Municipality of Anchorage

Mayor Dave Bronson

January 24, 2022

Dear Residents:

Enclosed are the 2022 Municipal Utilities and Enterprise Departments' approved operating budgets, as well as their respective 2022 capital budgets and program.

Solid Waste Service's new Central Transfer Station is well under way towards completion in March 2023. This new central transfer station will improve the experience for residents and area users.

The Port of Alaska has reached a milestone in the modernization program with the near completion of the Petroleum Cement Terminal. This critical modernization program continues to make progress toward food security and stabilization for all Alaskans.

Municipal-owned utilities provide businesses and residents safe drinking water and a mechanism for waste collection and disposal that is efficient and effective. We must thank the hard-working Municipal employees of these utilities for their dedication to the residents of Anchorage.

Regards,

Dave Bronson
Mayor of Anchorage

 VII. GLOSSARY OF TERMS	

Assembly Documents

This section includes the final legislative documents that show the Assembly's approval of the 2022 budgets.

The legislative documents are presented according to format and timing defined in the Anchorage Municipal Charter and Anchorage Municipal Code. These final legislative documents show the recommendations and changes made to the budgets as the documents progressed through the legislative process.

Documents

Assembly Information Memorandums (AIM) – informational documents, including:

- Municipal Budget Advisory Commission recommendations for all budgets

Assembly Ordinances (AO) for Operating and Capital Improvement Budgets

- Must be submitted to the Assembly at least 90 days before the end of the fiscal year
- At least two public hearings must be held, including:
 - one hearing at least 21 days after the budgets are submitted to the Assembly
 - one hearing at least seven but not more than 14 days prior to the adoption of the budgets
- The Assembly may increase or decrease any item, and may add or delete items, in the proposed operating or capital budgets by amending the documents
- The Assembly must approve the budgets at least 21 days prior to the end of the fiscal year
- Each document (original and S version) is accompanied by an Assembly Memorandum (AM) that summarizes the ordinance, typically in narrative form
- The Assembly ordinances for the operating budget are accompanied by an “AM Support” document that shows a summary of the balanced budget in a table format and the dollar impact of the funding uses and funding sources starting from the prior year Revised Budget and ending with the budget year Approved Budget on the final legislative document.

Assembly Resolution (AR) for Capital Improvement Program

- Must be submitted to the Assembly at least 90 days before the end of the fiscal year
- Accompanied by an AM

Assembly Resolution (AR) for Six-Year Fiscal Program

- Must be submitted to the Assembly at least 90 days before the end of the fiscal year
- Accompanied by an AM

Document Changes

The following indicate that the original documents that were submitted by the Administration were changed:

- “(S)” after the document number indicates that the document is a “Substitution” and includes changes by the Administration
- “as Amended” after the document number indicates that the document includes amendments by the Assembly

If the documents that were submitted by the Administration were changed, the new documents will show strikethroughs on the items that were changed, and, depending on the iteration, the changes will be shown with bolding or italicized bolding.

MUNICIPALITY OF ANCHORAGE

ASSEMBLY INFORMATION MEMORANDUM

AIM No. 209-2021

Meeting Date: November 23, 2021

1 **From: MAYOR**

2
3 **Subject: Municipal Budget Advisory Commission 2022 Proposed Budget**
4 **Resolution, November 2021**

5
6 Attached is a resolution from the Municipal Budget Advisory Commission recommending the
7 Assembly:

- 8 1) Review the Proposed 2022 General Government Operating Budget.
9 2) Review the Proposed 2022 General Government Capital Improvement Budget and
10 2022-2027 Capital Improvement Program.
11 3) Support the Proposed 2022 Utility & Enterprise Operating and Capital Budgets.

12
13 The resolution was discussed at the regular meeting of the commission on November 4,
14 2021.

15
16 Prepared by: Office of Management & Budget (OMB)
17 Concur: Marilyn Banzhaf, Acting OMB Director
18 Concur: Amy Demboski, Municipal Manager
19 Respectfully submitted: Dave Bronson, Mayor

**Municipal Budget Advisory Commission 2022 Proposed Budget Resolution,
November 2021**

Whereas; The Municipal Budget Advisory Commission (BAC) is an independent, volunteer-led citizen advisory board responsible to provide the assembly, the mayor, the school board, and the superintendent of schools well-informed advice as to budgets and budgeting process, as outlined in AMC 4.50.030; and

Whereas; under AMC 4.50.030 The municipality and the school district shall provide sufficient staff assistance as needed by the commission in its review of the municipal and school budgets, respectively; and

Whereas; under AMC 4.50.030 The purpose of the commission is to provide the assembly, the mayor, the school board, and the superintendent of schools well-informed advice as to the budgets and budgeting process from citizen commission members who provide a broad, rather than a specific issue, interest in the budgets; and

Whereas; the Budget Advisory Commission recognizes this is a time of transition to a new administration; however, the Commission requested, but did not receive, a budget presentation from the incoming administration, as has historically been delivered. For future budget cycles, the Budget Advisory Commission will continue to make this request of the administration pursuant to AMC 4.50.030; and

Whereas; The BAC has reviewed the proposed 2022 budgets (General Government, Utility, and Enterprises operating and capital) and heard a presentation of the proposed budgets by the OMB at its special meeting on October 27, 2021; and

Whereas; The BAC understands the unique challenges in preparing the Proposed 2022 Budgets during a time of our community's economic constraints and concerns for the overall health and wellbeing brought on by forces related to COVID-19 since March 2020 and predicted to continue into 2022; and

Whereas; the BAC endorses the Administration's stated objective to revitalize the Anchorage economy, which continues to struggle to recover from the COVID-19 pandemic and a prior recession, and years of out-migration; and

Whereas; The BAC recognizes the Tax Cap as an instrument to limit the growth of government spending and supports its full application in the budget process by adjusting as required to account for losses in non-property taxes, adjusted for new construction, population, and consumer price index that maintains investment in public safety and basic government service as proposed in the 2022 budget; and

Whereas; The BAC supports the Administration's stated commitment to ensuring health and safety in Anchorage, including a focus on people in Anchorage facing homelessness and providing the necessary resources to provide a compassionate solution; and

Whereas; The BAC recognizes the proposed 2022 General Government operating budget of \$550 million represents a reduction of more than 6.5% from the 2021 revised budget when adjusted for inflation; and

Whereas; In 2020, Anchorage voters approved a 5% alcohol tax; the proceeds of which would be dedicated to and only made available for: 1) Funding for police, related criminal justice personnel, and first responders; 2) Funding to combat and address child abuse, sexual assault and domestic violence; and 3) Funding for substance misuse treatment, prevention programs detoxification or long-term addiction recovery facilities, mental and behavioral health programs, and resources to prevent and address Anchorage's homelessness crisis, and this funding was intended for new programs, not to replace existing general government funding; and

Whereas; In 2021 the Municipality dedicated \$2 million in alcohol tax funding for early education to fund pre-Kindergarten programs through Anchorage School District (ASD), an historic first investment; and

Whereas; The benefits of pre-Kindergarten have been well evaluated and documented, finding that kids who attend pre-K are better prepared to enter school, as well as preventing child abuse which contributes to long-term cost avoidance related to criminal justice, welfare and education that exceed the initial investment; and

Whereas; In 2021 the Municipality also dedicated alcohol tax funding toward a new mental health first responders' model, the Mobile Crisis Team, as a new program within Anchorage Fire Department; and

Whereas; In its first period of operation, the Mobile Crisis Team responded to 149 people experiencing a crisis and of those, only 8 needed law enforcement transport to a hospital; the Mobile Crisis Team has received positive feedback from clients served by the program; and that generally, mental health first responder programs are effective at keeping people from police involvement and incarceration, which is not only an effective way to respond to a mental health crisis, but also saves money; and

Whereas; In 2021 the Municipality also dedicated alcohol tax funding as \$2 million in grants to prevent child abuse, sexual assault, and domestic violence, as well as \$250,000 to organizations providing prevention and crisis response services for victims of interpersonal violence: domestic violence, sexual assault, and violent crime; and

Whereas; Reducing the impacts of violence was one of the biggest priorities for alcohol tax funding, and Alaska has some of the worst rates of interpersonal violence in the nation, with alcohol as a significant contributing cause; and

Whereas; The BAC commends the herculean effort the Anchorage Health Department has taken in responses to the COVID-19 pandemic in 2020 and 2021, and supports the need to maintain strong staffing in order to continue its effective response to the pandemic and furthermore the staff to address those negative social, physical, and mental health issues resulting from alcohol and substance misuse and to coordinate efforts amongst various stakeholders, and these are important functions of a Home Rule Municipality with health powers; and

Whereas; Mobile Crisis Teams have a well-documented and distinct separate purpose from the Anchorage Police Department's Mobile Intervention Teams; and

Whereas; The Municipality's annual contribution to the Anchorage Economic Development Corporation (AEDC) is an investment in the city's economic future, which is leveraged three-to-one by other funds, including from the private sector. AEDC leads comprehensive economic

development strategic planning efforts, strengthens the city's business climate, and provides valuable data and analysis to the Municipality and private sector; and

Whereas; The BAC acknowledges that the 2022 Proposed General Government Operating Budget is balanced at \$149,579 under the Tax Limit; and

Whereas; The BAC acknowledges that the budget needs to be balanced and if any Assembly amendments are made, they should include consideration for offsetting expense or revenue adjustments to result in a balanced budget; and

Whereas; Community Councils are recognized in the charter as an important venue for residents to weigh in on the proposed budget; and

Whereas; The Municipality's capital improvement program and capital budget, including projects approved by voters as capital bonds, is an important investment in our city's infrastructure and amenities, creating jobs, economic activity, and long-lasting assets for our community;

Now Therefore Be It Resolved:

1) That the BAC recommends the Assembly review the Proposed 2022 General Government Operating Budget as follows:

- a. The net benefit or cost of the proposed departments being reorganized, new positions added, and whether this will result in a more efficient and effective operation of the Municipality in 2022 and long-term;
- b. The \$250,000 total cut in Municipal funding to the Anchorage Economic Development Corporation as an investment in economic revitalization;
- c. The \$1 million cut in alcohol tax funding for Early Education;
- d. The \$250,000 cut in alcohol tax funding to prevention grants;
- e. The \$250,000 cut in alcohol tax funding to providers of services in response to domestic violence, sexual assault, and violent crime;
- f. The \$1.5 million cut to the Mobile Crisis Teams and maintain the Mobile Crisis Teams position with the Anchorage Fire Department
- g. The general government funding for the Epidemiologist and other Anchorage Health Department positions funded in FY 2021 by General Government Operations, and not with dedicated alcohol tax funding;
- h. The cost-shift of the School Resource Officer (SRO) program to ASD.

2) That the BAC recommends the Assembly review the Proposed 2022 Capital Improvement Budget and 2022-2027 Capital Improvement Program (CIP).

- a. The overall bond package in the capital budget to be sufficient to maintain and improve the city's infrastructure, at a similar level to that of the 2021 budget, and as noted in the 2021 CIP;

3) That the BAC recommends the Assembly support the Proposed 2022 Utility & Enterprise Operating and Capital Budgets.

ANCHORAGE, ALASKA
AO No. 2021 - 98, As Amended

1 AN ORDINANCE ADOPTING AND APPROPRIATING FUNDS FOR THE 2022 MUNICIPAL
2 UTILITIES/ENTERPRISE ACTIVITIES OPERATING BUDGETS AND THE 2022 MUNICIPAL
3 UTILITIES/ENTERPRISE ACTIVITIES CAPITAL IMPROVEMENT BUDGETS.

4
 5 **WHEREAS**, the Mayor has presented recommended 2022 Municipal Utilities/Enterprise Activities
 6 Operating Budgets and Capital Improvement Budgets (CIB) for the Municipality of Anchorage to
 7 the Assembly in accordance with Article XIII, Section 13.03 of the Municipal Charter; and
 8

9 **WHEREAS**, the Assembly reviewed the budgets as presented; and
 10

11 **WHEREAS**, duly advertised public hearings were held in accordance with Article XIII, Section
 12 13.04 of the Municipal Charter; and
 13

14 **WHEREAS**, the 2022 Utilities/Enterprise Activities Operating Budgets and the 2022
 15 Utilities/Enterprise Activities CIB are now ready for adoption and appropriation of funds in
 16 accordance with Article XIII, Section 13.05 of the Municipal Charter; now therefore,
 17

18 **THE ANCHORAGE ASSEMBLY ORDAINS:**
 19

20 **Section 1.** The 2022 Municipal Utilities/Enterprise Activities Operating Budgets and the 2022
 21 Municipal Utilities/Enterprise Activities Capital Improvement Budgets are hereby adopted.
 22

23 **Section 2.** The amounts set forth for the 2022 Municipal Utilities/Enterprise Activities Operating
 24 Budgets for the following Municipal Utilities/Enterprise Activities are hereby appropriated for the
 25 2022 fiscal year:

Fund Utility/Enterprise	Appropriated Budget
531000 Anchorage Hydropower Utility	\$ 3,879,582
	49,260,172
	49,302,172
540000 Anchorage Water Utility (AWU)	49,235,172
540300 AWU - Reimbursable	1,000,000
	50,100,999
	50,142,999
550000 Anchorage Wastewater Utility (ASU)	50,075,999
550300 ASU - Reimbursable	1,000,000
	12,073,508
	12,025,313
	12,115,508
560000 Solid Waste Refuse Collections	12,000,313
	21,916,461
	21,715,656
	21,958,461
562000 Solid Waste Disposal	21,600,656

Fund Utility/Enterprise	Appropriated Budget
	15,430,493
	15,526,493
570000 Port of Alaska	15,300,493
	2,153,953
	2,200,010
580000 Merrill Field Airport	2,153,953
	156,815,168
	156,566,168
	157,125,225
Utility/Enterprise Operating Appropriated Budgets	156,426,168

Section 3. The amounts set forth for the 2022 Municipal Utilities/Enterprise Activities Capital Improvement Budgets for the municipal utilities/enterprise activities are hereby approved. AWU & ASU sections intend to complete the projects listed by category, but may complete related capital improvements as may be required for safety purposes or to maintain service to customers.

Section 4. The following capital activities' funding sources are available and are hereby appropriated for the 2022 Municipal Utilities/Enterprise Activities in amounts not to exceed, as follows:

Fund Utility/Enterprise	Appropriated Budget
531200 Anchorage Hydropower Capital	600,000
540200 AWU Capital	11,615,000
550200 ASU Capital	10,695,000
560200 SWS Refuse Capital	1,120,000
562200 SWS Disposal Capital	5,095,000
570200 Port of Alaska Capital	1,550,000
580200 Merrill Field Airport Capital	-
Utility/Enterprise Capital Appropriated Budgets	<u>\$ 30,675,000</u>

Section 5. This ordinance shall take effect immediately upon passage and approval by the Assembly.

PASSED AND APPROVED by the Anchorage Assembly this 10th day of December, 2021.

Chair

ATTEST:

MUNICIPALITY OF ANCHORAGE

OFFICE OF THE MAYOR

MEMORANDUM

DATE: November 30, 2021

TO: Anchorage Assembly
Suzanne LaFrance, Assembly Chair

FROM: Mayor Dave Bronson 

SUBJECT: Vetoes of AO 2021-98

**Overridden on
December 10, 2021
with the exception
of amendment #3
and amendment #4
on page 2.**

Pursuant to the authority vested in me by Charter section 5.02(c), I hereby, by veto, strike or reduce the following amendments to **AO 2021-98: AN ORDINANCE ADOPTING AND APPROPRIATING FUNDS FOR THE 2022 MUNICIPAL UTILITIES/ENTERPRISE ACTIVITIES OPERATING BUDGETS AND THE 2022 MUNICIPAL UTILITIES/ENTERPRISE ACTIVITIES CAPITAL IMPROVEMENT BUDGETS**, that were moved and approved by the Assembly at the meeting of November 23, 2021.

The Assembly's proposed increases creates increased pressure on the utilities' net income, decreases the dividends to the general government operating budget, requires an amendment to the general government operating budget, and requires an increase to the utilities' already-approved rates.

Strike Amendment #1: \$119,000 – Solid Waste Services (SWS) - Administration, Reinstates the filled Senior Code Enforcement Officer position.

My reasons are as follows: The senior code enforcement officer functions would be provided through Development Services and will be charged to SWS for services rendered; this is anticipated to be significantly less than the cost of a full-time position. SWS will change office procedures to address code enforcement communication issues with our customers.

Strike Amendment #2 – \$130,000 – SWS - Disposal, Restores funding to the SWS composting program.

My reasons are as follows: A current feasibility study is underway that is expected to be completed in 2022; until the cost is determined this expenditure is premature. My Administration is willing to revisit this issue in the 2022 Revised Budget process when costs have been identified.

Reduce Amendment #3 – Economic development Grant to the Anchorage Economic Development Corporation (AEDC) as follows:

Department	Assembly Amendment	Veto Reduction	Budget after Veto
Port	86,000	(46,000)	40,000
AWU	42,000	(17,000)	25,000
ASU	42,000	(17,000)	25,000
SWS-Ref	42,000	(17,000)	25,000
SWS-Disp	42,000	(17,000)	25,000
	<u>\$ 254,000</u>	<u>\$ (114,000)</u>	<u>\$ 140,000</u>

My reasons are as follows: This action funds AEDC at the pre-2021 levels, taking into consideration the sale of ML&P. The proposed increase of \$42,000 per utility creates increased pressure on the utilities' net income, decreases the dividends to the general government operating budget, requires an amendment to the general government operating budget, and requires an increase to the utilities' already-approved rates.

Strike Amendment #4 – Funds the Director of Enterprise Services position through the MOA utilities and enterprise departments as follows:

Department	Assembly Amendment	Veto Amount	Budget after Veto
AWWU	50,000	(50,000)	-
SWS	50,000	(50,000)	-
Port	50,000	(50,000)	-
Merrill Field	46,057	(46,057)	-
	<u>\$ 196,057</u>	<u>\$ (196,057)</u>	<u>\$ -</u>

My reasons are as follows: This position is already budgeted as being partially funded by the utilities / enterprise departments via intragovernmental charges (IGCs) from the Municipal Manager but in amounts resulting from the IGC factors to be in line with cost causer / cost payer. Regulatory Commission of Alaska stipulates that only allowable costs in line with approved methodologies can be charged to the utilities.

MUNICIPALITY OF ANCHORAGE

ASSEMBLY MEMORANDUM

AM No. 610 - 2021

Meeting Date: October 12, 2021

1 **From: MAYOR**

2
3 **Subject: AN ORDINANCE ADOPTING AND APPROPRIATING FUNDS**
4 **FOR THE 2022 OPERATING AND CAPITAL BUDGETS OF THE**
5 **ANCHORAGE COMMUNITY DEVELOPMENT AUTHORITY.**
6

7 The Anchorage Assembly adopted Anchorage Ordinance 2004-181(S) as
8 amended, on January 18, 2005, establishing the Anchorage Community
9 Development Authority (ACDA). The ACDA expanded the role of the former
10 Anchorage Parking Authority into a development and parking authority, with
11 parking operations now a unit within ACDA.
12

13 The 2022 operating and capital budgets for the ACDA were reviewed and
14 approved by the Anchorage Community Development Authority Board.

ANCHORAGE COMMUNITY DEVELOPMENT AUTHORITY
2022 Capital Improvement Budget

Project Title	Total
6th Ave Building	200,000
Total	200,000

Utility/Enterprise Budget Overview

Utility/Enterprise Departments

Anchorage Hydropower, Anchorage Water & Wastewater (AWWU), and Solid Waste Services (SWS) are utility departments; Merrill Field Airport and the Port of Alaska (Port) are enterprise departments. Many of the basic services Anchorage residents rely on daily: safe water, power generation, safe and efficient delivery of goods, come from municipal-owned utilities and enterprise departments.

The goal of the utilities/enterprise departments is to continue to provide quality service at reasonable rates. These departments continue to meet debt service requirements, prudently increase equity, adequately maintain cash reserves, and generate sufficient revenue to maintain their plants in good working condition. The primary source of revenue required to support the operating and capital budget comes from rate payers or users of their respective services. The budget is presented for a calendar year, in line with the Municipality's fiscal year.

Governance

The authority for operation and management of the utility/enterprise departments is under the control of the Mayor. The Municipal Manager and Deputy Municipal Manager are responsible to manage, direct, and ensure policy and procedures are followed. The Director of each department is responsible to manage and report on each section within.

Assembly Enterprise and Utility Oversight Committee-of-the-Whole – This committee of Assembly members reviews and makes recommendations regarding the operations and budgets of the Municipality's five enterprise and utility departments.

AWWU Board of Directors (AMC 4.80.020) – established to provide guidance to the Mayor and Assembly in regards to AWWU's strategic plan, long term fiscal plan, budget, tariff rates, and fees.

Eklutna Operating Committee (EOC) – of which the Municipality is a member, reviews the engineering and operating reports, maintenance schedules, and other information about the condition of the generation assets of the Eklutna Power Project (the Project). The EOC develops a five-year capital plan and approves a current year capital project budget based on need, available resources, and schedule. The Municipality's percentage of ownership is presented in the Anchorage Hydropower Utility.

Municipal Airports Aviation Advisory Commission (AMC 4.60.160) – Merrill Field Airport established this commission to provide recommendations to the Mayor and Assembly on all matters pertaining to the annual operating budget, rules, regulations, and administrative guidelines. This commission shall terminate on October 14, 2021, unless affirmatively continued by the assembly in accordance with AMC 4.05.150.

Regulatory Commission of Alaska (RCA) – regulates Anchorage Hydropower Utility and AWWU by approving all rates and tariffs prior to implementation. They also regulate service areas and quality.

Solid Waste and Recycling Advisory Commission (AMC 4.70.010, 4.70.040) – requires SWS establish a commission to provide guidance to the Mayor and Assembly in regards to each

entity's strategic plan, budget, policies, economic impacts, expansions, and improvements. Furthermore, they will conduct public input hearings when deemed appropriate on matters pertaining to recycling, composting, and waste reduction, including but not limited to: services, rates, and regulations, assist with public outreach and education on the topics of recycling, composting, and waste reduction.

Utility/Enterprise Accounting

The full accrual basis of accounting is used for utility/enterprise departments and they are categorized as Enterprise type funds. Revenues are recognized in the accounting period in which they are earned and become measurable. Expenses are recognized in the period incurred, if measurable.

Utility/Enterprise Expenses

Operating expenses are incurred from the operations of the department, it reflects the cost of doing business. Non-Operating expenses are incurred by activities outside of operations such as: interest expense, debt issuance costs, amortization and/or depreciation type activities.

Function cost by fund: this budget is the legal level of appropriation and includes interfund charges for general government services added to the manageable direct cost budget. Actual expenses may not exceed function cost budget appropriations at the enterprise and utility fund levels (AMC 6.10.036).

The manageable direct cost budget consists of several categories: labor (salaries and benefits); non-labor (supplies, travel, contracts, dividends, etc.); contributions; debt service; and non-cash accounts such as; depreciation and amortization, which are not appropriated. Each department is responsible for managing and monitoring their respective budget at these category levels.

Non-cash accounts are not appropriated, these accounts are used to internally account for future items, where cash is not actually being paid out of the Municipality. For example, depreciation and amortization. These accounts are budgeted, reported, and controlled separately.

Municipal Utility/Enterprise Service Assessment (MUSA/MESA)

Each year, payments-in-lieu of taxes are included in the operating budgets for the utility/enterprise departments to cover the cost of tax supported services they receive, other than services received on a contract or interfund basis. It is the public policy to require the utilities (AWWU and SWS) to pay a municipal utility service assessment (MUSA). Merrill Field and the Port are required to pay a municipal enterprise service assessment (MESA). Anchorage Hydropower is not held to this requirement, as the assets are outside of the Municipal rate payers service area.

The MUSA shall be calculated by applying the millage rate established annually for each service area by the assembly to the net classified plant in service as of January 1 of the current year of each utility. Net book value of plant will be the MUSA basis for the refuse collection utility and solid waste disposal utility. The millage rate so established will be that rate assessed other owners of real, personal and business property in each service area. Payment must be made on or before July 15th of each calendar year. (AMC 26.10.025)

The MESA shall be calculated by applying the value of adjusted plant in service multiplied by the annual mill rate. Adjusted plant in service means the final, year-end, audited net classified non-contributed plant in service value, less exclusions specified, for the calendar year preceding

the mill rate year. Payment shall be made on the first business day of July of each calendar year. (AMC 11.50.280)

Revenue distribution from the Anchorage Hydropower Utility (AMC 26.10.068)

- A. The Anchorage Hydropower utility shall pledge and distribute to the MOA Trust Fund revenue received pursuant to that certain Eklutna Power Purchase Agreement Between Chugach Electric Association, Inc. ("Purchaser") and Municipality of Anchorage ("Seller"), dated December 28, 2018, by and between the Municipality and Chugach Electric Association, Inc., as amended.

- B. If the Anchorage Hydropower utility has or is anticipated to have net income accruing from its operations in any year in addition to revenue received from Chugach Electric Association, Inc. and pledged to the MOA Trust Fund under subsection A. of this section, a portion of the net income may be pledged by inclusion in the respective municipal utility and general government budgets for the subsequent year. The pledged amount shall be described as "Utility Revenue Distribution from Anchorage Hydropower." Payment of any approved and budgeted utility revenue distribution shall be made in two equal payments on or before the 15th calendar day of August and October of such subsequent year only after the income has been collected by the municipality pursuant to lawful authority and the annual audit has been completed, or is substantially complete. The amount of utility revenue distribution for the subsequent year may equal or exceed the change in net operating position for the prior year; provided, however, that the utility retain sufficient reserves: 1. To meet anticipated capital and operating expenses; and 2. As required by the Regulatory Commission of Alaska.

Utility/Enterprise Revenues

Operating revenues are generated by providing a service. Non-Operating revenues are earned by investments, or other non-significant sources such as the gain/loss on the sale of an asset. Utility/enterprise departments are operated in a manner as to provide a reasonable profit in accordance with applicable regulatory provisions and law.

Surplus revenues from operations are to be reinvested in the department. If a municipal utility has or is anticipated to have net income accruing from its operations in any year, a portion of the net income may be pledged by inclusion in the respective municipal utility and general government budgets for the subsequent year. The pledged amount shall be described as "Utility Revenue Distribution."

The Assembly shall hold a public hearing as part of the annual budget process on the proposed Utility Revenue Distribution and use of funds. Payment of any approved and budgeted Utility Revenue Distribution shall be made in two equal payments on or before the 15th calendar day of August and October of such subsequent year only after the income has been collected by the municipality pursuant to lawful authority and the annual audit has been completed. (AMC 26.10.065).

All requested rate changes to utility tariffs shall be brought to the assembly by ordinance for review and approval for submission to the state public utilities commission. (AMC 26.10.035)

Budget Appropriations, Transfers, Reductions

The purpose of an appropriation is the request to expend. The Mayor must approve departmental requests for appropriations, prior to obtaining approval from the Assembly.

