes a series of gates corresponding to varying water surface elevations which allow for approximately 15-feet of reservoir fluctuation. While allowing for some operational flexibility and continued hydropower generation, this alternative being combined with the existing dam structure for flow releases still requires the hydroelectric powerhouse to be offline throughout the winter, when power demand is the

highest. For this reason, the variable exit fish ladder and release through the existing dam was not included as part of the Project Owners' Proposed Final Program.

Fish Ladder with Pumped Water Supply and Slide

The fish ladder with pumped supply and slide measure includes the construction of a new technical fishway at the existing Eklutna Dam with a chute or slide to return fish to a lower water surface elevation within the lake. The fish ladder would be of the weir and orifice or vertical slot style with an entrance below the dam and exit at a false weir located at the dam. Water from the lake would be pumped continuously over the weir during spawning season providing attraction flow for salmon. From the false weir, migrating adults would fall into a chute or slide and enter Eklutna Lake at a reduced water surface elevation. While this alternative allows for operations of the reservoir for power supply purposes, the reliance on pumps for providing flow to the ladder presents a significant risk. Additionally, this method of fish passage has little to no precedence at existing dams. For these reasons this measure was not included in any of the stakeholder comprehensive alternatives.

Trap and Haul

A trap and haul facility was proposed for analysis early on by the Project Owners to be combined with either the AWWU Portal Release or AWWU Pipeline Release measures. The proposal included the addition of a false weir, holding pond with crowder, and lift to transport migrating adults to a truck for transport to Eklutna Lake. While this measure would allow the Project Owners to maintain current reservoir operations and operate the powerhouse year-round, it was ultimately not selected as part of the Project Owners' Proposed Final Program due to the lake studies concluding that Eklutna Lake has little to no productivity potential and would likely not support a healthy fishery as evidenced by the condition of kokanee residing in the lake. In addition, this upstream fish passage option received no support from any of the stakeholders.

4.11.9.3 Downstream Fish Passage

Spill

One measure proposed for allowing downstream passage of out-migrating juvenile salmonids is to release a significant flow from the dam via a new spillway gate, or by uncontrolled release over the existing spillway from April through June. While this approach is viable, due to the size, depth, and layout of Eklutna Lake, a spill event on the order of 300-500 cfs would provide very low attraction velocities within the lake itself, resulting in substantially reduced efficacy of downstream passage. Additionally, the volume of water released in a spill event of this magnitude for a duration of up to 3 months results in a significant portion of the reservoir

annual inflow volume being utilized for downstream passage rather than for power generation purposes. For these reasons spill was not proposed for downstream passage as part of the Project Owners' Proposed Final Program.

Floating Surface Collector

To preserve water for power supply purposes, an alternate method for downstream passage was proposed, consisting of a floating surface collector located at or near the intake or the lake outlet. This floating barge structure would consist of guidance screens and attraction flow pumps moving approximately 500 cfs through the screens to attract and capture migrating juveniles. A primary concern with the usage of floating surface collector for downstream passage is that the barge must operate in ice-free conditions. At Eklutna Lake, ice breakups typically occur in May to June, which results in the floating surface collector being inoperable for 50%-70% of the theorized outmigration window. Additionally, as presented in the cost estimate summary, these structures have substantial capital and operating expenses. For these reasons, the floating surface collector was not included as part of the Project Owners' Proposed Final Program.

Other Downstream Passage Measures

During the Aquatics TWG meeting on November 9, 2022, two other downstream fish passage measures were discussed: 1) volitional downstream fish passage through the existing intake, and 2) trap and haul downstream fish passage utilizing a rotary screw trap and guide net. However, after preliminary evaluation, it was determined that neither of these measures would have a high success rate; therefore, neither measure was selected by the Aquatics TWG for further evaluation.

4.11.10 Trapping Facility with Hatchery Spawning, Rearing, and Release

During the Aquatics TWG meeting on November 9, 2022, the concept of a trapping adult salmon at the flow release point, spawning the adult salmon and rearing the juvenile salmon at a hatchery, and then releasing the juvenile salmon back into the Eklutna River. This method would likely result in a higher survival rate which would accelerate the salmon population growth in the river. However, the Aquatics TWG strongly opposed the idea of a hatchery; therefore, this measure was not selected by the Aquatics TWG for further evaluation.

4.11.11 Replacement Dam

The base of the existing Eklutna Dam is located on a depositional shelf approximately 200-ft higher in elevation than the deepest portion of Eklutna Lake and approximately 60-ft higher in elevation than the intake elevation for the power tunnel. As described in Section 4.11.4,

providing continuous releases to the Eklutna River from the existing dam significantly curtails power generation and reduces the active storage volume of the reservoir by over 80%. An alternative proposed to reduce restrictions on reservoir operations while providing year-round hydroelectric generation involves the excavation of the depositional shelf at the existing dam and construction of a replacement dam in its place. The excavation would require construction of a channel approximately 20-ft deep, 50- to 350-ft in width, and 1-mile in length resulting in removal of approximately 550,000 cubic yards of material. The replacement dam would have an overall height of approximately 56-feet and incorporate a spillway and fish passage structures.

This alternative would restrict the minimum reservoir operating elevation to El. 840 ft, removing approximately 40% of the storage capacity of the reservoir. While this allows operation of the Eklutna Power plant year-round in an average water year, it requires some operational restrictions and reduces flexibility in hydropower generation seasonally.

The replacement dam is included in four of 12 comprehensive alternatives proposed by stakeholder groups. While the replacement dam concept continues to allow hydroelectric generation year-round, the cost of this measure and loss of reservoir capacity are the primary reasons it is not included within the Project Owners' Proposed Final Program. Dependent on the measure chosen for downstream fish passage, the replacement dam alternatives range from a capital cost of approximately $120M to $180M[14] which results in a significant additional burden on ratepayers and taxpayers. A summary of the costs of the replacement dam alternatives compared to the Project Owners' AWWU portal valve alternative is presented in Table 4-4.

Table 4-18. Cost Comparison Summary – Replacement Dam.

Entity	Alternative Measure	Capital Cost ($)	Annualized Cost ($/Yr)	CEA Rate Impact (%)	MEA Rate Impact (%)	MOA Tax Impact ($/100k)
Project Owners	AWWU Portal Valve	$20,482,860	$3,898,161	0.78%	1.07%	$1.03
TCF	Replacement Dam	$118,129,000	$19,776,000	3.81%	5.31%	$4.46

[14] The cost estimate for the replacement dam measure was developed in close coordination with Eklutna Inc. and has a median construction cost of $113M with a class 5 estimate range of $57M to $220M. Following development of the original estimate, Eklutna Inc. had recommended a few revisions to the costs including providing a new location for material disposal which resulted in a potential cost savings of approximately $25M. The revision falls within the price range of the original estimate and will be considered if the design of this measure is advanced.

NVE	Replacement Dam	$122,853,000	$22,006,000	4.24%	6.10%	$4.62
USFWS Alt A	Replacement Dam	$158,719,000	$23,483,000	4.61%	5.50%	$7.48
NMFS	Replacement Dam	$177,833,000	$25,465,000	4.91%	5.89%	$8.32

4.12 NVE Comment Summary

As stated in their June 2020 letter to NVE, the Project Owners committed to submitting an NVE-specific comment summary to the Governor for consideration along with the Project Owners' Proposed Final Program.

4.12.1 Dam Replacement – NVE's First Preferred Alternative

In July 2023, NVE identified the replacement dam as their preferred alternative (see Section 4.5.4). NVE's preferred year-round instream flow regime was 350 cfs in July and August, 150 cfs in September and October, and 65 cfs throughout the winter. NVE's preferred channel maintenance flow regime was 700 cfs annually. Channel maintenance flows would be provided through a fixed wheel gate and upstream fish passage would be provided through a fish ladder (both consistent with the conceptual design of the replacement dam). Downstream fish passage would be provided through spill.

As described in Section 4.11.11, the replacement dam was not selected by the Project Owners primarily because of the associated costs and the 40% reduction in storage capacity for the reservoir.

4.12.2 Dam Removal – NVE's Second Preferred Alternative

Following the publication of the Draft Program, NVE proposed a new preferred alternative that requires removal of Eklutna Dam and decommissioning of the Project. NVE stated the following in their comment letter dated December 4, 2023:

> "To meaningfully meet the purpose of the Agreement, NVE proposes an alternative solution – removing the Eklutna Lake dam within ten years when sufficient renewable power generation is available to offset the lost power generation from dam removal."

NVE's second preferred alternative proposal contained no analysis of costs or risks of removing the Project dam or replacing its energy and capacity. In response to the letter, the Project Owners engaged engineers and hydrologists to conduct a high-level analysis of the

technical risks and cost implications associated with the removal of the Project. This investigation evaluated the effects that an unregulated river hydrograph may have on infrastructure on or adjacent to the Eklutna River downstream of the existing dam, summarized the costs associated with dam removal and decommissioning of Project infrastructure, investigated potential mitigation measures where necessary to address such risks, and analyzed the use of other comparable renewable energy sources to determine how to offset the lost generation from the Project. A memorandum documenting this analysis and the results is included in Attachment F.

The dam removal analysis revealed that if the Project were removed and the expected stream flows were allowed to flow unregulated down the Eklutna River, AWWU's water pipeline infrastructure would be at significant risk and the New Glenn Highway bridges and Alaska Railroad bridge would need to be replaced. Note that this analysis was limited to large public infrastructure and did not include an assessment of negative effects (or potential liabilities) arising from the inundation of lands on downstream landowners during high water flood events, including Eklutna, Inc. and NVE. Additionally, the assessment showed that mitigating the risks to the downstream infrastructure and replacing the Project energy and capacity with firm renewable energy would cost more than $500 million in total known costs in 2034 dollars.

Ultimately, given (1) the likely adverse impacts to the municipal water supply and downstream infrastructure, including the buried AWWU pipeline, New Glenn Highway bridges, and railroad bridge, (2) the cost of replacing the Project's capacity and energy generation, (3) the Project Owners' overall renewable energy goals, and (4) the dwindling natural gas supply in Cook Inlet, the Project Owners determined it would not be prudent or rational for the Project Owners to include dam removal in the Proposed Final Program.

4.12.3 Pump Station and Dam Removal – NVE's Third Preferred Alternative

On April 9, 2024, NVE proposed a new alternative still centered on the removal of Eklutna Dam "by 2034." However, in addition to all the costs and risks that would be created by dam removal outlined in Section 4.12.2 and Attachment F, NVE's third alternative also included additional requirements to obtain "40 MW of replacement renewable energy" within 10 years and the obligation to construct and operate an alternative Eklutna River Release Facility through the construction of a pump station that would pump water from Eklutna Lake to the small pond upstream of Eklutna Dam, and then release water from the dam into the river year-round (see Section 4.8). This pump station would remain in place and operating after the dam is removed to ensure that AWWU can maintain its full withdrawals and, if necessary, keep the river watered during dry winter months. NVE's third alternative also proposed other Program elements, such as creation of an earnings fund reserve, amending the 1991 Agreement to

delay its process and implementation, and including NVE as a permanent member of the Monitoring and Adaptive Management Committee.

As with its second preferred alternative, NVE's third preferred alternative proposal contained no analysis of costs or risks to the Project Owners or any other entity. The Project Owners acknowledge that NVE's proposed pump station is a viable alternative to the proposed Eklutna River Release Facility from an engineering perspective, and the Project Owners actually studied and considered variations of the pump station alternative during early analysis of all potential alternatives that were identified. Ultimately, however, the idea was not advanced as a preferred alternative because the pump station depends on the proper functioning of a powered mechanical system; if that powered mechanical system fails, the consequence could be catastrophic to the downstream fish populations and habitat that would depend on future flow releases. The Project Owners' proposed Eklutna River Release Facility does not depend upon a powered mechanical system to provide instream flows; rather it requires only gravity. Unlike the pump station, if there is a power outage for an extended time (which is somewhat likely given its location), then the Project Owners' Eklutna River Release Facility would continue to function by simple gravity flow from the river release valve. The Project Owners know of no instream flows established at any hydroelectric project in the U.S. that depends upon the proper functioning of a powered mechanical system to convey water, especially one in a remote location with complex supporting infrastructure.

The Project Owners expect that the capital costs of the pump station would significantly exceed the $10 million of estimated capital costs for the proposed Eklutna River Release Facility. The Project Owners disagree with NVE's statement that the $8.4 million capex figure developed for the siphon alternative as part of phase 1 engineering is reflective of what the pump station would cost. The pump station would be significantly more expensive due to the cost of the deep wet well excavation and boring of the intake pipe as proposed. Additionally, the Project Owners expect that the operational and maintenance costs of the pump station would far exceed the proposed Eklutna River Release Facility as the pumps require a continuous energy draw to operate and the emergency generator would need regular servicing and maintenance. The new access road construction, distribution line, and electrical building required by the pump station, all to be located so close to the state park recreation and campground facilities, may raise potential sound and aesthetic concerns.

Furthermore, the Project Owners do not believe that the proposal to provide power to the pump station using the existing system's 12.47 KV single-phase line on wooden poles would be adequate. A more robust distribution system would need to be erected at a much higher expense. Seven miles of 3-phase distribution lines in that territory would cost roughly $2 million. Finally, the Project Owners estimated that NVE's pump station alternative would not accommodate channel maintenance flows allowed under the Proposed Final Program.

Consequently, the Project Owners determined it would not be prudent or rational for the Project Owners to agree to the costs and risks of NVE's third preferred alternative (dam removal starting in 2034, 40 MW of replacement renewable energy, and the pump station). With all due respect to NVE, the Project Owners must observe prudent utility practices and our obligations to our member-ratepayers. The Project Owners also reject the need for fund reserve and ability to amend the 1991 Agreement without Congressional approval. The Project Owners did agree to name NVE as a permanent member of the Committee as set forth in Section 3.1 of the Proposed Final Program.

Dear Parties,

Thank you to the Owners for your submission on April 25, 2024, of the Proposed Final Fish and Wildlife Program (Proposed Final Program) for the Eklutna Hydropower Project (Project) and to the remaining parties for their comments and participation in developing the Proposed Final Program.

As you know, through an act of Congress, the Project was sold by the federal government to Chugach Electric Association (CEA), Matanuska Electric Association (MEA), and Anchorage

Municipal Light & Power (through the Municipality of Anchorage). As part of this transaction, the 1991 Fish and Wildlife Agreement (Agreement) laid out the process for the purchasers of the Project to fund studies to examine and quantify impacts to fish and wildlife from the Project, and to develop a proposed Final Program for the protection, mitigation, and enhancement of fish and wildlife effected by the Project and for the other Parties to offer their comments.

As Governor, my duties under the Agreement are to evaluate the Proposed Final Program, attempt to reconcile differences between the Parties to the Agreement, and establish a Final Program that "adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources."

The evaluation process requires me to give "equal consideration" to eight factors to "ensure that Eklutna [is] best adapted for power generation and other beneficial public uses." The factors are: purposes of efficient and economical power production; energy conservation; the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat); the protection of recreational opportunities; municipal water supplies; the preservation of other aspects of environmental quality; other beneficial public uses; and requirements of State law.

The Final Program established today includes my evaluation of these eight criteria and my amendments to the Proposed Final Program that attempt to reconcile differences among the Parties and the Native Village of Eklutna.

The Proposed Final Program restored year-round water flows to the Eklutna River by connecting Eklutna Lake to the existing Anchorage Water and Wastewater Utility (AWWU) infrastructure; required the Purchasers to provide funding for ongoing monitoring studies, physical habitat enhancement, and lakeside trail repairs; the creation of a Monitoring and Adaptive Management Committee (Committee); and two limited reopeners of the Program for the potential construction of a Fixed Wheel Gate to replace the existing outlet and spillway and for the potential construction of fish passage into and out of Eklutna Lake.

In accordance with my responsibilities to attempt to reconcile differences, I have adopted the Proposed Final Program with the establishment of three amendments to the Proposed Final Program:

1. I added a Governor-appointed seat to the Monitoring and Adaptative Management Committee. This allows future Governors and myself to continue our responsibility under the Agreement as the work of the Committee is ongoing in the final Program.

2. I accepted the request by federal signatories, U.S. Fish and Wildlife Service, and National Marine Fisheries Service, to modify the Proposed Final Program. The Proposed Final Program allocated up to $10 million to study and potentially construct the Fixed Wheel Gate at the Eklutna Dam. If the Fixed Wheel Gate is determined to not be structurally or economically feasible, as requested by the federal parties, the remaining funds not expended of up to $10 million will be made available to the Monitoring and Adaptive

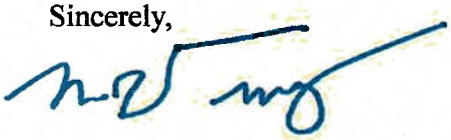
Management Committee for additional studies or measures that protect, mitigate damage to, or enhance fish and wildlife habitat.

3. I am accepting the request by the Municipality of Anchorage and Native Village of Eklutna in their joint resolution of September 5, 2024, to evaluate the Pumped Storage Hydro alternative. However, the Agreement does not provide any party the authority to unilaterally suspend or delay implementation of the Final Program and therefore the necessary work to design, permit, and construct the connection to AWWU's infrastructure and to evaluate the Fixed Wheel Gate is required to begin immediately.

The Final Fish and Wildlife Program established today under the Agreement balances the eight factors I am required to consider, and the Program is designed to be an iterative one that will be able to adapt to changing conditions and technologies well before the process is required to repeat itself.

I want to thank the Parties, the Native Village of Eklutna, and the members of the public who helped shape this Final Program with their time, resources, input, and participation over the past five years. This is not the end of the process, and I am committed to seeing this Final Program successfully enacted. I encourage everyone to join me in working together to implement this Program without delay.

Sincerely,



Mike Dunleavy
Governor

BEFORE GOVERNOR MIKE DUNLEAVY

IN THE MATTER OF THE EKLUTNA	**:**	**DECISION**
RIVER FISH & WILDLIFE PROGRAM	**:**	**October 2, 2024**

This matter comes before the Governor pursuant to the 1991 Agreement ("Agreement") among the Municipality of Anchorage ("MOA"), Chugach Electric Association, Inc. ("Chugach"), Matanuska Electric Association, Inc. ("Matanuska") (MOA, Chugach and Matanuska are collectively referred to as "Eklutna Purchasers" or "Owners"; when discussing issues where the Owners disagree, Chugach and Matanuska will be referred to as the "Operators" and MOA will be listed separately), the United States Fish & Wildlife Service ("FWS"), The National Marine Fisheries Service ("NMFS"), the Alaska Energy Authority ("AEA") and the State of Alaska ("State") concerning the protection, mitigation of damages to, and enhancement of fish and wildlife affected by the Eklutna Hydroelectric Project ("Project") near the Native Village of Eklutna ("NVE").[1] Per the Agreement the Governor is required to establish a "final Fish and Wildlife Program that adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources affected by the Project".[2]

I. PROJECT HISTORY

---

[1] The Agreement also involved the Snettisham Hydroelectric Project, but that project is not part of this decision.

[2] Agreement, Section 5 at P. 4.

The U. S. Bureau of Reclamation built the Project in the 1950s and it was rehabilitated over time. It currently consists of a dam which is an earth and rockfill structure 815 feetlong and 41 feet high with a rectangular spillway that runs through the dam.[3] The intake structure for the Project is located 36 feet below the natural Eklutna Lake level. From there, water is diverted north into a 4.6-mile-long tunnel through Goat Mountain and then into a 1,370-foot-long penstock before reaching the powerhouse located on Old Glenn Highway. The tailrace flows under the highway and then discharges into the Knik River. The powerhouse contains two generating units.[4] Eklutna Lake, approximately seven miles long and one mile wide, is located within Chugach State Park and provides almost 90 percent of the domestic water supply for the Municipality of Anchorage. As of 2018 the Project produced 177,438 megawatt hours of clean energy, enough to power more than 24,600 residential homes for an entire year.[5]

The federal government owned and operated the project until October 1997 when it sold it to the Eklutna Purchasers and is currently owned by Chugach (30%), Matanuska (16.67%) and MOA (53.33%), however, it has been operated exclusively by Chugach and Matanuska since October 30, 2020.[6] The purchase by the Eklutna Purchasers also included a requirement that the Eklutna Purchasers enter into the Agreement with NMFS,

5 Id.

6 MOA was required to surrender its right to operate the Project. RCA Order U-18-102(44)/U-19-020(39)/U-19-021(39). Surrender of Eklutna Operation Committee (EOC) Voting Rights dated as of October 27, 2020, and filed with the RCA in docket number U-18-102(44).

FWS, AEA, and the State (the Eklutna Purchasers, NMFS, FWS, AEA and State are collectively referred to as the "Parties[7]").

II. THE AGREEMENT

To obtain Congressional approval of the Project sale to the Eklutna Purchasers and as a substitute for federal licensing under the Federal Power Act[8] and its accompanying regulations[9], the Parties were required to enter into the Agreement to develop a fish and wildlife program that provides for the protection, mitigation of damages to, and enhancement of fish and wildlife affected by the Project.[10] The Agreement outlined a 35 year timeline to develop the fish and wildlife program. The timeline ran from the date of the sale, i.e., October 2, 1997, and initially culminates with the complete implementation of the fish and wildlife program by October 2, 2032. This process is designed to reoccur every 35 years.

A. Agreement Requirements

The Agreement set forth a comprehensive process to arrive at a final fish and wildlife plan. It required the Parties to perform the following:

---

[7] For purposes of this decision, Parties will also include NVE, unless stated otherwise, even though they are not an actual party to the Agreement.

[8] 16 U.S. C. §791a et seq.

[9] 18 C.F.R. 4.1 et seq.

[10] The Agreement was a substitute for the requirements of the Federal Power Act and its regulations and there are no requirements in the Agreement imposing those laws on the Parties. Rather, the Agreement specifically spells out all requirements the Parties must follow to develop a fish and wildlife program.

a. Purchasers to fund and perform studies in consultation with the other Parties and other State of Alaska agencies to "examine, and quantify, if possible, the impacts to fish and wildlife from the Project and to develop proposals for the protection, mitigation, and enhancement of fish and wildlife affected by the Project."[11]

b. Purchasers develop a draft program, the remaining Parties and other interested persons comment on the draft program, and the Purchasers reply to the comments, with all comments and the replies to be made part of the public record.[12]

c. Preparation of draft summary of the study results and a draft Fish and Wildlife Program by Purchasers.[13] Purchasers to hold public meetings and receive public comments on the program.[14]

d. Purchasers develop a Proposed Final Fish and Wildlife Program ("Proposed Final Program"), an explanation of its reasons for the final program, and provide them and all public comments to the other Parties and the Governor.[15]

---

11 Agreement, Section 2, P. 2.
12 Id. Section 3, P. 2.
13 Id. Section 4, P. 3.
14 Id. Section 5, P. 3.
15 Id. Section 5, P. 4.

e. The remaining Parties prepare written comments to the Proposed Final Program and Purchasers prepare a reply. The comments and reply are provided to the Governor.[16]

f. The Governor establishes a Final Fish and Wildlife Program.[17]

g. The Agreement requires the Owners to implement the final Program within 30 years of the transaction date and for the Governor to approve the Final Fish and Wildlife Program three years prior to commencement of the implementation of the Program.[18]

III. PROPOSED FINAL PROGRAM AND PARTIES' COMMENTS[19]

The Proposed Final Program was provided to the Parties and the Governor on April 25, 2024. The Proposed Final Program can be summarized as follows[20]:

1. Proposed Final Program

a. Construction of a new valve and release structure ("Eklutna River Release Facility") located adjacent to the existing Anchorage Water and Wastewater Utility ("AWWU") portal valve to restore year-round water

---

16 Id. Section 5, P. 4.

17 Id.

18 Id. Section 7, P. 4-5. The transaction date is October 2, 1997, which is the date of the sale of the Eklutna Project to the Owners. Program implementation must therefore begin by October 2, 2027, and the Governor's approved final Plan must be issued by October 2, 2024, i.e., three years prior to the commencement of Plan implementation.

19 AEA did not provide comments to the Final Proposed Fish and Wildlife Program. NVE did provide comments even though it was not a party to the Agreement. I will consider those comments as part of this decision.

20 The Final Proposed Fish and Wildlife Program is attached hereto as Appendix "A".

flow to the Eklutna River ("River") one mile downstream from the Eklutna Dam;[21]

1. The Eklutna River Release Facility is projected to provide year-round water flow to the River one mile below the dam at rates of 27 cubic feet per second to 40 cubic feet per second;[22]
2. The Eklutna River Release Facility is designed to increase available spawning habitat for chinook, coho, pink and chum salmon;

b. Automation of the existing outlet gate at the base of the spillway at the Eklutna Dam for remote operation;[23]

c. Development of a channel maintenance flow regime to support fish habitat over the long term;[24]

d. Construction of eight new bridges for Anchorage Water and Wastewater Utility (AWWU) at each existing ford crossing to be designed and built to withstand the projected flows;[25]

e. One-time payment of $234,000 for lakeside trail repairs;[26]

f. Monitoring and Adaptive Management Plan;[27]

---

21 Proposed Final Fish and Wildlife Program, Section 2.1.1 at P. 4-5.
22 Id. at Section 2.1.2 at P. 6-7. And
23 Id. Section 2.2.1 at P. 7.
24 Id. Section 2.2.2 at Pp. 8-10.
25 Id. Section 2.5 at P. 10.
26 Id. Section 2.4.1 at P. 11.
27 Id. Section 3.0 – 3.4 at P. 12 - 15. This plan includes the creation of a Monitoring and Adaptive Management Committee consisting of five voting members, one each from the following entities: Alaska Department of Fish and Game, Alaska Department of Natural Resources, NMFS, FWS and NVE. Id. Section 3.1 at P. 12.

g. Two limited reopeners, i.e., the study and potential construction of a fixed wheel gate to replace the existing overflow spillway and provisions to review fish passage alternatives to allow adult salmon to pass into the lake from the River and juvenile salmon to pass from the lake downstream into the River ("Limited Reopeners")[28].

2. MOA Comments

MOA raised the following issues in response to the Proposed Final Program[29]:

a. Although the prior Mayor supported the Proposed Final Program, the new Administration believed that Anchorage Assembly approval was necessary, and the prior Mayor failed to obtain it[30];

b. Requests full water restoration to the Eklutna River for the full 12 miles from the Eklutna River Dam downstream and permit fish passage to and from Eklutna Lake;

c. Removal of the limited reopeners; and

---

[28] The Fixed Wheel Gate Limited Reopener does not trigger the process terms of the 1991 Agreement; the Fish Passage Limited Reopener does not alter any other components of the Final Program. Proposed Final Program, Section 4.0, Pgs. 17, 20.

[29] Letter from Mayor Susanne LaFrance to Governor Dunleavy, July 19, 2024, and accompanying AR No. 2024-218(S).

[30] Mayor LaFrance was sworn into office on July 1, 2024. David Bronson previously served as Mayor of Anchorage from July 1, 2021 – June 30, 2024. The Proposed Final Program was drafted during and completed while Mayor Bronson served as Mayor of Anchorage. Former Mayor Bronson submitted a letter of support to the Governor's office on April 26, 2024.

d. Requested a two-year extension for the purpose of studying pumped storage hydropower as a potential alternative.

3. FWS Comments

In general, FWS agreed with the Proposed Final Program, but it believed full restoration of water flow to the Eklutna River and fish passage to and from Eklutna Lake was an "important component of a long-term mitigation strategy and that the Proposed Final Program was a starting point to reconnecting the River with their phased approach." They also commented that "[n]either an engineering solution nor funding support have yet been identified that can accomplish all criteria, but we look forward to exploring opportunities to accomplish river connectivity and return an anadromous sockeye salmon run to the Eklutna River". [31]

FWS requested one modification to the Proposed Final Program. FWS requested that if the Fixed Wheel Gate is determined to not be feasible, that the $10 million in funding committed for that purpose be allocated for other protection, mitigation, and enhancement measures "to improve habitat by other means." [32]

4. NMFS Comments

NMFS raised similar issues raised by FWS but did not object to the Proposed Final Program. It concluded the "Program provides a framework to initiate the protection, mitigation and enhancement of fish and wildlife resources and will support the next

---

31 Sara Boario, Regional Director, FWS, letter to Governor Dunleavy, June 24, 2024.

32 Id.

iteration of a mitigation plan."[33] NMFS had one request for a modification of the Proposed Final Plan. NMFS requested that if the Fixed Wheel Gate was determined to not be feasible or did not proceed, that either the $10 million committed for that purpose be allocated for other protection, mitigation, and enhancement measures in coordination with the Monitoring and Adaptive Management Committee, or that the NVE pump station alternative be studied.[34]

5. NVE Comments

NVE maintains the primary purpose of the Agreement was to "restore and maintain sockeye salmon that depend on free passage into and out of Eklutna Lake, their preferred spawning habitat."[35] NVE further states the Program is deficient in the following ways:

a. Failure to restore water to all 12 miles of the Eklutna River from the dam downstream at sufficient volumes to support salmon habitat;

b. Failure to permit passage of sockeye salmon to and from Eklutna Lake;

c. Low water flows only minimally enhance chinook and coho salmon habitat;

d. Jeopardizes Anchorage drinking water; and

e. Burdens ratepayers and taxpayers with excessive costs.[36]

---

33 Jonathan M. Kurland, Regional Administrator, National Marine Fisheries Service, letter to Governor Dunleavy June 21, 2024. Mr. Kurland's letter acknowledges that the mitigation process is ongoing and repeats every 35 years beginning 25 years after implementation of the Final Fish and Wildlife Program has been implemented.

6. Operators' Reply to Comments

The Operators replied to the comments from the other Parties and NVE and continued to maintain the Proposed Final Program was consistent with the Agreement. The Operators identified the federal Parties generally approved the Proposed Final Program with some reservations and they identified some key disagreement with MOA and NVE, including:

a. Flow regimes will enhance spawning habitat for chinook, coho, chum and pink salmon that currently exist in the Eklutna River;
b. Included a limited reopener in the Proposed Final Program for the Monitoring and Adaptive Management Committee to address fish passage to and from the Eklutna Lake in the future;
c. Operators worked with AWWU to negotiate agreements that protected the supply of drinking water to Anchorage;
d. NVE's proposed Pumped Station alternative posed higher costs and increased risks to the Project;
e. Removal of the Eklutna Dam in 10 years was not feasible due to foreseeable energy needs, inhibition of renewable energy goals, excessive replacement and removal costs, and damage to infrastructure and property downstream; and

f. The two-year delay requested by MOA for further study will thwart implementation of the Final Approved Program in the timeline required by the Agreement.[37]

7. Joint MOA/NVE Resolution for Pumped Storage Hydropower

Well after the comment period had expired and even after the deadline for Owners' reply to the comments, MOA and NVE provided the Governor and the other Parties a joint resolution recommending a new alternative, pumped storage hydropower, they believed "could result in full restoration of waterflow to the River, protection of Anchorage's drinking water source, and increased power generation, potentially with lower costs to municipal taxpayers and ratepayers".[38] MOA and NVE claim that pumped storage hydropower is used worldwide and it has the "potential to maintain and improve existing power production, meet municipal water supply needs and provide full river hydrological function and connection into and out of Eklutna Lake for fish passage". They requested the Governor require, as part of the Final Approved Program, Owners to use two years of the three year pre-implementation period in the Agreement to explore alternative infrastructure options, including pumped storage hydropower, so water could be restored to the entire Eklutna River and permit fish passage to and from the Eklutna Lake.[39] This joint resolution was virtually identical to MOA's prior request to delay the Governor's decision on a final

38 Anchorage Assembly and NVE Joint Resolution, No. 2024-001.
39 Id.

program, with the exception of it now identified a proposed alternative to pursue, i.e., pumped storage hydropower. The Operators did not have an opportunity to respond to this joint resolution, but it was addressed in the meeting of the Parties with the Governor's office on September 9, 2024.

IV. DISCUSSION

The Proposed Final Program and the comment period that followed ends a long public process that started with the Agreement in 1991. The most recent process started in March 2019 and included:

- Years of studies, consultations, and alternative analysis;
- Several public meetings;
- Extensive public comments;
- A draft fish and wildlife program;
- Numerous parties' comments, meetings, and discussions; and
- A Proposed Final Program.[40]

Almost all the Parties have described the process of reaching the Proposed Final Program as a negotiation.[41] As with any negotiation, participants do not always come away with

---

[40] Operators Response to Comments on Proposed final Fish & Wildlife Program, July 2024 at P. 1.

[41] Transcript of Proceedings before the Governor's Office, September 9, 2024 at Pp. 26 (Operators); P. 73 (FWS); and P. 83 (NMFS). NVE although not a Party to the Agreement also commented that the process included negotiations. Id. at P. 85. MOA did not describe the process as a negotiation, but is now represented by a different administration than the one in place when the Proposed Final Program was drafted. However, see Former Mayor Bronson's letter of support to the Governor's office on April

what they want, and the end result is a resolution that neither side may be completely happy with but nevertheless agree to the terms to move the matter forward. This is certainly the case with the Proposed Final Program put forth by the Operators. The Parties have disagreements as to what should be included and how far the Final Program should go. The Parties, at the time they entered the Agreement, clearly understood that not everyone would get what it desired. The Agreement includes provisions on how to resolve those differences.

A. Governor as Final Decision Maker

1. Review Standard

The Agreement sets forth the role of the Governor in establishing a Final Program. The Governor is required to "review the Proposed Final Program, comments, testimony, summary and analysis materials, and any alternative recommendations for the protection, mitigation, and enhancement of fish and wildlife resources".[42] He is then tasked with "attempting to reconcile any differences between the Parties, giving due weight to the recommendations, expertise, and statutory responsibilities of FWS, NMFS, the State Resource Management Agencies and the Purchasers".[43] Finally, the Agreement provides:

> In order to ensure that Eklutna . . . [is] best adapted for power generation and other beneficial public uses, the Governor shall give equal consideration to the purposes of efficient and economical power production, energy conservation, the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat), the protection of recreation opportunities, municipal water

26, 2024, wherein he states MOA (Anchorage Hydropower) was involved in the process every step of the way.

42 Agreement at Section 5, P. 4.

43 Id.

supplies, the preservation of other aspects of environmental quality, other beneficial public uses, and requirements of State law ("Eight Factors").[44]

The Governor is then tasked with establishing the Final Program that adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources affected by the Project.

2. Operators' Proposed Final Program and Analysis of Eight Factors

We must first evaluate the Proposed Final Program in light of the Eight Factors outlined in the Agreement.

a. Efficient and Economic Power Production and Energy Conservation - Factors One and Two

The Operators assert the Project "produces nearly six percent of the Owners' combined generation portfolio, which also amounts to roughly 25% of Chugach's renewable energy and 44% for Matanuska."[45] This power is also alleged to be the lowest cost resource for power in the Alaska Railbelt.[46] The Project also assists with power reliability for the region.[47] None of the Parties challenge these assertions. Obviously, the downside to restoring water flow to the River from a power production standpoint is the loss of the water for that production. This comes at a cost, both financial and in terms of

---

44 Id.

45 Operators' Brief to Governor, September 4, 2024 at P. 4.

46 Id. citing SID at 2.2.2

47 Operators' Brief, September 4, 2024, P.p. 4-5. Operators also cite an example of how the Project assists other power production in the region. When a natural gas company experienced delivery problem, Operators were able to maximize their usage of the Project to maintain system reliability. Id. (Citing Tony Zellers, et al, letter to MOA, February 12, 2024).

power availability, which cannot be overlooked. Maximizing the Project's power output results in energy conservation by reducing natural gas usage, avoidance of diesel usage for power generation and thus lower emissions, and thus reduced costs if these other power production methods were employed.

The Operators chosen method for restoring instream water flow to the River was also based on using cost effective means to achieve the goal and consideration of the costs to the rate payer. They also rejected alternatives that shut the Project down for lengthy periods of time which would have impacted the Project's value for capacity reserves and grid reliability.[48] These facts are likewise not challenged by any Party.

b. Protection, Mitigation of Damage to, and Enhancement of Fish and Wildlife (including related spawning grounds and habitat) – Factor Three

The Proposed Final Program provides several steps for restoring water flow to the River and thus enhancing, protecting, and mitigating damage to fish and wildlife. The Program restores water flow to the River at rates between 27cfs and 40cfs throughout the year.[49] It also requires periodic channel maintenance flows up to 220cfs.[50] It rewaters 11 of the 12 miles of River at the rates noted above thus restoring water flow to the River that has not existed for years. The plan also creates a Monitoring and Adaptive Management Committee of experts to review, evaluate and modify flow regimes within a water budget to increase and enhance fish habitat. Likewise, the increased flow and enhancement of fish habitat will have a corresponding effect on other wildlife, including

---

48 Id.

49 Proposed Final Fish and Wildlife Program, Section 2.1.2.

50 Id. at Section 2.2.

bear and moose populations. Operators' modeling projects increases in chinook spawning and rearing habitat by 209 and 53 percent respectively with increases for coho by 65 and 67 percent, respectively.[51] Limited Reopeners are also included, i.e., potential installation of a fixed wheel gate and fish passage in the future.

The federal Parties, NVE, and MOA correctly point out that the Proposed Final Program fails to include rewatering of the entire River and allow for fish passage to and from Eklutna Lake. NVE and MOA believe that this failure alone makes the Proposed Final Program deficient. They also challenge whether the flows proposed will result in any substantial benefit to salmon habitat. The federal Parties, although proponents of full water flow and fish passage, realize that this process is long and with technological advancements in the future, the goals can be achieved. For that reason, they did not reject the Proposed Final Program. The Agreement provides the Governor must give due weight to the recommendations, expertise, and statutory responsibilities of the Parties, including FWS and NMFS.[52] Due weight is given to the FWS and NMFS' expertise and the fact that they have not objected to proceeding with the Proposed Final Program is a very strong indicator that it meets Factor Three.

---

51 SID at Section 4.10.1.

52 Agreement at Section 5, P. 4. The Agreement also permits the Governor to give due weight to the Purchasers, which includes MOA. However, MOA gave up their right to vote on operations at the Project and conceded they lacked the expertise to participate in the Project's operations, which included establishing the Proposed Final Program per the Agreement. See RCA Order U-18-102(44)/U-19-020(39)/U-19-021(39) and Surrender of Eklutna Operation Committee (EOC) Voting Rights dated as of October 27, 2020, and filed with the RCA in docket number U-18-102(44).

As stated earlier herein, fish passage is not a requirement in the Agreement, nor is restoration of complete waterflow to the River and fish passage. However, from a review of the record, it appears all parties recognize the importance of eventual complete waterflow restoration and fish passage. The difference between the Parties is focused on the methods and timeline to achieve those goals. The Proposed Final Program includes a Limited Reopener to achieve full water restoration and fish passage, understanding that as technology advances, those goals may be cost effective or technically feasible to achieve in the future.[53]

c. The Protection of Recreation Opportunities – Factor Four

Several positive impacts on recreational activities are included within the Proposed Final Program:

- Commitment of $234,000 as a match to Chugach State Park or its designee for lakeside trail repairs;
- Potential fishing in the River;
- Kayaking on the Eklutna Lake
- Hunting opportunities;
- Camping;
- Wildlife viewing; and
- Protection of the tailrace fishery.[54]

---

[53] See Section IV.A.3. herein for further discussion on restoration of complete waterflow and fish passage.

[54] Operators' Brief, September 4, 2024, P.p. 8-9.

The other Parties did not address this issue in their briefs.[55] There are clear benefits and protections from the Proposed Final Program as outlined above.

d. Municipal Water Supplies – Factor Five

The Parties once again disagree on the impacts the Proposed Final Program will have on municipal water supply. Operators acknowledge they will use AWWU infrastructure to restore water flow to the River. They assert it will not negatively affect the water supply and, in some ways, enhance the water supply infrastructure. MOA and NVE on the other hand believe it will negatively affect municipal water supply. However, neither MOA nor NVE have been able to adequately detail these alleged negative effects. Once again, the Agreement permits the Governor to rely on the expertise of the Operators and give due weight to their findings.[56]

Operators maintain the Project's infrastructure and Anchorage's municipal water supply have been "inextricably linked as a matter of physical infrastructure, operations, contract, water rights, and authorizing law since the 1980s when AWWU connected its intake pipe to the Project's intake structure".[57] Operators assert they worked closely with AWWU leadership and engineers to develop legal terms and agreements by which AWWU will be comfortable with the use of AWWU infrastructure to release water into

---

55 MOA makes a passing reference that the "proposed program fails to adequately advance recreational and other beneficial public uses such as fishing or taking in the beauty of a real mountain river with real water in it". MOA Brief at P. 11.

56 See also, Footnote 51.[57] Operators' Brief, September 4, 2024, P. 9.

57 Operators' Brief, September 4, 2024, P. 9.

the River.[58] AWWU and Operators have agreed on key terms for an agreement to govern the construction and use of the Eklutna River Release Facility and an agreement for the long term sharing of Eklutna Lake water rights. AWWU and Operators also negotiated three agreements to detail and govern the arrangement if the Governor approves the Proposed Final Program. Finally, Operators agreed to commit to not take any action in connection with the Fish and Wildlife Program that would compromise Anchorage's water supply, and they agreed to accept liability if they did so. Additionally, other benefits flowed to AWWU, including design approval rights, the construction of eight new bridges over Eklutna River for AWWU to maintain access to its infrastructure, new communications systems, flow meters and a new isolation valve structure for safer maintenance of their facilities, as well as other benefits. AWWU receives its water under a contract with the Eklutna Owners; the proposed term sheet according to Operators would reduce the current water supply costs by half under the new contract to replace contract expiring at end of 2025. For all these reasons, the Proposed Final Program does meet the requirements of the Agreement concerning municipal water supply.

The central issue here is not whether the water supply is protected and/or enhanced, as the evidence clearly demonstrates it is, but rather, whether the Operators and AWWU's agreements must be approved by MOA and to date that approval has not been achieved. In Resolution 2024-182(S-1), the Assembly stated "The Municipality of Anchorage does not intend to issue authorizations or provide funds or any other form of

---

[58] Id.

support of the Proposed Final Program or any alternative that doesn't work toward the restoration of the full length of the River…"[59]. The Operators believe they have legal avenues to pursue the agreements even if MOA withholds approval, but litigation does not move the Final Program forward, creates delay in restoring water flows to the River, and impedes implementation of the Final Program.

e. The Preservation of Other Aspects of Environmental Quality – Factor Six

The redirection of lake water to the River instead of the Project's powerhouse reduces the generation of carbon free power that will most likely be replaced by natural gas generation. However, all alternatives considered reduce the power generation from the Project. The Proposed Final Program has the smallest impact in this regard of all the alternatives considered.

f. Other Beneficial Public Uses – Factor Seven

The Operators cite restoration of salmon habitat in the River as another beneficial public use and that flows will not impact infrastructure downriver, including bridges over the River. Enhanced salmon habitat is important to the public and to NVE and its people. Protecting existing infrastructure used by the public is also a beneficial public use.

g. Requirements of State Law – Factor Eight

Numerous areas of State law are impacted by this Proposed Final Program, including permitting, safety, fish and game, natural resources to list a few. The Operators

---

[59] MOA Resolution 2024-182(S-1), June 25, 2024

acknowledge the need to comply with all State laws that apply to the Proposed Final Program and their need to obtain an amendment to their certificate of authority from DNR to permit the conveyance and release of water into the River. Additionally, as operators of an electric utility, Operators also have an obligation to comply with all State laws related to utility operations.

h. MOA and NVE Proposed Alternatives

Neither MOA nor NVE have provided any analysis with respect to how their proposed alternatives consider the Eight Factors. Rather, they seem to rely on the belief that their proposed alternatives, such as dam removal or pumped storage hydro, will result in full water restoration to the River and allow for fish passage thus promoting the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat). While that is one factor that must be considered, the Governor is required to give equal consideration to all Eight Factors. They have not provided any evidence or analysis of how these proposed alternatives will impact the other seven factors. For example, there is no evidence of how these alternatives will promote the purposes of efficient and economical power production and energy conservation or impact municipal water supplies.

3. Differences Between the Parties

In addition to giving equal consideration to the Eight Factors, the Governor must also attempt to reconcile differences among the Parties. Although the Parties have generally agreed that the Proposed Final Program was arrived at through rigorous studies, public review, comment, and negotiation, two glaring differences were identified, 1)

water flow for the entire Eklutna River from the dam downstream; and 2) fish passage to and from Eklutna Lake.[60]

The Operators believe that current technology and cost are major prohibitions to obtaining full water flow throughout the River and fish passage to and from the lake at the present time. They posit that the agreement provides a mechanism to continually review these goals and as technology evolves and costs decline, the goals may be achievable, and have provided for this to be regularly evaluated by the Monitoring and Adaptive Management Committee.

FWS and NMFS believe that complete water flow and fish passage were intended as part of the Agreement, but they also indicate that the process must start somewhere and

---

[60] MOA and NVE allege the process to arrive at the Operators' Final Proposed Program was flawed. MOA asserts it was denied a viable way to participate due to the fact it lost its vote as an Owner of the Project via an RCA order. However, MOA's assertion in this regard is misguided for three reasons. First, MOA voluntarily gave up its right to vote on matters affecting the operation of the Project and the 1991 Agreement. Secondly, Mayor Bronson formally acknowledged the MOA's complete participation in "every step in the process that led to the Proposed Final Program" and that MOA supported the agreement with the Proposed Final Program. See Mayor Bronson letter to Governor Dunleavy, April 26, 2024. Thirdly, the Operators assert that they and MOA conducted themselves as equals throughout the process and made all decision on the Proposed Final Program through unanimous consent. The record contains no evidence to the contrary. NVE asserts that the Operators failed to pursue alternatives that would have provided for rewatering the entire river and allowed fish passage. Operators counter that they did look at several other alternatives, including NVE's pump station alternative and dam removal, and for various reasons, including economics and other risks, it chose to proceed as outlined in the Proposed Final Program. See NVE comments, June 21, 2024 and Operators' Reply to Comments, July 2024 at Pp. 22-23.

there is time to achieve both and still comply with the Agreement's requirements.[61] They are each committed to pursuit of any alternatives that will achieve those goals.

MOA and NVE however, believe that both goals should be pursued now and absent complete River waterflow and fish passage, the Program should not be adopted. First, the Agreement does not require complete waterflow and fish passage. Had the Parties intended to make those requirements of the Program, they could have and should have so stated in the Agreement itself.[62] Rather, the Agreement outlines requirements to protect, mitigates damage to, and enhances fish and wildlife resources affected by the Project. At the time the Agreement was signed, the River did not enjoy complete waterflow nor were fish able to pass from River to lake and lake to River. As NVE acknowledges, these goals were not achievable until the lower diversion dam was removed in 2018.[63] Courts cannot add words to the contract that would impermissibly re-write that contract, nor can the Governor in this situation.[64] Simply put, the Agreement is not ambiguous. Rather, complete waterflow and fish passage can be adopted in a final

---

61 ". . . the Program provides a framework to initiate the protection, mitigation and enhancement of fish and wildlife resources, and will support the next iteration of a mitigation plan". NMFS Comments to Proposed Final Fish and Wildlife Program, June 21, 2024 at P. 2. "Although the proposed Program does not immediately meet the FWS's goals of ecological connectivity . . . the Program, with commitment of all stakeholders, could be an interim step to reconnecting the river, consistent with our request for a phased approach". FWS comments on the Proposed Final Program, June 24, 2024 at P. 4.

