How to use spreadsheet: enter # on their card, press tab, then enter their name, if unsure aboutt spelling, consult attendance sheet for that race. Then select both place and name columns and arraing numericaly, preserving the correspondence between card # and racer. Once you have ordered the racers, begin entering the times from the timing paper that corresponds to that number. For format, I recommend keeping the column formatted for text and simple writing time as "hours.minutes.seconds I find it useful to move my spreadsheet window and the physical timing sheet close to each other so I spend as little time having to look back and forth between the timing results and my spreadsheet.