Operating appropriations that are not expended, encumbered, or designated to be carried over, lapse at the end of the fiscal year. Revenue budgets are not appropriated and are calculated based upon approved rates, tariffs, etc.

No appropriation may be reduced by more than the amount of the then unencumbered balance.

If the Mayor determines that revenues will be less than appropriations for a fiscal year, the Mayor shall so report to the assembly. The Mayor may transfer all or part of any unencumbered balance between categories within an appropriation. (Charter 13.06)

The Assembly may transfer part or all of any unencumbered balance from one appropriation to another. (Charter 13.06) The assembly may reduce appropriations as it deems necessary.

The Assembly may, by resolution, reduce or increase appropriations during the course of the fiscal year. A resolution reducing or increasing appropriations by an amount in excess of \$500,000 shall be subject to a public hearing (AMC 6.10.085).

The Office of Management & Budget (OMB) is authorized to transfer budget amounts within the appropriated departments and funds. In operating funds, budget transfer requests must be approved by the Municipal Manager, CFO, and OMB Director if:

- exceed \$10K (expenditures, IGCs, or revenues)
- include labor (salaries and wages) accounts
- include travel accounts

Utility/Enterprise Capital

The Municipality has two documents that govern planning and funding of capital projects:

- Capital Improvement Budget (CIB) – identifies projects and funding sources for the upcoming fiscal year; and
- Capital Improvement Program (CIP) – a longer-term outlook that identifies projects for the next six years, including the upcoming fiscal year.

Once approved by the Assembly, the amount of specific appropriations, project descriptions, and budget years for individual projects within the CIB/CIP are considered permanent legislative actions of the Assembly and may be altered in subsequent years only by majority vote of the Assembly (AMC 6.10.045).

The funding sources that are obtained for the capital projects could be: debt, State/Federal grants, and/or equity. Most utility/enterprise department capital projects are funded by equity, but can be funded by multiple sources.

Budget Planning and Timeline

The Mayor is required to submit the proposed enterprise/utilities operating and capital budgets to the Assembly 90 days prior to the end of the fiscal year (October 2nd) (AMC 13.03).

Prior to that (120 days prior to the end of the fiscal year), the Administration is required to provide preliminary information on the capital budget/capital program, business plans, update to utility/enterprise strategic plans, and major reorganizations (AMC 6.10.040).

Key Dates in Budget Process	
Summer	Preliminary budget information gathered
September 2	Preliminary budget information to Assembly
October 2	Mayor proposed budgets
October, November	Assembly deliberates, holds public hearings
December	Deadline for Assembly approval
April	First Quarter budget revisions

Preparation of the budget starts much earlier. A preliminary planning phase gets underway in the summer. OMB works with departments in reviewing their programs and responsibilities, assessing what is being done during the current year, and assisting in making plans for the next budget year in line with Administration goals. Some considerations during this phase are:

- Contractually obligated increases, such as labor contracts and health insurance premiums;
- New facilities that will open during the next fiscal year that will require staff, supplies, and other operating expenses;
- New responsibilities or programs required by Federal, State, or local laws;
- New or changed programs to meet community needs or interests;
- Programs that can be eliminated because they are ineffective, no longer required, or desired; and/or
- Efficiencies and savings that can be achieved through organizational management.

During this period of time, OMB also reviews projected revenue information in order to get an early indication of the Municipality’s ability to afford current spending levels and/or the potential need for reductions.

Mayor Proposes/Assembly Appropriates

The Mayor submits the proposed operating and capital budgets to the Assembly in early October, the Assembly holds public work sessions at which the Administration and department directors discuss the Mayor’s proposal.

Public Comment

The budget books are available on the Office and Management and Budget’s website: <http://www.muni.org/Departments/budget/Pages/default.aspx> for the public to view. The Assembly is required to hold two public hearings on the Mayor’s proposed budget, which is the official opportunity for the public to comment and for the Assembly to consider amendments. These are usually held during October and November. The Anchorage Charter requires that the Assembly approve the budget 21 days before the end of the year (by December 10). But if for some reason they still have not reached agreement, the Charter was amended to allow the Assembly and Mayor to continue to work. Once agreement is reached, that budget is known as the “Approved Budget.”

Veto Process

The Mayor has the ability to strike or reduce an appropriation in the operating or capital budget within 7 days from Assembly action. The Assembly then has 21 days from the Mayor's veto to override his/her action and must have a super-majority of 8 Assembly members to be successful. If a veto is sustained, the Mayor's action is implemented (AMC 5.02.c).

First Quarter Budget Amendments

During the spring following the budget's approval, the Administration finalizes the prior year's spending numbers and firms up revenues available to support the current year budget. This process, called "First Quarter Budget Amendments," takes place in April and May and results in the Assembly's approval of a "Revised Budget."

Unlike the proposed budget process in the fall that requires two public hearings, the first quarter amendment process only requires one public hearing and usually is at the Assembly meeting that follows the Mayor's introduction of the proposed amendments.

Based on these final spending decisions for general government, the Assembly then sets the tax rates for each service area.

Budget Monitoring, Controls, and Reporting

Each utility/enterprise department is responsible for managing and monitoring their respective budget at the spending category levels. Department directors also monitor their program performance measures throughout the year to ascertain if goals are being met.

Actual expenditures in a fiscal year that consume operating budgets may not exceed the function level budget appropriations by fund; which is all spending categories within a fund. At the end of the fiscal year, actual expenditures less revenues fall to fund balance. Some of the fund balance (equity) is transferred to the capital fund to support capital projects. There are also other requirements on minimum fund balance reserves that are defined in the annual financial statements. The capital budget is controlled by fund, division, and project.

P.V.R. – Performance.Values.Results. Performance measures and corresponding data for each program, as identified by each department, are reported quarterly to communicate and demonstrate the results and effectiveness of the program in achieving its stated purpose and to accurately capture the costs to deliver the intended results (AMC 6.40.016).

The last assembly meeting prior to June 30 of each year, the Mayor provides a memorandum to the assembly identifying the frequency, data, and format of the reporting requirements (AMC 6.40.015).

Currently, spending reports are provided quarterly to the assembly by spending category; labor, overtime, non-labor expenditures, travel, contributions to others, and revenues compared to budget. An explanation is required for any variance of 5% budget to actuals report for travel and the contributions to nonprofit organizations are provided to the Assembly, separately (AMC 6.10.034).

A

6.10.040 Submittal and adoption of municipal operating and capital budget. **September**

A. At least 120 days before the end of the fiscal year the Mayor shall submit to the Assembly the following:

1. A preliminary general government capital budget/capital program and utilities capital budget/capital program.
2. Proposed utility business plans and update to utility strategic plans.
3. Preliminary general government revenue plan, tax limitation, and administration service priorities.
4. Major departmental consolidations, reorganizations or establishments necessitating changes to Chapter 3.10 or 3.20, pertaining to executive organization, and required by proposed budgets for the next fiscal year.

B

Section 13.02. Six-Year Fiscal Program. October

At least 90 days before the end of the fiscal year of the municipality the mayor shall submit to the assembly, with recommendations from the planning commission, a six-year program for public services, fiscal policies and capital improvements of the municipality. The program shall include estimates of the effect of capital improvement projects on maintenance, operation and personnel costs. The assembly shall hold at least one public hearing on the six-year program prior to adoption.

Section 13.03. Operating and capital budget. October

At least 90 days before the end of the fiscal year of the municipality the Mayor shall submit to the Assembly a proposed operating and capital budget for the next fiscal year. The form and content of the budget shall be consistent with the proposed six-year program. The Mayor shall submit with the budget an analysis of the fiscal implications of all tax levies and programs.

C

Section 13.04. Budget hearing.

The Assembly shall hold at least two public hearings on the proposed operating and capital budget for the next fiscal year, including one hearing at least 21 days after the budget is submitted to the Assembly, and one hearing at least seven but not more than 14 days prior to

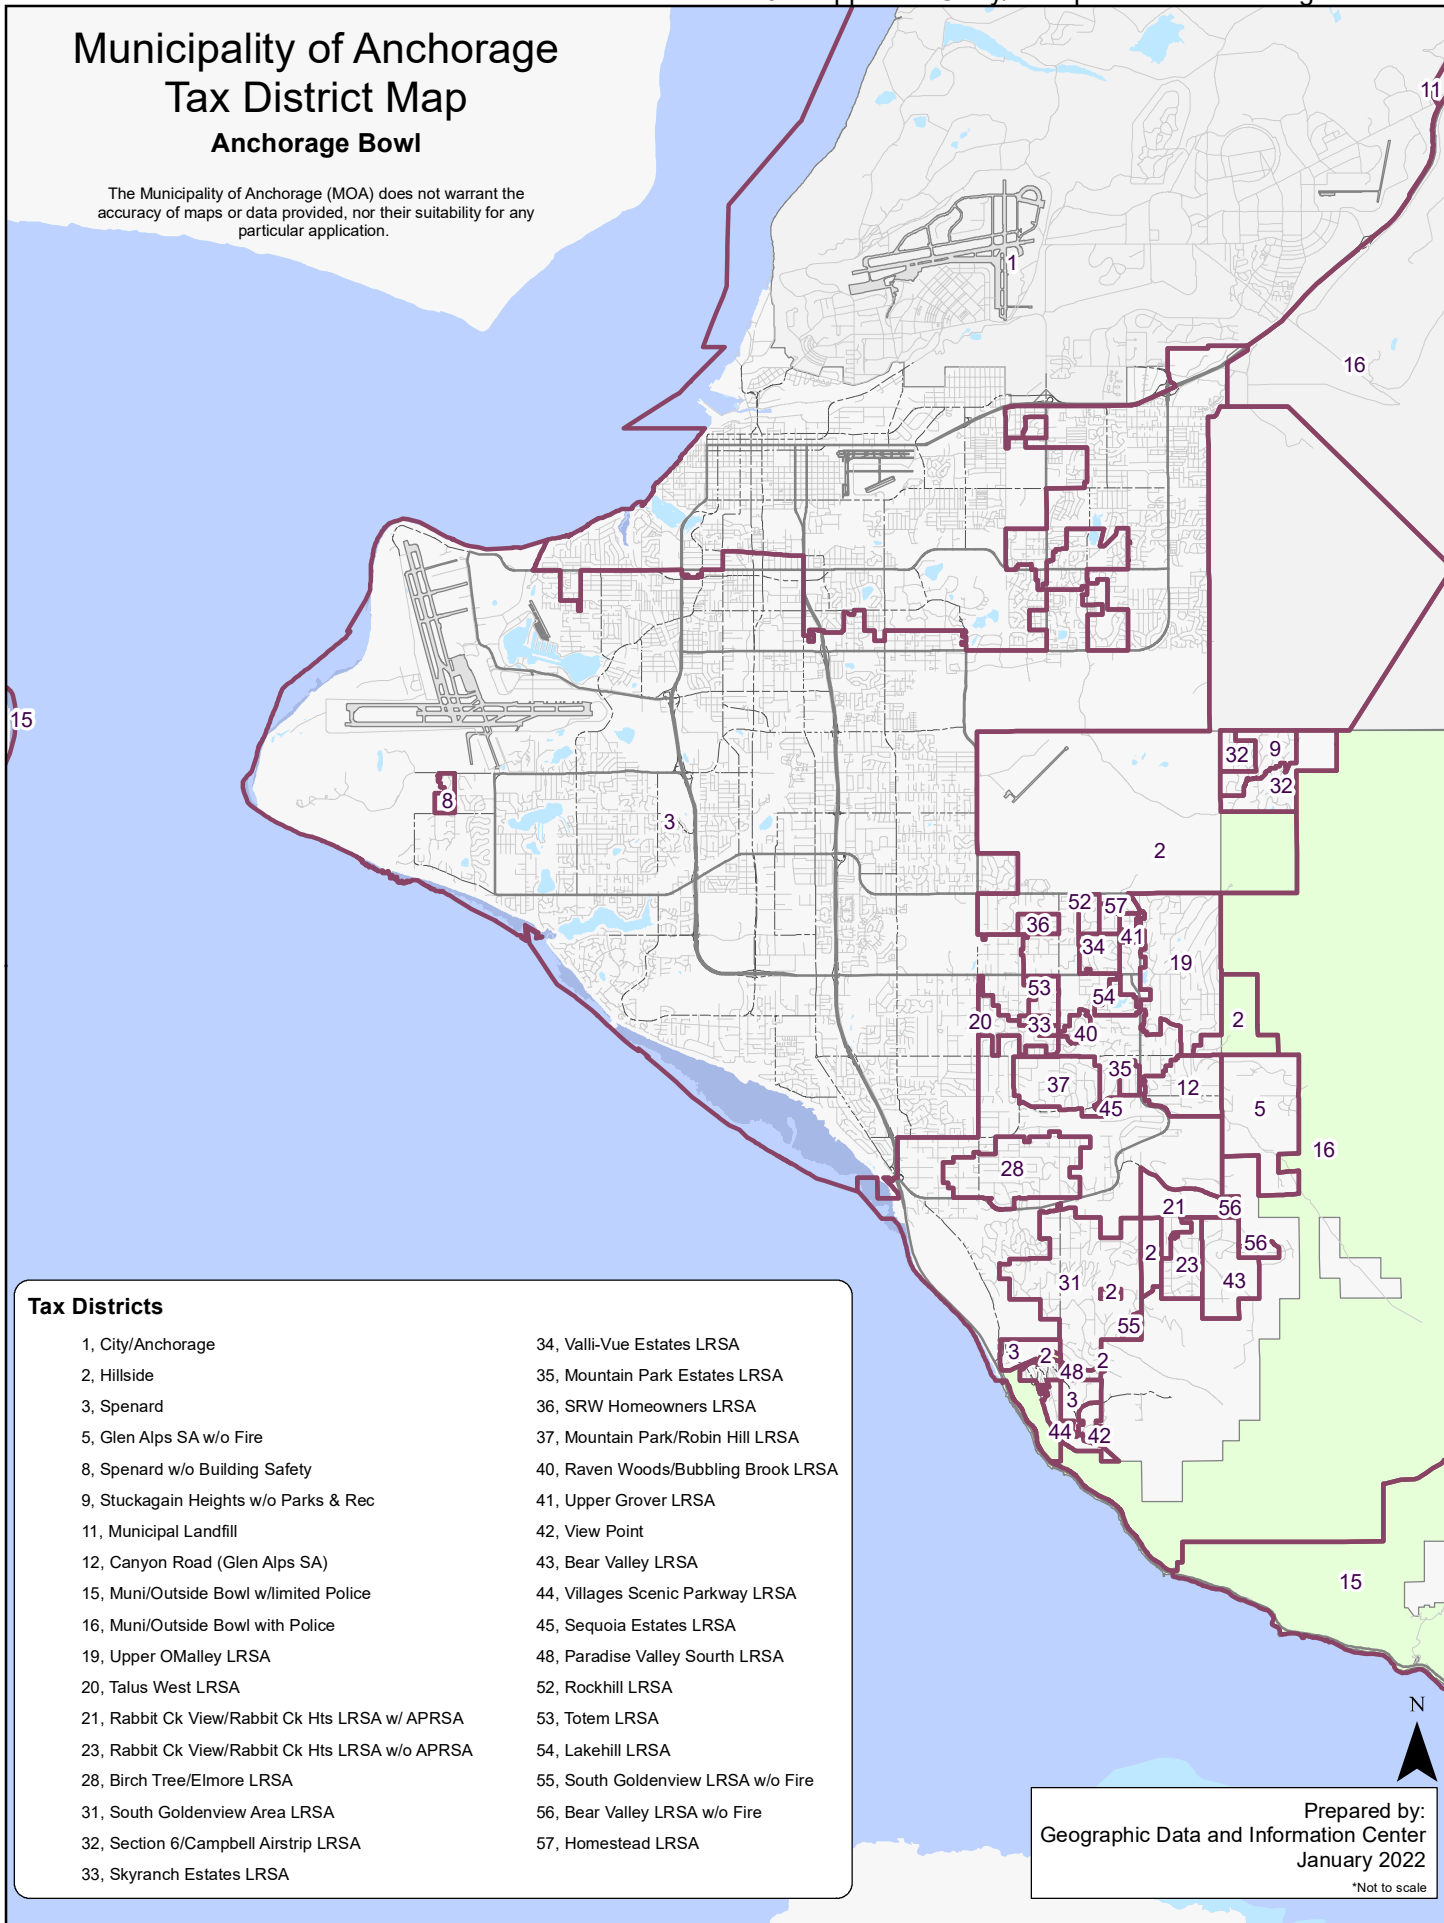

D

6.10.040 Submittal and adoption of municipal operating and capital budget.

B. The general government capital budget/capital program will be adopted at least 21 days prior to the end of the fiscal year of the

Anchorage Hydropower Utility

**Municipal
Manager**

**Anchorage
Hydropower**

Anchorage Hydropower Utility Organizational Overview

The Anchorage Hydropower Utility is an enterprise function of the Municipality of Anchorage (MOA).

The MOA sold Municipal Light & Power (ML&P) and with the closing of the sale transaction to Chugach Electric Association, Inc. (CEA), the nature of the electric service provided by the MOA will immediately convert from the provision of retail electric service to a significant portion of Anchorage, through generation, transmission, and distribution facilities, to the far more limited provision of wholesale generation service through long-term contracts with two utility customers. MOA's ownership interest in the generation assets of the Eklutna Hydroelectric Project ("Eklutna Project") will not be transferred to CEA and will be retained by the MOA, as the Anchorage Hydropower Utility.

Anchorage Hydropower Utility is located approximately 30 miles northeast of Anchorage on the Old Glenn Highway. MOA, CEA, and Matanuska Electric Association, Inc. (MEA) share the project costs through a proportionate share of ownership. Under separate power purchase agreements (PPAs), for a term of 35 years, CEA will purchase its proportionate share (64.29%) of ML&P's share, and MEA will purchase its proportionate share (35.71%), of the Eklutna output. Through these PPAs, CEA and MEA have agreed to purchase the entire output of the MOA's Eklutna Project ownership interest.

Visit the Eklutna Project website at: <https://www.eklutnahydro.com/background/>

Anchorage Hydropower Business Plan

Mission

Provide energy that is safe and reliable to meet purchase power agreement (PPA) requirements.

Services

Anchorage Hydropower owns 53.33% of the generation assets of the Eklutna Hydroelectric Project. Anchorage Hydropower sells all its electric output to Chugach Electric Association (CEA) and Matanuska Electric Association (MEA) pursuant to PPAs. Anchorage Hydropower is currently subject to economic regulation by the Regulatory Commission of Alaska (RCA).

Business Goals

- Provide electricity to satisfy the PPAs.
- Maintain \$3 million cash reserve in accordance with RCA Order U-19-020(39).
- Maintain 180 days of cash on hand to cover operating expenses.
- Maintain equity and earn net income at a level sufficient to continue to ensure the long-term financial stability of the utility.
- Operate the electrical system with optimum economic efficiency and strict adherence to environmental standards.

Strategies to Achieve Goals

- Implement industry best practices and streamline business processes to ensure the financial and operational integrity of the utility.
- Contract with an individual with knowledge of the Railbelt generation and transmission system and prudent utility practice to advise on power plant operations.
- Work collaboratively as owners of the Eklutna Hydropower Project to implement predictive maintenance program to reduce or eliminate outages and interruptions

Performance Measures to Track Progress in Achieving Goals

1. Maintain positive Net Income

About Anchorage Hydropower Utility

History

In 1929, the privately owned, Anchorage Power & Light Company (AP&L) began supplying electricity from a hydroelectric power plant on the Eklutna River, 30 miles northeast of Anchorage. In 1943, the city acquired the Eklutna plant from AP&L. In 1955, the U.S. Bureau of Reclamation completed construction of a new, larger plant on the Eklutna River. The city contracted for 16,000 kilowatts of generating capacity from that plant and “little” Eklutna was transferred to the federal government. In 1997, Municipal Light & Power (ML&P), Chugach Electric Association, Inc. (CEA), and Matanuska Electric Association, Inc. (MEA) jointly took ownership of the Eklutna Hydroelectric Plant. In 2020, through the sale of ML&P, the Municipality of Anchorage (MOA) retained its ownership interest in the generation assets of the Eklutna Hydroelectric Project (Eklutna Project). ML&P, CEA, and MEA each own an undivided interest in the Eklutna Project in the following percentages: ML&P, 53.33 percent; Chugach, 30 percent; and MEA, 16.67 percent.

Services

The Eklutna Project has 40 megawatts of generation capacity and produces approximately 130,000 kilowatt-hours of electricity per year.

In 2018, the project produced 177,438 megawatt hours (MWh) of clean energy. This is enough energy to power more than 24,600 residential homes for an entire year. Eklutna hydroelectric power is the lowest cost renewable energy in Southcentral Alaska.

Regulation

The utility is regulated by the Regulatory Commission of Alaska (RCA) and subject to abide by the rules and regulations in the utility’s tariff, if any, or in special contracts with customers.

Under sections 13.11(a) and 16.04.B. of the Anchorage Municipal Charter, the revenue received from CEA under the power purchase agreement must be distributed in the MOA Trust Fund. The new section 26.10.068 provides that revenue received from CEA must be distributed to the MOA Trust Fund. It also provides that additional revenue may be distributed to the general government budget, subject to the requirement that the utility maintain sufficient reserves to meet anticipated capital and operating expenses and as required by the RCA.

The RCA requires that the MOA maintain a reserve fund of not less than \$3,000,000 to support the MOA’s share of anticipated operations. If for any reason these reserves are not met, the utility is prohibited from paying a dividend to general government and depositing CEA’s payments to the trust.

Physical Plant

The 40-megawatt (MW) Eklutna Project is in Southcentral Alaska approximately 30 miles northeast of downtown Anchorage near the Native Village of Eklutna. The U.S. Bureau of Reclamation (USBR) constructed the project in 1955, which included rehabilitation of an existing dam at the outlet of Eklutna Lake.

The rehabilitated dam was damaged in the 1964 earthquake, at which point a new and taller embankment dam was constructed just downstream. The new dam is an earth and rockfill structure 815 feet long and 41 feet high with a rectangular concrete spillway that runs through the dam. Eklutna Lake, approximately 7 miles long and 1 mile wide, is located within Chugach

State Park and provides almost 90 percent of the domestic water supply for the MOA. The intake structure for the Eklutna Project is located 36 feet below the natural lake level. From there, water is diverted north into a 4.6-mile-long tunnel through Goat Mountain and then into a 1,370-foot-long penstock before reaching the powerhouse located on Old Glenn Highway. The tailrace flows under the highway and then discharges into the Knik River. The powerhouse contains two generating units.

Visit the Eklutna Hydropower website at: <https://www.eklutnahydro.com/background/>

Anchorage Hydropower Utility Highlights and Future Events

The 1991 Fish and Wildlife Agreement (Agreement) gives deadlines for specific milestones in the consultation, program development, and implementation processes. These deadlines, listed below, are all relative to the date on which ownership of the project was officially transferred from the federal government to the three local utilities (October 2, 1997). This date is referred to as the Transaction.

Before the Governor issues the final Fish and Wildlife Program, the Agreement requires the owners to develop study plans, conduct the necessary studies, prepare study reports, develop a draft Fish and Wildlife Program, engage the public, and to consult with agencies and interested parties multiple times throughout the process. In order to allow adequate time to meet these requirements, the owners have initiated the consultation process early.

- 2022 – Initiate the consultation process no later than 25 years after the transaction date
- 2024 – Issuance of the Final Program by the Governor at least 3 years prior to implementation
- 2027 – Begin implementation of the Program no later than 30 years after the transaction
- 2032 – Complete implementation of the Program no later than 35 years after the transaction

The planned schedule to provide the Governor with a Proposed Fish and Wildlife Program is shown below, with updates through Fall of 2021.

2019 – During the last week of August, the owners’ team conducted a site reconnaissance of the Eklutna River. The primary goal was to provide the project owners’ technical and regulatory staff with the chance to review and observe site conditions and project facilities. In addition, the site reconnaissance allowed technical staff to assess the potential scope of study efforts needed to provide the Governor and his/her staff with data to establish the Fish and Wildlife Program required by the 1991 Fish and Wildlife Agreement. For more information, please reference the trip report which can be found under Final Documents at: [Documents - Eklutna Hydro](#)

2020 – In June 2020, a Technical Work Group (TWG) was established for study planning purposes. The TWG consists of technical experts and representatives from the following entities:

- Native Village of Eklutna
- Alaska Department of Fish and Game
- U.S. Fish and Wildlife Service
- National Marine Fisheries Service
- Trout Unlimited
- Alaska Pacific University
- Alaska Institute for Climate and Energy
- Hydropower Project Owners

Earlier in the year, the project owners acquired aerial imagery, spherical videography, and LiDAR of the entire Eklutna River as well as the northeastern shoreline of Eklutna Lake along the lakeside trail. The spherical videography is now available online at: <https://biglook360.com/eklutna/> Segments 1-7 show the river and lake shoreline going upstream at a higher altitude, while segments 8-14 are going downstream at a lower altitude. The imagery, videography, and LiDAR will be utilized during the ongoing study planning process this year and during subsequent study implementation.

In September 2020, the project owners' technical team held several meetings with the TWG to establish a study program framework. The project owners then developed Draft Study Plans and distributed them to the TWG on October 26, 2020 for review and comment. The comment deadline was November 25, 2020. A subsequent TWG meeting was held on November 30, 2020 to review the TWG's comments on the Draft Study Plans. The project owners continue to work with the TWG to address their comments and finalize the study plans by early 2021.

As of March 2021 – After receiving comments from the Technical Work Group (TWG) and others on the Draft Study Plans, the Project Owners held multiple meetings with the TWG in November and December 2020 to discuss their comments. The Project Owners then revised the study plans based on all comments received and distributed the Revised Draft Study Plans to the TWG on January 18, 2021 for a second round of review and comment. Another meeting with the TWG was held on January 25, 2021 to review the major revisions to the study plans and to answer any clarifying questions from the TWG before the comment deadline on January 29, 2021. The Project Owners revised the study plans again to address the second round of comments from the TWG, and then distributed the Proposed Final Study Plans to the Parties to the 1991 Fish and Wildlife Agreement on February 24, 2021 for review and concurrence. The Project Owners are currently working to obtain all necessary permits and authorizations for the planned summer field work season.

The project owners are happy to report that we have now received letters from all of the parties in the 1991 agreement officially concurring with the scope of work in the study plans. Following the process outlined by the state agencies, the concurrence letters from the four state agencies and the Proposed Final Study Plans were then sent to the Alaska Energy Authority (AEA) as the governor's representative for review. The AEA provided no additional comments, and the study plans were finalized in May 2021.

