

Municipal Light & Power Organization Chart

Municipal Light & Power

2008 Utility Profile

Organization

Municipal Light & Power (ML&P) is functionally structured into seven operating divisions: Generation & Power Management, Engineering, Operations, Finance, Regulatory Affairs, Customer Service, and Systems & Communication. Each division manager reports directly to the General Manager. Furthermore, ML&P's administrative, personnel, and marketing efforts are performed as part of the General Manager's administrative group.

As of December 31, 2006, ML&P had 240 employees and total labor and benefit costs of approximately \$31.8 million, which includes operating and capital. Of these 240 employees, 168 were covered by a labor agreement with the IBEW and 72 were non-represented (covered by the Municipal Personnel Rules).

History

The history of ML&P is closely linked with the history and development of Anchorage itself. ML&P has emerged to serve a city with approximately half the population of the state at rates which are among the lowest in Alaska and that compare favorably with those of many metropolitan areas in the lower 48 states. ML&P has evolved into an acknowledged energy leader by being customer oriented, innovative, and responsive to customers' needs for safe, economical, and reliable electrical service.

When the Alaska Engineering Commission (AEC) initiated electrical service in Anchorage in 1916, Anchorage was just a small tent city in the wilderness. The City operated the electrical distribution system under a lease agreement, first with the AEC and later with the Alaska Railroad. This lease agreement continued until 1932 when the citizens of the young city bought the electrical distribution system for \$11,351.

A small steam plant and diesel power generators supplied Anchorage with electricity until 1929 when the private Anchorage Power & Light Company began supplying the community with electricity from a hydroelectric power plant on the Eklutna River, 40 miles northeast of Anchorage. The City acquired the Eklutna Plant from the Anchorage Power & Light Company in 1943. In 1955, the City contracted for 16,000 kilowatts (kW) of the generating capacity of a new Eklutna Hydroelectric power project of the U.S. Bureau of Reclamation and transferred "Little Eklutna" to that federal agency.

Between 1962 and 1984, ML&P installed seven turbine-generating units fired by natural gas and one heat recovery steam turbine generating unit. Unit 3, which was purchased in 1968 and remained in service for 36 years, was retired in 2004. Unit 3's replacement, which is the first new generating unit for ML&P in more than 20 years, began commercial operation August 16, 2007. The new 28.8 megawatt simple cycle gas turbine is a GE LM2500+ and cost \$26.5 million. Five of the seven gas fired turbines have dual-fuel capability, which enhances ML&P's reliability in the event of a disruption of the natural gas transportation system. In addition to its two power plants, ML&P operates nineteen modern substations and is the south-end controller of the Intertie from Anchorage to Fairbanks.

In late 1996, the Municipality purchased a one-third working interest in the Beluga River Gas Field, which established a guaranteed fuel supply and serves as a means to stabilize fuel prices for years to come. In 1997, ML&P in association with Chugach Electric Association and Matanuska Electric Association purchased the Eklutna Hydroelectric Project from the federal government.

Services

ML&P's service area encompasses 19.9 contiguous square miles including a large portion of the commercial and high-density residential areas of the Municipality. In 2006, the average number of residential and commercial customers was 23,943 and 6,144 respectively. Approximately twenty percent of ML&P's customer base consumes seventy seven percent of its output.

In 2006, electric retail sales totaled 1,103,168 MWh resulting in revenues of \$81,088,540. Total gas operating revenues was \$15,130,257. Total electric and gas operating revenues including Miscellaneous Operating Revenue, Sales for Resale, Other Utility Operating Income, and Water Diversion Compensation was \$114,962,670. ML&P also has agreements to supply Fort Richardson Army Base and Elmendorf Air Force Base with firm electrical service.

Regulation

ML&P is subject to economic regulation by the Regulatory Commission of Alaska (RCA), which is composed of five members appointed to six-year staggered terms by the Governor and confirmed by the State Legislature. RCA regulation encompasses service area definition, tariff rules and regulations, service quality criteria and establishment of recurring rates and miscellaneous fees and charges.

The Utility is also advised by the ML&P Electric Commission, which was created in 1963 and is composed of seven members appointed to staggered three-year terms by the Mayor with the approval of the Anchorage Assembly. The General Manager of ML&P serves in an ex officio capacity as Executive Secretary of the Commission.

The Commission reviews electric service policies and practices and reviews the budget and operations of ML&P. From these reviews, the Commission annually submits recommendations to the Mayor. It also conducts public hearings on matters pertaining to electric rates, regulations and related matters and makes recommendations to the Mayor and Assembly. It normally holds one meeting per month and calls special meetings as the need arises.

Environmental Mandates

Environmental mandates imposed by the Federal and State Governments will continue to add to the cost of environmental compliance. Scoping of environmental alternatives and pre-permitting assessments associated with equipment replacements, new generation, and services expansion will result in cost increases. New State air quality regulations require comprehensive modeling which may establish a need for equipment retrofits or operational restrictions. Recent changes to State oil spill prevention regulations are imposing additional requirements for corrosion protection of fuel storage tanks and piping. As a result, fuel system upgrades will be required.

Municipal Light & Power

2008 - 2009 Budget Assumptions

Beginning January 1, 2006 all of ML&P's gas requirements for generation (except for occasional purchases to meet peaking requirements) are supplied from its one-third interest in the Beluga River Unit Gas Field (BRU). Therefore, the transfer price of gas from the Gas Division to the Electric Division will be comprised of costs necessary to produce gas, and is budgeted to increase from \$1.53/MCF in 2007 to \$2.47/MCF in 2008. The transfer price is budgeted to increase in 2009 to \$3.23/MCF.