62 *McConnell v. Pickering Lumber Corp.*, 217 F.2d 44, 47 (9th Cir. 1954) ("Appellants would have the court under the guise of construction add words to the contract which are not to be found in it. We do not understand such to be the function of the court.").

63 NVE Brief to Governor Dunleavy, September 4, 2024 at P. 7.

64 *JAE Properties, Inc. v. AMTAX Holdings 2001-XX, LLC*, __ F. Supp. Ed __, 2024 WL 538570 (USDC S. D. Cal. 2024).

program if supported by an analysis of the factors in the Agreement, but the Agreement did not mandate it.

NVE and MOA also seem to place all their emphasis on Factor Three, i.e., protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat) without providing for equal consideration of the other seven factors. The Agreement clearly and unequivocally requires the Governor to give "equal consideration" to all Eight Factors.[65] Although Factor Three is an extremely important element of this process, it cannot be viewed alone or to the detriment of the other factors. Each factor has an impact on the final program.

However, with that said, it does not mean that the Governor cannot alter or improve the Proposed Final Program. The Proposed Final Program meets the requirements of the Agreement, giving equal consideration to the Eight Factors, and provides for the protection, mitigation of damage to, and enhancement of fish and wildlife habitat. It can, however, be improved in certain ways to try to reconcile the differences between the Parties per the requirements in the Agreement.

4. Governor's Amendments to Final Proposed Program

The Proposed Final Program is established with the following amendments. Discussion on the amendments will follow this section.

Section 3.1 Committee

This section is amended as follows:

---

65 Agreement at Section 5, P. 4.

The Committee will consist of one voting representative from each of the following:

Alaska Department of Fish and Game – member appointed by the Commissioner;

Alaska Department of Natural Resources – member appointed by the Commissioner;

NMFS – member appointed by its Regional Director;

FWS – member appointed by its Regional Director;

NVE - member appointed by its Chair/President; and

Governor of Alaska – appoints one member.

The Committee will make decisions by consensus and four members shall constitute a quorum.

Section 4.1 Fixed Wheel Gate

If it is determined that the construction of the fixed wheel gate is not structurally or economically feasible, the Owners shall make available any remaining funds not expended of the $10,000,000.00 (up to $10,000,000.00 in April 2024 U. S. dollars)[66] for other protection, mitigation, and enhancement measures for fish and wildlife including impacted habitat loss and other effects

[66] The current estimate for that fixed wheel gate is $4 million. Operators committed up to $10 million in 2024 dollars. See Transcript of Proceedings, September 9, 2024 at P. 109.

related the Project in accordance with the terms and process previously outlined in Section 3.3.6.[67]

Section 4.0 Limited Reopeners

New Section 4.3 is added.

Section 4.3 Pumped Storage Hydropower

Pumped Storage Hydropower is added as a Limited Reopener.

The Parties are directed to study this upon terms and conditions they mutually agree to. The terms and conditions will include level of engineering, level of cost analysis, what Party or Parties will fund the study and in what amounts and any other matters the Parties find necessary to implement this Limited Reopener. The study should be consistent with studies performed for other alternatives reviewed by Operators. The Parties, assuming they agree on the above requirements, are directed to undertake the study immediately, but this study will not delay the implementation of the Governor's Approved Final Program or the review and study of the fixed wheel alternative. The results of the study will be reported to the Monitoring and Adaptive Management Committee ("Committee").

The Committee will analyze the study findings and perform the Eight Factor analysis required by the Agreement. The Committee will then provide the study findings and Eight Factor analysis to the Owners for the Owners review. If

---

[67] See FWS comments to the Proposed Final Program, June 24, 2024 at Pp. 4-5.

the Owners approve the study findings and Eight Factors analysis, they will provide a statement of support to the Committee and the Committee and Owners will coordinate and cooperate to obtain the Governor's approval. Governor approval of the decision to pursue Pumped Storage Hydropower is required. If the Governor approves the proposal, then the 35-year timeframe requirement to repeat the consultation process required by the Agreement will restart from the date the Governor's approval. The construction of Pumped Storage Hydropower must minimize impacts to Project operations. The Project Owners will oversee all construction activities and will support the development and operation of Pumped Storage Hydropower facilities and infrastructure. This is a limited reopener and will not reopen any other components of the Fish and Wildlife Program.

Discussion of Amendments

Amendment to 3.1

Since the Proposed Final Program provides for ongoing review through the Monitoring and Adaptive Management Committee, and it is the Governor's role under the Agreement to establish a Final Program, adding a Governor appointed seat to the Monitoring and Adaptive Management Committee allows the Governor, and future Governors, to continue to fulfill his or her role under the Agreement to establish the Final Program as the work of the committee is ongoing. The definition of a quorum is added to assist in governance and ensure the recommendations made by the committee have robust involvement from the entities represented.

Amendment to 4.1

As one of the purposes of the Agreement and Final Program is to protect, mitigate damage to, and enhance fish and wildlife habitat, ensuring the funds already set aside for the fixed wheel gate alternative are available to be used for other protection, mitigation, and enhancement measures is consistent with the intent of the Agreement in the event the fixed wheel gate is found to be infeasible. This amendment is responsive to the modification of the Proposed Final Plan requested by NMFS and FWS.

Amendment to 4.0, addition of Section 4.3

MOA and NVE have suggested that Pumped Storage Hydropower ("PSH") is a viable alternative to the Proposed Final Program. They passed a joint resolution on September 5, 2024, advocating for PSH. They claim it is a "proven energy storage solution used worldwide that provides carbon free power production, storage and grid stabilization and that it has the potential to maintain or improve power production, meet municipal water needs and provide full River hydrological function and connection into and out of Eklutna Lake for fish passage.[68] They suggested that the Governor require the Owners use the first two years of the three year implementation period to explore this option.[69]

Neither MOA nor NVE have studied this potential alternative. The Operators have reviewed it but admittedly did not get to any final conclusions on its viability, nor did they engineer or model it to see if it was economically or engineeringly feasible at this location. At the meeting with the Governor's office, MOA, NVE and Operators each

---

68 MOA/NVE Joint Resolution, September 5, 2024

69 Id.

agreed that this was a potential option that could be explored.[70] However, Operators and the federal Parties do not want to delay implementation of the Final Approved Program to explore this option.

Implementation of the Final Approved Program should not be delayed or extended for an option of unknown cost and feasibility. However, if PSH is as promising as MOA and NVE indicate, there are numerous potential benefits and improvements to the Eight Factors which must be considered when evaluating this Program. As such, conducting this study, under terms agreeable to the Parties, will provide more information relevant to those factors and the potential benefit or harm to the protection, mitigation of damage to, and enhancement of fish and wildlife resources.

All other components and requirements of the Final Proposed Program are adopted herein unless otherwise amended hereby. The Owners are directed to begin implementation of the Final Approved Program as approved herein as soon as possible.

V. CONCLUSION

The Final Approved Program established today is the culmination of many years of difficult work, analysis, evaluation, discussion, and negotiation by the Parties. Each party did not get all they wanted in this Final Approved Program. However, this is a long-standing problem with no readily available easy solutions and implementation of this

---

[70] Transcript of Proceedings, September 9, 2024 at Pp. 105-122. The federal parties did not take a position other than to state they are in favor of exploring options that restores full waterflow to the river and allows for fish passage. Id. at Pp. 112-113.

Final Approved Program will put the River on track towards potential full water flow and fish passage.

1.0 Introduction

The Eklutna Hydroelectric Project (Project) is located in Southcentral Alaska, approximately 30 miles northeast of downtown Anchorage near the Native Village of Eklutna (NVE). The federal government completed construction of the Project in 1955. Decades later, Chugach Electric Association, Matanuska Electric Association, and the Municipality of Anchorage (collectively the "Project Owners") agreed to purchase the Project and entered into a Purchase Agreement with the federal government in 1989. Shortly thereafter, concerns were raised about the Project's potential impacts on fish and wildlife. This led to the execution of a binding agreement in 1991 (referred to as the "1991 Agreement") amongst the Project Owners, National Marine Fisheries Service (NMFS), U.S. Fish and Wildlife Service (USFWS), and the State of Alaska (collectively the "Parties") that requires the Project Owners to (1) study the Project's impacts to fish and wildlife, (2) develop proposals for the protection, mitigation, and enhancement of fish and wildlife affected by the development of the Project, (3) consider the impact of fish and wildlife measures on electric rate payers, municipal water utilities, recreational users and adjacent land use, and (4) identify available means to mitigate these impacts. The Project Owners must repeat this process every 35 years and it replaces regulation by the Federal Energy Regulatory Commission. The sale of the Project was authorized by U.S. Congress in 1995, and the Project was sold to the Project Owners in October 1997.

Per the 1991 Agreement, the Project Owners were required to initiate this process no later than 25 years after the sale of the Project. Since the Project was sold in October 1997, the Project Owners were not required to initiate this process until October 2022. However, in order to allow adequate time for a comprehensive analysis, the Project Owners initiated the process in March 2019, more than three years early. After several years of study and consultation with all interested stakeholders detailed in the Supporting Information Document, the Project Owners issued a Draft Fish and Wildlife Program (Draft Program) as required in the 1991 Agreement in October 2023. The Project Owners met with the Parties and the Native Village of Eklutna several times from December 2023 through March 2024 to attempt to resolve differences. They also held six public meetings in January 2024 to solicit public comments. After considering all comments received, and giving due weight to the recommendations and expertise of the Parties and the Native Village of Eklutna, the Project Owners have developed this Proposed Final Fish and Wildlife Program (Proposed Final Program) for submittal to the Governor.

Accordingly, the Project Owners are excited for the next phase of the Project. Details of the Proposed Final Program are described in subsequent sections and include the following:

- Construction of the Eklutna River Release Facility and establishment of year-round instream flows in the Eklutna River;
- Automation of the existing outlet gate at the dam to provide periodic channel maintenance flows in the Eklutna River;
- Construction of eight new bridges along the Anchorage Water and Wastewater Utility (AWWU) access road to enable AWWU's access to critical infrastructure year-round following the establishment of instream flows;
- Payment to Chugach State Park for lakeside trail repairs;
- Establishment of a Committee to oversee implementation of the Monitoring and Adaptive Management Plan;
- Funding to conduct monitoring studies in the Eklutna River throughout the 35-year program;
- Funding for physical habitat enhancement in the Eklutna River based on the monitoring results;
- Procedures for the Committee to adaptively manage the flow regime in the Eklutna River based on the monitoring results;
- Provisions for banking water in Eklutna Lake and potentially increasing the water budget for instream flows in the future;
- Potential installation of a fixed wheel gate to accommodate higher inflows in the future and/or allow higher channel maintenance flows if needed; and
- Potential installation of upstream and downstream fish passage facilities that meet specific criteria.

Approval of the Proposed Final Program will enable the Project Owners to implement these significant fish and wildlife measures at the Project, while simultaneously protecting the municipal water supply and continuing to provide low cost, renewable energy to Southcentral Alaska. The Project Owners anticipate the Governor's issuance of a Final Fish and Wildlife Program by October 2024.

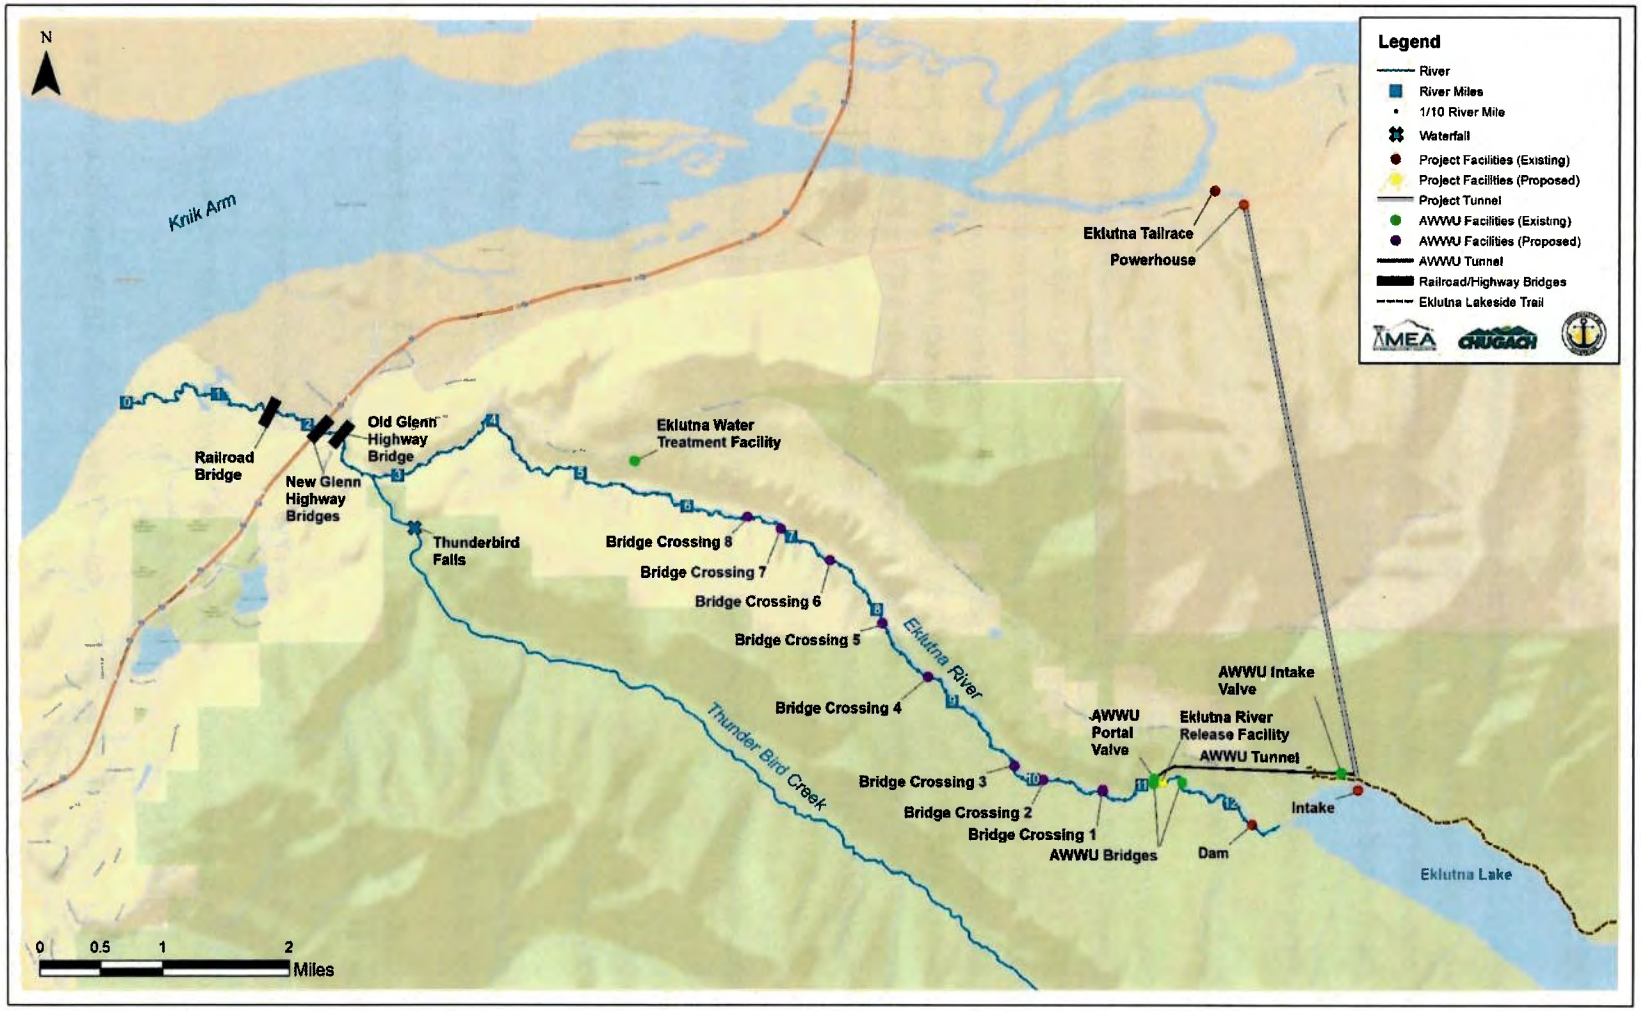

Figure 1-1. Existing and Proposed Infrastructure.

Exhibit TRZ-05
Page 41 of 58

2.0 Protection, Mitigation, and Enhancement Measures

The Project Owners will continue to operate the Project in a manner consistent with the current operating procedures. In addition, The Project Owners will implement the following protection, mitigation, and enhancement (PME) measures for fish and wildlife habitat, the municipal water supply, and recreational facilities.

2.1 Year-Round Instream Flows

2.1.1 Eklutna River Release Facility

In order to provide year-round instream flows to the Eklutna River for fish and wildlife habitat, the Project Owners will construct a new valve and release structure located adjacent to the existing Anchorage Water and Wastewater Utility (AWWU) portal valve approximately one mile downstream of Eklutna Dam. The proposed infrastructure, referred to as the Eklutna River Release Facility, will consist of a tee off the existing 54-inch pipeline that conveys water from Eklutna Lake as part of AWWU's Eklutna Water Project and new control valves to bypass water into the Eklutna River. The 30% design drawings for the Eklutna River Release Facility are provided in the Supporting Information Document. The infrastructure included as part of the 30% level of design for the Eklutna River Release Facility is as follows:

- Construction of a new isolation gate structure immediately upstream of the AWWU portal valve shaft;
- Replacement of approximately 25-ft of existing pipeline with a newly fabricated steel 54-inch x 42-inch tee;
- Installation of a 54-inch gate valve on the main segment of pipe intended to provide dual means of isolation for AWWU's pipeline segment P-4;
- Installation of a 42-inch gate valve on the branch segment intended to provide isolation to the river release structure;
- Installation of a draining and filling system around each isolation valve;
- Installation of a pressure monitoring system and flow meter to provide dual redundancy to AWWU's portal release valve facility;
- Construction of a new river release structure approximately 30-ft downstream of the isolation gate structure;

- Installation of a 30-inch sleeve valve or alternative energy dissipation valve to control flow into the Eklutna River;
- Installation of a flow monitoring system to monitor flow releases into the Eklutna River;
- Construction of a bypass channel from the river release structure to the Eklutna River; and
- Upgrades to communication infrastructure to provide direct communication between the Eklutna River Release Facility, AWWU portal valve shaft, AWWU intake valve shaft, Eklutna Water Treatment Facility, and the Eklutna Power Plant.

The addition of this release facility on the existing Eklutna Water Project will not reduce or impact flow available for water supply purposes, as required by state law. Flow releases through the facility will be limited to a maximum of 80 cfs to protect the AWWU valves and pipeline. The closure rate of the proposed river release valve will be set to keep transient pressures within the rating of the lake diversion tunnel and AWWU pipeline. Additional instrumentation including new flow meters and pressure transducers will be installed to monitor the new facility and protect AWWU infrastructure in the event of an emergency.

The current design allows the AWWU pipeline to be dewatered for maintenance, and in the event of a pipeline rupture, it allows for emergency closure at the AWWU portal valve, in both cases allowing continued operation of the Eklutna River Release Facility. Any maintenance activities that may be required to replace the intake valve shaft will be planned for the fall when the lake level is high and instream flows can be released through the existing outlet gate at the dam.

The Project Owners have closely coordinated with AWWU throughout the preliminary design of the Eklutna River Release Facility and will obtain AWWU approval on all final designs related to AWWU infrastructure. The Project Owners and AWWU have also discussed the water transportation services, compensation, and water rights issues that need to be resolved in order to utilize AWWU infrastructure for providing instream flows to the Eklutna River. A summary of proposed arrangements with AWWU is set forth in the Supporting Information Document. Upon the Governor's approval, the Project Owners will enter into long-term agreements with AWWU following, and subject to, all necessary approvals. If such approvals are delayed or are not able to be obtained, the Project Owners will continue with the other PME measures outlined in this program to the degree possible.

2.1.2 Default Year-Round Instream Flow Regime

Once construction is complete, the Project Owners will utilize the existing Project intake, excess capacity in the AWWU tunnel, and new Eklutna River Release Facility to provide year-round instream flows to approximately 11 out of 12 miles of the Eklutna River. The default year-round instream flow regime, shown in Table 2-1 and Figure 2-1, varies seasonally and was developed based on field studies and modeling.

Table 2-1. Default Year-Round Instream Flow Regime.

Month	Flow (cfs)	Volume (acre-feet)
January	27	1,660
February	27	1,500
March	27	1,660
April	27	1,607
May	34	2,060
June	40	2,380
July	40	2,460
August	40	2,460
September	40	2,380
October	40	2,460
November	34	1,993
December	27	1,660
Total	-	**24,280**

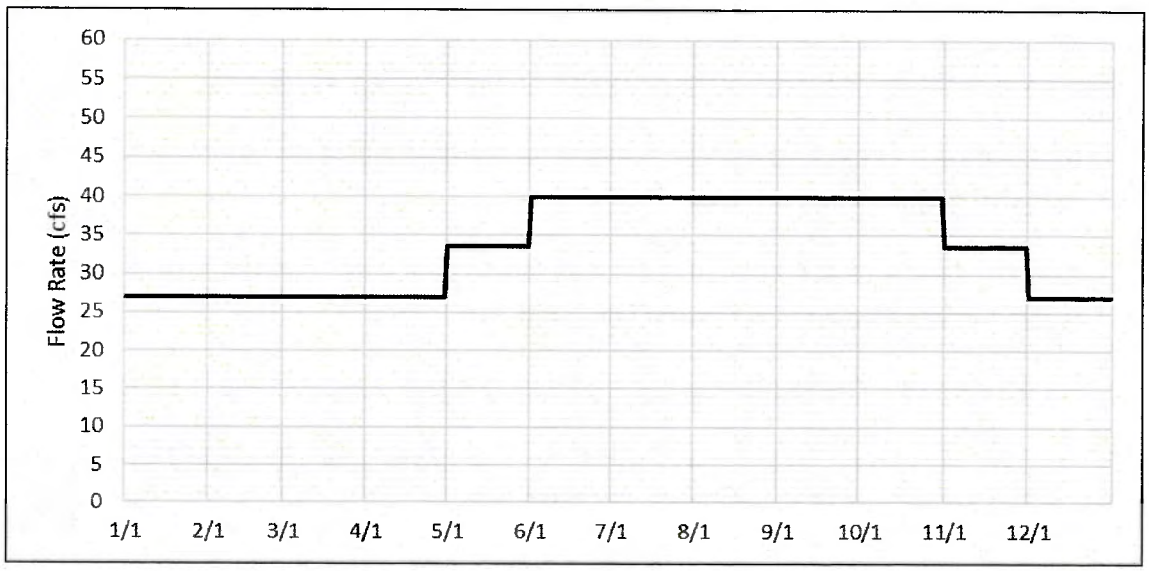

Figure 2-1. Default Year-Round Instream Flow Regime.

The default winter flow releases (27 cfs) when combined with natural accretion in the Eklutna River should promote favorable ice conditions to protect redds during incubation and provide overwintering habitat for juvenile salmon in the Eklutna River.

The default summer flow releases (40 cfs) when combined with natural accretion in the Eklutna River should (1) significantly increase the available spawning habitat for Chinook, coho, pink, and chum salmon, (2) provide sufficient flows for migrating adult salmon to navigate the potential upstream passage barriers identified in the confined canyon reach, and 3) provide additional rearing habitat for salmon.

The default November flow releases (34 cfs) reflect a downramping rate of less than 1 to 2 inches per hour to reduce the risk of any fish stranding downstream when transitioning from summer flows to winter flows.

The total volume of water to be released annually from Eklutna Lake into the Eklutna River for year-round base flows is 24,280 acre-ft/yr, equivalent to approximately 10% of the average annual inflow to the lake.

2.2 Channel Maintenance Flows

2.2.1 Existing Outlet Gate

In order to provide periodic channel maintenance flows to the Eklutna River, the Project Owners will automate the existing outlet gate within the base of the spillway at Eklutna Dam so that it can be controlled remotely. The 30% design drawings for automating the gate are

provided in the Supporting Documentation Document. The infrastructure included as part of the 30% level of design for automating the existing outlet gate is as follows:

- Replacement of existing manual actuator for the dam outlet gate with electric motor actuator with position sensing;
- Construction of new access platform and stilling well with level transducer to measure water surface elevation in Eklutna Lake; and
- Installation of 0.5 miles of new buried power line from Eklutna Lake Road to the dam.

The 30-inch by 30-inch outlet gate has a maximum capacity of approximately 190 cfs at the normal maximum water surface elevation of El 871.0 ft.

2.2.2 Channel Maintenance Flow Regime

Once year-round instream flows have been established in the Eklutna River and the existing outlet gate has been automated, the Project Owners will use both the Eklutna River Release Facility and the automated outlet gate to provide periodic channel maintenance flows to the Eklutna River. The default channel maintenance flow, shown in Table 2-2 and Figure 2-2, was developed based on field studies, modeling, and peak flow statistics in similar unmanaged Alaskan rivers and is shaped to resemble a natural peak flow hydrograph.

Table 2-2. Default Channel Maintenance Flow Releases.

Steps	Duration (hours)	Total Flow (cfs)	Base Flow (cfs)	Additional Flow (cfs)	Additional Volume (acre-feet)
1	3	150	40	110	27
2	3	200	40	160	40
3	36	220	40	180	535
4	12	200	40	160	159
5	6	160	40	120	59
6	6	140	40	100	50
7	6	110	40	70	35
8	6	90	40	50	25
9	6	80	40	40	20
10	6	70	40	30	15
11	4	60	40	20	7
Total for 1 flow	**94**	-	-	-	**971**
Total for 3 flows	**282**	-	-	-	**2,913**

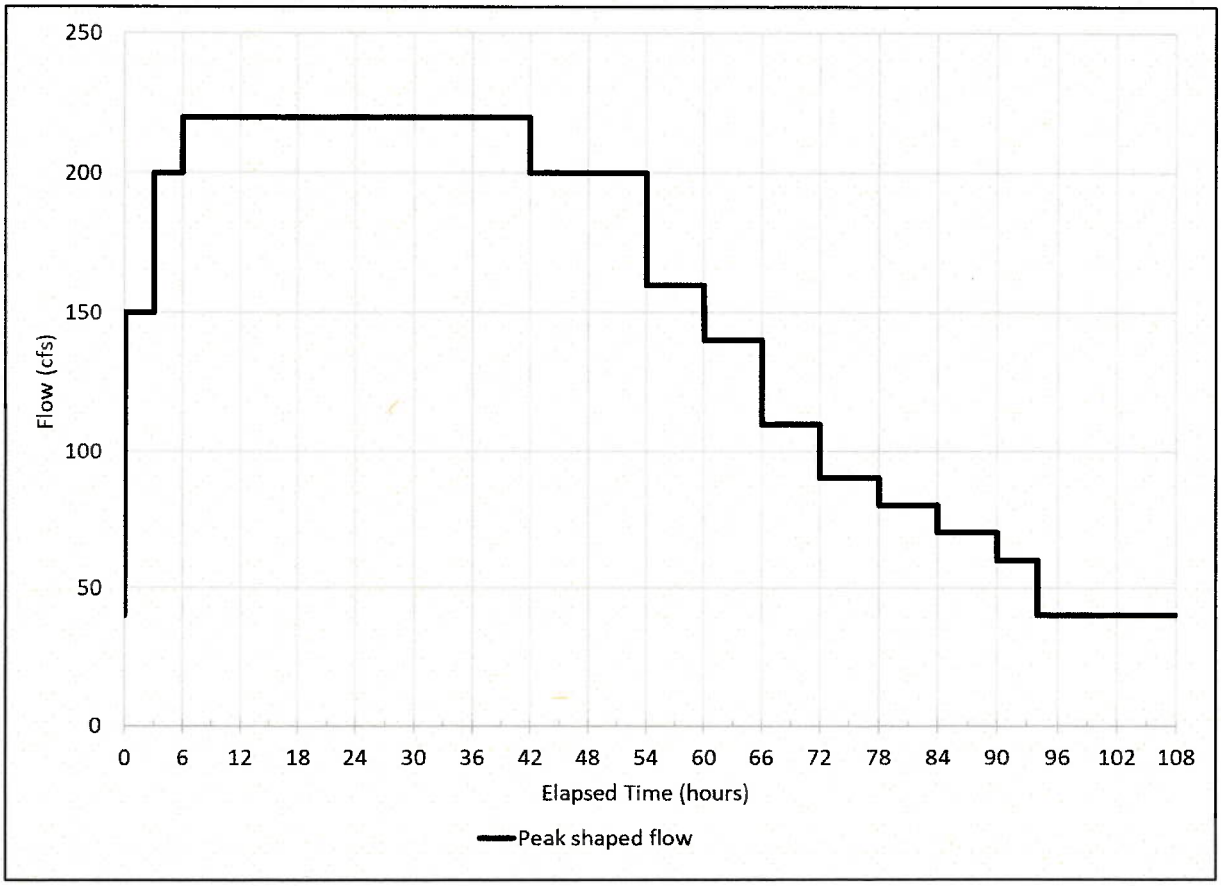

Figure 2-2. Default Channel Maintenance Flow Releases.

The default channel maintenance flow (peaking at 220 cfs for 36 hours) should complement the base flow regime and help create and maintain channel dimensions and substrate characteristics to support physical fish habitat over the long term.

The default downramping schedule (steps 4-11 in Table 2-2) reflects a downramping rate of less than 1 to 2 inches per hour to reduce the risk of any fish stranding downstream when transitioning back to base flows.

Channel maintenance flows will be conducted in the fall when the lake level is highest. The default schedule calls for the Project Owners to conduct a channel maintenance flow in years 2, 5, and 8 of each 10-year period. The first 10-year period will start with the first full calendar year after year-round instream flows are established. The total volume of water to be released in a 10-year period from Eklutna Lake into the Eklutna River for channel maintenance flows is 2,913 acre-ft. Any spill event that exceeds 220 cfs for 36 hours will count as one of the required channel maintenance flows for the current 10-year period.

The intent of providing flexibility in scheduling channel maintenance flows is to allow the Project Owners to take advantage of wet water years. If a planned channel maintenance flow coincides with a dry water year, the Project Owners may choose to postpone the channel maintenance flow to a subsequent year in the current 10-year period. However, if it is already the final year in the current 10-year period, then to the extent possible the Project Owners will curtail generation in order to raise the lake level high enough to achieve the desired flow rate. If due to unforeseen circumstances the Project Owners are unable to provide all three channel maintenance flows in any given 10-year period, then the Project Owners will provide the missed channel maintenance flows in the subsequent 10-year period.

2.3 Flow Monitoring

In order to monitor the year-round flow releases into the Eklutna River, the Project Owners will install a flow meter on the river release pipeline within the Eklutna River Release Facility. The accuracy of this meter is anticipated to utilize the ultrasonic transit time method and have an accuracy of ±1%.

In order to monitor channel maintenance flow releases into the Eklutna River, the Project Owners will utilize the rating curve for the existing outlet gate to calculate flow as a function of gate position and water surface elevation in the reservoir. The gate position will be monitored remotely via a new position feedback sensor within the electric motor operator of the gate. To monitor the water surface elevation of the reservoir, a new stilling well and pressure transducer will be located upstream of the gate within the entrance to the Eklutna Dam spillway channel. The addition of this transducer will avoid any potential inaccuracies with the existing USGS gauge measuring water surface elevation near the Project intake. The flow measurement at the gate is anticipated to have an accuracy of ±2%.

2.4 AWWU Bridges

Providing year-round instream flows to the Eklutna River will likely make all of the existing ford crossings along the AWWU access road impassable for most of the year. To mitigate these potential impacts, the Project Owners will construct eight new bridges, one at each of the existing ford crossings to allow AWWU year-round access to the AWWU pipeline for maintenance. The new bridges will be designed to pass the same flows as the two existing AWWU bridges. The existing ford crossings will be removed to prevent anyone from attempting to drive through the riverbed in the future. The 15% design drawings for the new AWWU bridges are provided in the Supporting Information Document. The Project Owners will obtain AWWU approval on all final designs related to AWWU infrastructure and will work with AWWU to obtain all necessary permits and easements as may be necessary.

2.5 Recreation

2.5.1 Lakeside Trail Repairs

The Project Owners operate the Project to not spill any water. However, due to various circumstances, spill events have occurred in the past. During past spill events, high lake levels have caused erosion along discrete segments of the lakeside trail. Chugach State Park has received $234,000 in funding for general lakeside trail repairs. Within 120 days of the Governor's approval or by January 31, 2025, whichever comes later, the Project Owners will provide a one-time payment of $234,000 to Chugach State Park (or another entity as directed by Chugach State Park) for lakeside trail repairs that address erosion impacts. This funding match brings the total budget for lakeside trail repairs to $468,000. State Parks will be responsible for seeking and obtaining approval from Eklutna, Inc. if needed. The Project Owners will not be responsible for funding the repair of any future erosion impacts to the lakeside trail that may result from continued Project operations.

2.5.2 Annual Powerhouse Maintenance

The Project Owners conduct annual maintenance activities that require Project shutdown for approximately two weeks every year. In order to avoid having multiple generation assets offline at the same time, the Project Owners coordinate with the other Railbelt utilities when scheduling the annual maintenance shutdown for the Project. In some previous years, this annual maintenance shutdown has coincided with peak fishing times and has had a negative impact on the tailrace fishery. The Project Owners will endeavor to avoid peak fishing times when scheduling the annual maintenance shutdown and any other maintenance activities that would require Project shutdown, taking into consideration the overall system maintenance needs.

2.5.3 Public Access to the Eklutna River

There is currently no free, un-permitted public access to most of the Eklutna River. The land under and surrounding the Eklutna River is largely owned by Eklutna, Inc., which requires permits for access to the Eklutna River. The Project Owners are therefore requesting that Eklutna, Inc. provide free, non-permitted public access to the Eklutna River once the ADFG Board of Fisheries has determined that the Eklutna River fishery for Chinook, coho, or sockeye salmon is sustainable and can be opened for recreational fishing.

3.0 Monitoring and Adaptive Management Plan

The PME measures described in the previous sections are based on the results of field studies, modeling, and extensive consultation. However, the Project Owners recognize there is some inherent uncertainty in modeling and physical habitat conditions in the Eklutna River will evolve over time. Therefore, the following Monitoring and Adaptive Management Plan will be implemented. This approach allows for flexibility and adjustments to PME measures, if needed.

3.1 Committee

Upon the Governor's issuance of the Final Fish and Wildlife Program, a Monitoring and Adaptive Management Committee (Committee) will be established to execute the Monitoring and Adaptive Management Plan. The Committee will consist of one voting representative from each of the following entities: ADFG, ADNR, NMFS, USFWS, and NVE. The Committee will make decisions through consensus, and the Committee chair will be selected by the members of the Committee. One or more representatives from the Project Owners will serve as non-voting participants on the Committee to provide technical expertise about Project operations. All voting and non-voting representatives named to serve on the Committee should possess the technical expertise necessary to carry out the responsibilities of the Committee and should ideally be local to the Project area. Each entity shall bear all costs for its representative to participate on the Committee.

Once the Committee is established, it will develop appropriate evaluation criteria for the Fish and Wildlife Program. These evaluation criteria will help inform monitoring efforts and adaptive management decisions. Decisions made by the Committee shall not be imputed to the Project Owners; implementation of actions pursuant to guidance provided by the Committee shall not create liability to the Project Owners.

3.2 Monitoring

The Project Owners will provide a total of $450,000 in April 2024 U.S. dollars (see Section 5.0) to ADFG over the length of the Program to fund additional monitoring efforts in the Eklutna River. The Committee will develop a plan to monitor aquatic habitat conditions and fish utilization in the Eklutna River and the straying rate of hatchery fish from the Eklutna Tailrace to the Eklutna River. The Committee may pursue other funding sources to supplement the monitoring budget if desired. ADFG will implement the monitoring plan based on direction from the Committee and must request funds from the Project Owners by July 1 each year based on the planned monitoring efforts for the subsequent year. The Project Owners will then budget accordingly and submit payment to ADFG by January 31 of the subsequent year.

Reports that summarize the various monitoring results will be prepared by ADFG and provided to the Committee by February 1 each year. The Committee will review and provide a composite report to the Project Owners by March 1 each year. The Committee shall maintain a database/archive for all monitoring results and reports.

3.3 Adaptive Management

3.3.1 Water Budget

The total volume of water available for release into the Eklutna River in the first water year (June 1 to May 31) following completion of the Eklutna River Release Facility is 24,280 acre-feet. This is based on the default year-round instream flow regime. An additional 24,280 acre-feet will become available at the beginning of each subsequent water year. An additional 2,913 acre-feet of water will become available at the beginning of each 10-year period, starting the first water year after instream flows are initiated. This is based on the default channel maintenance flow being released three times in each 10-year period.

3.3.2 Water Banking

If the entire annual water budget (24,280 acre-feet) is not released into the Eklutna River in a given water year, either intentionally or unintentionally, then that "banked water" can be released in subsequent water years with the following limitations: (1) water can only be banked for up to 5 years, (2) no more than 50% of the total annual water budget can be banked at any given time; and (3) in the event of any unplanned spill event at the Project, banked water is spilled first.

The additional water budget for each 10-year period (2,913 acre-feet) must be used within that period and cannot be carried over to the following 10-year period. However, as described in Section 2.2.2, if due to unforeseen circumstances the Project Owners are unable to provide all of the planned channel maintenance flows in any given 10-year period, then the Project Owners will provide the missed channel maintenance flows in the subsequent 10-year period.

3.3.3 Allocation of Additional Inflow

Climate change is anticipated to cause increased glacial melt in the coming decades. Increased glacial melt would likely result in more inflow to Eklutna Lake, and therefore more water available for both hydropower generation and instream flows. Because of this, the Project Owners will calculate the inflows to Eklutna Lake each year using the available lake level and flow monitoring data. Then 10 years after instream flows are established, the Project Owners will compare the average annual inflows to Eklutna Lake for the last 10 years to the previous 10-year period. Any increase in average annual inflows will be split 50/50 between

hydropower and the annual water budget for instream flows. If there is a decrease in average annual inflows, the annual water budget for instream flows will not be decreased. The Project Owners will repeat this process every 10 years.

3.3.4 Water Accounting Report

The Project Owners will prepare an annual report that summarizes (1) the inflows to Eklutna Lake, (2) instream flow releases, and (3) channel maintenance flow releases for all prior water years as well as the available water budget for the upcoming water year and provide it to the Committee by March 1 each year.

3.3.5 Requests to Modify the Flow Regime

Based on the results of the monitoring program, the Committee may request modifications to the default year-round instream flow regime and/or the magnitude, duration, frequency, or shape of the scheduled channel maintenance flow releases, as long as (1) the requested flows do not exceed the operational limitations of the Project infrastructure, and (2) the ramping rates conform to fisheries ramping rate requirements. If the total volume of water to be released exceeds the available water budget (which includes any banked water that may be available), then that deficit will be carried over into the next water year.

The Committee must provide a 60-day notice to the Project Owners for any requests to modify the default year-round instream flow regime or the default channel maintenance flow schedule. If the requested flows exceed the operational limitations of the Project infrastructure, the available water budget, or the approved ramping rates, then the Project Owners may reject the requested flow modifications. If the Project Owners reject the requested flow modifications, then they must notify the Committee so that the Committee may request alternative flows if desired. The Committee may request modifications to flows within 60 days; however, the Project Owners are not required to meet the request if it is not operationally feasible.

3.3.6 Physical Habitat Enhancement

The Project Owners will provide a total of $350,000 in April 2024 U.S. dollars (see Section 5.0) to ADFG during the Program to fund physical habitat enhancement and vegetation management efforts in the Eklutna River. The Committee will develop a plan to implement physical habitat enhancement and vegetation management efforts in the Eklutna River. These efforts will focus on enhancing rearing habitat in the Eklutna River. All physical habitat enhancement and vegetation management efforts must occur downstream of the Eklutna River Release Facility. The Committee may pursue other funding sources to supplement the physical habitat enhancement and vegetation management budget if desired. ADFG will implement the

plan based on direction from the Committee and must request funds from the Project Owners by July 1 each year based on the planned physical habitat enhancement and vegetation management efforts for the subsequent year. The Project Owners will then budget accordingly and submit payment to ADFG by January 31 of the subsequent year.

Reports that summarize the various physical habitat enhancement and vegetation management efforts will be prepared by ADFG and provided to the Committee by February 1 each year. The Committee will review and provide a composite report to the Project Owners by March 1 each year. The Committee shall maintain a database/archive for all physical habitat enhancement and vegetation management reports.

The Project Owners are not responsible for responding to natural processes that result in undesirable conditions in the river such as debris flow associated with precipitation or earthquakes, beaver activity, large wood build-up, etc.

3.4 Annual Meeting

The Committee will meet annually in April of each year to (1) review the results of the monitoring efforts conducted in the previous calendar year, (2) review the available water budget for the upcoming water year, (3) discuss any potential adaptive management actions for the upcoming water year, and (4) determine what monitoring efforts and/or physical habitat enhancement should be conducted in the subsequent calendar year. The Committee must notify the Project Owners of any planned monitoring efforts and/or physical habitat enhancement activities for the subsequent calendar year by July 1 so that the Project Owners can budget accordingly.

4.0 Limited Reopeners

Per the 1991 Agreement, the Project Owners are required to repeat this process every 35 years and must initiate the next process by October 2057. In addition, the Project Owners are required to repeat this process before making any major structural or operational modification to the Project that would substantially affect water usage or fish and wildlife. The following two limited reopeners are intended to enable consideration and potential execution of the specified structural and operational modifications during the period between processes without triggering the need to repeat this entire process outlined in the 1991 Agreement.

As set forth below, the two limited reopeners may occur no sooner than 10 years following completion of the Eklutna River Release Facility (Section 2.1.1) and establishment of year-round instream flows (Section 2.1.2). If the Eklutna River Release Facility and instream flows are delayed due to any reason such as litigation or appeals of the Final Fish and Wildlife Program or a failure to complete permitting or gain necessary approvals, the 10-year timeframe leading to the reopeners will be delayed until such time as the Eklutna River Release Facility is completed and the instream flows established.

4.1 Fixed Wheel Gate

During the consultation process, several stakeholders requested that the existing overflow spillway be replaced with a fixed wheel gate because either (1) climate change may cause inflows to the reservoir to increase significantly, which may increase the likelihood of future spill events, and a fixed wheel gate will allow the Project Owners to better manage those future spill events, or (2) while modeling results show that the default channel maintenance flow regime will maintain spawning gravels in the wetted reach of the Eklutna River, future monitoring may show that a higher magnitude channel maintenance flow that exceeds the combined hydraulic capacity of the existing outlet gate and the Eklutna River Release Facility may be warranted. Replacement of the existing overflow spillway with a new fixed wheel gate was evaluated during the study program and alternatives analysis and the Project Owners determined that it was not warranted at this time due to significant dam safety concerns, and the need for future monitoring. Recognizing that the fixed wheel gate might be warranted in the future, however, the Project Owners will continue to investigate the fixed wheel gate as described below and will construct it if certain criteria are met.

Within three years of the Governor's issuance of the Final Fish and Wildlife Program, the Project Owners will conduct a more detailed feasibility study of the fixed wheel gate (including a stability analysis and Class 3 cost estimate). The Project Owners will report the results of that analysis to the Committee.

If the fixed wheel gate is considered feasible and cost effective, then on the 10th anniversary after initiating instream flows, the Project Owners will confer with the Committee to reevaluate the need for the fixed wheel gate. If the monitoring efforts during that 10-year period indicate that (1) average annual inflows to the lake have increased by 20,000 acre-feet, or (2) the Committee determines that higher channel maintenance flows are warranted to maintain spawning gravels, then the Project Owners will commit up to $10M in April 2024 U.S. dollars (see Section 5.0) to demolish the existing overflow spillway and construct a new fixed wheel gate.

If the demolition/construction costs are estimated to be less than $10M in April 2024 U.S. dollars, then the Project Owners will obtain necessary permits, demolish the existing overflow spillway, and construct a new fixed wheel gate. If the demolition/construction costs are estimated to be greater than $10M in April 2024 U.S. dollars, then the Committee may seek supplemental funding payable to the Project Owners from other sources. If the supplemental funding is federal funding and triggers additional NEPA requirements, then the Committee will be responsible for ensuring that outside funding is available and payable to the Project Owners in order to meet those requirements. Upon receipt of such supplemental funding, the Project Owners will obtain necessary permits, demolish the existing overflow spillway, and construct a new fixed wheel gate.

This is a limited reopener and will not reopen any other components of the Fish and Wildlife Program or trigger the process requirements outlined in the 1991 Agreement. Governor approval of the decision to replace the fixed wheel gate will not be required.

4.2 Fish Passage

During the consultation process, several stakeholders requested that upstream fish passage of adult salmon into Eklutna Lake and downstream fish passage of juvenile salmon out of Eklutna Lake be evaluated. All fish passage measures proposed by the Project Owners and other stakeholders were evaluated during the study program and alternatives analysis. See alternatives analysis in Supplemental Information Document. All of the volitional upstream fish passage measures that were evaluated either (1) would have significant impacts to the hydropower project (i.e., would reduce the storage capacity of the reservoir by approximately 40% or would require the Project to be shutdown throughout the winter when energy is needed most), or (2) are cost prohibitive (the estimated present worth for the stakeholders' preferred alternatives that included volitional fish passage ranged from $221M to $385M including capex, operations and maintenance, and replacement energy). In addition, there are still significant concerns regarding the effectiveness of all the downstream fish passage facilities studied (i.e., low attraction flow velocities and/or the inability to operate the

downstream fish passage facilities while the lake is frozen over). Therefore, fish passage measures are not proposed at this time.