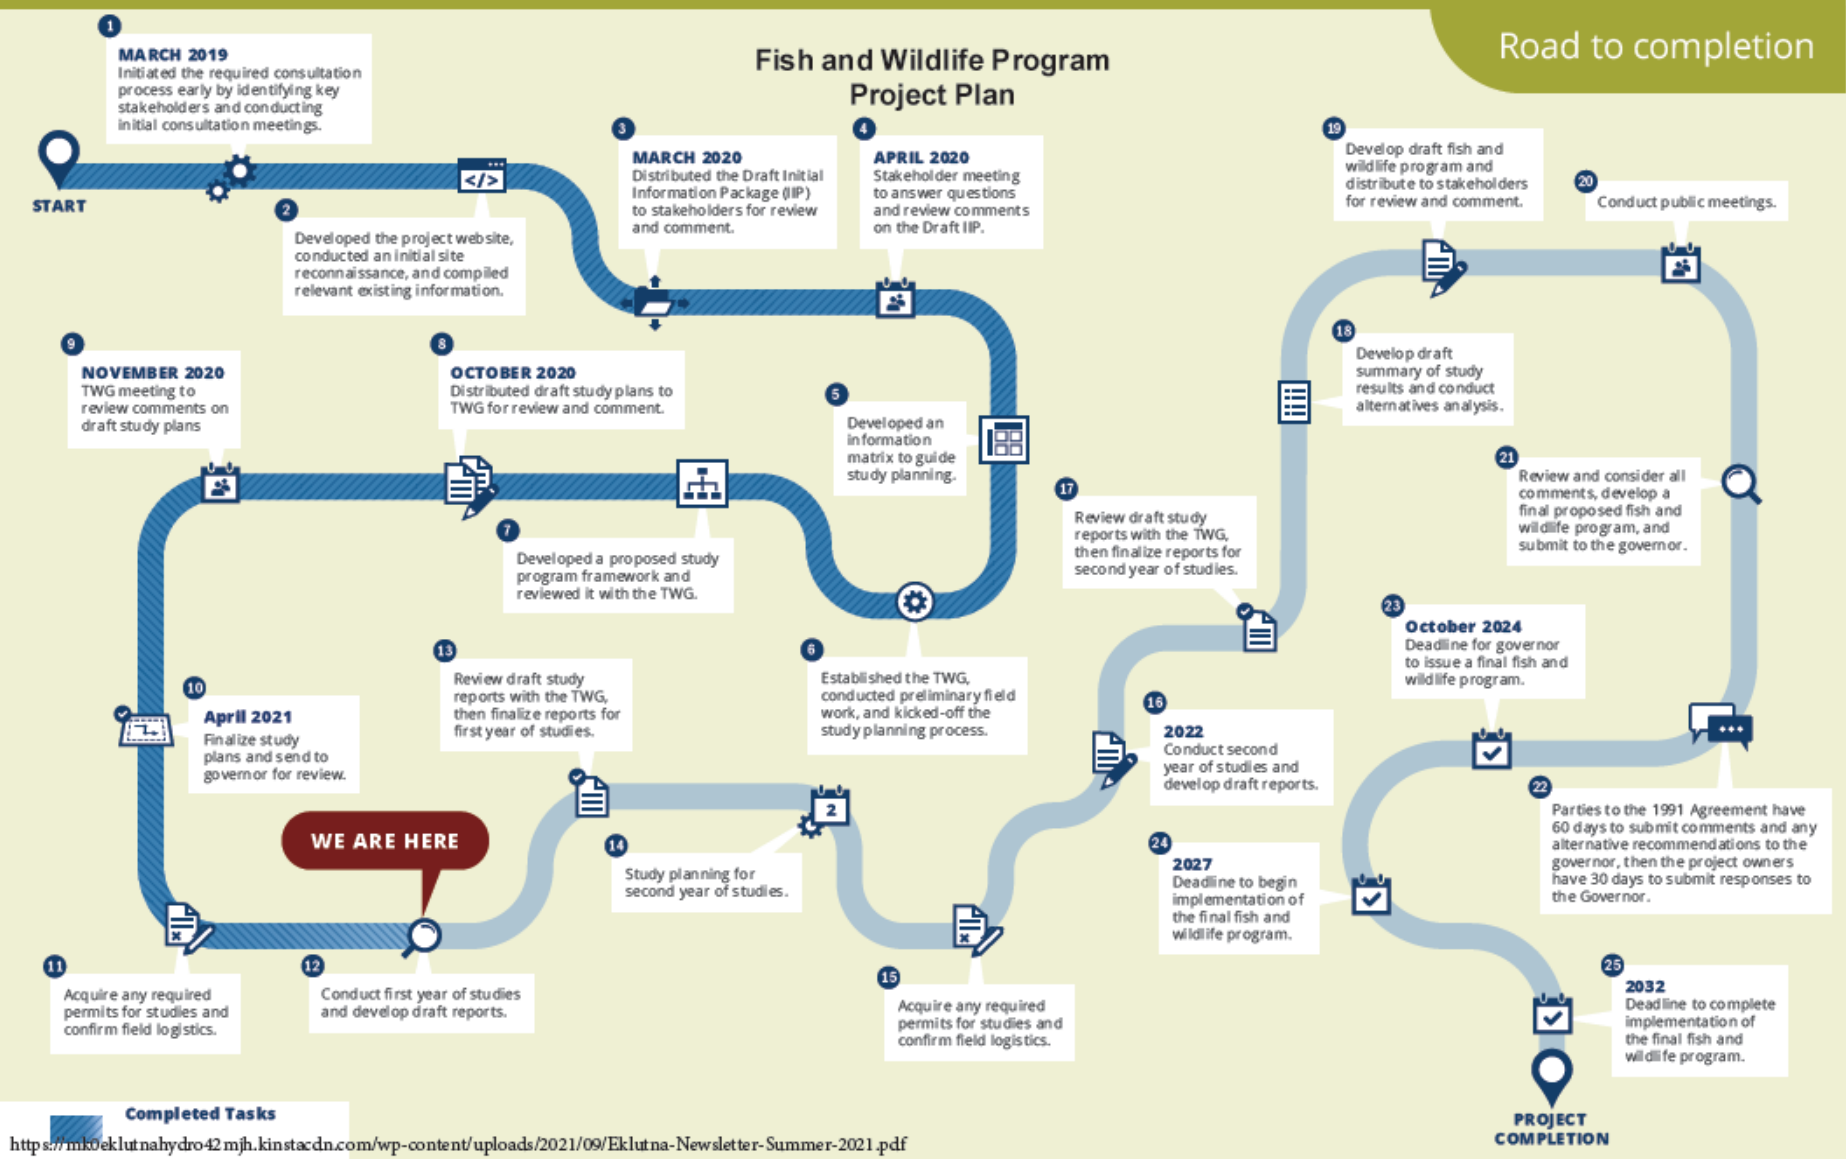

2021-2023 – Conduct studies as described in the study plans (assuming 2 years of studies), develop a draft Summary of Results, and distribute to stakeholders for review and comment.

2023–2024 – Conduct public meetings, resolve any disagreements, and submit proposal to the Governor.

Anchorage Hydropower Utility External Impacts

A Fish & Wildlife Agreement in 1991, with the United States Fish and Wildlife Service (USFWS), the National Marine Fisheries Service (NMFS), and the State of Alaska (the State) came to an agreement that requires the owners to:

- examine, and quantify if possible, the impacts to fish and wildlife from the Eklutna Hydroelectric Project
- examine proposals for the protection, mitigation and enhancement of fish and wildlife affected by the hydroelectric development
- consider the impacts of any protection, mitigation, or enhancement (PME) measures on other environmental resources and beneficial public uses as well as available means to mitigate those impacts
- develop and propose a Fish & Wildlife Program to the Governor.

The Governor will then review the proposal and issue a final Fish & Wildlife Program giving equal consideration to:

- the purposes of efficient and economical power production
- the protection, mitigation of damage to, and enhancement of fish and wildlife
- the protection of recreation opportunities
- municipal water supplies
- the preservation of other aspects of environmental quality
- other beneficial public uses
- requirements of State law

Throughout this process, the owners are required to consult with the USFWS, the NMFS, State resource agencies including the Alaska Department of Fish & Game (ADF&G), the Alaska Department of Environmental Conservation (ADEC), the Alaska Department of Natural Resources (ADNR), and any other interested parties. The USFWS, NMFS, and the State agreed that this process obviates the need for the owners to obtain a license for the project from the Federal Energy Regulatory Commission (FERC). The Native Village of Eklutna and Anchorage Water & Wastewater Utility are also included in the process.

Anchorage Hydropower Utility Capital Overview

Capital Project Selection Process

The Eklutna Operating Committee (EOC), of which the Municipality is a member, reviews engineering and operating reports, maintenance schedules, and other information about the condition of the generation assets of the Eklutna Power Project (the Project). The EOC develops a five-year capital plan, and develops and approves a current year capital project budget based on need, available resources, and schedule.

Significant Projects

Fish & Wildlife Project – In compliance with the 1991 Fish and Wildlife Agreement between the Eklutna project owners, the Federal government, and the State of Alaska, Anchorage Hydropower is responsible to pay for 19.04% of the costs associated with developing and implementing a Fish & Wildlife Study Plan, designed to mitigate any effects of the hydroelectric activity of the Project on fish and wildlife in the area.

Impacts on Future Operating Budgets

The entity must retain equity for the payment of capital projects in the future. The Municipality is responsible for 19.04% of the Eklutna generation capital expenditures and any future Fish & Wildlife project expenditures.

Anchorage Water & Wastewater Utility

Anchorage Water & Wastewater Utility Organizational Overview

Overview

The Anchorage Water and Wastewater Utility (AWWU) is the largest water and wastewater utility in Alaska. AWWU currently serves the Municipality of Anchorage extending from Eklutna to as far south as Girdwood. Although they share one workforce, AWWU operates as two separate economic and regulated entities: the Anchorage Water Utility (AWU) and the Anchorage Wastewater Utility (ASU).

AWWU Headquarters

System Description

To provide water and sewer services, AWWU owns and operates five Treatment Facilities (2 water and 3 wastewater), approximately 1,600 miles of pipe, and over 325,000 square feet of facility space distributed throughout the Municipality. The certificated water service area covers 130.4 square miles in three distinct geographic areas, Northern Communities, the Anchorage Bowl, and Girdwood Valley. Estimates place the water service population at approximately 243,000 people via nearly 56,700 customer accounts. The certificated sewer service area is larger, encompassing nearly all of the Municipality. ASU currently provides sewer service to approximately 252,500 people via approximately 57,600 customer accounts. Additionally, AWWU receives septage pumped from on-site wastewater systems on lots in areas not directly connected to the sewer system.

Ship Creek Water Treatment Facility

AWU's three sources of water are Eklutna Lake, Ship Creek, and groundwater accessed through a system of wells in the Northern Communities, the Anchorage Bowl, and Girdwood Valley. Eklutna Water Treatment Facility and the wells which supply Girdwood are operated year-round and serve as the primary supply sources for the Anchorage and Girdwood water systems. The Ship Creek Water Treatment Facility and the remainder of the water wells are used to augment the primary water supply, mainly in times of peak demand, as well as provide redundancy to the

Eklutna source for Eagle River and the Anchorage Bowl. Of these sources, the Eklutna Water Treatment Facility now provides approximately 91% of total water production for the Northern Communities/Eagle River and the Anchorage Bowl. In Girdwood, where system demand constitutes less than 2 percent of AWWU's total water production, all water produced and distributed is from two municipally-owned and managed wells.

ASU operates three wastewater treatment facilities (WWTF) to treat wastewater collected in three geographically separate but commonly managed sewer systems. The largest of these is the John M. Asplund WWTF located at Point Woronzof. The Asplund WWTF was constructed in

the early 1970's when Anchorage eliminated direct ocean discharges. It services the wastewater treatment needs of the Anchorage Bowl. The Asplund facility has received silver, gold, and platinum awards from the National Association of Clean Water Agencies for efficiency and environmental compliance. ASU is continually at work to maintain and enhance the facility. The Asplund facility operates in accordance with a National Pollution Discharge Elimination System (NPDES) permit administered by the U.S. Environmental Protection Agency (EPA). The permit, which expired in 2005 but has been administratively extended by EPA, allows discharge of effluent receiving primary treatment, in accordance with Section 301(h) of the Clean Water Act. The EPA is targeting September 2022 to complete a review of the existing permit.

The Eagle River WWTF was originally built in the 1960's and upgraded several times. It services the public wastewater treatment and disposal needs within Eagle River and Chugiak. The Eagle River facility provides biological secondary treatment and discharges treated effluent to Eagle River. The Eagle River Wastewater Treatment Facility Permit was renewed on March 1, 2020 by Alaska Department of Environmental Conservation (ADEC), which has assumed primacy from EPA over permits for wastewater discharge to fresh water and is valid for five years.

Asplund Facility

Girdwood Wastewater Treatment Plant

The third facility is Girdwood WWTF. It was originally constructed in the 1970's and also has undergone several process modifications and upgrades. The Girdwood facility provides biological secondary treatment and discharges treated effluent to Glacier Creek under an administratively extended NPDES permit administered by the ADEC. The core facility is now at the end of its useful life. Phase 1 of plant replacement and upgrades was completed in 2014. Phase 2 of the plant replacement and upgrade is being planned to conform to discharge requirements of a new permit.

Over the past decade, investments in physical infrastructure have resulted in an increase in the value of AWU and ASU. From 2010 to present, plant in service has increased by 27.1% from \$709.3 million to \$901.4 million for AWU and by 32.9% from \$554.6 million to \$737.1 million for ASU. This growth is primarily a result of an increasing amount of investment in transmission and distribution assets (water pipelines) and collection plant assets (wastewater pipelines).

Organization

The General Manager's office is responsible for overall operation of AWWU that includes the following 7 divisions:

- Treatment Division is responsible for day-to-day operation of the treatment facilities and water distribution system and for maintaining compliance with all state and federal regulations.
- Operations and Maintenance (O&M) Division maintains the treatment facilities and repairs all water and sewer piping and lift stations. The O&M Division also operates the wastewater collection system and is responsible for AWWU's Supervisory Control and Data Acquisition (SCADA) system.
- Customer Service Division is responsible for responding to customer inquiries, billing and collections for both utilities, issuing of permits, and field service functions.
- Engineering Division is responsible for development and execution of AWWU's capital program and for system planning.
- Information Technology Division provides support for all AWWU computers, network, and software systems.
- Administrative Services Division provides for training, safety, and internal and external communications.
- Finance Division is responsible for all general ledger and plant accounting, preparation of utility budgets and financial statements, and regulatory filings.

Anchorage Water & Wastewater Utility Business Plan

Mission

Providing safe and reliable water and wastewater service today and into the future.

Services

Anchorage Water & Wastewater Utility (AWWU) is the largest water and wastewater utility in Alaska. AWWU currently serves the Municipality of Anchorage extending from Eklutna to as far south as Girdwood. Although they share one workforce, AWWU operates as two separate economic and regulated entities: the Anchorage Water Utility (AWU) and the Anchorage Wastewater Utility (ASU).

Business Goals

AWWU prepared an updated strategic plan in 2016. The plan includes the following goals:

- Be responsive to the needs of the community
- Be the model of innovation and efficiency in service to the public
- Be a responsible steward of ratepayer funds
- Be the employer of choice for existing and future staff

Strategies to Achieve Goals

AWWU has identified the following customer commitments which represent the outcomes or accomplishments of the Utilities' activities as viewed by the customer:

1. Provide safe drinking water that meets or exceeds all standards.
2. Protect the environment through appropriate wastewater collection, treatment, and disposal.
3. Provide reliable service.
4. Have timely, professional, and courteous interactions with customers.
5. Manage finances responsibly and transparently.
6. Set rates that fairly reflect the cost of providing service and maintaining infrastructure.
7. Deliver services affordably to promote a strong Anchorage economy.
8. Invest wisely to minimize risk and maintain service levels.
9. Continuously improve the efficiency of our operations.
10. Anticipate change and prepare for the future.

Performance Measures to Track Progress in Achieving Goals

AWWU measures progress in achieving these customer commitments using quantifiable performance measures, including the following:

1. Compliance with all State and Federal drinking water, wastewater and clean air standards.
2. Number of planned and unplanned water outages.
3. Sanitary sewer overflows.
4. Number of reportable injuries and accidents.
5. Execution of capital improvement budget.
6. Debt to equity ratio.

Anchorage Water & Wastewater Utility

Anchorage: Performance. Value. Results.

Mission

Supporting the public health, safety, and economic interests of the community by providing quality water and wastewater services in a responsible, efficient, and sustainable manner.

Core Services

- Reliably treat and distribute potable water for domestic, commercial, and firefighting uses throughout the certificated service area.
- Reliably collect, treat, and dispose of wastewater in accordance with laws and regulations that protect public health and the environment.

Accomplishment Goals

- Provide reliable service
- Provide safe drinking water that meets or exceeds all standards
- Protect the environment through appropriate wastewater collection, treatment, and disposal.
- Fiscal responsibility and transparency with utility finances.
- Timely, professional, and courteous interactions with customers.
- Rates that fairly reflect the cost of providing service and maintaining infrastructure
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future.

Performance Measures

Progress in achieving goals shall be measured by:

1. Compliance with all State and Federal drinking water standards
 - Wastewater standards
 - Clean Air Act standards
2. Number of planned and unplanned water outages
3. Sanitary sewer overflows
4. Recordable incident rate (as compared to the standard incident rate for water and wastewater utilities)
5. Execution of capital improvement budget
6. Debt to equity ratio

Measure #1: Compliance with all State and Federal drinking water, wastewater, and clean air standards

Type

Effectiveness

Accomplishment Goals Supported

- Provide reliable service
- Provide safe drinking water that meets or exceeds all standards
- Protect the environment through appropriate wastewater collection, treatment, and disposal.

Definition

The number of regulatory requirements meeting compliance standards divided by the total number of regulatory requirements for the time period. The total number of regulatory requirements is the sum of daily, weekly, and monthly compliance standards.

Data Collection Method

All samples collected are compared with the State or Federal regulatory standards and any violations are noted and reported in accordance with permit stipulations.

Frequency

The percent compliance measurement will be calculated quarterly, using running totals for the calendar year.

Measured By

The Treatment Division will prepare a report from the water quality and laboratory databases that identifies any samples or reportable incidents that do not meet regulatory standards.

Reporting

The Treatment Division Director will update the report quarterly from the water quality and laboratory databases. The information will be displayed in tabular form.

Used By

The Treatment Division Director and General Manager will use the information to gain a clearer understanding of performance of AWWU's treatment facilities and determine if changes in system operation or maintenance are required.

Results

Measure 1: Compliance with all State and Federal drinking water, wastewater, and clean air standards	Goal	2021				Past Years					
		Q4	Q3	Q2	Q1	2020	2019	2018	2017	2016	2015
Safe Drinking Water Act Compliance (%)	100			100	100	100 %	100	99.8	97.6	100	100
Clean Water Act (NPDES permit) Compliance (%)	100			100	100	100	100			100	100
-Asplund				100	100	99.6	97.8	99.7	100	100	100
-Eagle River				100	99.7	98.95	99.7	99.3	100	99.7	100
-Girdwood				99.5	99.7	99.43	99.4	100	100	99.7	99.5
Clean Air Act Compliance (%) (Asplund Incinerator)	100			100	100	99.99	100	100	100	99.99	99.99

Measure #2: Number of planned and unplanned water outages

Type

Effectiveness

Accomplishment Goal Supported

- Provide reliable service
- Provide safe drinking water that meets or exceeds all standards
- Protect the environment through appropriate wastewater collection, treatment, and disposal.
- Timely, professional, and courteous interactions with customers.
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future

Definition

A water outage is defined as a disruption in service to a service connection. A service connection serves one customer, although multiple people may be affected by the disruption in service to a residence or a business.

Data Collection Method

A tally is kept through each calendar month of the number of customers who experience planned and unplanned water service disruptions for a range of durations listed below. The outage is as reported to AWWU and confirmed by observation or analysis in the field.

Frequency

The measurement will be recorded at the beginning of each month for the preceding month.

Measured By

Number of customers who do not have water service for the following durations:

- Less than 4 hours
- Between 4 hours and 12 hours
- Greater than 12 hours

Disruptions are counted for planned activities (customers are given advance notice in writing) and unplanned (emergency) activities.

Reporting

The Strategic Asset Services Section will create a monthly report that will be show water outages numerically and graphically.

Used By

The O&M Division, Customer Service Division, and Strategic Asset Services Section and the General Manager will review these data monthly to evaluate adequacy of operation and maintenance approaches, customer service response and pipe condition.

Results

Measure 2: Number of planned and unplanned water outages (customers per month)	Goal (Affected customers per month)	2021 (monthly average)	4 th Q 2021 (monthly average)	3 rd Q 2021 (monthly average)	2 nd Q 2021 (monthly average)	1 st Q 2021 (monthly average)	Historical monthly average				
							2020	2019	2018	2017	2016
Planned Outages											
<4 hours	<20				0	0	30	11	10	10	5
4-12 hours	<20				4	0	23	37	16	71	8
>12 hours	0				0	0	0	0	3	0.2	0.2
Unplanned Outages											
<4 hours	<20				22	26	63	17	38	15	92
4-12 hours	<50				56	11	32	36	42	38	22
>12 hours	0				0	0	3	3	11	3	5

Measure #3: Sanitary Sewer Overflows

Type

Effectiveness

Accomplishment Goals Supported

- Provide reliable service.
- Timely, professional, and courteous interactions with customers.
- Protect the environment through appropriate wastewater collection, treatment, and disposal.
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future.

Definition

Total number of wastewater overflows onto the ground or wastewater back-ups into customer residences if caused by an obstruction in an AWWU sewer main, manhole, or cleanout. Overflows or backups that occur due to on-property blockages do not count.

Data Collection Method

The reportable number of sanitary sewer overflows is what is reported in writing to the EPA Region X office within a week of each occurrence.

Frequency

The measurement will be recorded each month for the previous month.

Measured By

Data collection is by direct observation by AWWU staff.

Reporting

The O&M Division will create a monthly report displaying overflow data numerically and graphically.

Used By

The O&M Division, Customer Service Division, and Strategic Asset Services Section and the General Manager will review these data monthly to evaluate adequacy of operation and maintenance approaches, customer service response and pipe condition.

Results

	Goal	2021				Historical monthly average					
		Q4	Q3	Q2	Q1	2020	2019	2018	2017	2016	2015
Measure 3: Sanitary Sewer Overflows (monthly)	<1.5			2.67	1.0	1.1	1.33	1.23	0.91	1.48	1.58

Measure #4: Number of reportable injuries and accidents**Type**

Effectiveness

Accomplishment Goal Supported

- Provide reliable service
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future.

Definition

Number of OSHA recordable incidents multiplied by 200,000 (# defined by OSHA as 100 employees working full-time for a year) divided by number of hours worked by all employees. Compare Recordable incident rate to standard industrial rate (SIR) for water and wastewater utilities.

Data Collection Method

Accident and near-miss reports.

Frequency

Annually.

Measured By

Safety Program Manager, Administrative Services Division.

Reporting

The Administrative Services Division will maintain an accident and near miss report on a monthly basis. Data will be compiled, summarized, and reported at the end of the year. Reportable incidence rates will appear mid-calendar year.

Used By

The Safety Manager, all Division Directors and the General Manager will use the report to monitor and adjust working practices and focus training and attention to hazardous situations.

Results

	Goal	2020	2019	2018	2017	2016	2015	2014
Measure 4: Number of reportable injuries and accidents (annual)	<4.60	.994	4.08	7.1	4.45	6.30	6.26	6.37

Note: Bureau of Labor Statistics (BLS) will normally post the previous year's incidence rate during the months of June or July. AWWU falls within the utilities sector of electric power generation, transmission, and distribution; natural gas distribution; and water, sewer, and other systems.

Update - From the Bureau of Labor Statistics: **Important note on future data:** Beginning with the 2016 reference year, the Survey of Occupational Injuries, and Illnesses (SOII) will present a single release of national data on **November 9, 2017**. This release will include industry counts and rates along with case circumstances and worker characteristics for cases requiring days away from work. In previous years, these data were released separately. State data was released on November 28, 2017. A similar schedule will be followed in subsequent years.

Measure #5: Execution of Capital Improvement Budget
--

Type

Efficiency

Accomplishment Goal Supported

- Provide reliable service
- Fiscal responsibility and transparency with utility finances.
- Rates that fairly reflect the cost of providing service and maintaining infrastructure
- Continuous improvement in the efficiency of our operations
- Anticipate change and be prepared for the future.

Definition

The ratio (as a percent) of capital project dollars expended through the fiscal year divided by the planned expenditure for the year as indicated in the approved Capital Improvement Budget.

Data Collection Method

Project Managers input % complete data and expected completion dates for each project named in the capital improvement budget.

Frequency

Estimates of the completeness (% complete) of all ongoing projects will be reported through the AWWU Engineering Division Project Management group annually and with quarterly updates to yearly progress.

Measured By

The Engineering Division will keep track of this information using the ERP tracking and reporting system.

Reporting

The information will be displayed numerically and graphically in monthly reports.

Used By

The Engineering Director and General Manager will use this data to gauge progress on use of capital project funds.

Results

	Goal	2021	Historical Information					
			2020	2019	2018	2017	2016	2015
Measure 5: Execution of Capital Improvement Budget (annual)	75%	23%	90%	45%	78%	64%	65%	71%

Budget, Expenditures, and Closures through June of 2021

Measure #6: Debt to Equity Ratio

Type
Effectiveness

- Accomplishment Goal Supported**
- Fiscal responsibility and transparency with utility finances.
 - Anticipate change and be prepared for the future.

Definition
The relative percentages of assets that are funded by debt and equity, respectively. The total of debt funding and equity funding equals 100%.

Data Collection Method
The calculation is performed by comparing debt and equity to assets annually.

Frequency
The measurement will be calculated annually upon completion of the Utility’s audited financial statement.

Measured By

The Finance Division will calculate this ratio from financial statement data.

Reporting

The Finance Division manager will create and maintain an annual report. Trend information will be displayed in a table.

Used By

The information will be used by the Finance Division Director, General Manager, Board, and Administration to help evaluate debt financing levels.

Results

Measure 6: Debt to Equity Ratio (annual)	Goal	2020	2019	2018	2017	2016	2015	2014
Water Utility	67/33	56/44	58/42	60/40	61/39	62/38	63/37	62/38
Wastewater Utility	67/33	63/37	64/36	65/35	64/36	67/33	67/33	65/35

PVR Measure WC: Managing Workers' Compensation Claims

Reducing job-related injuries is a priority for the Administration by ensuring safe work conditions and safe practices. By instilling safe work practices, we ensure not only the safety of our employees but reduce the potential for injuries and property damage to the public. The Municipality is self-insured and every injury poses a financial burden on the public and the injured worker's family. It just makes good sense to WORK SAFE.

Results are tracked by monitoring monthly reports issued by the Risk Management Division.