It is estimated that the 2008 and 2009 contract price for natural gas sales to Chugach Electric Association, Inc. (CEA) will increase to \$4.25/MCF over the 2007 contract price of \$4.15/MCF and the ENSTAR contract price will decrease to \$6.03/MCF and \$5.17/MCF, respectively from the 2007 contract price of \$6.25/MCF. The CEA and ENSTAR volume is budgeted to remain fairly stable for the two year period. ML&P's contract with ENSTAR expires December 31, 2009.

On May 15, 2007, the RCA issued Order Number 2 in Docket U-07-45 granting ML&P's request to modify its natural gas transfer price methodology effective July 1, 2007. ML&P requested and the RCA approved this change in which the natural gas sales revenues would be excluded from the calculation of the gas operations revenue requirement which determines the natural gas transfer price. This was requested to keep the natural gas transfer price from becoming negative for the next few years resulting in unrealistically low customer rates. The money received from natural gas sales will be used to pay for future BRU construction or future gas purchases.

Municipal Light & Power Highlights and Future Events

Replacement of Unit 3

The first new generating unit for ML&P in more than 20 years is now on line at Hank Nikkels Plant 1 in the Ship Creek area. The unit began commercial operation August 16, 2007. The new simple cycle gas turbine is a GE LM2500+ and cost \$26.5 million. This turbine was built and installed at a cost of less than \$1,000 per kilowatt and its nitrous oxide (NOx) emissions are 70 percent less than the unit it replaced. It generates 28.8 megawatts at 59 degrees and is 36 percent efficient. By comparison, the old Unit 3 had an efficiency of only 15 to 20 percent. The new unit will be used for carrying peak loads and will be started and stopped on a daily basis. This will allow us to use our base load machines more effectively and will also result in lower overall operating costs. The old Unit 3 was purchased in 1968, remained in service for 36 years, and was retired in 2004.

Dividend and Gross Receipts Payments

ML&P paid its owner, the Municipality of Anchorage (MOA), \$11,722,047 in annual dividends between the years of 1960 and 1982. During that period, the largest payment occurred in 1975 when ML&P paid \$959,800 in dividends.

In 1988, the Alaska Public Utilities Commission (APUC) restricted ML&P from paying a dividend and dividend-like payments to the MOA upon finding that the utility's capital structure was impaired. In its 1986 test year, ML&P's equity ratio (equity/total capitalization) was only 4.5 percent.

The APUC also required ML&P to file an equity management plan for building equity. ML&P steadily improved its capital structure consistent with the goals of its equity management plan. By year-end 2006, the equity ratio was 50 percent and is projected to remain in the 35-50 percent range through the next five years, even with resumption of dividends to MOA and large bond issues.

In response to a proposal from ML&P, the Regulatory Commission of Alaska (RCA) issued a bench ruling on November 7, 2005, removing the restriction on dividends and dividend-like payments.

The dividend consists of a revenue distribution to general government of 5 percent of the utility's gross revenues (excluding restricted revenues) and a gross receipts payment considered supplemental MUSA at 1.25 percent times actual gross operating revenues.

Accordingly, on August 14, 2007, ML&P made its 2007 dividend and Gross Receipts payments to the MOA, \$5,969,152 and \$1,437,033, respectively, for a total payment of \$7,406,185. The dividend is based on 2006 Audited Financial Statements. The 2006 dividend and gross receipts payment based on 2005 Audited Financial Statements totaled \$7,426,844.

ML&P Legacy Application Replacement

ML&P currently uses the HP3000 Minicomputer for most business and customer service applications. In November of 2001 Hewlett-Packard (HP) announced they would discontinue support for the HP3000 system in 2006. This will require ML&P to replace or migrate all of its existing applications on the HP3000 to new platforms. We expect this to be accomplished over the next 2 years.

Migration to a windows based server was considered, but it was determined that a replacement with off the shelf products was more cost effective and that very little increased effort was required. This project will involve all divisions both in selection of a replacement system and in testing. It is expected that this replacement can take place without any affect on day-to-day operations.

New Generation

ML&P is at a point from a life cycle perspective where it must give consideration to making significant generation capital additions over the next few years. Currently there is \$250 million in the capital budget for new generation to replace aging generation infrastructure. Modern generating units are much more efficient delivering more energy for the same amount of fuel. ML&P's goal is to begin to move forward to have new generation facilities on line by early 2012.

Joint Action Agency

On Aug. 1, 2005, ML&P, CEA, and Golden Valley Electric Association (GVEA) formally formed the Alaska Railbelt Energy Authority (AREA), a joint action agency (JAA) under Alaska statute AS 42.45.300. The JAA structure enables the utilities to combine their expertise, resources, and borrowing power to make major investments in generation and transmission facilities in the Railbelt. Such investments are necessary to meet growing demands for power and replacement of aging generation. The AREA will ensure the lowest cost power through coordinated planning, more favorable financing, and possible joint dispatch of power.

During 2007, the AREA has actively participated in on-going efforts to determine the feasibility of wind-generated power from Fire Island and will continue to do so. In 2008, the AREA will continue to explore investment alternatives and begin initiating major investments such as the possible acquisition of the state-owned Bradley Lake Hydroelectric Power Plant. It is anticipated that in 2008 or sooner Homer Electric Association, Inc. and the City of Seward's electric utility, among other Railbelt utilities, will be near-term future members.