Nonetheless, the Project Owners recognize that fish passage may become feasible in the future and fish passage is important to NVE, the federal and state agencies, and others who have commented on the Draft Program. If a new, proven methodology or technology becomes available, then the Committee may reevaluate the potential for the construction and operation of fish passage facilities both into and out of Eklutna Lake on its own initiative or at the request of any of the resource agencies or NVE. Any fish passage measures must meet the following criteria:

1. Fish passage facilities must be safe and effective for human health, the environment, and operations of the Project, the Eklutna River Release Facility, and AWWU's Eklutna Water Project and its water supply;

2. Fish passage facilities must address both upstream and downstream fish passage for anadromous fish (i.e., no effective upstream passage without effective downstream passage);

3. Fish passage facilities cannot affect reservoir operations in a manner that would cause AWWU operation shutdown for any amount of time or Project shutdown for more than two weeks annually (except during construction);

4. Fish passage facilities cannot result in more than 10% loss of storage capacity in the reservoir (i.e., the active storage capacity in the reservoir cannot be reduced by more than 17,480 acre-feet);

5. Fish passage facilities must operate within the available water budget administered by the Committee.

Because fish passage into the lake has the potential to impact recreational use or facilities within Chugach State Park and/or the water quality of the municipal water supply, both of these potential impacts must be evaluated by the Committee. The Committee must also consult with the State Park and AWWU regarding any such impacts and the appropriate mitigation for those impacts. The Committee must ultimately obtain written consent or approval from both the State Park and AWWU for any proposed fish passage measures, including the construction schedule.

The cost of any fish passage measures (including scientific studies, engineering, construction, operation, maintenance, and mitigation for any impacts to recreational use or facilities and/or

the municipal water supply, etc.) must be completely funded by parties other than the Project Owners.

At any time more than 10 years after initiating instream flows, if (1) the Committee has identified fish passage measures that meet all of the listed criteria, (2) the Committee has obtained written consent or approval from both the State Park and AWWU, (3) the Committee has obtained the necessary funding for all fish passage measures, and (4) the Anadromous Waters Catalog maintained by ADFG has been updated to reflect that migrating or spawning adult sockeye salmon have been documented within 1 mile of the Eklutna River Release Facility, then the Committee may propose those fish passage measures to the Project Owners with supporting information. As long as all of the above criteria and prerequisites are met, then the Project Owners will support the development and operation of the proposed fish passage facilities. The Project Owners may choose to waive criteria numbers 3, 4, and/or 5 upon unanimous decision, provided that AWWU must independently consent or approve fish passage measures affecting its facilities or its water supply.

Upon receiving a statement of support from the Project Owners, the Committee and the Project Owners will coordinate and cooperate to obtain the Governor's approval of the proposed fish passage measures. Governor approval of the decision to add the fish passage facilities will be required.

If the Governor approves the proposed fish passage measures, then the 35-year timeframe requirement to repeat the consultation process required by the 1991 Agreement will restart from the date the Governor's approval.

The construction schedule must minimize impacts to Project operations. The Project Owners will oversee all construction activities and will support the development and operation of the fish passage facilities. However, the Project Owners will not operate the fish passage facilities and will be held harmless from the development and operation of such facilities.

This is a limited reopener and will not reopen any other components of the Fish and Wildlife Program.

5.0 Funding Commitments and Inflation Adjustment

All monetary amounts in this Proposed Final Program are in 2024 U.S. dollars, unless otherwise stated. All monetary amounts will be adjusted annually for inflation using a 15-year rolling average reflected in the Bureau of Labor Statistics' Urban Alaska Consumer Price Index (CPI-U) (as currently reported by State of Alaska Department of Labor and Workforce Development at https://live.laborstats.alaska.gov/cpi/table).

EXHIBIT TRZ-06

Modified PSH Concept with Wind & Solar at Eklutna Lake with River Restoration and Fish Passage

Municipality of Anchorage

Anchorage Hydropower Utility

Presentation to the Joint Worksession of the Anchorage Assembly and the Native Village of Eklutna

Friday August 23, 2024

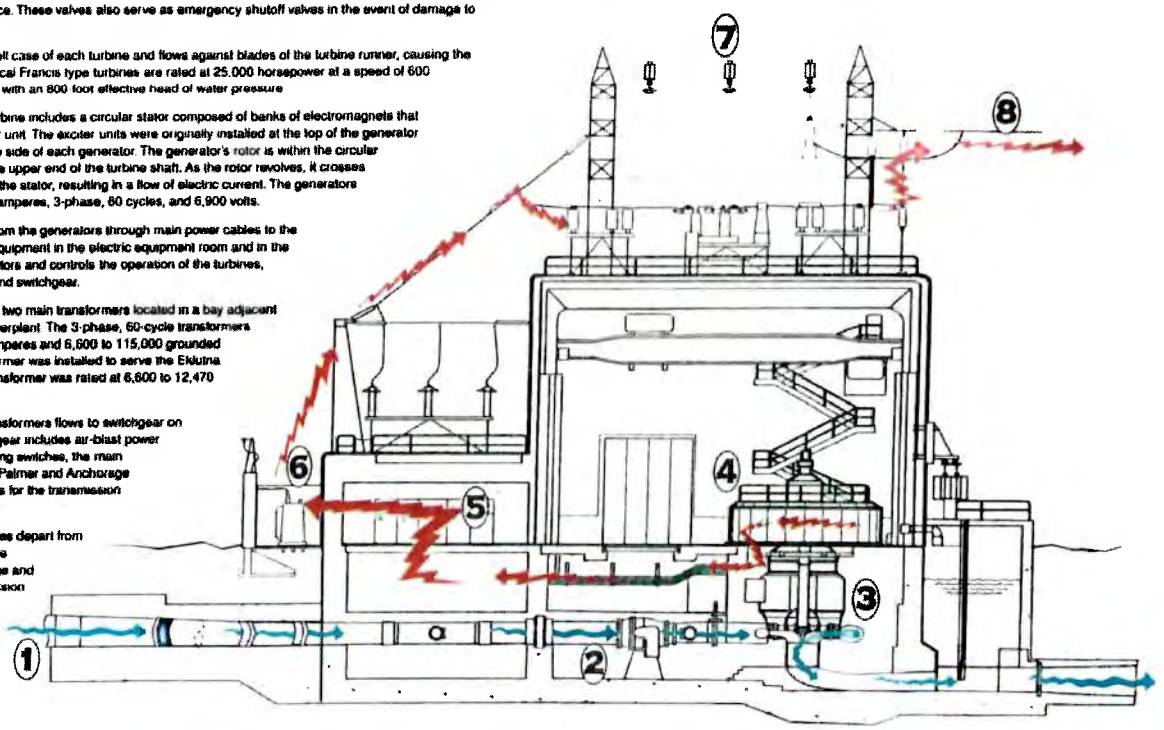
1pm Conf 155 City Hall

Presentation Topics/Goals:

- Eklutna Water Resource Background
- What is PSH?
- Why PSH?
- Preliminary Eklutna Reservoir Baseline Analysis
- Variations (there are numerous variations of PSH at Eklutna that can be considered)
- Disclaimers (many assumptions have taken place and much vetting and analysis is needed)
- We are looking for feedback to determine if this is worth evaluating and pursuing any further as part of proposed 2-year pre-implementation period

Generating Electricity at the Eklutna Project

1. Water enters the powerplant in two steel penstock branches, each one 51 inches in diameter.
2. A 66-inch butterfly valve is installed on each penstock branch to provide a means of dewatering the turbines for servicing or maintenance. These valves also serve as emergency shutoff valves in the event of damage to the turbines
3. Water enters the spiral scroll case of each turbine and flows against blades of the turbine runner, causing the runner to revolve. The vertical Francis type turbines are rated at 25,000 horsepower at a speed of 600 revolutions per minute and with an 800 foot effective head of water pressure
4. A generator above each turbine includes a circular stator composed of banks of electromagnets that are energized by an exciter unit. The exciter units were originally installed at the top of the generator but now are attached to the side of each generator. The generator's rotor is within the circular stator and is attached to the upper end of the turbine shaft. As the rotor revolves, it crosses magnetic fields created by the stator, resulting in a flow of electric current. The generators are rated at 16,667 kilovoltamperes, 3-phase, 60 cycles, and 6,900 volts.
5. The electric current flows from the generators through main power cables to the electric equipment room. Equipment in the electric equipment room and in the adjacent control room monitors and controls the operation of the turbines, generators, transformers, and switchgear.
6. The electric current flows to two main transformers located in a bay adjacent to the south side of the powerplant. The 3-phase, 60-cycle transformers operate at 20,000 kilovoltamperes and 6,600 to 115,000 grounded wye-volts. A smaller transformer was installed to serve the Eklutna Government Camp; this transformer was rated at 6,600 to 12,470 volts.
7. Electric current from the transformers flows to switchgear on the powerplant roof. Switchgear includes air-blast power circuit breakers, disconnecting switches, the main 115,000-volt busses for the Palmer and Anchorage transmission lines, and a bus for the transmission line.
8. 115,000-volt transmission lines depart from the main busses on top of the powerplant toward Anchorage and Palmer. The Palmer transmission line originally departed from the north side of the powerplant, but it was rebuilt to leave from the east side after flood damage required reconstruction of a portion of the line



Existing/Current Setup:

Eklutna Lake currently feeds hydropower & municipal public water supply, but it is not providing downstream river flows or fish passage

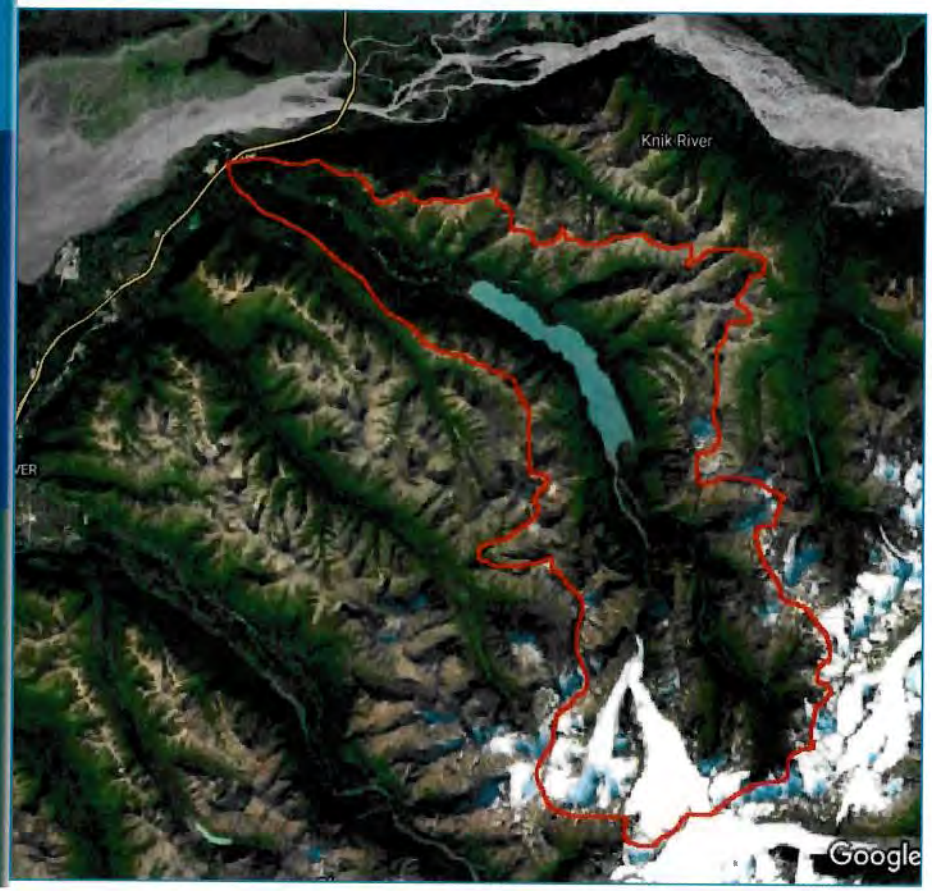
Water is a shared resource and the identified competing interests for the *limited* water at Eklutna Lake are:

- Power Generation
- Municipal Water Supply
- Instream River Flows

Photo 14: General view of the natural bypass channel at

- How do we achieve a fair balance with the limited water that is recharged in Eklutna Lake annually?
- **What if we could add more water to maintain or improve existing power production, meet municipal water supply needs and provide full instream river flows with a river connection to Eklutna Lake for fish passage?**

We recognize that Eklutna watershed goes from glaciers to tidewater; as does the Knik River watershed; watersheds are adjacent to one another, both have large glacial lakes, and water quality is *likely* very similar; this begs the question, can pumped storage hydro (PSH) be analyzed in 'another' way to utilize existing infrastructure and additional supplemental water?



"Unlike batteries, PHS absorbs all that excess energy from renewables, which avoids waste, and then it gives you long-term, reliable and flexible power dispatch," he adds. Engineers at GE Renewable Energy built pumpec storage units for a massive project in Linthal, Switzerland. It is capable of quickly producing or absorbing 1 gigawatt (1,000 MW) of power, while storing up to 34 GWh of energy. "You cannot reasonably do that with traditional battery storage," Alex Schwery, chief consulting engineer at GE Renewable Energy's Hydro Power unit, told GE Reports. "It doesn't work."

Building a battery on top of the Alps is certainly extreme engineering. But there are few other options now. The scale and penetration of renewables on the grid makes smoothing over intermittency a herculean challenge.

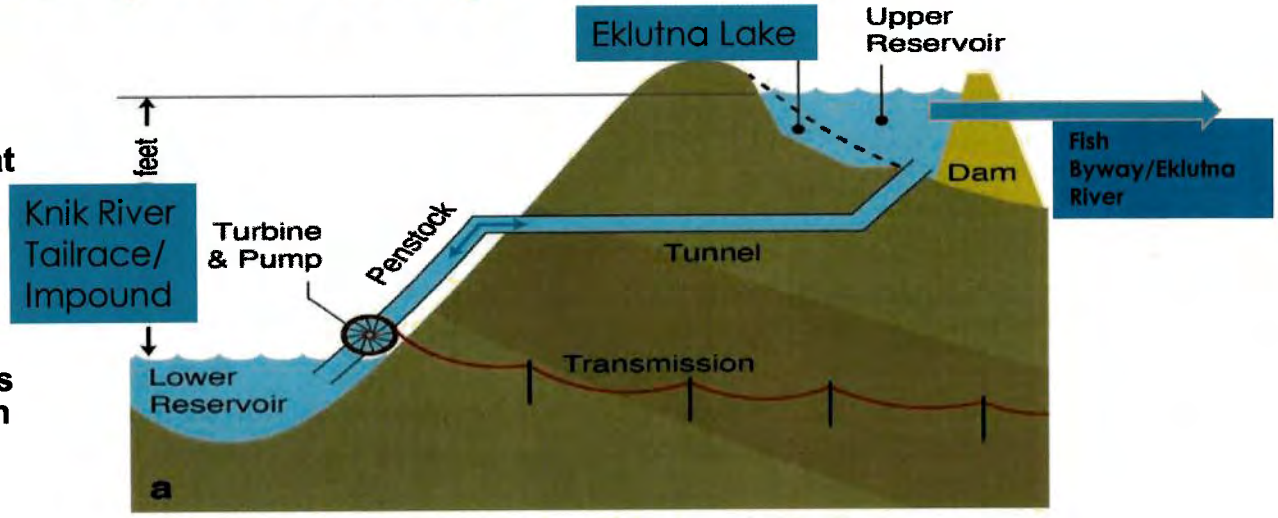
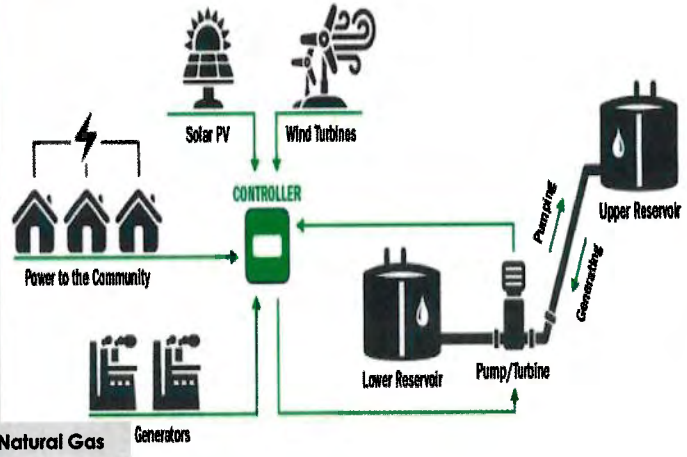
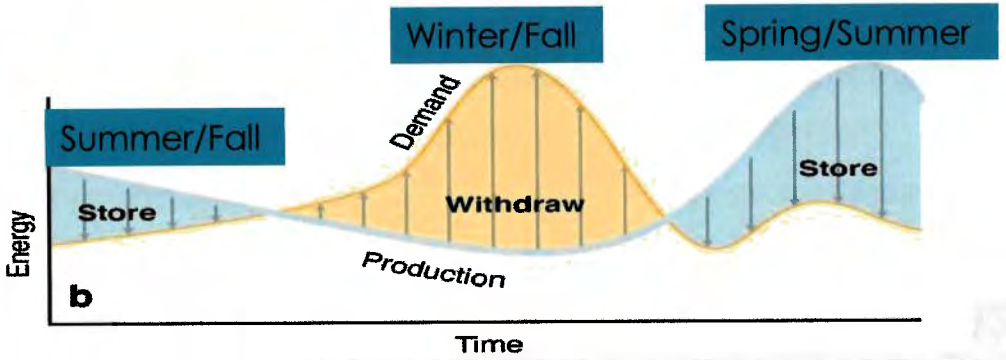
What is Pumped Storage Hydro?

- Pumped Storage Hydro (PSH)
- **Proven natural large scale energy storage solution* used worldwide that provides carbon free power production, storage and grid stabilization**
- **aka Pumped Energy Storage (PES) and Pumped Hydro Storage (PHS)**
- **The Eklutna Concept proposed builds upon and is a variation and extension of a prior proposed PSH idea**

*PSH is the bulk current energy storage capacity in the US (Hydrowires USDOE)







Why PSH? As we contemplate the fact that Southcentral AK is in a natural gas crisis with expensive imported natural gas for heat and power expected by 2028

- First, we recognize the following:
- Electric rates will increase; estimates range from 10 to 50% (fuel is @25% of CEA and @50% of MEA rates)
- Natural gas/heating rates will increase more than electric rates (fuel is @85% of gas bill)
- @80% of railbelt electricity comes from natural gas turbine generators; very little wind or solar
- Solar & Wind are fuel free and are eligible for ITC and PTC, but are not reliably dispatchable without storage solutions (batteries*, hydro) *batteries only provide short term storage, typically only hours

Investment Tax Credit and Production Tax Credit

The Investment Tax Credit (ITC) and Production Tax Credit (PTC) allow taxpayers to deduct a percentage of the cost of renewable energy systems from their federal taxes. These credits are available to taxable businesses entities and certain tax-exempt entities eligible for direct payment of tax credits (see Tax Credit Monetization below).

Certain projects are eligible for either the ITC or PTC, but not both.

Eligible for ITC or PTC	Eligible for ITC	Eligible for PTC
multiple solar and wind technologies, municipal solid waste, geothermal (electric), and tidal	energy storage technologies, microgrid controllers, fuel cells, geothermal (heat pump and direct use), combined heat & power, microturbines, and interconnection costs	biomass, landfill gas, hydroelectric, marine and hydrokinetic

Through at least 2025, the Inflation Reduction Act extends the Investment Tax Credit (ITC) of 30% and Production Tax Credit (PTC) of $0.0275/kWh (2023 value), as long as projects meet prevailing wage & apprenticeship requirements for projects over 1 MW AC.

Why Pumped Storage Hydro?

- Pumped Storage Hydro
  - **Complements fuel free renewable power and can store weeks/months of spring/summer power for peak winter demand when wind/solar unavailable, offsetting natural gas demand**
  - **Balances wind output variability and solar seasonality and maximize their benefit by generating artificial demand, that has a critical and delayed beneficial use**
  - **Can maintain higher lake level for increased hydro efficiency and power production**
  - **AND can provide river/lake connectivity for full fish passage and all 12 miles of river restoration**
  - **Existing infrastructure is in place for initial phase keeping costs low**
  - **Scalable; allows for future build out and benefit if energy conditions change**

The Eklutna Battery

BY CRAIGMEDRED ON MARCH 9, 2018 • (31 COMMENTS)

Graphic courtesy AlaskansKnowClimateChange.com

If Alaska was Switzerland, the natural equivalent of a giant, rechargeable battery able to provide renewable power for the state's largest city forever would likely be up and running in the Chugach Mountains above Eklutna by now.

Switzerland switched on its most powerful "green battery" in the Linthal Valley four years ago. Even before that project was complete, Norway saw the potential to combine wind, solar and hydropower into contained, rechargeable systems and began trying to position itself to become the green battery for all of Europe.

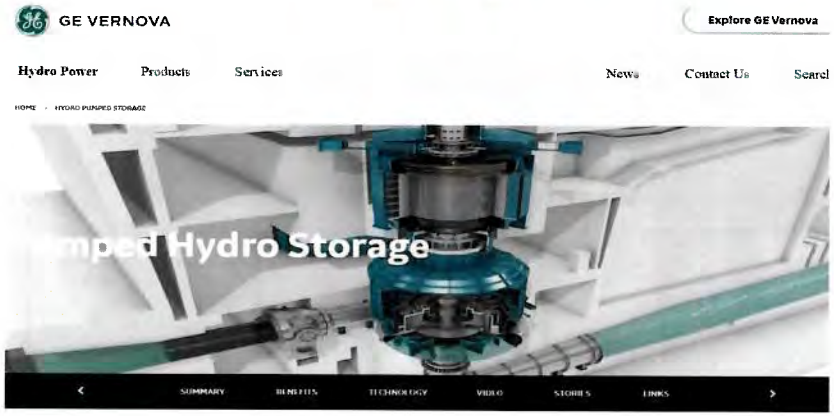
The workings of these systems that have come to be called green-batteries are fundamentally simple: Renewable energy that would otherwise go to waste is used to pump water uphill where it is stored for future use as hydropower.

If wind turbines or solar panels are producing more power than can be used in the moment, the extra energy is shifted to pumps that move water from lower elevation reservoirs to higher elevation reservoirs. If water is spinning through hydro turbines when electric demand is low, as often happens, the excess power is shunted away to pump water back uphill and store it.

PSH is not a new Concept at Eklutna:

Integrating Renewables to the Grid with Closed Loop pumped storage hydro (PSH) has been considered at Eklutna, but it was dismissed because it not well understood as it was perceived to require new and very expensive infrastructure*, and it didn't appear to offer additional water or provide downstream river flows

*in the billions of dollars



THE MOST ECONOMICAL STORAGE TECHNOLOGY FOR LONG DISCHARGE DURATION

Pumped Hydro Storage

ENABLING THE ENERGY TRANSITION

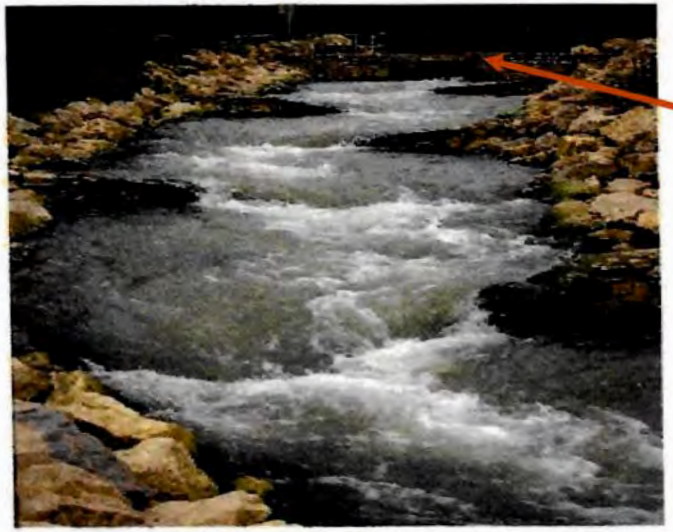
Centralized synchronous plants will be less dominant in the future energy mix and with the massive penetration of intermittent renewables such as wind and solar and their impact on the grid reliability is huge. Supply of energy is variable and services to maintain voltage or frequency of the grid cannot be met by inverter-based resources.

Hydropower can play a defining role in the energy transition thanks to the balancing and system services to the grid that facilitate the integration of variable renewables.

With higher needs for storage and grid support services, Pumped Hydro Storage is the natural large-scale energy storage solution. It provides all services from reactive power support to frequency control, synchronous or virtual inertia and black-start capabilities. It brings support that was previously managed by fossil-fueled power plants but with even more reactivity and in a sustainable manner without CO_2 emissions.

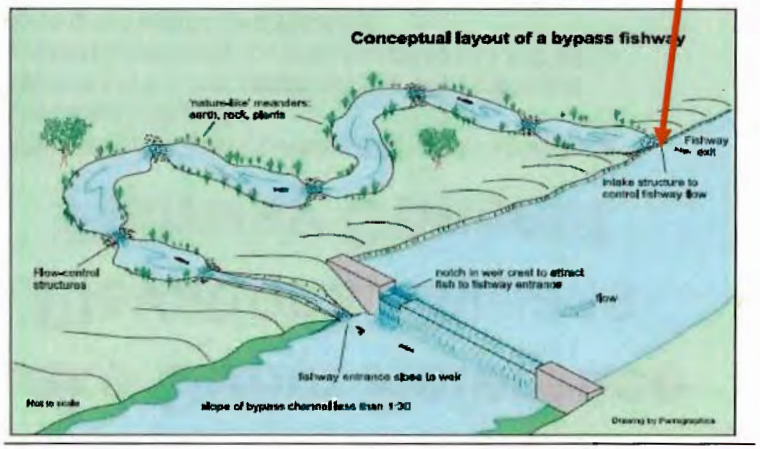
For years, Pumped Hydro Storage has offered a cost-effective way to provide reliable large-scale balancing and grid services. New pumped hydro storage technologies—such as variable speed capability—give plant owners even more flexibility by providing grid

This Proposal Modifies and Scales Back the Original Concept:
Eklutna Lake & Knik River offer an opportunity for an Open Looped PSH System backed by Renewable Wind & Solar with Fish Passage



Fish Gate Structure

Photo 15: Natural bypass channel for salmonids on the river Loue (Chatillon sur



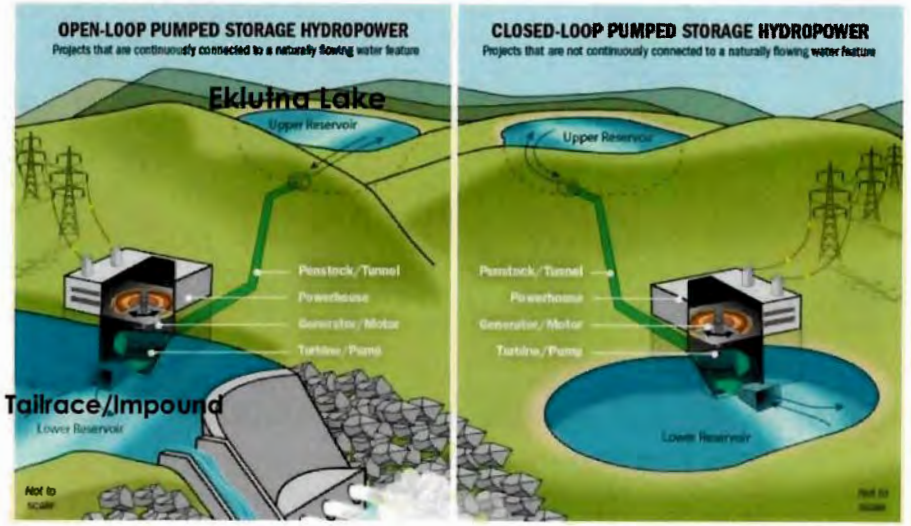


Figure 4-7 Illustration of Open-loop and Closed-loop PSH Systems (Source: DOE, undated)

For a small-scale PSH projects, a common approach is to install independent pump and generato sets, rather than customized, reversible pump-turbines. Such sets allow systems operators to use off-the-shelf components and scale them by increasing or decreasing the number of sets installed to reduce equipment costs. Scaling the size and number of pump and generator sets can also allow for greater control of the rate of pumping into the upper reservoir.

Certain conventional hydroelectric plants can be converted to pumped storage plants, known as pump-back PSH plants. This conversion adds separate pumps or reversible turbines to allow water to be moved from a lower reservoir back to an upper reservoir. Water can be pumped back during periods of low energy demand when excess energy from wind and/or solar generation is available. This approach reduces the need for curtailment of variable wind/solar generation and can conserve water in the upper reservoir, which can be important during dry seasons or periods of high energy demand and when there is not much wind/solar energy available.

Lake Outlet Reference Elevations, Bypass Fishway Concept

Eklutna Pond Gate Operates 860 to 870 when lake connects with pond
Eklutna Lake Gate operates from 850 to 870 but preferred and only route between 850 to 860 when lake is not connected to pond

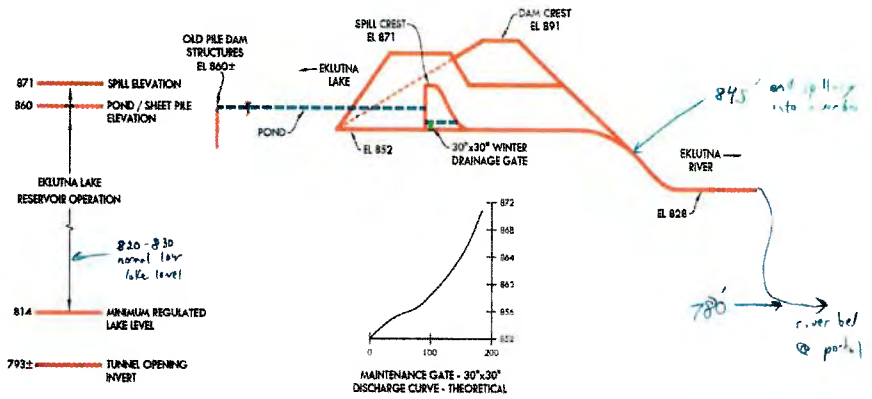

Figure 2-6. Profile of Project Dam and Spillway, Critical Elevations, and Drainage Gate Discharge Curve

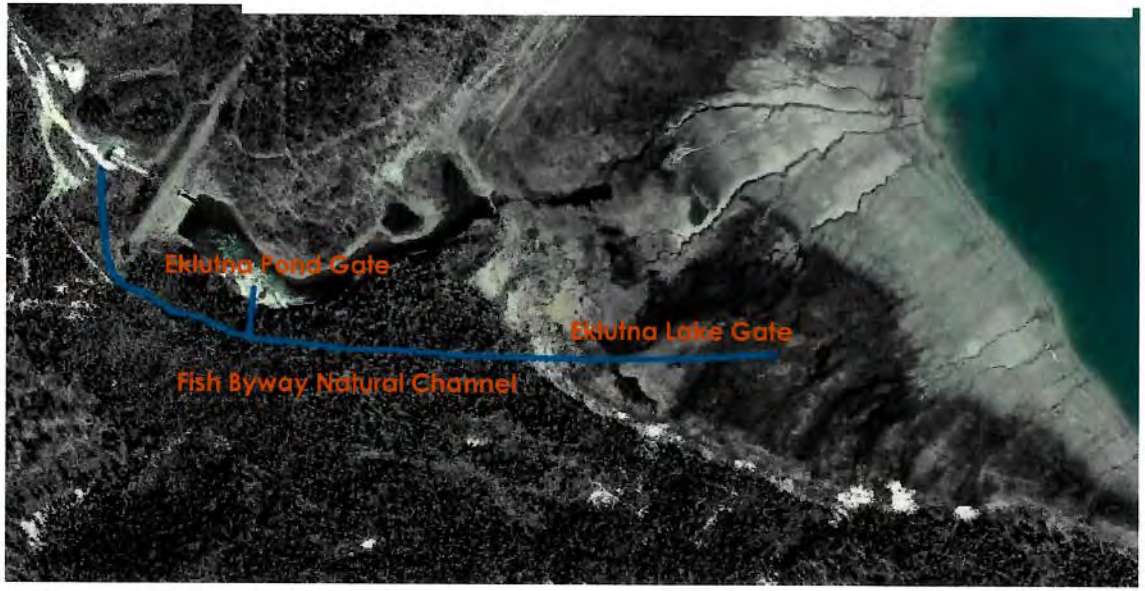

In Summary:

PSH/PES/PHS is a tried, trued, and sustainable energy practice and is backed by a statewide study and by others including historically by the Governor

The Prospects for Pumped Storage Hydropower in Alaska

July 2023

ANL-23/17

Siting at Eklutna: While PES can potentially work in other locations, the primary focus of this paper is on the Eklutna project, at the request of the governor. Eklutna is located inside Chugach State Park, centrally located near existing high-capacity transmission, the highway, the port of Anchorage, and the majority of the Railbelt energy consumers. As a result, it is likely to provide the greatest energy benefits at the lowest cost.

Additionally, the Eklutna PES project has the potential to help mitigate long-standing water resource conflicts in the Eklutna watershed. By raising the level of Eklutna Lake, increasing downstream flows and improving water management, the Eklutna PES could increase water availability for energy generation, stabilize the water supply for Anchorage and assist salmon restoration efforts currently underway.[10] It would also help Chugach and Matanuska Electric Association fulfill their legal obligations to mitigate fish and wildlife resources affected by the original Eklutna Hydroelectric project.[11] Analysis of these additional potential benefits exceeds the scope of this paper.

Acknowledgements

The authors compiled this report at the request of Governor Dunleavy at no cost to the State of Alaska. Thanks to Kachemak Geospatial, Dr. Anna Liljedahl and Scott Gruhn for their valuable insights and contributions to this report.

Executive Summary

Alaska's Railbelt has expensive electricity, generated from expensive fuel. Most of it comes from a single source -- Cook Inlet Natural Gas -- leaving us vulnerable to swings in price or supply. Prices may increase further, due to taxes and regulations aimed at emissions reductions, or decreases in fossil fuel subsidies. Here we outline a way to meet our power needs more economically and cleanly by combining two proven cost-effective technologies: wind power and pumped energy storage (PES). Wind power is exploding across the lower 48, as technology has improved and costs have dropped. One thing that has stymied power producers from bringing wind into Alaska is the challenge of integrating large amounts of variable power into our small and isolated grid. PES can solve this problem, pumping water uphill when energy is abundant, and running it back down when power is needed. This decades-old technology is long-proven, fish-friendly, and can create the cheapest "batteries" in the world.

Finally: Modified Proposed Eklutna PSH Preliminary Baseline Reservoir Analysis

Modified Eklutna PSH Baseline Reservoir Analysis

175,000 acre-ft between 814 to 871 feet (57 feet) theoretical operational zone

Assume* vertical walls and that is 3,000 acre-ft of water storage per foot of lake elevation

*In reality, with likley bathtub bathymetry, there will be slightly less storage/foot at lower lake levels

Current active operations average range between 830 to 870

For Fish byway operations, lake levels will need to be held between 850 to 870 (dam invert to spillway)

Will lose 20 feet of active operations (btw 830 to 850)

That equates to 60,000 acre-feet of lost potential water, plus 25,000 acre-ft lost to proposed instream flows

Need to make up at least 85,000 acre-ft of water to allow for fish passage and keep gross power production at parody**

****this is an improvement over existing proposed Hydro Owner F&W Plan as they will lose 10% of gross power prodcution**

as noted above, the storage loss will be less b/c of likely bathtub bathymetry

85,000 acre-ft equates to 3,700,000,000 cubic feet

3 months is 7,776,000 seconds

Need 475 cfs of flow pumped into Eklutna Lake for 90 days (3 summer months June, July, August)***

@240 cfs per reversible turbine pump

240 cfs at 900 ft of head (with losses) @90% efficiency is 20MW of power needed per pump

*** If more time is allocated to pumping beyond 90 days, then pumping flows can go decrease for less power demand,

or more water can be pumped into the lake for larger instream flows

*** Selected peak summer months based on much lower power demand and much higher solar/wind power potential

Analysis is not complete: Need to consider the fact that during pumping, no water will be diverted for power, which averages 350 cfs

Therefore, when the diversions take place for power production, diversions will likely need to increase to the 600 to 700 cfs flows

more often to drawn down the lake level and prevent unintended lake spills and power production loss, which ideally could occur during winter peak power demands

Natural peak inflows occur during June, July and August, and lowest lake levels are in May and June, but they will go from lows of 830 to lows of 850

Because of bathtub bathymetry and extra pond storage, there could be up to 100,000 acre-ft storage (850 to 870) to accommodate

850 cfs of natural lake inflows, plus 425 cfs of pumped inflows, minus 40 cfs of instream flows and 30 cfs of water supply diversions

This nets to 1,200 cfs a total lake inflow for June, July, August...or 215,000 acre-ft, meaning the pump schedule will need to be shifted and/or not continuous

to avoid a 115,000 acre-feet overflow. This should not problematic as the sun and wind are not continuous either.

This is an iterative process with multiple water budgeting variations to evaluate

Table 4.1-1. Eklutna Lake Technical Parameters.

Description	Value
Max Regulated Water Surface Elevation	871.0 ft
Minimum Operating Water Surface Elevation	814.0 ft
Max Water Surface Area	3,500 Acres
Active Storage	174,860 Acre-Ft

115k acre-ft overflow would provide increased instream river flows that would much more closely match the proposed NVE instream river flows over 100 cfs

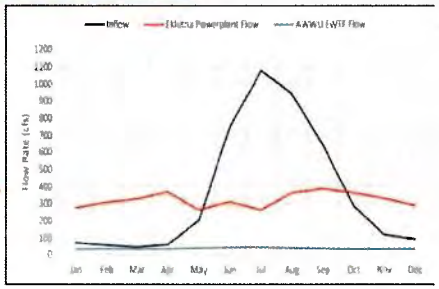

Figure 4.1-4. Eklutna Lake Average Inflows/Outflows, 2011 - 2021

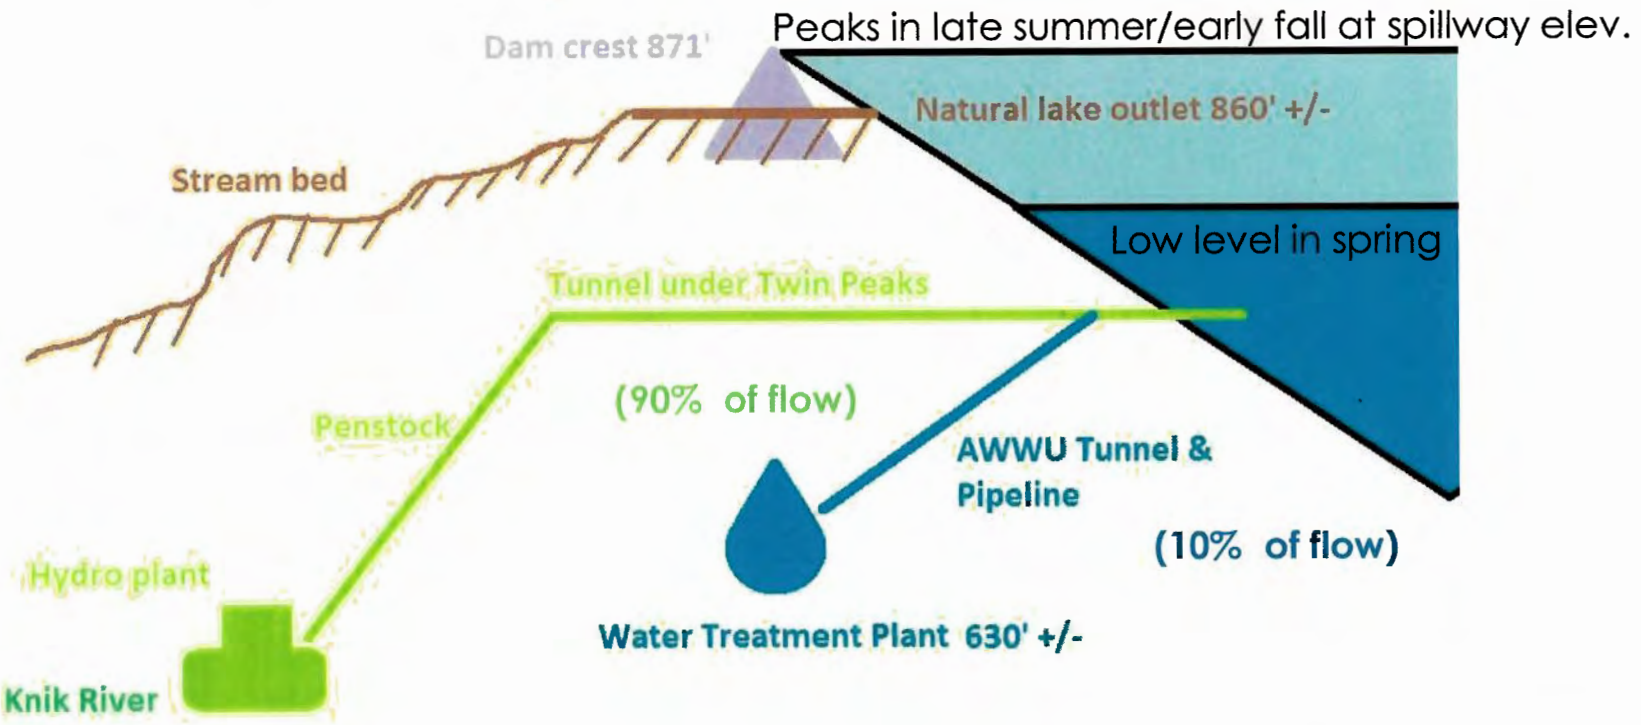
- **Much Vetting is necessary**, but if done judicially at Eklutna it could offer:
- No loss of power production and potentially more; offsetting natural gas
- Full instream river flows, fish passage and lake connectivity
- Provide for downstream control and protection of municipal water supply infrastructure
- Require minimal infrastructure investment (assuming existing tunnel infrastructure can be reused) other than turbine/pump/control upgrades, bypass fish channel and hydro owners/MOA/IPP would need to build new solar/wind and/or negotiate with existing wind/solar operators to maximize their renewable output, when possible, to fill the lake for @90 days annually

Questions, Gaps, Variations and Discussion?



- Does this meet full restoration objectives of stakeholders?
- Does this meet prudent utility practices?
- Eklutna tailrace fishery impact?
- Is there a tidal impact? Turbidity control measures?
- Will fish return with a blended water (imprint markers)?
- Solar and wind generation siting, funding, existing?
- Reversible Turbine Pump? Separate?
- Turbidity control, Other?

- **<u>Multiple Variations Available (not a fully inclusive list)</u>**
- Open Loop vs. Closed Loop, lower impoundment
- Assortment of flow regime and seasonal variations to model
- Additional/redundant penstocks, additional/redundant pump/turbines, upper impoundments, etc.
- Blending water variations with Knik River
- Lower or higher fish gate elevations

RECEIVED
By the Regulatory Commission of Alaska on Oct 15, 2024

STATE OF ALASKA

THE REGULATORY COMMISSION OF ALASKA

Before Commissioners: John M. Espindola, Chairman
Robert M. Pickett
John C. Springsteen

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

OFFICE OF THE ATTORNEY GENERAL'S MOTION TO DISMISS AS MOOT

I. Introduction

The Office of the Attorney General, Regulatory Affairs & Public Advocacy Section (RAPA) moves to dismiss this matter as moot. In this matter, the Municipality of Anchorage d/b/a Anchorage Hydro Power (the Municipality[1]) sought to have a seat at the table—the ability to vote on the Eklutna Operating Committee (EOC)—when it comes to the Fish and Wildlife Program and process involving Eklutna Hydropower. The Governor of Alaska approved the final Fish and Wildlife Program on October 2, 2024, rendering moot the Municipality's desire to have a voting member on the EOC.

[1] The Municipality also includes the Assembly. "[The Commission] find[s] no facts that the Municipality of Anchorage's varied interests in this docket, including the Assembly's interests, will not be adequately represented by AHP." Order U-24-024(4) at 5.

RAPA also moves that this matter be dismissed as prematurely filed unless AHP establishes that the Commission should set aside the minimum term of voting rights surrender in Order 39.[2]

II. Relevant Background

On May 28, 2020, Order 39 approved Chugach Electric Association's (Chugach) acquisition of most of the assets and service obligations of the Municipality of Anchorage d/b/a Municipal Light & Power Department.[3] The Regulatory Commission of Alaska (Commission) made the approval of the acquisition subject to several conditions including that the Municipality would surrender its voting rights on the EOC.[4] The Municipality surrendered its EOC voting rights on October 27, 2020.[5]

The Eklutna Project Owners released a draft Fish and Wildlife Program in October of 2023.[6] On February 2, 2024, the Assembly passed resolution No. 2024-40, as amended, opposing the draft Fish and Wildlife plan.[7] Assembly resolution

No. 2024-40 stated, among other things, that (1) "the Anchorage Assembly cannot endorse and thus opposes the Draft Fish and Wildlife Program[,]" (2) "[t]he Municipality of Anchorage does not intend to issue authorizations or provide funds or any other form of support of the Draft Fish and Wildlife Program or any alternative that doesn't restore the full length of the Eklutna River and comply with policy of the Municipality, as recently enacted by AO 2023-131, As Amended, and codified at AMC 26.30.025A., as well as AR 2022-262, As Amended, and AR 2017-324(S)," and (3) requested that the Project Owners seek a two-year extension to the 1991 Agreement. On April 3, the Project Owners declined to include the Municipality's alternative analyses and indicated that the Project Owners intended to submit the proposed final Fish and Wildlife Program to the governor without Assembly approval.[8]

On April 15, 2024, the Assembly moved the Commission to reopen dockets and to modify Order 39 to allow the Municipality to exercise its vote "specifically on the proposed final Fish and Wildlife Program[.]"[9] In its motion seeking expedited consideration for the return of its voting rights, the Assembly asserted that "[t]he current draft Fish and Wildlife Program was developed by the minority Project owners, Chugach Electric Association ("Chugach") and Matanuska Electric Association

("MEA"), but it has not been submitted to or approved by the Assembly as required by law."[10]

In its motion to intervene in Docket U-18-102 *et al*, the Assembly asserted that "the Assembly has exercised its legislative authority to require that the proposed final Fish and Wildlife Program be submitted to the Assembly for approval before being transmitted to the governor."[11] The Assembly also asserted that "[t]he Assembly's Petition and Motion are focused on a single, narrow issue: whether the Municipality should be allowed to vote on the EOC's decision to submit a proposed final Fish and Wildlife Program to the governor."[12] On April 19, 2024, the Commission denied the Assembly's motion.

On July 2, 2024, the Assembly held a work session for the confirmation of Mr. Corsentino as the Director of Anchorage Hydropower (AHP). That hearing is available online.[13] At the beginning of the work session, after putting Mr. Corsentino forward for the AHP Director position, Mayor LeFrance stated: "As you all know, the hydropower director position has been unfilled for years and is important to ensuring

the municipality has a seat at the table when it comes to the fish and wildlife process, and the future of Eklutna."[14] Mr. Corsentino was unanimously approved by the Assembly to be the director of AHP.[15]

On July 18, 2024, the Municipality filed its Notice and Request for Acknowledgment with the Commission. The Governor of Alaska approved the final Fish and Wildlife Program on October 2, 2024.