About Anchorage Water & Wastewater Utility

Anchorage Water Utility History

From the first intake of water at Lower Ship Creek, and a few miles of wood stave water lines downtown more than 100 years ago, Anchorage's public water utility has grown into an enterprise with a net plant in service of approximately \$550 million that delivers an average of 23 million gallons of water to customers each day. The original water system for Anchorage was installed by the Alaska Railroad in 1917. In 1921, the City purchased the water system and associated water rights from the Alaska Engineering Commission. As the City expanded by annexation, the water system was extended into new areas and independent water systems previously serving the annexed areas were acquired by the City. A 2.6-mile raw water line to Ship Creek was built in 1980 to replace an earlier raw water main originally constructed in 1962 for the Ship Creek Water Treatment Facility (WTF). In the 1950's, an aqueduct was drilled through the mountains north of Anchorage to supply water from Eklutna Lake to the Eklutna hydroelectric power plant along the Knik River. In 1985, the Anchorage Water & Wastewater Utility (AWWU) tapped this aqueduct and connected a 7.8-mile-long transmission main (intake portal) to provide water from Eklutna Lake to the Eklutna Water Treatment Facility. A 22-mile-long water transmission main was constructed to distribute the treated water from Eklutna to Chugiak, Eagle River, and on into Anchorage.

Anchorage Sewer Utility History

The Alaska Engineering Commission first installed sewers in downtown Anchorage in 1916 along the lower bluff near the Alaska Railroad Depot. As Anchorage grew, construction of sewers continued and by the end of World War II, sewers were available in much of the area between Ship Creek and Chester Creek, west of Cordova Street. The Greater Anchorage Area Borough (GAAB) was created in 1964 and was granted area wide sewer authority. The last major private sewer utility was acquired by the GAAB in 1972. Investment by the GAAB in the 1970's constructed the J.M. Asplund Wastewater Treatment Facility (WWTF) for Anchorage, the Girdwood Wastewater Treatment Facility and the Eagle River Wastewater Treatment Facility. The wastewater utility is now owned and governed by the Municipality of Anchorage after unification of the City of Anchorage and the GAAB on September 15, 1975. The rivers, creeks, and inlets downstream from Anchorage's wastewater treatment facilities are not adversely impacted by treated effluent, which is AWWU's principal measure of success. The Anchorage community benefits from the superior operation of the three wastewater treatment plants that serve its growing population. Anchorage's public wastewater utility has grown into an enterprise with a net plant in service of approximately \$423 million, treating an average of 29 million gallons of effluent each day.

Governance

AWWU has a seven-member Board of Directors as codified in Anchorage Municipal Code section 4.80.020. The Board is appointed by the Mayor to staggered 3-year terms, with nominees subject to the approval of the Anchorage Assembly. The Board, by code, makes recommendations to the Mayor, establishes procedures for customer complaints, and recommends changes in code to the Assembly that the Board deems necessary or desirable for the efficient operation of the Utility or for the benefit of its customers. The authority for operation and management of the Utility is under the control of the Mayor. The Board members are very experienced professionals in the fields of law, finance/accounting, engineering, and public health, in addition to 2 at-large citizen members. Regular meetings are held monthly and are open to the public. Board meetings focus on Utility operations and highlights.

Economic Regulation and Accounting

Since 1970, both the Anchorage Water Utility (AWU) and the Anchorage Wastewater Utility (ASU) have been regulated by the Alaska Public Utilities Commission, which was renamed the Regulatory Commission of Alaska (RCA) on July 1, 1999. AWU and ASU each hold a Certificate of Public Convenience and Necessity for serving portions of the Anchorage Bowl, Eagle River and Girdwood. The RCA must approve all rates and tariffs prior to implementation. They also regulate service areas and service quality. The RCA is composed of five members appointed to six-year staggered terms by the Governor of the State of Alaska and confirmed by the State Legislature.

AWWU is an Enterprise Fund. Enterprise Funds are used to account for operations where costs of providing services to the general public on a continuing basis are financed or recovered primarily through user charges or where the governing body has decided that periodic determination of revenues earned, expenses incurred, and/or change in net assets is appropriate for capital maintenance, public policy, management control, accountability or other purposes.

AWWU applies all applicable provisions of the Governmental Accounting Standards Board which has authority for setting accounting standards for governmental entities. The accounting records of the Utility conform to the Uniform System of Accounts prescribed by the National Association of Regulatory Utility Commissioners. The accrual basis of accounting is used for Enterprise Funds. Revenues are recognized in the accounting period in which they are earned and become measurable. Expenses are recognized in the period incurred, if measurable.

AWWU's audited financial statements are available at [Financial Statements | Anchorage Water and Wastewater Utility \(awwu.biz\)](https://www.awwu.biz)

Environmental Regulation

AWU's activities are dictated by a wide variety of environmental regulations administered by the Environmental Protection Agency (EPA) and the Alaska Department of Environmental Conservation (ADEC). Potable water produced by AWU must comply with the regulations promulgated under the Safe Drinking Water Act (SDWA). The SDWA is the main federal law governing the quality of drinking water in the United States. The ADEC has authority (primacy) to administer the SDWA regulations for the EPA. The SDWA sets standards for the chemical and microbial quality of drinking water and establishes requirements for informing the public.

ASU's activities are also dictated by a wide variety of environmental regulations administered by the EPA and the ADEC. All wastewater discharges must comply with the regulations promulgated under the Clean Water Act (CWA). The CWA is the main federal law governing discharges into the waters of the United States. The CWA requires that each treatment facility have a unique National Pollution Discharge Elimination System (NPDES) permit that specifies the discharge limits from each facility for a wide variety of chemical and biological constituents. The ADEC has authority (primacy) to issue and administer the NPDES permits for ASU's Eagle River and Girdwood WWTFs. Authority to issue and administer the 301(h) modification for the Asplund WWTF has been retained by EPA, due to the special conditions of this discharge as outlined in section 301(h) of the CWA. In addition to the CWA laws, ASU's sewage sludge incinerator must also comply with the provisions specified in Title V of the Clean Air Act (CAA). ADEC has primacy for the CAA and administers the permit for EPA.

Failure to comply with the regulations promulgated under the SDWA, CWA and CAA can result in fines and/or compliance orders and criminal charges.

Physical Plant

The John M. Asplund WWTF is one of the few facilities in the nation operating as a primary treatment facility under Section 301(h) of the Clean Water Act. The primary treatment provided by this facility removes up to 46% of the biological oxygen demand and 80% of the solids from the influent wastewater meeting the criteria necessary for discharge to the marine waters of Cook Inlet.

The smaller Eagle River WWTF and Girdwood WWTF provide advanced secondary treatment prior to discharge to Eagle River and Glacier Creek, respectively. These facilities remove up to 99% of the pollutants from the incoming wastewater prior to discharge.

In 2020, the Asplund WWTF treated an average of 26.9 million gallons per day (mgd). The Eagle River WWTF treated an average 1.3 mgd and the Girdwood WWTF treated an average 0.5 mgd. The three facilities have a combined design capacity of 61.1 mgd. The wastewater collection system has approximately 764 miles of pipes.

The Asplund Facility, built in 1972, is Alaska's largest wastewater treatment plant. As wastewater treatment technology and the demands of community growth have developed over the last two decades, utility operators and engineers have kept pace. The Asplund plant underwent major renovations in 1982 and expanded and upgraded again in 1989.

A facilities plan update was prepared in 1999. The 1999 facilities plan evaluated the existing condition of the Asplund facility and identified improvements necessary to meet the future needs of the community. The facilities plan identified over \$40 million worth of improvements to the solids handling, headworks, administration, laboratory, incineration, thickening processes and control and power systems. AWWU undertook a majority of the recommended Asplund projects. These projects, along with careful operation, have made Asplund a modern, state-of-the-art treatment facility. In 2014, an updated facilities plan was prepared for Asplund. The plan recommended over \$17M of additional investment in Asplund over ten years' time to rehabilitate and maintain aging infrastructure. A significant portion of those recommendations have been completed since 2014. ASU continues to maintain its smaller treatment plants. Additional projects at Eagle River and Girdwood are underway, all designed to replace, rehabilitate, and provide for the near-term needs of the areas being serviced.

AWU's three sources of water are Eklutna Lake, Ship Creek and groundwater accessed through a system of wells in the Northern Communities, the Anchorage Bowl, and Girdwood Valley. Eklutna Water Treatment Facility and the wells which supply Girdwood are operated year-round and serve as the primary supply sources for the two water systems. The Ship Creek Water Treatment Facility and the remainder of water wells are used to augment the primary water supply as well as provide redundancy to the Eklutna source for Eagle River and the Anchorage Bowl.

Of these sources, the Eklutna WTF now provides, on average, 91 percent of total water production for the Northern Communities and the Anchorage Bowl. In Girdwood, where system demand constitutes less than 2 percent of AWWU's total water production, all water produced and distributed is from two wells.

Projects to maintain the surface water plants and AWU wells are on-going. The purpose of these projects is multiple fold: to rehabilitate and upgrade facilities where equipment has reached the end of its useful life; to automate and increase operational efficiency of facilities; to increase yield from existing well sites; and to meet stricter federal and state regulations regarding water quality.

Visit the AWWU website at: <https://www.awwu.biz/>

Anchorage Water & Wastewater Utility Highlights and Future Events

Affordability

A growing concern for water and wastewater utilities nationwide is the affordability of rates to ratepayers. AWWU shares the concerns of these other utilities. Increases in infrastructure and operating costs continue to lead to higher rates. Ongoing investment in infrastructure is critical for the Utility, as evidenced from the November 2018 earthquake. AWWU's infrastructure proved resilient; no customers went without service immediately following the earthquake. With this history and knowledge, AWWU is decreasing the amount of capital spending to be more in-line with depreciation levels.

Throughout 2019, 2020 and 2021, AWWU took the following steps to help reduce ongoing expenses:

- Education throughout the utility on energy efficiency and reduced demand charges.
- Reduced natural gas usage while maintaining compliance with air quality permits.
- Additional storage and reliability of the Asplund Wastewater Treatment Facility's disinfection system.

Focus in these areas will result in the savings of hundreds of thousands of dollars annually and those savings are reflected in the 2022 operating budget.

2022 Operating Expenses

With economic sustainability as an underlining principle for the Utility, AWWU is budgeting labor expenses at levels lower than budgeted in 2021 and is budgeting modest increases for non-labor. These measures will assist in meeting financial metrics as defined by the AWWU Board of Directors and as required by current debt covenants. Proposed reductions will affect AWWU's levels of service, response time, mean time to repair, and customer hold times, which may lead to an increase in customer complaints due to these spending reductions.

2022 Operating Revenues

Revenues in the 2022 budget are based on current and proposed rate filings with the Regulatory Commission of Alaska (RCA). At present, AWWU has a pending Revenue Requirements Study with the RCA with a 2% rate increase for the water utility and an 8% rate increase for the sewer utility. These interim and refundable rates are pending approval by the Commission. Should the rate increases granted be less than requested, Operating Revenue will be negatively impacted. AWWU plans to file another Revenue Requirements Study with the RCA at the end of 2021 asking for a 1.75% rate increase for the water utility and an 3.75% rate increase for the sewer utility effective January 1, 2022. Again, should these interim and refundable rates be decreased or denied by the RCA, Operating Revenues will be negatively impacted.

Rate Increases Calculated, Requested and Approved

	Calculated Rate Increases		Requested Permanent Rate Increases		Approved Rate Increases		Reason For Requesting Increases Less Than The Calculated Increases
	AWU	ASU	AWU	ASU	AWU	ASU	
2004	14.2%	8.1%	14.2%	8.1%	13.6%	8.1%	The calculated increases were requested due to the change in the MUSA calculation.
2005	7.2%	6.8%	7.2%	6.8%	7.8%	3.0%	The calculated increases were requested due to the change in the MUSA calculation.
2006	12.4%	15.0%	8.9%	10.6%	6.5%	10.6%	Policy direction to limit rate increases requested to reduce impact on customers.
2007	15.0%	17.8%	14.5%	13.0%	7.0%	9.5%	Policy direction to limit rate increases requested to reduce impact on customers.
2008	-	-	-	-	-	-	Rate changes were not requested by AWWU for 2008.
2009	8.7%	8.0%	7.0%	6.5%	5.6%	6.5%	Policy direction to limit rate increases requested to reduce impact on customers.
2010	7.0%	9.5%	2.5%	2.5%	2.5%	2.5%	Policy direction to limit rate increases requested to reduce impact on customers.
2011	18.5%	26.2%	8.0%	15.0%	8.0%	15.0%	Policy direction to limit rate increases requested to reduce impact on customers.
2012	13.0%	16.6%	6.0%	11.0%	6.0%	11.0%	Policy direction to limit rate increases requested to reduce impact on customers.
2013	9.1%	6.8%	6.0%	4.5%	6.0%	4.5%	Policy direction to limit rate increases requested to reduce impact on customers.
2014	5.6%	6.7%	4.0%	5.5%	2.3%	4.3%	AWWU stipulated to permanent rates lower than the rates requested.
2015	-	-	-	-	-	-	Rate changes were not requested by AWWU for 2015.
2016	-	-	-	-	-	-	Rate changes were not requested by AWWU for 2016.
2017	-	11.9%	-	9.5%	-	9.5%	Policy direction to limit rate increases requested to reduce impact on customers.
2018	4.5%	4.2%	3.0%	2.5%	3.0%	1.0%	
2019	8.3%	10.5%	7.0%	9.5%	6.5%	6.9%	AWWU stipulated to permanent rates lower than the rates requested.
2020	-	-	-	-	-	-	Rate changes were not requested by AWWU for 2020.
2021	4.86%	11.67%	2%	8%	TBD	TBD	Policy direction to limit rate increases requested to reduce impact on customers. Rate Case is still pending RCA decision by June 11, 2022.

To improve its debt position, AWWU must continue to request reasonable rates while controlling expenses. The budget provided in this package provides just such a balance.

Anchorage Water & Wastewater Utility External Impacts

Wastewater Treatment Facilities Discharge Permits

The State of Alaska Department of Environmental Conservation (ADEC) assumed authority for permitting wastewater discharges for the Girdwood and Eagle River Wastewater Treatment Facilities (WWTF) in November 2008. The Girdwood WWTF permit has been administratively extended by ADEC and continues to be effective and enforceable until a new permit is issued. The Eagle River WWTF permit was reissued by ADEC in 2020 and is valid for at least five years.

Authorization of discharge into marine waters from the Asplund WWTF remains under the auspices of the U.S. Environmental Protection Agency (EPA). The EPA is currently evaluating the Utility's application for reauthorization of the permit allowing only primary treatment, in accordance with criteria set out in Section 301(h) of the Clean Water Act. Subsequent to the agency's determination that the Asplund discharge meets the 301(h) criteria, EPA will consult with the National Marine Fisheries Service (NMFS) on the effects of the permit reauthorization on endangered species (i.e., the Cook Inlet beluga whale). If NMFS finds that the discharge reauthorization is likely to jeopardize continued existence of the species or adversely modify critical habitat, NMFS may impose conditions on the permit to mitigate the effects on the species. EPA has notified AWWU that they have targeted September 2022 to complete the review of the extension of the 301(h) permit.

Infrastructure

The infrastructure required to provide reliable water and sewer service requires continual annual capital investments to maintain expected service levels and prudently mitigate long term risk. Anchorage Water and Wastewater Utility (AWWU) continuously evaluates Anchorage Water Utility and Anchorage Sewer Utility assets using industry standard best management practices through our asset management program which identifies the need for specific capital projects. In this program, AWWU performs extensive condition assessment monitoring and evaluation using both AWWU staff and specialized contractors. This work culminates in business case analyses that best determine solutions offering the lowest overall life cycle costs.

The November 2018 earthquake was an empirical data point that exhibited the benefit of successful strategic investments made by AWWU over the last decade. While the earthquake did cause significant damage to AWWU systems, operations staff were able to maintain uninterrupted and reliable water and wastewater services through that catastrophic event. As such, AWWU has begun to modestly scale back capital investment.

Anchorage Water & Wastewater Utility Capital Overview

Capital Project Selection Process

Anchorage Water and Wastewater Utility (AWWU) continuously evaluates Anchorage Water Utility (AWU) and Anchorage Sewer Utility (ASU) assets using industry standard best management practices which identify the need for capital projects. As assets age and deteriorate over time they become problematic and either disproportionately lower customer levels of service, have disproportionately high operations and maintenance cost, or increase risk liability. Capital project expenditures address one or more of these issues. The typical origin of capital projects is from facility plans, asset management plans, master plans, or day to day operations. AWWU has the following types of capital projects:

- Water Treatment Facility Plant
- Water Transmission or Distribution
- Sewer Trunk or Collection System
- Wastewater Treatment Facility Plant
- Other Facilities and Plant not directly involved:
 - The treatment of raw water or delivery of finished water
 - The collection or treatment of sanitary sewer
- Miscellaneous Equipment (non-dedicated to a specific facility or location)
- Facility Plans and Master Plans
- Information Technology Hardware and Software
- Vehicles

For an issue of concern, not previously identified, to become a capital project listed above, AWWU develops a Business Case Evaluation (BCE) which summarizes the concern, identifies alternative solutions, and calculates the risk matrix score. AWWU uses a standardized risk matrix to score different aspects of potential projects like safety, security, criticality, customer needs, maintenance requirements, and financial benefit. The matrix score produces a risk number so projects in different categories can be compared (i.e., Water Treatment Facility Plant project vs. Information Technology Hardware and Software Project). AWWU takes these justification documents (BCE and matrix score) and in conjunction with the long-range financial plan, selects which capital projects to move forward and schedules them within the 6-year Capital Improvement Plan.

Significant Projects

Water Treatment Facility Plant Projects include improvements and equipment for the Eklutna Water Treatment Facility, Ship Creek Water Treatment Facility, and any source water improvements including wells or well sites.

Wastewater Treatment Facility Plant Projects include improvements and equipment for the Eagle River Wastewater Treatment Facility, Asplund Wastewater Treatment Facility, Girdwood Wastewater Treatment Facility, and Septage Receiving Stations.

Water Transmission and Distribution System Projects are any improvements to the pipe network of the distribution system from Eklutna Lake to Potter Valley in Anchorage and the distribution system in Girdwood.

Sewer Collection System Projects are any improvements to the pipe network of the sanitary sewer collection systems in Eagle River, Anchorage, and Girdwood.

For both AWU and ASU, general and intangible plant improvements are broken into the following projects:

- Facility and Master Plans
- Information Technology Hardware and Software
- Other Plant and Facilities include improvements to those facilities not directly associated with:
 - The treatment of raw water or delivery of finished water
 - The collection or treatment of sanitary sewer
- Miscellaneous Equipment (non-dedicated to a specific facility or location)
- Vehicles

A portion of annual capital funding is reserved for unplanned projects in any of the aforementioned categories and unanticipated coordination due to unplanned projects of agencies such as the Alaska Department of Transportation and Public Facilities or MOA Project Management and Engineering.

Impacts on Future Operating Budgets

One of the overarching goals of AWWU is to balance the ratepayer's expected level of service while maintaining reasonable rates. Rates are a function of both capital spend and annual operating expenses. One of the intents, among many, of the Capital Program is to decrease long term operating expenses. Other objectives of the Capital Program, such as risk mitigation, level of service adjustment, and parity replacement of existing infrastructure do not materially impact future operating budgets. The balance between current capital spend and future operating budgets is a function of AWWU's long-range financial plan that identifies the available capital funding in consideration of anticipated operational costs. AWWU's project selection process prioritizes the greatest operational cost savings for the ratepayers given prudent utility industry practices.

475 Loop Conversion

Project ID	AWU2018007	Department	Anchorage Water Utility
Project Type	Improvement	Start Date	October 2013
District		End Date	July 2026
Community Council			

Description

The 475 loop conversion project will change the operating hydraulic grade line (HGL) within the Anchorage loop transmission main from 630 HGL to 475 HGL between the Ship Creek Energy Recovery Station to Abbot Valve vault.

570 600 Zone Conversion

Project ID	AWU2017012	Department	Anchorage Water Utility
Project Type	Improvement	Start Date	
District		End Date	
Community Council			

Description

Combine the 570 and 600 pressure zones at South Park pressure regulating valve to mitigate pressure surges and increase operating pressures, minimize the size of water outages when disruptions do occur, and upsize the station piping to meet AWWU requirements. Project timing should occur as station rehabilitation or replacement is needed.

Eklutna Water Treatment Facility Fluoride Improvements

Project ID AWU2018001 **Department** Anchorage Water Utility
Project Type Replacement **Start Date**
District **End Date**
Community Council

Description
 This project involves replacing the existing 30-year-old dry fluoride system with a new dry fluoride system. Updated equipment would provide increased operator safety and higher fluoride feed accuracy.

D-2-4 Trunk Improvements

Project ID ASU2016009 **Department** Anchorage Wastewater Utility
Project Type Improvement **Start Date** April 2017
District **End Date** January 2025
Community Council

Description

Project location bound by Chester Creek to the North, Joint Base Elmendorf-Richardson land to the West, Parks and Recreation land to the East and 17th Avenue to the south. The existing 12-inch and 18-inch sewer line is built underneath and directly adjacent to structures making access for maintenance activities difficult.

Merrill Field Airport

Merrill Field Airport Organizational Overview

The Airport Manager is responsible for overall management, airport operations, risk mitigation, and operational tone, policies, and direction of the Airport. The Airport Manager is also the primary point of contact with the Federal Aviation Administration (FAA) regarding capital and airport planning, operations, and capital development. The airport manager is assisted in these tasks by an engineering function contracted out to a local airport engineering firm. Finally, the airport manager is the MRI spokesman in all representations to the media.

Merrill Field Airport Runway by Shelly Plum of AK Love Photography

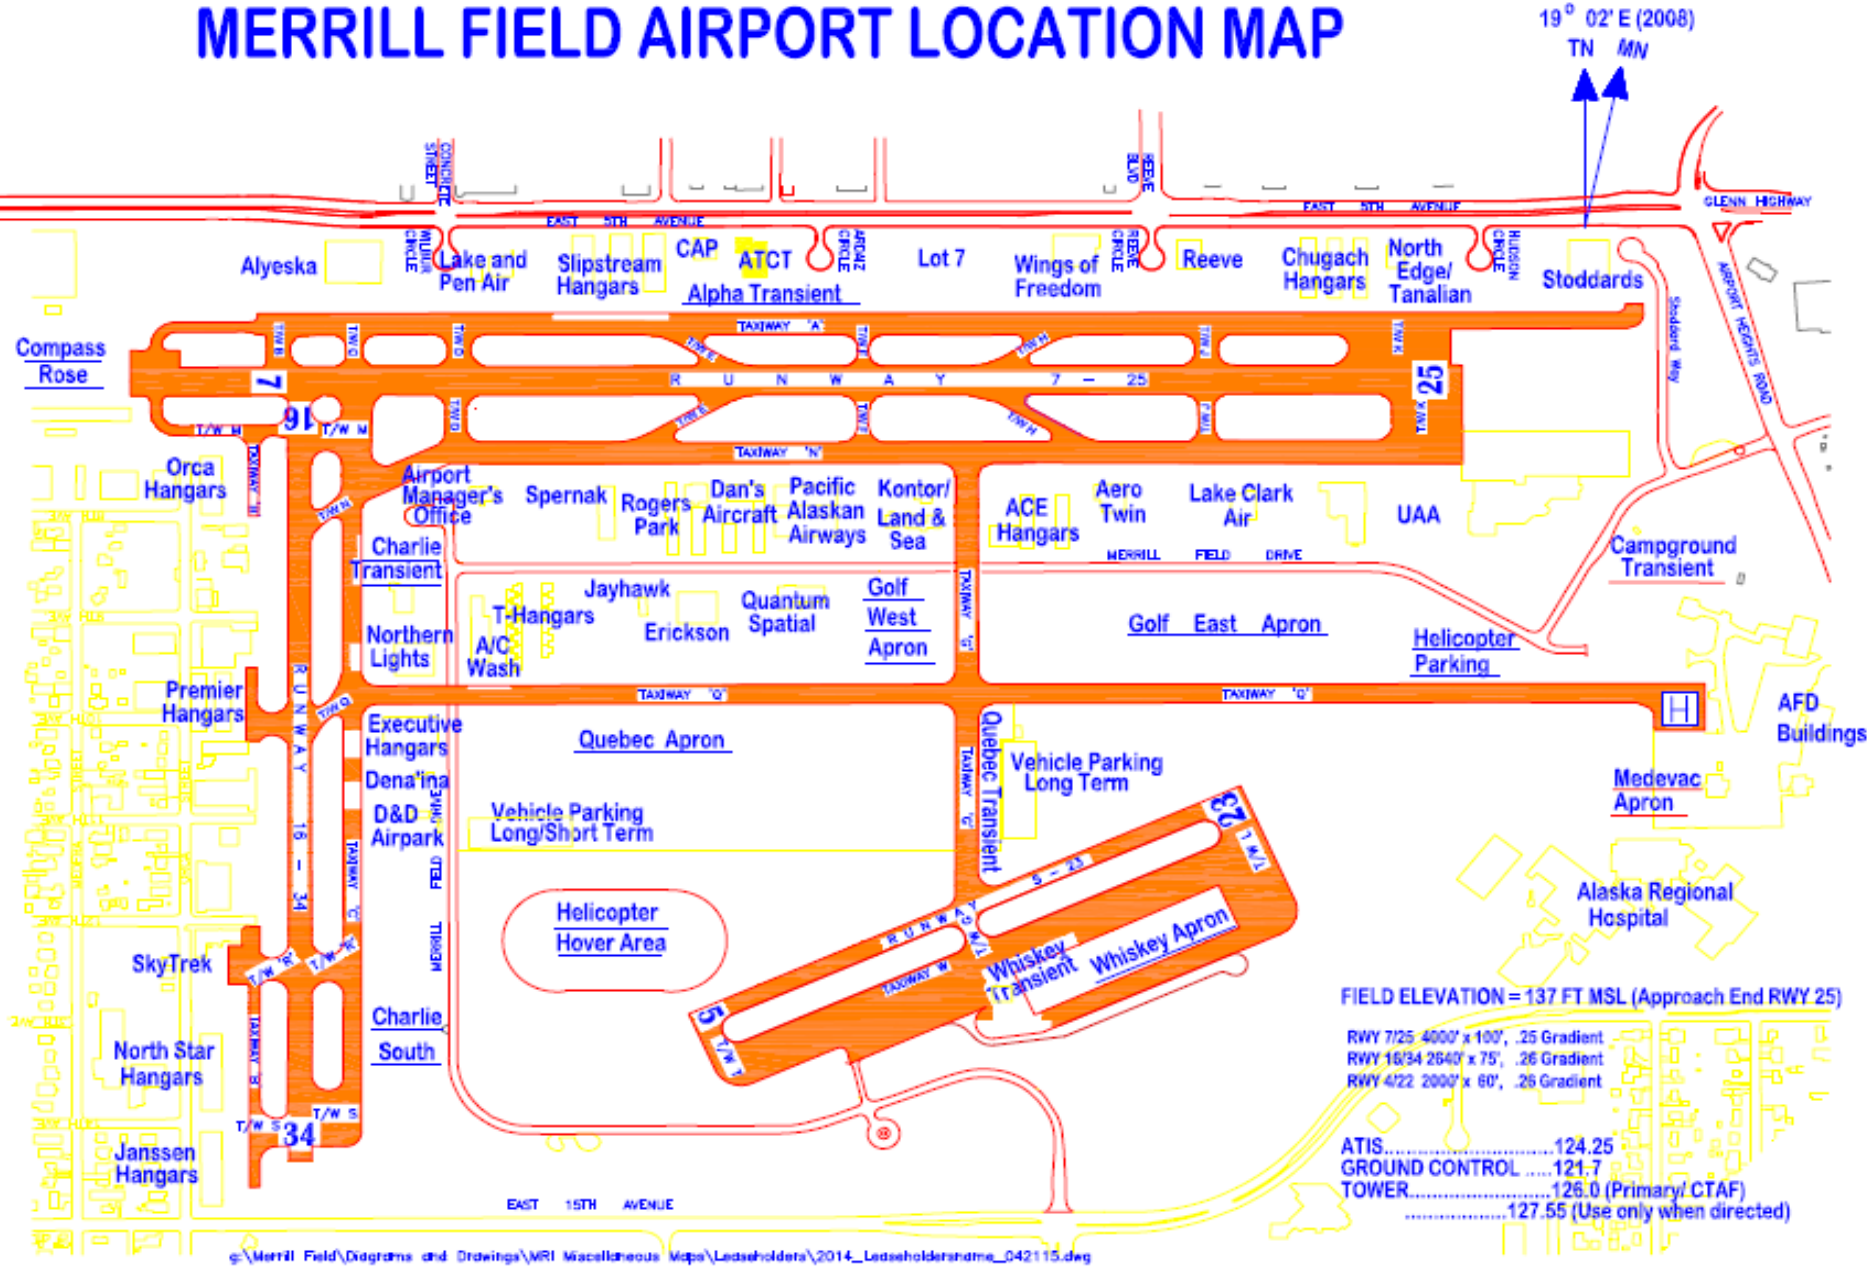

The Assistant Airport Manager serves as the: deputy administrator for airport management functions, financial management, and the supervisor of the administrative staff. The administrative staff conducts the day-to-day operations at the Airport. This includes; property management and servicing of leasehold and tie-down customers. They also oversee the coordination of planning and design of infrastructure construction projects. All office staff are one deep and specialized, per job duties.

