

Neighborhood Traffic Calming Program

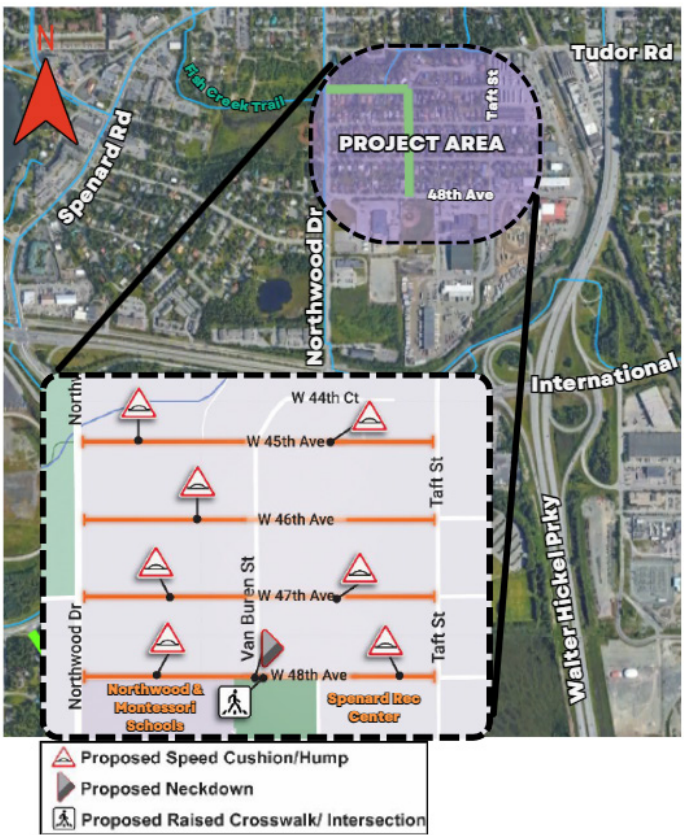

Road Closures Map*

*Project closure info to be available near construction dates

Coming this summer!

Northwood Area Traffic Calming and Safe Routes to School Improvements

WHAT TO EXPECT

Eight traffic calming treatments will be installed throughout the Northwood neighborhood network. Improvements include a raised intersection and crosswalk enhancements at 48th Avenue and Van Buren Street.

Construction, flagging, and potential short-term detours will occur over the summer season.

Speed Cushion

SPEED HUMP VS. SPEED CUSHION

Speed cushions are modified versions of speed humps. While a speed hump spans the full width of the roadway, a speed cushion includes two gaps centered on the roadway.

These gaps allow emergency vehicles to pass through more easily, reducing delays in emergency response times. Speed cushions have long term effectiveness, reliably reducing the maximum speed of most vehicles by 27% after construction.

DRIVER USE

Crossing the double yellow lines to use emergency vehicle gaps is against the law.

On-Street vehicle parking on top of speed humps or cushions is prohibited.