For the time-period from the date of Order 39, through the time of the Municipality's surrender of voting rights, to the present, Mr. Corsentino was employed by the Municipality.[16] After the Municipality surrender of voting rights, Mr. Corsentino represented the Municipality on the EOC in a non-voting capacity.[17]

III. Argument

A. AHP's Notice and Request for Acknowledgement is moot because the Governor has already approved the Fish and Wildlife Program.

The Municipality sought to have Mr. Corsentino become its voting representative because the Municipality wanted a vote on the Fish and Wildlife Program. That program was submitted to and has been approved by the Governor. That makes AHP's Notice and Request for Acknowledgement moot.

A matter is moot if it does not present a live controversy.[18] A matter is moot if the party bringing the case would not be entitled to relief.[19] Where events have rendered the issue moot, the matter is not considered.[20]

The above background section shows that the Municipality took no action for Mr. Corsentino to become its voting representative for three years and eight months (October 27, 2020 to July 2, 2024). This is true despite the fact that Mr. Corsentino was a Municipal employee[21] and was already serving as the Municipality's non-voting member on the EOC.[22]

Only after the Municipality disagreed with the draft Fish and Wildlife Program and after the Assembly's bid to reopen the Acquisition failed did the Municipality seek to have a voting representative on the EOC. The Municipality has made its position clear:

> Although the Municipality has attempted to fill the open position with Anchorage Hydropower but has not succeeded, the lack of qualified employees is now a moot point. All policy decisions, including whether to approve the Fish and Wildlife Program, may only be made by the Assembly.[23]

> According to the Resolution [No. 2024-40], the "Municipality does not intend to issue authorizations or provide funds or any other form of support of the Draft Fish and Wildlife Program or any alternative that doesn't restore the full length of the Eklutna River or comply with policy of the Municipality, as recently enacted by AO 2023-131."[24]

The Municipality presented a proposed voting representative on the EOC only after its bid to reopen the acquisition docket failed. The Municipality wanted a voting representative so it could exercise a vote on the proposed Fish and Wildlife Program. The individual proposed, Mr. Corsentino, worked for the Municipality at the time the Municipality submitted its surrender of voting rights and through the present day. The Municipality brought Mr. Corsentino forward after the Municipality realized the Fish and Wildlife Program that would be submitted to the Governor was not to the Municipality's liking. But, the Fish and Wildlife Program has since been approved by the Governor.

B. This matter should be dismissed because AHP's Notice and Request for Acknowledgement appears to have been prematurely filed.

At the August 30, 2024 prehearing conference, ALJ Walker noted " …it appears that the Commission should be considering dismissal of the notice and request for acknowledgement as being prematurely filed …."[25] ALJ Walker further observed that AHP's notice and request for acknowledgment did not present "any evidence or

discussion of why the Commission should set aside the minimum term of voting rights surrender required in Order [39].[26]"

The parties agreed to brief the meaning of Order 39, but there is no request by a party for Commission action on the issue raised by ALJ Walker. RAPA officially makes that request now.

After reviewing the already-scheduled briefing by the parties on the impact and meaning of Order 39, and unless AHP establishes through evidence, discussion, and response to the briefing by the other parties to this Docket that the minimum term of voting rights surrender should be set aside, the Commission should dismiss this matter as being prematurely filed.

IV. Conclusion

The Municipality can no longer vote against the proposed Fish and Wildlife Program. It is now final. The program and the financial obligations arising from the approved program are set. AHP's Notice and Request for Acknowledgement is moot because of the Governor's subsequent approval of the Fish and Wildlife Program. AHP's Notice and Request for Acknowledgement should be dismissed as moot.

Unless AHP establishes through evidence, discussion, and response to the briefing by the other parties to this Docket that the minimum term of voting rights surrender should be set aside, the Commission should dismiss this matter as being prematurely filed.

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024 ORDER NO. 5

ORDER GOVERNING CONFIDENTIAL DISCOVERY MATERIAL

BY ADMINISTRATIVE LAW JUDGE JAMES L. WALKER:

On August 30, 2024, the Regulatory Commission of Alaska held a prehearing conference in this docket. At the prehearing conference, the Municipality of Anchorage d/b/a Anchorage Hydropower (AHP) requested that an order governing confidential discovery be issued in this docket. No parties to this docket opposed AHP's request.[1] On October 15, 2024, the parties proposed a mutually acceptable model for this order.[2]

I grant AHP's request and issue this Order Governing Confidential Discovery Material (Order) to establish procedures for the protection and use of confidential discovery material in these proceedings. This Order does not determine whether any specific information is confidential in accordance with 3 AAC 48.045, it establishes the procedures for the production and use of discovery material that is

[1]August 30, 2024, Prehearing Conference Tr. 17, 23-24.

[2]Correspondence from D. Thompson filed October 15, 2024.

Regulatory Commission of Alaska
701 West Eighth Avenue, Suite 300
Anchorage, Alaska 99501
(907) 276-6222; TTY 1-800-770-8973

confidential. Pursuant to 3 AAC 48.049(g), a party with a confidentiality interest who does not file a petition for confidential treatment waives that confidentiality interest.

IT IS HEREBY ORDERED

Confidential Information

1. This Order shall govern the use of all information, in any form, produced by a party ("producing party") for the purpose of discovery. The producing party must have a good faith belief that good cause, as defined under 3 AAC 48.045(b), exists to mark any materials as confidential under this Order. The producing party must indicate materials are confidential through using the following specific designation which refers to the specific docket and order number under which those materials are to be held confidential, such as "Confidential Order U-24-024(5)." Absent this or similar designation clearly indicating a claim of confidentiality, the receiving party is free to treat the materials received as non-confidential materials. All confidential discovery materials shall be treated as confidential pursuant to 3 AAC 48.040 - 3 AAC 48.049.

Use of Confidential Discovery Material

2. All confidential material and the information contained therein shall be made available to and shall be used by each recipient party solely for the purpose of these proceedings.

Qualified Persons

3. Access to confidential material shall be restricted to counsel of record for the parties, including the Attorney General and any intervenor, associated attorneys and their paralegals and support staff; party representatives, employees, experts or consultants engaged in these proceedings; and duplicating or copying centers.

Nondisclosure Agreement

4. Each Person to whom confidential material is disclosed shall agree in writing to the nondisclosure agreement attached hereto as an appendix and, by this

Regulatory Commission of Alaska
701 West Eighth Avenue, Suite 300
Anchorage, Alaska 99501
(907) 276-6222; TTY 1-800-770-8973

reference, incorporated herein. A copy of the executed nondisclosure agreement shall be filed with the Commission and served on all other parties in the docket prior to having access to confidential information. In the event that any person to whom such confidential material was disclosed ceases to be engaged in these proceedings, access to and possession of such material by such person shall be terminated and such person shall immediately return all confidential information to the producing party and destroy all electronic versions of the confidential information. The provisions of this Order and the certification shall remain in full force and effect as to any such person in any subsequent employment. In lieu of signing a nondisclosure agreement, state employees, including both Attorney General employees and Commission employees, are bound by the Executive Branch Ethics Act not to disclose confidential information pursuant to AS 39.52.010, *et. seq.*

Challenge to Confidentiality

5. If a recipient party disagrees with a designation of confidentiality, the recipient party and the producing party shall attempt to resolve the dispute on an informal basis. If the parties are unable to resolve the dispute, the recipient party may file a motion requesting that the information be released to the public record. The motion shall specifically identify the contested information and assert the reason(s) why the information does not fall within the definition of 3 AAC 48.045.

6. Within seven (7) calendar days of the date of service of a motion contesting confidentiality, the producing party must file a response. The producing party has the burden of proving that the challenged information is confidential as defined by 3 AAC 48.045.

7. Pending resolution of the motion by the Commission, the challenged information shall not be disclosed.

Regulatory Commission of Alaska
701 West Eighth Avenue, Suite 300
Anchorage, Alaska 99501
(907) 276-6222; TTY 1-800-770-8973

Use of Confidential Information

8. If a recipient party determines that its prefiled testimony or other submission will include or incorporate material gathered during discovery which was designated as confidential by the producing party, the recipient party must both file electronically a redacted version of the prefiled testimony or other submission, and file and serve an un-redacted version of the prefiled testimony or other submission. If the producing party objects to making the material which it has designated as confidential public, unless the confidentiality of such information is already before the Commission pursuant to paragraphs 5 and 6 above, the producing party must petition the Commission to classify the records as confidential as provided in 3 AAC 48.045, within five (5) business days of the date the confidential information is served. Unless the producing party timely files a petition to keep the material confidential, it will become public as provided in 3 AAC 48.049(g).

9. If a party wishes to refer to confidential material during oral examination, then the Commission will establish procedures consistent with due process for referring to the confidential material, examination of witnesses concerning the confidential material, handling the transcript, and ultimate disposition of any confidential material.

Amendment or Modification

10. The Commission may modify this Order upon motion by a party or upon its own motion after reasonable notice and an opportunity to be heard.

Disposition of Confidential Material

11. Within sixty (60) days of the conclusion of these proceedings, all confidential information, all copies thereof, and all extracts shall be returned to the producing party or destroyed by counsel of record for the recipient party. The producing party shall determine whether the information is to be returned or destroyed. Counsel of

Regulatory Commission of Alaska
701 West Eighth Avenue, Suite 300
Anchorage, Alaska 99501
(907) 276-6222; TTY 1-800-770-8973

record for each recipient party shall certify in writing the return or destruction of all confidential material, file the certification with the Commission, and serve the certification on the producing party.

12. The Commission will retain the confidential materials contained in the administrative record under seal and pursuant to its record retention schedule.

Sanctions

13. Violation of this Order by reasons of unauthorized use of or unauthorized divulgence of confidential information, or any other violation, may subject such person to civil penalties and/or other penalties and remedies, as provided by law.

No Waiver

14. Nothing in this Order shall preclude or constitute a waiver of the right of any party to seek, with respect to any type of information, a protective order providing for limitations on the dissemination of, use of, or access to that information, that are in addition to the limitations set forth in this Order.

Definitions

15. In this Order, the following definitions are applicable:

a. "*producing party*" means a party that provides information in its possession or control to another party for the purpose of discovery.

b. "*recipient party*" means a party that receives confidential information through the discovery process, receipt of prefiled testimony or other documents or pleadings, presence in an *in camera* hearing, or by any other means.

c. "*confidential information*" or "*confidential material*" means information designated as confidential, trade secret, private commercial or financial information, or other nonpublic information by the producing party, unless confidentiality is subsequently waived by the producing party or denied by the Commission.

Regulatory Commission of Alaska
701 West Eighth Avenue, Suite 300
Anchorage, Alaska 99501
(907) 276-6222; TTY 1-800-770-8973

d. "*counsel of record*" means any attorney, including assistant attorneys general, or non-attorneys representing a party pursuant to 3 AAC 48.080(a)(3) - (8).

e. "*conclusion of these proceedings*" means the exhaustion of all available administrative and judicial appeals or the expiration of the time for taking such appeals, as provided by applicable law.

DATED AND EFFECTIVE at Anchorage, Alaska, this 17th day of October, 2024.

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

CHUGACH ELECTRIC ASSOCIATION, INC. AND MATANUSKA ELECTRIC ASSOCIATION, INC.'S MOTION TO COMPEL DISCOVERY RESPONSES

Chugach Electric Association, Inc. ("Chugach") and Matanuska Electric Association, Inc. ("MEA"), pursuant to 3 AAC 48.144(e), hereby jointly move the Commission for an order compelling responses to its discovery requests sent to the Municipality of Anchorage d/b/a Anchorage Hydropower ("AHP"). Undersigned counsel certifies that they have attempted to resolve the discovery dispute with AHP's counsel but such efforts have been unsuccessful. **This is a motion concerning discovery. A response must be filed within five (5) business days pursuant to 3 AAC 48.144(h).**

I. BACKGROUND

On September 18, 2024, Chugach and MEA propounded its Joint First Set of Discovery Requests on AHP in this proceeding (the "Requests"). A copy of the Requests is attached hereto as **Exhibit A**. On September 30, 2024, AHP responded to the Requests (the "Response"). A copy of the Response is attached hereto as **Exhibit B**.

Request numbers CEA&MEA-AHP-1 through CEA&MEA-AHP-9 all requested information about an alternative proposal that AHP developed and formally proposed to Governor Mike Dunleavy to substantially redesign, rebuild and replace the existing Eklutna Project with a pumped storage hydro ("PSH") facility (the "MOA PSH

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

Alternative"). AHP advanced this MOA PSH Alternative during the Governor's review of the Proposed Final Fish and Wildlife Program ("Proposed Program") for the Eklutna hydroelectric project ("Eklutna Project") owned by Chugach, MEA, and the MOA, and which was developed and submitted to the Governor pursuant to the 1991 Agreement[1] by Chugach and MEA in consultation with the MOA. The MOA developed and advanced the MOA PSH Alternative and formally sought a two year delay to consider such alternatives despite having surrendered associated decision-making authority over such matters in October 2020 in response to the Commission's Order U-18-102(44)/U-19-020(39)/U19-021(39) ("Order 39") requirement central to this proceeding – that the MOA surrender from the Eklutna Operating Committee ("EOC") and not be allowed any ability to delay or change Eklutna Project decisions made by the Chugach and MEA representatives on the EOC, including with respect to the Proposed Program).

The relevant background surrounding the MOA PSH Alternative is as follows:

- The Proposed Program was developed by Chugach, MEA, and MOA over five years and was submitted to the Governor on April 25, 2024, opening a 60-day comment period for the parties to the 1991 Agreement to comment on the Proposed Program and any proposed alternatives.[2] The Proposed Program did not include any PSH facility proposal. It was supported by

[1] Agreement Between the Municipality of Anchorage d/b/a Anchorage Municipal Light and Power, Chugach Electric Association, Inc., Matanuska Electric Association, Inc., U.S. Fish and Wildlife Service, National Marine Fisheries Service, Alaska Energy Authority, and the State of Alaska Relative to the Eklutna and Snettisham Hydroelectric Projects (Aug. 7, 1991) ("1991 Agreement").

[2] Supporting Information Document attached as **TRZ-04** to Tony Zellers Prefiled Responsive Testimony at 19 ("the "Parties then have 60 days to submit written comments on the Proposed Final Program, and any alternative recommendations for the protection, mitigation, and enhancement of fish and wildlife resources, to the Governor").

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

Mayor Dave Bronson[3], although opposed by the Anchorage Assembly.[4] At the time, however, the Anchorage Assembly had not raised a PSH facility proposal to MEA or Chugach.

- The 60-day comment period closed on June 24, 2024, and no comments were submitted about a PSH facility proposal from any party or person.
- On July 1, 2024, Mayor Suzanne LaFrance was sworn in, replacing Mayor Dave Bronson.
- On July 2, 2024, Mark Corsentino was approved by the Anchorage Assembly to be the Utility Director of AHP.[5]
- On July 18, 2024, the MOA filed its Notice and Request for Acknowledgement of Anchorage Hydropower's Acquisition of Expertise Required to Participate as a Voting Member of the EOC in this proceeding seeking to regain the voting rights it surrendered in 2020 with respect to the EOC.
- On July 24, 2024, MEA and Chugach responded to 1991 Agreement party comments submitted on the Proposed Program.[6]
- On August 23, 2024, in his new role as Utility Director of AHP, Mr. Corsentino participated in a Joint Worksession of the Anchorage Assembly and Native Village of Eklutna where he presented and discussed the new

[3] Mayor Dave Bronson's April 26, 2024 letter in support of the Proposed Program is available at https://eklutnahydro.com/wp-content/uploads/2024/05/2024-04-26-Comments-on-Proposed-Final_Mayor.pdf.

MOA PSH Alternative proposal, accompanied with PowerPoint slides that were attached to Tony Zellers' Prefiled Responsive Testimony as **TRZ-06**. No other background or technical materials have been shared directly with the MEA and Chugach (the other two Eklutna Project owners) about the MOA PSH Alternative at any time, so the presentation (TRZ-06) and Mr. Corsentino's statements to the Anchorage Assembly[7] are all the information that Chugach and MEA have about the MOA PSH Alternative.

- On September 4, 2024, the MOA advanced the MOA PSH Alternative to the Governor in a brief requested by the Governor's Staff, asserting: "Several alternatives [have] not yet [been] adequately considered by [MEA and Chugach]…A preliminary proposal for pumped storage hydro, for example, was presented to a work session of the Anchorage Assembly on August 23, 2024, by the head of the Anchorage Hydropower utility and received favorable discussion."[8]
- On September 9, 2024, during a meeting conducted by the Governor's chief of staff as part of their review of the Proposed Program and in which Mr. Corsentino advanced the MOA PSH Alternative, MOA representatives told the Governor's office in a meeting and, that the MOA's "pump storage hydro [proposal] beats the [Proposed Program] on every metric."[9]

---

[7] Mr. Corsentino's presentation to the Joint Worksession of the Anchorage Assembly and Native Village of Eklutna is a public record available at https://www.youtube.com/watch?v=hw3AGSUGlac .

Seattle, WA 98104-7036
PHONE 206.883.2500

- On October 2, 2024, the Governor issued the Final Fish and Wildlife Program and included a requirement that the parties to the 1991 Agreement and the Native Village of Eklutna study the pumped storage hydropower alternative as a limited program reopener upon terms and conditions they mutually agree to, and also noted that MEA and Chugach did not have an opportunity to respond to the MOA's joint resolution outside of the September 9, 2024, Governor's office meeting.[10]

In submitting CEA&MEA-AHP-1-1 through CEA&MEA-AHP-1-9 to AHP in the Request (the "PSH Discovery"), MEA and Chugach sought more information and background from AHP and Mr. Corsentino regarding the MOA PSH Alternative as such information is directly relevant to the scope of this proceeding. The AHP Response, however, contained the following objection to each PSH Discovery request: "AHP objects to this request to the extent that it seeks information that is irrelevant."

Pursuant to 3 AAC 48.144(d), on October 17, 2024, undersigned Counsel had a telephone discussion with Dean Thompson, Counsel for AHP, in an effort to resolve the dispute surrounding the relevancy of the PSH Discovery. Unfortunately, as re-confirmed on October 28, 2024, the parties have not been able to resolve the issue and AHP remained unwilling to provide information in response to the PSH Discovery based on AHP's understanding of the scope of this proceeding. Chugach and MEA now bring this motion to compel, requesting that the Commission determine that the information requested by MEA and Chugach in the PSH Discovery is relevant to this proceeding.

II. ARGUMENT

A. *The Applicable Broad Discovery Standard*

AHP has an obligation to comply with discovery requests propounded on it. The scope of discovery for this proceeding is set forth in 3 AAC 48.141:

[10] *See* Governor's Decision, dated October 2024, Final Fish and Wildlife Program, attached to Tony Zellers Prefiled Responsive Testimony at **TRZ-05**, at 14-15 of 58.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

> A party may obtain discovery from another party regarding any matter, not privileged, that is relevant to the subject matter of the proceeding, if the matter is admissible in evidence under 3 AAC 48.154 or appears reasonably calculated to lead to the discovery of admissible evidence.

This is a broad discovery standard. The Alaska Supreme Court has held that discovery rules should be liberally construed to effectuate the underlying purpose of those rules,[11] including to ensure that the parties may have a just determination of their case upon the merits.[12] With respect to relevancy disputes specifically, the Alaska Supreme Court has held that it will reverse a grant of discovery that is attacked on relevancy grounds "only **if** the information could not be reasonably expected to lead to the discovery of admissible evidence."[13] The Commission has also reiterated the broad nature of its applicable discovery rules, stating, for example, that "the scope of discovery is very broad and includes not only matters that would be admissible at hearing but also matters that are reasonably calculated to lead to the discovery of admissible evidence."[14]

B. ***The PSH Discovery Is Reasonably Calculated to Lead to the Discovery of Admissible Evidence Directly Relevant to Interpretation of this Proceeding's Scope.***

The PSH Discovery – which asks for specific information about the development and basis of the MOA PSH Alternative, including information about the data and research involved and relied upon, the staff involved, the anticipated costs, the equipment and technical specifications, and the anticipated impacts of the MOA PSH Alternative – is reasonably calculated to lead to the discovery of admissible evidence in this proceeding.

---

Seattle, WA 98104-7036
PHONE 206.883.2500

Mr. Corsentino and AHP developed, and MOA advanced, the MOA PSH Alternative to replace the proposal developed and advanced by the Eklutna Owners over the past five years. The requests about the MOA PSH Alternative are both directly relevant to (i) the most narrow reading of the scope of this proceeding: whether Mr. Corsentino and AHP have sufficient knowledge of Prudent Utility Practice and the Railbelt transmission system to vote AHP's interests on the EOC and (ii) expanded potential scopes of proceeding relating to the Commission determining – if it were to find that AHP had "acquired the expertise required to fully participate as a voting member of the EOC"[15] – whether it should set specific requirements or guardrails on AHP's powers on the EOC, as requested by MEA and Chugach in their Joint Brief to ensure that actions taken during the Surrender period are not undone and to ensure compliance by all Eklutna Project owners of contractual and legal obligations.[16]

To be clear, this discovery was not posed in order to litigate the MOA PSH Alternative or whether it is better or worse than the Proposed Program or Final Fish and Wildlife Program; rather this discovery is propounded to elicit information regarding Mr. Corsentino's and AHP's knowledge of Prudent Utility Practice and the Railbelt transmission system and how they have and will apply this knowledge to decisions related to the Eklutna Project.

1. *The PSH Discovery Is Reasonably Calculated to Lead to the Discovery of Relevant Evidence About the Depth of Mr. Corsentino's Understanding of Prudent Utility Practice*

If the Commission does not grant the Office of the Attorney General's Motion to Dismiss as Moot in this proceeding, and instead, the Commission proceeds with holding a hearing in this proceeding, Chugach and MEA anticipate that at the very minimum, the narrowest scope of such hearing will be centered on whether Mark Corsentino has the

[15] Order 39 at 67.

[16] *See* Chugach Electric Association, Inc. and Matanuska Electric Association, Inc.'s Joint Brief Regarding Surrender Term ("Joint Brief") at 23-24.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

necessary knowledge of Prudent Utility Practice and knowledge of the Railbelt generation and transmission system to adequately represent AHP on the EOC. MEA and Chugach further anticipate that part of the hearing, even in such a narrow scope only, will be spent ascertaining what Prudent Utility Practice is, particularly within the confines of AHP's limited utility function and obligations as only a wholesale provider of electricity from the Eklutna Project.[17] At a minimum, however, Chugach and MEA will assert that Prudent Utility Practice for AHP specifically will require an understanding of the Eklutna Project as AHP's only generating asset. Chugach and MEA will also broadly assert that Prudent Utility Practice when applied to proposing significant changes to utility infrastructure also typically mandates detailed examinations of cost, impacts, and technical feasibility. Because Mr. Corsentino was only recently appointed Utility Director of AHP, the actions he has taken in that role that can be examined to potentially demonstrate the degree of his knowledge of applicable Prudent Utility Practice is limited.

Mr. Corsentino has taken one notable public action in his first months as Utility Director of AHP relevant to the Eklutna Project: develop and present the MOA PSH Alternative to the Anchorage Assembly and assist in advancing such proposal to the Governor for consideration, who then included requirements related to such proposal in the Final Fish and Wildlife Program. Information about how this MOA PSH Alternative was developed and how Mr. Corsentino was involved, and information about what documents, analysis, studies, cost reports and impact analysis were used and relied upon by Mr. Corsentino in deciding to present this MOA PSH Alternative to the Anchorage Assembly and the Governor is not only reasonably calculated to lead to the discovery of admissible evidence, but is actually perhaps the *only* and *best* information currently available that could demonstrate the degree of his knowledge of Prudent Utility Practice applicable in his role at AHP. Furthermore, this information could showcase how he applies such

[17] *See* Joint Brief at page 6-7 for discussion of AHP as a "stub utility".

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

knowledge in deciding to propose major changes to AHP's sole operating asset to the MOA and the Governor. This discovery is therefore directly relevant to the scope of this proceeding – whether Mr. Corsentino has the necessary expertise (e.g., knowledge of Prudent Utility Practice) to fully participate as a voting member of the EOC.

2. *The PSH Discovery Is Reasonably Calculated to Lead to the Discovery of Evidence About AHP's Understanding of Applicable Law and AHP Contractual Obligations That Are Relevant to Prudent Utility Practice*

It is widely understood that Prudent Utility Practice requires operating within the bounds of applicable law and contractual obligations.[18] The MOA PSH Alternative and information about its development is therefore relevant to ascertaining whether Mr. Corsentino has sufficient knowledge of the legal and contractual requirements applicable to AHP. In its two PPAs with Chugach and MEA, the MOA, acting through AHP, currently has contractual obligations to make Eklutna Project operational decisions in a manner consistent with Prudent Utility Practice.[19] All of the Project Owners also have certain obligations to preserve the quality of the Eklutna Lake water for the Anchorage drinking water system.[20] The requested evidence on the MOA PSH Alternative is reasonably calculated to lead to admissible evidence about: (i) whether Mr. Corsentino and AHP have the knowledge of applicable law and AHP's contractual obligations that are required as part of Prudent Utility Practice (which is relevant to examination of AHP's expertise); and

[18] *See e.g.,* the definition of "Prudent Utility Practice" in the Chugach-MOA PPA ("…. Consistent with good business practices, reliability, safety, expedition and the requirements of any governing authority having jurisdiction"), cited in Mr. Ori's Prefiled Responsive Testimony at 10-11.

[19] *See* Section 4.2(A) of both the Chugach-MOA PPA and MEA-MOA PPA, attached to Mr. Ori's testimony as **EAO-2** and Mr. Zeller's testimony as **TRZ-02**, respectively.

[20] Eklutna Owners' shall "take no action regarding Eklutna Lake which has the effect of reducing the quality or increasing the turbidity of the lake water from those conditions which presently exist" nor "take or authorize any other action with regard to Eklutna Lake which may have the effect of reducing its present suitability for use as a source of public water supply" under Section 7 of the "Agreement for Public Water Supply and Energy Generation from Eklutna Lake, Alaska" with APA, dated February 17, 1984, as amended (the "1984 Agreement").

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

(ii) whether AHP's actions are out of step with Prudent Utility Practice by proposing the MOA PSH Alternative (which is relevant to examination of whether placing limits on the scope of AHP's future participation on the EOC with respect to the Final Fish and Wildlife Program specifically is appropriate).

Furthermore, in proposing the MOA PSH Alternative to the Governor after the submission by MEA and Chugach of the Proposed Program, the MOA violated its requirements under Order 39 to not delay or change the Eklutna Project decisions made by Chugach and MEA representatives on the MEA, including with respect to the Fish and Wildlife Program.[21] The PSH Discovery may demonstrate whether the MOA, AHP, or Mr. Corsentino knows or acknowledges such contractual and legal obligations.

3. *The PSH Discovery Is Reasonably Calculated to Lead to the Discovery of Evidence About the AHP's Development of a Pumped Storage Hydro Facility Proposal Now Included in the Final Fish and Wildlife Program and Directly Relevant to Future EOC Obligations.*

As a direct result of MOA's, AHP's, and Mr. Corsentino's joint efforts and advocacy, a requirement to study the MOA PSH Alternative has now been included in the Final Fish and Wildlife Program issued by the Governor.[22] As a result, the EOC may soon be charged with carrying out related studies, or making recommendations about feasibility, costs, and impacts to other parties to the 1991 Agreement and the Project owners group that will make decisions related to the 1991 Agreement. The PSH Discovery is therefore reasonably calculated to lead to the discovery of evidence directly relevant to the degree of Mr. Corsentino's and AHP's knowledge in, development of, and involvement with the MOA PSH Alternative, as well as more information about the MOA PSH Alternative,

[21] Order 39 at 67 ("This does not prohibit [AHP] from attending EOC meetings, but may not allow [AHP] any ability to delay or change the Eklutna Project decisions made by the Chugach and MEA representatives on the EOC.").

[22] *See* Governor's Decision, dated October 2024, Final Fish and Wildlife Program, attached to Tony Zellers' Prefiled Responsive Testimony at **TRZ-05**, at 14-15 and 29-32 of 58.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

including its potential impacts on the Eklutna Project, its impacts on fish and wildlife, and its costs as compared with the Proposed Program. Such evidence would be directly relevant to a broader scope of this proceeding where the Commission is ascertaining if and how it should limit AHP's ability to fundamentally change decisions made about the Final Fish and Wildlife Program during the Surrender period through future votes on the EOC, including votes on the MOA PSH Alternative reopener. Once again, this discovery was not posed in order to litigate the MOA PSH Alternative; rather this discovery is propounded to elicit directly relevant information regarding Mr. Corsentino's and AHP's knowledge of Prudent Utility Practice and the Railbelt transmission system and how they have and will apply this knowledge to decisions related to the Eklutna Project.

C. ***Each PSH Discovery Request is Reasonably Calculated to Lead to the Discovery of Evidence Reasonably Calculated and Relevant to the Scope of the Commission Proceeding***

Each specific PSH Question and response to that PSH Question is quoted and discussed below.

> **CEA&MEA-AHP-1-1:** Please provide all documents reviewed in development or preparation of the MOA PSH Alternative, including without limitation, (i) any engineering, cost estimates, feasibility studies and other materials related to Eklutna Lake, other Alaska projects, other United States' or international pumped storage hydro projects; and (ii) "Modified Eklutna PSH Baseline Reservoir Analysis", referenced on page 14 of the MOA PSH Alternative.
>
> **Response:** AHP objects to this request to the extent that it seeks information that is irrelevant.
>
> **Persons(s) Supplying Information:** Mark Corsentino, Counsel

This request is relevant because it is likely to lead to the discovery of evidence that will showcase the process used, information relied upon by, and application of judgment by Mr. Corsentino in deciding to bring the MOA PSH Alternative before the Anchorage Assembly and advance the proposal to the Governor; it will demonstrate the depth of his knowledge of Prudent Utility Practice and the Eklutna Project, how he applies such knowledge and discipline in important decisions (or not), and the level of information he deems necessary to make such decisions. This request may also lead to the discovery of

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

evidence relevant to what specific information – or lack thereof – actually led to the inclusion of the MOA PSH Alternative in the Final Fish and Wildlife Program that the EOC may be involved with studying and implementing going forward.

> **CEA&MEA-AHP-1-2:** Please identify each person that was involved in the development or approval of, or otherwise provided input on, the MOA PSH Alternative, and identify each person's employer and role, whether the MOA, AHP, Anchorage Water and Wastewater Utility ("AWWU"), or some other entity.
>
> **Response:** AHP objects to this request to the extent that it is overbroad and seeks information that is irrelevant.
>
> **Persons(s) Supplying Information:** Mark Corsentino, Counsel

This request is relevant because it is reasonably calculated to lead to the discovery of evidence that will showcase the people, process and resources used, as well as the skill and experience of staff relied upon, by Mr. Corsentino in deciding to bring the MOA PSH Alternative before the Anchorage Assembly and the Governor, and will therefore help to demonstrate the depth of his knowledge of Prudent Utility Practice and how it may have been used in consulting with such people. This request may also lead to the discovery of evidence relevant to what specific people – and their knowledge and application of Prudent Utility Practice – were involved within the MOA in the investigation and development of the alternative and the decision leading to the inclusion of the MOA PSH Alternative in the Final Fish and Wildlife Program that the EOC may be involved with studying and implementing going forward.

> **CEA&MEA-AHP-1-3:** On September 9, 2024, Mr. Corsentino stated in a meeting with the Governor's Staff that the infrastructure costs associated with the MOA PSH Alternative would total "somewhere between $5 and $10 million". Please provide the MOA's cost estimates and any supporting documents for the MOA PSH Alternative.
>
> **Response:** AHP objects to this request to the extent that it seeks information that is irrelevant.
>
> **Persons(s) Supplying Information:** Mark Corsentino, Counsel.
>
> This request is relevant because it is reasonably calculated to lead to the discovery

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

of evidence that will showcase the level of cost analysis developed and relied upon by Mr. Corsentino in deciding to bring the MOA PSH Alternative before the Anchorage Assembly and the Governor and will therefore help to demonstrate his judgment, the depth of his knowledge and application of Prudent Utility Practice, and his appreciation of the lowest reasonable cost responsibilities typically contained therein. Of course, if the cost information is sufficient to warrant giving the cost information to the Governor's Chief of Staff in support of the PSH Alternative, it would seem sufficiently relevant to the Commission in support of its decision about the MOA's voting rights requested by the MOA in this docket. This request may also lead to the discovery of evidence relevant to what specific cost information was and is available to AHP and how such information may impact the implementation of the Final Fish and Wildlife Program now that requirements related to a MOA PSH Alternative are included therein at the MOA's request.

> **CEA&MEA-AHP-1-4:** Please identify the manufacturer of, and provide the MOA's cost estimate for, the "reversible turbine pump" referenced in the MOA PSH Alternative as well as any supporting documents.
>
> **Response:** AHP objects to this request to the extent that it seeks information that is irrelevant.
>
> **Persons(s) Supplying Information:** Mark Corsentino, Counsel.

This request is relevant because it is reasonably calculated to lead to the discovery of evidence that will showcase the process used, technical feasibility and investigation, and cost information relied upon by Mr. Corsentino in deciding to bring the MOA PSH Alternative before the Anchorage Assembly and the Governor, and will help to demonstrate the depth of his knowledge and application of Prudent Utility Practice and the Eklutna Project in assessing such technical and cost information. Turbines are critical and expensive equipment in any hydroelectric project. AHP's proposal to replace the Eklutna's turbines must have been based on an investigation and assessment of whether such equipment is available and how costly it would be. AHP's responses to this request will demonstrate AHP's knowledge and application of Prudent Utility Practice in the past

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

regarding the MOA PSH Alternative and going forward if sitting on the EOC.

> **CEA&MEA-AHP-1-5:** Please provide the MOA's cost estimates and any supporting documents for demolition of each turbine bay to accommodate the size and geometry of reversible turbine pump, replacement of all electrical systems and controls, rebuilding the surge shaft, replacing the intake, and constructing a new lower reservoir.
>
> **Response:** AHP objects to this request to the extent that it seeks information that is irrelevant.
>
> **Persons(s) Supplying Information:** Mark Corsentino, Counsel.

Similar to CEA&MEA-AHP-1-4, this request is reasonably calculated to lead to the discovery of evidence that will showcase the process used – and technical feasibility and cost information relied upon by – Mr. Corsentino in deciding to bring the MOA PSH Alternative before the Anchorage Assembly and advance it to the Governor, and will help to demonstrate the depth of his knowledge, and application, of Prudent Utility Practice in assessing such technical and cost information. The Eklutna Project was built in the 1950s for a specific geometry of turbine, intake and outflow structures, and standard operation for the flow of water in one direction for hydroelectric production. Chugach and MEA assume that AHP gathered and assessed such technical and cost information and applied Prudent Utility Practice in making the MOA PSH Alternative proposal to alter the Eklutna Project; this request merely seeks to have AHP show its work and demonstrate Prudent Utility Practice.

> **CEA&MEA-AHP-1-6:** Please admit or deny that the Eklutna Project's tailrace, powerhouse, penstock, tunnel, surge tanks, and intake structures were not designed for reversible flows of water from the Knik River into Eklutna Lake as proposed in the MOA PSH Alternative. If the answer to this interrogatory is anything other than an unqualified admission, please state all facts and reasons that support such answer.
>
> **Response:** AHP objects to this request to the extent that it seeks information that is irrelevant.
>
> **Persons(s) Supplying Information:** Mark Corsentino, Counsel

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

This request is reasonably calculated to elicit relevant evidence of AHP's understanding of the Eklutna Project and whether it understands the Eklutna Project and Prudent Utility Practice adequately enough to be able to regain its voting rights on the EOC. If either admitted or if denied with supporting information, this evidence would also provide information about whether the MOA PSH Alternative is consistent with Prudent Utility Practice and would therefore help to showcase Mr. Corsentino's knowledge and application of Prudent Utility Practice given that (i) AHP is obligated to act in line with Prudent Utility Practice and (ii) he brought this proposal before the Anchorage Assembly and Governor. This request is also relevant in that it is reasonably calculated to lead to admissible evidence about the potential impacts of the MOA PSH Alternative which is relevant to any Commission analysis of whether AHP's roles with respect to implementing such MOA PSH Alternative should be limited.

> **CEA&MEA-AHP-1-7:** Please admit or deny that the Eklutna Project tail race and its outflow into the Knik River that are proposed to be the lower reservoir supply in the MOA PSH Alternative are within the range of tidal influence of the Knik Arm of the Cook Inlet. If the answer to this interrogatory is anything other than an unqualified admission, please state all facts and reasons that support such answer.
>
> **Response:** AHP objects to this request to the extent that it seeks information that is irrelevant.
>
> **Persons(s) Supplying Information:** Mark Corsentino, Counsel

This request is reasonably calculated to elicit relevant evidence of AHP's understanding of the Eklutna Project – including the importance of its location and proximity to salt water – and Prudent Utility Practice and if such understanding is adequate enough for AHP to be able to regain its voting rights on the EOC. This request is relevant because if either admitted or if denied with supporting information, this evidence would provide information about whether the MOA PSH Alternative is consistent with Prudent Utility Practice and would therefore help to showcase Mr. Corsentino's knowledge and application of Prudent Utility Practice given that (i) AHP is obligated to act in line with

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

Prudent Utility Practice and (ii) he brought this proposal before the Anchorage Assembly and Governor. This request is also relevant because it is reasonably calculated to lead to admissible evidence about the potential impacts of the MOA PSH Alternative on the Eklutna Project (i.e., movement of salt or brackish water into the project works and Eklutna Lake/reservoir) which is relevant to any Commission analysis of whether AHP's roles with respect to implementing such MOA PSH Alternative on the EOC should be limited.

> **CEA&MEA-AHP-1-8:** Please admit or deny that brackish water and suspended sediment from the Eklutna Project tail race and the Knik River that are proposed to be the lower reservoir supply in the MOA PSH Alternative could severely impact AWWU's public water supply and the Eklutna Lake and River ecosystem. If the answer to this interrogatory is anything other than an unqualified admission, please state all facts and reasons that support such answer.
>
> **Response:** AHP objects to this request to the extent that it seeks information that is irrelevant.
>
> **Persons(s) Supplying Information:** Mark Corsentino, Counsel

Similar to CEA&MEA-AHP-1-7, this request is reasonably calculated to elicit relevant evidence of AHP's understanding of the Eklutna Project and whether it understands (i) the Eklutna Project's location and proximity to salt water, (ii) the environmental responsibilities borne by the Project owners, and (iii) Prudent Utility Practice adequately enough to be able to regain its voting rights on the EOC. If either admitted or if denied with supporting information, this evidence would provide information about whether the MOA PSH Alternative is consistent with Prudent Utility Practice and the environmental responsibilities borne by the Project owners, and would therefore help to showcase Mr. Corsentino's knowledge and application of Prudent Utility Practice given that (i) AHP is obligated to act in line with Prudent Utility Practice and (ii) he brought the MOA PSH Alternative before the Anchorage Assembly and Governor. This request is also reasonably calculated to lead to admissible evidence about the potential impacts of the MOA PSH Alternative on the Eklutna Project, MEA and Chugach's contractual obligations to AWWU, and fish and wildlife, all of which is relevant to any Commission analysis of

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

whether AHP's roles with respect to implementing such MOA PSH Alternative on the EOC should be limited.

> **EA&MEA-AHP-1-9:** Please admit or deny that introduction of brackish water and suspended sediment from the Eklutna Project tail race and Knik River into the Eklutna Lake ecosystem would constitute a breach of the Eklutna Owners' contractual obligations to the MOA and AWWU to "take no action regarding Eklutna Lake which has the effect of reducing the quality or increasing the turbidity of the lake water from those conditions which presently exist" nor "take or authorize any other action with regard to Eklutna Lake which may have the effect of reducing its present suitability for use as a source of public water supply" under Section 7 of the "Agreement for Public Water Supply and Energy Generation from Eklutna Lake, Alaska" with APA, dated February 17, 1984, as amended (the "1984 Agreement"). If the answer to this interrogatory is anything other than an unqualified admission, please state all facts and reasons that support such answer.
>
> **Response:** AHP objects to this request to the extent that it seeks information that is irrelevant.
>
> **Persons(s) Supplying Information:** Mark Corsentino, Counsel

Similar to CEA&MEA-AHP-1-7 and CEA&MEA-AHP-1-8, this request is reasonably calculated to elicit relevant evidence about AHP's understanding of the Eklutna Project and whether it understands (i) the Eklutna Project's location and proximity to salt water, (ii) the contractual responsibilities owed to AWWU under the 1984 Agreement, and (iii) Prudent Utility Practice adequately enough to be able to regain its voting rights on the EOC. If either admitted or if denied with supporting information, this evidence would provide information about whether the MOA PSH Alternative is consistent with Prudent Utility Practice, including obligations to comply with contracts like the 1984 Agreement and applicable law within, and would therefore help to showcase Mr. Corsentino's knowledge and application of Prudent Utility Practice given that (i) AHP is obligated to act in line with Prudent Utility Practice and (ii) he brought the MOA PSH Alternative before the Anchorage Assembly and Governor. This request is also relevant in that it is reasonably calculated to lead to admissible evidence about the potential impacts of the

WILSON SONSINI GOODRICH & ROSATI, P.C.

MOA PSH Alternative on the Anchorage drinking water system and on Eklutna Project owner contractual obligations, all of which is relevant to any Commission analysis of whether AHP's roles with respect to implementing such MOA PSH Alternative on the EOC should be limited.

III. CONCLUSION

The discovery sought in the PSH Discovery is reasonably calculated to lead to the discovery of admissible evidence and is relevant to both a narrow interpretation and broad interpretation of the scope of this proceeding. AHP should be compelled by Order of the Commission to provide the information requested in the PSH Discovery.

RESPECTFULLY SUBMITTED this 28th day of October, 2024.

STATE OF ALASKA

BEFORE THE REGULATORY COMMISSION OF ALASKA

Before Commissioners:	John M. Espindola, Chairman Robert M. Pickett John C. Springsteen
In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

CHUGACH ELECTRIC ASSOCIATION, INC. AND MATANUSKA ELECTRIC ASSOCIATION, INC.'S JOINT FIRST REQUEST FOR DISCOVERY TO MUNICIPALITY OF ANCHORAGE d/b/a ANCHORAGE HYDROPOWER (CEA&MEA-AHP-1)

Chugach Electric Association, Inc. (Chugach) and Matanuska Electric Association, Inc. (MEA) jointly provide their first set of discovery requests to the Municipality of Anchorage (MOA) d/b/a Anchorage Hydropower (AHP). These discovery requests are propounded in accordance with 3 AAC 48.141-.145. Please provide responses as soon as possible, but within ten (10) calendar days.

INSTRUCTIONS

1. These discovery requests are deemed to be continuing in nature. Should AHP, its counsel, consultants, or its witnesses learn of additional information or documents relating to the matters inquired into in these requests after they have been initially answered, AHP is requested to supplement its response to provide all responsive information and documents.

2. Where a document or information is responsive to a request but is withheld based on a claim of privilege, state in detail the basis for the claim and all facts and reasons relied on in support of the privilege. Provide an index identifying the document's dates, authors, recipients, title and subject areas, and identify the requests to which the claim of

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

privilege applies. For each document that is withheld due to a claim of attorney work product, indicate whether the document was prepared for litigation purposes, and identify the litigation on which the claim is based.

3. Where it is not possible to respond because responsive documents or information no longer exist (or because AHP does not have access to such documents or information), and AHP has reason to believe that such documents or information at one time existed, explain how or why the documents and information were lost or destroyed (or why AHP does not have access to such documents or information), describe the subject matter of the documents or information to the extent possible, indicate the requests to which the documents or information apply, and identify persons having knowledge of the content of the documents or information.

4. A discovery request may request documents, be an interrogatory, seek an admission, or combine elements of these types of discovery requests. Please respond as applicable. These requests apply to all information and documents in the possession of AHP, its consultants, and its witnesses and all information and documents subject to AHP's control or access. Please provide the requested information electronically. For any response that requires or includes calculations, please also provide any and all relevant calculations electronically in Excel format, with all formulae and calculations intact.

5. If any portion of AHP's response to a request is that the requested information or document has been previously provided, provide a clear, specific reference (including page numbers) where the information or document was previously provided.

6. The discovery requests below are directed to AHP, including its affiliates, employees, witnesses, and consultants.

WILSON SONSINI GOODRICH & ROSATI, P.C.

DEFINITIONS

The following definitions apply to these discovery requests. Any term that is not specifically defined herein should be construed in accordance with the usage of the term in the referenced testimony, its accepted usage in the relevant field, or if neither, its ordinary and plain meaning.

"Document," "documents" or "documentation" mean, without limitation, emails, drawings, graphs, charts, photographs, images, models, spreadsheets, studies, accounting journals (including all general, subsidiary and fixed asset books and ledgers), workpapers, other data or data compilations, the original and non-conforming drafts and copies of any written, typed, recorded (on magnetic tape or through any other means), computer-generated, or graphic material of any kind, whether prepared by AHP or any other person, that is in AHP's possession, custody, or control. The terms "document," "documents" and "documentation" include copies where the original is not in AHP's possession, custody, or control, and include any voice recordings or videotapes or tape recordings. With regard to information maintained by electronic means, the terms "document," "documents" and "documentation" include data processing and computer printouts, tapes, disks, and materials stored in computers or data processing equipment, together with programs and program documents necessary to retrieve, read, interpret, understand, and manipulate such data, and all other mechanical or electronic means of storing or recording data.

"Support," as limited by the context of the particular discovery requests asking for support for any particular proposition or conclusion, includes any of the following material that AHP views as supporting the particular proposition or conclusion: 1) state and federal statutes and regulations; 2) judicial or administrative adjudicatory or rulemaking decisions or orders from any state, federal, or local judicial or administrative body; 3) any other form of administrative guidance and pronouncements; 4) industry and professional standards promulgated by appropriate standard-setting bodies; 5)

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

authoritative text, treatises, and articles, and 6) any other material actually relied on in formulating the particular proposition or conclusion.

"MOA PSH Alternative" refers to the powerpoint presentation "Municipality of Anchorage, Anchorage Hydropower Utility, Modified PSH Concept with Wind & Solar at Eklutna Lake with River Restoration and Fish Passage", Mr. Corsentino presented to the Joint Worksession of the Anchorage Assembly and the Native Village of Eklutna on August 23, 2024 and discussed in the MOA's presentation to the Governor's Staff on September 9, 2024.

CHUGACH AND MEA'S DISCOVERY REQUESTS

CEA&MEA-AHP-1-1:

Please provide all documents reviewed in development or preparation of the MOA PSH Alternative, including without limitation, (i) any engineering, cost estimates, feasibility studies and other materials related to Eklutna Lake, other Alaska projects, other United States' or international pumped storage hydro projects; and (ii) "Modified Eklutna PSH Baseline Reservoir Analysis", referenced on page 14 of the MOA PSH Alternative.