Merrill Field Airport Live Web Camera Footage

Maintenance personnel provide maintenance and operation of Airport facilities and equipment, as well as maintenance of all operating surfaces on the airport - runways, taxiways, roads, and aircraft tiedown areas that are not on leased property. Such responsibilities include snow removal, sanding, airfield maintenance, including coordination of Notices to Airmen (NOTAMs) and currency of the regularly updated and continuously broadcast Air Traffic Information Service (ATIS).

MERRILL FIELD AIRPORT LOCATION MAP

Merrill Field Airport Business Plan

Mission

Merrill Field Airport is committed to operating and maintaining a safe and efficient airport that meets the aviation and business needs of the community. New branding: 'Welcome to Merrill Field-The gateway to Alaska's Interior.'

Services

Merrill Field is a primary commercial service airport and serves as a general aviation reliever for Anchorage International Airport. It is the second busiest airport in the state, second only to Ted Stevens International.

Business Goals

- Enhance the Airport's role as the major general aviation transportation facility serving Anchorage and outlying areas within Alaska by providing services that promote and encourage use of the Airport by the general aviation community.
- Develop an overall Airport strategy, including leasing policies and pricing that attracts aviation support services and related businesses to Merrill Field and encourages long- and short-term private sector investments.
- Practice sound fiscal management to enable Merrill Field to increase its value, both to its customers and to its owner, the Municipality of Anchorage.
- Take advantage of new technologies to maximize the use and efficiency of available resources.
- Understand and be responsive to our customers to better meet their needs by providing the services and facilities they desire. This includes maintaining those facilities in a fully functional, efficient, and safe condition by continually improving their utility, quality, and appearance.
- Maximize the use of Federal Airport Improvement Program (AIP) grants to provide facilities that will safely and adequately meet the needs of general aviation.
- Meet requisite Federal Aviation Administration (FAA) sponsor assurances resultant from AIP grant acceptance.
- Increase operating revenues through increased lease and parking rates, and the addition of new business enterprises.
- Decreased expenses caused by leaseholder damage to airport infrastructure, i.e., \$3,500 security gates.
- Increase safety of flight operations at Merrill Field by 1) funding five new instrument approach procedures with lower weather minimums and opening the MOA Sim Center where pilots can refresh their instrument flight skills, thereby reducing CFIT (Controlled Flight into Terrain.)

Strategies to Achieve Goals

Merrill Field's strategic plan provides a framework to achieve results for the customer:

1. Maintain a proactive nuisance noise mitigation policy, asking pilots to follow established noise-reducing practice, including implementation of a late night 'Quiet Hours' protocol that restricts Touch & Go operations to one take-off and one landing per pilot at MRI between the hours of 10PM and 6AM (local). Maintain a close working relationship and coordinate with the MRI FAA ATCT (Tower).

2. Maintain positive relations with neighboring Community Councils by encouraging their comments and actively addressing their concerns.
3. Work in close coordination with the Municipal Airports Aviation Advisory Commission, Fixed Based Operators, and Airport users.
4. Continue to aggressively seek and obtain FAA grant funding for the MRI Airport Capital Improvement Program.
5. Provide infrastructure to meet customer demand.
6. Maintain revenues at a level adequate to cover inflation, fund MOA and FAA mandated costs, and meet airport objectives by:
 - a. increasing facility productivity.
 - b. adjusting user fees and/or lease rates when required.
7. Minimize expenses by:
 - a. Reducing or eliminating services where the impact is minimal.
 - b. Employing economies of scale whenever possible.
 - c. Deferring expenses, within practical limits.
 - d. Performing functions in-house when cost-efficient to do so and workloads permit.
8. Take advantage of new technology:
 - a. Continue refinement and enhancement of existing programs to facilitate better data resource management, including enabling fiber optic cabling and surveillance cameras airport wide.
 - b. Continue replacing computer hardware, as required, to ensure the efficient processing of data.
9. Maintain database and management reporting capabilities.
10. Maintain runways, taxiways, and tie-down aprons in a safe and secure condition.
11. Expeditiously and systematically remove snow from airport surfaces. Ensure Notices to Airmen (NOTAMs) and Air Traffic Information Service (ATIS) are both proactive, accurate and current.
12. Continue long term planning, development, and construction of quality airport facilities through the Airport Master Plan process.
13. Provide technical assistance to lessees on issues associated with federally mandated environmental programs.
14. Endeavor to reduce the number of runway incursions (Vehicle/Pedestrian Deviations or VPDs).
15. Manage and develop Orca St properties to maintain and maximize lease rental revenue.
16. Pursue development of new lease lots and encourage development of commercial aviation facilities on current leaseholds.
17. Perform asphalt crack sealing of runways/taxiways/apron areas to extend the life expectancy of these surfaces.
18. Fund pre-grant expenses for engineering services on grant-eligible projects.
19. Enhance the utility of existing tiedown aprons, taxiways, and roadways.
20. Expand aircraft aprons and taxiways as needed to meet demand.
21. Actively market Airport facilities and services.
22. Acquire planned acquisition of identified parcels southwest of the Runway 16/34 safety area to ensure compatible land use as listed on the master plan.
23. Identify high priority projects to be included in the FAA 5-Year Airport Capital Improvement Plan (ACIP), thereby helping Merrill Field to more effectively compete nationally for AIP grant funds.
24. Secure engineering services for project preliminary design, final design, contract specifications, bid award, and construction supervision.
25. Acquire "City Electric" property for development into a new site for the MOA Sim and Aerospace Innovation center.

26. Rehab the Orca street building exteriors to provide a facelift for those buildings bringing in airport revenues and to present a better appearance to our Fairview neighbors.

Performance Measures to Track Progress in Achieving Goals

Merrill Field measures progress in achieving these customer commitments using the following set of quantifiable performance measures:

1. Number of Occupied Aircraft Parking Spaces – representing the number of parking spaces that Merrill Field owns and that contribute directly to Merrill Field Operating Revenue
2. Percentage of lease spaces currently leased – representing the number of lease properties that are occupied and contributing directly to Merrill Field Operating Revenue
3. Number of Airport Operations (Takeoffs, landings, touch-n-go operations, instrument approaches and airport overflights) – qualifying Merrill Field for Annual FAA AIP funding
4. Percentage of operating surfaces above the minimum PCI value (pavement condition index) – measuring when ground surfaces will qualify for rehab/replacement projects
5. Simulator Center Usage (this is a new program) – new revenue generating opportunity
6. Number of Vehicle-Pedestrian Deviations (VPDs) – instances where Airport users or unauthorized personnel have crossed into the active area without authorization

Merrill Field Airport

Anchorage: Performance. Value. Results.

Mission

Safely operate and maintain Merrill Field Airport to meet the aviation and business needs of our customers.

Core Services

- Maintain runways, taxiways, and aircraft parking aprons in a safe and secure condition.
- Provide space to operate and park aircraft.
- Provide lease space for private enterprises to support air transportation.

Accomplishment Goals

- Reduce the number of vehicle-pedestrian deviations (VPDs) - unauthorized entry into restricted areas.
- Provide sufficient aircraft parking area and business lease space to meet public demand.
- Repair and improve surface conditions on all Runway operating surfaces with a Pavement Condition Index (PCI) below 70 and all Taxiway, Apron & Roadway operating surfaces with a PCI below 60 (on a scale of 1 – 100 with 100 being the best condition).

Performance Measures

Progress in achieving goals will be measured by:

Measure #1: Number of Occupied Aircraft Parking Spaces

Spaces Available	6/30/21 Actual	9/30/21 Projected
489	359	369

Measure #2: Percentage of Lease Spaces Currently Leased

2020 Actual	6/30/21 Actual	9/30/21 Projected
(54/54)	(55/55)	(55/55)
100%	100%	100%

Measure #3: Number of Airport Operations (Takeoffs, landings, touch-n-go operations, instrument approaches and airport overflights)

2020 Actual	6/30/21 Actual	2021 Annual Projected
149,639	30,915	155,000

Measure #4: Percentage of operating surfaces above the minimum PCI value

3/31/21 Actual	6/30/21 Actual	9/30/21 Actual
Runway	Taxiway	Apron
90%	92%	85%

Measure #5: Simulator Center Usage (new program)

2021 Goal	6/30/21 Actual	9/30/21 Projected
50%	10%	20%

Measure #6: Number of Vehicle-Pedestrian Deviations (VPDs)

2020 Actual	6/30/21 Actual	9/30/21 Projected
13	3	3

PVR Measure WC: Managing Workers' Compensation Claims

Reducing job-related injuries is a priority for the Administration by ensuring safe work conditions and safe practices. By instilling safe work practices, we ensure not only the safety of our employees but reduce the potential for injuries and property damage to the public. The Municipality is self-insured and every injury poses a financial burden on the public and the injured worker's family. It just makes good sense to WORK SAFE.

Results are tracked by monitoring monthly reports issued by the Risk Management Division.

About Merrill Field Airport

History

MRI was established in 1930 and is located one mile east of downtown Anchorage. It was the first real airport in Alaska and in Anchorage and served as the primary airport for South Central Alaska until Anchorage International Airport opened in 1954. The airport bears the name of Russel Hyde Merrill, an early Alaskan aviator who disappeared in September 1929 on a flight to Bethel. The first aviation beacon in the Territory of Alaska was located at Merrill Field and was dedicated on September 25, 1932 to honor Russ Merrill. The three letter Federal Aviation Administration (FAA) designator for Merrill Field is MRI. The International Air Transport Association (IATA) also designates Merrill Field as MRI and the International Civil Aviation Organization (ICAO) designates Merrill Field as PAMR.

Today, MRI is classified as a "Non-Hub Primary Commercial Service Airport" and effectively serves as a general aviation reliever airport to Ted Stevens Anchorage International Airport. MRI is presently restricted to aircraft weighing 12,500 pounds or less. Commercial operators with heavier aircraft may request a PPR (Prior permission request) for limited access.

MRI continues to be an integral part of Alaska's transportation network. Over the past several years aircraft operations have varied between 145,000 and 155,000 and based aircraft varied between 700 and 800.

Services

Merrill Field serves as the general aviation link between Southcentral Alaskan communities, rural areas, and Anchorage. Intrastate air traffic to and from Anchorage, with many passengers destined for the downtown and midtown areas, is conveniently served by MRI.

Some of the many services provided at MRI include 1) sale of aircraft fuel, 2) hangar rental, 3) flightseeing, 4) flight and ground school instruction, 5) aircraft maintenance and repair, 6) sale of parts, supplies, equipment and accessories, 7) aerial photography, 8) propeller repair, 9) aviation electronics, 10) aircraft sales, rentals and charters, 11) power plant and airframe training, 12) a fully accredited University of Alaska Aviation Technology Division campus, offering Baccalaureate/Associate degrees and A&P Licensure programs in piloting and aviation management, 13) and direct Medevac taxiway connection to Alaska Regional Hospital.

Regulation

Merrill Field is a non-Part 139 certificated public airport that is required to meet most FAA and all Municipal regulations. Additionally, the Municipal Airports Aviation Advisory Commission (MAAAC) advises and makes recommendations to the Anchorage Administration and Assembly on all matters pertaining to the operating budget, rules, regulations, and administrative guidelines at Merrill Field.

Environmental and Other Mandates

There are many federally mandated programs which have a direct impact on the Airport's operating costs. The Clean Water Act, Civil Rights Act, Americans with Disabilities Act, Community Right to Know, Underground Storage Tank Regulations, and Clean Air Act are some of the current laws which have and will continue to affect the Airport. Approximately 42% of the MRI airfield land mass is atop the former Anchorage Municipal Landfill, which was closed in 1987. As a result of this residual underlying trash mass, significant environmental challenges and additional development costs exist for airfield development and construction.

Physical Plant

Primary commercial service airport

- Hub for intra-Alaska air travel
- Located one mile from downtown Anchorage
- Serves as general aviation reliever for Ted Stevens Anchorage International Airport
- Restricted to aircraft weighing 12,500 pounds or less (larger with Prior Permission Required (PPR) allowed for maintenance and airshows at the discretion of the airport manager.)
- 437 acre land area; elevation 137 feet; fee simple title
- 1,193 tiedown spaces; leaseholders manage 664; Municipality manages 529, including 53 for transient aircraft
- Runway 7/25 length/width is 4,000' x 100'; Runway 16/34 is 2,640' x 75'; Gravel/Ski Runway 5/23 is 2,000' x 60'
- Six taxiways; 102 acres of tiedown aprons
- Air traffic control tower owned, operated, and staffed by FAA

Merrill Field Airport statistics and trends as part of top four state airports. Merrill Field continues to be the second busiest airport in the state of Alaska. "Operations" include takeoffs, landings, touch-n-go operations, instrument approaches, and airport overflights.

Anchorage ANC

2019 - 269,902 operations

2020 - 245,283 operations

Merrill Field MRI

2019 - 152,394 operations

2020 - 149,639 operations

Fairbanks FAI

2019 - 108,634 operations

2020 - 96,543 operations

Juneau JNU

2019 - 114,168 operations

2020 - 44,398 operations

Note: "Operations" include takeoffs, landings, touch-n-go operations, instrument approaches, and airport overflights.

Phone number: 907-343-6303

Physical Address: 800 Merrill Field Drive Anchorage, AK 99501

Merrill Field Airport Highlights and Future Events

Merrill Field (MRI) continues to develop its economic revitalization program through cooperative efforts of the business owners, airport management, and surrounding communities. The Federal Aviation Administration (FAA) invested \$37.8 million in airport infrastructure and MOA's economy.

2021 and beyond, projects have now been enabled by Federal Coronavirus Aid, Relief, and Economic Security (CARES) funding. It allows us to think outside a fiscally constrained "box," bringing innovation to the planning phase. Some of these long-desired projects include:

1. The addition of five new instrument approach and departure into Merrill Field lower weather minimums. Doing so will allow our commercial part 135 operators to depart and arrive with their passengers without diverting to Ted Stevens Airport on low visibility days.
2. Additionally, the FAA repossessed seven of the Medallion Foundation flight simulators. MRI was able to purchase these machines at 10% of the appraised value. These trainers were originally acquired by the FAA to help mitigate the higher than average Controlled Flight into Terrain (CFIT) accident rates in Alaska. Thus, the MOA Sim Center is now open to the flying public.
3. Many of the Airport Master Plan projects were pushed out 3-4 years because of an inability to make match payments. We have now scheduled those to commence. One of those projects is the acquisition of City Electric property on Orca Street. After the purchase has been completed, MRI is looking to find and enter a long-term lease with a developer that wants to bring an aerospace innovation center to MRI. Additionally, MRI is looking to develop a portion of that City Electric property as the home of a new Sim Center.
4. A final milestone is the facelift planned for the Orca Street properties.

Revenues and Expenses

The expenses in 2022 are anticipated to remain flat, with the exception of a request to increase a Maintenance Technician position from part-time to full-time. Salary and benefits are adjusted to reflect any union negotiated legal mandates, changes in benefit costs, and/or administrative requirements.

The budgeted revenues are based on lease agreements and historical trends from the past 5 years. The SIM Center program is new, no comparable metrics exist within the region, and it is unknown what to anticipate at this time. In the 2022 1st Quarter budget revision process, a review will be completed to determine the activity for the first quarter of the year and projections will be provided.

Merrill Field generates revenue through Aeronautical and Non-Aeronautical sources:

- Aeronautical revenues come from: Airport Lease Fees, Property Rentals, Aircraft Parking Fees, Aircraft Transient Parking Fees, Aircraft Tie Down Fees, Aviation Fuel Fees, and Medevac Taxiway Fees.
- Non-Aeronautical revenues come from Vehicle Parking Fees, Miscellaneous Revenues, and Non-Operating Revenue sources.

Merrill Field's 2022 Proposed Budget includes rate increases, effective January 1, 2022:

Type of Fee	Current	New
Daily Transient Parking Fees	\$ 6.00	\$ 10.00
<i>No longer offering Hourly Transient Parking Fee, Daily rates apply.</i>		
Tie Down Fees:		
Tail-End Space/Month	\$ 70	\$ 75
Tail-End Space - Electric/Month	\$ 85	\$ 90
Pull-Through Space/Month	\$ 80	\$ 85
Pull-Through Space - Electric/Month	\$ 95	\$ 100

Merrill Field Airport Historical Rates			
	Lease Rate/Sq Ft/Year	Tail-In Space/Month	Drive-Through Space/Month

2021	\$0.242	\$70.00	\$80.00
2022	\$0.242	\$75.00	\$85.00

Merrill Field Airport External Impacts

Merrill Field Airport (MRI) is classified as a Primary Non-Hub airport that also serves as a general aviation reliever airport to Ted Stevens Anchorage International Airport (ANC). With approximately 151,400 flight operations per year, MRI is the major general aviation link between Anchorage and surrounding rural communities. With over 50 aviation businesses and 830+ based aircraft, MRI provides a positive economic impact to Anchorage.

The MRI Economic Impact brochure, completed as part of the ongoing Airport Master Plan, highlighted the economic and community benefits of MRI, which noted that MRI is responsible for approximately 600 direct, indirect, and induced in-state jobs, and that four air taxi operators are based here, including one that provides non-stop service from MRI to Prudhoe Bay! There are two rotorcraft flight schools and now five fixed wing flight schools on MRI.

MRI is one of the few airports in the nation that has a taxiway link connecting directly to a hospital (Alaska Regional). Medevac aircraft land and taxi directly to the hospital and the patient is literally transferred from the aircraft onto a gurney and wheeled into the hospital emergency room. This service saves valuable minutes in critical situations and it is regularly utilized.

MRI continues to pursue federal airport grant funds for all grant-eligible capital improvement projects by working with federal grant managers to secure all available grant funding as it becomes available. These funds are used to develop/continue its economic revitalization program through cooperative efforts of the business owners, airport management, and surrounding communities.

Since its beginning in 1930, when MRI was built on the outskirts of Anchorage, MRI has become encroached by residential and commercial development. As a result, the airfield layout is geometrically constrained without taxiway separation from individual leasehold apron areas, which effectively makes MRI taxiways apron edge taxi-lines. This apron-edge taxi-lane configuration easily enables vehicles to inadvertently trespass onto the adjacent taxiway thereby creating a Vehicle-Pedestrian Deviation (VPD).

To address this, the MRI Runway Safety Program has implemented operational procedures and pursued numerous Federal Aviation Administration (FAA) capital improvements to curb this trespass problem. Further, reconfiguration of apron-edge taxi-lanes (better delineation and the installation of taxiway lighting) has been proposed to the FAA and will be pursued for the north side Taxiway Alpha. Through cooperative efforts of MRI leaseholders and implementation of our Driver Training Program, there has been a dramatic decrease in trespass incidents, from the historic number in the hundreds to 19-or-less per year over the past decade. Our ongoing goal is to improve Airport fencing and perimeter/gate security, continue a program of recurring education for the Airport leaseholders and businesses, and to make VPDs the exception rather than a periodic occurrence.

MRI noise complaints have also dramatically decreased since implementing a “Fly Friendly” program that includes a revised standard protocol for all rotorcraft Touch & Go operations, emphasizing the use of Runway 34 only when the wind is out of the north or south; landing long (further down the runway); using steeper ascent and descent angles, to the degree practicable; and using Bryant Army Airfield (on Joint Base Elmendorf-Richardson (JBER)) for rotorcraft

training, when it is available. A “Quiet Hours” program that allows only one take off and one landing per aircraft at MRI between the hours of 10PM and 6AM (local) is also being implemented to discourage repetitive Touch & Go ops during these hours, which have significant noise impacts on neighboring communities (if an operator wants to conduct Touch & Go’s during these times, they can do so elsewhere at other southcentral airports, such as ANC, LHD, Wasilla, Palmer, etc.).

Merrill Field Airport Capital Overview

Capital Project Selection Process

The process of choosing funded projects in the Capital Improvement Program (CIP) begins with the creation of the airport master plan. It is an all-inclusive list of every conceivable project for airport safety, improvement, maintenance, expansion, and revenue generation. It is submitted to the FAA for their vetting and approval.

Then year to year, the airport makes a request to the FAA for those items that are most urgent that year. Based on the number commercial enplanements (minimum of 10,000) , the airport is given AIP (Airport Improvement Program) funding for these previously approved projects. However, from year-to-year, the FAA's priorities change.

Thus, the determining factors in Merrill Field's CIP is for our ask of the FAA to match the FAA's own priority for any given year. In short, although we get to create the "wish list," the FAA is in driver's seat for the projects approved in the annual Merrill Field CIP.

Significant Projects

Merrill Field is finishing the Airport Access Road Construction project, scheduled for completion in 2022. This project was needed to fix the large swells along Merrill Field Drive due to the Airport being constructed on top of an old trash dump. The trash underneath the surface has shifted over time and therefore caused up and down movement along Merrill Field Drive, the vehicle driving road.

Impacts on Future Operating Budgets

The FAA awarded Merrill Field Airport a CARES Operating Grant in the amount of 17.89M dollars. This money is being used to improve, fix, and maintain airport structures, surfaces and for the procurement of replacement maintenance equipment. The Grant is also allowed to be used as the MOA matching funding on future FAA AIP Grants. This will have a positive impact on Merrill Fields Operating Budget, allowing the Airport the opportunity to afford future AIP Grant match funding by not spending Merrill Field Operating dollars for the next couple years, until the Grant expires.

Port of Alaska

Port of Alaska Organizational Overview

The Port of Alaska (Port) is an enterprise function of the Municipality.

The Port Director is responsible for overseeing the day-to-day business operations of the Port; interacting as needed with tenants, the U.S. Coast Guard, the military, and any new business prospects interested in operating out of the Port of Alaska.

The Port of Alaska Modernization Program (PAMP) Director, in coordination with the PAMP Executive Committee, serves as the Port's and Municipality's direct representative and supervisor for all facets of the PAMP, to include the responsibilities of the Contracting Officer's Technical Representative for the PAMP program management consultant contract.

The Finance & Administration Manager is responsible to perform the day-to-day business functions supporting the Port and Municipality as required. Duties performed by the staff in this section include receptionist duties; accounts payable and receivable; financial management; and analysis of reports and budgets. The Finance & Administration Manager is also responsible for real estate management, grants management, and budgeting preparation for the Operating and the Capital Improvement Plan.

Photo taken by Andre Horton

The Port Engineering Manager develops and oversees all aspects of the existing port's infrastructure engineering requirements; directs the activities of port consultants and contractors; oversees port construction contracts, including the multi-year engineering services contract; leads the port's capital budget planning; develops and maintains an engineering project tracking system; leads the port's capital grant-related application activities; and oversees port geographic information systems (GIS) activities.

The Port's Operations & Maintenance Superintendent oversees all Port operations, to include all aspects of facility maintenance, vessel scheduling, movements and dockside activities, general upkeep and operation of Port facilities, infrastructure, equipment, upkeep and day-to-day management of all municipally owned infrastructure, roads, and docks. Also, under their direction, Port Maintenance is responsible for the dredging and upkeep of the Ship Creek Small Boat Launch and the Dry Barge Berth.

The Security & Business Continuity Director oversees the Port's security contract; coordinates with the U.S. Coast Guard (USCG) to verify compliance with federal maritime security/cyber-security mandates; acts as port's liaison with local, state, and federal law enforcement agencies; and ensures all disaster response and recovery plans are current. Additional responsibilities include: seeking

Port of Alaska Docks

future business development opportunities and working with prospective new tenants to satisfy their business requirements; implementing the Port's marketing, educational and media outreach plans and materials; overseeing the port's tour programs and special events; and acting as the port's point of contact for news events and government/legislative liaison activities.

Photo taken by Andre Horton

The Port's Safety Coordinator oversees the Port staff's workplace safety program, heads the Port's Safety Working Group, and coordinates safety-related interactions with the municipality's Risk Management Division. The Safety Coordinator reports directly to the Port Director.

Port of Alaska Business Plan

Mission

The Port of Alaska (Port) is committed to provide a modern, safe, and efficient facility to support the movement of goods throughout the State of Alaska.

Services

The Port is a landlord port committed to providing safe, efficient, and dependable facilities and support services to our private and public sector customers. The staff of the Port is responsible for maintaining all of the land, docks, and municipal buildings that encompass the Port of Alaska.

Business Goals

- Provide Port operating expertise and management to the Port of Alaska Modernization Program (PAMP) with the PAMP Director serving as Project Administrator.
- Plan for future facility and service needs of business and public entity customers.
- Conduct periodic facility condition surveys to anticipate age-related challenges and to ensure uninterrupted operations and safety.
- Maintain affordable and competitive tariff rates sufficient to cover operating and capital requirements.
- Provide a safe work environment for both employees and tenants.
- Maintain financially sound operating ratios.
- Deliver accurate and timely billings to tenants and customers; demand timely payments from all users.
- Provide required level of port security under U.S. Coast Guard/Homeland Security directives through a consortium of private tenants and the Port.

