

Figure 6: Avalanche Risk Along Crow Creek Road: This map delineates the limits of high (red) and moderate (blue) snow avalanche hazard affecting potential development along Crow Creek Road. The blue lines represent the design magnitude avalanche limits (>30 years, but <300 years) of the moderate hazard zone. Red lines delineate the limits of high hazard zones with return intervals <30 years. (Mapped 2-6-07 by D. Fesler, AMSC. Source map: provided by MOA/ITD, created 1-07 by Warren Elkins.)