Response:

Witness/Individual(s) supplying information:

CEA&MEA-AHP-1-2:

Please identify each person that was involved in the development or approval of, or otherwise provided input on, the MOA PSH Alternative, and identify each person's employer and role, whether the MOA, AHP, Anchorage Water and Wastewater Utility ("AWWU"), or some other entity.

Response:

Witness/Individual(s) supplying information:

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

CEA&MEA-AHP-1-3:

On September 9, 2024, Mr. Corsentino stated in a meeting with the Governor's Staff that the infrastructure costs associated with the MOA PSH Alternative would total "somewhere between $5 and $10 million". Please provide the MOA's cost estimates and any supporting documents for the MOA PSH Alternative.

Response:

Witness/Individual(s) supplying information:

CEA&MEA-AHP-1-4:

Please identify the manufacturer of, and provide the MOA's cost estimate for, the "reversible turbine pump" referenced in the MOA PSH Alternative as well as any supporting documents.

Response:

Witness/Individual(s) supplying information:

CEA&MEA-AHP-1-5:

Please provide the MOA's cost estimates and any supporting documents for demolition of each turbine bay to accommodate the size and geometry of reversible turbine pump, replacement of all electrical systems and controls, rebuilding the surge shaft, replacing the intake, and constructing a new lower reservoir.

Response:

Witness/Individual(s) supplying information:

CEA&MEA-AHP-1-6:

Please admit or deny that the Eklutna Project's tailrace, powerhouse, penstock, tunnel, surge tanks, and intake structures were not designed for reversible flows of water from the Knik River into Eklutna Lake as proposed in the MOA PSH Alternative. If the

WILSON SONSINI GOODRICH & ROSATI, P.C.

Seattle, WA 98104-7036
PHONE 206.883.2500

answer to this interrogatory is anything other than an unqualified admission, please state all facts and reasons that support such answer.

Response:

Witness/Individual(s) supplying information:

CEA&MEA-AHP-1-7:

Please admit or deny that the Eklutna Project tail race and its outflow into the Knik River that are proposed to be the lower reservoir supply in the MOA PSH Alternative are within the range of tidal influence of the Knik Arm of the Cook Inlet. If the answer to this interrogatory is anything other than an unqualified admission, please state all facts and reasons that support such answer.

Response:

Witness/Individual(s) supplying information:

CEA&MEA-AHP-1-8:

Please admit or deny that brackish water and suspended sediment from the Eklutna Project tail race and the Knik River that are proposed to be the lower reservoir supply in the MOA PSH Alternative could severely impact AWWU's public water supply and the Eklutna Lake and River ecosystem. If the answer to this interrogatory is anything other than an unqualified admission, please state all facts and reasons that support such answer.

Response:

Witness/Individual(s) supplying information:

CEA&MEA-AHP-1-9:

Please admit or deny that introduction of brackish water and suspended sediment from the Eklutna Project tail race and Knik River into the Eklutna Lake ecosystem would

WILSON SONSINI GOODRICH & ROSATI, P.C.

constitute a breach of the Eklutna Owners' contractual obligations to the MOA and AWWU to "take no action regarding Eklutna Lake which has the effect of reducing the quality or increasing the turbidity of the lake water from those conditions which presently exist" nor "take or authorize any other action with regard to Eklutna Lake which may have the effect of reducing its present suitability for use as a source of public water supply" under Section 7 of the "Agreement for Public Water Supply and Energy Generation from Eklutna Lake, Alaska" with APA, dated February 17, 1984, as amended (the "1984 Agreement"). If the answer to this interrogatory is anything other than an unqualified admission, please state all facts and reasons that support such answer.

Response:

Witness/Individual(s) supplying information:

CEA&MEA-AHP-1-10:

Please admit or deny that the MOA did not consult with Chugach Electric Association, Inc., prior to appointing Mark Corsentino as its representative to the Eklutna Operating Committee as required under Section 4.2(B) of the Eklutna Power Purchase Agreement, by and between MOA and Chugach Electric Association, Inc., dated as of December 28, 2018 (as amended). If the answer to this interrogatory is anything other than an unqualified admission, please state all facts and reasons that support such answer.

EXHIBIT B

STATE OF ALASKA

THE REGULATORY COMMISSION OF ALASKA

Before Commissioners:	John M. Espindola, Chair Robert A. Doyle Robert M. Pickett John C. Springsteen
In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

MUNICIPALITY OF ANCHORAGE D/B/A ANCHORAGE HYDROPOWER'S RESPONSE TO CHUGACH ELECTRIC ASSOCIATION, INC. AND MATANUSKA ELECTRIC ASSOCIATION, INC.'S JOINT FIRST REQUEST FOR DISCOVERY (CEA&MEA-AHP-1)

The Municipality of Anchorage ("MOA"), d/b/a Anchorage Hydropower ("AHP") hereby responds to Chugach Electric Association, Inc. ("Chugach") and Matanuska Electric Association, Inc.'s ("MEA's") Joint **First** Set of Discovery Requests, dated **September 18, 2024**. All responses to discovery are prepared by AHP in consultation with counsel.

PRELIMINARY STATEMENT

As discovery proceeds, facts, information, evidence, documents, and other matters may be discovered which are not set forth in these responses, but which may be responsive to these discovery requests. Except as otherwise indicated, the following responses are complete based on AHP's current knowledge, information, and belief. Furthermore, these responses were prepared based on AHP's good faith interpretation of the discovery requests and are subject to correction for inadvertent errors or omissions, if any.

GENERAL OBJECTIONS

1. AHP objects to requests for documents relating to confidential settlement negotiations. Any and all answers AHP provides in response to these discovery requests will be provided subject to, and without waiving, this objection.

2. AHP objects to the production of documents, calculations, and analyses that do not exist. A document is not within a party's "possession, custody, or control" if it does not exist.

3. AHP objects to each and every discovery request to the extent that they are vague, ambiguous, overbroad, unduly burdensome, or use terms that are subject to multiple interpretations but are not properly defined or explained for purposes of these discovery requests. Any and all answers AHP provides in response to these discovery requests will be provided subject to, and without waiving, this objection.

4. AHP objects to each and every discovery request to the extent that it is not reasonably calculated to lead to the discovery of admissible evidence and is not relevant to the subject matter of this proceeding.

5. AHP objects to providing information to the extent that such information is already a matter of public record. The requesting party is not entitled to require other parties to gather information that is equally available and accessible to it.

6. AHP objects to each and every discovery request to the extent that it seeks documents or information protected by the attorney-client privilege or the work product privilege.

Nothing contained in these responses is intended as, or shall in any way be deemed, a waiver of any such privilege or protection, or any other applicable privilege or doctrine.

7. AHP objects to the instructions contained in Chugach and MEA's Joint **First** Set of Discovery Requests. In responding to the requests, AHP will abide by the Regulatory Commission of Alaska's ("RCA" or "Commission") discovery regulations and, where applicable, the Alaska Rules of Civil Procedure.

8. AHP objects to the requests for identification of answering witnesses and designation of hearing witnesses as part of the responses. All responses to discovery are prepared by AHP in consultation with counsel. Witnesses at hearing will be available for cross-examination on their testimony. In accordance with Commission regulations, AHP will identify the persons supplying information for a particular response where appropriate.

DISCOVERY RESPONSES

CEA&MEA-AHP-1-1: Please provide all documents reviewed in development or preparation of the MOA PSH Alternative, including without limitation, (i) any engineering, cost estimates, feasibility studies and other materials related to Eklutna Lake, other Alaska projects, other United States' or international pumped storage hydro projects; and (ii) "Modified Eklutna PSH Baseline Reservoir Analysis", referenced on page 14 of the MOA PSH Alternative.

Response: AHP objects to this request to the extent that it seeks information that is irrelevant.

Case No. 3AN-24-06001 CI

UNOPPOSED MOTION FOR ONE-WEEK EXTENSION OF DISPOSITIVE MOTIONS DEADLINE

The Regulatory Commission of Alaska, by and through counsel, hereby requests a one-week extension of the deadline for parties to file dispositive motions. The parties had previously agreed to a deadline of October 21, 2024, but due to interceding events and counsel's schedule, the RCA is requesting the deadline be extended by one week, to October 28, 2024. Counsel for the other active parties to this appeal (the Assembly, MEA/CEA, and RAPA) have stated that they do not oppose a one-week extension of this deadline.

DATED October 21, 2024.

AFFIDAVIT OF JEFF WALLER IN SUPPORT OF OFFICE OF THE ATTORNEY GENERAL'S MOTION FOR EXPEDITED CONSIDERATION

STATE OF ALASKA)
) SS
THIRD JUDICIAL DISTRICT)

Jeff Waller, being duly sworn, states as follows:

1. I am the Chief Assistant Attorney General for the Office of the Attorney General, Regulatory Affairs & Public Advocacy Section (RAPA), assigned to the above-captioned matter.

2. On October 24, 2024, RAPA filed a request to defer ruling until after hearing on RAPA's previously filed motion to dismiss.

3. The current deadline under 3 AAC 48.091 for any party to respond/oppose RAPA's motion to dismiss is currently October 30, 2024.

4. RAPA requests that the deadline to respond/oppose RAPA's motion to dismiss be changed to the last business day before hearing on the merits for this matter,

being November 15. That deadline is later than the current deadline to respond/oppose RAPA's motion to dismiss.

5. A ruling on RAPA's Request to Defer Ruling before October 30, 2024 is needed so that the parties will know whether they have to respond/oppose RAPA's motion to dismiss by October 30 or by the last business day before hearing on the merits.

6. I contacted Counsels for AHP and Chugach and MEA regarding expedited consideration.

7. Counsel for AHP stated that his client did not oppose expedited consideration.

8. Counsel for Chugach and MEA conveyed that his clients oppose expedited consideration.

DATED October 24, 2024, at Anchorage, Alaska.

OFFICE OF THE ATTORNEY GENERAL'S MOTION FOR EXPEDITED CONSIDERATION OF REQUEST TO DEFER RULING

Pursuant to 3 AAC 48.091(g) the Office of the Attorney General, Regulatory Affairs & Public Advocacy Section (RAPA) moves for expedited consideration of RAPA's Request to Defer Ruling on Motion to Dismiss.

Expedited consideration is appropriate because RAPA's request seeks a change in the standard motion practice deadline to respond/oppose the motion to dismiss (October 30) which occurs before the deadline for response/opposition to RAPA's Request to Defer Ruling (November 4). RAPA suggests that any opposition to this motion for expedited consideration be due by noon October 29. Because of the compressed time-lines, RAPA will waive its reply to any opposition.

RAPA requests a decision by the Regulatory Commission of Alaska on RAPA's Request to Defer Ruling by close of business on October 29, 2024. A decision by that date would allow any party responding to RAPA's motion to dismiss to still make a

timely response/opposition filing by the current October 30, 2024 deadline, if required. This motion is supported by the Affidavit of Chief Assistant Attorney General Jeff Waller.

Counsel for RAPA has addressed this motion for expedited consideration with counsel for the Municipality of Anchorage d/b/a Anchorage Hydropower (AHP) and counsel for Chugach Electric Association, Inc., and Matanuska Electric Association, Inc. (Chugach & MEA). AHP does not oppose this motion for expedited consideration. Chugach & MEA oppose this motion.

THE REGULATORY COMMISSION OF ALASKA

Before Commissioners: John M. Espindola, Chairman
Robert M. Pickett
John C. Springsteen

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

OFFICE OF THE ATTORNEY GENERAL'S REQUEST TO DEFER RULING ON MOTION TO DISMISS

The Office of the Attorney General, Regulatory Affairs & Public Advocacy Section (RAPA) requests that the Regulatory Commission of Alaska (Commission) defer ruling on RAPA's motion to dismiss until after the conclusion of the hearing on the merits in this matter.

On October 15, 2024, RAPA filed a motion to dismiss the above-captioned matter. Pursuant to 3 AAC 48.091(d) any response/opposition to RAPA's motion would be due October 30, 2024. RAPA would have three business days to reply, making the motion ripe for decision after November 4 (two weeks before hearing).

Considering the short time-lines and compressed schedule for this matter, RAPA believes that it makes sense for the Commission to defer ruling on RAPA's motion until after conclusion of the hearing on the merits. This will provide sufficient time for the Commission to consider the motion, and for the parties and the Commission to examine

Attorney General
Regulatory Affairs & Public Advocacy
1031 West Fourth Avenue, Suite 200

witnesses and any relevant evidence that bears upon the issues raised in RAPA's motion to dismiss.

RAPA also proposes a change to the deadlines so that any opposition/response to RAPA's motion to dismiss shall be due no later than the last business day before the first day of hearing in this matter. As stated above, this Docket has a compressed timeline. Allowing the other parties ample time to respond to RAPA's motion will ensure that the Commission has been presented with full information and arguments before ruling on RAPA's motion. RAPA waives its right to file a reply to any opposition/response, thereby making sure that motion practice is complete before hearing.

In summary, RAPA requests the Commission defer ruling on RAPA's motion to dismiss until after the close of the hearing. RAPA also requests that the motion practice deadlines be changed so that any response/opposition to RAPA's motion is due no later than the last business day before the start of the hearing. RAPA waives its right to a reply.

The Municipality of Anchorage d/b/a Anchorage Hydropower supports this request and has signed below. Chugach Electric Association, Inc., and Matanuska Electric Association, Inc., are aware of this request and will file their response.

Order U-24-024(6)

ORDER DENYING REQUEST TO DEFER RULING AND MOTION FOR EXPEDITED CONSIDERATION OF REQUEST TO DEFER RULING

Background

At the pre-hearing conference held August 30, 2024, the Administrative Law Judge raised with the parties the issue of dismissal of the Notice and Request for Acknowledgment filed by the Municipality of Anchorage d/b/a Anchorage Hydropower (AHP) on July 18, 2024. The basis for such dismissal was that the Notice and Request for Acknowledgment appeared to be premature under the minimum term of Eklutna Operating Committee (EOC) voting rights surrender specified in Order U-18-102(44)/U-19-020(39)/U-19-021(39) (Order U-18-102(44)). AHP stated its disagreement that the minimum term of EOC voting rights surrender was meant to apply to its Notice and Request for Acknowledgment, and the parties agreed to a briefing schedule on this issue which is documented in Order U-24-024(4).

In conformance with this briefing schedule AHP filed its initial brief on September 18, 2024; Chugach Electric Association, Inc. (Chugach) and Matanuska Electric Association, Inc. (MEA) jointly filed a responsive brief on October 8, 2024; and the Office of the Attorney General, Regulatory Affairs and Public Advocacy Section (RAPA) filed a responsive brief of October 8, 2024. AHP's reply brief is due October 29, 2024.

On October 15, 2024, RAPA filed a motion to dismiss AHP's Notice and Request for Acknowledgment on the grounds that it was now moot and on the grounds that it was premature under the minimum term of EOC voting rights surrender specified in Order U-18-102(44). On October 24, 2024, Chugach and MEA filed notice of their joinder in RAPA's motion to dismiss. Under 3 AAC 48.091(d), AHP has until October 30, 2024, to file its response to RAPA's motion to dismiss. Under 3 AAC 48.091(e), RAPA can file a reply to any response up to three business days after AHP files its response. Therefore, RAPA's motion to dismiss should be ripe for our decision by November 5, 2024. A public hearing is scheduled to begin in this docket on November 18, 2024.

On October 24, 2024, RAPA filed a request to defer ruling on its motion to dismiss. In this Request, RAPA specifically requested that the time for AHP to file its response to RAPA's motion to dismiss be extended to November 15, 2024, and that we not decide the motion to dismiss until after the hearing

in this docket concludes. RAPA represented that AHP supports this request. RAPA represented that Chugach and MEA were aware of this request but had not yet responded to it. Also on October 24, 2024, RAPA filed a motion for expedited consideration of its request to defer ruling. In this motion, RAPA requested that we require any responses to its request to defer ruling be filed by noon on October 29, 2024, and that we issue an order on the request to defer ruling by no later than the close of business on October 29, 2024. RAPA represented the counsel for AHP does not oppose the motion for expedited consideration. RAPA represented that counsel for Chugach and MEA does oppose the motion for expedited consideration. RAPA supported the motion for expedited consideration with the Affidavit of Jeff Waller, dated October 24, 2024.

Discussion

In support of its request to defer ruling, RAPA asserts that this proposed deferral will provide us with time to consider the motion. RAPA also asserts that that this deferral will allow the parties and us an opportunity "to examine witnesses and any relevant evidence that bears upon the issues raised in RAPA's motion to dismiss." The parties have submitted written direct testimony in this docket by Mark A. Corsentino on behalf of AHP, responsive testimony by Eugene A. Ori on behalf of Chugach, and responsive testimony by Tony R. Zellers on behalf of MEA. We have reviewed this testimony and have not found any of the testimony or related exhibits to be relevant to the issues raised in RAPA's motion to dismiss. We recognize that AHP could introduce new witnesses on reply, but reply testimony is generally limited to the scope of responsive testimony and given the lack of responsive testimony relevant to the issues raised in the motion to dismiss it appears unlikely that reply testimony will be relevant to those issues. Thus, we see no benefit in deferring our decision on the motion to dismiss until after the hearing scheduled to begin on November 18, 2024.

We try to resolve dispositive motions as early in docketed proceedings as possible to minimize the costs incurred by the parties and us to resolve a docket. In this docket, briefing on the minimum term of EOC voting rights surrender required by Order U-18-102(44) will be fully briefed on October 29, 2024, regardless of what action we take on RAPA's request to defer ruling. AHP has not requested or justified an extension of time to file its response to RAPA's motion to dismiss. If briefing on the motion to dismiss is completed by November 4, 2024, as required under 3 AAC 48.091, we believe that we have time to reach a decision on the motion to dismiss prior to the scheduled start of the public hearing for this docket. That schedule presents the possibility that we can prevent the parties and us from incurring the costs and commitment of resources required to hold that hearing. For these reasons, we deny RAPA's request to defer ruling filed October 24, 2024.

With this decision on RAPA's request to defer ruling, RAPA's motion for expedited consideration of the request to defer ruling is moot. For this reason, we also deny the motion for expedited consideration.

ORDER

1. The *Office of the Attorney General's Request to Defer Ruling on Motion to Dismiss*, filed October 24, 2024, is denied.

2. The *Office of the Attorney General's Motion for Expedited Consideration of Request to Defer Ruling*, filed October 24, 2024, is denied.

DATED AND EFFECTIVE at Anchorage, Alaska, this 25th day of October, 2024.

IN THE SUPERIOR COURT FOR THE STATE OF ALASKA
THIRD JUDICIAL DISTRICT AT ANCHORAGE

ANCHORAGE MUNICIPAL ASSEMBLY, Appellant, v. REGULATORY COMMISSION OF ALASKA; MUNICIPALITY OF ANCHORAGE, d/b/a MUNICIPAL LIGHT AND POWER; ENSTAR NATURAL GAS CO.: PROVIDENCE HEALTHY & SERVICES; GOLDEN VALLEY ELECTRIC ASSOCIATION, INC.: STATE OF ALASKA; ALASKA ENERGY AUTHORITY; HOMER ELECTRIC ASSOCIATION, INC.; ALASKA ELECTRIC AND ENERGY COOP., INC.; MATANUSKA ELECTRIC ASSOCIATION, INC.; CHUGACH ELECTRIC ASSOCIATION, INC.; JL PROPERTIES; ALASKA NATIVE HEALTH CONSORTIUM, Appellees.	)	Case No. 3AN-24-06001 CI

**MOTION TO DISMISS OR,
IN THE ALTERNATIVE, TO STAY APPEAL**

Under Appellate Rule 203,[1] the Regulatory Commission of Alaska (RCA) moves to dismiss the Anchorage Municipal Assembly's appeal. The Assembly's appeal should be dismissed for three reasons. First, the appeal attempts to challenge RCA orders in dockets that were closed four years ago—the Assembly failed to exhaust administrative remedies in those dockets in 2020 and cannot now timely appeal those orders. Second, the core issues raised by the Assembly, both in its petition to the RCA and on appeal,

[1] Alaska R. App. P. 203 ("The appellate court may at any time entertain a motion to dismiss the appeal . . . .").

have been mooted or resolved by Alaska Governor Mike Dunleavy's approval of the Final Fish and Wildlife Program on October 2, 2024. Third, because the Assembly lacked a direct interest in the underlying RCA proceedings, was not factually aggrieved by them, and failed to participate when the dockets were open, the Assembly lacks standing to challenge and appeal the RCA's decisions in the underlying dockets.[2]

Alternatively, the RCA requests that this appeal be stayed pending the resolution of a related RCA matter, RCA Docket U-24-024, *In the Matter of the Petition filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee.* In that matter, the Municipality of Anchorage is seeking acknowledgement by the RCA that it has acquired the expertise required for it to participate as a voting member on the Eklutna Operating Committee (EOC). That matter directly relates to the issues raised by the Assembly in this appeal. Here, the Assembly asserts that the "RCA erred when it denied the Assembly's request to modify RCA Order 39 to allow the Municipality to vote as a member of the [EOC]," and otherwise seeks to deem unlawful the RCA's May 2020 Order 39.[3] The RCA's decision in the Municipality's pending petition may fundamentally change or resolve some or all of the issues on appeal. If this appeal is not wholly dismissed, the Court should stay the appellate proceedings until RCA docket U-24-024 is resolved and all administrative and appellate remedies from that docket are exhausted.

I. Relevant Background[4]

In 1997, the Eklutna Hydroelectric Project was sold by the federal government to three utilities: Matanuska Electric Company, Inc. (MEA), Chugach Electric Company, Inc (Chugach), and the Municipality of Anchorage d/b/a Municipal Light and Power (ML&P). The utilities agreed to operate the project through the Eklutna Operating Committee (EOC). As part of the sale, the utilities were required to submit a proposed Fish and Wildlife Plan to the governor for final approval by October 2, 2024.

Beginning in 2019, ML&P sought approval from the RCA to sell to Chugach most of the ML&P's assets. As part of the transaction, the Municipality would retain a 53.33% ownership interest in the Eklutna Hydroelectric Project. RCA opened Dockets U-19-020, U-19-021, and U-18-102 to consider approval of the sales agreement. On May 28, 2020, the RCA issued a conditional approval of the sale (Order 39). One of the conditions of the sale was that the Municipality would surrender its voting rights on the EOC for a specified term, The Municipality's voting rights would not be restored until it could demonstrate to the satisfaction of the RCA that it had acquired the requisite expertise to participate as a voting member of the EOC. On October 30, 2020, the MOA filed a notice of surrender of its voting rights on the EOC in conformance with the RCA's condition. On the same date, Chugach filed notice that the sales transaction had closed. On December 23, 2020, the RCA closed it dockets on the matter.

[4] Factual and procedural background for this appeal can be found in RCA's April 19, 2024 Order U-10-102(52)/U-19-020(47)/U-19-021(47). Attachment A to Notice of Appeal, Apr. 24, 2024. Relevant portions will be summarized here to assist the Court in reviewing this motion.

DEPARTMENT OF LAW
OFFICE OF THE ATTORNEY GENERAL
Anchorage Branch
1031 W. 4th Avenue, Suite 200
Anchorage, AK 99501
Phone: (907) 269-5100 Fax: (907) 276-3697

More than three years later, on April 15, 2024, the Assembly filed motions requesting that the RCA allow it to intervene, reopen the dockets related to the sale, and modify its May 2020 Order 39 conditionally approving the sale. In its motions, the Assembly asserted that it disagreed with a proposed Fish and Wildlife plan prepared by the EOC. The Assembly sought to regain its vote on the EOC in order to delay or prevent the transmittal of the EOC's proposed Fish and Wildlife Plan to the governor. The Assembly asserted that it should be allowed to approve the final Fish and Wildlife Program before the plan was transmitted to the governor.

On April 19, 2024, the RCA denied the Assembly's motion to reopen the dockets and modify Order 39. The RCA found that the motion was a request for reconsideration of Order 39. Under RCA regulation 3 AAC 48.105, a petition for reconsideration is due within fifteen days of the date of the order, making the Assembly's motion over three years late. The RCA denied the motion as untimely. The RCA also denied the motion to intervene as the dockets had been closed for over three years and therefore the request was moot.

The Assembly filed the current appeal on April 24, 2024.

On October 2, 2024, the governor approved the final Fish and Wildlife Program. The program incorporated requests from the Municipality, including a request to evaluate a pumped storage hydro alternative.

II. Arguments for Dismissal of Appeal

A. The appeal should be dismissed because the Assembly failed to exhaust administrative remedies and cannot now appeal a 2020 order.

DEPARTMENT OF LAW
OFFICE OF THE ATTORNEY GENERAL
Anchorage Branch
1031 W. 4th Avenue, Suite 200
Anchorage, AK 99501
Phone: (907) 269-5100 Fax: (907) 276-3697

The Assembly's appeal relates back to the RCA's order from May 28, 2020 in dockets U-19-020, U-19-021, and U-18-102 (Order 39). In its Statement of Points on Appeal, the Assembly asserts that the RCA lacked jurisdiction to issue Order 39, that Order 39 violates the law, that the RCA should have modified Order 39, and that the RCA should have allowed the Assembly to intervene to pursue its challenge to Order 39.[5] The time for the Assembly to challenge Order 39 has long passed.

To the extent the Assembly now attempts to appeal the RCA's substantive rulings in Order 39, that appeal is clearly untimely. The Assembly filed its motion with the RCA to reopen dockets and to modify Order 39 on April 15, 2024—more than three years after Order 39 was issued (May 28, 2020) and the dockets were closed (December 23, 2020). The RCA does not have a procedure to reopen dockets. In fact, the RCA is required to abide by strict statutory deadlines for issuing a final order and closing a docket.[6] The Assembly's attempt to reopen a docket from 2020 runs contrary to these statutory deadlines. Due to its inability to reopen a docket that had been closed for many years, the RCA construed the Assembly's motion as a request for reconsideration of the RCA's 2020 decision approving the sale of ML&P assets to Chugach. Under RCA regulations at 3 AAC 48.105, a petition for reconsideration must filed within fifteen days of the date the order is issued. The Assembly's petition was filed several *years* beyond that deadline. Now, the Assembly asserts on appeal that Order should be modified "to allow the Municipality to vote on the EOC," that "Order 39 violates state

---

5 Statement of Points on Appeal 1-3, Apr. 24, 2024.

6 AS 42.05.175.

and federal law," and that the "RCA lacked jurisdiction to enter Order 39."[7] Under Alaska Rule of Appellate Procedure 602(a)(2), an appeal may be filed from an administrative agency within thirty days from the date the decision is mailed or distributed. The Assembly's attempts to challenge Order 39 either through an RCA motion or the present appeal are untimely and should therefore be dismissed.

To the extent the Assembly attempts to appeal the RCA's procedural rulings in refusing reopen the dockets or allow intervention so that Order 39 can be modified, the Assembly failed to exhaust administrative remedies that would have been available to it had it attempted to participate in 2020. The exhaustion doctrine forecloses judicial relief "until the available administrative remedies have been exhausted."[8] In evaluating exhaustion, courts consider whether it is required, whether the complainant exhausted remedies, and whether a failure to do so is excused.[9]

The Assembly needed to exhaust administrative remedies by timely attempting to participate in the dockets in 2020, but it failed to do so. The Alaska Supreme Court has held that exhaustion of administrative remedies at the RCA is required before a party can challenge an RCA ruling because exhaustion allows the RCA to "make a factual record, apply its expertise, and to correct its own errors so as to moot judicial

7 Statement of Points on Appeal ¶¶ 6, 10-11, Apr. 24, 2024.

8 *City of Valdez v. Regulatory Comm'n of Alaska*, 548 P.3d 1067, 1081 (Alaska 2024) (quoting *Winterrowd v. State, Dep't of Admin., Div. of Motor Vehicles*, 288 P.3d 446, 450 (Alaska 2012)).

9 *Id.*

controversies."[10] These factors weigh heavily in favor of a similar exhaustion requirement here. As the RCA explained, the Assembly could have attempted to modify Order 39 before the dockets and underlying transaction closed by moving to intervene and filing a petition for reconsideration.[11] If the Assembly had pursued that remedy at that time, the RCA "could have either found an alternative solution to the lack of managerial and technical fitness of [the Municipality] or . . . could have rejected the [ML&P–Chugach purchase agreement] entirely." That is, if the Assembly had pursued administrative remedies when they were available the RCA could have made a record, applied its expertise, and mooted this controversy.

The Assembly's failure to exhaust administrative remedies should not be excused. The time for the Assembly to attempt to intervene and participate in this matter happened years ago. In *City of Valdez v. Regulatory Commission of Alaska*, the RCA approved the transfer of the Trans-Alaska Pipeline certificate of public convenience and necessity from BP to Harvest, and after the underlying sale had already closed, the City of Valdez appealed the RCA's final order.[12] The Alaska Supreme Court held Valdez failed to exhaust administrative remedies to challenge the order.[13] Valdez never petitioned to intervene, never filed a protest, and failed to otherwise "engage meaningfully in the administrative process"—giving the RCA no "opportunity to

address Valdez's objections by developing a factual record, applying its expertise, or correcting any errors it may have made."[14] The Assembly's failure to act here before the closure of the ML&P–Chugach transaction is directly parallel. The Assembly failed to take any action for over three years and not until after the EOC released its draft plan for the Fish and Wildlife Program and neared transmittal to the governor. The Assembly may argue that it waited to file its motions with the RCA until the Assembly had passed ordinances purporting to prohibit the EOC from submitting the Fish and Wildlife Program to the governor without assembly approval.[15] But new ordinances do no excuse the Assembly's failure to participate before the RCA, move to intervene, seek to participate when the dockets were open—or seek timely reconsideration—to set aside Order 39 or modify it to preserve the Municipality's vote. The Assembly should not be permitted to now reopen issues that have been resolved for years. As noted in the RCA's order denying the Assembly's motions, "The relief the Anchorage Assembly seeks in these dockets will affect the substantive rights of others"—the transaction under which Chugach acquired the majority of ML&P assets has been closed for years and "Chugach has expended considerable resources incorporating those assets into Chugach's operations, that transaction can no longer be undone."[16]

Phone: (907) 269-5100 Fax: (907) 276-3697

14 *Id.* at 1084-85.

15 *See* RCA Order U-10-102(52)/U-19-020(47)/U-19-021(47) at 4 (Apr. 19, 2024), Attachment A to Notice of Appeal, Apr. 24, 2024.

16 *See* RCA Order U-10-102(52)/U-19-020(47)/U-19-021(47) at 3 (Apr. 19, 2024), Attachment A to Notice of Appeal, Apr. 24, 2024.

For these reasons, the Assembly's appeal should be dismissed as untimely and for failing to exhaust administrative remedies.

B. The appeal should be dismissed as moot.

The Assembly has been clear that the original underlying motions before the RCA, and this appeal of those motions, are directed towards restoring the Municipality's voting rights on the EOC—specifically as they relate to the development of the Fish and Wildlife program—and giving the Assembly the opportunity to approve or reject the proposed Fish and Wildlife Program before it was transmitted to the governor. But Fish and Wildlife Program was sent to the governor and, on October 2, 2024, the governor approved it.[17] The Assembly's attempt to reopen the RCA docket, modify Order 39, and appeal to the superior court in order to prevent the transmittal of the Fish and Wildlife Program to the governor is now moot.

The governor's approval of the final Fish and Wildlife Program renders the Assembly's appeal moot because it ends the controversy that led to the actions before the RCA and this appeal. "A claim is moot if it is no longer a present, live controversy, and the party bringing the action would not be entitled to relief, even if it prevails."[18] The Assembly has been clear that the reason for its actions before the RCA have been

DEPARTMENT OF LAW

1031 W. 4th Avenue, Suite 200
Anchorage, AK 99501
Phone: (907) 269-5100 Fax: (907) 276-3697

[17] Because it is a matter of "public record," this Court can take judicial notice of the Governor's decision on the Fish and Wildlife Program. *See Pedersen v. Blythe*, 292 P.3d 182, 185 (Alaska 2012) (explaining that "matters of public record (including other court proceedings)" fall within the scope of "strict judicial notice"); *see also* Exhibit A, Governor Mike Dunleavy, In the matter of the Eklutna River Fish & Wildlife Program (Oct. 2, 2024).

[18] *City of Valdez*, 548 P.3d at 1080 (quoting *Fairbanks Fire Fighters Ass'n, Loc. 1324 v. City of Fairbanks*, 48 P.3d 1165, 1167 (Alaska 2002)).

directed at reinstating the Municipality's voting rights so that it could vote on the Fish and Wildlife Program before it goes to the governor. But the governor has received the plan, reviewed it, and with modifications, approved it. The final decision on the Fish and Wildlife Program indicates that the governor considered comments from interests outside of the EOC, including a joint resolution from the Municipality of Anchorage and the Native Village of Eklutna dated September 5, 2024. The governor accepted the request from this joint resolution to evaluate a pumped storage hydro alternative.

The result that the Assembly was seeking in these matters is now foreclosed. The RCA can neither go back in time, give the Municipality a vote on the EOC and the Assembly a veto on the Fish and Wildlife Program, and prevent the governor's decision, nor can the RCA stop the EOC's implementation of the governor-approved plan.[19] The Assembly might cite the mootness holding in *City of Valdez*, where the Alaska Supreme Court held that Valdez's challenge to RCA rulings related to the then-closed Trans–Alaska Pipeline System transfer were not moot because they included disputes over access to confidential documents that may be "relevant to Valdez's interests in future proceedings before the RCA."[20] But there are no present controversies here that could give the Assembly similar prospective relief. If the Assembly wishes to challenge or modify Order 39 to *preserve* the Municipality's voting rights on the EOC, it had to do

DEPARTMENT OF LAW
OFFICE OF THE ATTORNEY GENERAL

[19] The governor's letter relating to the Final Fish and Wildlife Program notes that it "does not provide any party the authority to unilaterally suspend or delay implementation of the Final Program and therefore necessary the necessary work to design, permit, and construct" the infrastructure contemplated by the plan and to "evaluate" a gate system "is required to begin immediately." Exhibit A at 3.

[20] *Id.* at 1080.

that in 2020, but it failed to act—those issues are not timely and were not exhausted before the RCA when they were. If the Assembly wishes to *restore* the Municipality's voting rights by demonstrating its managerial and technical fitness, it must do that before the RCA in the separate pending matter, not by reopening the dockets here. And if the Assembly wishes to enforce ordinances that purport to *prohibit submission* of the Fish and Wildlife Program to the governor without Assembly approval, that issue is now plainly moot.

The Assembly failed to take any action for over three years and not until after the EOC released its draft plan for the Fish and Wildlife Program in April 2024. The governor's review of the plan has been moving forward since then. The issue is now resolved and this appeal should be dismissed as moot.

C. The Assembly lacks standing to challenge Order 39.

To have standing to appeal an RCA decision, a party "must (1) be directly interested in the proceeding, (2) be factually aggrieved by the decision, and (3) have participated in the proceeding."[21] The Assembly had no direct interest in the RCA's dockets below that were not already represented by the Municipality, it was not factually aggrieved by decisions that limited the Municipality's authority (not the Assembly's), and it wholly failed to participate in the dockets when they were open. The Assembly lacks standing to challenge or otherwise press for modifications of the RCA's Order 39.

[21] *City of Valdez*, 548 P.3d at 1076.

DEPARTMENT OF LAW
OFFICE OF THE ATTORNEY GENERAL
Anchorage Branch
1031 W. 4th Avenue, Suite 200
Anchorage, AK 99501
Phone: (907) 269-5100 Fax: (907) 276-3697

The Assembly had no direct interest in the RCA proceeds leading to Order 39. A "direct interest" requires a showing of a "'material' interest that is 'discrete' to some party or class of parties."[22] Regardless of how material the Assembly's interest may be in the RCA's Order 39, it is by no means *discrete*. The Assembly seeks to modify Order 39 "to allow the Municipality to vote."[23] That is the Municipality's interest, not the Assembly's. And that interest was represented by the Municipality in the underlying transaction and RCA dockets—where the Municipality "filed notice of surrender of its voting rights on the EOC" and then closed its transaction with Chugach.[24] The Assembly does not have the discrete interest needed to show standing; nor can it pursue changes to Order 39 on the Municipality's behalf.[25] The sole interest that the Assembly has articulated that is arguably its own is its asserted goal of fulfilling "its role as the Municipality's policy-making body responsible for reviewing and approving the proposed Fish and Wildlife Program."[26] But as explained above, any appeal on that basis is mooted by the governor's recent decision.

DEPARTMENT OF LAW
OFFICE OF THE ATTORNEY GENERAL
Anchorage Branch
1031 W. 4th Avenue, Suite 200
Anchorage, AK 99501
Phone: (907) 269-5100 Fax: (907) 276-3697

---

22 *Id.* at 1077.

23 Statement of Points on Appeal ¶ 4; *see also id.* at ¶¶ 6, 10-11.

24 *See* RCA Order U-10-102(52)/U-19-020(47)/U-19-021(47) at 2 (Apr. 19, 2024), Attachment A to Notice of Appeal, Apr. 24, 2024.

25 *Cf. Keller v. French*, 205 P.3d 299, 303 (Alaska 2009) (holding legislators lacked citizen-taxpayer standing to sue over investigation of governor's dismissal of commissioner when parties that were allegedly mistreated and the governor could have brought claims and did not); *Tuluksak Native Community v. Dep't of Health & Soc. Servs.*, 530 P.3d 359, 380 (Alaska 2023) (holding tribe lacked standing to raise violations of child's due process rights).

26 Statement of Points on Appeal ¶ 5.

For the same reason the Assembly has no direct interest, it is likewise not factually aggrieved by the RCA's decision. Factual aggrievement requires a "personal stake in the proceedings and an interest that was adversely affected."[27] Again, it is the Municipality's voting rights—not the Assembly's—that were removed in Order 39. The Assembly asserts that "Municipality ratepayers and taxpayers will be obligated to fund a plan and project into which their elected government has no input or ability to influence," and blames RCA Order 39 disallowing the *Municipality's* vote on the EOC.[28] The Municipality's voting rights are not the Assembly's personal stake and interest. To the extent that the Assembly argues that it had a personal stake and was aggrieved by the RCA's procedural rulings on its motions to reopen the docket and intervene, that is inapposite. The Assembly cannot acquire standing simply to challenge bare procedural rulings without a sufficient stake in the underlying merits.[29]

Finally, the Assembly did not participate in the proceedings leading to Order 39. The Assembly waited more than three years after Order 39 before it sought to intervene, reopen the dockets, and modify the proceedings. That untimely participation is not enough to provide the Assembly with standing.

27 *City of Valdez*, 548 P.3d at 1078.

28 Statement of Points on Appeal at ¶ 6.

29 *City of Valdez*, 548 P.3d at 1076 ("Standing 'is a rule of judicial self-restraint based on the principle that courts should not resolve abstract questions or issue advisory opinions.'" (quoting *Trs. for Alaska v. State, Dep't of Nat. Res.*, 736 P.2d 324, 327 (Alaska 1987))).

III. Argument for Stay of Appeal

There is currently a pending matter before the Regulatory Commission of Alaska, RCA docket number U-24-024, that relates to substantially similar issues, including whether the Municipality's voting rights on the EOC should be restored and issues related to the governor's recent decision related to the Fish and Wildlife program.

In that RCA matter, the Municipality is seeking acknowledgement by the RCA that it has acquired the expertise required for it to participate as a voting member of the Eklutna Operating Committee (EOC), which was a condition of the RCA's Order 39 for restoration of voting rights. As that matter directly relates to the issues pending in this appeal, and the RCA's final decision may fundamentally change or resolve some or all issues on appeal, the RCA asks that if this Court declines to dismiss the Assembly's appeal that it stay the appeal until such time as the RCA issues a final decision in U-24-024 and all administrative remedies and appellate avenues are exhausted.

IV. Conclusion

For the reasons stated above, the RCA asks this Court to dismiss the Assembly's appeal. If the Court denies the motion to dismiss, the RCA alternatively requests that the appeal be stayed pending the resolution of the related matter at RCA Docket U-24-024.

Dear Parties,

Thank you to the Owners for your submission on April 25, 2024, of the Proposed Final Fish and Wildlife Program (Proposed Final Program) for the Eklutna Hydropower Project (Project) and to the remaining parties for their comments and participation in developing the Proposed Final Program.

As you know, through an act of Congress, the Project was sold by the federal government to Chugach Electric Association (CEA), Matanuska Electric Association (MEA), and Anchorage

Municipal Light & Power (through the Municipality of Anchorage). As part of this transaction, the 1991 Fish and Wildlife Agreement (Agreement) laid out the process for the purchasers of the Project to fund studies to examine and quantify impacts to fish and wildlife from the Project, and to develop a proposed Final Program for the protection, mitigation, and enhancement of fish and wildlife effected by the Project and for the other Parties to offer their comments.

As Governor, my duties under the Agreement are to evaluate the Proposed Final Program, attempt to reconcile differences between the Parties to the Agreement, and establish a Final Program that "adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources."

The evaluation process requires me to give "equal consideration" to eight factors to "ensure that Eklutna [is] best adapted for power generation and other beneficial public uses." The factors are: purposes of efficient and economical power production; energy conservation; the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat); the protection of recreational opportunities; municipal water supplies; the preservation of other aspects of environmental quality; other beneficial public uses; and requirements of State law.

The Final Program established today includes my evaluation of these eight criteria and my amendments to the Proposed Final Program that attempt to reconcile differences among the Parties and the Native Village of Eklutna.

The Proposed Final Program restored year-round water flows to the Eklutna River by connecting Eklutna Lake to the existing Anchorage Water and Wastewater Utility (AWWU) infrastructure; required the Purchasers to provide funding for ongoing monitoring studies, physical habitat enhancement, and lakeside trail repairs; the creation of a Monitoring and Adaptive Management Committee (Committee); and two limited reopeners of the Program for the potential construction of a Fixed Wheel Gate to replace the existing outlet and spillway and for the potential construction of fish passage into and out of Eklutna Lake.

In accordance with my responsibilities to attempt to reconcile differences, I have adopted the Proposed Final Program with the establishment of three amendments to the Proposed Final Program:

1. I added a Governor-appointed seat to the Monitoring and Adaptative Management Committee. This allows future Governors and myself to continue our responsibility under the Agreement as the work of the Committee is ongoing in the final Program.

2. I accepted the request by federal signatories, U.S. Fish and Wildlife Service, and National Marine Fisheries Service, to modify the Proposed Final Program. The Proposed Final Program allocated up to $10 million to study and potentially construct the Fixed Wheel Gate at the Eklutna Dam. If the Fixed Wheel Gate is determined to not be structurally or economically feasible, as requested by the federal parties, the remaining funds not expended of up to $10 million will be made available to the Monitoring and Adaptive

Management Committee for additional studies or measures that protect, mitigate damage to, or enhance fish and wildlife habitat.

3. I am accepting the request by the Municipality of Anchorage and Native Village of Eklutna in their joint resolution of September 5, 2024, to evaluate the Pumped Storage Hydro alternative. However, the Agreement does not provide any party the authority to unilaterally suspend or delay implementation of the Final Program and therefore the necessary work to design, permit, and construct the connection to AWWU's infrastructure and to evaluate the Fixed Wheel Gate is required to begin immediately.

The Final Fish and Wildlife Program established today under the Agreement balances the eight factors I am required to consider, and the Program is designed to be an iterative one that will be able to adapt to changing conditions and technologies well before the process is required to repeat itself.

I want to thank the Parties, the Native Village of Eklutna, and the members of the public who helped shape this Final Program with their time, resources, input, and participation over the past five years. This is not the end of the process, and I am committed to seeing this Final Program successfully enacted. I encourage everyone to join me in working together to implement this Program without delay.

Sincerely,

Mike Dunleavy
Governor

BEFORE GOVERNOR MIKE DUNLEAVY

IN THE MATTER OF THE EKLUTNA	**:**	**DECISION**
RIVER FISH & WILDLIFE PROGRAM	**:**	**October 2, 2024**

This matter comes before the Governor pursuant to the 1991 Agreement ("Agreement") among the Municipality of Anchorage ("MOA"), Chugach Electric Association, Inc. ("Chugach"), Matanuska Electric Association, Inc. ("Matanuska") (MOA, Chugach and Matanuska are collectively referred to as "Eklutna Purchasers" or "Owners"; when discussing issues where the Owners disagree, Chugach and Matanuska will be referred to as the "Operators" and MOA will be listed separately), the United States Fish & Wildlife Service ("FWS"), The National Marine Fisheries Service ("NMFS"), the Alaska Energy Authority ("AEA") and the State of Alaska ("State") concerning the protection, mitigation of damages to, and enhancement of fish and wildlife affected by the Eklutna Hydroelectric Project ("Project") near the Native Village of Eklutna ("NVE").[1] Per the Agreement the Governor is required to establish a "final Fish and Wildlife Program that adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources affected by the Project".[2]

I. PROJECT HISTORY

---

[1] The Agreement also involved the Snettisham Hydroelectric Project, but that project is not part of this decision.

[2] Agreement, Section 5 at P. 4.

The U. S. Bureau of Reclamation built the Project in the 1950s and it was rehabilitated over time. It currently consists of a dam which is an earth and rockfill structure 815 feetlong and 41 feet high with a rectangular spillway that runs through the dam.[3] The intake structure for the Project is located 36 feet below the natural Eklutna Lake level. From there, water is diverted north into a 4.6-mile-long tunnel through Goat Mountain and then into a 1,370-foot-long penstock before reaching the powerhouse located on Old Glenn Highway. The tailrace flows under the highway and then discharges into the Knik River. The powerhouse contains two generating units.[4] Eklutna Lake, approximately seven miles long and one mile wide, is located within Chugach State Park and provides almost 90 percent of the domestic water supply for the Municipality of Anchorage. As of 2018 the Project produced 177,438 megawatt hours of clean energy, enough to power more than 24,600 residential homes for an entire year.[5]

The federal government owned and operated the project until October 1997 when it sold it to the Eklutna Purchasers and is currently owned by Chugach (30%), Matanuska (16.67%) and MOA (53.33%), however, it has been operated exclusively by Chugach and Matanuska since October 30, 2020.[6] The purchase by the Eklutna Purchasers also included a requirement that the Eklutna Purchasers enter into the Agreement with NMFS,

---

3 https://eklutnahydro.com/background/.

4 Id.

5 Id.

6 MOA was required to surrender its right to operate the Project. RCA Order U-18-102(44)/U-19-020(39)/U-19-021(39). Surrender of Eklutna Operation Committee (EOC) Voting Rights dated as of October 27, 2020, and filed with the RCA in docket number U-18-102(44).

FWS, AEA, and the State (the Eklutna Purchasers, NMFS, FWS, AEA and State are collectively referred to as the "Parties[7]").