Strategies to Achieve Goals

1. Provide year-round access to suitable terminals and docks for movement of containers, dry bulk cargo, and liquid bulk cargo to include petroleum products.
2. Provide seasonal maintenance of and access to the Ship Creek Small Boat Launch.
3. Plan, develop, and operate facilities to accommodate market growth and modernization.
4. Monitor the scheduling of all vessels that call on the Port.
5. Provide centralized Port and tenant security services and emergency management leadership.
6. As a landlord port, manage short-term permits (revocable use permits) and long-term leases of land and buildings.
7. Maintain and ensure uninterrupted 24/7/365 availability of Port owned facilities.
8. Ensure environmental quality of the land within the Port boundaries
9. Assess and manage the collection of all tariffs and user fees associated with vessels calling on the Port and land tenant operations.
10. Manage the Foreign Trade Zone (FTZ) and all FTZ applicants.
11. Coordinate U.S. Army Corps of Engineers dredging of channel, turning basin, and dock face dredging to provide for safe commerce.

12. Host official U.S. Navy, U.S. Coast Guard, National Oceanic Atmospheric Administration (NOAA), foreign navy, and Arctic research vessels on behalf of the Municipality of Anchorage, as needed.

Performance Measures to Track Progress in Achieving Goals

Progress in achieving goals will be measured by:

1. Overtime hours and pay compared to base compensation for current vs prior year.
2. Operating Net Income YTD for current vs prior year.
3. Reportable incidents for current vs prior year (# of incidents, loss of time & cost).

Port of Alaska

Anchorage: Performance. Value. Results.

Mission

Develop and maintain the quality of the Port's infrastructure to meet the needs of our stakeholders and ensure safe and modern infrastructure for the timely delivery of consumer goods and commercial cargo.

Core Services

- Provide all Port users with marine terminals and staging yards free of defects.
- Provide Port petroleum terminal operators with an operable and efficient valve yard and petroleum docks.
- Provide clean and safe roads and transfer yards for use by commercial and port-related vehicles.

Accomplishment Goals

- Ongoing repair and enhancement of deteriorating dock pile and infrastructure.
- Continued maintenance of valve yard valves and piping through scheduled inspections and timely maintenance.
- Continued maintenance and repair of storm drain systems and Ship Creek Boat Launch.
- Inspect dock surface and common areas to ensure cranes, equipment and personnel can operate with minimal threat of damage.
- Oversee management of the cost and schedule associated with the Port of Alaska Modernization Project (PAMP).

Performance Measures

Progress in achieving goals will be measured by the following:

Measure #1: Overtime hours and pay compared to base compensation for current vs prior year.

	<u>2020</u>	<u>2021 (YTD)</u>
Total Hours	1,146	303
Total Cost	\$ 60,838	\$ 16,067

Measures #2: Operating Net Income YTD for current vs prior year.

	<u>6/30/2020</u>	<u>6/30/2021</u>	
<u>%Growth/(Loss)</u>			
*Net Operating Income	\$ 161,272	\$(3,074,788)	(2006%)
Total Cash Flow	\$ 3,303,326	\$ 894,107	73%

* Unaudited

* Net Operating Income includes Depreciation (non-cash item) and Debt Service payments.

Measures #3: OSHA Recordable incidents for current vs prior year (# of incidents, loss of time & cost)

	<u>2020</u>	<u>2021</u>
# of Incidents	0	0
Loss of Time	0	0
Cost	\$ 0	\$ 0

PVR Measure WC: Managing Workers' Compensation Claims

Reducing job-related injuries is a priority for the Administration by ensuring safe work conditions and safe practices. By instilling safe work practices, we ensure not only the safety of our employees but reduce the potential for injuries and property damage to the public. The Municipality is self-insured and every injury poses a financial burden on the public and the injured worker's family. It just makes good sense to WORK SAFE.

Results are tracked by monitoring monthly reports issued by the Risk Management Division.

About Port of Alaska

History

The Port of Alaska (Port) commenced operation in September 1961 as the Port of Anchorage, with a single berth. In its first year of operation, 38,000 tons of cargo crossed the dock. On average, around four million tons pass over the dock every year, equating to about 250,000 commercial truck trips through Port property. The Port is a major economic engine and one of the strongest links in the Alaska transportation chain. This chain enables residents statewide, from Cordova to Barrow, to take full advantage of the benefits of inexpensive waterborne commerce through this regional port. The Port and its stakeholders have maintained a notable safety record throughout the five decades of operation. The Port is one of 17 Department of Defense - designated Commercial Strategic Seaports. In October 2017, the Anchorage Assembly voted to change the Port's name to the Port of Alaska to better recognize the state-wide importance of this vital marine Intermodal facility.

Services

Approximately 50% of all waterborne freight entering the State, and 90% of all refined petroleum products sold within the Railbelt and beyond (87% of the State's population) move through the Port of Alaska on an annual basis. Container service is available twice a week from the Port of Tacoma through two domestic ocean carriers. Bulk shipments, both domestic and foreign, involve imports of basic commodities such as cement, refined petroleum products and construction materials. Due to its strategic global position and close proximity to neighboring military bases, JBER and Fort Wainwright are key transportation nodes for Department of Defense concerning mobilization planning, shipping/transporting of jet fuel and other related petroleum products and bulk cargo for military use.

The Municipality of Anchorage is the grantee of the Foreign Trade Zone (FTZ) No. 160, the only activated FTZ in the State of Alaska. The Port is the Municipal department responsible for the administration of the FTZ program in Anchorage. Under the FTZ Alternate Site Framework construct, the entire Municipality is the identified FTZ. At the present time, there are seven "sub-zones" totaling some 1,000 acres located at the Port, Ted Stevens Anchorage International Airport and at five private sites throughout the Municipality. An application for subzone status for the Andeavor (formerly Tesoro) refinery in Kenai was approved by the United States Department of Commerce Foreign Trade Zones Board in May 2001.

Regulation

Dock revenue rates for the Port are established in the Port's Terminal Tariff No. 9.0 and through contractual Terminal Preferential Usage Agreements. Changes to the tariff and adjustments to the Preferential Usage Agreements' charges require initial approval by the Anchorage Port Commission, and are subject to final approval by the Anchorage Municipal Assembly.

Port Industrial Park Revenue is derived from long-term leases of properties in the 220-acre Port Industrial Park. The leases provide for five-year rate adjustments that are performed in accordance with Anchorage Municipal Code provisions. Leases and lease options are subject to Anchorage Municipal Assembly approval.

Environmental Mandates

The Port complies with a broad range of local, state and federal environmental standards, including all provisions of the National Environmental Policy Act (NEPA), Clean Water Act, Clean Air Act, National Pollution Discharge Elimination System (NPDES), the Marine Mammal

Protection Act (MMPA), Endangered Species Act, and Coastal Zone Management Plan. The Port area was also granted a categorical exclusion from Cook Inlet beluga whale critical habitat for reasons of its strategic importance to the Department of Defense and the State of Alaska.

Physical Plant

- 3,500 feet dock frontage
- Three general cargo terminals with two 30-ton gantry cranes, one 40-ton gantry crane and roll-on/roll-off capability
- Two petroleum terminals with nine, eight-inch, tide-compensating lines
- Bulk Petroleum Valve Yard capable of accommodating multiple simultaneous marine/shore and/or inter-user shore side transfers.
- Dry and break-bulk handling
- Two floating, small-vessel docks
- Dry-barge landing
- All berths dredged to 35-foot depth at mean lower low water
- Two miles of rail-spur connected to Alaska Railroad
- 125 acres of cargo handling and storage yard, 59,200 tons of bulk cement storage and 3.4 million barrels of liquid fuel storage
- On-dock Transit Shed with 27,000 square foot heated storage/office space
- Portable Cranes to 150 tons available
- Adjacent to Alaska Railroad's main cargo yard, two private barge terminals, Joint Base Elmendorf-Richardson (JBER) and Ted Stevens International Airport (ANC).
- Regional pipeline connections to Nikiski, JBER and ANC.

Port Safety Security and Emergency Preparedness

Because the Port is a lifeline to the State of Alaska, safety, security and emergency preparedness are key parts of Port operations. Threats of natural disasters, accidents, or terrorists potentially disrupting the commerce and fuel supply for 87% of the state's population is of utmost importance. Efforts will continue to prevent and minimize these threats as well as establishing recovery procedures. These efforts are done in conjunction with the Port stakeholders, and Municipal, State, and Federal agencies. The Port continues to undergo security upgrades via Federal Port Security Grant applications and awards. Emergency preparedness planning and drills continue to be held to establish up to date disaster action and mitigation plans.

Master Planning

The Port of Alaska Modernization Program (PAMP) began in 2014 and is solely focused on replacing the deteriorating dock structures that have reached their original design life and were not built to current engineering standards for operational and seismic performance. The initial phase involves construction of a joint-use Petroleum & Cement Terminal (PCT). The effort began with landside preparation and improvements in 2018, which have been followed by the start of a two-year in-water effort to construct the terminal itself. The first of year's work began in Spring/Summer 2020 and will be completed by October 2020. The second year's work to complete the construction is funded and scheduled for the 2021 construction season. In parallel with this has been the start of the design work for next PAMP phase, which is construction of new cargo docks. The dates for this effort are dependent on securing sufficient funding.

Port of Alaska (907) 343-6200

Port of Alaska Highlights and Future Events

Port of Alaska Modernization Program (PAMP)

The Port's existing marine terminals have reached the end of their life span and suffer from severe corrosion on the wharf piling. It has reached the point where dock operations will have to change in the next 4 to 5 years because of inability to sustain the weight of operational loads. The PAMP will replace two general cargo terminals and two petroleum terminals to ensure infrastructure resilience over a 75-year life cycle. To maintain Port operations during construction, the program will be completed in phases. Phase 1 includes construction of a new Petroleum/Cement Dock. Phases 2 through 4 complete the marine terminal construction, stabilization of the north extension, and re-location of the Port administrative offices.

Upon The program will enable the Port to eventually accommodate deeper draft vessels by allowing for a harbor depth increase from 35 feet to 45 feet when needed. New ship-to-shore container cranes will increase reach for wider vessels. Completion of this program is critically important for the Port to continue to serve 90% of Alaska's population and to maintain its role as one of 17 designated Department of Defense Commercial Strategic Seaports.

Construction of the Phase 1 Petroleum/Cement Terminal is under way and on track to be completed by Fall of 2021. Based on current 15% - 35% complete program design, assuming full up-front funding, and assuming timely permit issuance, the remainder of the program is estimated to be completed by 2028.

Ongoing Facility Maintenance

The Port continues to work diligently to meet its commitment to offer uninterrupted operational capability for Port users while new facilities are in design and construction. Aging facilities not included in the early phases of infrastructure improvements continue to be managed and maintained to the highest standards possible with great attention being paid to the highest priorities addressed first. The recommendations in the Port's Capital Improvement Budget address items needing immediate attention outside of the PAMP. Those include, but are not limited to, Wharf Pile and Fender System Enhancements, Storm Drain Enhancements and a project that supports the geographic information system (GIS) mapping of the Port and continued Port Security upgrades.

Link to Port of Alaska Financial Statements:

https://www.portofalaska.com/wp-content/uploads/Municipality_of_Anchorage-Port_of_Alaska_Fund_20.pdf

Description of Major Port Revenues

The Municipality operates the Port as a landlord through various property agreements entered into with tenants of the Port. The property agreements entered into by the Municipality, which convey the right to use, rent or lease Port assets, include: leases, preferential use agreements, revocable permits, and terminal operator permits. The tenants of the Port pay tariff charges (including, but not limited to, dockage (the charge assessed for docking a vessel at a berth), wharfage (the charge assessed when cargo crosses the wharf)), and other fees to the

Municipality for the right to use, rent or lease Port facilities. These different revenue sources are provided below.

Dockage

This is a tariff charge assessed to a vessel for docking at the Port wharf. The tariff outlines the basis for charges and provides guidelines for rates based on the length-over-all of the vessel and the length of time the vessel is tied up to the wharf.

Wharfage - Liquid Bulk

Wharfage is the charge assessed by barrel against Petroleum products passing over or under the Port wharf, transferred between vessels, and loaded into land petroleum storage tanks.

Wharfage - General Cargo

Wharfage is the charge assessed by ton for cargo passing over the cargo terminals. The main source of the Port's general cargo revenue is generated by cargo users subject to a negotiated Preferential User Agreement which sets rates outside of the tariff and is based on a scheduled number of Port visits annually. TOTE and Matson are the current Port cargo carriers.

Security Fees

The security fees generated by the Port are from a collaborative agreement of eight stakeholders plus the Port (the Port Security Committee), executed in 2004 to collectively secure the facility security necessary to comply with U.S. Coast Guard requirements for ports. The formula has been agreed upon by all stakeholders where each share a portion of the security cost based on property square footage, tonnage across the dock.

Industrial Park Lease

Port industrial park revenue is derived from long-term leases of properties in the 220-acre Port Industrial Park. The leases provide for five-year rate adjustments that are performed in accordance with Anchorage Municipal Code provisions. Leases and lease options are subject to Assembly approval. This revenue represents short term permit rentals for Port users to meet their storage need when a temporary increase in business occurs. This revenue is unpredictable due to the fact that it is earned when an increase in regular business happens, so the Port is not able to plan on this revenue.

Commercial Passenger Vessel Tax (Cruise Ship Tax)

The State imposes an excise tax on travel on commercial passenger vessels (CPVs), typically cruise ships that have 250 or more berths and provide overnight accommodations in the State's marine waters. Passengers traveling on qualified commercial passengers are liable for the tax. The commercial passenger vessel excise tax rate is \$34.50 per passenger, per voyage. Cruise ship companies and commercial passenger vessel owners file returns and pay taxes monthly. The due date is the last day of the month following the month in which the voyages ended. The State's Department of Revenue's Tax Division deposits all proceeds from the CPV excise tax into the commercial Vessel Passenger (CVP) tax account in the General Fund. Subject to appropriation by the State Legislature from the account, the Division distributes \$5 per passenger to each of the first seven ports of call in Alaska. The tax is further reduced by any municipal taxes imposed on each passenger that were in effect prior to December 17, 2007. In light of COVID-19 reduced sailings to the Port of Alaska, this revenue was provided by the State of Alaska through COVID relief funds for 2020.

Preferential Use Agreements

The Municipality has reserved the right under Tariff 9.0 to negotiate preferential user rates and terms providing for a reduced charge for dockage, wharfage, and real estate with requesting users who agree to provide profitable long-term business arrangements with the Port. The Municipality has preferential use agreements (each a “PUA”) with Matson and TOTE. Both the Matson and TOTE PUAs provide for monthly dockage and wharfage payments subject to escalation. Neither the Matson nor the TOTE PUA contains guaranteed annual minimum payments. The TOTE PUA expires at the end of 2021 and is in the process of renegotiations. The Matson PUA expires 12/31/2025 and provides for two five-year extensions on mutually agreeable terms. The current TOTE PUA does not provide for additional extensions.

Description of Major Port Expenses

Non-Labor

This category is representative of operating expenses necessary to operate and maintain the Port. It includes supplies such as tires and fuel for equipment used to maintain roads and docks in good condition for Port users. Non-labor also includes professional engineering services as needed to assist in projects of maintenance and repairs to Port infrastructure where engineering services cannot be provided by the Port. Non-labor is also the accounting group where the cost for the Port’s Facility Security contract is paid. (Security fees noted above offset this cost to the Port. The Port’s security expense is 11.9% of the contract).

Legal Services

This category is representative of legal expenses and expert witness fees incurred in connection with two broad categories. The majority of these expenses relate to ongoing litigation against the United States Maritime Administration, a division of the United States Department of Transportation. The lawsuit, commenced in 2013, seeks to recover damages incurred by the Port due to the Maritime Administration’s mismanagement of a port expansion project that was terminated in 2012. Trial is scheduled in February 2021, after which the fees will be substantially reduced and possibly eliminated if the case is settled. This is a relatively short-term expense. No claims have been asserted against the Port and therefore there is no risk of an adverse decision requiring payment to the Maritime Administration. The second category of legal expense relates to intermittent occasions when specialized legal assistance is required, such as marine mammal regulatory compliance and coordination with Port users on other environmental issues.

MESA & Dividend Payments

Municipal Enterprise Service Assessment (“MESA”) is a service assessment required by code AMC11.50.280. MESA is paid to general government in lieu of property tax and the calculation is outlined in the code. This calculation is based on the net book value of Port assets. The Dividend calculation is outlined in AMC 26.10.065 as a mechanism to return a portion of surplus revenues, if available, after the legislated calculation is performed.

Tariffs

Pursuant to Anchorage Municipal Code 11.50.030(B), the Anchorage Port Commission regulates the operation of terminal and transportation facilities at the Port by promulgating a terminal tariff containing rates, charges, rules and regulations applicable at the Port and subject to the approval of the Assembly and filed with the Federal Maritime Commission. Dock revenue rates for the Port are established in the Port’s Terminal Tariff No. 9.0 and through contractual Preferential Usage Agreements. Changes to the tariff require approval by the Commission and are subject to final approval by the Assembly.

In 2019, the Port undertook an extensive review of the tariff rates in light of the expiration of Tariff 8.2 on December 31, 2019 and the potential requirement to create capacity in the Port's income stream for debt service coverage to repay future borrowings necessary in order to complete the PCT. Following the review of the tariff and the completion of a Revenue Requirements report, which included various rate scenarios and recommendations provided by an independent contractor, the Commission promulgated a ten year tariff with a rate structure that would support ongoing operations of the Port as well as provide income for future debt service payments to complete the PCT. The Assembly approved the rates, terms and conditions of the Port's Terminal Tariff 9.0 and it was implemented on January 1, 2020. Tariff 9.0 increased all tariff fees as described in Table 5 below. Additionally, commodity-specific rate increases for operating and debt service coverage on petroleum and cement were implemented as described in Table 5 below. The Commission will review the established tariff rates each year and revise as needed to meet operating and debt service coverage requirements. The entire Tariff 9.0 document (including individual rates) can be found at:

https://www.portofalaska.com/wp-content/uploads/POA_Terminal_Tariff_9.0.pdf

The Port's Tariff 9.0 was designed and approved to put in place a 10-year rate plan in support of not only continued Port operations, but also to pay debt service coverage requirements to complete construction of the PCT. Tariff 9.0 was created in a joint effort of the Port and Municipality administration, an independent professional port tariff consulting firm and provided an opportunity for public comment for the Port customers and users and the public concerning the recommended rates set for the Port to accomplish the goal of completed construction of the PCT.

Tariff Setting Methodology

Tariff rates are established based on a revenue requirement methodology of having users pay for their facility improvements and operations. Costs related to common use facilities and Port CIP are charged ratably through the base tariff rates. Nothing prevents the Municipality from changing this methodology. See "Preferential Use Agreements" herein.

	<u>Approved Tariff 9.0 Rate Increases</u>									
	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029
Petroleum	23.81%	24.24%	12.95%	12.95%	12.95%	12.95%	12.95%	8.65%	5.64%	5.64%

Other	3.50%	3.93%	3.01%	3.01%	3.01%	3.01%	3.01%	3.01%	-	-

	<u>Recap of Historical Rates per Ton (10 Years 2011 – 2020)</u>									
	2020	2019	2018	2017	2016	2015	2014	2013	2012	2011
Total Tonnage	4,704	4,266	3,949	3,498	3,498	3,776	3,456	3,408	3,754	4,135
Total Rates/Ton	\$3.25	\$2.98	\$3.12	\$3.34	\$3.54	\$3.25	\$3.45	\$2.95	\$2.72	\$2.51

(Note: Rates/Ton is calculated by dividing total tonnage across the dock by operating expenses.)

Port of Alaska External Impacts

Continued development and infrastructure replacement at North Slope, offshore, and Cook Inlet oil and gas fields, including potential construction of a pipeline to tidewater for liquefied natural gas (LNG) export, and construction of the Ambler Mining Road and the associated follow-on mineral extraction activities.

Catching up with the changing equipment and infrastructure needs of the maritime shipping industry so as not to lose relevance, to keep Port users competitive, and to keep the cost of goods to the consumer reasonable.

Sustaining the response to jet fuel requirements from Ted Stevens Anchorage International Airport and Joint Base Elmendorf-Richardson (JBER).

Designation of the Port of Alaska as one of 17 Department of Defense – designated Commercial Strategic Seaports.

Unpredictability of State and Federal funding.

Unpredictable terrorist events affecting implementation of Department of Homeland Security laws and regulations.

Port of Alaska Capital Overview

Capital Project Selection Process

The process of choosing funded projects for the existing Port infrastructure in our Capital Improvement Program (CIP) begins with an inspection of the facility led by our engineering services contractor, Michael Baker International. Documentation and estimates for all repairs that fall into the definition of a capital project are prepared for decisions to be made in regards to funding sources and when the projects will be constructed.

There are large assets at the Port that may require multiple years to complete, we then prepare the budget based on the expected amount that will be spent for each year until it is complete. Examples include but are not limited to: wharf pile enhancements, fender systems, and storm drains. Heavy equipment replacements are budgeted based on the life of the asset and the maintenance requirement costs.

Funding sources for necessary projects are identified based on availability of Port equity, and with large projects, the opportunity to access capital funding mechanisms such as loans or bonds.

Significant Projects

Storm Drain Enhancements – The 2022 Capital project work at the Port includes continued work on the infrastructure of the storm drain system. This work includes camera work to identify critical deficiencies in funding required to repair and enhance sections of the system. This will ensure good working conditions and prevent failures and potential sink holes from developing.

Ship Creek Boat Launch Repairs – Capital work is continuing on the Ship Creek Boat Launch with funds requested for dredging to keep the launch useable by the Anchorage Fire Department and citizens who use this launch for recreational and professional work.

Port of Alaska Modernization Program (PAMP) – Check out the latest on our live webcams at: [Petroleum and Cement Terminal Webcams | Port of Alaska in Anchorage](#)

The significant 2022 projects on the horizon are:

1. Cargo Terminals – completing Cargo Dock preliminary design for the PAMP
2. Administration Building – design and construction of a replacement Port of Alaska Administration Building
3. Port's North Extension Stabilization Step 1 – completing the design for and removal of the first portion of the Port's North Extension, declared to be unsafe and the substance of the ongoing lawsuit between the Municipality and the U.S. Maritime Administration. This is necessary in order to assure safe navigation to the existing cargo docks while construction on the new cargo docks begins.

Impacts on Future Operating Budgets

Once revitalized and repaired, the ongoing maintenance and operating costs on the infrastructure will be less, however, the funds to complete these PAMP projects will create debt service and will have an impact on the user fees charged for services at the Port. The amount of increase for user fees, as it directly correlates to debt service, will be determined once the project is completed and any rate adjustments will be made at that time.

Solid Waste Services

Solid Waste Services Organizational Overview

The Municipality of Anchorage's (MOA) Department of Solid Waste Services (SWS), comprised of the Refuse Collection Utility (RCU) and Solid Waste Disposal Utility (SWSDU), is defined as a municipal utility by Anchorage Municipal Code (AMC 26.10.015). The Utilities are self-funded and self-supporting by revenues derived from operations, primarily customer fees for services. No tax dollars are used by SWS operations. By Code and Municipal Charter, each utility is required to operate in accordance with general business standards common to the solid waste industry (Charter Article 16.01) and to provide a reasonable profit in accordance with industry standards (AMC 26.10.060).

To support the RCU and SWSDU, SWS has three additional operating divisions: Engineering & Planning, Finance, and Administration. The customer service team reports to the Chief Financial Officer, as a subsection of Finance. Each SWS division supervisor reports to the General Manager

General Manager

The General Manager is responsible for the overall management of SWS. The General Manager oversees operational decisions, with the Solid Waste and Recycling Advisory Commission (SWRAC) providing an overview of strategies, operating plans and budgets, along with offering input on solid waste issues, ordinances and policies and providing recommendations to the Mayor.

Refuse Collection Utility (RCU)

The RCU provides both residential and commercial service to the former City of Anchorage service area. The RCU has converted 99% of its residential customers to automated collections operations. There are approximately 100 customers which still receive manual can and bag pickup.

Solid Waste Recycling and Commercial Collection Services

Commercial refuse collection consists of six routes serviced Monday through Friday and three additional routes serviced on Saturdays. This equates to the servicing of over 5,000 dumpsters on a weekly basis. All commercial refuse collected is unloaded at the Central Transfer Station (CTS). There is also a commercial glass collection route that services numerous businesses throughout the SWS service area.

Residential refuse collection consists of 11 routes serviced Monday through Friday for over 10,000 customers. All residential refuse is collected and unloaded at CTS. Curbside recycling is performed by two routes that service over 9,500 customers on a bi-weekly basis. Mixed paper and cardboard recycling collection is also provided to more than 50 municipal offices on a weekly, bi-weekly, or monthly basis. All recycling is transported and unloaded at the Anchorage Recycling Center (ARC) and SWS pays a recycling tipping fee.

A commercial glass collection pilot program was rolled out in late 2019 and continued in 2020 to test the effectiveness of this type of collection from commercial generators. In 2021, a glass

collection route services businesses that have elected to retain the service, diverting glass from the landfill.

All refuse and recycling collection activities are currently performed by 27 full time employees. The RCU fleet consists of: ten 40 cubic yard commercial frontload vehicles; nine 27 cubic yard automated sideload vehicles; one 25 cubic yard rear loader; numerous light-duty support vehicles, including a fully electric box truck; and one forklift. RCU vehicle maintenance employees repair and maintain this fleet within a warm storage facility located at the CTS. Residential and Commercial collection operators are members of the local Teamster's union with the vehicle maintenance employees being part of the International Brotherhood of Electrical Workers (IBEW). All operators are required to participate in a pre-route safety-operations briefing, and daily Department of Transportation (DOT) required pre-shift and post-shift vehicle inspections.

Solid Waste Disposal Utility (SWDU)

The main function of the SWSDU is to dispose of household and commercial refuse generated within the MOA. The refuse is brought to three locations: Girdwood Transfer Station (GTS), CTS, and the Anchorage Regional Landfill (ARL). The SWSDU has an extensive fleet of specialized equipment for the disposal of refuse that is maintained, operated, and supported by highly skilled and trained staff.

GTS received over 690 tons of refuse in 2020. GTS has a paved area where solid waste is discarded into an enclosure containing a 120-cubic yard trailer for transfer to CTS. GTS accepts used oil and batteries from customers and these items are picked up by SWS's Household Hazardous Waste (HHW) contractors for proper disposal, recycling, or for reuse.

Solid Waste - Anchorage Regional Landfill

CTS is located between the Old and New Seward Highways on 56th Avenue. Solid waste disposed of at CTS is transferred by SWS tractors pulling 120 cubic yard (approximately 20-tons at a time) open top trailers to ARL. An average of 600 tons per day of solid waste is transferred from CTS to ARL. CTS also has an HHW disposal location and accepts residential used oil,

batteries, and appliances that are picked up by contractors for proper disposal, recycling, or for reuse. Customers can drop off small quantities (less than 220 pounds per month) of unregulated hazardous waste which is not allowed to be disposed at ARL. A total of 25 SWS operators perform the various duties and operations associated with CTS.

ARL is located near the intersection of the Glenn Highway and Hiland Road near Eagle River. It is a 275-acre, award-winning, subtitle D landfill that typically processes more than 1,000 tons of refuse daily. Currently, 11 cells are constructed, with a total of 12 cells to be developed at full build out of the facility. Every day solid waste is compacted and then covered with soil using bulldozers or alternative daily cover such as plastic tarps, grinded wood waste and recycled construction and demolition debris. The soil cover material comes from the excavation of future

cells located on-site. Each landfill cell is lined and contains a leachate (water) collection system. Leachate is collected and transported in pipelines at the bottom of the landfill to collection lagoons for pre-treatment by aeration to increase the oxygen levels within it. On average, three specially designed leachate tankers transport and dispose of over 30 million-gallons per year at the Anchorage Water & Wastewater Utility's Turpin Road dump station. ARL employees are responsible for the daily disposal of all of the MOA's refuse, the excavation and hauling of daily cover material, the installation and maintenance of landfill gas recovery wells and lines, the hauling of leachate, the building and maintaining of roads, snow removal, dust control and equipment repair. Located within a warm storage facility located at ARL, vehicle maintenance employees repair and maintain heavy equipment and SWSDU vehicles. A total of 26 SWS operators and mechanics perform the various duties and operations associated with ARL. The main HHW facility is located at ARL and is operated by a contractor that serves residential and small business customers.

Due to the 7.2 magnitude, November 30, 2018, earthquake in the MOA, the warm storage, vehicle maintenance, and administration facilities have been rendered unusable and staff are being housed in temporary facilities until the permanent structures can be reconstructed. Construction of the replacement facilities at ARL commenced in June 2021 and they are expected to be completed by July 2022. This construction project is being completed with the assistance of the State of Alaska and the Federal Emergency Management Agency (FEMA).

City-wide recycling has stabilized, and trash disposed at the landfill has remained steady for several years. Funded from a recycling surcharge, the recycling program promotes recycling and the recycling industry with the goal of extending the ultimate life of the landfill. One fulltime recycling coordinator answers public inquiries, and, in coordination with private and non-profit partners, prepares educational media (including social media) campaigns and events related to recycling throughout the MOA. A sustainability coordinator position was added in 2019 with the vision of expanding the recycling and diversion programs within the MOA and ultimately extending the life of ARL. The surcharge has funded the development of an expanded paved public recycling drop-off site at the landfill. ARL currently accepts aluminum cans, paper, plastic, and cardboard. The materials are then transported to the Anchorage Recycling Center.

The program also provides support for public space recycling and to the Anchorage School District (ASD) by collecting mixed paper from all their facilities. The recycling program along with assistance from ASD and Alaska Waste funds a recycling coordinator position for the district that helps to promote education for students and the reduction of waste generated from their facilities. Recycling within the MOA is further supported through a grant for Christmas tree recycling. A large, but less visible effort is economic and business development grants. These funds are given to local recycling businesses for developing ideas for reusing materials in-state, such as glass, tires, construction and demolition debris, and organics

Engineering & Planning

The Engineering & Planning Division consists of one engineer/manager, one civil engineer, one engineering intern, and two engineering technicians. The group has the following main tasks:

- Planning, design and construction of new facilities;
- Major facility upgrades and repairs;
- Technical landfill operations;
- Landfill gas (LFG) collection system operation; and,
- Regulatory compliance.

The division is responsible for the planning, design and management of construction activities related to landfill expansion, LFG collection system expansion and maintenance, CTS improvements, and landfill closure projects. The division relies on contracted engineering services for major design and construction projects. The division has also engaged AWWU engineering staff to assist with the management of a leachate disposal project. As the landfill development progresses, engineering efforts will turn more toward closure and reclamation projects such as capping, re-vegetation and storm water management as well as the design and construction of the new CTS. The current closure cost includes \$60M of closure construction work, and \$39M (both in 2020 dollars) of post closure care costs that will be conducted over a period of 30 years following the closure of ARL.

As SWS facilities age (many are over 30-years old), the division is responsible for the procurement of services for major repair and maintenance activities as well as new ones. These activities include periodic reconstruction of the CTS tipping floor; heating, ventilation, and air conditioning (HVAC) systems; paving of roads and work areas at ARL; rehabilitation of landfill gas and leachate wells and piping systems; and the design and construction of the new CTS.

The division provides technical support to the SWSDU ARL staff to improve landfill operations and maximize airspace utilization. The division helps re-engineer outer landfill slopes which recovers valuable landfill airspace and regularly monitors waste compaction and daily cover quantities in order to re-evaluate these estimates. The division provides support for planning fill operations, developing access roads, and efficiently mining cover materials from the site. As an example, the landfill crew, in addition to processing solid waste, can also mine gravel for current and future cover operations.

The LFG collection system currently supplies Doyon Utilities (DU) with gas to power a 7 megawatt electrical generating plant which provides power to the Fort Richardson side of Joint Base Elmendorf-Richardson (JBER). LFG activities at ARL include daily checks of key operating parameters, as well as routine maintenance of LFG well heads and monitoring equipment. The system currently requires a bi-weekly check and rebalancing of over 68 gas collection points to optimize the efficiency of the gas collection system while maximizing the gas output delivered to DU.

The division is responsible for compliance with environmental regulations at ARL as well as three closed landfill sites. All sites have groundwater monitoring and reporting requirements, as well as solid waste permit compliance relating to operation or post-closure monitoring. The Merrill Field landfill site has active landfill gas and leachate management systems which have both operational and regulatory reporting requirements. ARL operates under an active Class I landfill operating permit, as well as a Title V Air Quality operating permit, both issued by the Alaska Department of Environmental Conservation (ADEC). In addition to specific operating requirements, these permits require numerous inspections, as well as documentation and reporting requirements. Because ARL accepts asbestos wastes, it is regulated under National Emissions Standards for Hazardous Air Pollutants which requires inspection and documentation of every load of regulated material received. Both ARL and CTS have Storm Water Pollution Prevention Plans approved by ADEC which have regular inspection, monitoring, sampling, and reporting requirements.

Financial Services

The Financial Service Division has three work groups: Finance and Accounting, Customer Service Administration and Call Center, and the Scale House / Cash Booth. All work groups, totaling 23 employees, are managed by the SWS Chief Financial Officer.

Finance and Accounting

The Finance and Accounting section, consisting of five employees, manages the financial matters of SWS, including the accounting for revenues and expenses, the preparation of budgets, asset management, capital expenditures, customer account collection services, as well as providing financial reports. One employee is responsible for purchasing and accounts payable providing for the procurement of and the payment for all equipment, supplies, and contracts, in coordination with other MOA departments. Invoices are received, checked, account coded, approved, and entered into SAP for payment. Purchase orders are initiated at SWS: verifying proper account codes and funding, attaching all supporting documentation, obtaining proper department approval through the SAP workflow; many of the purchase orders also go through the MOA Purchasing Department's SAP workflow for final approval. Over 100 SWS timecards are processed each week in the SAP timekeeping and payroll system to ensure proper pay and cost of service coding. The SWS Collector position manages in house collection efforts for accounts that are 31-90 days past due. Once accounts reach 90 days past due, they are transferred to the MOA third party collection company for further collective action. Additional administrative staff provide other support duties that include: ordering office supplies; processing travel authorizations, expense reports, and incoming and outgoing mail; maintaining files; oversight of recycling and organics programs; and, providing administrative support to supervisors and to the SWRAC.

Customer Service Administration and Call Center

This work group is based out of the SWS Administration Building located at 1111 East 56th Avenue. This office is staffed with one Customer Service Supervisor, one Junior Administrative Officer, one Code Enforcement Officer and three Account Representative III's. The SWS call center staff answer up to 160 calls per day and also maintain the SWS customer information system, which allows the invoicing of up to 12,350 customers monthly. These customers provide, on average, more than \$2.1M in monthly payments to their accounts.

The SWS Code Enforcement officer ensures compliance within the SWS mandatory service area by actively facilitating corrective action in accordance with AMCs 14, 15, 21.07 and 26.

Scale House / Cash Booth

The 12 employees of the Scale House / Cash Booth work group operate both the scale houses and cash booths at CTS, ARL, and GTS. Operating hours and days of operation vary by location, but overall, this work group operates approximately 311 days a year, including all MOA holidays except Christmas and New Year's Day. Opening shifts begin as early as 6:00 A.M. for the staff opening CTS, closers are often on duty until approximately 6:00 P.M.

This group is the smiling face that greets both the residential and commercial disposal customers as they visit our disposal locations. These employees screen the customer's load prior to disposal, help monitor safety compliance, and kindly educate many on safe disposal practices, and encourage compliance with AMC and State Laws regarding litter prevention through assessment of fees. These team members assist over a quarter of a million customers visiting SWS facilities each year.

Administration

The Administration division provides support to all SWS employees. It is responsible for key performance indicator monitoring, IT assistance, safety, security, and vehicle parts inventory functions.

SWS has one position involved in the monitoring and reporting of key performance indicators. This employee also researches, evaluates, and implements existing and emerging technologies when deemed necessary, fiscally responsible, and/or becomes critical to operations.

The SWS Safety Manager ensures that all operations are conducted in a safe manner. The Safety Manager is responsible for compliance with Occupational Safety and Health Administration (OSHA) safety standards by ensuring that the work environment is safe, as well as identifying and mitigating potential hazards for SWS employees and the public long before the hazard becomes an accident statistic. The Safety Manager inspects buildings, projects, equipment, operating practices and working conditions for compliance with various MOA, State and Federal safety codes and regulatory requirements. The Safety Manager coordinates safety programs in training, personal protective equipment, clothing and devices, as well as organizing and conducting seminars on first aid and OSHA required safety training. The Safety Manager prepares reports and makes recommendations for improvement. By analyzing data on accident rates and compensation claims, the Safety Manager develops methods to reduce costs, loss time, and personnel suffering.

The mission statement of SWS is: Providing safe, efficient and innovative solid waste management for the Municipality of Anchorage. The vision statement of SWS is: Advancing solid waste management through continuous improvement and transparent performance.

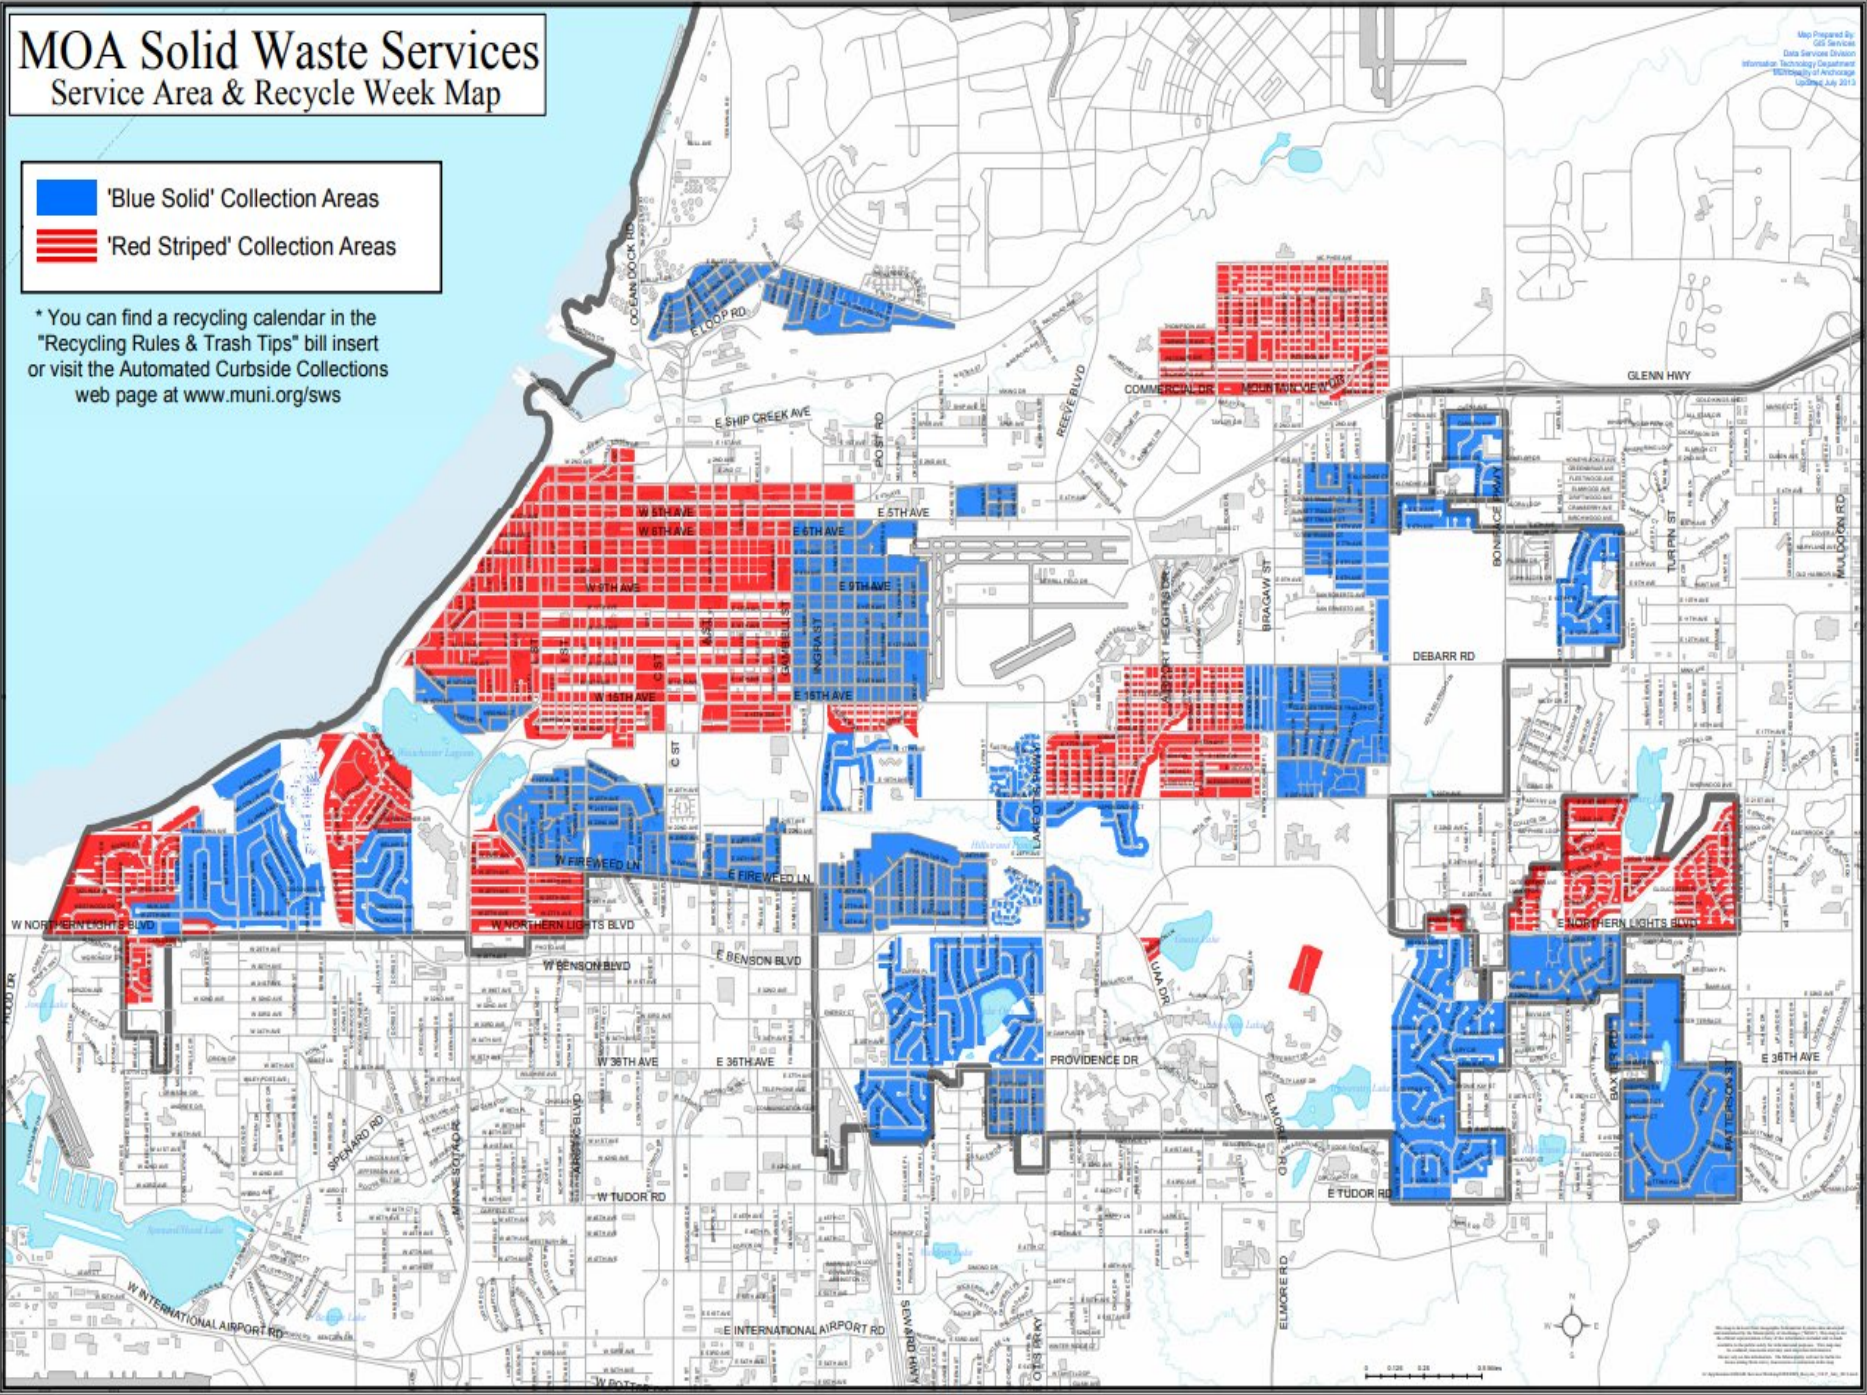

MOA Solid Waste Services Service Area & Recycle Week Map

Solid Waste Services Strategic Business Plan

Mission

Providing safe, efficient, and innovative solid waste management for the Municipality of Anchorage (MOA).

Vision

Advancing solid waste management through continuous improvement and transparent performance.

Values

Providing value to our community through safe, innovative and sustainable solid waste management.

Services

The Refuse Collection Utility (RCU) provides garbage and recycling collection to the former City of Anchorage service area, which is approximately 20% of the population of the MOA. Since at least 1952, there has been mandatory service for all customers of the RCU service area. The RCU provides seven types of service: commercial dumpster; commercial recycling; automated garbage roll cart service; recycling roll cart service; residential organics; commercial/residential glass collection; and limited can and bag service.

The Solid Waste Disposal Utility (SWDU) serves the entire MOA. The services include the disposal of solid waste, the collection of household hazardous waste, and the promotion of community recycling and sustainability. Municipal solid waste is received at three transfer stations located within the MOA. Waste generated in the community of Girdwood is transported from the Girdwood Transfer Station (GTS) to the Central Transfer Station (CTS) in Anchorage. All waste from the CTS is transported to the Anchorage Regional Landfill (ARL) for final disposal.

Business Goals and Guiding Principles

- Increase overall customer satisfaction rating.
- Reduce number of missed pick-ups by Solid Waste Services (SWS).
- Reduce the average customer wait time.
- Maximize the usage of landfill gas collected for beneficial purposes.
- Decrease the per capita amount of trash disposed at ARL.
- Expand the lifespan of ARL and maximize airspace utilization.
- Fully maximize existing collection and transfer truck routes through the leveraging of technology.
- Reduce loss time accidents and workman compensation claims.
- Create opportunities for employee development via training opportunities.
- Reduce greenhouse gas emissions across the MOA.

Strategies to Achieve Goals

- Invest in our business and community through the completion of the construction project for a State-of-the-Art transfer facility.
- Continue to leverage new SWS on-board vehicle computer systems.
- Streamline and improve CTS and ARL site traffic patterns. Leverage the modernized fleet and fuel technologies.

- Utilize alternative daily cover material and improve waste compaction with on-board computing systems in heavy equipment at ARL.
- Communicate more effectively with employees about training opportunities and make them available.
- Develop a leachate evaporator system fueled by landfill gas to beneficially use the excess gas capacity.
- Promote the diversion of food waste, yard waste, metals, plastics, paper and cardboard.
- Improve recycling options for businesses and apartment buildings within the SWS service area.
- Standardize recycling outreach and labeling throughout the MOA.

Performance Measures to Track Progress in Achieving Goals

1. Disposal Costs Offset by Landfill Gas Revenue.
2. Garbage to Dirt Ratio.
3. Landfill Closure Date.

Refuse Collections & Disposal Utility Solid Waste Services Department

Anchorage: Performance. Value. Results.

Mission

Providing safe, efficient, and innovative solid waste management for the Municipality of Anchorage.

Vision

Advancing solid waste management through continuous improvement and transparent performance.

Values

Providing value to our community through safe, innovative, and sustainable solid waste management.

Core Services

- Provide dumpster service to commercial and multifamily residential customers.
- Provide automated garbage, curbside recycle collection, and disposal to residential customers.
- Provide transfer station and landfill disposal services for the entire community of Anchorage.
- Support and promote energy efficient and sustainable practices for all residents throughout the community.

Accomplishment Goals

- Subsidize Disposal Utility operations with revenue collected from landfill gas sales to keep rates lower for longer periods of time.
- Extend the life of the Anchorage Regional Landfill by increasing the ratio of inbound garbage to dirt placed as daily cover. The less dirt used to cover garbage for means more space available at the landfill.
- Extend the useful life of the Anchorage Regional Landfill as far in the future as possible by improving recycling and operational performance on a continuous basis. The longer the landfill stays open the cheaper the cost to dispose of material in Anchorage is.

Performance Measures

Progress in achieving these goals will be measured by:

- Disposal Costs Offset by Landfill Gas Revenue
- Garbage to Dirt Ratio
- Landfill Closure Date.

The following pages provide actual data which quantify these measures.

For more information on the performance indicators Solid Waste Services (SWS) has developed, please visit:

<https://acak.statwindow.com>

Measure #1: Disposal Costs Offset by Landfill Gas Revenue

This is calculated by dividing landfill gas revenue by total disposal costs. SWS has set a target goal of >15% indicated by the dashed line in the above line graph. SWS is given this data on a quarterly basis.

Quarter 2 – Disposal Costs Offset: 11%

SWS syphons methane gas from collected waste in the landfill. A portion of the gas is sold to provide electricity to the Army side of Joint Base Elmendorf-Richardson. The revenue from selling landfill gas is used to subsidize disposal costs, therefore lowering customer rates.

Measure #2: Garbage to Dirt Ratio

This is calculated by dividing total tons of waste received at the landfill by the total tons of dirt (cover) used, which includes alternative cover. SWS has set a target goal of >1.4 indicated by the dashed line in the above line graph.

Quarter 2 Average – 1.87

- April: 1.82**
- May: 1.90**
- June: 1.88**

Every day SWS covers the waste received. We use different forms of cover including dirt, gravel, wood chips, tarps, and snow (season-permitting).

This data is important because SWS has a goal to “extend the life of Anchorage Regional Landfill.” The less amount of cover used to cover the refuse, the more space is left in the landfill and the longer it will remain open.

Measure #3: Landfill Closure Date

SWS uses a 12-month average of waste generation and cover used by the landfill to predict the day the landfill will reach full capacity. As public behavior changes, lowering the rate of waste generation thus using less cover, the life of the landfill will be affected. Decomposition and compaction are considered in the equation, as well as population growth. SWS derives this data from the most current landfill study.

SWS does not have a target set because this information is continually changing, however, SWS has a goal to “extend the life of Anchorage Regional Landfill.”

Quarter 2 Estimated Year of Closure: 2,070

As the year of closure draws near, SWS reflects on how to continually provide the Municipality of Anchorage safe, efficient, and innovative solid waste management for the foreseeable future (i.e. building a new Central Transfer Station – click this link for more info:

<https://newswscentraltransferstation.com/>). Through fine-tuning public behavior (recycling, composting, organics collection), SWS can successfully serve the MOA for many years beyond this estimated date.

Landfills are not forever, there is no time to waste.

PVR Measure WC: Managing Workers' Compensation Claims

Reducing job-related injuries is a priority for the Administration by ensuring safe work conditions and safe practices. By instilling safe work practices, we ensure not only the safety of our employees but reduce the potential for injuries and property damage to the public. The Municipality is self-insured and every injury poses a financial burden on the public and the injured worker's family. It just makes good sense to WORK SAFE.

Results are tracked by monitoring monthly reports issued by the Risk Management Division.

About Solid Waste Services

The Department of Solid Waste Services (SWS) is composed of two utilities, the Refuse Collections Utility (RCU) and the Solid Waste Disposal Utility (SWSDU). The RCU provides refuse collection service to residential and commercial customers in the old “City of Anchorage” Service Area (approximately 20% of the community) and the SWSDU operates two transfer stations and the Anchorage Regional Landfill (ARL) providing affordable and environmentally responsible municipal solid waste disposal services for the entire Municipality of Anchorage (MOA). SWS is divided into three organizations: RCU, SWSDU, and Administration (which is a support organization that fully charges out expenses to both RCU and SWSDU).

Refuse Collections Utility

History

The RCU was originally a function of the former City of Anchorage Public Works Department. When the City and Borough merged in 1975, the RCU became an enterprise activity of the MOA.

Services

The RCU provides refuse collection to the service area of the former City of Anchorage, which is approximately 20% of the population of the MOA. Since 1952, there has been mandatory service for all residents of the RCU service area. The RCU has five types of services: commercial dumpsters; automated roll cart service; can and bag service; curbside recycling; and, curbside organics collection. The RCU services over 5,000 dumpsters per week with seven daily dumpster routes, and four Saturday routes to serve its commercial and multi-family residential customers.

As a result of an automated trash and recycling collection service that began in the fall of 2009, most SWS residential customers are serviced using automated vehicles and roll carts. In 2017, the final phase of automated collection rollout was completed and the RCU is servicing eight automated garbage collection routes. Approximately 100 customers remain on can/bag service.

Regulation

The fees charged by RCU are overseen by the Anchorage Municipal Assembly. RCU is granted the exclusive right to collect solid waste within its defined service area by a Certificate of Public Convenience and Necessity which is issued by the Regulatory Commission of Alaska.

Environmental Mandates

Although there is no specific state or federal regulations governing refuse collection, RCU must comply with a number of mandated regulations. These regulations include but are not limited to: the Federal Clean Air Act; the Clean Water Act; and, the Occupational Safety and Health Administration. These regulations have and will continue to impact the economics and operations of RCU.