II. THE AGREEMENT

To obtain Congressional approval of the Project sale to the Eklutna Purchasers and as a substitute for federal licensing under the Federal Power Act[8] and its accompanying regulations[9], the Parties were required to enter into the Agreement to develop a fish and wildlife program that provides for the protection, mitigation of damages to, and enhancement of fish and wildlife affected by the Project.[10] The Agreement outlined a 35 year timeline to develop the fish and wildlife program. The timeline ran from the date of the sale, i.e., October 2, 1997, and initially culminates with the complete implementation of the fish and wildlife program by October 2, 2032. This process is designed to reoccur every 35 years.

A. Agreement Requirements

The Agreement set forth a comprehensive process to arrive at a final fish and wildlife plan. It required the Parties to perform the following:

---

7 For purposes of this decision, Parties will also include NVE, unless stated otherwise, even though they are not an actual party to the Agreement.

8 16 U.S. C. §791a et seq.

9 18 C.F.R. 4.1 et seq.

10 The Agreement was a substitute for the requirements of the Federal Power Act and its regulations and there are no requirements in the Agreement imposing those laws on the Parties. Rather, the Agreement specifically spells out all requirements the Parties must follow to develop a fish and wildlife program.

a. Purchasers to fund and perform studies in consultation with the other Parties and other State of Alaska agencies to "examine, and quantify, if possible, the impacts to fish and wildlife from the Project and to develop proposals for the protection, mitigation, and enhancement of fish and wildlife affected by the Project."[11]

b. Purchasers develop a draft program, the remaining Parties and other interested persons comment on the draft program, and the Purchasers reply to the comments, with all comments and the replies to be made part of the public record.[12]

c. Preparation of draft summary of the study results and a draft Fish and Wildlife Program by Purchasers.[13] Purchasers to hold public meetings and receive public comments on the program.[14]

d. Purchasers develop a Proposed Final Fish and Wildlife Program ("Proposed Final Program"), an explanation of its reasons for the final program, and provide them and all public comments to the other Parties and the Governor.[15]

---

11 Agreement, Section 2, P. 2.
12 Id. Section 3, P. 2.
13 Id. Section 4, P. 3.
14 Id. Section 5, P. 3.
15 Id. Section 5, P. 4.

e. The remaining Parties prepare written comments to the Proposed Final Program and Purchasers prepare a reply. The comments and reply are provided to the Governor.[16]

f. The Governor establishes a Final Fish and Wildlife Program.[17]

g. The Agreement requires the Owners to implement the final Program within 30 years of the transaction date and for the Governor to approve the Final Fish and Wildlife Program three years prior to commencement of the implementation of the Program.[18]

III. PROPOSED FINAL PROGRAM AND PARTIES' COMMENTS[19]

The Proposed Final Program was provided to the Parties and the Governor on April 25, 2024. The Proposed Final Program can be summarized as follows[20]:

1. Proposed Final Program

a. Construction of a new valve and release structure ("Eklutna River Release Facility") located adjacent to the existing Anchorage Water and Wastewater Utility ("AWWU") portal valve to restore year-round water

---

16 Id. Section 5, P. 4.

17 Id.

18 Id. Section 7, P. 4-5. The transaction date is October 2, 1997, which is the date of the sale of the Eklutna Project to the Owners. Program implementation must therefore begin by October 2, 2027, and the Governor's approved final Plan must be issued by October 2, 2024, i.e., three years prior to the commencement of Plan implementation.

19 AEA did not provide comments to the Final Proposed Fish and Wildlife Program. NVE did provide comments even though it was not a party to the Agreement. I will consider those comments as part of this decision.

20 The Final Proposed Fish and Wildlife Program is attached hereto as Appendix "A".

flow to the Eklutna River ("River") one mile downstream from the Eklutna Dam;[21]

1. The Eklutna River Release Facility is projected to provide year-round water flow to the River one mile below the dam at rates of 27 cubic feet per second to 40 cubic feet per second;[22]
2. The Eklutna River Release Facility is designed to increase available spawning habitat for chinook, coho, pink and chum salmon;

b. Automation of the existing outlet gate at the base of the spillway at the Eklutna Dam for remote operation;[23]

c. Development of a channel maintenance flow regime to support fish habitat over the long term;[24]

d. Construction of eight new bridges for Anchorage Water and Wastewater Utility (AWWU) at each existing ford crossing to be designed and built to withstand the projected flows;[25]

e. One-time payment of $234,000 for lakeside trail repairs;[26]

f. Monitoring and Adaptive Management Plan;[27]

---

21 Proposed Final Fish and Wildlife Program, Section 2.1.1 at P. 4-5.
22 Id. at Section 2.1.2 at P. 6-7. And
23 Id. Section 2.2.1 at P. 7.
24 Id. Section 2.2.2 at Pp. 8-10.
25 Id. Section 2.5 at P. 10.
26 Id. Section 2.4.1 at P. 11.
27 Id. Section 3.0 – 3.4 at P. 12 - 15. This plan includes the creation of a Monitoring and Adaptive Management Committee consisting of five voting members, one each from the following entities: Alaska Department of Fish and Game, Alaska Department of Natural Resources, NMFS, FWS and NVE. Id. Section 3.1 at P. 12.

g. Two limited reopeners, i.e., the study and potential construction of a fixed wheel gate to replace the existing overflow spillway and provisions to review fish passage alternatives to allow adult salmon to pass into the lake from the River and juvenile salmon to pass from the lake downstream into the River ("Limited Reopeners")[28].

2. MOA Comments

MOA raised the following issues in response to the Proposed Final Program[29]:

a. Although the prior Mayor supported the Proposed Final Program, the new Administration believed that Anchorage Assembly approval was necessary, and the prior Mayor failed to obtain it[30];

b. Requests full water restoration to the Eklutna River for the full 12 miles from the Eklutna River Dam downstream and permit fish passage to and from Eklutna Lake;

c. Removal of the limited reopeners; and

---

[28] The Fixed Wheel Gate Limited Reopener does not trigger the process terms of the 1991 Agreement; the Fish Passage Limited Reopener does not alter any other components of the Final Program. Proposed Final Program, Section 4.0, Pgs. 17, 20.

[29] Letter from Mayor Susanne LaFrance to Governor Dunleavy, July 19, 2024, and accompanying AR No. 2024-218(S).

[30] Mayor LaFrance was sworn into office on July 1, 2024. David Bronson previously served as Mayor of Anchorage from July 1, 2021 – June 30, 2024. The Proposed Final Program was drafted during and completed while Mayor Bronson served as Mayor of Anchorage. Former Mayor Bronson submitted a letter of support to the Governor's office on April 26, 2024.

d. Requested a two-year extension for the purpose of studying pumped storage hydropower as a potential alternative.

3. FWS Comments

In general, FWS agreed with the Proposed Final Program, but it believed full restoration of water flow to the Eklutna River and fish passage to and from Eklutna Lake was an "important component of a long-term mitigation strategy and that the Proposed Final Program was a starting point to reconnecting the River with their phased approach." They also commented that "[n]either an engineering solution nor funding support have yet been identified that can accomplish all criteria, but we look forward to exploring opportunities to accomplish river connectivity and return an anadromous sockeye salmon run to the Eklutna River". [31]

FWS requested one modification to the Proposed Final Program. FWS requested that if the Fixed Wheel Gate is determined to not be feasible, that the $10 million in funding committed for that purpose be allocated for other protection, mitigation, and enhancement measures "to improve habitat by other means." [32]

4. NMFS Comments

NMFS raised similar issues raised by FWS but did not object to the Proposed Final Program. It concluded the "Program provides a framework to initiate the protection, mitigation and enhancement of fish and wildlife resources and will support the next

---

31 Sara Boario, Regional Director, FWS, letter to Governor Dunleavy, June 24, 2024.

32 Id.

iteration of a mitigation plan."[33] NMFS had one request for a modification of the Proposed Final Plan. NMFS requested that if the Fixed Wheel Gate was determined to not be feasible or did not proceed, that either the $10 million committed for that purpose be allocated for other protection, mitigation, and enhancement measures in coordination with the Monitoring and Adaptive Management Committee, or that the NVE pump station alternative be studied.[34]

5. NVE Comments

NVE maintains the primary purpose of the Agreement was to "restore and maintain sockeye salmon that depend on free passage into and out of Eklutna Lake, their preferred spawning habitat."[35] NVE further states the Program is deficient in the following ways:

a. Failure to restore water to all 12 miles of the Eklutna River from the dam downstream at sufficient volumes to support salmon habitat;
b. Failure to permit passage of sockeye salmon to and from Eklutna Lake;
c. Low water flows only minimally enhance chinook and coho salmon habitat;
d. Jeopardizes Anchorage drinking water; and
e. Burdens ratepayers and taxpayers with excessive costs.[36]

---

33 Jonathan M. Kurland, Regional Administrator, National Marine Fisheries Service, letter to Governor Dunleavy June 21, 2024. Mr. Kurland's letter acknowledges that the mitigation process is ongoing and repeats every 35 years beginning 25 years after implementation of the Final Fish and Wildlife Program has been implemented.

35 Aaron Leggett, Chair/President, NVE, letter to Governor Dunleavy, June 21, 2024.

36 Id.

6. Operators' Reply to Comments

The Operators replied to the comments from the other Parties and NVE and continued to maintain the Proposed Final Program was consistent with the Agreement. The Operators identified the federal Parties generally approved the Proposed Final Program with some reservations and they identified some key disagreement with MOA and NVE, including:

a. Flow regimes will enhance spawning habitat for chinook, coho, chum and pink salmon that currently exist in the Eklutna River;

b. Included a limited reopener in the Proposed Final Program for the Monitoring and Adaptive Management Committee to address fish passage to and from the Eklutna Lake in the future;

c. Operators worked with AWWU to negotiate agreements that protected the supply of drinking water to Anchorage;

d. NVE's proposed Pumped Station alternative posed higher costs and increased risks to the Project;

e. Removal of the Eklutna Dam in 10 years was not feasible due to foreseeable energy needs, inhibition of renewable energy goals, excessive replacement and removal costs, and damage to infrastructure and property downstream; and

f. The two-year delay requested by MOA for further study will thwart implementation of the Final Approved Program in the timeline required by the Agreement.[37]

7. Joint MOA/NVE Resolution for Pumped Storage Hydropower

Well after the comment period had expired and even after the deadline for Owners' reply to the comments, MOA and NVE provided the Governor and the other Parties a joint resolution recommending a new alternative, pumped storage hydropower, they believed "could result in full restoration of waterflow to the River, protection of Anchorage's drinking water source, and increased power generation, potentially with lower costs to municipal taxpayers and ratepayers".[38] MOA and NVE claim that pumped storage hydropower is used worldwide and it has the "potential to maintain and improve existing power production, meet municipal water supply needs and provide full river hydrological function and connection into and out of Eklutna Lake for fish passage". They requested the Governor require, as part of the Final Approved Program, Owners to use two years of the three year pre-implementation period in the Agreement to explore alternative infrastructure options, including pumped storage hydropower, so water could be restored to the entire Eklutna River and permit fish passage to and from the Eklutna Lake.[39] This joint resolution was virtually identical to MOA's prior request to delay the Governor's decision on a final

---

37 Operators Response to Comments, July 24, 2024.
38 Anchorage Assembly and NVE Joint Resolution, No. 2024-001.
39 Id.

program, with the exception of it now identified a proposed alternative to pursue, i.e., pumped storage hydropower. The Operators did not have an opportunity to respond to this joint resolution, but it was addressed in the meeting of the Parties with the Governor's office on September 9, 2024.

IV. DISCUSSION

The Proposed Final Program and the comment period that followed ends a long public process that started with the Agreement in 1991. The most recent process started in March 2019 and included:

- Years of studies, consultations, and alternative analysis;
- Several public meetings;
- Extensive public comments;
- A draft fish and wildlife program;
- Numerous parties' comments, meetings, and discussions; and
- A Proposed Final Program.[40]

Almost all the Parties have described the process of reaching the Proposed Final Program as a negotiation.[41] As with any negotiation, participants do not always come away with

---

[40] Operators Response to Comments on Proposed final Fish & Wildlife Program, July 2024 at P. 1.

[41] Transcript of Proceedings before the Governor's Office, September 9, 2024 at Pp. 26 (Operators); P. 73 (FWS); and P. 83 (NMFS). NVE although not a Party to the Agreement also commented that the process included negotiations. Id. at P. 85. MOA did not describe the process as a negotiation, but is now represented by a different administration than the one in place when the Proposed Final Program was drafted. However, see Former Mayor Bronson's letter of support to the Governor's office on April

what they want, and the end result is a resolution that neither side may be completely happy with but nevertheless agree to the terms to move the matter forward. This is certainly the case with the Proposed Final Program put forth by the Operators. The Parties have disagreements as to what should be included and how far the Final Program should go. The Parties, at the time they entered the Agreement, clearly understood that not everyone would get what it desired. The Agreement includes provisions on how to resolve those differences.

A. Governor as Final Decision Maker

1. Review Standard

The Agreement sets forth the role of the Governor in establishing a Final Program. The Governor is required to "review the Proposed Final Program, comments, testimony, summary and analysis materials, and any alternative recommendations for the protection, mitigation, and enhancement of fish and wildlife resources".[42] He is then tasked with "attempting to reconcile any differences between the Parties, giving due weight to the recommendations, expertise, and statutory responsibilities of FWS, NMFS, the State Resource Management Agencies and the Purchasers".[43] Finally, the Agreement provides:

> In order to ensure that Eklutna . . . [is] best adapted for power generation and other beneficial public uses, the Governor shall give equal consideration to the purposes of efficient and economical power production, energy conservation, the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat), the protection of recreation opportunities, municipal water

---

26, 2024, wherein he states MOA (Anchorage Hydropower) was involved in the process every step of the way.

42 Agreement at Section 5, P. 4.

43 Id.

supplies, the preservation of other aspects of environmental quality, other beneficial public uses, and requirements of State law ("Eight Factors").[44]

The Governor is then tasked with establishing the Final Program that adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources affected by the Project.

2. Operators' Proposed Final Program and Analysis of Eight Factors

We must first evaluate the Proposed Final Program in light of the Eight Factors outlined in the Agreement.

a. Efficient and Economic Power Production and Energy Conservation - Factors One and Two

The Operators assert the Project "produces nearly six percent of the Owners' combined generation portfolio, which also amounts to roughly 25% of Chugach's renewable energy and 44% for Matanuska."[45] This power is also alleged to be the lowest cost resource for power in the Alaska Railbelt.[46] The Project also assists with power reliability for the region.[47] None of the Parties challenge these assertions. Obviously, the downside to restoring water flow to the River from a power production standpoint is the loss of the water for that production. This comes at a cost, both financial and in terms of

---

44 Id.

45 Operators' Brief to Governor, September 4, 2024 at P. 4.

46 Id. citing SID at 2.2.2

47 Operators' Brief, September 4, 2024, P.p. 4-5. Operators also cite an example of how the Project assists other power production in the region. When a natural gas company experienced delivery problem, Operators were able to maximize their usage of the Project to maintain system reliability. Id. (Citing Tony Zellers, et al, letter to MOA, February 12, 2024).

power availability, which cannot be overlooked. Maximizing the Project's power output results in energy conservation by reducing natural gas usage, avoidance of diesel usage for power generation and thus lower emissions, and thus reduced costs if these other power production methods were employed.

The Operators chosen method for restoring instream water flow to the River was also based on using cost effective means to achieve the goal and consideration of the costs to the rate payer. They also rejected alternatives that shut the Project down for lengthy periods of time which would have impacted the Project's value for capacity reserves and grid reliability.[48] These facts are likewise not challenged by any Party.

b. Protection, Mitigation of Damage to, and Enhancement of Fish and Wildlife (including related spawning grounds and habitat) – Factor Three

The Proposed Final Program provides several steps for restoring water flow to the River and thus enhancing, protecting, and mitigating damage to fish and wildlife. The Program restores water flow to the River at rates between 27cfs and 40cfs throughout the year.[49] It also requires periodic channel maintenance flows up to 220cfs.[50] It rewaters 11 of the 12 miles of River at the rates noted above thus restoring water flow to the River that has not existed for years. The plan also creates a Monitoring and Adaptive Management Committee of experts to review, evaluate and modify flow regimes within a water budget to increase and enhance fish habitat. Likewise, the increased flow and enhancement of fish habitat will have a corresponding effect on other wildlife, including

---

48 Id.

49 Proposed Final Fish and Wildlife Program, Section 2.1.2.

50 Id. at Section 2.2.

bear and moose populations. Operators' modeling projects increases in chinook spawning and rearing habitat by 209 and 53 percent respectively with increases for coho by 65 and 67 percent, respectively.[51] Limited Reopeners are also included, i.e., potential installation of a fixed wheel gate and fish passage in the future.

The federal Parties, NVE, and MOA correctly point out that the Proposed Final Program fails to include rewatering of the entire River and allow for fish passage to and from Eklutna Lake. NVE and MOA believe that this failure alone makes the Proposed Final Program deficient. They also challenge whether the flows proposed will result in any substantial benefit to salmon habitat. The federal Parties, although proponents of full water flow and fish passage, realize that this process is long and with technological advancements in the future, the goals can be achieved. For that reason, they did not reject the Proposed Final Program. The Agreement provides the Governor must give due weight to the recommendations, expertise, and statutory responsibilities of the Parties, including FWS and NMFS.[52] Due weight is given to the FWS and NMFS' expertise and the fact that they have not objected to proceeding with the Proposed Final Program is a very strong indicator that it meets Factor Three.

---

51 SID at Section 4.10.1.

52 Agreement at Section 5, P. 4. The Agreement also permits the Governor to give due weight to the Purchasers, which includes MOA. However, MOA gave up their right to vote on operations at the Project and conceded they lacked the expertise to participate in the Project's operations, which included establishing the Proposed Final Program per the Agreement. See RCA Order U-18-102(44)/U-19-020(39)/U-19-021(39) and Surrender of Eklutna Operation Committee (EOC) Voting Rights dated as of October 27, 2020, and filed with the RCA in docket number U-18-102(44).

As stated earlier herein, fish passage is not a requirement in the Agreement, nor is restoration of complete waterflow to the River and fish passage. However, from a review of the record, it appears all parties recognize the importance of eventual complete waterflow restoration and fish passage. The difference between the Parties is focused on the methods and timeline to achieve those goals. The Proposed Final Program includes a Limited Reopener to achieve full water restoration and fish passage, understanding that as technology advances, those goals may be cost effective or technically feasible to achieve in the future.[53]

c. The Protection of Recreation Opportunities – Factor Four

Several positive impacts on recreational activities are included within the Proposed Final Program:

- Commitment of $234,000 as a match to Chugach State Park or its designee for lakeside trail repairs;
- Potential fishing in the River;
- Kayaking on the Eklutna Lake
- Hunting opportunities;
- Camping;
- Wildlife viewing; and
- Protection of the tailrace fishery.[54]

---

[53] See Section IV.A.3. herein for further discussion on restoration of complete waterflow and fish passage.

[54] Operators' Brief, September 4, 2024, P.p. 8-9.

The other Parties did not address this issue in their briefs.[55] There are clear benefits and protections from the Proposed Final Program as outlined above.

d. Municipal Water Supplies – Factor Five

The Parties once again disagree on the impacts the Proposed Final Program will have on municipal water supply. Operators acknowledge they will use AWWU infrastructure to restore water flow to the River. They assert it will not negatively affect the water supply and, in some ways, enhance the water supply infrastructure. MOA and NVE on the other hand believe it will negatively affect municipal water supply. However, neither MOA nor NVE have been able to adequately detail these alleged negative effects. Once again, the Agreement permits the Governor to rely on the expertise of the Operators and give due weight to their findings.[56]

Operators maintain the Project's infrastructure and Anchorage's municipal water supply have been "inextricably linked as a matter of physical infrastructure, operations, contract, water rights, and authorizing law since the 1980s when AWWU connected its intake pipe to the Project's intake structure".[57] Operators assert they worked closely with AWWU leadership and engineers to develop legal terms and agreements by which AWWU will be comfortable with the use of AWWU infrastructure to release water into

---

55 MOA makes a passing reference that the "proposed program fails to adequately advance recreational and other beneficial public uses such as fishing or taking in the beauty of a real mountain river with real water in it". MOA Brief at P. 11.

56 See also, Footnote 51.[57] Operators' Brief, September 4, 2024, P. 9.

57 Operators' Brief, September 4, 2024, P. 9.

the River.[58] AWWU and Operators have agreed on key terms for an agreement to govern the construction and use of the Eklutna River Release Facility and an agreement for the long term sharing of Eklutna Lake water rights. AWWU and Operators also negotiated three agreements to detail and govern the arrangement if the Governor approves the Proposed Final Program. Finally, Operators agreed to commit to not take any action in connection with the Fish and Wildlife Program that would compromise Anchorage's water supply, and they agreed to accept liability if they did so. Additionally, other benefits flowed to AWWU, including design approval rights, the construction of eight new bridges over Eklutna River for AWWU to maintain access to its infrastructure, new communications systems, flow meters and a new isolation valve structure for safer maintenance of their facilities, as well as other benefits. AWWU receives its water under a contract with the Eklutna Owners; the proposed term sheet according to Operators would reduce the current water supply costs by half under the new contract to replace contract expiring at end of 2025. For all these reasons, the Proposed Final Program does meet the requirements of the Agreement concerning municipal water supply.

The central issue here is not whether the water supply is protected and/or enhanced, as the evidence clearly demonstrates it is, but rather, whether the Operators and AWWU's agreements must be approved by MOA and to date that approval has not been achieved. In Resolution 2024-182(S-1), the Assembly stated "The Municipality of Anchorage does not intend to issue authorizations or provide funds or any other form of

---

58 Id.

support of the Proposed Final Program or any alternative that doesn't work toward the restoration of the full length of the River…"[59]. The Operators believe they have legal avenues to pursue the agreements even if MOA withholds approval, but litigation does not move the Final Program forward, creates delay in restoring water flows to the River, and impedes implementation of the Final Program.

e. The Preservation of Other Aspects of Environmental Quality – Factor Six

The redirection of lake water to the River instead of the Project's powerhouse reduces the generation of carbon free power that will most likely be replaced by natural gas generation. However, all alternatives considered reduce the power generation from the Project. The Proposed Final Program has the smallest impact in this regard of all the alternatives considered.

f. Other Beneficial Public Uses – Factor Seven

The Operators cite restoration of salmon habitat in the River as another beneficial public use and that flows will not impact infrastructure downriver, including bridges over the River. Enhanced salmon habitat is important to the public and to NVE and its people. Protecting existing infrastructure used by the public is also a beneficial public use.

g. Requirements of State Law – Factor Eight

Numerous areas of State law are impacted by this Proposed Final Program, including permitting, safety, fish and game, natural resources to list a few. The Operators

---

[59] MOA Resolution 2024-182(S-1), June 25, 2024

acknowledge the need to comply with all State laws that apply to the Proposed Final Program and their need to obtain an amendment to their certificate of authority from DNR to permit the conveyance and release of water into the River. Additionally, as operators of an electric utility, Operators also have an obligation to comply with all State laws related to utility operations.

h. MOA and NVE Proposed Alternatives

Neither MOA nor NVE have provided any analysis with respect to how their proposed alternatives consider the Eight Factors. Rather, they seem to rely on the belief that their proposed alternatives, such as dam removal or pumped storage hydro, will result in full water restoration to the River and allow for fish passage thus promoting the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat). While that is one factor that must be considered, the Governor is required to give equal consideration to all Eight Factors. They have not provided any evidence or analysis of how these proposed alternatives will impact the other seven factors. For example, there is no evidence of how these alternatives will promote the purposes of efficient and economical power production and energy conservation or impact municipal water supplies.

3. Differences Between the Parties

In addition to giving equal consideration to the Eight Factors, the Governor must also attempt to reconcile differences among the Parties. Although the Parties have generally agreed that the Proposed Final Program was arrived at through rigorous studies, public review, comment, and negotiation, two glaring differences were identified, 1)

water flow for the entire Eklutna River from the dam downstream; and 2) fish passage to and from Eklutna Lake.[60]

The Operators believe that current technology and cost are major prohibitions to obtaining full water flow throughout the River and fish passage to and from the lake at the present time. They posit that the agreement provides a mechanism to continually review these goals and as technology evolves and costs decline, the goals may be achievable, and have provided for this to be regularly evaluated by the Monitoring and Adaptive Management Committee.

FWS and NMFS believe that complete water flow and fish passage were intended as part of the Agreement, but they also indicate that the process must start somewhere and

---

[60] MOA and NVE allege the process to arrive at the Operators' Final Proposed Program was flawed. MOA asserts it was denied a viable way to participate due to the fact it lost its vote as an Owner of the Project via an RCA order. However, MOA's assertion in this regard is misguided for three reasons. First, MOA voluntarily gave up its right to vote on matters affecting the operation of the Project and the 1991 Agreement. Secondly, Mayor Bronson formally acknowledged the MOA's complete participation in "every step in the process that led to the Proposed Final Program" and that MOA supported the agreement with the Proposed Final Program. See Mayor Bronson letter to Governor Dunleavy, April 26, 2024. Thirdly, the Operators assert that they and MOA conducted themselves as equals throughout the process and made all decision on the Proposed Final Program through unanimous consent. The record contains no evidence to the contrary. NVE asserts that the Operators failed to pursue alternatives that would have provided for rewatering the entire river and allowed fish passage. Operators counter that they did look at several other alternatives, including NVE's pump station alternative and dam removal, and for various reasons, including economics and other risks, it chose to proceed as outlined in the Proposed Final Program. See NVE comments, June 21, 2024 and Operators' Reply to Comments, July 2024 at Pp. 22-23.

there is time to achieve both and still comply with the Agreement's requirements.[61] They are each committed to pursuit of any alternatives that will achieve those goals.

MOA and NVE however, believe that both goals should be pursued now and absent complete River waterflow and fish passage, the Program should not be adopted. First, the Agreement does not require complete waterflow and fish passage. Had the Parties intended to make those requirements of the Program, they could have and should have so stated in the Agreement itself.[62] Rather, the Agreement outlines requirements to protect, mitigates damage to, and enhances fish and wildlife resources affected by the Project. At the time the Agreement was signed, the River did not enjoy complete waterflow nor were fish able to pass from River to lake and lake to River. As NVE acknowledges, these goals were not achievable until the lower diversion dam was removed in 2018.[63] Courts cannot add words to the contract that would impermissibly re-write that contract, nor can the Governor in this situation.[64] Simply put, the Agreement is not ambiguous. Rather, complete waterflow and fish passage can be adopted in a final

---

61 ". . . the Program provides a framework to initiate the protection, mitigation and enhancement of fish and wildlife resources, and will support the next iteration of a mitigation plan". NMFS Comments to Proposed Final Fish and Wildlife Program, June 21, 2024 at P. 2. "Although the proposed Program does not immediately meet the FWS's goals of ecological connectivity . . . the Program, with commitment of all stakeholders, could be an interim step to reconnecting the river, consistent with our request for a phased approach". FWS comments on the Proposed Final Program, June 24, 2024 at P. 4.

62 *McConnell v. Pickering Lumber Corp.*, 217 F.2d 44, 47 (9th Cir. 1954) ("Appellants would have the court under the guise of construction add words to the contract which are not to be found in it. We do not understand such to be the function of the court.").

63 NVE Brief to Governor Dunleavy, September 4, 2024 at P. 7.

64 *JAE Properties, Inc. v. AMTAX Holdings 2001-XX, LLC*, __ F. Supp. Ed __, 2024 WL 538570 (USDC S. D. Cal. 2024).

program if supported by an analysis of the factors in the Agreement, but the Agreement did not mandate it.

NVE and MOA also seem to place all their emphasis on Factor Three, i.e., protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat) without providing for equal consideration of the other seven factors. The Agreement clearly and unequivocally requires the Governor to give "equal consideration" to all Eight Factors.[65] Although Factor Three is an extremely important element of this process, it cannot be viewed alone or to the detriment of the other factors. Each factor has an impact on the final program.

However, with that said, it does not mean that the Governor cannot alter or improve the Proposed Final Program. The Proposed Final Program meets the requirements of the Agreement, giving equal consideration to the Eight Factors, and provides for the protection, mitigation of damage to, and enhancement of fish and wildlife habitat. It can, however, be improved in certain ways to try to reconcile the differences between the Parties per the requirements in the Agreement.

4. Governor's Amendments to Final Proposed Program

The Proposed Final Program is established with the following amendments. Discussion on the amendments will follow this section.

Section 3.1 Committee

This section is amended as follows:

---

[65] Agreement at Section 5, P. 4.

The Committee will consist of one voting representative from each of the following:

Alaska Department of Fish and Game – member appointed by the Commissioner;

Alaska Department of Natural Resources – member appointed by the Commissioner;

NMFS – member appointed by its Regional Director;

FWS – member appointed by its Regional Director;

NVE - member appointed by its Chair/President; and

Governor of Alaska – appoints one member.

The Committee will make decisions by consensus and four members shall constitute a quorum.

Section 4.1 Fixed Wheel Gate

If it is determined that the construction of the fixed wheel gate is not structurally or economically feasible, the Owners shall make available any remaining funds not expended of the $10,000,000.00 (up to $10,000,000.00 in April 2024 U. S. dollars)[66] for other protection, mitigation, and enhancement measures for fish and wildlife including impacted habitat loss and other effects

[66] The current estimate for that fixed wheel gate is $4 million. Operators committed up to $10 million in 2024 dollars. See Transcript of Proceedings, September 9, 2024 at P. 109.

related the Project in accordance with the terms and process previously outlined in Section 3.3.6.[67]

Section 4.0 Limited Reopeners

New Section 4.3 is added.

Section 4.3 Pumped Storage Hydropower

Pumped Storage Hydropower is added as a Limited Reopener.

The Parties are directed to study this upon terms and conditions they mutually agree to. The terms and conditions will include level of engineering, level of cost analysis, what Party or Parties will fund the study and in what amounts and any other matters the Parties find necessary to implement this Limited Reopener. The study should be consistent with studies performed for other alternatives reviewed by Operators. The Parties, assuming they agree on the above requirements, are directed to undertake the study immediately, but this study will not delay the implementation of the Governor's Approved Final Program or the review and study of the fixed wheel alternative. The results of the study will be reported to the Monitoring and Adaptive Management Committee ("Committee").

The Committee will analyze the study findings and perform the Eight Factor analysis required by the Agreement. The Committee will then provide the study findings and Eight Factor analysis to the Owners for the Owners review. If

---

67 See FWS comments to the Proposed Final Program, June 24, 2024 at Pp. 4-5.

the Owners approve the study findings and Eight Factors analysis, they will provide a statement of support to the Committee and the Committee and Owners will coordinate and cooperate to obtain the Governor's approval. Governor approval of the decision to pursue Pumped Storage Hydropower is required. If the Governor approves the proposal, then the 35-year timeframe requirement to repeat the consultation process required by the Agreement will restart from the date the Governor's approval. The construction of Pumped Storage Hydropower must minimize impacts to Project operations. The Project Owners will oversee all construction activities and will support the development and operation of Pumped Storage Hydropower facilities and infrastructure. This is a limited reopener and will not reopen any other components of the Fish and Wildlife Program.

Discussion of Amendments

Amendment to 3.1

Since the Proposed Final Program provides for ongoing review through the Monitoring and Adaptive Management Committee, and it is the Governor's role under the Agreement to establish a Final Program, adding a Governor appointed seat to the Monitoring and Adaptive Management Committee allows the Governor, and future Governors, to continue to fulfill his or her role under the Agreement to establish the Final Program as the work of the committee is ongoing. The definition of a quorum is added to assist in governance and ensure the recommendations made by the committee have robust involvement from the entities represented.

Amendment to 4.1

As one of the purposes of the Agreement and Final Program is to protect, mitigate damage to, and enhance fish and wildlife habitat, ensuring the funds already set aside for the fixed wheel gate alternative are available to be used for other protection, mitigation, and enhancement measures is consistent with the intent of the Agreement in the event the fixed wheel gate is found to be infeasible. This amendment is responsive to the modification of the Proposed Final Plan requested by NMFS and FWS.

Amendment to 4.0, addition of Section 4.3

MOA and NVE have suggested that Pumped Storage Hydropower ("PSH") is a viable alternative to the Proposed Final Program. They passed a joint resolution on September 5, 2024, advocating for PSH. They claim it is a "proven energy storage solution used worldwide that provides carbon free power production, storage and grid stabilization and that it has the potential to maintain or improve power production, meet municipal water needs and provide full River hydrological function and connection into and out of Eklutna Lake for fish passage.[68] They suggested that the Governor require the Owners use the first two years of the three year implementation period to explore this option.[69]

Neither MOA nor NVE have studied this potential alternative. The Operators have reviewed it but admittedly did not get to any final conclusions on its viability, nor did they engineer or model it to see if it was economically or engineeringly feasible at this location. At the meeting with the Governor's office, MOA, NVE and Operators each

---

68 MOA/NVE Joint Resolution, September 5, 2024

69 Id.

agreed that this was a potential option that could be explored.[70] However, Operators and the federal Parties do not want to delay implementation of the Final Approved Program to explore this option.

Implementation of the Final Approved Program should not be delayed or extended for an option of unknown cost and feasibility. However, if PSH is as promising as MOA and NVE indicate, there are numerous potential benefits and improvements to the Eight Factors which must be considered when evaluating this Program. As such, conducting this study, under terms agreeable to the Parties, will provide more information relevant to those factors and the potential benefit or harm to the protection, mitigation of damage to, and enhancement of fish and wildlife resources.

All other components and requirements of the Final Proposed Program are adopted herein unless otherwise amended hereby. The Owners are directed to begin implementation of the Final Approved Program as approved herein as soon as possible.

V. CONCLUSION

The Final Approved Program established today is the culmination of many years of difficult work, analysis, evaluation, discussion, and negotiation by the Parties. Each party did not get all they wanted in this Final Approved Program. However, this is a long-standing problem with no readily available easy solutions and implementation of this

---

[70] Transcript of Proceedings, September 9, 2024 at Pp. 105-122. The federal parties did not take a position other than to state they are in favor of exploring options that restores full waterflow to the river and allows for fish passage. Id. at Pp. 112-113.

Final Approved Program will put the River on track towards potential full water flow and fish passage.

In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgment of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

MUNICIPALITY OF ANCHORAGE D/B/A ANCHORAGE HYDROPOWER'S REPLY BRIEF REGARDING INTERPRETATION OF ORDER 39

The Municipality of Anchorage ("MOA") d/b/a Anchorage Hydropower ("AHP") submits this reply brief regarding interpretation of language in Order U-18-102(44)/U-19-020(39)/U-19-021(39) ("Order 39")[1] pertaining to the terms of the MOA's surrender of voting rights on the Eklutna Operating Committee ("EOC"). In Docket U-18-102/U-19-020/U-19-021 ("Acquisition Docket"), the Commission required that the MOA surrender its voting rights on the EOC because the Commission found that the individual who the MOA proposed to manage the remaining municipal utility in the immediate wake of Chugach's acquisition of ML&P assets ("Acquisition" or "Transaction") then-Municipal Manager William D. Falsey (an attorney), did not have the relevant background experience to participate as a member of the EOC.[2] Specifically, the Commission found that Mr. Falsey did not have the required "knowledge of the Railbelt generation and transmission system, or prudent utility practice which is the management standard specified for the MHP EOC representative in both the Eklutna PPA [power purchase agreement

[1] May 28, 2020.

with Chugach Electric Association, Inc. ("Chugach"] and the MEA PPA [power purchase agreement with Matanuska Electric Association, Inc. ("MEA")]."[3] On July 18, 2024, AHP filed a Notice and Request for Acknowledgement ("Request for Acknowledgment") with the Commission stating it had acquired the expertise required to participate as a voting member of the EOC when Mark Corsentino, P.E., was unanimously approved by the Anchorage Assembly to be the Utility Director of AHP on July 2, 2024.[4]

The other parties in this matter now argue that in order to address its determination that the single proposed individual was not qualified to be the MOA's EOC representative, the Commission placed a requirement on the reinstatement of voting rights that AHP could not even *present* a new EOC representative for acknowledgment by the Commission acquisition of the relevant expertise until more than *three decades* had passed (or possibly never, if the power purchase agreements ("PPAs") with Chugach and MEA are extended for the life of the project). The Office of the Attorney General, Regulatory Affairs & Public Advocacy Section ("RAPA"), Chugach, and MEA, all now take this position—contrary to their prior articulations in this docket that showed they, like AHP, interpreted Order 39 as having no such requirement. For the reasons explained below, the reasoning articulated for this changed position should be rejected. As RAPA noted in the prehearing conference, similar to an amusement park ride where the only question is whether the potential rider is tall enough to be on the ride, here, the only issue is whether Mr.

[3] *Id*. In Order 39, the Commission referred to the post-transaction electric utility owned by the MOA as Municipal Hydro Power ("MHP") and not AHP.

[4] Request for Acknowledgment.

Corsentino is qualified to be AHP's EOC representative.[5] RAPA, Chugach, and MEA articulate no factual support or legal reason why AHP, despite being qualified now, must arbitrarily wait over three more decades in order to regain voting rights on the EOC. If the Commission panel in the Acquisition Docket had intended to require a 35-plus year forfeiture of all of the MOA's rights to participate in the management and operation of its certificated hydropower utility, it would have done so in unambiguous and unequivocal language, following additional process that would have been required as the issue of surrender was not addressed in the Acquisition Docket hearing.

DISCUSSION

I. The responsive briefing reflects changed positions from the other parties in this docket regarding interpretation of Order 39.

In the prehearing conference on August 30, 2024, Administrative Law Judge ("ALJ") Walker stated that AHP had not addressed in its initial filings "any evidence or discussion of why the Commission should set aside the minimum term of voting rights surrender required in Order 44."[6] Order U-24-024(4) articulated the Commission's "desire for briefing on the minimum term of the Eklutna Operating Committee voting rights surrender required" by Order 39.[7] As explained below and in AHP's September 18, 2024, opening brief, the language of Order 39 is clear that (1) there must be a "term" for the surrender of voting rights that must be of at least the length of the PPAs with Chugach and MEA (including any extensions); and (2) this finite term can also be curtailed if AHP makes a showing of acquisition of the required expertise to regain EOC

[5] See, e.g., August 30, 2024, Hearing Tr. at 9.

voting rights. In other words, if before the expiration of the term, AHP showed to the Commission's satisfaction that AHP had acquired the expertise required, then the surrender would be "lifted."

In their responsive briefs on the issue, RAPA, Chugach, and MEA all admitted that prior to the prehearing conference on August 30, 2024, each had shared AHP's interpretation of the Order 39 language. Specifically, Chugach and MEA both, "admit[ted] that until ALJ Walker raised this issue in this proceeding, they had not examined this issue closely and were theoretically comfortable with an interpretation of the Surrender that if and when the MOA could demonstrate technical and managerial fitness," then at that time the MOA "would be entitled to regain its voting rights on the EOC and with respect to the Fish and Wildlife Agreement before the end of the PPA terms."[8] Further, Chugach and MEA's August 26, 2024, comments on AHP's Request for Acknowledgment unequivocally manifest an understanding by Chugach and MEA at the time that AHP voting rights could be immediately restored upon a showing that it had acquired the necessary expertise, with no mention of a "minimum term."[9] RAPA's response to AHP's Motion to Expedite this proceeding also reflected an understanding that "RAPA agrees with AHP" that "[t]he only issue in this docket is a straightforward one—whether AHP 'has shown to [the Commission's]

[8] Chugach and MEA's Joint Br. re Surrender Term at 11 (October 8, 2024). Chugach and MEA also stated that such reinstatement should, "potentially [be] with certain conditions imposed on the MOA." *Id.*

[9] Chugach and MEA Joint Initial Comments at 1. Chugach and MEA stated "we do not oppose AHP's nomination of Mr. Corsentino to become a voting member of the EOC. We will defer to the Commission's investigation of Mr. Corsentino's qualifications and whether AHP has gained sufficient expertise necessary for it to regain voting rights on the EOC pursuant to the criteria outlined in Order 39, but we reserve the right to take a position later in this proceeding."

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS

satisfaction that [it] has acquired the expertise required to fully participate as a voting member of the EOC."[10]

However, in its responsive briefing, RAPA conducted a 13-page (and as discussed below, incorrect) grammatical and syntax[11] analysis to determine that the rules of grammar and syntax demand nothing less than that AHP be deprived of voting rights regarding operation and management of its 53.33% ownership interest in the Eklutna Hydropower Project ("Eklutna Project") by the EOC, with no discussion of how such a requirement would be reasonable.[12] RAPA does not address any of AHP's arguments raised in its opening brief on this topic. Similarly, upon further reflection, Chugach and MEA conclude in their responsive brief that "the language in question is ambiguous and upon a plain reading, can be interpreted in at least two ways," either "as ALJ Walker has indicated," or the interpretation "that the MOA is arguing for . . . that the Surrender term has to match the minimum PPA term length per the first part of the clause," and that "the second part creates a pathway to shorten that term by AHP showing that it has acquired the expertise required to fully participate."[13] Chugach and MEA argue that in the face of ambiguous language, the context of the decision to require the surrender should be considered, as well as the public interest, and that these factors weigh in favor of a mandatory term equal to the length of the PPAs, with the surrender continuing indefinitely after the conclusion of such 35-year

[10] RAPA's Response to AHP's Motion for Expedited Consideration at 1-2, August 26, 2024.

or more term, at which point the surrender may be terminated by a showing of acquisition of expertise by AHP.

As explained below, RAPA's grammatical arguments are based on incorrect application of principles of grammar and logic, and the language regarding surrender of EOC voting rights in Order 39 is not ambiguous. This is evidenced by the fact that prior to the prehearing conference, the four parties to this matter, representing three different types of interests (PPA customers, PPA seller, and RAPA, who "speak[s] for the public interest"[14]) all agreed upon the interpretation that there was no "minimum" period of time AHP had to wait before reinstatement of its voting rights. However, even if the Commission were to determine that the surrender language of Order 39 was ambiguous, the principles of interpretation as described by AHP in its opening brief, as well as described by Chugach and MEA in their responsive brief, support an interpretation of the surrender language as providing for termination of the surrender at any time by a showing that AHP has acquired the expertise required. Additionally, to the extent the Commission were to resolve the ambiguity to require a mandatory 35-plus-year surrender term, the Commission could always still choose to modify that certificate condition either *sua sponte* or at the request of AHP, and should do so here.

II. RAPA's reliance on an incorrect grammar and syntax analysis is misplaced.

A. RAPA makes an unsupported and illogical conclusion based on its flawed grammar and analysis.

RAPA's attempt to discern the correct interpretation of the surrender language by parsing the grammar and syntax misses the mark. RAPA's entire analysis relies on its faulty understanding of which clause is the relevant "subordinate clause." More importantly, RAPA fails to connect its sentence diagramming exercise to any legal precedent or principles of legal interpretation, including the principles and precedent AHP discussed in its opening brief.

RAPA relies on the website "Grammarly.com" for its legal interpretation analysis of the surrender term language, which relies on the classification of "independent" and "subordinate" (dependent) clauses.[15] RAPA focuses on the below sentence from Order 39:

> This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended, and cannot be lifted until such time as [AHP] has shown to our satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC.[16]

RAPA argues that Order 39 consists of (1) an independent clause (everything before the word "and") and (2) a subordinate clause (the word "and" and everything following it). RAPA correctly notes that from a sentence structure perspective, a subordinate clause[17] cannot stand on its own as

[15] RAPA's Br. on Interpretation of Order 39 at 4.

[16] Order 39 at 67.

[17] Subordinate clauses are also referred to as dependent clauses.

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

an independent sentence.[18] However, as discussed below, RAPA incorrectly describes the "subordinate clause" at issue. RAPA then compounds this mistake by committing a syllogistic fallacy in concluding that because a subordinate clause cannot stand alone as a sentence or "exist without the independent clause," it "cannot overrule the requirements of the independent clause."[19] Counsel for AHP was unable to find discussion in grammar authorities referencing clauses "overruling" each other. RAPA continues its errors in logic by taking a *giant* leap to conclude that therefore, (1) the surrender of voting rights was for a term at least equal to the duration of the PPA, and (2) because the subordinate clause cannot "overrule" the independent clause, then "AHP cannot seek to have the surrender lifted until the PPAs have expired."[20] RAPA cites to nothing to support this final (il)logical leap, besides the definition of "subordinate" in Black's Law Dictionary, which does not address the use of the term "subordinate" in the grammatical context.[21]

Below, the "independent clause identified by RAPA is denoted in bold text, and the "subordinate clause" identified by RAPA is italicized:

> **This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended**, *and cannot be lifted until such time as [AHP] has shown to our satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC*.[22]

---

[18] RAPA's Br. on Interpretation of Order 39 at 3. RAPA incorrectly extrapolates this statement, without reference, to state that a subordinate clause "is also subordinate to the independent clause's stated requirements."

RAPA incorrectly characterizes the phrase beginning with the word "and" as the subordinate clause. It is not.

The sentence in question is a complex sentence, with an underlying subject-verb-verb structure.[23] The subject is "this surrender." If the sentence were to be diagrammed, the line for the first verb would have "must have" written on it, and the line for the second verb would have "cannot be lifted" written on it.[24] A subject-verb-verb structure does not in itself create two "clauses" in a sentence—it can still be a simple sentence.[25] However, the sentence in question includes at least two subordinate clauses. The first is the phrase "as those agreements may be extended," which modifies the noun "term," and is not relevant to this grammar/syntax analysis.[26] The second subordinate clause is:

> "until such time as AHP has shown to our satisfaction that AHP has acquired the expertise required to fully participate as a voting member of the EOC."

[23] *See, e.g.,* https://www.cambridge.org/us/files/5716/1800/4404/Skills_for_Effective_Writing_Level_2_Sample_Content.pdf (last accessed October 29, 2024). Cambridge University Press is the publishing division of the University of Cambridge in Cambridge. *See also* https://www.grammarly.com/blog/sentences/simple-sentence/.

[24] The verbs "must have" and "cannot be lifted" both have an auxiliary or modal verb ("must" and "cannot") that are diagrammed as part of the verb. Modal verbs are a type of auxiliary verb ("helping verbs") that express modalities such as likelihoods, permission, or ability. https://www.merriam-webster.com/dictionary/helping%20verb (last accessed October 29, 2024).

[25] Even a "simple sentence" can include a subject-verb-verb structure. https://www.cambridge.org/us/files/5716/1800/4404/Skills_for_Effective_Writing_Level_2_Sample_Content.pdf (last accessed October 29, 2024).

[26] https://www.merriam-webster.com/dictionary/subordinate%20clause (last accessed October 29, 2024).