Physical Plant

The RCU's truck fleet assets include:

- 11 commercial refuse collection vehicles;
- 10 residential refuse and recycling vehicles (automated and can/bag); 10 automated / 2 Tomcats
- Two rear load vehicles for MOA paper collection and recycling; and,

- 9 support vehicles (General Foreman Vehicle, Refuse Collections Leadman Vehicle, Expeditor Vehicle, Mechanics' Trucks, and, one fully electric Box Van,).

Currently, there is an average of 25,000 roll-carts and 2,032 dumpsters in service. The RCU maintains a 27,000 square foot building that contains vehicle maintenance, warm storage space, and administrative offices and it is located at the Central Transfer Station (CTS).

Future Planning Efforts

The RCU is currently in the process of evaluating and rolling out additional collection services such as curbside residential organics collection and commercial/residential glass collection. The RCU also secured grant funding to assist in purchase and deployment of an all-electric medium duty vehicle and two all-electric class 8 collection vehicles by 2022. The RCU is also assisting with the planning, design and construction of the new CTS as there will be numerous components of the facility that will support their functions.

Solid Waste Disposal Utility

History

Municipal solid waste disposal was originally a function of the City Public Works Department, which operated the city landfill at Merrill Field. Under unification, the MOA acquired responsibility for five waste disposal sites from Peters Creek to Girdwood. The SWSDU was formed to operate and maintain these sites, while managing solid waste disposal matters throughout the MOA. The five sites were ultimately closed, and waste disposal was consolidated at the Anchorage Regional Landfill (ARL). ARL is an award winning, state-of-the-art, fully engineered landfill. The facility was opened in 1987 and is the only operating municipal solid waste landfill within the MOA.

Services

The SWSDU serves the entire MOA. The services include the disposal of solid waste and collection of household hazardous waste. Municipal solid waste is received at two transfer stations located within MOA. The waste is then transported by the SWSDU to ARL for final disposal.

The ARL has a total land area of approximately 275-acres and is being developed in phases called cells. Currently, cells 1 through 7, 8a, 8b, 9a, and 10 - 12 have been constructed. Cells 9b / 8c are currently being designed with construction anticipated in 2024/2025. ARL is projected to have a total capacity in excess of 47.5 million cubic yards and should reach its capacity in 2069, dependent upon population growth, waste compaction, diversion of more recyclables and construction activities. In 2020, approximately 301,000 tons were deposited in ARL, which represents just under fourteen thousand tons less than in 2019. The reduction in tonnage is largely attributable to reduction in Anchorage tourism, construction, and other business activities due to the COVID-19 pandemic. SWSDU currently expects an average of approximately 300,000+ tons in 2021 as well as future years.

The transfer stations located at Girdwood and midtown Anchorage (CTS) allow the SWSDU to reduce traffic flow to the landfill and restrict access to the working face. CTS also helps keep MOA garbage collection rates low by minimizing the distance that private haulers have to drive to dispose of collected waste. This also helps to reduce greenhouse gas emissions. CTS receives the largest amount of solid waste, having received nearly 207,000 tons in 2020 from almost 190,000 customers. This facility has an operating capacity of 1,600 tons per day. The

SWSDU operates a fleet of 29 transfer tractor and trailers that transport the solid waste from Girdwood and CTS to ultimate disposal at ARL, each with a capacity of 120 cubic yards.

The SWSDU is responsible for post closure care and monitoring of former landfill sites at Merrill Field, Peters Creek (Loretta French Park), and International Airport Road (Javier de la Vega Park). At each of these sites, SWS must perform annual or biennial groundwater and landfill gas (LFG) migration monitoring. There is no end date at this time for when monitoring will be discontinued at these sites. The SWSDU operates an active landfill gas (LFG) collection system at Merrill Field to mitigate migration of LFG to commercial buildings constructed along Merrill Field Drive. The SWSDU also operates and maintains a leachate collection system along 15th Avenue to mitigate potential migration of groundwater contaminants to the Chester Creek system. Since no closure funds were ever designated for these sites, all post closure care activities must be funded out of the SWSDU's annual operating budget by current ratepayers.

The SWSDU operates a 6,000 square foot hazardous waste collection facility built in 1989 at ARL. Through 2020, the facility has collected nearly 24 million pounds of hazardous waste that otherwise may have been improperly disposed of at ARL, the storm drain system, or citizens' backyards.

Household hazardous waste can be dropped off at CTS (on Tuesday, Thursday, and Saturday) or the Hazardous Waste Facility located at ARL (Tuesday through Saturday). The hazardous waste is then handled by a contractor that sorts and processes the waste into proper containers. Hazardous products are shipped out of state to federally approved hazardous waste disposal sites. Other materials are rendered inert and landfilled, processed locally, or recycled. Anchorage residents bring household items such as paints, cleaners, and solvents to Reuse Centers at CTS or at ARL. The items are then stocked for other Anchorage residents to take home for reuse on household projects. SWS will also be using waste oil collected from collection and transfer vehicles to use as fuel in heaters that will provide heat for warm storage at the new ARL facility.

Regulation

The SWSDU is not economically regulated by any non-municipal agencies but is overseen by the Anchorage Municipal Assembly. SWSDU operates under numerous permits and many Environmental Protection Agency (EPA) regulations. ARL is operated under a Solid Waste operating permit issued by the Alaska Department of Environmental Conservation (ADEC). This permit must be renewed every five years. ARL construction and certain operations must comply with the EPA Resource Conservation and Recovery Act (RCRA) subtitle D. The facility is also regulated under a Title V air emissions operating permit issued by ADEC. The SWSDU operates under two permits from Anchorage Water & Wastewater Utility for industrial water discharge, one for disposal of leachate from ARL and one for discharge of leachate contaminated groundwater at Merrill Field Airport. ARL has permits from the U.S. Department of Fish and Wildlife and the Alaska Department of Fish and Game for bird management.

Environmental Mandates

SWSDU must operate under, and comply with, numerous environmental mandates. These mandates have a significant economic impact on the cost of operations and construction for the Utility. The main environmental mandates that have a significant impact on the SWSDU are RCRA subtitle D, the Clean Air Act, New Source Performance Standards (NSPS), the Clean Water Act, SARA Title 3 (Super Fund), NESAP (asbestos), and NPDES (storm water discharge). In 2010, EPA added greenhouse gas monitoring and reporting requirements that

affect both active and closed landfill sites. It is projected that the environmental mandates regarding operating and constructing a landfill will become even more stringent in the future.

Physical Plant

The SWSDU's assets include:

Anchorage Regional Landfill (ARL)

- 275 acres, estimated to last through the year 2060.
- 47.5 million cubic yard capacity.
- Phased construction of cells lasting four to five years each.
- Ten of the 11 landfill cells are fully or partially constructed.
- Located on municipal land.
- Scale house
- 22,000 square-foot shop with an adjoining storage facility, that was severely damaged in the 2018 Earthquake and reconstruction is currently underway.
- Heavy equipment fleet: dozers, loaders, dump trucks, water truck, leachate trucks, tankers, lube trucks, grader, excavator and solid waste compactor.
- Two leachate storage and treatment lagoons with a 2.9-million-gallon capacity.
- Gas collection facility with 700 square foot blower and flare station with a 2,000 cubic feet per minute capacity enclosed flare.
- Gas processing facility processes gas to fuel quality and transports it by pipeline to Doyon Utility's power generation system to produce electricity on adjacent military lands. MOA is currently in a 20-year agreement with Doyon, in which Doyon will generate electricity from methane gas to sell to military customers on Joint Base Elmendorf-Richardson (JBER).

Three transfer stations provide intermediate disposal, easy access for public solid waste disposal

- Cash booths at Girdwood, CTS, and the ARL public site.
- Two scale houses, one each at CTS and ARL.
- 29 transfer tractor and trailers haul from stations to landfill.

Hazardous waste management

- 6,000 square foot collection facility for household hazardous waste.

Merrill Field Airport

- LFG collection system and leachate/groundwater collection system.

Future Planning Efforts

Future projects include:

- Design of cells 9b and 8c will commence in 2022 with an estimated cost of approximately \$10.3 million.
- Slope closure and storm water run-off development is on-going.
- Construction of improved leachate management system to mitigate growing expense of hauling leachate.
- First strategic plan and Masterplan have been completed and are continuously being updated based upon new goals and strategies as developed by SWS staff.
- CTS Upgrade and Expansion to a new site is under construction, which commenced in 2020 and it is anticipated to be substantially completed by 2023. This includes issuing an

RFP to interested proposers to operate the existing transfer station site as a new recycling center.

- Construction of replacement for the shop/administration/vehicle maintenance building, and replacement of gas wells and piping are on-going as part of the 2018 earthquake recovery project.

Please see our website for hours of operation and contact information.

Solid Waste Services Highlights and Future Events

Disposal Utility

The Department of Solid Waste Services (SWS) Disposal Utility's (SWSDU) Central Transfer Station (CTS) is nearing the end of its useful life. The facility is aged, poses health and safety risks, and is not properly sized or designed for the vehicle size and volume that it serves today as well as the recycling initiatives that are being implemented by SWS. SWS is well underway to completing the construction of a new transfer station facility that is estimated to open in early 2023. The new facility will provide increased capacity for peak flows of commercial and residential customers as well as provide much needed on-site traffic circulation improvements. The new transfer station will enhance the SWSDU's ability to serve the community, while accommodating needs for increased recycling and waste reduction efforts to extend the life of the Anchorage Regional Landfill (ARL).

Anchorage sustained a 7.2 magnitude earthquake on November 30, 2018, and ARL suffered irreparable damage to the main Shop/Admin building. Additional damage that was sustained at the landfill includes: various gas collection piping and gas wells; non-structural damage to the concrete floor of the Household Hazardous Waste building; and, multiple smaller damages to roadways and slopes within the landfill. Temporary facilities and gas system repairs have been constructed to maintain operation and SWS worked with the Federal Emergency Management Agency (FEMA) and the State of Alaska to secure funding for reconstructing the permanent ARL Shop/Admin building. Additionally, various building and roadway repairs are ongoing. Construction for this project is underway and construction is anticipated to be completed by July 2022.

The ARL has a total land area of approximately 275-acres and is being developed in phases called cells. Currently, cells 1 through 7, 8a, 8b, 9a, and 10 - 12 have been constructed. Cell 9b and 8c are in design and construction is expected to commence in in 2024.

In 2020 the SWSDU trucked approximately 40 million gallons of treated leachate generated at the landfill to the Anchorage Water & Wastewater Utility (AWWU) Turpin dump station. SWSDU started design for retrofitting the leachate lagoons with a more modernized aeration system that will be more efficient and provide better treatment to the leachate in 2019, and the project is ongoing.

Leachate has been hauled via tanker truck since ARL was first opened in 1987. The truck haul system is considered inefficient and potentially unsafe to the public due to the additional truck traffic on the Glenn Highway. SWSDU is currently evaluating alternatives to trucking leachate including the installation of a deep injection well and multiple leachate evaporators onsite as well as closing out and capping certain areas of ARL.

SWSDU continues to aggressively expand recycling programs in Anchorage. Organics and glass collection is a priority for the department. Demand for the programs are high and the SWSDU is looking to expand capacity by developing back-end infrastructure and increasing community outreach for participation in food scrap and glass drop-offs.

SWSDU also plans to continue supporting recycling initiatives across the municipality, which has seen decreased processing costs as a result of shifting global commodities markets and the

COVID-19 pandemic. SWS will continue to invest in recycling, as well as communication and outreach, which is vital to the success of the programs.

Another priority for SWS is sustainability and energy efficiency. SWS spearheads the MOA's sustainability efforts. A recommendation from the SWS Integrated Solid Waste Master Plan, Strategic Plan and Climate Action Plan is to investigate further waste to energy alternatives. SWS has invested funds and significant staff time in determining which waste to energy technology is most applicable to the community with the ultimate goal of extending the life of ARL. This work is on-going with a large amount of effort being put towards obtaining the funding for a facility such as this in Anchorage.

The SWSDU receives most of its revenue from tipping fees charged to customers. The SWSDU also collects revenue from sales of gas collected from the landfill. Revenue from gas sales is budgeted based upon an analysis of current electric utility rates and an estimation of the amount of gas that will be sold in the future period. Budgeted customer revenue is based upon an average of tonnage received in the prior two years. Operational expenses are established through a process of review with managers and staff where tonnage estimates, contractual requirements, equipment usage and labor needs are reviewed and expected future costs are established.

Refuse Collection

The SWS Refuse Collection Utility (RCU) owns and operates a fleet of refuse collection vehicles, which are housed in a shop/storage building along with administrative offices on land owned by SWSDU. The recent land purchase by SWS includes land to construct new facilities to replace the aging structures owned by RCU.

New software has recently been installed in RCU vehicles allowing drivers to communicate directly with the billing system for improved tracking of refuse collection activities, missed stops, and other metrics.

SWS worked in 2019 to restart a commercial glass recycling program in the downtown district. The department worked with local recyclers to expand uses for the recycled glass in construction projects. Demand is at the point where local recyclers can accept even more glass for recycling. SWS continues collecting glass recycling downtown with the goal of increasing participation and offering the service outside of downtown as well as to the residential customer

base. SWS will also be rolling out a residential curbside glass collection program in the Fall of 2021 to approximately 200 customers.

The RCU receives most of its revenue from monthly fees for trash collection from customers. Budgeted revenue is based upon a twelve-month historical average for each service type. Operational expenses are established through a process of review with managers and staff where customer numbers, collection route requirements, contractual requirements, equipment usage and labor needs are reviewed and expected future costs are established.

Solid Waste Services External Impacts

Disposal

SWS is currently completing the construction of: a new Central Transfer Station; ARL administration, warm storage and maintenance building; leachate collection and processing improvement project; and, the final remaining landfill cells. SWS anticipates issuing long-term debt to finance the projects beginning in early 2022. Interest rate changes and availability of long-term funding may impact the actual costs of these projects.

Disposal customers are subjected to long wait times and safety issues each time they come to the CTS to dispose of their loads. SWS is in the process of designing and constructing a new CTS. The new facility will also allow SWS to control the destiny of the Disposal and Refuse Collection Utilities through additional space to explore new technologies, and the ability to re-purpose the existing space to meet other growing needs within the Municipality such as large scale diversion of materials from ARL. This will take years of public education and training to implement.

The Landfill Gas (LFG) to Energy project came into commercial operation in 2013. Revenue to the Solid Waste Disposal Utility (SWSDU) derived from the sale of landfill gas to Doyon Utilities (DU) is based upon the purchase price for natural gas as reported by Chugach Electric Association (CEA) to the Regulatory Commission of Alaska (RCA). Future revenues anticipated from this project will be based upon gas price projections by CEA and other area utilities. As a result, the actual revenue generated by the LFG project will fluctuate dependent upon market price of natural gas in Southcentral Alaska. Revenues from this help to subsidize and keep disposal rates low for residents of the Municipality of Anchorage (MOA).

Currently, SWSDU Inc. holds an air quality permit which will allow continuous operation of up to six generating units at the LFG power plant on Joint Base Elmendorf-Richardson (JBER). The power plant currently operates five generating units, producing approximately seven (7) megawatts of power. In the summer months, power usage at Fort Richardson decreases below this capacity in off-peak hours. Because of the lower demand, one generating unit is shut down on evenings and weekends, resulting in decreased landfill gas consumption seasonally. Currently, there is no energy integration between the Fort Richardson and Elmendorf sides of JBER. This limits the amount of revenue that can be generated by the project. A project is currently in the final phases of design to interconnect the Fort Richardson and Elmendorf electrical grids. JBER has no plans to expand the power plants generating potential.

The current tonnage received at the landfill is dependent upon all refuse providers servicing the MOA. SWS is in the process of implementing a Recycling Education Program as well as recycling incentives. As a result, there is an expected decrease in the amount of refuse received by ARL in the years to come as this is a lengthy process. SWS' operations are directly impacted by population growth or decreases, tourism, and construction activities. Changes in these external factors directly affect the revenues generated by SWSDU.

Since 1994, SWS has stored gravel generated from cell development activities on leased land from Fort Richardson. SWS currently has over 4 million-cubic yards of material stored at this location which will all be used in the normal operation of the landfill.

Leachate from the ARL is disposed of thru Anchorage Water & Wastewater Utility's (AWWU) wastewater collection system. SWS hauls the leachate from ARL to AWWU's Turpin Street septic hauler station. SWS typically hauls over 30 million gallons annually to this facility and this value will only increase as ARL expands. The cost for this activity is driven by labor, fuel and vehicle operations and maintenance (O&M) costs as well as AWWU disposal rates, all of which are continuously rising. SWS is in the process of initiating design activities for a leachate disposal system that will eliminate the need to haul leachate in order to control costs and increase efficiencies.

ARL was constructed in 1987 and the Central Transfer Station (CTS) was converted from a garbage shredding facility constructed in the 1970's to a transfer facility. Consequently, many mechanical, electrical and structural components of these facilities are rapidly approaching or have exceeded their useful lives. Many of these systems are either life safety issues or critical to the continued operation of the facilities. SWS has and will continue to incur significant capital and maintenance costs as these facilities and components are upgraded or replaced. Disposal customers are subjected to long wait times and safety issues each time they come to the CTS to dispose of their loads. Therefore, SWS is in the process of constructing a new CTS, located adjacent to the existing facility. The new facility will also allow SWS to control the destiny of the Disposal and Refuse Collection Utilities through additional space to explore new technologies, and the ability to re-purpose the existing space to meet other growing needs within the Municipality.

Refuse

SWS' operations are directly impacted by population growth or decreases, tourism, and construction activities. Changes in these external factors directly affect the revenues generated by the Refuse Collection Utility, as well.

Solid Waste Services Utilities Capital Overview

Capital Project Selection Process

Solid Waste Services (SWS) continuously evaluates the Disposal Utility (DU) and the Refuse Collection Utility (RCU) assets to identify the need for capital projects. As assets age and deteriorate over time they either affect customer service levels, inadequately meet the needs of the community, have disproportionately high operations and maintenance cost, or increase risk liability. Capital project expenditures address one or more of these issues. Capital projects generally originate from facility plans, asset management plans, master plans, or day to day operations. SWS has the following types of capital projects:

- Central, Girdwood, and Anchorage Regional Landfill (ARL) Transfer Stations
- Anchorage Regional Landfill
- Gas Collection System
- Leachate Treatment System
- Other Facilities Utilized for Administrative Purposes
- Miscellaneous Equipment (Owned by either the Disposal or Refuse Collection Utility)
- Master Plan
- Information Technology Hardware and Software
- Vehicles

The process of choosing funded projects in the Capital Improvement Program (CIP) begins with an identification by Solid Waste Services operating and engineering staff of facilities or infrastructure requiring improvement or replacement. Heavy equipment and vehicles are also assessed. Once potential projects have been identified, projects that improve health and safety, customer experience, cost containment and operating efficiency are prioritized.

Significant Projects

SWS does not project any significant projects for 2022, other than some improvements to the gas collection system at ARL.

SWS currently has the following significant projects in process, for which projected funding needs have already been appropriated:

- Construction of a new Central Transfer Station to serve both DU and RCU,
- Construction of ARL cell 9A, 8B, and 8C, and
- Leachate collection and treatment improvement at ARL

Impacts on Future Operating Budgets

SWS has developed a long-range financial plan with an eye towards providing a high level of service to customers while maintaining reasonable rates. Rates fund both capital spend and annual operating expenses. One of the intents, among many, of the Capital Program is to decrease long term operating expenses and maximize the life the landfill. The balance between current capital spend and future operating budgets is a function of SWS's long-range financial plan that identifies the available capital funding in consideration of anticipated operational costs.

Design and Construction of Gas Collection System at Anchorage Regional Landfill

Project ID DIS2020002 **Department** SWS Disposal
Project Type Improvement **Start Date** January 2021
District Tax: 11 - Municipal Landfill w/o ERPRSA **End Date**
Community Council

Description

Construction of new and replacement gas wells and gas system expansion at landfill- multi-year project constructing approx \$700K of wells in each year 2021-2026. Construction of an additional flare to increase landfill gas destruction capacity while reducing gas emissions into the environment and mitigate environmental violations.

Anchorage Community Development Authority and EasyPark

The Anchorage Community Development Authority

Organization

Pursuant to Municipal Code, AMC 25.35.010(A), the Anchorage Community Development Authority (ACDA) is “an instrument of the Municipality, but exists independently of and separately from the Municipality.” ACDA is governed by a nine-member board of directors appointed by the mayor and approved by the Anchorage Assembly (assembly). Two of the nine members are executive employees of the Municipality. In addition, two assembly members serve as *ex officio* members of the board. The management team of ACDA reports to the Board of Directors. The Executive Director is appointed by and serves at the pleasure of the Mayor.

The ACDA consists of two departments: Development and Parking Services (branded EasyPark), with a total budgeted operational staff of 30 employees. These employees operate all municipal parking facilities, maintain and clean public garages and parking lots, maintain on-street parking meters, manage Anchorage Police Department’s parking citation system, plan and develop public projects, and manage property in the ACDA’s inventory. ACDA’s planning and development staff work on projects and property transferred from the Municipality to ACDA, along with other redevelopment projects, both in the public as well as the private sectors.

History

The predecessor of ACDA, the Anchorage Parking Authority, was originally created as a separate public authority on February 28, 1984. That authority was created “to create an environment in the Anchorage area such that parking and parking policies are a position of influence for the community as a whole.” Within four years, the Anchorage Parking Authority operated three public garages (two of which were new), six surface lots and the on-street spaces are within the Central Business District (CBD). Total parking operated by the Anchorage Parking Authority was approximately 5,800 spaces. Revenues from parking operations were used to help pay debt service on the parking garages built in the 1980’s.

On January 18, 2005, the assembly adopted an amendment to the Anchorage Parking Authority Ordinance that created the ACDA as an instrument of the Municipality, existing independently of and separately from the Municipality, replacing the former Anchorage Parking Authority. The powers of ACDA were expanded to include responsibilities above and beyond the management of parking facilities, including the acquisition, operation, improvement, and leasing of property.

In 2008, the ACDA’s mission was formally defined to include the responsibility to “create and develop opportunities that forward municipal goals and objectives, using innovations, partnerships, sound planning and incentives. Additionally in 2008, the Development Department was created in ACDA, which would be responsible for acquiring or disposing of interests in real property, and constructing, improving, operating, managing, and controlling real property assets.

In June of 2011, the assembly delegated ACDA authority to enforce parking violations with the area bounded by Ship Creek on the north, Gambell Street on the east, 10th Avenue on the south, and M street on the west. The assembly amended Anchorage Municipal Code chapter 25.35.

In the fall of 2017, the ACDA Board of Directors held a planning session to determine the organization's strategy for the coming year. Those goals included improvements in organizational efficiencies through new parking technologies and cost containment, and a more aggressive approach to new developments in downtown Anchorage.

In 2018, the ACDA's Mission Statement was updated to more accurately reflect its focus on economic and community development work.

In 2022 The ACDA Board and staff will attend a retreat to evaluate the effectiveness against the Authorities mission and vision.

Mission & Vision

It is the mission of ACDA to:

- Provide sufficient, high quality, customer-focused public parking by managing parking resources in a fair and efficient manner for the benefit of the residents of the Municipality.
- Create and develop opportunities that forward municipal goals and objectives, using innovation, partnerships, sound planning, and incentives.
- Engage in community and economic development opportunities, including but not limited to the acquisition of vacant or abandoned property and facilities, with a goal of encouraging economic growth, commercial development, and safe and vibrant neighborhoods, and furthering the goals and objectives of municipal plans and policies.

The mission statement of ACDA is "***We deliver quality development and public parking services within the Municipality of Anchorage.***"

The vision of ACDA is to promote "***A vibrant and prosperous Municipality of Anchorage by leveraging innovative community development and public parking.***"

We believe as an organization that everything we do, must add a tangible value to our three critical stakeholders: the Municipality, ACDA, and the Anchorage Community.

Budget Assumptions

Revenue 2022

- Parking revenue will be impacted by further Covid19 developments.
- Management believes off street and garage revenue will return to 85% of post Covid19 levels in 2022.
- Leasing revenue will continue to be consistent and there will be no major variances from previous years.
- Increase in monthly permit holders as Easy Park moves to enhance and improve the customer experience for permit holders including the implementation of auto pay and a reinvigoration of our concierge program.
- Development of new revenue streams that will allow advertisers to capture the traffic at our garages.
- Re-tooling of on Street Enforcement to maximize on-street and garage parking

Expenses 2022

- Department by department expense analysis.
- Use of automation to increase efficiency.
- Target contracted services for savings.
- Better utilizations of resources.
- Maximize staffing capacity and productivity.

Executive Director's Message

To coin a phrase from Kevin Costner, "We live in a different world than we did just 30 seconds ago." That's from the movie Draft Day. It seems to fit with the year we had in 2020 and are the uncertainty surrounding 2021.

2021 was the year of adaptation. 2020 caused us to redefine how and why we do what we do to serve the public and to provide a return on investment for the Tax Payer. During this time we have strived to modernize the parking experience in downtown Anchorage along with facilitating economic development that will add value to the community.

While Anchorage and its economy continues to face headwinds, nowhere is that more evident than downtown. With a continuation of an uncertain state economy and the outmigration, both local and outside investors have remained elusive. Despite a sluggish retail and commercial real estate environment, downtown parking revenues have grown in 2021 over 2020 and we believe they will grow again in 2022.

In spite of the challenges, the team at ACDA/Easy Park had a productive year and we are proud to share a few of the highlights for 2021:

- Continued discussions with Simon Mall and JCPenney on the purchase of the JCPenney Garage
- Easy Park invested \$115,000 installing modern gate equipment in the JCPenney garage.
- Easy Park has implemented on line technology allowing customers to pay on line and by the end of 3rd Quarter will be able to offer Autopay
- Easy Park has successfully tested and implemented pay by phone for street level parking.
- ACDA is expanding its focus to include the entire city while maintaining its downtown initiatives including the signing a Development Agreement for a hotel and mixed use facility atop the 6th avenue garage.
- The Executive Director has been asked to Chair the Mayors Commission on Economic Revitalization and Diversification.
- ACDA's Board issued a Letter of Interest to work with the Block 41 Developers and build a new parking Garage to serve the remodeled Key Bank Building.

In 2022 ACDA/EasyPark will continue to work with our stakeholders to continue adding value to downtown and helping to re-invigorate the Anchorage economy. In the coming year we hope to accomplish the following major goals:

- Complete the acquisition of the JCP Garage for redevelopment
- Commence construction on redesigning a new modern transit space at 6th Avenue
- Begin construction of housing/parking at 8th & K
- Pursue economically feasible projects outside the downtown corridor
- Upgrade lighting, cameras, and security in all EasyPark Garages

On behalf of the team at ACDA/EasyPark we are proud of the work we have done over the last year and we look forward to continue making progress to help build a stronger Anchorage community.

Mike W. Robbins

Anchorage Community Development Authority Statement of Revenues and Expenses

	2021 Approved	2022 Approved
Operating Revenue