This subordinate clause modifies the verb "cannot be lifted."[27]

RAPA incorrectly identifies the word "and" as a "subordinating conjunction,"[28] but it is a "coordinating conjunction," used here to link the two verbs in the sentence.[29] "Coordinating conjunctions" are used to "join like elements" and to "join clauses of equal stature."[30] Therefore, RAPA identifies the wrong language as the subordinate clause. The language RAPA identifies as a subordinate clause is:

> "and cannot be lifted until such time as AHP has shown to our satisfaction that AHP has acquired the expertise required to fully participate as a voting member of the EOC."[31]

Instead, the relevant subordinate clause actually begins with the subordinating conjunction "until," and is the language "until such time as AHP has shown to our satisfaction that AHP has acquired the expertise required to fully participate as a voting member of the EOC." This clause modifies the verb "cannot be lifted." Thus, to the extent that RAPA's argument that a subordinate clause cannot "overrule" the (correct) independent clause ("This surrender must have a term . . . and cannot be lifted") would apply, then under RAPA's reasoning, the clause "until AHP has shown to our satisfaction" is legally superfluous, because the verb "cannot be lifted" embodies a

requirement that cannot be overruled by the subordinate clause. This would result in a legal interpretation from RAPA that the surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, and that the surrender cannot be lifted—ever. Clearly this is not what the Acquisition Docket panel intended.

B. A plain reading of the language in question results in an understanding that AHP need not wait decades for the surrender "term" to be completed in order to have its EOC voting rights restored.

To the extent grammar and syntax analysis provides helpful interpretative guidance as to the plain meaning of the language, it supports AHP's interpretation. Looking at the subject and the first verb of the sentence, and any related subordinate clauses: the surrender (1) must have a term. A term is a "limited or definite extent of time."[32] This term, we learn through a subordinate clause modifying the noun, must be at least equal to the PPA and MEA terms, as extended. It arguably could be longer. On to the next verb (same subject), this surrender, which will last for a "definite extent of time" (2) "cannot be lifted." However, the subordinate clause "until AHP has acquired the expertise required . . ." modifies the verb "cannot be lifted." The word "until" means "up to (the time that)"[33] or "not before a particular time or event."[34] Thus the surrender cannot be lifted before AHP shows that it has acquired the requisite expertise. But it can be lifted after that showing. So, the sentence states that (1) the surrender must have a term (of at least the length of

the PPAs) and (2) the surrender cannot be lifted until a requisite showing of expertise.[35] What this sentence *does not* say is that the surrender cannot be lifted during the term. Nor does this sentence say that the surrender cannot be lifted until (1) the expiration of the term of the surrender *and* (2) AHP has made a showing of the requisite expertise.

This comports with a plain reading of the surrender language that the surrender should have a term that is at least as long as the PPAs, but that this term could be lifted by a showing of requisite expertise.[36] Use of the word "term" indicates a finite period, that could be even *longer* than the term of the PPAs. If this were the case, under RAPA's reading, would RAPA argue that even after the PPAs elapsed, AHP would still need to wait for the term of its surrender to make its showing of expertise? A better reading is the reading that all the parties originally held: absent a showing that AHP has acquired the expertise required, the surrender must have a term that is at least as long as the PPAs.

As discussed in AHP's opening brief, the meaning of the term "lifted" is key in interpreting the sentence.[37] The term "lift" is defined in Black's Law Dictionary as "[t]o stop or put an end to; to revoke or rescind."[38] The term "revoke" is defined as "to annul or make void by taking back or recalling; to cancel, rescind, repeal, or reverse."[39] "Rescind" means to "abrogate

[35] Another way of putting it would be that the surrender *can* be lifted with a requisite showing of expertise.

[36] *See, e.g.,* AS 01.10.040(a) ("[w]ords and phrases shall be construed according to the rules of grammar *and according to their common and approved usage*") (emphasis added).

or cancel (a contract) unilaterally or by agreement," or "[t]o make void; to repeal or annul."[40] All of these definitions denote cutting something short, which would not be necessary language to use if the surrender term needed to be over before a showing of acquisition of expertise were allowed.

This interpretation is consistent with the way in which the Commission has typically used the term "lift" in prior orders referencing termination of conditions that had terms that had not yet expired. For instance, in Docket U-97-120, the Commission issued a stay that was to "remain in effect until the Federal Communications Commission (FCC) issues a final decision."[41] The Commission later lifted the stay despite the FCC not having issued a ruling,[42] after a determination that the stay should be "lifted" before the termination event (FCC ruling) in order to "balance the needs of all entities affected" and upon consideration of a new factor.[43] In that matter, unlike here, there had not even been a statement in the initial order outlining the conditions upon which the stay could be lifted before the end of the term of the stay, yet the Commission found it had authority to lift (e.g., end before the termination date) the stay nevertheless.

If the Commission panel in the Acquisition Docket had taken the unusual step of requiring a surrender of management of a certificated utility for a period that at a *minimum* would last decades, and could last the life of the utility, it would have done so clearly. If the panel *had*

intended to require *both* the expiration of the surrender term *and* a showing of acquisition of expertise, it would have included the term requirement *after* the word "until" in the relevant subordinate clause. For instance, the language of Order 39 would have said:

> ". . . and [the surrender] cannot be lifted until (1) the expiration of the surrender term and (2) AHP has shown to our satisfaction . . . ."

A plain language reading of the sentence in question, including consideration of grammar and syntax, results in AHP's interpretation of the surrender language, not RAPA's. If the Acquisition Docket panel had intended to create a requirement that would impact the ability of the Anchorage municipality to manage its majority ownership interest and property right in the Eklutna Project for over 35 years, it would have been crystal clear and express in doing so. As described below in Section III(B), due process would have demanded nothing less.

C. RAPA's remaining arguments are merely attempts to refute strawman arguments that AHP has not made.

RAPA's remaining arguments fail because they are all premised on its incorrect grammar and syntax argument, they attack strawman arguments that AHP did not make, and are irrelevant regardless. For instance, RAPA argues that AHP has not shown that the Chugach and MEA PPA language "override the requirements of Order 39."[44] But AHP never argued that the PPAs *did* override the language of Order 39. AHP argued that the fact that the Commission did not disapprove or otherwise order the removal of the language in the PPAs regarding AHP's role on the EOC and obligations under the two agreements related to that role shows that the Commission did not intend for Order 39 to prohibit the MOA from reinstituting EOC voting rights

until *after* the term of the PPAs. If the Commission intended the surrender to irrevocably last for the duration of the PPAs, the Commission would have conditioned its approval of the PPAs on the removal of that language or included an explicit disapproval of the language as it did for disapproved contractual provisions elsewhere in Order 39.[45] RAPA makes no attempt to square its analysis that the language of Section 4.2(B) of the PPAs would be void with the failure of the Commission to explicitly disapprove the language, even after it make a detailed inquiry about the language in the MEA PPA approval docket.[46]

RAPA also places reliance on the fact that the PPAs do not reference a requirement to have knowledge of the Railbelt electric generation and transmission system, but that AHP admits that requirement is a condition for reinstatement of voting rights. AHP does not disagree, but that fact is irrelevant to an analysis of the language of Order 39. The requirement of knowledge of Railbelt electric generation is not an explicit contractual PPA requirement, it is an explicit requirement from the Commission in order to lift the condition on AHP's certificate.

Finally, RAPA argues that while the MEA PPA approval record includes correspondence from AHP stating clearly that there was not a conflict between Order 39 and the MEA PPA language addressing AHP's voting rights, because AHP's voting rights could be restored, that this correspondence is contradicted by correspondence from MEA in a parallel docket regarding MEA PPA approval. The correspondence from MEA does *not* admit a conflict existed between the MEA PPA and Order 39 as RAPA asserts. The Commission staff asked if

there was a conflict between the surrender language of Order 39 and the language in the MEA PPA that appeared to allow AHP to keep its vote on the EOC.[47] And MEA's response language merely repeats the Commission staff language, putting the word "conflict" in quotations or referring to it as a "perceived conflict."[48] MEA stated that the PPAs were entered into before Order 39 which required surrender, and that "[t]his appears to be the reason for the 'conflict' you reference."[49] MEA never stated that it understood that voting rights could not be restored for the duration of the PPAs. Instead, it noted that the same language existed in the Eklutna PPA already approved, and that if the Commission wanted to "resolve this perceived conflict, the remedy should be similar and consistent with how the RCA remedied the same conflict in the [Chugach PPA], which could include approving the MEA PPA subject to the same conditions the RCA previously imposed in [Order 39]."[50] Nothing in this language indicates that MEA "disagreed with MOA/ML&P about a potential conflict" as asserted by RAPA.[51]

Looking to Order 39, the Eklutna PPA was approved subject to various conditions, including that certain language (Amendment 1) was explicitly not approved. One of the conditions of approval of the Eklutna PPA was that "[t]his approval is subject to the condition that MHP complies with the certificate conditions set out above," including the surrender language.[52] MEA

simply stated that, "MEA is agreeable to having the same vote surrender language in [Order 39] at page 67 apply to the [MEA PPA]."[53] Of course, because the surrender requirement was a certificate condition, it would apply whether or not the MEA PPA approval required it. Further, AHP could not practically have a voting member for purposes of the MEA PPA, but not the Eklutna PPA. Thus, the MEA response does not conflict with the MOA response that Section 4.2(B) of the PPAs "will be relevant if and when MHP's voting rights surrender is terminated in the future upon the necessary finding of the RCA."[54] Instead, the MEA response is completely silent on how any such surrender could be reinstated.[55] It seems MEA merely believed Commission Staff was asking MEA if the EOC voting right surrender would also apply to the MEA PPA, and MEA found such a condition reasonable (and likely obvious, as it couldn't be a one-sided surrender applicable just to Chugach). MEA did *not* state that it believed the surrender would irrevocably last the duration of the MEA PPA, rendering the language about AHP's EOC representative in the MEA PPA invalid.[56] Indeed, if MEA understood that to be the case, it would have likely suggested that the Commission could merely disapprove that provision. And MEA

[56] Further, while RAPA cites to the severability provision in the MEA PPA to determine the case was closed, and AHP cannot regain voting rights during the terms of the PPAs under its interpretation of Order 39, it makes an incomplete reference, ignoring the language that even if it were determined that a term of the PPA is invalid, illegal or unenforceable (and thus severable), "the Parties shall negotiate in good faith to modify this PPA so as to effect the original intent of the Parties as closely as possible in a mutually acceptable manner in order that the transactions contemplated hereby be consummated as originally contemplated to the greatest extent possible." Order 39 at Appendix H at Section 18.17.

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS

itself filed comments in the present docket consistent with the understanding that voting rights could be restored before the PPA expired,[57] and admits in its brief it had not previously held the position that voting rights could not be restored during the PPA terms.[58]

RAPA concludes its argument with the determination that any conflict between the PPAs and Order 39 is resolved because the language in Order 39 controls. However, this logic brings RAPA full circle to the starting line with no conclusion, since the question the Commission has asked parties to brief is essentially, "what is the interpretation of the language of Order 39?"

RAPA's convoluted grammar-based interpretation fails. RAPA makes no attempt to refute or even address AHP's arguments in its opening brief, or examine whether RAPA's conclusion makes any logical sense in the context of Order 39, or public policy. RAPA's reliance on its grammar argument also fails to attempt to answer the question of what possible policy goal is implemented by RAPA's interpretation that a majority municipal government owner of a hydropower plant can be deprived of any say in the operational or managerial control of that plant for *at least decades,* with no articulated reason for such a lengthy mandatory deprivation.

[57] Chugach and MEA Joint Initial Comments at 1.

[58] Chugach and MEA's Joint Br. re Surrender Term at 11. To the extent RAPA argues the responses to Commission Staff about the MEA PPA conflict, and that therefore there is no "meeting of the minds" regarding that crucial term of the contract, such a serious allegation would raise the troubling question of whether the MEA PPA would be a valid contract. *Lewis v. Lewis,* 285 P.3d 273, 275 (Alaska 2012) (holding that if there is no "meeting of the minds," there is no contract).

III. To the extent that the Commission determines that the surrender language is ambiguous, AHP agrees with Chugach and MEA that the "[c]ontext leading to Order 39 [s]urrender matters," as well as the context of the Commission's own subsequent implementation of Order 39.

To that the extent that the Commission finds ambiguity in the surrender language, AHP agrees with Chugach and MEA that the language of Order 39 should be interpreted in the context of the record leading up to the issuance of the order and surrounding the Surrender. Additionally, the context of the issuance of AHP's certificate and the Commission's approval of the MEA PPA and the subsequent understanding of the parties to the PPAs and the Eklutna Transition Agreement must be considered.

Chugach and MEA argue that the surrender language is ambiguous, and that in choosing an interpretation, the "Commission's reading of a term length requirement" should be "supported by the facts and [have] a reasonable basis in law."[59] As explained below, here, the imposition of a decades-long, unbreakable minimum term requirement for surrender is not supported by the facts and evidence in the acquisition docket, and does not has a reasonable basis in law. Conversely, the interpretation that the minimum term of the surrender can be lifted by a showing from AHP of acquisition of the expertise required to fully participate as a voting member of the EOC is supported by the Acquisition Docket record and subsequent Commission approvals, as well as by the understanding of all parties until the August 30, 2024, prehearing conference. This interpretation further has a reasonable basis in the law.

[59] Chugach and MEA's Joint Brief re Surrender Term at 16 (citing *Alaska Exchange Carriers Ass'n v. Regulatory Comm'n of Alaska*, 262 P.3d 204, 208-09 (Alaska 2011)).

A. Alaska and federal precedent and rules of interpretation support interpreting an ambiguous order in a manner that is harmonious with the record and subsequent actions of the decisional body and parties.

1. Decisional language should be read in the context of the facts surrounding the decision.

Chugach and MEA suggest that to the extent the language is ambiguous, the Commission should interpret Order 39 in a manner that is supported by the facts of the case and that has a reasonable basis in law. This approach is supported by Alaska and federal case law on how one court should interpret another court's decisions. While here, the Commission is interpreting its own order, that order is a complicated and lengthy one (the decision *without* its appendixes is 152 pages) that was issued over four years ago. Three out of the four Commissioners on the panel for the decision have since left the Commission. Thus, to the extent the Commission determines the surrender language in Order 39 is ambiguous, the panel in the present matter is arguably similar to a court reviewing another court's decision.

The Alaska Supreme Court has held that, "[j]udgments are to be given that interpretation which will render them reasonable, effective, conclusive and in harmony with the facts and law of the case."[60] The Alaska Supreme Court has also considered post-trial evidence in interpreting judgments pursuant to this standard.[61] Similarly, the Ninth Circuit has found that,

[60] *Pennington v. Employer's Liab. Assur. Corp*., 520 P.2d 96, 97 (Alaska 1974); *Luckart v. State*, 270 P.3d 816, 820 (Alaska Ct. App. 2012).

[61] *Matanuska Elec. Ass'n, Inc. v. Weissler,* 723 P.2d 600, 609–10 (Alaska 1986) (in affirming a Superior Court judgment, the Alaska Supreme Court considered an affidavit submitted with post-trial briefing in the Superior Court which provided additional information clarifying that an oral assignment of interest in the cause of action had occurred between plaintiffs before the dismissal of one of the plaintiffs).

"[w]hen interpreting an ambiguous prior judgment, the reviewing court should 'construe a judgment so as to give effect to the intention of the issuing court.'"[62] "Where the judgment is ambiguous or fails to express the rulings with clarity, the entire record before the issuing court and the findings of fact may be referenced in determining what was decided."[63]

2. Principles of contract interpretation and statutory interpretation support this precedent.

This precedent parallels principles of statutory interpretation and interpretation of contracts. For contracts, the goal of interpretation "is to give effect to the parties' reasonable expectations . . . [which] must be gleaned not only from the contract language, but also from extrinsic evidence, including evidence of the parties' conduct, goals sought to be accomplished, and surrounding circumstances when the contract was negotiated."[64] Interpretation of contracts is typically considered a matter of law, but it "becomes a task for the trier of fact when the parties present extrinsic evidence to clarify a contract's meaning, when this evidence points towards conflicting interpretations of the contract, and when the contract itself is reasonably susceptible of either meaning."[65] Similarly, for statutory construction:

> [t]he goal of statutory construction is to give effect to the legislature's intent, with due regard for the meaning the statutory

> language conveys to others. We give unambiguous statutory language its ordinary and common meaning, but the 'plain meaning rule' is not an exclusionary rule; we will look to legislative history as a guide to construing a statute's words. We must, whenever possible, interpret each part or section of a statute with every other part or section, so as to create a harmonious whole. We also must presume that the legislature intended every word, sentence, or provision of a statute to have some purpose, force, and effect, and that no words or provisions are superfluous.[66]

Applying these various and similar principles of construction to the surrender language results in only one interpretation that "is supported by the facts and has a reasonable basis in law."[67] Contrary to Chugach and MEA's assertions, to the extent there is any ambiguity in Order 39's surrender language, the record of the Acquisition Docket, subsequent decisions from the Commission, understanding of the parties, and due process all support the interpretation that the term of the surrender may be "lifted" by a showing of acquisition of expertise by AHP.

B. An interpretation that the surrender can be "lifted" at any time on a showing of acquisition of expertise is the only interpretation that renders the Order 39 language "reasonable, effective, conclusive and in harmony with the facts and law of the case."[68]

1. The Acquisition Docket and Order 39 discussion supports this interpretation.

The record of the acquisition docket and the language surrounding the "surrender" language of Order 39 support the interpretation that the term of the surrender can be lifted by a

showing of acquisition of expertise by AHP. First, in the hearing itself, there was *no* discussion of whether the MOA should surrender its voting rights temporarily, let alone completely relinquish them for decades. Discussion of the EOC and voting rights and the Fish and Wildlife Agreement was limited. On August 29, 2019, ALJ Walker noted that Chugach witness Dustin Highers had indicated in his prefiled direct testimony that he had served twice on the EOC. ALJ Walker then initiated the following brief exchange:

> ALJ WALKER: "[b]ased on that experience, would you say that knowledge of prudent utility practice and the railbelt electric generation and transmission system elements are essential to being a functional member of the Eklutna Operating Committee?
>
> MR. HIGHERS: Sounds reasonable.
>
> ALJ WALKER: And would knowledge of the Eklutna Hydroelectric Project transition plan and the related agreements also be essential to participating on the Eklutna Operating Committee?
>
> MR. HIGHERS: Not necessarily. The Eklutna Operating Committee, the way we've functioned, is as an operations and maintenance type of committee. Not necessarily dealing with higher-level functions like the original purchase, you know, agreements and the transition agreements and so on. It's a tool that the utilities use to -- to memorialize decisions and move forward on major projects. But it's not necessary in order to be that person that's sitting on that committee in order to make those higher level decisions[.][69]

The exchange continues with Mr. Highers responding to whether he knew anybody at the MOA who would "have the knowledge base to serve on the [EOC]" and Mr. Highers responded that the two persons he knew of would both be moving over to Chugach.[70] ALJ

[69] U-19-020 Hearing Tr. August 29, 2019, at 604-605.

Walker continued to ask Mr. Highers about the costs for compliance with the 1991 Fish and Wildlife Agreement, and Mr. Highers responded that he had not done any estimation of the costs.[71]

Later, ALJ Walker questioned then-municipal attorney Rebecca Windt Pearson about whether the municipality would be retaining employees from ML&P after the Transaction:

> MS. WINDT PEARSON:· The plan is not to. And I know that we have discussed what we would need to do to have the necessary advice, expertise, and personnel in order to continue to participate in the Eklutna Operating Committee. I think that we envision the stub utility being the department that reports up to the municipal manager. And that, more likely than not, we would utilize consultant services to provide that industry-specific expertise and staffing to help us make informed decisions as a continuing member of the Eklutna Operating Committee. Because we would not be retaining any employees of Municipal Light & Power.
>
> ALJ WALKER:· Have you investigated to see if any such expertise exists in the consulting community?
>
> MS. WINDT PEARSON:· We have not done so yet.[72]

This is the extent of the discussion in the record. No other party raised any issues or questions on the topic. The discussion focused on MOA retaining an employee who could serve on the EOC in the immediate aftermath of the Acquisition.

Order 39 referenced these hearing exchanges in its analysis, and noted that:

> ML&P proposes that MHP will have a seat on the EOC, even though it will have no employees. ML&P states that MHP will be managed by the Municipal Manager, a position currently filled by William D. Falsey. Falsey has a law degree from Yale Law School and a Bachelor of Science degree in physics from Stanford University. Falsey has worked as the MOA's manager since 2017 and worked in legal positions from 2003 through 2017.[73]

Order 39 continued that "Chugach witness Dustin Highers testified based on his experience as chair of the EOC that to be an owner representative on the EOC, it was essential that the representative have knowledge of prudent utility practice and the Railbelt electric generation and transmission system."[74] The order noted that the specific individuals identified by Mr. Highers as being so qualified would be moving to Chugach with the Acquisition, and that ML&P "proposes that MHP will have a seat on the EOC, even though it will have no employees," and that "ML&P states that MHP will be managed by the Municipal Manager, currently filled by William D. Falsey."[75] The Commission then determined that "[t]here is nothing in Falsey's resume indicating that he has any knowledge of the Railbelt generation and transmission system, or prudent utility practice which is the management standard specified for the MHP EOC representative in both the Eklutna PPA and the MEA PPA."[76] Order 39 continued to note that while the MOA stated it would hire consultants on an as-needed basis to help make informed decisions as a voting member of the EOC, that it admitted it had not confirmed if such expertise existed in the consulting community.[77]

This analysis of the immediate "circumstances" of the post-acquisition landscape is then referenced in the imposition surrender requirement condition on the MOA's Certificate of Public Convenience and Necessity ("CPCN"):

> Under *these circumstances*, we cannot unconditionally find that MHP is managerially or technically fit to maintain majority

> ownership of the Eklutna Project. We can only find that MHP is managerially and technically fit to maintain an ownership interest in the Eklutna Project subject to the condition that before the effective date of either the Eklutna PPA or the MEA PPA, ML&P surrenders its vote on the EOC under the Eklutna Project agreements so that Chugach and MEA can jointly manage and operate the Eklutna Project, including negotiating compliance with the Fish and Wildlife Agreement, without MHP having a vote on operation or management decisions. This surrender must have a term at least equal to the term of the Eklutna PPA and the MEA PPA, as those agreements may be extended, and cannot be lifted until such time as MHP has shown to our satisfaction that MHP has acquired the expertise required to fully participate as a voting member of the EOC. This does not prohibit MHP from attending EOC meetings, but may not allow MHP any ability to delay or change the Eklutna Project decisions made by the Chugach and MEA representatives on the EOC.[78]

The "circumstances" are simply that the Commission found Mr. Falsey an unsuitable candidate for an EOC representative once ML&P employees transitioned to Chugach. In making this determination, the Commission explicitly focused on and referenced the PPAs, stating there was no evidence that Mr. Falsey had the requisite knowledge of "prudent utility practice which is the management standard specified for the MHP EOC representative in both the Eklutna PPA and the MEA PPA."[79] Thus, the Acquisition Docket and the language of Order 39 stressed that the qualifications requirement was important because of the requirements of Section 4.2(B) of the PPAs. This contextual language supports the interpretation that the Commission (1) found it important to keep the surrender in place for the duration of the PPAs if no qualified EOC representative was proposed, thus proposing that the surrender term must last for at least the length

[78] *Id.* at 67 (emphasis added).

[79] *Id.* at 66.

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION

(907) 277-1604

of the PPAs, and (2) that the surrender could only be lifted once the MOA had acquired the expertise required by the PPAs. This language, focused on the PPA requirements, supports the interpretation that the surrender "term" could be lifted by a showing of acquisition of requisite expertise as required by the PPAs, that that the MOA can only make the showing it has the requisite expertise, including knowledge of "prudent utility practice *which is the management standard specified for the MHP EOC representative in both the Eklutna PPA and the MEA* PPA" *after* the PPAs have expired.[80]

The record and language or Order 39 provide *no* evidence that the Commission was concerned about the MOA's long-term ability to manage a certificated utility such that it would impose a near-permanent prohibition on MOA participation on the EOC. The entire focus of the Commission's analysis was on whether MOA's proposed *immediate* candidate for the EOC had the requisite background and qualifications. To read the surrender as having a mandatory 35-plus year term despite AHP now having a Utility Director with the requisite expertise to serve on the EOC makes no sense in the context of the acquisition docket record and Order 39 discussion. Nothing in the record or Order 39 provides evidence or analysis that acquisition of the requisite expertise could not happen before the close of the PPAs. And if the primary reason for the requirement was the management standard articulated in the PPAs, it makes no sense to provide that the MOA could only make a showing that it met the PPA standard *after* the PPA contracts expired. In fact, if the PPAs are extended for the life of the Eklutna Project, there might *never* be an AHP EOC voting member. Further, the Commission explicitly discussed the PPA management

standard in its analysis, and did not indicate that Section 4.2(b) of the relevant PPAs regarding the MOA's EOC voting member were disapproved or would be rendered void by Order 39.

2. The record for the issuance of a certificate to AHP and approval of the MEA PPA also support this interpretation.

As discussed in AHP's opening brief, the related proceedings following the Acquisition Docket provide further support for the interpretation that the surrender could be lifted by a showing that AHP had acquired the expertise required to participate as a voting member of the EOC.[81] The Commission's (1) approval of the MEA PPA, with no modifications to exclude the language in Section 4.2(B), after the documented staff discussion with MOA counsel on the topic and (2) issuance of a CPCN to AHP and acceptance of the MOA's surrender of voting rights, with language that made clear the surrender could be lifted at any time by a showing of acquisition of the requisite expertise, show that in the aftermath of Order 39, the Commission also understood that the surrender could be lifted before the expiration of the surrender "term."

The filings and decision in the MEA PPA approval docket make it unequivocally clear that the reinstatement of the MOA's voting member of the EOC could occur (before the expiration of the PPAs) if the MOA meets the Commission's requirements regarding the expertise required to fully participate as a voting member of the EOC. On November 20, 2020, the Commission issued Letter Order #L2000410, approving, in its entirety, the MEA PPA (with Amendment 1), with no attempt to exclude Section 4.2(b) (discussing the MOA EOC representative) or to refute the understanding articulated in the docket filings that the "minimum term" of the surrender was subject to being "lifted" or "terminated" by a showing of the MOA

meeting the expertise requirements. It would be difficult to argue that the Commission merely committed an oversight by not disapproving Section 4.2(B) in the MEA PPA, after Commission Staff explicitly inquired in the docket whether the language of Section 4.2(B) conflicted with Order 39, and received a response from MOA which was made part of the public docket for the MEA PPA approval. MOA counsel responded:

> Like Section 4.2(B) of the Chugach Eklutna PPA, Section 4.2(B) of the MEA Eklutna PPA requires MHP, in consultation with the Purchaser, to select MHP's representative on the EOC. As a result of Order 39, MHP won't have any voting representative on the EOC *until the surrender is terminated upon a positive finding by the RCA that MHP's proposed representative is qualified. Thus, Section 4.2(B) of neither PPAs need to be amended. In addition, Section 4.2(B) should remain as written as it will be relevant if and when MHP's voting rights surrender is terminated in the future upon the necessary finding of the RCA.*"[82]

MOA counsel made it unequivocally clear that the language of Section 4.2(B) of the MEA PPA should remain because it would be relevant "if and when" voting rights were restored. If the Commission had a different understanding, this would have been its opportunity to clarify and disabuse the parties and public of this understanding. Instead, it approved the MEA PPA in its entirety as filed.

Similarly, it would be difficult to argue the Commission *repeated* this oversight when it later reviewed the language of the October 27, 2020, Surrender document (signed by all three Eklutna Project owners) and issued AHP a CPCN. The surrender stated:

> In accordance with the requirements of order U-18-102(44), the Municipality of Anchorage, dba Municipal Light & Power(ML&P), hereby surrenders its voting rights as an EOC member and under the Fish and Wildlife Agreement effective as of

> the Closing of the Asset Purchase Agreement between ML&P and Chugach Electric Association (Chugach). *This surrender of voting rights shall remain in effect until ML&P's successor complies with the RCA requirements pertaining to qualifications for ML&P's representation on the EOC.*
>
> Until ML&P's successor complies with the qualification terms of RCA order U-18-102(44), all EOC decisions will be by unanimous vote of Chugach and Matanuska Electric Association, Inc. (MEA). Eklutna hydro operations, dispatch and maintenance will continue to follow past practices and policies unless changes are approved through the EOC process.[83]

The surrender language states reinstatement can occur when the "requirements pertaining to qualifications," are met, not also when the PPAs expire. Again, the Commission issued CPCN 780 without any statement that the surrender language was incorrect or needed to be modified.

It was clear and explicit during the approval process of the MEA PPA and the certificate issuance that Section 4.2(B) properly remained in both the MEA PPA and the Eklutna PPA because the surrender term could be terminated by a showing that AHP had acquired the expertise required to fully participate as a voting member of the EOC.

B. Thus, the reading of the surrender requirement which gives effect to all provisions of the PPA contracts and Order 39 is the reading that the surrender term could be "lifted" by a showing of requisite expertise.

Interpreting the surrender requirement as having a term which can be cut short and lifted if AHP acquires the relevant expertise is the interpretation that renders Order 39 (as well as the subsequent, related decisions), "reasonable, effective, conclusive and in harmony with the facts

[83] *Id.* (emphasis added).

(907) 277-1604

and law of the case."[84] In order to require an inviolable 35-plus year term to be required, the Commission would have needed to make findings articulating *why* such a requirement was legally necessary and supported by the evidence in the Acquisition Docket. It did not. No evidence in the record or discussion from the Commission supports this interpretation. Further, the interpretation that the surrender has no "mandatory" minimum term that cannot change with changed circumstances comports with Commission practice and precedent. It is not unusual for the Commission to put conditions on a certificate which may be "lifted" by future showings or events.[85]

Indeed, to the extent that Order 39 language regarding the surrender were "ambiguous" in the manner suggested by the parties, it raises troubling statutory and due process concerns. A final order of the Commission "denying a right or privilege" "may not be entered without giving the interested party reasonable notice and an opportunity to be heard."[86] Similarly

[84] *Pennington*, 520 P.2d at 97.

[85] In Docket U-96-040, the Commission approved ATU-LD's application for a CPCN, with conditions. Order No. U-96-040(3) at 23-27 (Nov. 15, 1996). The Commission vacated one of the conditions after finding "competition in the local exchange market of ATU has reached a sufficient level to relax the prohibition." Order No. U-96-040(5) at 4-5 (Apr. 15, 1998). The Commission reminded ATU-LD that "any further relaxation of the conditions on its certificate imposed in Order U-96-40(3) may be accomplished only through Commission Order." *Id.* at 5.ATU-LD later filed a petition to have most of the remained conditions vacated but withdrew the petition before the Commission ruled on it. The Commission noted that only one of the remaining conditions was "subject to vacation based on a finding of sufficient competition," and ATU-LD had the burden "to show that sufficient competition exists to support vacating [that condition]." Order No. U-98-082(1) at 14 (Oct. 20, 1998). The Commission also "determined that good cause exists to conduct an evidentiary hearing to allow all parties to present evidence on the issue of whether the Commission should vacate the conditions imposed on ATU-LD's certificate by Order U-96-40(3)." *Id*. at 14-15.

due process requirements of the state and federal constitutions require notice and an opportunity to be heard before deprivation of a property right.[87] Here, the other parties suggest that the Commission *ambiguously* placed a condition on the MOA's ability to manage its property interest in the Eklutna Project, for decades at a minimum, and the life of the project potentially, through a proceeding where there was no argument, briefing, testimony, or other discussion on the topic of surrender of voting rights during the proceeding. There was no notice or right to be heard on the issue of surrender before the decision in Order 39. If the Commission had intended to put such a permanent and inviolable condition on AHP's certificate, it would have needed to have done so *unambiguously*. Principles of due process thus also weigh in favor of a reading that puts no such permanent and unbreakable restrictions on the MOA's property interest.[88]

Chugach and MEA also focus on the principle of statutory and contract interpretation that statutes and contracts should not be interpreted in a manner that renders language superfluous in order to argue that an interpretation that the term of surrender could be lifted renders the alleged "minimum term" language superfluous.[89] First, it does not. The

[87] *Heitz v. State, Dep't of Health & Soc. Servs.*, 215 P.3d 302, 305 (Alaska 2009) (stating "'[d]ue process of law requires that before valuable property rights can be taken directly or infringed upon by governmental action, there must be notice and an opportunity to be heard"); *City of Homer v. State, Dep't of Nat. Res.*, 566 P.2d 1314, 1319 (Alaska 1977) (applying a due process analysis regarding a city's right to a city's property interests).

[88] The interpretation that there is a decades-long mandatory forfeiture, contrary to the clear understanding of MOA and the other parties as articulated in post-Transaction proceedings, also may raise issues regarding the effectiveness of the Surrender. Such an interpretation in light of the proceedings subsequent to Order 39 would also raise questions of estoppel. *Jamison v. Consolidated Utilities, Inc*., 576 P.2d 97, 101-102 (1978) (describing the elements of equitable estoppel and quasi-estoppel).

[89] Chugach and MEA Joint Br. re Surrender Term at 22.

LAW OFFICES OF

Commission tied the period of the surrender to the PPAs because of its focus on the PPA language regarding the MOA's EOC representative and the MOA's obligations under the PPAs regarding that language. Its language ensures that as long as the PPAs are in force, the MOA will either have surrendered its voting rights or made a showing of acquisition of expertise. The term language allows the parties to know how long the surrender would last if undisturbed by further action on the part of the MOA. To the extent the Chugach and MEA PPAs were the primary focus of the Commission's concern in Order 39 about the MOA's voting member, an inviolable surrender for the duration of the PPAs would actually render an *additional* requirement to make a showing of an acquisition of expertise to lift the surrender *after* the PPAs expired moot and pointless.

Second, Chugach and MEA ignore the fact that the interpretation they propose the Commission now adopt would render Section 4.2(B) of the PPAs superfluous, contrary to the principles of contract interpretation. Chugach and MEA also ignore that a key motivation for the qualification requirements for reinstatement was the Commission's concern that the MOA EOC representative meet the PPA requirements.

Finally, while the principles regarding statutory and contract interpretation might be a helpful one to examine in reviewing agency or court decision language, it is not a controlling principle in this context. Order 39 is a 152-page decision. Most court decisions and agency decisions will have language that might be considered superfluous upon examination four years after their issuance. The surrender term should, as Chugach and MEA suggested, be read in the way that is supported by the facts of the record and has a reasonable basis in the law. There are no facts or principles of law to support a three-plus decade surrender that cannot be terminated by a showing of requisite expertise. Nothing in the record references or supports a need to wait that

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS

long, and as explained below, the *post hoc* reasons Chugach and MEA propose are not supported by the record or reasonable. There is no reason for the Commission to have placed such a restriction simply because it found that the municipal manager at the time of the sale was not qualified enough to sit on the EOC, and because the MOA had not at that time hired any other permanent employee who did meet the qualifications to do so at that time. The MOA is as well positioned today as it will be 35 years from now to acquire the requisite expertise to regain voting rights on the EOC, and as stated in its request for acknowledgment, it has done so now.

C. The record of the Acquisition Docket and context leading to Order 39 provides *no* support for Chugach and MEA's *post hoc* arguments that the Commission intended to require that surrender of EOC voting rights could only be lifted at the conclusion of the PPAs.

1. Continued MOA participation on the EOC, with continued majority voting rights and resulting "veto power" was *exactly* what the parties bargained for in the Chugach and MEA PPAs.

Continued MOA participation on the EOC, pursuant to the terms of the Transition Agreement,[90] was explicitly contemplated in Section 4.2(B) of each of the PPAs. Chugach and MEA argue that the factual circumstances of the Acquisition and docket support an understanding that the surrender could not be lifted until the termination of the PPAs because otherwise, if AHP's voting rights are restored, the MOA will have veto power over decisions of Chugach and MEA with respect to the operation of the Eklutna project, "despite the facts that (1) only Chugach and MEA rely on the ongoing operation of the Project as part of their ratepayer obligations, (2) the MOA is only responsible for 19% of Project costs, and (3) both MEA and Chugach have purchase

(907) 277-1604

options at the end of the PPA terms."[91] These are all concerns that are exclusive to Chugach and MEA, not the public interest. To the extent that Chugach and MEA might have had these concerns about AHP having veto power over decisions of Chugach and MEA with respect to the operation of the Eklutna project, these concerns would have all existed at the time the agreements were negotiated and before presentation to the Commission in the acquisition docket. The PPAs represent the bargained-for agreement between the MOA and Chugach and MEA, respectively. Neither Chugach nor MEA indicate that they believe they bargained for the MOA to give up its voting rights. Nothing in the record shows Chugach and MEA argued for such a requirement in the Acquisition Docket. If such a relinquishment term had been a requirement for the PPAs, the MOA likely would have required additional consideration for the concession of a decades-long relinquishment of its voting rights on the EOC for the duration of the PPAs.

Instead, the respective Sections 4.2(B) of both PPAs are unambiguous, and evince the clear understanding of all the parties to the agreements. Both agreements explicitly reference the MOA's EOC representative, and contain explicit terms and requirements regarding the MOA's EOC representative, such as the requirement that the MOA representative "shall make all decisions on the Operating Committee consistent with Prudent Utility Practice and the rights and obligations of the Parties" under the PPAs.[92] As previously briefed by AHP,[93] the Commission explicitly referenced this language in Order 39 and subsequent proceedings, but did not disapprove or require the removal of the language in Section 4.2 of the PPAs regarding the AHP representative. This is

[91] Chugach and MEA Joint Br. re Surrender Term at 19-20.

consistent with the understanding that if AHP acquires the expertise to again fully participate on the EOC, these terms will apply to implement the parties' bargained-for agreements. To the extent that Chugach and MEA ask the Commission to now reinterpret the surrender language to provide Chugach and MEA with a more advantageous agreement than which they bargained for, this request should be rejected. To the extent that part of the interpretation of Order 39 involves interpretation of the PPA contracts, this interpretation should "give effect to the parties' reasonable expectations."[94]

Chugach and MEA's other arguments that "[a] strict PPA-term Surrender term limit reading by the Commission is clearly supported" by other aspects from the Acquisition Docket similarly fail upon an examination of the record and the subsequent decisions of the Commission related to the Acquisition.

2. The fact that AHP sells power only to Chugach and MEA provides no support for a "strict PPA-term Surrender term limit reading" of the surrender language.

Chugach and MEA argue that a "strict PPA-term Surrender term limit" is supported by the fact that AHP's CPCN authorizes it only to sell wholesale power "from the Eklutna Hydroproject Switchyard" to Chugach and MEA pursuant to the two PPAs.[95] It is unclear why Chugach and MEA believe that the fact that the CPCN (currently) "serves one purpose: to enable MOA to meet its obligations under the Eklutna PPAs for at least the next 35 years" requires

[94] *Zamarello*, 321 P.3d at 393.

relinquishment of any say in operations of its property interest. The acquisition record is similarly silent on the issue. This argument fails.

3. Whether the Eklutna PPA is "more akin to a deferred payment mechanism [for the acquisition] than a power purchase agreement" has no bearing on the importance of AHP's voting seat on the EOC.

Chugach and MEA argue that because the terms that Chugach bargained for and agreed to in its PPA provide for Chugach to be responsible for "payment of all capital expenditures and operating and maintenance expenses that are payable with respect to the Chugach Portion," of AHP power, and because Chugach's payments to AHP are not correlated with the amount of generation, that the MOA has therefore "ceded its liabilities and all of its costs associated with approximately 64% of its ownership share to Chugach."[96] Chugach and MEA argue that because of its increased responsibility for the "Chugach portion" during the PPA, the MOA's voting seat could be "determined to be less important under a deferred payment mechanism contract, rather than under a long-term PPA with typical performance obligations on the seller rather than on the offtaker."[97]

Even if this statement were true, it ignores the MOA's continued ownership responsibilities under the MEA PPA. Additionally, the MOA asks, "important to *whom*?" Perhaps Chugach and MEA believe it is less important, but the MOA does not. At a minimum, the MOA continues to be responsible for 19.05% of Eklutna Project operations, maintenance, capital, and environmental compliance costs. The MOA has a duty under its Charter to manage its certificated

utility in a manner that is "in accordance with the general standards common to utilities providing the same utility service,"[98] and has a duty to the citizens of Anchorage to responsibly manage its property assets.[99] Chugach and MEA's subjective opinion on the "importance" of the MOA's voting rights on the EOC fails to support how a mandatory 35-plus year surrender of voting rights in order to obtain a CPCN has any "reasonable basis in the law" or is supported by the facts of the record. Nor is it supported by the language of Order 39. In issuing a CPCN, the Commission is concerned with the relevant standards for a CPCN, not what might be subjectively important to certain contract parties. It considers whether the "public convenience and necessity require or will require the service."[100] Conditions put on certificates therefore must be linked to public convenience and necessity, rather than micromanagement of how the Commission might prefer to arrange contractual agreements or see a utility managed. The Commission has consistently held that its role is not to second guess utility management decisions or make strategic decisions for utilities.[101]

Chugach and MEA cite to the MOA's continued prudent operation obligations under the MEA PPA that will last the "duration of the MEA PPA" as another reason the MOA should not be allowed to reinstitute its voting rights. But this continued responsibility supports the opposite conclusion, that the Commission should allow the MOA to meet its contractual obligations by participating in the prudent operation of the Eklutna Project once it had acquired the relevant expertise during the duration of the MEA PPA.

4. There is no evidence in the record that the Commission considered the purchase option in the PPAs in establishing the surrender term.

Chugach and MEA argue that the fact that the PPAs contain purchase options for the subject portions of MOA's ownership shares for "then-book value" means that MOA will in that event have no interest or stake in the Eklutna project beyond the PPA terms. Thus, they argue,

---

Chugach's plan to replace Beluga Unit 8, which is a management decision, but to ascertain whether Chugach's plan is the outcome of rigorous and disciplined economic analysis and logical construct, i.e., Chugach has not made this plan on a whim, as a means of penalizing wholesale customers with additional depreciation charges before the termination of the wholesale contract but has made **a decision that has its foundation in disciplined analysis and is supported by the actions of its Board of Directors**"); Order No. U-96-037(46) at 12-13 (March 15, 2002) (discussing how certain debt management decisions "**are best left to the expertise of the utility as long as the practices followed by the utility are within the range of reasonable management practices**"); Order No. U-85-013(11) at 12-13 (June 26, 1986) (stating that "[w] hat is clear . . . is that the alleged economies advanced by Chugach were precisely the sort anticipated by HEA management as the near term cost of pursuing an individual power production policy, that over the longer run, would be calculated to result in lower costs and other benefits for HEA ratepayers," and that "this is a **prime area of cooperative utility management discretion and the Commission has been presented with no cause to question the soundness of management's decision**"); Order No. U-81-052(28)/U-81-053(8)/U-83-010(1) at 21 (Feb. 18, 1983) (holding that "[i] n an effort to carry out this responsibility [of ensuring ratepayers are provided satisfactory service at the least possible cost, consistent with prudent and efficient management practices] judiciously and **without interposing Commission preference in place of management discretion**, the Commission expressly adopts, as modified infra, the three part standard developed by the Maine Public Service Commission in *Pollis v. New England Telephone Company* to determine whether utility management practices and services are unreasonable or inadequate") (bold emphasis added).

a surrender lasting as long as the PPAs, that cannot be lifted, makes sense. First, Chugach and MEA (one or both) *might* not ultimately purchase the MOA's interest, in which case, the MOA will continue to have an ownership interest. Second, the MOA has an interest in participating on the EOC to ensure that prudent utility practices are continued for the duration of the PPA terms.

5. There is no evidence in the record to support Chugach and MEA's assertion that the existence of MOA's "veto" power associated with its voting rights supports a decades-long surrender.

Finally, Chugach and MEA cite again to the "veto" power that the MOA has as majority owner on the EOC. First, Chugach argues that in practice, this "veto" power was rarely exercised, as "disagreements resulting in formal votes were not common given that all parties were incented to run the project as cost effectively as possible."[102] This statement does not appear to weigh in favor of *preventing* the MOA's participation for the next three decades, as the MOA will continue to be required to make EOC voting decisions consistent with prudent utility practice—including under its own municipal charter,[103] under the enforceable terms of the PPAs regarding prudent utility practice,[104] and under its certificate. Second, Chugach and MEA argue that because only they rely on the ongoing operation of the Eklutna Project as part of their ratepayer obligations, and the MOA is only responsible for 19% of the costs, that the MOA should not have voting rights. This argument ignores that (1) the MOA continues to have a majority 53.3% ownership interest, (2) the MOA continues to be responsible for a larger percentage of costs than MEA (16.67%), and

[102] Chugach and MEA Joint Br. re Surrender Term at 19.

[103] Article XVI, Section 16.01(a) (stating that "[e]ach municipal utility shall be operated in accordance with the general standards common to utilities providing the same utility service").

(3) Chugach and MEA previously *agreed* to the terms of the PPAs with continued MOA voting rights, for the 35-plus year term of the PPAs. Chugach and MEA now argue that protecting themselves from their own bargained-for agreement is a "public interest" consideration under the grant of a CPCN and that the Commission should reinterpret its surrender language to prevent AHP from reinstatement of voting rights. This argument fails, as does the argument that AHP is somehow not incentivized to conduct prudent utility practice or to comply with the PPAs.

More importantly, Chugach and MEA point to *nothing* in the record that shows the Commission previously considered any of these arguments and as a result determined the surrender should last a minimum of 35 years with no ability to lift it. Chugach and MEA argue that the record shows "[t]he underlying material facts behind the surrender remain unchanged."[105] They argue that Mark Corsentino worked at Anchorage Water and Wastewater Utility ("AWWU") in his current role at the time of the acquisition as well, and attempt to argue that "[t]he only thing that has changed is that the Fish and Wildlife implementation process progressed and the Anchorage Assembly did not like Chugach and MEA's Proposed Program."[106] They note that "going forward, implementation [of the Fish and Wildlife Program] will only be a small part of the many responsibilities of the EOC."[107]

To the extent that Chugach and MEA assert that the Commission needs to make factual determinations about issues such as the relevance of Mr. Corsentino's presence at the municipality at the time of the acquisition, or what types of decisions the EOC makes or will make

in the future, such determinations cannot be made on briefing limited to the question of a legal interpretation, and would need to be made in the context of the evidentiary hearing.[108] Further, these assertions are completely irrelevant to the question of what the language of the surrender means.

6. The Commission should decline to accept Chugach and MEA's invitation to expand the scope of this briefing and this docket.

Chugach and MEA next use their brief on interpretation of the language of Order 39 to argue that if the Commission does determine that AHP does not need to wait several more decades to reinstate voting rights, then the Commission should expand the scope of this docket and expand the requirements that AHP must meet beyond the condition placed on AHP's certificate through Order 39. Chugach and MEA make various factual arguments in support of this invitation for the Commission to expand the scope of this docket. Chugach and MEA cite to their prefiled responsive testimony in support of these arguments,[109] and ask the Commission to engage in detailed decision-making about how AHP can vote if its voting rights are restored. They also ask the Commission to modify the Transition Agreement and determine what decisions the EOC can and cannot make.[110] The Commission should reject this invitation to expand the scope of this docket in order to renegotiate the PPAs at this late date. The Commission has already held that nothing raised at hearing impacts the legal issues in this briefing, noting that "given the lack

[108] Further, whether or not Mr. Corsentino was employed at AWWU at the time was irrelevant. He was not, at the time, put forward as a possible EOC voting representative.

of responsive testimony relevant to the issues raised in the motion to dismiss it appears unlikely that reply testimony will be relevant to those issues."[111]

IV. Certificates can always be modified for good cause shown, and the Commission should do so here.

Even if the Commission were to determine that Order 39 mandated a minimum surrender term of at least 35 years that could not be lifted, CPCNs are not ossified documents set in stone. CPCNs and their conditions may be modified, "[u]pon complaint or upon its own motion," after notice and opportunity to be heard "and for good cause shown."[112] Good cause includes "the requirements of public convenience and necessity."[113] Good cause exists here because to the extent the language of Order 39 indicated a decades-long surrender of voting rights, it was ambiguous. Further, AHP has a right to participate in management of its own property, and there is no reason why it must wait three more decades to do so when it is able to present a suitable EOC representative to the Commission now. Here, the Commission could choose to construe AHP's Request for Acknowledgment as a request to modify its certificate to conform with AHP's understanding of the surrender requirement, and respectively modify procedures accordingly in this matter to ensure fairness to all parties, or AHP could simply file a new application to modify its certificate.

[111] Order No. U-24-024(6), October 25, 2024.

CONCLUSION

For the reasons explained above, and in AHP's September 18, 2024, brief, any "minimum term" on the MOA's surrender is subject to the MOA's showing to the Commission that it has acquired the required expertise to participate as a voting member of the EOC.

RESPECTFULLY SUBMITTED this 29th day of October, 2024, at Anchorage, Alaska.

PREFILED REPLY TESTIMONY OF MARK A. CORSENTINO, P.E.

I. INTRODUCTION

Q.1 Please state your name and title.

A.1 My name is Mark A. Corsentino, P.E., and I am the Utility Director of Anchorage Hydropower ("AHP") and the General Manager of Anchorage Water and Wastewater Utility ("AWWU"), except for matters involving both AHP and AWWU, for which Assistant General Manager David Persinger serves as Acting General Manager of AWWU, and I serve only as Utility Director of Anchorage Hydropower.

Q.2 Are you the same Mark Corsentino that prepared direct testimony in this case?

A.2 Yes.

Q.3 What is the purpose of your testimony?

A.3 The purpose of my testimony is to respond to the prefiled responsive testimony of Tony Zellers and Eugene Ori on behalf of Chugach Electric Association, Inc. ("Chugach") and

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

Matanuska Electric Cooperative, Inc. ("MEA"). Specifically, I will respond to Mr. Zellers's and Mr. Ori's testimony regarding membership on the EOC, prudent utility practice, and the MOA's surrender of its voting rights on the EOC. In addition, I will provide provisional testimony regarding pumped storage hydropower ("PSH"). That provisional testimony and associated exhibits are presented for consideration only if the Commission issues a decision expanding the scope of this docket to include PSH options at the Eklutna Project.

Q.4 Will other witnesses provide reply testimony?

A.4 No.

Q.5 Please describe how your testimony is organized.

A.5 First, I will discuss the importance of Commission lifting the MOA's surrender of its voting rights. Second, I will clarify the qualifications the MOA must acquire before the Commission will lift the MOA's surrender of its voting rights. Third, I will discuss the meaning of prudent utility practice. Fourth, I will discuss the effect that the Commission's lifting of the MOA's surrender of its voting rights will have. Fifth, I will discuss the conflict of interest issue. Finally, in my "provisional" testimony, I will discuss PSH at the Eklutna Project.

II. LIFTING THE MOA'S SURRENDER OF ITS VOTING RIGHTS

Q.6 What is the MOA's interest in getting its surrender of its voting rights on the EOC lifted?

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

A.6 First, the MOA wants to meaningfully participate on the EOC. The MOA is the majority owner of the Eklutna Hydroelectric Project ("Eklutna Project"). Like any owner of any property, the MOA has a legitimate interest in exercising all of the rights of ownership. Every EOC decision directly impacts the MOA's property. Moreover, although Chugach and MEA have options to purchase the Eklutna Project after the PPAs expire, there is no guarantee they will do so, and the MOA should have the power to protect its long-term interests in the Eklutna Project. For example, the MOA should have the power to protect its interests regarding a future sale of its assets, a subject regarding which Chugach and MEA have potential conflicts of interest with the MOA, since they have an incentive to minimize the ultimate sales price. Chugach and MEA should not be able to control property they do not own in such a way that could be adverse to the interests of the owner. Second, the MOA is one of Chugach's largest electric customers and relies on electric rates to be reliable and affordable. Decisions made by the EOC regarding its budget and capital expenditures directly affect the rates the MOA pays. Third, the MOA is a home rule city and has an obligation to look out for the public interest, which gives it a different perspective than Chugach and MEA. Fourth, while Chugach and MEA claim the MOA's surrender of its voting rights has resulted in less contentious decision making on the EOC because all decisions require a consensus, there are times when having a third party is necessary to avoid an impasse. On information and belief, there are matters that the EOC can and should resolve which Chugach and MEA have long put off because of the lack of any mechanism to resolve disagreements between Chugach and MEA. Finally, the EOC is responsible for implementing the Final Fish and Wildlife Program ("F&W Program"),

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200
ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

which the Governor established on October 2, 2024. Implementing the F&W Program will involve important decisions affecting the F&W Project and the people of Anchorage. AHP is responsible for a portion of the costs resulting from EOC decisions about operations, maintenance, and capital investments for the F&W Program. The payments AHP receives from Chugach and MEA from the PPAs are not based in any part on AHP's actually incurred costs and it is possible the costs of the F&W Program could exceed PPA revenues, potentially impacting AHP and the MOA budget. AHP cannot increase Eklutna Project revenues to address increased costs resulting from the F&W Program. Without a vote on the EOC, AHP has no control over the costs. The MOA deserves to exercise its full voting rights on the EOC with respect to the F&W Program just as much as Chugach and MEA do.

Q.7 Prior to your approval to be the Utility of Director of AHP on June 2, 2024, what efforts did the MOA make to acquire the expertise required to fully participate as a voting member of the EOC?

A.7 The MOA publicly advertised a job posting for AHP General Manager from April 28, 2021 to May 28, 2021, which yielded 10 applicants. The MOA conducted additional recruitment efforts outside of formal job postings over the last several years, which yielded at least three candidates. Among other times, prior to February 3, 2022, the MOA consulted with Chugach and MEA prior to appointing me as its representative to the EOC. For example, there are two documents that reflect such consultation (February 3, 2022, letter from Matt Clarkson, Chugach Executive VP, General Counsel to Kolby A. Hickel, Deputy Municipal

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION
255 E. FIREWEED LANE, SUITE 200

(907) 277-1604

Manger, and Benjamin Bowman, Assistant Municipal Attorney; and February 3, 2022, e-mail from David Pease, MEA In-House Counsel, to Benjamin Bowman, Matthew Clarkson, and Todd Glass, Counsel for Chugach and MEA). Chugach and MEA have asserted attorney-client privilege for those documents.

Q.8 In his prefiled testimony, at p.8:7-10 (Q/A 12), Mr. Ori stated, "[t]he Commission therefore required that the MOA surrender its voting rights on the EOC for a term length at least equal to the terms of the related PPAs and until the MOA could attain the requisite sufficient knowledge of prudent utility practice and of the Railbelt electric system." How do you respond?

A.8 In Order U-18-102(44)/U-19-020(39)/U-19-021(39) ("Order 39"), the Commission stated that MOA's surrender of its voting rights on the EOC "must have a term at least equal to the term of the [Eklutna Power Purchase Agreement ("Eklutna PPA") with Chugach] and the [MEA Power Purchase Agreement ("MEA PPA")], as those agreements may be extended, and cannot be lifted until such time as [AHP] has shown to [the Commission's] satisfaction that [AHP] has acquired the expertise required to fully participate as a voting member of the EOC."[1]

As AHP has argued in its Brief Regarding Interpretation of Order 39, filed with the Commission on September 18, 2024, my interpretation of Order 39 is that the Commission can lift the MOA's surrender and reinstate the MOA's voting rights before the terms of the Eklutna PPA and MEA PPA expire, so long as the MOA and AHP show AHP has acquired

[1] Order 39 at 67 (May 28, 2020) (emphasis added).

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS
A PROFESSIONAL CORPORATION

ANCHORAGE, ALASKA 99503-2025
(907) 277-1604

the expertise required to fully participate as a voting member of the EOC to the Commission's satisfaction. I do not believe Order 39 barred the MOA from regaining its voting rights on the EOC until after the Eklutna PPA and MEA PPA expire, regardless of whether AHP has acquired the necessary expertise.

Q.9 In his prefiled testimony, at pp. 15:19 – 16:1 (Q/A 26), Mr. Zellers stated, "We read the Commission's surrender requirements in Order 39 as a fundamental requirement that the MOA should only regain its voting rights with respect to the EOC, implementation of the 1991 Agreement, and operations and maintenance of the Eklutna Project when and only when the MOA demonstrates its representatives will act in a manner consistent with prudent utility practices and with due respect for how the Eklutna Project plays a key role in the generation, transmission, and overall reliability of the Railbelt."

A.9 Mr. Zellers misstates what the Commission has stated it requires from the AHP owner representative in order for the MOA's surrender of its voting rights to be lifted. In Order 39, the Commission identified two characteristics that AHP's owner representative must have in order to lift the MOA's surrender of voting rights: knowledge of prudent utility practice and knowledge of the Railbelt generation and transmission system.[2]

III. EOC REPRESENTITIVE QUALIFICATIONS

Q.10 In his prefiled testimony, at pp. 6:14 – 7:2 (Q/A 10), Mr. Ori stated "[t]he EOC is responsible for the Eklutna Project's: (1) oversight of major maintenance and operations

(power plant and switchyard) and dam safety and inspections; and (2) preparation of the annual project budget, reliability and scheduling occurrences, project status reports, monthly revenue reports and energy usage among members, and notifications related to factors that limit energy or capacity, such as reservoir levels and transmission constraints." Please describe how you are qualified to fulfill these responsibilities.

A.10 I am a licensed engineer with a background in electrical engineering and approximately 20 years of utilities experience. As a licensed engineer, I understand the mechanics and theory of electricity generation and transmission. I have been the General Manager of the AWWU since February 2019 and was the Director of Operations and Maintenance and a Project Management Engineer/Supervisor before that. As the General Manager of AWWU, I oversee the operation and maintenance of the hydropower generation from AWWU's Eklutna Energy Station, as well as AWWU's Reservoir 3&4 Facility and 92nd Street PRV Facility. I also oversee AWWU's co-location with Chugach's Plant 2A. I am regularly involved in the construction of pump stations and other projects requiring significant power supply from the grid. This has given me a greater understanding of power systems and related issues such as power correction, phase, amplitude, and frequency of AC power.

I direct and oversee two economically regulated utilities with a combined annual revenue of $139 million, annual capital budgets of $35 million, and a net book value of over one billion dollars. I oversee 280 full-time AWWU employees as well as AWWU's two water treatment plants, three wastewater treatment plants, 1,600 miles of underground pipelines, and 200 water and sewer remote facilities.

During my time at AWWU, I have gained significant experience with operation capital expenditures, leading projects such as SCADA control system upgrades, and providing project management design and construction expertise in water transmission main projects, sewer pump station projects, and wastewater treatment process improvement projects. I have overseen several utility rate cases. I am also versed in compliance with the uniform system of accounts pursuant to 3 AAC 48.277, particularly subsections (9) through (13) for electric public utilities and (14) through (17) for water utilities.

In addition, I have experience representing AHP on the EOC in a non-voting capacity for the last several years. As such, I have knowledge of Eklutna Project matters including hydropower generation, scheduling, integration with other Railbelt resources, SCADA (as managed through Chugach), and project maintenance. I have also completed the National Hydropower Association ("NHA") Hydropower Systems Principals Course that covers topics such as operations, maintenance and dam safety.

Q.11 In his prefiled testimony, at p. 8:15-19 (Q/A 15), Mr. Zellers stated, "An effective member of the EOC should have deep knowledge of hydroelectric facilities, their operations and maintenance, and applicable prudent utility practices, as well as a broad understanding of the Railbelt, its systems, reliability standards, how utilities interact with each other to maintain the Railbelt system, and how the Eklutna Project plays a key role in the Railbelt." How do you respond?

A.11 As I discussed above, the Commission, in Order 39, identified two characteristics that AHP's owner representative must have in order to lift the MOA's surrender of voting rights: knowledge of prudent utility practice and knowledge of the Railbelt generation and transmission system.[3] While the characteristics listed by Mr. Zellers might be ideal, they go far above and beyond what the Commission has stated it requires of AHP's owner representative in order for the MOA's surrender of its voting rights to be lifted.

Q.12 How did the Commission identify knowledge of prudent utility practice and knowledge of the Railbelt generation and transmission system as the two characteristics that AHP's owner representative must have in order to lift the MOA's surrender of voting rights?

A.12 The Commission discussed testimony from Chugach Witness Dustin Highers, stating that based on his experience as EOC chair, "that to be an owner representative on the EOC, it was essential that the representative have knowledge of prudent utility practice and the Railbelt electric generation and transmission system."[4] The Commission also noted that knowledge of the Railbelt generation and transmission system and prudent utility practice are "the management standard specified for the [AHP] EOC representative in both the Eklutna PPA and the MEA PPA."[5]

IV. PRUDENT UTILITY PRACTICES

Q.13 In his prefiled testimony, at p. 10:5-6 (Q/A 18), Mr. Ori stated, "As a prudent utility operator, Chugach is obligated to use the least cost, most efficient means to operate and maintain our assets." Do you agree that a prudent utility operator is obligated to use the least cost, most efficient means to operate and maintain our assets?

A.13 No, minimizing costs of operation and maintenance, to the exclusion of all other considerations, is not prudent utility practice. As defined in the PPAs between the MOA and Chugach and the MOA and MEA, Prudent Utility Practice requires, among other things, the application of "reasonable judgment" to "accomplish the desired result at the lowest reasonable cost consistent with good business practices, reliability, safety, expedition and the requirements of any governing authority having jurisdiction."[6] Moreover, even simply with respect to costs, there are short term costs and total lifecycle costs that sometimes are in competition and need to be considered and balanced.

Q.14 Are there guidelines for Prudent Utility Practice other than the definitions in the PPAs between the MOA and Chugach and the MOA and MEA as discussed above?

A.14 As a regulated utility, AHP must follow the standards under 3 AAC 52.400 – 3 AAC 52.500, "which ensure that electric utilities will render safe, reliable, and prompt service to the public "and "implement them with diligence and good faith to maintain the proper balance between economic effectiveness and the provision of safe, adequate service to the

public."[7] In addition, the Anchorage Municipal Charter, § 16.01(a), states "[e]ach municipal utility shall be operated in accordance with the general standards common to utilities providing the same utility service."

Q.15 In his prefiled testimony, at p.7:17-19 (Q/A 13), Mr. Zellers stated, "[I]t is important for the EOC to follow prudent utility practices to maintain and operate the Eklutna Project in such a way as to maximize its benefit to all members." How do you respond?

A.15 The statement appears to be true and supports the MOA's request to lift the surrender of its voting rights. The only way the MOA can guarantee the EOC maximizes its benefit to all members is for the MOA to participate fully as a voting member.

Q.16 In his prefiled testimony, at p. 10:9-12 (Q/A 19), Mr. Zellers stated, "As the MOA-MEA PPA states, we make decisions that are 'expected to accomplish the desired result at the lowest reasonable cost consistent with good business practices, reliability, safety, expedition and the requirements of any governing authority having jurisdiction.'" How do you respond?

A.16 The statement appears to be true and supports the MOA's request to lift the surrender of its voting rights. The only way the MOA has a say determining the desired result and the lowest reasonable cost is for the MOA to participate fully on the EOC as a voting member.

V. EFFECT OF MOA REGAINING VOTING RIGHTS

Q.17 In his prefiled testimony, at p. 9:9-13 (Q/A 17), Mr. Zellers stated, "Before the acquisition transaction, the costs were allocated among the Project Owners in a manner consistent with ownership interests: MOA – 53.33%; Chugach – 30%; MEA 16.67%. After the transaction (and effectiveness of the PPAs) this became: Chugach – 64.29%; MOA – 19.04%; MEA 16.67%." Should the fact the MOA's cost allocation is less than its ownership interest have an effect on the MOA's voting rights?

A.17 No. First, the MOA's ownership interest has not changed. The MOA is still the majority owner with 53.33%. Second, voting rights were set by contract among the Project owners based on ownership, not based on then-current cost allocations or any cost allocations as they may change in the future. Chugach's acquisition of substantially all of the assets of ML&P did not change those contractually assigned voting rights or assign any portion of the MOA's voting rights to Chugach. If Chugach had wanted to purchase the MOA's voting rights in its acquisition of ML&P or purchase the right to exercise the MOA's voting rights commensurate with cost allocation, Chugach could and should have bargained for that valuable right and provided the MOA with valuable consideration. Third, after the PPAs expire, the cost allocation could revert back to what it was previously, consistent with ownership interests. Until then, the MOA needs its voting rights to protect the valuable assets that it still owns and may continue to own even after the expiration of the PPAs.

Q.18 In his prefiled testimony, at p. 15:12-18 (Q/A 26), Mr. Zellers stated, "Should the MOA regain its voting rights, we expect that the Assembly will attempt to undo, redo or otherwise block the Project Owners' implementation of the Final Fish and Wildlife Program approved by the Governor on October 2, 2024 in pursuit of its own policy goals. We do not trust how the MOA might act if it regains majority voting rights in matters related to the Eklutna Project, the 1991 Agreement, and implementation of the Final Fish and Wildlife Program." How do you respond?

A.18 According to the Anchorage Municipal Charter, § 16.01(a), which binds every element of the Municipality, "Each municipal utility," including AHP, "shall be operated in accordance with the general standards common to utilities providing the same utility service." There is thus no risk that the MOA will use its vote on the EOC in a manner that is inconsistent with prudent utility practice. Mr. Zellers appears to speculate that, within the zone of choices available to all the Project Owners under prudent utility practice, he might end up having different preferences from the Municipality. Any such good faith disagreements among the Project Owners, if they do occur, can and should be resolved using the traditional mechanisms that have always been used to resolve disputes among the Project Owners. The mere possibility of future disagreement among the Project Owners is no basis on which to deny the majority owner its voting rights under the applicable contracts and Order 39.

Q.19 Assuming the Commission finds that you have the expertise required to fully participate as a voting member of the EOC and lifts the MOA's surrender of its voting rights, what would happen if or when you leave your position as Utility Director of AHP?

A.19 The MOA would hire a qualified replacement and would rely on the expertise and knowledge of any other AHP executives or employees that may exist at the time of such an event. My replacement, in conjunction with the other officers and employees of AHP, must possess such knowledge. Additionally, as stated in my prefiled direct testimony, the MOA has contracts with professional engineering firms that have knowledge of generation and transmission and there are other members of the MOA Administration that have prudent management experience.

VI. CONFLICT OF INTEREST

Q.20 Prior to AHP filing its Request for Acknowledge of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee with the Commission, has either Chugach or MEA raised concerns about actual or potential conflicts of interest between ML&P or AHP and AWWU that may impact AHP's participation on the EOC?

A.20 I am not aware of Chugach or MEA raising any such concerns. During discovery, Mr. Ori stated he "was not aware of any concerns raised by Chugach to the MOA about potential or actual conflicts of interests between ML&P and AWWU that impacted ML&P's participation on the EOC.[8] Mr. Zellers stated that "as the current MEA representative on the EOC, is not aware of any concerns raised by MEA to the MOA during Mr. Zellers's

term on the EOC, about potential conflict of interest between ML&P and AWWU that arose during his time on the EOC."[9] Mr. Zellers noted "that water rights and allocation of water related benefits were allocated to, and subsumed within, ML&P's interests, and to his knowledge, no conflicts between ML&P and AWWU related to water rights and allocation were managed at the EOC."[10]

Q.21 As AHP's owner representative on the EOC, you may be involved in confidential discussions about matters and strategy relating to AWWU. Do you believe your role as both the Utility Director of AHP and the General Manager of AWWU would present a conflict of interest ?

A.21 No. As I stated in my prefiled direct testimony, under the Memorandum of Understanding between AHP and AWWU ("MOU"),[11] I will act solely as the Utility Director of AHP and will abstain from any decisions that need to be made by the General Manager of AWWU in any instance of conflicting interests between AHP and AWWU.

Under the MOU, I will not take any action in my role as the General Manager of AWWU on "issues that effect the interest, operations, or obligations" of AHP. In such instances, AWWU's interests will be represented by AWWU's Assistant General Manager. All decisions I will make in my role as the AHP representative on the EOC will be consistent with prudent utility practices and the rights and obligations of Chugach and MEA as required by the Eklutna PPA and MEA PPA.

Q.22 In his prefiled testimony, at p. 20:14-18 (Q/A 34), Mr. Zellers stated, "As we move forward implementing the 1991 Agreement and the Final Program, the Project Owners will need to have confidential discussions about various matters and strategy as it related to AWWU. It makes no sense and is a direct conflict of interest to have the General Manager of AWWU in those discussions." How do you respond?

A.22 As I stated above, under the MOU, I will make all decisions as they related to AWWU in my role as the AHP representative on the EOC and not as the General Manger of AWWU. My decisions will be consistent with prudent utility practices and the rights and obligations of Chugach and MEA as required by the Eklutna PPA and MEA PPA. AHP and AWWU have entered into a Supplemental MOU, dated October 29, 2024.[12] Under this Supplemental MOU, I will not exercise the powers of the General Manger of AWWU until a final decision is issued in this docket and any judicial review is compete. As the Director of AHP, I will advise AWWU on matters provided there is no risk of convict between the interests of AHP and the interests of AWWU regarding the Eklutna Hydroelectric Project. If the MOA regains its voting rights, I will promptly resign from AWWU.

VII. PUMPED STORAGE HYDROPOWER ** PROVISIONAL TESTIMONY **

The provisional testimony below and associated exhibits are presented for consideration only if the Commission issues a decision expanding the scope of this docket to include PSH options at the Eklutna Project.

[12] **Exhibit MAC-6**.

LAW OFFICES OF

(907) 277-1604

Q.23 In his prefiled testimony, at p. 12:8-13 (Q/A 21), Mr. Ori stated, "I do know that the Eklutna Project designed and built in the 1950s was not designed to be operated in a bidirectional manner. Replacing the existing turbines alone would be quite costly. Based on my professional experience, I expect that retrofitting the project to operate in a manner it was never intended to operate, but consistent with prudent utility practices, would be very costly." In his prefiled testimony, at Q/A 31, Mr. Zellers stated, "The Eklutna Project was built in the 1950s, and similar to other hydroelectric projects developed during that time, was never designed to be operated in a bidirectional manner, so the engineering and retrofitting costs will be substantial and the risks to the Project could be well beyond those that a prudent utility operator would take." How do you respond?

A.23 First, the MOA's proposed PSH options were a "concept." The MOA presented PSH concepts to get feedback from the Assembly to request pursuing an evaluation through the Governor's F&W Program review process. As noted in the MOA's presentation, there are data gaps to be filled and much vetting and analysis still to be done, hence why the MOA request was simply to further evaluate the PSH options that are available at Eklutna.

Second, regardless of whether 80 years ago the Eklutna Project was originally designed for bidirectional PSH, like most systems, including the Eklutna tunnel, the Eklutna Project can be modified or retrofitted to uses that were not specifically foreseen. And Chugach and MEA have not "engineer[ed] or model[ed] [PSH options] to see if it was economically or engineeringly feasible at [Eklutna]."[13]

[13] **Exhibit MAC-7** at 31.

LAW OFFICES OF
KEMPPEL, HUFFMAN AND ELLIS

(907) 277-1604

Q.24 In his prefiled testimony, at pp. 17:23 – 18:3 (Q/A 30), Mr. Zellers stated, "Our engineering consultants . . . determined that converting the Eklutna Project to a pumped storage project would present significant technical and logistical challenges, making the proposal infeasible from an engineering perspective and likely economically prohibitive." How do you respond?

A.24 Without a formal engineering evaluation to review, those statements are premature. And more importantly, PSH is a concept with many options and variations that can be used to convert variable renewable energy sources ("VREs") to firm power to benefit the Utilities and Railbelt, as noted by the Owners themselves in their November 2022 response to the USF&W comments requesting PSH be evaluated with fish bypass.[14] Further, considering the looming Cook Inlet gas shortage, it is prudent and reasonable to explore alternative energy sources. But without an evaluation, the feasibility and economics cannot be known. After the further evaluation of PSH that is mandated by the Governor's F&W Program has been conducted, I will evaluate in good faith whether, in my professional opinion, implementing any PSH option at Eklutna Lake is feasible and consistent with prudent utility practice, and I will also evaluate in good faith how a PSH option scores under the public interest factors set out in the 1991 Fish and Wildlife Agreement. I will not vote on the EOC to advance a PSH option that I believe to be inconsistent with prudent utility practice.

BEFORE THE REGULATORY COMMISSION OF ALASKA

Before Commissioners:	John M. Espindola, Chairman Robert M. Pickett John C. Springsteen
In the Matter of the Petition Filed by the Municipality of Anchorage d/b/a Anchorage Hydropower for Acknowledgement of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee	U-24-024

CHUGACH ELECTRIC ASSOCIATION, INC.'S RESPONSE TO MUNICIPALITY OF ANCHORAGE D/B/A ANCHORAGE HYDROPOWER'S SECOND SET OF DISCOVERY REQUESTS TO CHUGACH ELECTRIC ASSOCIATION, INC. (AHP-CEA-2)

Chugach Electric Association ("Chugach") hereby provides its response to the Municipality of Anchorage ("MOA"), d/b/a Anchorage Hydropower's ("AHP") Second Set of Discovery Requests to Chugach Electric Association, Inc., dated October 11, 2024. All responses to discovery are prepared by Chugach in consultation with counsel.

PRELIMINARY STATEMENT

Discovery in this docket is not complete. Chugach reserves the right to supplement these responses as discovery proceeds and additional facts, information, evidence, documents, and other matters are discovered. The following responses are complete based on Chugach's current knowledge, information, and belief. These responses were prepared based on Chugach's good faith interpretation of the discovery requests and are subject to correction for inadvertent errors or omissions.

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

representation on the EOC," complied with Order 39. If the answer to this request for admission is anything other than an unqualified admission, please state all facts and reasons that support such answer.

Response: Chugach objects to this request to the extent that it requests a legal conclusion regarding a legal issue currently being considered by the Commission in this proceeding. Please see the Joint Brief for Chugach's legal reasoning addressing the Commission's meaning behind including a surrender requirement and specified term in Order 39. Refer to the Joint Brief, which discusses Chugach's views regarding the ambiguity in the Surrender's reference to "RCA requirements" in the above-mentioned surrender document. Additionally, Chugach objects to this request to the extent it requests Chugach to speculate on the intention of the RCA in Order 39. Without waiving this objection, Chugach responds as follows: Mr. Ori admits that, at the time the MOA's surrender was signed by all three owner parties and submitted to the Commission, his understanding was that MOA had fully complied with Order 39's requirements regarding the surrender.

Person(s) Supplying Information: Eugene A. Ori, Counsel.

AHP-CEA-2-3: Please admit or deny that before the acquisition of ML&P's assets by Chugach, Chugach never raised any concerns to the MOA about potential or actual conflicts of interest between ML&P and Anchorage Water and Wastewater Utility ("AWWU") that impacted ML&P's participation on the EOC. If the answer to this request for admission is anything other than an unqualified admission, please state all facts and reasons that support such answer.

Response: Chugach objects to this request to the extent that it is overly broad, unduly burdensome, seeks information that is not relevant and not reasonably calculated to lead to the discovery of admissible evidence, and is vague or ambitious,

WILSON SONSINI GOODRICH & ROSATI, P.C.
701 Fifth Avenue, Suite 5100
Seattle, WA 98104-7036
PHONE 206.883.2500

particularly regarding the time period during which the question seeks information. Without waiving this objection, Chugach responds as follows: During his time working at ML&P's – during which Mr. Ori oversaw operations and maintenance for all electric generation assets, including the Eklutna Project, and when he participated in the EOC on ML&P's behalf – Mr. Ori was not aware of any concerns raised by Chugach to the MOA about potential or actual conflicts of interest between ML&P and AWWU that impacted ML&P's participation on the EOC.

Person(s) Supplying Information: Eugene A. Ori, Counsel.

AHP-CEA-2-4: Please refer to the prefiled responsive testimony of Tony Zellers at page 13, Q/A 24, that references a "Project Owners group" that "implement[ed] the 1991 Agreement from 2019 through June 2024 . . . ." Please respond to the following:

(a) Please produce any documents that establish this group and its operating procedures, including any voting and decision-making methods.

(b) Please identify Chugach's representative(s) on this group.

(c) Please identify what decisions this group was established to make.

(d) Please describe the qualifications required to be a representative member of this group.

Response:

(a) Chugach objects to this request to the extent that it is it is vague or ambiguous and not relevant to the scope of Mr. Ori's Prefiled Responsive Testimony. As Mr. Ori notes in his answer to Question 14 in his Prefiled Responsive Testimony, he has not typically participated in such Project Owners group while he worked at ML&P or at Chugach. Notwithstanding such objections, Chugach refers to Mr. Zellers's response and the documents that he is producing in answer to this request in MEA-2-4(a).

SUPPLEMENTAL MEMORANDUM OF UNDERSTANDING BETWEEN ANCHORAGE WATER AND WASTEWATER UTILITY AND ANCHORAGE HYDROPOWER UTILITY RE RESOLUTION OF POTENTIAL CONFLICTS OF INTEREST

WHEREAS, Anchorage Water and Wastewater Utility (AWWU) and Anchorage Hydropower Utility (AHP) both utilize Eklutna Lake as part of their operations; AWWU as a source of drinking water and AHP as a hydropower production water source and storage;

WHEREAS, AWWU currently purchases water from the Eklutna Hydroelectric Owners, comprised of Chugach Electric Association, Inc., Matanuska Electric Association, Inc., and AHP;

WHEREAS, in light of the above circumstances, certain decisions regarding the management of AHP and AWWU may impact the other utility;

WHEREAS, Mark Corsentino has been appointed and confirmed as the general manager of AWWU and has also been appointed and confirmed as the Director of AHP;

WHEREAS, Mark Schimscheimer is the Engineering Director of AWWU and has also been designated to provide technical and engineering support to AHP;

WHEREAS, a memorandum of understanding was executed on July 18, 2024, between representatives of AWWU, AHP, and the Municipal Manager to address and resolve potential conflict issues;

WHEREAS, that memorandum of understanding provided that "in all instances of conflicting interest between AWWU and AH[P]" "Mark Corsentino shall abstain from any decisions that need to be made by the General Manager of AWWU" and "AWWU's interests shall be represented by, and the General Manager's authority delegated to, the AWWU Assistant General Manager (currently David Persinger)" and provided that AHP shall pay 20% of Mr. Corsentino's salary; and

WHEREAS, the Governor issued a final Fish and Wildlife Program on October 2, 2024, that, among other things, requires the Eklutna Hydroelectric Owners to consider pumped storage hydropower on Eklutna Lake and creates a pathway to implementation; and

WHEREAS, in light of the final Fish and Wildlife Program, the Director of AHP will need to devote substantially more time and attention to AHP duties going forward;

NOW THEREFORE, AWWU and AHP agree to supplement the memorandum of understanding dated July 18, 2024, as follows:

Docusign Envelope ID: 817F08CC-D8FB-40F7-A15C-E96A70CB6FC7

1. The Director of AHP (currently Mark Corsentino) will not exercise the powers of the General Manager of AWWU. The Director of AHP will not advise or otherwise assist or act for AWWU and will act for the Municipality solely in his capacity as Director of AHP, except that the AHP Director may continue to advise AWWU on the following matters in which there is no risk of conflict between the interests of AHP and the interests of AWWU regarding the Eklutna Hydroelectric Project:
    a. All Anchorage Sewer Utility (wastewater) matters;
    b. Certain Anchorage Water Utility matters, but only to the extent they are unrelated to the Eklutna Hydroelectric Project:
        i. Environmental Protection Agency and Alaska Department of Environmental Conversation regulatory matters;
        ii. AWWU Board, Assembly, stakeholder, and customer coordination;
        iii. Strategic planning;
        iv. Ship Creek and well water rights;
        v. Human resources related issues;
        vi. Legal and Risk issues;
        vii. Capital planning and budgeting;
        viii. Regulatory Commission of Alaska matters;
        ix. Health, safety and security; and
        x. Finance and auditing.

    The AHP Director's salary will be paid by AHP, and AWWU will not be responsible for any portion of that salary.
2. The AWWU Assistant General Manager (currently David Persinger) is delegated all powers of the AWWU General Manager. If that delegation continues for longer than 60 days from the date of execution of this supplemental memorandum, the administration will submit to the assembly a proposed resolution pursuant to AMC 3.20.020A.5.iii.
3. This supplemental memorandum of understanding is effective immediately upon the date of the final signature below.
4. The arrangements provided in Sections 1 and 2 will persist until final resolution of AHP's pending Request for Acknowledge of Acquisition of Expertise Required to Participate as a Voting Member of the Eklutna Operating Committee, filed with the Regulatory Commission of Alaska (Docket U-24-024), and any judicial review thereof.
    a. If the Municipality regains its voting rights, the Director of AHP will act for the Municipality solely in his or her capacity as Director of AHP and will not hold (and will promptly resign from) any office or employment with AWWU. The AHP Director will not advise or otherwise assist AWWU except in matters listed in Section 1.a and b above. The Mayor shall appoint, subject to Assembly confirmation, a General Manager of AWWU, who shall not simultaneously hold any office or employment with AHP. The AHP Director shall be compensated from AHP's budget and shall not be compensated from AWWU's budget. The AHP Director, and any successor,

Docusign Envelope ID: 817F08CC-D8FB-40F7-A15C-E96A70CB6FC7

shall be appointed based on consideration of that person's ability, in conjunction with any other AHP officer or employee, to exercise AHP's voting rights on the Eklutna Owner's Committee consistent with all applicable legal requirements, including prudent utility practice.

b. If the Municipality does not regain its voting rights, the delegation of power to the Assistant General Manager under Section 2 above will cease and the General Manager of AWWU will once again exercise all powers of that office regardless of his or her contemporaneous services as Director of AHP. The AHP Director and AWWU General Manager may assist and advise each other on any matter, including those related to the Eklutna Hydroelectric Project. The salary of the AHP Director and AWWU General Manager will be drawn from the AHP and AWWU budgets as provided for by the administration and by law, as appropriate.

5. The provisions of the memorandum of understanding dated July 18, 2024, including the provisions regarding Mr. Schimscheimer, shall remain in effect to the extent they do not conflict with the provisions of this supplemental memorandum of understanding.
6. The AHP Director, the AWWU General Manager, the AWWU Assistant General Manager, and the Municipal Manager, with the advice of the Municipal Attorney, are responsible for ensuring the provisions of the memorandum of understanding dated July 18, 2024, and this supplemental memorandum of understanding are carried into effect.
7. This supplemental memorandum of understanding is not intended to, and does not, create any right or claim, substantive or procedural, enforceable at law or equity, by any party against the Municipality, its agencies, its officers, or any person.

Dear Parties,

Thank you to the Owners for your submission on April 25, 2024, of the Proposed Final Fish and Wildlife Program (Proposed Final Program) for the Eklutna Hydropower Project (Project) and to the remaining parties for their comments and participation in developing the Proposed Final Program.

As you know, through an act of Congress, the Project was sold by the federal government to Chugach Electric Association (CEA), Matanuska Electric Association (MEA), and Anchorage

Municipal Light & Power (through the Municipality of Anchorage). As part of this transaction, the 1991 Fish and Wildlife Agreement (Agreement) laid out the process for the purchasers of the Project to fund studies to examine and quantify impacts to fish and wildlife from the Project, and to develop a proposed Final Program for the protection, mitigation, and enhancement of fish and wildlife effected by the Project and for the other Parties to offer their comments.

As Governor, my duties under the Agreement are to evaluate the Proposed Final Program, attempt to reconcile differences between the Parties to the Agreement, and establish a Final Program that "adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources."

The evaluation process requires me to give "equal consideration" to eight factors to "ensure that Eklutna [is] best adapted for power generation and other beneficial public uses." The factors are: purposes of efficient and economical power production; energy conservation; the protection, mitigation of damage to, and enhancement of fish and wildlife (including related spawning grounds and habitat); the protection of recreational opportunities; municipal water supplies; the preservation of other aspects of environmental quality; other beneficial public uses; and requirements of State law.

The Final Program established today includes my evaluation of these eight criteria and my amendments to the Proposed Final Program that attempt to reconcile differences among the Parties and the Native Village of Eklutna.

The Proposed Final Program restored year-round water flows to the Eklutna River by connecting Eklutna Lake to the existing Anchorage Water and Wastewater Utility (AWWU) infrastructure; required the Purchasers to provide funding for ongoing monitoring studies, physical habitat enhancement, and lakeside trail repairs; the creation of a Monitoring and Adaptive Management Committee (Committee); and two limited reopeners of the Program for the potential construction of a Fixed Wheel Gate to replace the existing outlet and spillway and for the potential construction of fish passage into and out of Eklutna Lake.

In accordance with my responsibilities to attempt to reconcile differences, I have adopted the Proposed Final Program with the establishment of three amendments to the Proposed Final Program:

1. I added a Governor-appointed seat to the Monitoring and Adaptative Management Committee. This allows future Governors and myself to continue our responsibility under the Agreement as the work of the Committee is ongoing in the final Program.

2. I accepted the request by federal signatories, U.S. Fish and Wildlife Service, and National Marine Fisheries Service, to modify the Proposed Final Program. The Proposed Final Program allocated up to $10 million to study and potentially construct the Fixed Wheel Gate at the Eklutna Dam. If the Fixed Wheel Gate is determined to not be structurally or economically feasible, as requested by the federal parties, the remaining funds not expended of up to $10 million will be made available to the Monitoring and Adaptive

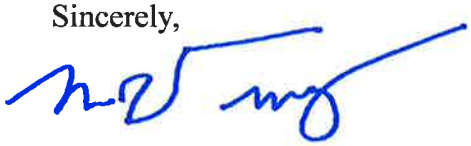
Management Committee for additional studies or measures that protect, mitigate damage to, or enhance fish and wildlife habitat.

3. I am accepting the request by the Municipality of Anchorage and Native Village of Eklutna in their joint resolution of September 5, 2024, to evaluate the Pumped Storage Hydro alternative. However, the Agreement does not provide any party the authority to unilaterally suspend or delay implementation of the Final Program and therefore the necessary work to design, permit, and construct the connection to AWWU's infrastructure and to evaluate the Fixed Wheel Gate is required to begin immediately.

The Final Fish and Wildlife Program established today under the Agreement balances the eight factors I am required to consider, and the Program is designed to be an iterative one that will be able to adapt to changing conditions and technologies well before the process is required to repeat itself.

I want to thank the Parties, the Native Village of Eklutna, and the members of the public who helped shape this Final Program with their time, resources, input, and participation over the past five years. This is not the end of the process, and I am committed to seeing this Final Program successfully enacted. I encourage everyone to join me in working together to implement this Program without delay.

Sincerely,



Mike Dunleavy
Governor

BEFORE GOVERNOR MIKE DUNLEAVY

IN THE MATTER OF THE EKLUTNA	**:**	**DECISION**
RIVER FISH & WILDLIFE PROGRAM	**:**	**October 2, 2024**

This matter comes before the Governor pursuant to the 1991 Agreement ("Agreement") among the Municipality of Anchorage ("MOA"), Chugach Electric Association, Inc. ("Chugach"), Matanuska Electric Association, Inc. ("Matanuska") (MOA, Chugach and Matanuska are collectively referred to as "Eklutna Purchasers" or "Owners"; when discussing issues where the Owners disagree, Chugach and Matanuska will be referred to as the "Operators" and MOA will be listed separately), the United States Fish & Wildlife Service ("FWS"), The National Marine Fisheries Service ("NMFS"), the Alaska Energy Authority ("AEA") and the State of Alaska ("State") concerning the protection, mitigation of damages to, and enhancement of fish and wildlife affected by the Eklutna Hydroelectric Project ("Project") near the Native Village of Eklutna ("NVE").[1] Per the Agreement the Governor is required to establish a "final Fish and Wildlife Program that adequately and equitably protects, mitigates damage to, and enhances fish and wildlife resources affected by the Project".[2]

I. PROJECT HISTORY

---

[1] The Agreement also involved the Snettisham Hydroelectric Project, but that project is not part of this decision.

[2] Agreement, Section 5 at P. 4.

The U. S. Bureau of Reclamation built the Project in the 1950s and it was rehabilitated over time. It currently consists of a dam which is an earth and rockfill structure 815 feetlong and 41 feet high with a rectangular spillway that runs through the dam.[3] The intake structure for the Project is located 36 feet below the natural Eklutna Lake level. From there, water is diverted north into a 4.6-mile-long tunnel through Goat Mountain and then into a 1,370-foot-long penstock before reaching the powerhouse located on Old Glenn Highway. The tailrace flows under the highway and then discharges into the Knik River. The powerhouse contains two generating units.[4] Eklutna Lake, approximately seven miles long and one mile wide, is located within Chugach State Park and provides almost 90 percent of the domestic water supply for the Municipality of Anchorage. As of 2018 the Project produced 177,438 megawatt hours of clean energy, enough to power more than 24,600 residential homes for an entire year.[5]

The federal government owned and operated the project until October 1997 when it sold it to the Eklutna Purchasers and is currently owned by Chugach (30%), Matanuska (16.67%) and MOA (53.33%), however, it has been operated exclusively by Chugach and Matanuska since October 30, 2020.[6] The purchase by the Eklutna Purchasers also included a requirement that the Eklutna Purchasers enter into the Agreement with NMFS,

---

3 https://eklutnahydro.com/background/.

4 Id.

5 Id.

6 MOA was required to surrender its right to operate the Project. RCA Order U-18-102(44)/U-19-020(39)/U-19-021(39). Surrender of Eklutna Operation Committee (EOC) Voting Rights dated as of October 27, 2020, and filed with the RCA in docket number U-18-102(44).

FWS, AEA, and the State (the Eklutna Purchasers, NMFS, FWS, AEA and State are collectively referred to as the "Parties[7]").

II. THE AGREEMENT

To obtain Congressional approval of the Project sale to the Eklutna Purchasers and as a substitute for federal licensing under the Federal Power Act[8] and its accompanying regulations[9], the Parties were required to enter into the Agreement to develop a fish and wildlife program that provides for the protection, mitigation of damages to, and enhancement of fish and wildlife affected by the Project.[10] The Agreement outlined a 35 year timeline to develop the fish and wildlife program. The timeline ran from the date of the sale, i.e., October 2, 1997, and initially culminates with the complete implementation of the fish and wildlife program by October 2, 2032. This process is designed to reoccur every 35 years.

A. Agreement Requirements

The Agreement set forth a comprehensive process to arrive at a final fish and wildlife plan. It required the Parties to perform the following:

---

7 For purposes of this decision, Parties will also include NVE, unless stated otherwise, even though they are not an actual party to the Agreement.

8 16 U.S. C. §791a et seq.

9 18 C.F.R. 4.1 et seq.

10 The Agreement was a substitute for the requirements of the Federal Power Act and its regulations and there are no requirements in the Agreement imposing those laws on the Parties. Rather, the Agreement specifically spells out all requirements the Parties must follow to develop a fish and wildlife program.

a. Purchasers to fund and perform studies in consultation with the other Parties and other State of Alaska agencies to "examine, and quantify, if possible, the impacts to fish and wildlife from the Project and to develop proposals for the protection, mitigation, and enhancement of fish and wildlife affected by the Project."[11]

b. Purchasers develop a draft program, the remaining Parties and other interested persons comment on the draft program, and the Purchasers reply to the comments, with all comments and the replies to be made part of the public record.[12]

c. Preparation of draft summary of the study results and a draft Fish and Wildlife Program by Purchasers.[13] Purchasers to hold public meetings and receive public comments on the program.[14]

d. Purchasers develop a Proposed Final Fish and Wildlife Program ("Proposed Final Program"), an explanation of its reasons for the final program, and provide them and all public comments to the other Parties and the Governor.[15]

---

11 Agreement, Section 2, P. 2.
12 Id. Section 3, P. 2.
13 Id. Section 4, P. 3.
14 Id. Section 5, P. 3.
15 Id. Section 5, P. 4.

e. The remaining Parties prepare written comments to the Proposed Final Program and Purchasers prepare a reply. The comments and reply are provided to the Governor.[16]

f. The Governor establishes a Final Fish and Wildlife Program.[17]

g. The Agreement requires the Owners to implement the final Program within 30 years of the transaction date and for the Governor to approve the Final Fish and Wildlife Program three years prior to commencement of the implementation of the Program.[18]

III. PROPOSED FINAL PROGRAM AND PARTIES' COMMENTS[19]

The Proposed Final Program was provided to the Parties and the Governor on April 25, 2024. The Proposed Final Program can be summarized as follows[20]:

1. Proposed Final Program

a. Construction of a new valve and release structure ("Eklutna River Release Facility") located adjacent to the existing Anchorage Water and Wastewater Utility ("AWWU") portal valve to restore year-round water

---

16 Id. Section 5, P. 4.

17 Id.

18 Id. Section 7, P. 4-5. The transaction date is October 2, 1997, which is the date of the sale of the Eklutna Project to the Owners. Program implementation must therefore begin by October 2, 2027, and the Governor's approved final Plan must be issued by October 2, 2024, i.e., three years prior to the commencement of Plan implementation.

19 AEA did not provide comments to the Final Proposed Fish and Wildlife Program. NVE did provide comments even though it was not a party to the Agreement. I will consider those comments as part of this decision.

20 The Final Proposed Fish and Wildlife Program is attached hereto as Appendix "A".

flow to the Eklutna River ("River") one mile downstream from the Eklutna Dam;[21]

1. The Eklutna River Release Facility is projected to provide year-round water flow to the River one mile below the dam at rates of 27 cubic feet per second to 40 cubic feet per second;[22]
2. The Eklutna River Release Facility is designed to increase available spawning habitat for chinook, coho, pink and chum salmon;

b. Automation of the existing outlet gate at the base of the spillway at the Eklutna Dam for remote operation;[23]

c. Development of a channel maintenance flow regime to support fish habitat over the long term;[24]

d. Construction of eight new bridges for Anchorage Water and Wastewater Utility (AWWU) at each existing ford crossing to be designed and built to withstand the projected flows;[25]

e. One-time payment of $234,000 for lakeside trail repairs;[26]

f. Monitoring and Adaptive Management Plan;[27]
